REPORTS.

The American steamer *City of Peking*, Captain Smith, reports:—Left Hongkong the 27th October at 1.56 p.m. Arrived at Amoy the 28th at 1.12 p.m. and left the 29th at 7.05 a.m. Arrived at Shanghai the 31st at 9.17 a.m. and left at 5.14 p.m. Arrived at Nagasaki the 2nd November at 2.58 a.m. and left the 3rd at 1.32 a.m. Arrived at Kobe the 4th at 4.44 a.m., and left the 7th at 6.05 a.m.

Per Japanese steamer *Saikio Maru*, Captain Conner, reports:—Left Shanghai the 30th October at 4.30 p.m.; had strong N.W. winds and mixed sea to Nagasaki; thence to Kobe light variable breeze and clear. Left Kobe the 5th November at noon; experienced strong N.E. winds to Oshima at 8 p.m.; thence to Omai-saki fresh gale from same direction and light variable winds to port. Arrived at Yokohama the 6th November at 3.25 p.m.

The British steamer *Belgie*, Captain Rinder, reports:—Left San Francisco the 17th October, and left Honolulu the 25th. Arrived at Yokohama the 6th November. Passage, from San Francisco, 19 days, 15 hours, and 51 min.; from Honolulu, 11 days, 16 hours, and 1 min.

LATEST COMMERCIAL.

IMPORTS.

No sign at present of anything satisfactory. After a month of absolute stagnation, holders are getting uneasy, and find the present state of things monotonous. Quotations for Grey Yarn and Shittings withdrawn; all others quite nominal, as not a single transaction is recorded for the past week. Tight money, and financial stringency appear to be having a good innings.

COTTON PIECE GOODS.

ARTIFICIAL PERFUMES. CAUTION!

Messrs. J. & E. ATKINSON warn their customers against the Artificial Chemical Perfumes at present so extensively offered. Though strong they are nasty, and from a hygienic point of view their use is to be strongly deprecated.

ATKINSON'S "NATURAL" PERFUMES are made from flowers, and possess all their natural fresh sweetness. They cannot be surpassed either in delicacy or strength.

ATKINSON'S "WHITE ROSE."
"A charming Scent."—H. R. H. The Duchess of York.

J. & E. ATKINSON, 24, Old Bond Street, London.

May 4th, 1895.

THE GREATEST WONDERS OF MODERN TIME HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the dragoman Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN. HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations. Mr. J. T. COOPER, in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a tea, spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining 'stock.'"

Sold by all Chemists and Medicine Vendors the throughout World,
May 1st, 1896.

MILKMAID BRAND CONDENSED MILK

The "Milkmaid" Brand is guaranteed to contain all the cream of the original milk. In the process of manufacture nothing but water is removed, nothing but the best refined sugar added.

Avoid low-priced brands from which the cream has been abstracted, and ask for the "Milkmaid" Brand, the best for all purposes.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL" must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, NOV. 14TH, 1896.

SUMMARY OF NEWS.

BARON IWASAKI YANOSUKE is the new President of the Bank of Japan.

THE Tenth Imperial Diet will be convoked in Tokyo on the 22nd of December.

THE autumn athletic meeting of the Yokohama Cricket and Athletic Club passed off most suc-

cessfully on Saturday. The attendance was very large.

MARQUIS SAIONJI, ex-Minister of Education, will start for Europe on the 30th inst.

REAR-ADMIRAL OXLEY is now visiting Yokohama with his flagship the *Grafton*.

COUNT ITAGAKI who has been staying at Oiso, returned to the capital on Monday.

RUMOUR says that Viscount Aoki, Minister to Germany, has sent in his resignation.

THE Right Hon. J. Chamberlain has been elected Lord Rector of Glasgow University.

THE Black Death is still prevalent in Formosa and extra sanitary precautions are being taken.

BARON KUSUMOTO will, in all probability, take the late Baron Kawada's seat in the House of Peers.

ADMIRAL DE BEAUMONT, of the French Asiatic Squadron, has left for home by the French mail steamer.

MR. JOHN CAREY HALL has left Yokohama for Kobe to take charge of H.B.M. Consulate at the latter port.

HEAVY snowfalls are reported from Hokkaido and from many of the mountain districts in Central Japan.

MARQUIS ITO is now visiting Kyoto and Osaka; Count Inouye is touring through the Shimono-seki districts.

THE Bachelor's Association of Yokohama gave their first ball this season at the Public Hall on Monday evening.

CAPT. CRAWFORD read an essay on Railroads in the Holy Land before the last meeting of the Yokohama Literary Society.

OWING to an entire absence of wind last Saturday, the final races of the Yokohama Sailing Club had to be postponed for a week.

THE Chrysanthemum Garden-party on Wednesday in Tokyo was the largest function of its kind for many years. The day was brilliantly fine.

THE Committee of the General Hospital, Yokohama, report a good balance in hand of a thousand dollars, at the end of the financial year.

LIEUT.-GENERAL OKU, the new Commandant of the First Army Division, arrived in the capital on Sunday last to take up his new appointment.

CAPTAIN MARITT, of the Norfolk Regiment, has been captured by brigands at Smyrna, and a ransom of ten thousand pounds is demanded.

THE Revised Treaty of Commerce and Navigation between Holland and Japan reached the Foreign Department on Friday. It will be ratified soon.

SPAIN is issuing an internal five per cent. loan of four hundred million pesetas (£16,000,000 sterling), to defray the war expenses in Cuba and the Philippines.

THE *Himeji Maru*, of the N.Y.K., bound to London, ran on to the Bombay Reef of the Paracels on Nov. 3rd. Assistance has gone to her from Hongkong.

MRS. CAREW has been arrested on the charge of murdering her husband, and during the week the preliminary inquiry before the magistrate has taken place in the British Court.

MR. SHIBUSAWA, President of the Tokyo Chamber of Commerce, has sent round a notification

to all the Chambers of Commerce to send delegates to Tokyo to an extraordinary meeting of the Chamber, which is to be opened on the 19th inst.

THE Japanese man-of-war *Chinyen* left Kobe for Yokosuka on the 12th, and the *Amaki* left Yokosuka for Tateyama the same day.

THE Foreign Department will establish next year Japanese Legations in Hawaii, Peru, Brazil, and Siam; and Japanese Consulates at Chicago, Sydney, Antwerp, and Newchwang.

OWING to the sudden illness of his father, Dr. de Fleisch, Austro-Hungarian Consul, has gone home, and the business of the Consulate will be discharged by the Belgian Consul during his absence.

A MEETING of the Railway Conference will be held about the end of this month. During the absence of General Kawakami, the President, General Kodama, Vice-Minister of War, will preside.

THE Chinese Consulate General was reopened in Yokohama on Tuesday. The new Consul-General, accompanied by Mr. McIvor, of the U.S. Consulate-General, has paid his official calls in Yokohama.

THE Reformed Mining Regulations that are to be laid before the next session of the Diet by the Department of Agriculture and Commerce, having been completed, will be submitted to the Legislative Bureau.

SINCE Mr. McKinley's election many factories are working overtime, and the mills reopened are giving employment to one hundred thousand men. There is a greatly increased demand for woollens and clothing.

THE Right Rev. Mandell Creighton, Bishop of Peterborough, has been translated to the Bishopric of London, in place of the Right Hon. and Right Rev. Frederick Temple, the present Archbishop of Canterbury.

DURING the month of October, at Yokohama and Kobe, exports amounted to yen 11,980,000 and imports yen 14,050,000, an increase of yen 2,070,000 in imports. Exported bullion amounted to yen 1,170,000 and imported to yen 660,000, an increase of yen 510,000 in exports.

THE situation, so far as importers are concerned, is still very dreary. Merchants complain of tightness of money and inability to take up consignments, consequently godowns are filling at an accelerated rate. Yarns and Grey Goods are absolutely dead, and only a feeble enquiry is made for Woollens and Fancy Cottons. At the beginning of the week a few parcels of Turkey Reds and Victoria Lawns changed hands, but this demand quickly "petered out." Some activity is anticipated in the near future for Metals, though at present the market is quiet and unchanged. Quotations for Kerosene may be expected to fall next week, in sympathy with the lowering of the Kobe market, and buyers have consequently held aloof this week. A small business has been done in Brown Sugars, the large arrivals depressing prices. White Sugar is very quiet at nominal quotations. Trade in Raw Silk has dwindled very rapidly these past few days, and ere long holders must lower their expectations if they wish to clear any of the large stock now pressing so heavily upon their hands. In Waste Silk a little "boom" has been experienced, a large business being done. In Tea nothing worthy of note has occurred, the stock now being very small. Exchange has not altered much during the week, falling a point at the close.

THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.

The sudden death of the late Baron Kawada, President of the Nippon Ginko, has evoked strong expressions of regret from the vernacular press, journals of all shades of opinion concurring in eulogizing his ability and service. But the appointment of Baron Iwasaki as the deceased's successor is not regarded with universal satisfaction, especially by the Opposition papers. The Liberal organ, indeed, only hints its disapproval, but the *Chuo* opens its leading columns to an economist who is strongly dissatisfied with Baron Iwasaki's nomination. This writer marshals three reasons which, according to his thinking, disqualify Baron Iwasaki for the most important post in the banking system of Japan. In the first place, the Baron is essentially a man of enterprise, and so long as he directs the affairs of the Mitsubishi Firm and is connected with multifarious business, the public can not believe that he will act with strict fairness and integrity as Manager of the Bank of Japan. In the second place, he is inseparably connected with Counts Matsukata, Okuma, and Goto, and that connection may easily prove an obstacle to his administration as a banker. It is true that such a danger might be avoided were the Baron possessed of inflexible firmness and integrity, but the writer doubts whether he is well endowed with those qualities.

The *Shogyo* thinks Baron Iwasaki entirely fitted to succeed to the late Baron Kawada, his wealth, position, and experience constituting ample qualifications for the post. The difficulties now awaiting solution by the President of the Nippon Ginko are of a more arduous character than those that the late Baron Kawada had to encounter when he was first appointed; for, whereas currency troubles still agitate the monetary and economic spheres, as was the case in the time of the late President, the sudden development that Japan's economical affairs have experienced since the termination of the War, require most delicate and cautious procedure on the part of the director of the country's chief financial institution. On the other hand, the mere fact that Baron Iwasaki has accepted this arduous post, although his wealth and position enable him to enjoy a life of ease and luxury, shows that he expects to acquit himself with credit and success.

Several vernacular papers report that as the new President cannot devote his whole time to the Nippon Ginko, a Vice-President will be appointed to assist him, so that he may be required to direct the main affairs of the Bank only. As candidates for this important subordinate post, the names of Mr. Yamamoto, Chief of the Business Department of the Bank; Mr. Sonoda, President of the Specie Bank; and, lastly, Mr. Matsuo, a high official of the Department of Finance, are mentioned.

Another topic that has produced a far more heated controversy between the organs of the Government and of the Opposition is the alleged unsuitability of Count Hijikata for his present post. We shall refer to the matter at greater length in a future issue, but we may mention here that the accusations appeared originally in an *Osaka* periodical, the editor of which is supposed to be patronized by Mr. Takahashi, Chief Secretary of the Cabinet. Our readers must be aware how repeatedly such papers as the *Kokumin*, the *Nippon*, and so forth have penned diatribes against the Minister of the Imperial Household Department, charging him with subservience to Marquis Ito. They seek to persuade the public that one of the main-springs of Marquis Ito's influence is the partiality of the Household Department towards him, and that the connection between the two ought to be completely severed. The present campaign is simply a renewed manifestation of that deeply rooted prejudice on the part of the anti-Ito papers. The *Nichi Nichi* takes the lead in contradicting the charges against the Minister of

the Household and Marquis Ito, and, in common with the *Tokyo Shimbun* and the *Chuo*, charges the *Osaka* periodical and its *Tokyo* supporter, the *Nippon*, with gross disrespect toward the Imperial Court, inasmuch as they represent the Sovereign in the light of a mere puppet in the hands of Count Hijikata. The *Nippon* and its allies, however, maintain that their intention is simply to purge the Household Department of corruption and abuses, and that their attacks against the Minister of the Department, far from reflecting in any way on the Emperor, are dictated by motives of genuine loyalty. The Imperial Court and the Household Department, they say, are distinct and must never be confounded.

The *Fiji* continues to draw the attention of the public to the advisability of increasing the *sake* tax. Our contemporary holds that an addition of 10 *yen* to the rate per *koku* would not inconvenience either producers or consumers to any serious extent. In point of fact, as the extra impost would come from the pockets of consumers, the producers would not be concerned at all so long as due facilities were given in the method of paying the tax. Further, the proposed increase means nothing more than that the price of *sake* would be raised 1 *sen* per *go* (one third of a pint, approximately), a change not at all likely to cause any diminution of consumption. In another article, the same journal advises the Authorities, as a means of protecting the interests of brewers, to abolish the system of domestic brewing. The brewing of *sake* in the houses of wealthy farmers, though a traditional custom of ancient standing, is at present a distinct abuse, for the object of the practice is to furnish *sake* to the servants and dependants of the family. It would of course be a deprivation to these persons did their masters cease to supply them with *sake gratis*, but inasmuch as the home-brewed stuff is always known as *dakushu* (turbid *sake*), they would be satisfied were the tax on the latter reduced, a change advocated by the *Fiji* in a third article.

A point raised by the *Matnichi* in connection with the alleged corruption in the Railway Bureau and prevalence of a vicious habit of gambling among its experts, has evoked an article from the *Nippon*, over the signature of Mr. Miyake Yujiro. The writer argues that if the Government wish to correct these abuses, they must, first of all, impose restraints upon the propensity of Ministers of State to the same practice. The only hope lies in Count Kabayama, the Home-Minister. If that statesman resolves to exert himself for the discontinuance of the habit, he may succeed. In this context Mr. Miyake wishes to go a step further, by introducing a higher standard of morality in the Imperial Household Department, which, being the fountain head of official virtue, must be kept pure and must serve as a perfect model.

The *Shogyo* has a timely article about the anxiety caused by the enormous excess of imports this year, an excess amounting to as much as 50 million *yen*, approximately, up to the end of September. Our contemporary is astonished to learn that the Authorities are contemplating an artificial remedy with the view of checking this commercial tendency and providing against the import of commodities that minister to people's luxurious habits. The remedy is to make the Specie Bank forbear to sell bills payable abroad to import merchants of Yokohama, and to adopt a similar course on the other side in the case of foreign merchants intending to export goods to Japan. If that really be the remedy contemplated by the Authorities, the *Shogyo* has no choice but to condemn it, not only as inefficacious but also as calculated to inflict positive injury on the country. Those that advocate any such measure must be ignorant of the real causes responsible for the present disturbance of the balance of trade. They do not seem to apprehend clearly that the rise in the market prices of commodities in Japan constitutes a potent factor in encouraging imports and that so long as that factor continues to be operative,

imports must exceed exports, whatever artificial measures be devised to check the tendency. The rise in the market prices of commodities has considerably affected the export trade also, for whereas imports, during the first months of the year, show an increase of 35 million *yen* as compared with the corresponding period of the preceding year, exports showed a diminution of no less than 22 millions. The *Shogyo* condemns the scheme attributed to the Government as liable to inflict positive harm on the country, since it would cripple the business of the Specie Bank and inflict loss on consumers of foreign goods. Suppose that the Bank, abandoning its original programme to extend its scope of business abroad, be obliged to refuse banking facilities to foreign merchants who wish to ship goods to Japan, would they give up the idea of shipping? By no means. They would, in that case, ask foreign banks to finance the transactions refused by the Specie Bank, even though a higher rate of exchange were charged by the foreign institutions. In other words, the Specie Bank would be superseded by foreign banks in business between Japan and foreign countries, while consumers in Japan would be obliged to pay out of their own pockets the additional charge that foreign merchants would have to pay to foreign bankers. Altogether, therefore, the remedy attributed to the Authorities deserves condemnation only.

The *Fiji* writes in an appreciative strain about the concessions that Japan has obtained from China in return for relinquishing the free-manufacture clause in the Shimonoseki Treaty. These concessions have been distinctly set forth in a protocol to the new Treaty of Commerce and Navigation between Japan and China. The *Fiji* is specially gratified by the provisions relating exclusively to Japanese settlements in various open ports of China. Some hold that the matter being already covered by the most-favoured-nation clause, the concession on this point does not amount to much. The *Fiji* traverses that idea, and observes that, though in theory such may be the case, in practice there are only two or three large Powers that enjoy any such privilege, all the others having failed to profit by it. Therefore, the concession must be considered a positive and valuable gain to Japan. Further, if it be remembered that China had originally no intention of giving any recompense whatever for the renunciation of the free-manufacture clause by Japan, and if it be also remembered that the matter was carried through in a comparatively short space of time, the Authorities deserve to be emphatically commended.

The *Yomiuri* offers some suggestions for the consideration of the Administrative Reform Committee, especially on the two points of maintaining unity in officialdom and opening the door to men of ability from among the public at large. In order to attain the first object, the Cabinet must work in cordial amity; a distinct line of demarcation must be drawn between Executive and Administrative officials, the former moving with the Cabinet; the latter not meddling in any State affairs outside their direct functions, and being therefore forbidden to combine official duties with legislative business as members of Parliament. In pursuance of this view, the *Yomiuri* opposes the scheme of holding members of Parliament qualified for Administrative posts, a rumour to that effect having been lately circulated. Such a plan would end in making the Diet subservient to the Government. With regard to the nomination of Local Governors, this same paper makes three suggestions; namely, that men identified with any political party must not be allowed to become Governors; that Governors should be considered executive officials and be changed on every occasion of a change of Cabinet; and that, irrespective of party connection, any men of ability should be eligible. The *Yomiuri* urges the last point as the most important.

Mr. Suzuki Jyubi, M.P., one of this most in-

fluential members of the Liberal Party, writing in the last number of the *To-ko*, discusses the present Premier from three different points of view, namely, as a statesman in a limited sense; as a statesman in a general sense; and as a statesman of far-sighted and comprehensive ability. Mr. Suzuki thinks that the Premier, in the period immediately prior to his nomination, gave materials for testing his capacity in all those respects. His announcement that the financial policy of the empire should be reduced in scope furnished the first test; his declaration that the administration must be radically remodelled furnished the second; and his message conveyed to Marquis Ito through Viscount Takashima, when an extraordinary Cabinet Council was held in the ex-Premier's residence at Isarago, just on the eve of the resignation of the Ito Cabinet, that he, Count Matsukata, did not recognize political parties, furnished the third test. Gauged by these three tests, the doings of the Premier since his nomination show that he has forfeited his qualifications for all three characters. He has forfeited his title to statesmanship in a limited sense, because he failed to see that Japan's economy had already developed to an extraordinary degree and that the spirit of enterprise shown since the termination of the war is a proof of that fact. Again, if Count Matsukata really pronounced in favour of drastic administrative reforms, thus posing as a statesman in the general sense of the term, then his action just prior to being gazetted Premier must have dispelled the flattering delusion. For did he not, on that occasion, of his own accord, seek the help of the *Genkun*, the interference of "wire-pullers," and so forth, and patch up a Cabinet in reference to the views of this old statesman or of that. As to his claim to statesmanship of far-sighted and comprehensive ability, it is vitiated by the official interference that he sanctioned at the time of the general elections when he formerly presided over the Cabinet, and by his present relations with the *Shimpo-to*. All these things, according to Mr. Suzuki, show that the Premier can not even claim consistency of view. But it must be confessed that Mr. Suzuki's argument proves, above all things, his own incapacity to rise above the level of a special pleader.

EDITORIAL NOTES.

KOTOBUKICHO POLICE STATION.

AN unpretentious though extremely neat and commodious police-station built on the bungalow plan, has just been opened at Kotobukicho, Yokohama, and placed in charge of Inspector Kawada, a genial and large-minded police official. The station-house has been built partly from Municipal funds, partly by the generous subscriptions of prominent native merchants of the town, Mr. Otani Kahei and others; who, finding the town treasury to be too short of funds to permit of the erection of a first-class station, handsomely came forward and put up the requisite sum. The station stands on the corner of two streets, not far from Yoshihama-bashi, near the creek that runs along by Motomachi, and the front or public office commands a wide view of four thoroughfares. Branching off from this office on one side are sleeping and dining rooms for the accommodation of the sergeants and constables, opposite to which are four cells. These cells are set apart, one for drunkards and other folk detained for the night; one for women; and two for men. They are lofty apartments, wide, and speedily ventilated, far and away superior to the accommodation provided in the Kaga-cho, or Settlement police station, and much neater, higher, and broader than many a station-cell in England. The doors are of the ordinary police-pattern, with spy-hole and aperture for admitting food. On the other side of the bungalow is a visitor's room; inspector's private room; detective's rooms; examination room; and a spacious lecture room where the constables and sergeants gather for instruction. The building covers 263 *tsubo*. Inspection Kawada has three inspectors under him and 56 sergeants and

constables. To give an idea of the extent of his district—in parts one of the poorest in the town—we may mention that its population exceeds 40,000 persons, including that troublesome quarter, the Yoshiwara. Yet for all that his staff is only 59 all told! Fancy such a tiny staff in Europe having to control such a large population. Inspector Kawada, who speaks English fluently, will have much to do with foreigners who may be arrested from time to time and have to wait in the cells until morning before the Consular authorities step in and deal with their cases. They will, we feel sure, receive most generous treatment at his hands. On the fifth instant when the Station was opened, Governor Nakano, Mr. Yoshida, Chief of Police of the Ken, and other officials visited the establishment and deservedly complimented the Inspector-in-charge.

THE PARADISE FISH OF JAPAN.

We take the following from the *Literary Digest*—

The paradise fish of Japan, which builds a nest for its eggs from glutinous bubbles, is now brought to this country and can, according to the *San Francisco Examiner*, be bought at a low price of any fancier in that city. We quote the following description of its habits from *The Scientific American*—

"The habits of these creatures are remarkably interesting, and unlike goldfish they will breed in an aquarium or even in a glass globe. They produce three or four broods of young annually, so that the owner is likely to be able to make money by disposing of the increase.

"The nests they make are very odd indeed, being composed entirely of air-bubbles. When the time for mating arrives the male fish undergoes a striking change in his appearance. Ordinarily he is of a dull, silvery color, but now he exhibits stripes of red, blue, and green, with streaks of brightest orange on the ventral fins. Such is the costume in which he goes a-wooing.

"Later on the female proceeds to construct the family nest at the surface of the water. Swallowing air, she ejects it in the shape of bubbles, which are held and made permanent by glutinous capsules from a secretion in her mouth. Having got together in this way a sufficient mass of bubbles, she proceeds to lay.

"At this stage the female paradise fish seems always to be seized with a strange desire to gobble her own eggs. This she would inevitably do but for the watchfulness of the male, who prevents her, taking the eggs in his mouth and ejecting them beneath the mass of bubbles, to which they rise and find a resting-place among them. Sometimes he will conduct his mate under the nest, so that the eggs as they are laid may ascend to it. When laying is finished he keeps guard over the nest, attacking the female if she comes near. Meanwhile, he busies himself in the making of fresh bubbles to take the place of those which chance to burst.

"This performance is kept up for five days, at the end of which the young are hatched out. They can not swim, but cling like little tadpoles to the bubbles. If one falls to the bottom, as happens now and then, the papa fish takes it in his mouth and disgorges it among the bubbles again. His watchfulness is continued until the little fishes are able to take care of themselves.

"They grow fast in a glass globe or aquarium, attaining a length of three or four inches. They thrive best on chopped angle worms, but raw beef cut fine will serve as a substitute. Apparently they are exclusively carnivorous. Care must be taken not to expose them to cold, which quickly kills them."

A STRANGE CLASSIFICATION.

A BOOKING-CLERK on the Burmese railway, says the *Perak Pioneer*, was recently at his wit's ends as to the goods classifications of a couple of jugglers' snakes. The reptiles were tendered for dispatch up-country and after much diligent search the clerk brought the vermin under "dogs" and booked them accordingly, but the Railway Company have since pointed out that performing snakes may travel under the "perishable articles" classification. This reminds one of the Chinese clerk on the Tientsin line who entered up the charge for a dog as that for one-and-a-half-pieces pig. But still quaintest is the case of the Yokohama resident who, in 1881, despatched a mermaid to America under the description of a "breeding ram."

YOKOHAMA CHAMBER OF COMMERCE PROCEEDINGS.

We have before us the first number of the Yokohama Japanese Chamber of Commerce's Proceedings, published last month. It is a carefully compiled repository of business in-

formation about Yokohama and contains 68 pages. The contents are subdivided into 15 headings, viz., Report of the work undertaken by the Chamber; its proceedings; inquiries that the Government has put to it; commercial, industrial, and economic topics, and so forth. As a proof of the thoroughness of compilation we may mention that the journal contains the outlines of the Monetary System Investigation Committee's Report; "Comparison between Yokohama and Kobe as a commercial outlet," by Mr. Kuwada; "A word to Yokohama People," by the *Kokumin*; translation of the *Japan Mail's* article regarding the Yokohama Situation problem; a speech delivered by Mr. Kaneko, Vice-Minister of Agriculture and Commerce, before the Hakata Chamber of Commerce; and numerous notes either directly or indirectly relating to Yokohama. So far as we can judge, all this matter has appeared in the dailies or periodicals, with the exception of the news of purely local interest. Indeed this is but right, for the chief use of a journal of the kind is to present to its subscribers, namely, the members of the Chamber, in a convenient manner information needed for purposes of reference. It is edited by Mr. H. Iida, late Professor in the Commercial School and now Chief Secretary of the Chamber

THE ARREST OF A CHINESE IN LONDON.

IN reference to the Reuter's telegram describing the illegal arrest of Dr. Sun Yat Sin, by the officials of the Chinese Legation in London, a fuller account appears in Hongkong papers. The telegram there says:—A sensation has been caused in London by a Chinese doctor called Sun Yat Sin, who it is stated has been concerned in a conspiracy in Canton to overthrow the dynasty. It appears that he has been imprisoned since the 11th instant in the Chinese Legation in London. It is reported that he was inveigled thither by the Chinese, and that he has managed to secretly inform his friends of his detention. Detectives are watching the Legation day and night to prevent his clandestine removal to China. Lord Salisbury, in a sharp note, demanded the immediate release of Dr. Sun Yat Sin, whose real name is Sun Wen. In the afternoon, an official of the Chinese Legation handed Dr. Sun Wen over to the Foreign Office, reserving the question of diplomatic rights. The *China Mail* says Dr. Sun Yat Sin was born in Honolulu, his parents having emigrated from the Heungshan district, near Macao. At an early age he came to China, and received the first part of his medical education at Dr. Kerr's Hospital, Canton, and afterwards came to Hongkong and studied at the Hongkong College of Medicine. He afterwards went to Tientsin, and while there addressed a long letter to Li Hung-chang advocating the necessity of reform in China. Returning to Macao, he opened a shop for the sale of foreign drugs, after which he went to Canton and established himself as a doctor. When the unsuccessful attempt at rebellion took place in October, 1895, Dr. Sun Yat Sin was still at Canton. He next came to Hongkong and remained here for about ten days, disappearing afterwards. A short time ago he was reported to be in New York. He is recognised as a very smart Chinaman, and is honestly endeavouring to effect reforms in China.

NIPPON MARINE INSURANCE COMPANY, LTD.

THE Nippon Marine Insurance Company, Limited, of Osaka, has published its balance sheet and statement of account for the term from the 22nd April to the 31st August, 1896, from which we gather that it has assets of \$3,028,160.095. The profit made during the year was \$24,887.481 which it proposes to divide as follows:—transfer to reserve \$1,500; and to special reserve, \$23,000; and to carry to new account \$387.487.

"EN ROUTE."

MONS. L. LEROY and Papillaud, the two French Journalists whose arrival we chronicled last week, have overcome the initial difficulties connected with an edition of *En Route in Japan*. They will bring out a Japan edition in a few weeks, with illustrations by Ogawa, the famous Tokyo photographer.

THE SHIMPO-TO AND THE GOVERNMENT.

The *Shimpo-to* held an extraordinary meeting on the 1st instant, Baron Kusumoto in the chair. It will be remembered that, in a recent issue, we published a translation of the Party's reported programme—a programme of very wide scope. Since then, the document has been reduced to reasonable dimensions by the Party's Standing Committee. Its latest form is this:—

- (1) To establish the reality of Responsible Cabinets.
- (2) To amend the country's foreign policy in the sense of developing the national prestige and interests.
- (3) To adopt the military expansion to the resources of the country.
- (4) To make the development of education, commerce and industry a prime object for the sake of increasing the national strength.
- (5) To secure fuller freedom of speech and public meeting.
- (6) To proceed resolutely with administrative reforms and the elimination of superfluous documents in the conduct of official business.
- (7) To regulate the public finances and bring the revenue and expenditures into equilibrium.

The above headings were embodied in a resolution for submission to the meeting, and the meeting was informed that steps having been taken to lay the document before the Government, the latter had declared their policy to be in general agreement with it. Nevertheless, the resolution was accompanied by the formula constantly affected by the *Shimpo-to*, namely, that if the Administration's acts were found culpable, the Party would be true to its responsibility and would resolutely attack those in power. Truly there is a great deal of farce in all this. The *Shimpo-to* are unquestionably supporters of the Cabinet, and yet they perpetually try to persuade the public that they are watching the Ministers as if they had not the smallest confidence in them. If that is their idea of the way to introduce the party-government system, they cannot have given the matter very serious thought. If a Cabinet is to owe its acquisition and tenure of power to party influence, it must have the genuine support of some party. Did the people at large take their cue from the *Shimpo-to*, they would regard the present Ministers of State as exceedingly slippery, untrustworthy personages, requiring to be carefully scrutinized and rigorously held in the path of well-doing. To say nothing of the silly arrogance of the language employed in the *Shimpo-to's* resolution, their method's are excellently calculated to defeat the prime object they have in view. However, no one present at the meeting took that view of the matter. The resolution was adopted unanimously.

In the afternoon, the regular meeting of the Party was held, and after various reports had been read, the draft of a Representation to the Government was adopted. The Representation will be submitted to the Diet next session. It recommends that legislative action be taken for the protection of labourers; for the regulation of factories; for improving the relations between land-owners and tenants and for encouraging agriculture.

The *Shimpo-to* have also issued a manifesto. It runs as follows:—

It goes without saying that the responsibility of assisting the Sovereign devolves upon the Ministers of State under a Constitutional Monarchy. The Imperial Constitution is explicit on the subject. Nevertheless, to properly conduct administrative affairs and discharge that responsibility fully in practice, it is necessary that the Cabinet should obtain the support of a majority in the Diet. To attempt to dispense with that support is to be thwarted and checked in the work of administration and to fail in the full discharge of the responsibility of assisting the Sovereign. A Cabinet that does not succeed in obtaining the support of a majority in the Diet, has to choose one of three courses: the first is to adopt the views of the majority; the second, to dissolve the House; the third, to resign office. If after dissolution of the Diet the Cabinet still finds itself opposed by a majority in the new Diet, there then remain only two courses to be chosen between, namely, to adopt the views of the majority or to resign. To

act as the Ito Cabinet acted, namely, dissolve the Diet, and then, though still opposed by a majority in the new Diet, to remain in office, is to violate the true principle of constitutional government and to disregard the dictates of political morality. To sum up, the way to discharge the responsibility of assisting the Sovereign, is to obtain the support of a majority in the Diet. If, unfortunately, that support can not be obtained, then one of three courses, adoption, dissolution, or resignation must be chosen. If such choice be made, then the reality of responsible Cabinets is achieved. The Matsukata Cabinet now in power has declared that it will endeavour to secure the support of the Diet; that it will seek to realize the advantages of co-operation between rulers and ruled, and that it will spare no pains to discharge its administrative responsibilities towards the Sovereign. That is to carry into practice the reality of responsible Cabinets, and with such principles our Party's policy is in unison.

INSOLVENT DEBTORS.

Mr. "Ishiu" in Osaka and Mr. "Sawakichi," the proprietors of the Sawa Firm, are the largest insolvent persons in Japan. The case of the former celebrated speculator is the brightest of the two, for his assets are estimated as sufficient to cover his liabilities, which now amount to over 2½ million yen. Mr. "Ishiu" took side with the "Bulls" in the latter part of last year and during the spring of this, and by engrossing the shares of the Sangu Railway Company and cornering rice, succeeded in realizing an immense fortune. But good fortune did not last. While hesitating in disposing of his rice and shares, lest by so doing he might accelerate the fall of the market, both rice and shares entered on the downward path, so that his loss totalled over one million yen. So long as this big speculator was swimming with the tide his credit was extremely good, and he became indebted to various banks in Osaka and Kyoto to the tune of over four millions. A portion of this debt he cleared off by selling rice at more or less loss, but there remains a sum of over 2½ million yen still owing to the banks. However, as these creditors advanced money on shares of various railways and other companies and also on 55,000 *koku* of rice, they had no particular misgiving as to the result of the transaction. In the meantime, economic troubles broke out in Osaka and money became tight especially after two or three banks had collapsed. Some of the creditors of Mr. Ishiu were therefore obliged to press for repayment. The situation became more critical every day, especially as he had to pay over 20,000 yen per mensem in interest. He then disclosed his situation to his creditors and asked them to sell him up if they thought that necessary. The creditors held a secret meeting and ascertained that even at the low quotations then reigning in the stock market, Mr. Ishiu's shares would leave a surplus of about 140,000 yen to the good, and to sell him up might cause serious harm and loss. They decided therefore to hold his shares on mortgage and to sell them off as the market permitted, and in that way to settle the business. The wisdom of this resolution has been borne out by events, for the market that had fallen to a very low level has since risen, so that after they have liquidated all his liabilities, his property, including house and land, is estimated at over 400,000 yen.

The insolvency of the Sawa Firm endangers the existence of the Nippon Weaving Company. The Company held an extraordinary meeting of shareholders in the latter part of last month, to discuss the steps that should be taken at this crisis. The meeting was held behind closed doors, but the *Chuo* has succeeded in obtaining particulars of the proceedings. The chairman declared to the 140 shareholders assembled, that he had discovered a deficiency amounting to no less than 145,360 yen in the books of the Company that a sum of about 58,000 yen had been used in defrauding shareholders by declaring three unearned dividends; and that a sum of about 83,000 yen represented the shares that had actually been subscribed for, and subsequently been used by the Directors in raising money from the banks. Nothing was known as to the exact whereabouts of the ficti-

tious shares. A careful examination of the ledgers, proceeded the chairman, made it clear that the Company stood as creditor to the Sawa Firm to the extent of 117,000 yen. The Sawa Firm had formerly furnished accommodation in the sum of 100,000 yen, but from July last their relations underwent a sudden change and the Firm became indebted to the Company. Moreover, the Company endorsed notes of hand issued by the Firm to the extent of more than 45,000 yen, and as the Firm had been declared insolvent, the Company must now redeem those notes. The Company's loans to the Firm totalled about 163,300 yen. Asked by certain shareholders whether this was all the loss that the Company had incurred in consequence of the imprudence of the Directors, the Chairman, who was himself an auditor, did not give any satisfactory reply. In fact he confessed that only a few days ago two sums, one of 2,500, and the other of 5,000 yen, were discovered missing, the books of the Company giving us clue whatever. It was moved that an adjusting committee should be elected to make a thorough overhaul of actual conditions. The motion was unanimously adopted and a committee of nine was forthwith elected. The future of the Company is still doubtful—whether it will be wound up and dissolved, or whether it will continue in business. The chairman's opinion was that, in order to make good the losses of the Company, shareholders will have to furnish money at the rate of 20 yen per share. The shareholders of Kiryu wished to maintain the Company's business as before, for they argued that more than 600 girls now employed by the Company are all first rate weavers and that were they disengaged it would be impossible to get weavers unless 3,000 girls were newly enlisted.

PRINCE KONOYE ON THE PEERS.

Prince Konoye, President of the House of Peers, has been interviewed by a representative of the *Mainichi*, to whom he spoke about the Peers of Japan in an unreserved manner. Certain special views, observed His Highness, induced him to undertake the task of presiding over the Nobles' School for Boys, an institution that constitutes only a very small part of the scheme of national education in this country. To be more explicit, Prince Konoye said that the mental condition of the Peers was so pitiable that he could not contemplate it without feeling intense dissatisfaction. To speak but the truth, the Peers of to-day were an incarnation of stupidity, meanness, and arrogance; the first especially characterizing Feudal Peers, the second, Court Peers, and the last, Peers of modern creation. All may probably be aware how best to avail themselves of the advantages accruing from their position, but not one is aware of the responsibility and obligations devolving upon them in return. When His Highness returned home from Germany, he was so struck with indignation at what he considered the contemptible aspect of the Peers, that he drew up a memorial on the subject and read it before the Peers' Club. The members turned deaf ears to his earnest remonstrances, and even stigmatized him as a "titled *soshi*." He therefore gave up the hope of bringing about a reformation among the elders and resolved to turn his attention to the rising generation of Nobles. This was his reason for presiding over the affairs of Noble's School for Boys.

THE CONVOCAION OF THE DIET.

On the 7th instant an Imperial Rescript was issued convening the Diet for the 22nd of December. As the Lower House will not have to elect a President and a Vice-Presidents on this occasion, the business of organizing the sections and electing the standing committees will alone have to be concluded before the official opening. Thus the latter will probably take place on the 24th. But as the Houses usually rise on the 25th for the New Year's recess, it may be taken for granted that the real work of the session will not commence until the 11th of January.

THE TREATY BETWEEN JAPAN & GERMANY AND THE QUESTION OF PATENTS.

The views held by Japan and Germany about trade-marks, designs, patent-rights, and so forth as contemplated by the revised Treaty now awaiting ratification by the Sovereigns of the two Powers, are somewhat conflicting, according to the vernacular press. It, observes the *Kokumin*, the construction put by Japan upon the provisions of the revised Treaty be not endorsed by Germany, the effect upon the former's commerce and industry will be very great. Hence it behoves Japanese merchants and producers to be on their guard from this very day. Convinced of the gravity of the issue, the *Kokumin* caused inquiries to be specially prosecuted in Yokohama, and succeeded in obtaining more or less clear information on the points in dispute between the two Governments. The Japanese Authorities are said to maintain that, since German goods thus far imported into Japan have become, as it were, public property, therefore Japan cannot extend to them the same protection as she undertakes, by the new Treaty, to extend to articles of subsequent invention, on account of which special application is made by the inventors. Consequently, imitations hitherto made and sold in Japan will have to be tolerated as before. This contention of the Japanese Authorities applies only to imitations, and these are not numerous at present. In fact, the so-called German imitations now produced by either Japanese or aliens in Japan are, in 8 or 9 cases out of 10, more properly counterfeits, and it would prove very difficult to nicely discriminate between imitations and counterfeits. For instance, beer, condensed milk, iron goods, bearing various brands or trade marks, now imported into Yokohama, are, in great part, counterfeits, and this must be much more the case in Kobe, where the import of such miscellaneous goods is far more abundant than in Yokohama. It is said that the names of the manufacturers of these counterfeits and the places where they are produced, are clearly known to the Japanese merchants transacting business in such goods. Even if the trouble about articles thus far imported into Japan be settled without difficulty, the effect that the revised Treaty—supposing that Japan is obliged to abandon her own interpretation of the provisions in question—will exercise upon the future development of Japanese commerce and industry can not fail to be far reaching. Germany, it ought to be remembered, aims not merely at replacing England in the markets of the Far East, but also at constituting herself a great producing centre for the world. She therefore seeks to compete with Japan in supplying goods to the Orient, and, content with a small margin of profit, employs the newest machines and processes. Thus she will enter into resolute competition with the so-called imitations and will endeavour to divert to herself any custom now possessed by Japan in China and elsewhere. Judging from the fact that many resident merchants now living in the treaty ports contemplate starting one kind of industry or another in the interior so soon as the new Treaties go into force, it is evident that keen rivalry and competition between foreign and Japanese capital must soon develop itself. The Japanese should spare no pains to equip themselves for the struggle. As the provisions in the new Treaty relating to patents, &c., are to go into operation from the day of the ratification, applications for patents by Japanese have suddenly increased to a large extent.

A word may be added in elucidation of the above subject. The privileges as to patents, trade-marks, and designs, secured to German subjects by the Revised Treaties, must, of course, be granted in compliance with Japanese law already in force. The 2nd Article of the Patent Regulations, issued on December 18th, 1888, provides that "patents can not be granted for articles that have been in public use prior to the application for a patent." Hence, if it appears that an article for which a German subject seeks to obtain a patent under the provisions of the

Revised Treaty, has already been in public use in Japan, the desired patent can not be granted. In the case of trade marks, a similar consideration suggests itself. The 2nd Article of the Trade Marks Regulations provides that a trade mark can not be registered if it "closely resembles one already in use by another person for a similar purpose." That appears to cover the case of articles hitherto manufactured in Japan, and offered for sale with imitations of foreign trade marks affixed. We are speaking now of the mere letter of the law. There is also a moral aspect of the question. It can hardly be supposed that the Japanese authorities will consent to sanction any course calculated to encourage counterfeiting, or to exclude from the home market articles of superior quality in order that their place may be taken by inferior imitations. Moreover, in considering the practical nature of the privileges secured by the Revised Treaty, and in applying to them the limitations of Japanese law, the fact that the latter was enacted solely for domestic purposes and without any regard to the international protection of patents, trade marks, and designs, must not be lost sight of. In short, there is evidently a great deal to be considered before a just and generally beneficial conclusion can be reached.

DIFFICULTY IN CONNEXION WITH THE JAPAN-GERMANY TREATY REVISION.

An alleged difficulty in connexion with the Japan-Germany Treaty Revision is made a topic of discussion by several Tokyo journals. The point in question is the jurisdiction relating to the enforcement of the Law of Patents, Trade Marks, and so forth, it being generally understood that the new Treaty contains no provisions on that subject. In order to make the matter plain to our readers before submitting to them the comments of the vernacular press, we may explain that, according to Germany's revised Treaty, German subjects become entitled to protection for their patents, trade marks, and so forth, as provided by Japanese law for Japanese subjects, from the date of the exchange of ratifications. Every law must, of course, contain punitive clauses relating to infractions, and thus the question naturally arises, under what jurisdiction are German subjects to be punished in the event of their violating Japanese patents, trade marks, or designs. Strange to say—we now quote vernacular newspapers—no definite arrangement is included in the Treaty with respect to that question. The omission is variously criticized, the Tokyo journals being guided by their political bias in attempting to fix the responsibility. Those that side with the new Government generally attribute the blunder to the negligence of the late Cabinet and its German Representative, Viscount Aoki, while those opposed to the present Ministry hold the Viscount alone responsible. The latter view seems to be the more generally entertained, inasmuch as even the *Nippon*, which is partial to the Matsukata Cabinet, writes strongly against the Japanese Representative, in Berlin, and alleges that, in charging him with the task of revising the German Treaty, the Tokyo Government instructed him to take the new Anglo-Japanese Treaty as a basis, with liberty to make more or less concessions according to circumstances. But owing to either his misconception or his oversight, the Viscount concluded a Treaty containing no provision whatever as to jurisdiction in the matter of patents, designs, and so forth, thus exposing himself to the charge either of incompetence, or of acting in excess of his powers. From either point of view, it is exceedingly risky to suffer a diplomat of that kind to remain in such an important position, and the new Government, if faithful to the policy it has announced, must take a decisive measure with regard to him.

The *Asahi* alleges that the omission was first discovered after Mr. Komura's appointment as Vice-Minister of the Foreign Office, in succession to Mr. Hara, now Japanese Minister in Soul,

and that when, after a prolonged interchange of telegrams between the Foreign Office and Viscount Aoki, the latter had to approach the German Government on the subject, he received a flat refusal, the German Foreign Minister telling him that the Treaty having been already concluded, and passed by the German Diet, no amendment was now possible. As to conceding jurisdiction to Japanese Courts, that was quite out of the question whether theoretically or practically. The press concludes that Japan must choose between, first submitting to German Consular jurisdiction in matters of patents, designs, and so forth, till the new Treaty actually goes into force; secondly, making a division of jurisdiction, so that questions relating to loss and damage shall be decided by Consular Courts, and those relating to punitive provisions, by Japanese Courts; or thirdly, setting the whole Treaty aside, and commencing negotiations anew. The *Asahi* says that the Representatives of the two Powers signed and sealed the drafts on the 8th of last April, and that the ratification of the Emperor of Japan was obtained on August 26th. The problem will tax the ability of the new Foreign Minister to the utmost.

We (*Japan Mail*) have reason to think that the vernacular newspapers are not fully informed as to the details of this matter, but they are doubtless right about the main fact, namely, that although, under the terms of the revised Treaty with Germany, the privileges accorded by Japanese laws relating to patents, trade marks, and so forth, are to be extended to German subjects immediately after the exchange of ratifications, no provision with reference to jurisdiction has been inserted in the Treaty, nor has any independent arrangement been made on the subject. The Japanese Laws of Patents, Trade Marks, &c., of course contain punitive clauses. For example, any one imitating a patented invention, or employing or selling it, is liable to major confinement for not less than one month and not more than one year, or to a fine of not less than 20 yen and not more than 200. Again, persons fraudulently obtaining patent rights, or applying to unpatented articles patent marks, are liable to major confinement for not less than 15 days and not more than 6 months, or to a fine of not less than 10 yen and not more than 100. There can be no question that every one enjoying the privileges of a law is bound to obey its prohibitions, and that means of compelling obedience must be employable against him. But suppose that, in the interval between the exchange of the ratifications of the German Revised Treaty and the date (1899) when Japan recovers judicial autonomy, during which interval German subjects will be entitled to claim for their patents, trade marks, &c., all the protection afforded by Japanese laws—suppose that in that interval a German is guilty of one of the infractions prohibited by the Japanese laws, how is he to be punished or restrained? Japanese tribunals cannot assume jurisdiction over him, and the German Consular Courts are not competent to do so unless special powers are delegated to them by the German Government. From a practical point of view, we cannot think that the question has any serious importance. The Laws of Patents, Trade Marks, &c., came into force 8 years ago. There has not been, so far as we know, a single instance of an attempt on the part of a German subject to violate their provisions, though any foreigner might have violated them with impunity, his offence not being judiciable by Japanese Courts nor falling within the purview of a Consular Court. There is, therefore, little reason to apprehend anything of the kind in the two years and a half that remain before Japan's recovery of judicial autonomy, and even if infractions do occur, their punishment or restraint might be deferred without much inconvenience or hardship. Still that is a somewhat happy-go-lucky view of the matter—a consolation for, but not a justification of, the negotiators' failure to make such an obviously necessary provision. It appears to us that the responsibility rests with Germany just as much as with Japan. If the German Government secures certain privileges for its subjects by treaty, it is bound to provide

means for guarding against the abuse of those privileges. German officials are about the last people on whose part we should have anticipated an omission of the kind.

THE LATE BARON KAWADA.

Baron Kawada, whose decease has just been announced, was only in his sixty-first year. He was a native of Tosa, and during the greater part of his career he devoted himself to mercantile, marine, and mining enterprises, in co-operation with the late Mr. Iwasaki Yataro, founder of the Mitsu Bishi firm. He seems to have been uniformly successful, and his business and financial capacities were so fully recognised that, in 1889, the Government appointed him President of the Bank of Japan. In the following year he was nominated a member of the House of Peers, and in consideration of the distinguished financial services rendered by him during the war with China, he was raised to the peerage, in 1895, with the title of Baron. There can be no question that his country owes him a great debt of gratitude for his work as a financier.

BARON KAWADA'S SERVICES.

The *Nichi Nichi* has a very appreciative article upon the services rendered to Japan by the late Baron Kawada, President of the Nippon Ginko. Apart from the conspicuous aid given by him during the China-Japan War, he wrought a complete revolution in the banking methods of this country. The old policy of placing the agricultural interest above all others in the State was gradually abandoned under his discreet supervision, and commerce and industry were given a fair chance to develop, so that the nation's attention was drawn to more varied and profitable channels of investment. Long prior to Baron Kawada's being installed at the head of the Bank of Japan, Count Matsukata realised the pressing necessity of affording greater facilities to Japanese merchants engaged in foreign trade, and he advised the Nippon Ginko to advance a loan of 10 million yen to the Yokohama Specie Bank, at the low interest of 2 per cent. per annum, so that the merchants at that port might obtain the financial backing so necessary in conducting transactions with foreign countries. Mr. Tomita Ginnosuke, the then President of the Nippon Ginko, thought that the advancing of such a large sum at so low a rate would not be conducive to the interests of the Bank which was, after all, a business concern, and had but a capital of 30 million yen. Count Matsukata pressed the point; Mr. Tomita resigned, and was succeeded by the late Baron, who was in thorough accord with the policy of the Finance Minister. He held that as Japan based its national economy on agriculture, the country was exceedingly liable to experience a financial panic whenever the rice crop failed. Under such circumstances a fixed, definite economic policy was out of the question and the development of other national resources entirely precluded. Baron Kawada, arguing on this hypothesis, urged that the old agricultural policy be changed and steps taken towards encouraging industry and commerce. He thereupon advanced 10 million yen to the Specie Bank. From that day on to the time of his death Baron Kawada pursued this policy consistently, and already the beneficial results of his changes are noticeable.

In 1890 a panic of small dimensions broke out in Japan, due to the failure of the rice crop and the excess of imports over exports. Chiefly owing to the judicious and prompt help of the President of the Bank of Japan, the nation was saved on that occasion from still greater calamity. Even when the Specie Reserves fell from 60 million yen to less than 40 millions, he extended help to the Mitsui and the 1st National Bank, while at the same time he maintained the value of the hypotheated stocks and bonds, thus affording a considerable boon to merchants and manufacturers. Moreover, he took steps to help the silk men out of their difficulty. Another of his aims was to unify the currency system and regulate the rate of interest. To attain the former he extended every possible help to the

National Banks in the matter of redeeming their notes, while he increased the number of branch offices of the Nippon Ginko in various important districts. Formerly, Bankers used to act as mere exchange-brokers between the Bank of Japan and the general public, advancing the money they obtained cheaply from the Nippon Ginko at a slightly higher rate to their customers. Such dealings have practically gone out of fashion now, and the tone of banking business has reached a more elevated level. Both phenomena increase, to no small extent, the credit of the late Baron. The economic reverses sustained by Japan this year are far more serious than those experienced in 1890; for while the failure of the rice crop is in about the same proportion, the excess of imports over exports totalled only 20 millions in 1890 and the stock of unsold silk about 15,000 bales. This year more than 30,000 bales were recently waiting purchasers, while the excess of imports amounted to over 50 million. This business stagnation, combined with seismic troubles and vast inundations, make a record year for Japan. Yet no perceptible economic trouble approaching that experienced in 1890 has so far been felt. The *Nichi Nichi* attributes this stability to the increase of the national wealth; combined with the effects of the late financier's policy in encouraging the development of Japan's commerce and industry. He was not contented with making the Nippon Ginko a central mechanism for this country, but aspired to raise it to the position of the central banking institution of the East. The nation keenly deploras his untimely cutting down at the height of a useful career.

BARON KAWADA'S SUCCESSOR.

The *Fiji Shimpō* thinks that a President of the Bank of Japan, in succession to the late Baron Kawada, will be chosen from among the following gentlemen, the names being given in the order of probability:—Viscount Watanabe, formerly Minister of State for Finance; Mr. Sonoda Kokichi, President of the Specie Bank; Mr. Shibusawa Eiichi, President of the First National Bank; Mr. Shoda Heigoro, Manager of the Mitsubishi Kwaisha; and Mr. Hara Rokuro, Chairman of the Imperial Commercial and Agricultural Society. Count Inouye, Messrs. Kawashima Jun, Ninomura Risuke and Morioka Shoji are also spoken of, but, on the whole, it is thought that Viscount Watanabe would be best adapted to the circumstances of the time.

CURRENT NEWS.

Cholera has spread considerably in Tokyo since the 20th ult., the cases totalling 84 up to the 30th ult. The symptoms are said to be very acute, and the proportion of mortality equally serious. The Governor of Tokyo asked Dr. Kitazato, on the 30th, to take charge of the Cholera Hospital at Hongo, a request that the Doctor decided to accede to at once. The Doctor, accompanied by an assistant, is now treating patients and injecting the blood-serum that he discovered to be so efficacious last year in combatting this epidemic. The renowned bacteriologist has effected a considerable improvement in the process, and it is therefore believed that he will be able to combat the epidemic with success.

Marquis Ito returned to Tokyo to be present at the Emperor's Birthday celebration. Some say that His Excellency, accompanied by Baron Suyematsu, his son-in-law, will shortly undertake a tour through Europe and America. Marquis Saionji will start on a similar journey about the end of this month.

The site of the Imperial Iron Foundry has been chosen at Yedamitsu, Oga District, Fukuoka. According to the original project, it was to extend over only 100,000 *tsubo* of land, but subsequently this was considered insufficient.

The Government intends to lay a submarine cable between Kyushiu and Shikoku. The cable will be laid under the Saga Sea and will connect Iyo and Buzen, a distance of 23 nautical miles. Exclusive of the travelling expense of experts, the expenses are estimated at about 43,000 yen.

RAILWAY NEWS.

In pursuance of the resolution to double the Tokaido Trunk Line, the work is now being carried out on the Kanagawa-Kozu and Iwabuchi-Shizuoka sections. The Atsuta-Nagoya section will also be taken in hand shortly. The steep gradient of the Tarai-Nagaoka section being highly inconvenient, the Railway Authorities have decided to abandon the present track in favour of a route offering greater topographical facilities. The gradient, now 1 in 40, is to be reduced to 1 in 100, surveys for the purpose being nearly completed. Another tunnel on the left of that passing through Osakayama on the Otani-Bamba section, is also in course of construction. The building of an iron bridge over the Kakegawa on the Kyoto-Mukomachi section has been started, and the Mokomachi Station is to be reconstructed. The Osaka and Kobe Stations also require alterations; the former must be enlarged to three times its present size, and the latter wants special arrangements by which the trains from the Government and the Sanyo roads can effect a direct junction without the passengers being obliged to alight, as at present.

Of the nine lines that the Government originally determined to construct, the Kyoto-Matsuru and the Takata-Wakayama roads, having been left to private enterprise, only seven remain to be built by the State. Of the O-U line, the Aomori-Ikarigasaki section (35 miles) has already been opened for traffic. The tunnelling at Yatategote and Itayetoge is the most serious work on the O-U road, but the boring is now in process at both places. Hitherto the highest gradient on Japanese railways has been 1 in 40, but that at Itaya is said to be 1 in 30.

On the Tsuruga-Fukui section of the Hoku-riku Line, 13 tunnels had to be constructed before it was opened for traffic in July last. At present the tunnelling of the Ushidani and Kurikara passes on the Fukui-Daishoji section, is going on, the former being about eighth parts complete, but the latter having been started only a short time ago. It was originally contemplated to finish the construction of this line during the present year, but unexpected difficulties have been encountered, so that the Authorities will be obliged to ask for an additional appropriation of over 2 million yen in the next session of the Diet. The completion of the line will be delayed by one year.

The difficulty of constructing the Central Line, that is to say, the line starting from Hachioji and reaching Nagoya via Kofu and Shimono-suwa, is expected to be not only unprecedented in Japan, but even comparable with the most arduous enterprises of the kind in any country. Still, the line is essential, not merely from a military standpoint, but also for promoting the prosperity of Kai and other places adjacent to the contemplated route. Between Hachioji and Kofu, a distance of about 45 miles, the district is extremely hilly, and tunnels must be constructed at more than 10 places, the longest being over 3 miles. Work will be started shortly on the Hachioji-Kobotoke section. The Shinoi line, a branch of this railway, will be finished by the next fiscal year.

RAILWAY ENTERPRISE.

The policy of the present Cabinet with regard to private railway enterprise has not been publicly declared, but, according to the vernacular press, although charters will be granted, as far as possible, to railways of national importance, or railways apparently destined to be the beginnings of national routes, or railways promising a large return for a small outlay, rigorous inquiries will invariably be instituted into the capacity of applicants to discharge their obligations, and whenever the result of such investigations is not completely satisfactory, the application will be rejected. Judging by that standard, it is expected that among the lines for which charters have been sought but not yet granted—lines involving a total capital of four hundred million yen—not more than one fourth will obtain sanction.

TROUBLE AT THE NARA HIGH SCHOOL.

The Nara High School, supported by the American Board Mission, has suffered from the same trouble that overtook the Doshisha. About ten years ago, the school commenced a somewhat checkered existence, until in 1893, the number of students had diminished to fourteen. Mr. Kawamura Kyuen, a graduate of the Sapporo Agricultural College, then became Director, and, as a step towards making the institution more prosperous, a resolution was adopted to change it into an ordinary High School under the supervision of the Local Authorities. One of the most radical alterations that this remodeling involved was the elimination of regular religious teaching in the school; an unavoidable change, of course. To meet the need thus created, those interested in the Christian influence that the School was originally intended to exercise, resolved to start a Young Men's Christian Association in Nara, where the doctrines of Christianity might be taught to youths. The change in the character of the School was hailed with much satisfaction by the citizens of Nara and its vicinity, for that town had no institution where middle-class instruction could be obtained. Mr. Kawamura enjoyed special facilities for persuading the people of the district to send their boys to the School, since he held, at the same time, the post of overseer of the Local Experimental Farm and advisory agricultural expert to the Local Office. Whenever he happened to make an official tour through the provinces, he could scarcely fail to exert his influence towards promoting the prosperity of the school. Thus the attendance steadily increased, so that within the short lapse of only two years, the number of students rose to about 200, the institution thus becoming the largest of its kind in Japan, after the Doshisha itself. This rapid increase of pupils called for enlarged accommodation. An appeal was accordingly made to eminent philanthropists in America, and, of course, the evident prosperity enjoyed by the school added much force to the appeal, so that a fund of about 20,000 yen was collected. The school buildings were forthwith reconstructed, and everything seemed to be going on excellently. Meanwhile, the Board of Trustees began to feel some misgivings as to whether the school was fulfilling its true mission, and they certainly seem to have had cause for their anxiety, seeing that the school, though in practice a purely secular institution, was supported by the American Mission Board to the extent of about 3,000 yen per annum. It is true that lectures were regularly delivered at the Young Men's Christian Association every Saturday, and that some 30 pupils made a habit of attending, the Director and two or three others also, who were Christians, being invariably present. But the number of converts was quite insignificant, only four or five being enrolled in the course of two years. The Trustees doubtless felt much dissatisfaction about this exceedingly slow attainment of the real purpose of the school. Under such circumstances, a small incident often suffices to precipitate a crisis. The students, in the course of a recent excursion, visited a shrine dedicated to the "Tutelary God" of the District, and all the lads, as well as their teachers, uncovered their heads and paid respect to the shrine in the usual Japanese fashion. The Trustees thereupon asked for a distinct explanation of an act that they considered pure idolatry, and difficulties at once occurred between them and the Director. The latter, learning that the Trustees contemplated his dismissal, tendered his resignation, in conjunction with six others, out of the total staff of nine, and they were at once relieved from service. The pupils were much incensed when they heard of the affair. They memorialized the Trustees, urging the retention of the Director and the teachers, but the Trustees rejected the petition, whereat the lads broke out into open insubordination, smashed the windows of the school and broke the furniture in broad daylight. It was only after the help of the police had been obtained that

the riotous youths could be compelled to desist from their work of destruction.

We (*Japan Mail*) do not, of course, vouch for the absolute accuracy of these statements: we have taken them from the vernacular press, and from the information of one that was directly involved in the trouble. The Trustees doubtless have much to say in justification of their proceedings. This fact stands out clearly, however, namely, that another educational institution supported by a foreign mission board has followed in the wake of the Doshisha and failed of its original purpose. To our own thinking, the root of the trouble is traceable to the conflict of views between foreign orthodox believers and Japanese Christians, the latter maintaining that Christianity, to be prosperous in Japan, must be adapted to the circumstances of the country, and the former not readily acquiescing in that opinion. Many Japanese thinkers consider it erroneous to establish a secular institution of such a kind as the Nara School in Japan. If a foreign mission board is prepared to spend money in Japan for the purpose of giving education and propagating Christian doctrine at the same time, the best plan, these Japanese hold, is to establish a *bona fide* religious school and be content with a small number of students only; whereas, if there be an inclination to take a more liberal course and to maintain a purely secular institution, the supporters of the institution must exercise great patience, and not take much thought about the number of converts. A secular school conducted in a truly Christian spirit, though it might not succeed in winning many converts in a short space of time, could not fail to instill, little by little, the beneficent doctrines of the Nazarene's creed, and to turn out really useful men. Witness how the majority of the Doshisha graduates, though not all Christian converts, are noted for their industry and for conduct superior to that of students in other schools or colleges.

ECONOMIC TOPICS.

Baron Iwasaki, who purchased the Sado and Ikuno mines and the Smelting-works at Osaka for 1,730,000 yen, paid over, a few days ago, in Government Bonds, a sum of 1,577,000 yen, the remainder being covered by other securities deposited at the time of bidding. The plant and fixtures of the mines and works were purchased for something like 800,000 yen. The Mitsubishi Firm, as a result of this new acquisition, has decided to reestablish a special mining department, and to appoint Mr. Nambu Kyugo, hitherto chief expert of the Takashima Colliery, as director.

The Osaka Silk Spinning Mill has decided to dissolve. The Mill was established last year, and called in the security deposit of one yen per share, amounting to 20,000. Now recent economic troubles in Osaka and the extraordinary tightness in the market left no choice but dissolution. The opinions of the directors were endorsed by the shareholders, who find they have incurred a loss of 23 yen per yen share in the venture.

The *Yiji's* correspondent writing from Osaka, under date 30th ult., says that a small sum seems sufficient to tide over the present economic trouble. In fact, up to the time of writing, the loan asked from the Nippon Ginko is only 400,000 yen or so. This is owing to the creditor banks deeming it prudent not to urge other banks to make immediate repayment. The President of the Nippon Ginko has gone to Osaka, but it is not yet clear what step he will take in this matter.

The vernacular papers report that pecuniary trouble has occurred among certain wholesale dealers in foreign liquors in Tokyo, especially the Kansendo (Takiguchi Tojiro), of Kayabacho, and the Ibe Firm, of Bakurocho. These used to transact business on notes of hand which the Commercial Bank usually discounted. But since the insolvency of the Sawa Firm and the precautions consequently observed by banks in the matter of discounting bills, the Commercial Bank has declined to accept the paper of the

two merchants, and this has at once interrupted their business operations. The Kansendo, unable to satisfy the demands of its creditors, has placed its affairs in the latter's hands, delivering over all its property. Its liabilities and assets are estimated at about 100,000 yen each. This insolvency of one of the greatest wholesale dealers in foreign liquors in Tokyo has produced a species of panic in Tokyo and Yokohama in this line of business.

The last act of the late President of the Nippon Ginko was to help the Osaka Bankers out of their financial difficulty. Although, among the original seven applicants, the First National Bank subsequently declined to hold with the rest in this money affair, and was dismissed on that account from the Osaka Bankers' Union, the Nippon Ginko consented to make an advance as originally promised by Mr. Kawakami, and the fact was definitely announced on the 9th inst. Tranquillity will therefore be restored in the Osaka market in consequence of the liberal policy of the late Baron Kawada.

The Special Committee appointed by the shareholders of the Nippon Weaving Company to investigate the state of the Company's affairs in Kiryu have discovered another new liability of the Company amounting to 10,000 yen. In other respects the result of the Committee's investigation tallies with the statement recently formulated by the Directors of the Company. The Committee, according to the *Yiji*, are anxious to keep the Company in existence, for the loss sustained by this, the greatest weaving company in Japan, is attributable to want of skill on the part of the weavers and also to the irregular management of the Directors. The latter defect can be easily provided against in future, and as for the weavers, they have now developed so much ability that the fabrics turned out by the Company's looms are steadily gaining favour in the market. Even at present, despite the general depression that prevails in Kiryu in consequence of the troubles that have overtaken the Sawa Firm and the Company, the latter's manufactures are sold to the extent of over 6,000 yen, whenever a market is held there, namely, six times a month. In ordinary times, therefore, it must be very easy to effect sales amounting to 10,000 yen on the occasion of a market, or 60,000 yen a month, and a profit of at least ten per cent. must be realized on these transactions, it would evidently be unwise to abandon a business that has been brought to such a condition. The Company's debts aggregate 250,000 yen, which amount will have to be made good by the shareholders.

COMPETITION FOR THE SUPPLY OF RAILWAY MATERIAL.

We read in the *Chuo* that very keen competition recently took place in connection with the supply of certain material for the Railway Bureau. The articles to be furnished were passenger carriages and goods waggons to the number of 850 in all. Tenders were invited from foreign and Japanese firms, and were sent in on the 5th instant. But as none of them was within the official figure, fresh tenders were invited, the result, as ascertained on the 6th instant, being:—

The Mitsui Bussan Kaisha	£43,300 18s. 2d.
Messrs. Sale & Co.	£43,522 — —
Mr. Isono	£48,067 — —

That was certainly very close bidding. Our contemporary says that since the system of competitive tenders was inaugurated at the Railway Bureau a great saving of money has been effected.

COUNTLESS OKUMA'S RECEPTIONS.

We are asked to state that Countess Okuma will receive, for the present, on Fridays, in the second and fourth week of every month, commencing on the 13th instant, between the hours of 3 and 5.30 in the afternoon.

NEW RAILWAY CONSTRUCTION IN THE VICINITY OF TOKYO.

The Tsuchiura and Sumidagawa lines of the Nippon Railway have been nearly completed and will be open for traffic about the middle of next month. The former starts from Miwa in the Minami Toshima-gun suburb of Tokyo, and reaches Tsuchiura via Kaganei and Totte, a distance of 60 miles; the latter is laid between the Tabata Station on the Nippon Railway and Minami Senju, a distance of three miles. The Sumidagawa line passing through the streets of Senju requires a large number of bridges, as many as 14, three of which are constructed at sites included in the scheme of the Tokyo City improvement, and are therefore of a special style, introduced for the first time in Japanese railways. This short line is intended chiefly to facilitate goods traffic, the central depot at the Akawagahara terminus being limited in space and totally unfit for the handling of goods on an extensive scale. Consequently, the Company has constructed a new depot, covering 100,000 *tsudo* (8 acres approximately), at Minami Senju, which will subsequently be used as a centre for collecting goods before despatching them to their respective destinations. A canal, measuring 400 yards by 60, has been excavated from the Station to the river Sumida, so that junks plying in Tokyo Bay will be able to come direct to the Station.

The most noteworthy feature in the Tsuchiura line is the abundance of bridges. Setting out from the terminus at Minowa, the traveller finds, at a little distance from the Senju Bridge, a massive iron structure, with a total span of 1,600 ft., crossing the river Sumida. It is said that the design of this iron bridge is an engineering novelty in Japan. Proceeding farther the line crosses bridges over the rivers, Ayase, Nakagawa, and Yedo, and before reaching Tsuchiura several other bridges are found. This line is intended to carry both passengers and goods, prominent among the latter being coal extracted in Iwaki Province. The mineral is not of good quality, but the gradual rise in the market price of fuel of all kinds in Tokyo owing to an extraordinary increase in the number of factories, renders it probable that the importation of cheap Iwaki coal will be welcomed by the citizens.

Incidental mention may be made of two items of railway news, one relating to Hokkaido and the other to the vexed problem of the Sôul-Fusan Railway. According to the original programme for the northern island, the three lines from Kamikawa as centre to Soya and to Nemuro, and from the latter to Abashiri, were to be constructed in 6 years, the total length of the three being 560 miles. But the Government has now decided to extend the work to 12 years. As for the Sôul-Fusan line, its prospects, recently so gloomy, are said to be now quite hopeful.

THE ADMINISTRATIVE INVESTIGATION SPECIAL COMMITTEE.

Count Okuma, in his speech to the Administrative Investigation Special Committee, pointed out that the Council's functions would extend to recommending the establishment of new Departments, Bureaux or Sections, or the abolition or amalgamation of those already existing, should such measures seem calculated to promote administrative convenience. The *Tokyo Shimpô* says that, as outlined by His Excellency's remarks, the following questions will be debated by the Committee:—

- 1.—Whether Administrative Vice-Ministers of State should be appointed.
- 2.—Whether the office of Chief of Metropolitan Police should be abolished.
- 3.—Whether the Railway Council should be preserved or abolished.
- 4.—Whether the Colonization Department should be preserved or abolished.
- 5.—Whether amendment of the Law of Examination of Officials should be undertaken.
- 6.—Whether Secretaries and Councillors should be abolished.

THE ALLEGED POLICE OUTRAGE IN KOBE.

We observe that a paragraph published by the *Yorodsu Chôhō* on the 5th instant has received much attention from our local contemporaries. The paragraph refers to an act of brutality said to have been perpetrated by four Kobe constables who, having arrested a girl of 18 on suspicion of leading a life of unlicensed ill-fame, subjected her at the close of her magisterial examination to cruel and humiliating treatment, and then released her at the dead of night. Presumably the story comes from the girl or her friends. It sounds very improbable, for the constables supposed to have behaved with such gratuitous and mischievous cruelty, must have known perfectly well that the act could at any moment be brought home to them, and the knowledge ought to have restrained them, even supposing that their sense of duty and manhood were entirely inactive. Certainly all must agree with the comment of our local English contemporaries that either the story should be officially contradicted, or, if the facts be correct, the constables should be severely punished. But it surprises us to read in the *Japan Gazette* these words:—

But assuming the story to be false, as we must without further corroboration, we are confronted with the fact that a paper published in the metropolis of Japan, and having a large circulation, prints the statement as if it were a common occurrence. We do not suppose that under the new Treaty many foreigners will find themselves in the hands of the police. But some of them will, even as some find themselves before a Consul, and, if we are to take the average Japanese opinion on the subject, such prisoners will be liable to have barbarities practised on them that could never have been contemplated when the Treaty was negotiated. The prospect is unpleasant enough in anticipating the clumsy administering of new codes by unskilled judges, but if to this we must add the torture of suspects and prisoners, there is still more reason to regard the future with apprehension.

It will be observed that our contemporary, while avowedly unable to believe so strange a tale without further corroboration, is nevertheless much perturbed by the fact that it is "printed as if it were a common occurrence" by "a newspaper published in the metropolis of Japan and having a large circulation;" and further proceeds to infer from the attitude of the *Yorodsu Chôhō* that, according to "the average Japanese opinion on the subject, prisoners are liable to have barbarities practised on them." All this sensational writing on the part of the *Japan Gazette* is attributable to that very common source of foreign error, ignorance of the Japanese language, and inability to read a vernacular newspaper. So far from being "printed as if it were a common occurrence," the paragraph in the *Yorodsu Chôhō* is entitled "*Kikwai no Yunsa*" (extraordinary policemen), and closes with the words *Kikwai shigoku to wa Korera wo iu nari* (talk of the acme of what is extraordinary, this is a case in point). It thus appears that the *Japan Gazette* regards as an expression of "average Japanese opinion," a statement headed "extraordinary" and dismissed as "the acme of what is extraordinary" by the Japanese journal that publishes it. Shall we be deemed hypercritical if we suggest that before deducing the habits of Japanese thought from the methods of a vernacular journal, the *Japan Gazette* should make some attempt to obtain information about those methods, so as to avoid the somewhat unfortunate error of describing them in a light diametrically opposite of the truth? Suppose that the *Japan Gazette*, having entitled one of its pieces of intelligence "extraordinary," and designated it as "the acme of what is extraordinary," found itself declared by a Japanese newspaper to have "printed the intelligence as if it were a common occurrence," would not our contemporary feel justified in denouncing Japanese untruthfulness and unfairness in pretty strong language? If the Kobe tale has any foundation in fact, the four constables merit a sound flogging; but that is not the question here. What concerns us is the *Japan Gazette's* attempt to create a prejudice against Japanese police methods, and to inspire alarm about the terrors of submission to Japanese jurisdiction, by a totally false rendering of a vernacular journal's attitude. The fact is again forced upon our attention that the natural ob-

jection of the foreign residents to lose the privileges of their own national jurisdiction is brought into perpetual ridicule by advocates so giddy and reckless as the *Japan Gazette*.

BACHELORS' BALL IN YOKOHAMA.

The Bachelors Dance Association of Yokohama gave the first of their usual series of balls for the season in the Public Hall on Monday, the 10th instant. The decorations, though not profuse, were very effective; the floor was in capital order; the number of guests was just sufficient to ensure spirited dancing without overcrowding, and the arrangements as to refreshments, supper, and so forth were quite beyond criticism. Dancing was kept up until past two o'clock to the music of the Town Band. The following was the programme, to which were added two extras:—

- | | |
|----------------|------------------|
| 1.—Waltz. | 9.—Polka. |
| 2.—Waltz. | 10.—Lancers. |
| 3.—Lancers. | 11.—Waltz. |
| 4.—Waltz. | 12.—Caledonians. |
| 5.—In the Bar. | 13.—Waltz. |
| 6.—Waltz. | 14.—Schottische. |
| 7.—Polka. | 15.—Waltz. |
| 8.—Waltz. | 16.—Waltz. |

RUMOURD ABOLITION OF THREE DEPARTMENTS.

From the *Mainichi Shimbun*, which must now be credited with access to excellent sources of information, we learn that it is in contemplation to abolish no less than three of the present Departments of State. The first is the Department of Education, which would be replaced by an Educational Bureau in the Home Department. The second is the Department of Justice, whose functions would be discharged by a bureau in the Cabinet. And the third is the Department of Colonization, among the duties of which there is none that might not be delegated to Governors-General in Formosa and Hokkaido. What amount of economy would be effected by these changes, we are not told.

THE POPULATION OF JAPAN.

The *Official Gazette* contains a statement of the population of Japan at the close of last year:—

Number of Habitations	7,935,969
Total Population	42,279,620
Males	21,345,750
Females	20,924,870
Nobles (<i>Kwasoku</i>)	4,162
Former Samurai (<i>Shisoku</i>)	2,050,145
Commoners (<i>Heimin</i>)	40,216,314
Foundlings	4,242
Unregistered (in prison)	1,319

Compared with the preceding year, these figures show increases of 51,700 houses and 457,405 persons.

THE BANK OF JAPAN UNDER BARON IWASAKI.

The *Fiji Shimpô* says that there will be no change in the policy of the Bank of Japan under the presidency of Baron Iwasaki. His appointment is expected only to have the effect of improving the Bank's relations with the business world, and enhancing its credit abroad, for the Iwasaki family in well known in foreign countries. We consider this forecast very reasonable in view of Baron Iwasaki's career.

THE "HIMEJI MARU" ASHORE.

The Yokohama Agency of the Nippon Yusen Kaisha have informed us that the Nippon Yusen Kaisha's steamer *Himeji Maru*, Captain Tipple, hence for London, on October 17th, went ashore on the eastern end of the Bombay Reef, Paracels Islands, about the 3rd of November. The steamer *Siegfried*, with gear and coolies, and an European Superintendent from the Hongkong Dock, left Hongkong on Sunday to render assistance.

THE CASSINI CONVENTION.

THE so-called "Cassini Convention" has now gone the round of the local English press in the various Settlements in China and Japan, and we find, to our astonishment, that its authenticity is everywhere accepted without cavil. For our own part, our chief sentiment with regard to it is one of speculation as to the means employed for manufacturing these bogus documents and securing their solemn insertion in the columns of the leading Shanghai journal. Were the world a hundred years younger, there might be warrant for imagining that some Russo-phobe agency was secretly working to persuade the Chinese people that they are in imminent danger of being handed over, bag and baggage, to the tender mercies of the great Northern Bear. Such an agency might be credited with exercising its ingenuity in British interests—did Englishmen resort to any methods of the kind, which they don't—or it might be supposed to aim at rousing national ire against the temporizing, disloyal, and suicidal policy of the Manchu Dynasty. But these hypotheses need not concern us. The "Convention" itself is a more interesting study. Many months ago a "secret treaty," said to have been just concluded between Russia and China, was given to the public by the same journal. We ventured, at the time, to characterise the document as a clumsy hoax, and, of course, our opinion was vehemently traversed by sensational journalists. Yet we venture now to apply the same term to this "Cassini Convention," and we base our opinion on evidence furnished by the document itself. In the first place, we find, omitting minute details, that the Siberian Railway is to be carried southward via Aiyun, Tsitsihar, Petune, Kirin, and Hunch'un to Vladivostock. In other words, an extensive portion of Russia's main line of communications with her Far Eastern possessions is to pass through Chinese territory. There is nothing inherently improbable in that choice of route. On the contrary, it has long been supposed that some such deflection of the Siberian road would be acceptable to Russia from engineering and economical reasons alike. But of course the districts traversed by the line must be either neutralized or permanently secured to Russia. One or other of those courses is essential. Russia could not possibly accept the risks inseparable from the programme attributed to her, namely, leaving her railway communications at the mercy of a Power capable of becoming hostile to her at any moment. Yet, so far from permanently neutralizing or securing the territory, she is actually represented as promising to sell this loop of her railway to China, after the expiration of 30 years, should the latter Power desire to purchase it. Is that credible? Doubtless some critics will assert

that Russia does not foresee the least probability of China's desiring to buy the line at the expiration of 30 years. But are they prepared to go the length of alleging that a great Power like Russia has deliberately entered into an agreement on the chance that circumstances may relieve her from the obligation of observing it? Passing over the promise that, in the event of China's finding it inconvenient to extend her Tientsin-Shanhaikuan Railway to Mukden and Kirin, Russia shall be permitted to undertake the work—a totally meaningless promise as it stands, since no limit of time is fixed—we come to the condition that, inasmuch as the lines to be built by Russia in Chinese territory "will pass, for the greater part, through barren and sparsely inhabited districts where it will be difficult for the Chinese Authorities to grant the necessary protection and aid," therefore "Russia shall be allowed to place special battalions of horse and foot soldiers at the various important points of the railway." Is it conceivable that the Pekin Government has made such a concession, and made it, not to avert any imminent danger or soften any sinister menace, but simply out of gratitude for past favours? The Convention is supposed to have been signed at the end of September. The service in avowed consideration of which it was signed had been rendered in March, 1895. Thus, after an interval of 18 months, China, in recognition of assistance that enabled her to save a portion of her territory from Japan's grasp, authorizes what is virtually a military occupation of the same territory by Russia. That is not China's way. Under the most favourable conditions it is immensely difficult to exact any concessions from her, and we can not for one instant imagine that the pressure of imponderable gratitude could ever have induced her to give herself away so completely. Besides, has she not in Manchuria ample forces of her own to guard a line of railway against local outrages? An open confession of inability to discharge such a task, is the last thing to be expected from a Government like the Chinese, nor can we attribute to Russian diplomacy the clumsiness of exacting such an acknowledgment. All these considerations, however, fade into insignificance when compared with the pledges that China is supposed to have given with respect to Chiao-chow, Port Arthur, and Talien. The "Convention" puts her in the position of having engaged to allow Russia to use these three places as bases of military operations, should exigencies dictate that course, or should Russia find herself likely to be involved in war. The exact language of the document is:—"China consents to allow Russia temporarily to concentrate her land and naval forces within the said ports, in order the better to enable Russia to attack the enemy or to guard her own position." Without

pausing to comment on the extraordinary language employed to describe and explain these engagements, we have only to observe that China is represented as publicly and deliberately violating the rules of neutrality by pledging herself to grant to one of the Treaty Powers exceptional and important facilities for belligerent purposes against any of the others. The Chinese Government is perfectly cognizant of the grave responsibilities attaching to unjustifiable discrimination of that kind; and even supposing the Chinese Government to be grossly careless of precipitating serious complications, we may safely say that Russia is not prepared to be a party to such recklessness. The first characteristics of Russian diplomacy are inexhaustible patience and unlimited precaution against needless friction. If the CZAR'S Ministers had any idea of embarking upon the course here attributed to them, they would never have embodied their schemes in a convention. Even an exchange of diplomatic notes would have been eschewed, for to make such aims the object of direct negotiation and the subject of documentary agreement would be the surest method of impeding their accomplishment. Should it be a fact that Russia contemplates making use of Chinese territory and Chinese fortified ports for belligerent purposes, pledging herself, at the same time, to protect those ports against foreign encroachment, the world will hear nothing of such purposes through the channel of treaties or conventions, and were not the reasoning faculties of many observers perturbed by a mania of Russo-phobism, the diplomacy of St. Petersburg would never be suspected of such gross and wasteful blundering as this so-called "Convention" implies.

Before dismissing the subject, we invite our readers attention to the following paragraph as a specimen of drafting:—

9.—Russia has never possessed a seaport in Asia which is free from ice and open all the year round. If, therefore, there should suddenly arise military operations in the continent it will naturally be difficult for the Russian Eastern Seas and Pacific fleets to move about freely and at pleasure. As China is well aware of this, she is willing to lease temporarily to Russia the port of Kiaochow [Chiao-chow] in the province of Shantung, the period of such lease being limited to fifteen years. At the end of the period China shall buy all the barracks, godowns, machine shops, and docks built there by Russia [during her occupation of the said port]. But, should there be no danger of military operations, Russia shall not enter immediately into possession of the said port or hold the important points dominating the port, in order to obviate the chance of exciting jealousy and suspicion of other Powers. With reference to the amount of rent and the way it is to be paid, this shall form the subject of consideration in a protocol at some future date.

It will be observed that, in the first place, China declares her willingness to lease Chiao-chow to Russia for 15 years; that she allows Russia to build there barracks, godowns, machine-shops, and docks, and that she undertakes to buy all these at the close of the fixed period of occupation. At the same time, she stipulates that, except in the event of military operations becoming imminent, Russia shall not

enter into possession of the port, or hold the strategical positions dominating it. What is Russia to do then? When is her fifteen years' term of occupation to commence? Is she to build barracks, docks, and so forth without entering into possession of the place where they stand, or is she to defer these works of construction until the war, for whose purposes alone they would be required, has already become a visible danger? Fancy Count CASSINI putting his name to such a prattle of babyish diplomacy? And fancy him, on behalf of the SOVEREIGN of all the Russias, attaching his signature to the Ostrich-like clause that, though Russia and China enter into a solemn compact to do certain things the very announcement of which must at once excite the jealousy and suspicion of all Western Powers, a semblance of delay is to be made before doing the things so that the chance of exciting that suspicion and jealousy may be obviated! Are we not justified in dubbing this so-called "CASSINI Convention" a hoax as clumsy as was its predecessor, the "secret treaty" of last spring?

HABEAS CORPUS.

WE observe that the old question of *habeas corpus* has again been brought up in Kobe, in connection with the case of a Chinaman who, having been discovered, when landing from the steamer *Doric*, to be in secret possession of opium and opium-smoking apparatus, was arrested, handed over to the Kobe police, examined before the magistrate the following day, remanded for public trial, and finally condemned, seven weeks later, to a term of imprisonment with hard labour. These are the facts so far as they have been published. On the strength of them a Kobe English journal alleges that in Japan "the right of bail is virtually denied," and that "the principle of the *Habeas Corpus* Act has been deliberately and purposely set aside by those responsible for the laws adopted for the governance of Japan, since she has set herself the task of identifying herself with the form, regardless of the spirit, of Western jurisprudence." It would seem that the writer of this last sentence laboured under some mental excitement too acute to consist with coherency of expression, for though he explicitly charges Japan with the intention of adopting the form only, and rejecting the spirit, of Western jurisprudence, he could not possibly be so silly in his lucid moments as to advance such an accusation. For the rest, the whole story and the comments evoked by it are characteristic of the blundering, slipshod methods too often followed by critics of things Japanese; methods so flagrantly prejudiced that whatever assistance the cause of reform might derive from the criticism itself is marred by the mood of the critic. In the

case of the Kobe Chinaman, one fact alone is seized: the man remained in prison for seven weeks before being finally brought up for trial. Did any special circumstances intervene to cause his detention? Did he make any attempt to recover his liberty upon bail? If he did, for what reasons was he unsuccessful? These are the first questions that would suggest themselves to any thoughtful person in considering the affair from the point of view of criminal procedure, and without distinct replies to them, he would never dream of offering any criticism. We ourselves are not in possession of any information to supplement that of our Kobe contemporary, but we gather indirectly from the published account that some difficulty of jurisdiction intervened, and if that be so, the delay becomes easy to understand. However, without attempting to discuss this particular case exhaustively, let us refer briefly to the general allegations that "the right of bail is virtually denied in Japan," and that "the principle of the *habeas corpus* has been deliberately and purposely set aside" by the framers of Japanese laws.

What is the *habeas corpus*? It is a remedy for the violation of personal liberty. In old times, a common abuse of power was the detention of freemen in prison without any criminal charge being duly preferred against them. To guard against that abuse the writ of *habeas corpus* was introduced. It enables persons held in custody to obtain speedy access to a court of law, there to be remanded, admitted to bail, or discharged, in accordance with the view taken by the court. In England the Habeas Corpus Act is a special statute. Like many other laws of the United Kingdom, it had its origin in special circumstances. The absence of any independent law or ordinance in Japan of similar import has been frequently misconstrued as an evidence that the principle of *habeas corpus* does not exist here. But, of course, whether certain provisions be embodied in a separate statute, or included in a general code, the practical result may be precisely the same. What we have to see, then, is whether and how far the principle of *habeas corpus* finds expression in the Japanese Code of Civil Procedure. In the 73rd Article, it is laid down that any one accused of a crime must be brought up for judicial examination within 48 hours from the time of his arrest, and, after examination, must be either set at liberty or duly remanded. The 85th Article provides that, except in the case of *mise au secret*, an accused person is authorized to receive, in the presence of an official, visits from his parents, relatives, friends, or legal adviser. And the 150th Article provides that, on the demand of a person awaiting trial, a judge may order that he be provisionally set at liberty, under written engagement to present himself when required, and on furnish-

ing bail. There we have a series of enactments apparently ample to guarantee an accused person, first, against being held in custody without a proper hearing of his case; secondly, against being secluded from those that are ready to assist him; and thirdly, against detention in prison if the nature of his crime admit of bail. So far, then, as the principle of the *habeas corpus* is concerned, it certainly finds expression in the Japanese Code of Criminal Procedure. Just as a writ of *habeas corpus* compels a man's jailers in England to conduct him, within a specified period, before a law court, where, if not again remanded, he may procure temporary release upon bail, so the 150th Article of the Japanese Code of Criminal Procedure entitles an accused person to obtain liberty upon bail, subject, of course, to the judge's decision. Nothing could be farther from the truth, therefore, than to say that in Japan "the right of bail is virtually denied," and that "the principle of the *habeas corpus* has been deliberately and purposely set aside" by the framers of Japanese laws. But whether the provisions of the Code of Criminal Procedure are so drafted as to preclude all abuses of the kind under consideration, we are not prepared to say. That there have been some abuses under its operation is beyond doubt, and we ourselves have direct cognisance of an assertion made by the most prominent among its drafters, namely, that however excellent the intention of the law, its execution appeared to require fuller safeguards. The amended Code, which will be submitted to the Diet next session, is expected to be more satisfactory. But in the meanwhile the laws now actually in force certainly do not justify criticisms so sweeping as those referred to above. We have examined the matter here because of its interest for foreigners soon to come under Japanese jurisdiction, and because it seems a pity that the manufacture of ill-founded prejudices should be suffered to proceed unchecked.

THE NEW PRESIDENT OF THE BANK OF JAPAN.

ON Wednesday the *Official Gazette* announced the appointment of Baron IWASAKI YANOSUKE as President of the Bank of Japan, in succession to the late Baron KAWADA. We confess that the news takes us rather by surprise. Not that there can be any manner of doubt as to Baron IWASAKI'S qualifications. On the contrary, it would be impossible, we believe, to find a Japanese who by long and successful management of great commercial, industrial, and banking enterprises, and by skilful handling of large financial problems, has proved himself more thoroughly competent to discharge the onerous functions of such a post. Baron IWASAKI, had any disposition for leisure and luxury swayed him, might have lived in opulence beyond the

reach of all business cares. After the death of his elder brother, Mr. IWASAKI YATARO, he found himself one of the richest men in Japan, with everything to suggest a life of idleness and pleasure. But the responsibilities of wealth evidently presented themselves to him in a different light. He seems to have worked as industriously and as indefatigably as a man works who has his daily bread to earn, and instead of abandoning to paid *employés* the direction of his large interests, he has always held the threads in his own hands. It is precisely for that reason that we are surprised at his consent to become President of the Bank of Japan. There did not appear to be room in his life for such an access of duties. But the Bank is very fortunate to get him. His insight is keen; his methods are liberal; his sense of business probity is of the finest type, and with persons deserving of confidence his manner of dealing is magnanimous in the extreme. Hence it is a matter for public congratulation, as well as for rejoicing on the part of the Bank's shareholders, that Baron IWASAKI consents to enter upon such a charge; but still to foreign observers there is much novelty in the idea that one of the country's greatest millionaires should become President even of its principal bank. Fancy the head of the house of ROTHSCHILD or of the BARINGS in their palmy days, accepting the post of President of the Bank of England! The event is interesting as an evidence not only that the plutocrats of modern Japan have no idea of provoking unpopularity by displays of idleness, but also that the relations between the MATSUKATA Cabinet and the leaders in business circles are very intimate. Baron IWASAKI's eldest daughter is married to one of Count MATSUKATA's sons, and his sister is the wife of Mr. KATO, now Japanese Representative in London, who was Count OKUMA's right-hand man in 1888-9, and who is certainly one of the very ablest among the younger generation of officials. These family ties must count for something, but the credit that Count MATSUKATA enjoys in commercial and financial circles counts for much more. It is true that he does not stand alone in that respect: Count INOUE has equally faithful supporters—the Mitsui family, Mr. MASUDA KO, Mr. SHIBUSAWA EIICHI, Mr. SONODA KOKICHI, and other prominent merchants and bankers. But there is no rivalry between Count INOUE and Count MATSUKATA. They have never differed materially in financial policy, and the friends of the one are not in any sense opponents of the other. It is a wholesome sign that the Administration should find itself in close touch with the commercial and industrial classes.

THE CAREW INQUEST.

MR. CONSUL HALL is to be congratulated on his remarkably able summing up at the close of the CAREW inquest in his capacity of Coroner. Seldom has a more lucid and powerfully marshalled *résumé* of evidence been submitted to a jury in any case. On the other hand, Mr. HALL could scarcely have been more explicit in the indications he afforded. He practically directed the Jury to attribute the crime of murder to Mrs. CAREW. He brushed away, as unworthy of serious attention, the main theory set up by Mrs. CAREW's counsel—the theory that Mr. CAREW's life having been suddenly disturbed by the re-appearance of a lady who had the power to destroy his domestic happiness, the unfortunate man made away with himself—and he bade the Jury accept as proved the facts that Mr. CAREW had been poisoned by another; that Mrs. CAREW alone had administered medicines to him during the process of poisoning, and that quantities of the poison from the effects of which he died, had been procured by her from the time immediately preceding his sickness until shortly before his death. Had the Jury adopted the Coroner's view, their verdict must at least have indicated that very grave suspicion attached to Mrs. CAREW. But it would appear that they shrank from publicly fixing on the lady any stigma not fully warranted by the testimony. After deliberation, lasting an hour and twenty-five minutes, they found that Mr. CAREW had died from the effects of arsenic, but that there was no "direct evidence" to show by whom the poison had been administered. The qualifying adjective "direct" deserves to be carefully noted. We believe it to be a fact that testimony directly establishing the administration of poison with criminal intent is scarcely ever procurable. In the very nature of things such evidence must be almost impossible to obtain. But, on the other hand, its absence has never been held to exculpate an accused person, or to prevent law courts from pronouncing a verdict of guilty. Under favourable circumstances the act of giving poison can always be managed so as to elude direct observation by third parties, and when the Jury in the CAREW case declared their inability to formulate a conclusive verdict in the absence of "direct evidence," they placed on record a contention that reads very strangely in the context of previous convictions. We do not by any means desire to be interpreted as alleging that justice was defeated by the verdict. That is a question not properly offering itself for discussion at present, since the case may still be carried before another tribunal. But we conceive that the Jury assumed an irrational position when they based their finding on the want of "direct evidence," and that if they were not convinced sufficiently to follow

the Coroner's instruction, they should have alleged the inadequacy, not the indirectness, of the testimony. Apart from that question, the case has afforded another illustration of the defective character of English law in that it allows such inquiries to be held in public. The finding of a coroner's jury has no conclusive force: it is at best a preliminary to judicial procedure. Hence the machinery of a coroner's court lacks many things essential to the complete administration of justice. None the less, an inquest may develop phases permanently injurious to the reputation of some person who is not prepared at the moment, and possibly has not the opportunity, to vindicate himself. European nations reputed to hold the first rank in jurisprudence, fully recognise these points, and carefully guard against publicity in the conduct of all such preliminary investigations. England, unfortunately, has not yet followed their example, and probably if her legislators proposed to do so, they would have difficulty in overcoming the respectable old prejudice against secrecy in any shape or form; a prejudice which, though founded on the idea that right can be best vindicated in the open, sometimes conduces to the infliction of grievous wrong. Indeed the blindness of conservatism has been illustrated strikingly enough in connection with this very inquest, for journalists have actually contended that all questions coming from Counsel engaged to watch the proceedings should have been put through either the Coroner or the Jury. Why should they? For no discernible reason except that a vast deal of valuable time could thus have been wasted. The prime object of such an inquiry is to elicit the truth, and the assistance of barristers can scarcely fail to promote that end. It is within the Coroner's competence to check any line of examination that may seem incorrect, and the power thus vested in him should be ample to prevent undue licence, without recourse to the cumbrous expedient of making him the sole mouth-piece for everybody.

MIXED COINS.

"E.H.H.," whose letter appears in our correspondence columns, advances some arguments that touch the very root of the bimetallic problem. We have asserted that, if equivalent quantities of gold and silver were melted together and minted into one coin, the resulting medium of exchange would possess a purchasing power permanently independent of fluctuations in the relative value of the metals composing it. That is our general proposition. Its practical truth depends in part on the universality of the coin's employment, but for the purposes of the present discussion that factor may be left out of consideration. As a concrete illustration of our

position, we said that, had the two equivalent parts of such a coin been each exchangeable for a pound of tea, twenty-five years ago, then the composite coin would be still exchangeable to-day for 2 lbs. of tea,—if independent causes affecting the price of tea in the interim were eliminated from the account,—since the appreciation of the gold would counteract the depreciation of the silver. "E.H.H." thereupon asks whether we mean to say that the purchasing power of gold has increased to that extent, and denies that any such change of price has occurred. It appears to us that our meaning ought to have been clear without the explanation now demanded of us. When we spoke of buying pounds and half pounds of tea, we simply had recourse to quantities lending themselves easily to the statement of a ratio. That gold was exactly 50 per cent. cheaper, and silver exactly 50 per cent. dearer, in terms of general commodities, 25 years ago, than the two metals are to-day, we do not for a moment pretend to assert. But we do intend to assert that gold is now much dearer, in terms of general commodities, and silver much cheaper, than was the case before the demonetization of the latter metal. Precisely how much, no statistician can undertake to determine, because many factors independent of the adoption of gold monometallism are more or less responsible for the change, and the influence of those independent factors varies in the case of different commodities. Beyond all doubt, however, there has been a virtually universal fall in the gold price of commodities, one result of which is that to repay a gold debt contracted in 1870, a producer must now devote about twice the quantity of produce that would have sufficed to discharge the debt at the time it was incurred. That, indeed, is one of the strong arguments advanced by bimetalists. It has been expounded with special clearness by Mr. FREWEN, and even the monometallists themselves do not venture to deny that the additional demand created for gold since it was deprived of the assistance of silver in discharging the functions of a medium of exchange, must of necessity have enhanced its value. But "E.H.H.," if we read him aright, does deny it. He is "at a loss to understand upon what theory we hold that a certain fixed amount of gold will buy more of any article now than it would a quarter of a century ago, assuming, as we do, that independent causes had not interfered in the interim to affect the price." Of course he is aware that a bushel of wheat, for example—we refer to that because "E.H.H." himself takes flour as a case in point—cost 2½ sovereigns 29 years ago and can now be brought for 1½ sovereigns. If he intends to attribute the whole of that change, and of other similar changes in almost every line of commodities, to causes operating independently of the demoneti-

zation of silver, he goes back to one of the first principles of the bimetalists, and will pardon us if we decline to follow him into a discussion that has been exhausted and re-exhausted time and time again already. But a word may be said about his proposition, "nor can I discover any reason why two coins—gold and silver—melted together and restamped should be supposed to possess different qualities of purchasing power from those of the same coins in the original form;—unless, indeed, a fixed ratio of gold and silver had been established and recognised." There is here a confusion of ideas for which we can not think that anything previously written by ourselves is responsible. Of course the mere act of melting together two coins and restamping the combination could not in any way alter their qualities of purchasing power. But when the act signifies the remonetization of silver, and its consequent elevation from the paltry rôle of a subsidiary coin to the rank of legal tender, there can not be much question that a very distinct change would be effected in the quality of its purchasing power. Moreover, does not our correspondent perceive that such a union of the two metals would be a practical fixing of the ratio between them, since the proportions in which they are combined would be, in fact, an expression of that ratio? It is further to be noted that, without some such device, bimetalism can scarcely become a practical reality. Silver may be remonetized, and its free coinage permitted everywhere, but so long as two separate tokens of exchange are employed, their contemporaneous use in any country would depend upon the absolute fixity of the ratio between them. The first symptoms of a change in that ratio would mean the expulsion of the more valuable token from circulation, and when we consider the multitude of vicissitudes to which the ratio must be exposed, no hope of its permanent fixity could be entertained. The limits of variation would probably be too small to entail serious inconvenience, as was the case during the long eras prior to the demonetization of the white metal. Still there would be variation, and in these times when success or failure in business lies within a very narrow margin, the smallest divergence from the ratio of minting values would at once be reflected in international commerce. Bimetalism, under such conditions, must simply mean that each nation, according to its own financial convenience, would drift into either gold or silver monometallism, and though the resulting condition would be a vast improvement as compared with the present state of affairs, there would still be ground for dissatisfaction. If, however, the unit of value were a composite coin, such as we have been considering—in other words, if the simultaneous use of both metals were compulsory in all transactions of exchange—and if the same composite coin were

used by every nation in the civilized world, we should at last attain a monetary system as near perfection as it seems possible to get at present.

PERFORMANCE BY THE TOKYO M. AND D.A.A.

"A Lesson in Love," Chelnam's three-act comedy, was the piece chosen by the Tokyo Musical and Dramatic Amateur Association for the performances on the 6th and 7th instant, in aid of the sufferers by the recent inundations. It is not a play well suited for amateur acting, the "situations" being few, and the main line of incident not marked with sufficient clearness to excite keen interest. But many considerations that would not be imperative were the appliances of a fully equipped theatre and the aid of a large corps of actors and actresses available, limit the range of choice in a place like Tokyo, and it must be confessed that the inappropriateness of the piece was almost concealed by the excellence of the acting in this instance. The scene is laid at a sea-side boarding house, among the inmates of which are a serene spinster, *Miss Winterberry* (Miss F. von Fallot); her assiduous admirer, an inquisitive, mischief-making old bachelor, *Mr. Babbiebrook* (Mr. L. van der Polder); her pretty niece, *Miss Edith Leslie* (Miss F. V. Denning); a charming widow, *Mrs. Sutherland* (Madame la Baronne d'Anethan); a retired officer of Dragoons, *Captain Freeman* (Mr. J. Conder), and a man in search of a wife, *Mr. Orlando Middemarch* (Mr. H. G. Parlett). The plot turns entirely upon the vicissitudes of love and the very checkered aspect its progress assumes when an officer who has come home from India to marry, enlists, as his ally in the business of wife finding, a lady who has loved him for years and with whom he himself is unwittingly in love; when an aunt, determined to get a husband for herself, develops intentions towards every one seeking the hand of her niece; and when a man making matrimony his vocation, seeks to win every marriageable dame he comes across. The chief rôle fell to Madame la Baronne d'Anethan. Her talents as an actress had already been recognised, but she attained a higher level than ever as *Mrs. Sutherland*. That great study must have been required for such a perfect rendering could not be doubted, but there was no apparent evidence of study throughout. Every change of mood—the hardly concealed disappointment of unrequited affection; the loyal devotion of a true-hearted woman, who, for the sake of the man she loves, does not shrink from assisting to immolate her own hopes; the resourceful intrigue of the quick-witted leader of society, and the latent coquetry of the much-courted widow—all these phases of character were rendered with most natural fidelity, and in the scene where *Captain Freeman* at length discovers the real loadstone of his love, and offers his heart to the woman on whose assistance he has hitherto relied to obtain the hand of another, the contrast between the suitor's profound earnestness and the lady's wayward resolve to punish his previous blindness by imitating it herself when he for the first time sees distinctly, was quite as effective a bit of acting as we have seen upon any stage in the East. A voice easy of modulation and great power of facial expression are gifts the possession of which contributes materially to the excellence of Madame la Baronne's performances. They appeal to eye and ear alike, and are happily free from every symptom of the mechanicalness so difficult to banish from memorized phrases and the dull routine of rehearsals. *Miss von Fallot* as *Anastasia Winterberry* was delightful. This lady is imbued with the true spirit of histrionic unselfishness: she never hesitates to sacrifice the freshness of youth to the exigencies of a rôle. Her "make up" as the many-wintered *Anastasia* wanted nothing essential to that most unsympathetic *ensemble*, the juvenile spinster, dressing to attract and dressed to repel. Her simpering affectation, her meet-you-much-more-than-half-way displays of tentative fond-

ness, her tender *abandon* at the first symptom of reciprocity, and her hysterical fury when her rosy hopes are suddenly replaced by the bitterest of female torments, the *spectra infuria formæ*, were beautifully realistic and moved the audience to perpetual merriment. A little attention to elocution would add greatly to her effectiveness on the stage, for she does not always succeed in making herself audible, and we doubt whether many of the hearers appreciated the skill of her acting when, at the close of the piece, she abandoned her affections and in an outburst of desperate frankness, fell back upon Mr. *Babblebrook's* perennial offer of marriage, if he were "fool enough to repeat it." Possibly it was owing to a defect of management that this telling scene took place at the back of the stage, but, at any rate, *Anastasia's* words were lost. *Edith Leslie's* delicious freshness formed a capital foil to her aunt's faded charms. Her part, though comparatively insignificant, demands no little exercise of skill, for the repeated acts of actionless presence that it requires would be effectually marred by the slightest display of *gaucherie*. *Edith*, however, personated the gentle *ingenue* with entire freedom from solecism or suggestion of self-consciousness, and nothing could have been prettier or more natural than her unconscious betrayals of the predilection that she has begun to entertain for *Middlemark*, and of the tendency she feels to snub the frigid *Freeman*. That so much could be made of a rôle so thinly outlined by the writer of the play must have been a most agreeable surprise to the audience, and, indeed, no scene seemed to afford more genuine enjoyment than *Captain Freeman's* bungling attempts to contrive some sort of "declaration" in the presence of a young lady so artlessly attractive and, at the same time, so sweetly deterrent. *Captain Freeman's* part may fairly be described as the most trying in the play, for without sufficient colour to justify any salience of style, it nevertheless requires subtle variations of mood, an extremely difficult combination of cavalry nonchalance and social timidity, and occasional displays of strong emotion. Mr. Conder was very satisfactory in this perplexing rôle. His conception of it seemed fit the plot excellently, and his rendering was sustained uniformly without any semblance of effort. A full measure of success was achieved by Mr. H. G. Parlett, also, as *Middlemark*. He invested the character with many happy mannerisms, and the contrast between his nervous alertness and *Captain Freeman's* ponderous helplessness was excellently conceived. Mr. Parlett had appeared upon the Tokyo stage only once previously in an important rôle, but the public will now hope to see him as often as possible. *Babblebrook*, the fussy old eavesdropper and scandal monger, found a most energetic and quaint representative in Mr. van der Polder, but the rôle scarcely enabled him to do justice to the talent that he has often shown on other occasions. Every congratulation must be offered on the subject of the scenery. Its arrangement evinced excellent taste, especially the seascape in the second act, a really pretty bit of art which won hearty encomiums. For all this part of the affair, contriving, decorating and painting, Mr. Conder is to be chiefly thanked, and when we remember that the major portion of the non-apparent work also fell upon his shoulders, it becomes difficult to over-praise his services. Owing to his forethought the performance on the first night was saved from collapse, for the electric light failed shortly before the curtain rose, and had not special provision of candles and lamps been made against such an emergency—an emergency to which every Tokyo resident depending upon the Asakusa electric source has of late been only too liable—it is difficult to conceive what could have been done. The stage-manager, Dr. Clay MacCauley, must be heartily congratulated on the results of his labours, and Miss Mair, who played several pieces on the piano in the intervals between the acts, contributed not a little to the general success. Seating accommodation for 400 people had been provided, and the hall was nearly full on the first night, but on the second

the attendance naturally fell off, though His Imperial Highness Prince Kanin and several Japanese ladies and gentlemen of high rank were present. On both occasions, the audience showed thorough appreciation. All the good points elicited warm applause, and several bouquets were presented to the actresses. After the close of the performance on the second evening, the actors and actresses and all concerned in getting up the play were entertained at supper by the Belgian Minister and Madame la Baronne d'Anethan, to whose interest and support the Society is largely indebted.

THE NEW TARIFF.

It is anticipated, writes the *Yomiuri Shimbun*, that the negotiations for the revision of the five remaining treaties—namely, those with Austria-Hungary, Spain, Portugal, Sweden and Switzerland—will be concluded before the end of February next. It will then be possible for the Japanese Government to give notice of the enforcement of the new Tariff, which, according to the Treaties, is to go into operation six months after the work of revision is completed. If that calculation prove correct, the Tariff will become operative from the beginning of September next year. Of course, some legislation will be necessary with respect to articles not included in the Tariff schedule, but the *Yomiuri* learns that a Bill in that sense has been prepared and will be submitted to the Diet next session. We confess that we are a little sceptical about the *Yomiuri's* forecast. It will surprise us greatly if three and a half months suffice to dispose of the five Treaties still awaiting revision.

THE REV. JOHN ROSS AND BISHOP GUILLON.

Some time ago we alluded to certain grave charges preferred by Dr. Ross against the Roman Catholic Bishop of Mukden. Dr. Ross, writing in the *United Presbyterian Missionary Record*, a Scotch magazine of very limited circulation, accused Monseigneur Guillon of practising the most appalling barbarities upon the persons of renegades from the Roman Catholic faith or converts to the Protestant. He alleged that the Archbishop had in his compound a stone pillar for the purpose of suspending men by their queues, and he described, with full detail, the case of an unfortunate Chinaman named Pung, who, having been dragged to the Bishop's residence by a rope tied round his neck, was hung up by his queue from 9 a.m. to 3 p.m., and was beaten on the mouth by the Bishop himself at intervals. That Dr. Ross believed all this to have happened, there can be no doubt, for he applied, it appears, to the British Consul at Newchwang, and procured the arrest and incarceration of some Chinese subjects said to have been actors in seizing Pung and dragging him away. The story found its way into a Shanghai journal, and our readers may remember that we characterized it at the time as a cruel libel, so obviously extravagant as to carry its own refutation. The Roman Catholic Missionaries, however, being naturally unwilling to leave such falsehoods unrefuted, induced Count du Chaylard, Consul General for France at Tientsin, to visit Mukden for the purpose of conducting an investigation, and the result is said to have been that the accused men were liberated, and that the British Consul at Newchwang made a personal apology to Monseigneur Guillon, and acknowledged that he had been sadly misled. Meanwhile, no retraction has come from Dr. Ross, who, however, when interrogated during a recent visit to Shanghai, wrote to one of the papers there, declining to give fuller details, on the ground that "the whole matter of Roman Catholic persecution of our converts in Manchuria is referred to Pekin." Considering how very full Dr. Ross details had already been, we can not appreciate the reasons of his sudden reticence, especially as, in the very same letter, he declared that all those hav-

ing "well authenticated cases in different parts of the empire should publish them." We fear that Dr. Ross has brought lasting shame upon his cloth, and that his accusations will do much to injure the cause he undoubtedly has at heart.

ATMOSPHERIC PRESSURE ON THE EARTH.

One of the theories advanced by seismologists in Japan to account for earth tremors, at any rate, if not in some degree for earthquakes, is that the varying pressure of the atmosphere cannot fail to produce some effect upon the stability of a globe delicately suspended in space, as the earth is. It is a pretty and almost self-evident theory, and our readers will be interested to know that it has been elaborated by Mr. Henry Harries in an article written for *Longman's Magazine*. The facts are easily comprehended that in times of tempest the barometer may stand at heights varying by several inches at different places in the same hour, and in the same place at intervals of a few hours, and that tremendous weights are thereby rapidly shifted on the earth's surface, but it is not so easy to realize Mr. Harries' calculation that an inch fall of the barometer in Great Britain corresponds to a decrease of pressure of 108 billion tons over the whole country. He proceeds as follows:—

There are good reasons for believing that the earth—"this too, too solid earth," as many of us suppose it to be—feels these enormous changes of weight, and responds to them much in the same way as an orange would respond to the pressure and the withdrawal of a finger. It must be remembered that the surface of the globe is dotted all over with moving cyclones and anti-cyclones differing in weight to the extent of many hundreds of thousands of millions of tons, so that the idea that the earth's outer crust is about as unstable as a jelly is not so absurd as it might appear at first sight. Prof. G. H. Darwin, after some careful experiments conducted at Cambridge, has calculated that even if the earth were so solid as to have the rigidity of glass, it would still mean that with a barometric range of only two inches we should be at least three or four inches nearer the centre of the earth when the mercury is at its highest than when it touches its lowest point. The experiments of the late Dr. von Rebeur Paschwitz strongly confirm Professor Darwin's conclusions, for they show that even when the barometer rises such a short distance as $\frac{1}{4}$ part of an inch there is a perceptible deflection of the plumb-line. In the determination of the geographical position of places observers have been puzzled at the discrepancies in the results obtained at different periods, but it now seems to be recognized that they must be largely attributed to the tilting of the ground in one direction or another, according to the disposition of atmospheric pressure, and that this is sufficient to introduce a difference of several miles in the results. It is true we are not conscious of this sinking and elevating process; it takes place at such a very imperceptible rate, perhaps occasionally two or three inches in twenty-four hours, but delicate and carefully balanced astronomical and seismological instruments tell us very clearly that the ground is never at perfect rest; it has, in fact, been likened to a jelly. Whether the variations of barometric pressure contribute directly to the production of earth tremors and earthquakes has not been definitely determined, although the connection is more than suspected. Thus in Japan, where the barometric fluctuations are more frequent and of greater extent in winter than in summer, earthquakes are fully twice as numerous in the former as in the latter.

It is probably easier to understand that water would be influenced by changes in the weight of the superincumbent air. Our tide-tables predict the height of the tide every day, but under normal barometric conditions the actual height being regulated by circumstances, so that corrections are necessary according as the barometer is above or below the average. In the *Official Channel Pilot*, published by the Admiralty, it is said of Dover Harbour that "it is on record that during equinoctial spring tides with a high barometer and a strong north-easterly wind, the tide at high water has receded 4½ feet below the datum of low water ordinary springs." Under the great anticyclone of January 1887, the Mediterranean at Anthes was lowered about a foot, M. Faye attributing this to the exceptionally high pressure. Curiously enough, inland lakes were similarly depressed at this time, Constance being lower than at any time during three quarters of a century previously, the result being that lacustrine habitations were laid bare, and nephrite axes and other ancient objects were brought to light.

The most interesting and important feature of the meteorology of the North Atlantic Ocean is the great anticyclone which lies over the Horse latitudes practically all the year round. No doubt this permanent area of high atmospheric pressure accounts for the saucer-like depression of the surface of the ocean known as the Sargasso Sea, a region where large quantities of so-called gulf-weed accumulate, very little of the fucus escaping into higher levels. One of the derelict ships about which so much has been heard of late in and out of Parliament was the schooner *Fannie E. Wolston*, abandoned off Cape Hatteras on October 15, 1891. Drifting down into the Sargasso Sea, the helpless wanderer simply moved hither and thither within this shallow depression for more than three years before she finally disappeared.

KOREAN NEWS.

From the tone of the *Söul Independent* we begin to find truth in the allegation of Japanese journalistic correspondents that the one journal of Korea is emphatically pro-Russian. The *Independent*, tabulating the advantages that have accrued to Korea from the Mission to Russia on the occasion of the Coronation, gives prominence to the fact that the Ambassador obtained the sanction of the Russian Government to the employment of Russian officers to instruct the Korean army. Is that really an advantage to Korea? We think that the editor of the *Independent* has not given this question his full consideration. We may add here that the first installment of these instructors reached Söul in company with the Ambassador. It consisted of Colonel D. Putiata, two other officers, and ten non-commissioned officers. Colonel Putiata, we read, spent several years in Pekin as Russian Agent. Lieutenant Kusmin of the Russian Army has also arrived in Söul, where he will serve as assistant to Colonel Strelbitsky, Russia's Military Agent.

Mr. Min Yung-chul, Governor of Whang-hai in Korea, is reported to be a very staunch conservative. He approves of torture and has devised a new kind of rattle for beating prisoners. It is a stick having shards of china attached to it by glue. A few blows reduce a man's body to a shocking condition. That is one of the clumsiest devices on record.

The *Independent* emphatically denies that there is any anti-Russian spirit in Korea. It defends the King's flight to the Russian Legation by saying that his Majesty was "in danger of losing his throne, and perhaps his life." At whose hands, we wonder. It is a pity that the *Independent* cannot see its way to being more explicit.

Hong Chong-wo, who murdered Kin Ok-kyun in Shanghai, has been promoted from the position of Secretary of the Royal Household Department to that of Master of Ceremonies. That is one of the sublimest burlesques on record. A foul assassin discharging the functions of master of the ceremonies at a King's court! No wonder that the Monarch of Korea has to hide for his life in foreign legations. To round off the savage comedy, Yi Se-chik, who attempted to kill Pak Yong-ho in Tokyo three years ago, succeeds his more successful master in the post of Secretary of the Royal Household Department. The King of Korea ought to import a hangman to be Groom of the Chamber.

Mrs. Isabella Bird Bishop is now in Söul, where she is the guest of Mr. McLeavy Brown. She is compiling a book on Korea.

Speaking of Mr. McLeavy Brown, we observe that he has had the honour of being the first foreign recipient of a Korean decoration. It was not within our knowledge that such a thing as a Korean decoration existed.

Mr. W. C. Hillier, who, after 30 years' service in the Far East, leaves his Consul-Generalship in Söul in obedience to the advice of oculists, has received a magnificent "myriad-men's" umbrella of red satin from the Chinese residents of the city. The umbrella has the names of the donors embroidered in gold.

CHINESE NEWS.

The Viceroy of Chihli is said to have given his approval to a scheme for the establishment of an iron and steel foundry at Tientsin. Coal as well as iron are easily procurable by rail. The enterprise is to be in Chinese hands.

It is said that a ten-mile railway is to be built between the new foreign settlement at Hangchow and a place westward of it, called Tsak'ou. The main purpose of the line is the transport of silk from the producing districts.

We reported in a recent issue that Taotai Sheng had been appointed Chief Commissioner of Railways in China, with instructions to carry out the building of the Pekin-Hankow and Hankow-Canton lines, a total length of nearly 1,200 miles. It now appears that Sheng has merely obtained permission to start the railway by recourse to private enterprise.

The *Peking and Tientsin Times* says that a cloth mill is about to be started in Tientsin.

The following are the dimensions, &c., of the two Armstrong cruisers, for which Messrs. Buchheister & Co. recently obtained a contract—the cruisers that are to form the basis of China's new navy:—

Length over all.....	424 feet.
between-perpendiculars..	390 feet.
Breadth extreme.....	46 feet 8 inches.
Depth, moulded.....	30 feet 8 inches.
Draft, mean.....	16 feet 9 inches.
Displacement, about.....	4,300 tons.
Speed 24 knots forced draught.	
Speed 22 knots natural draught.	

Their armament is to be as follows:—

2—8" Q. F. Guns.	
10—4.7" Q. F. Guns.	
16—3 pdr. Guns.	
6—3 pdr. Guns.	
5—3 Torpedo tubes.	

Ships ready for trial within 18 months.
Price for each vessel £35,659.

TROUBLE WITH ABORIGINES IN SOUTH FORMOSA.

It will be remembered that reference was recently made in these columns to disturbances caused by a section of the aborigines in the south of Formosa near Hienchun. Out of eighteen tribes, two betrayed a spirit of insubordination, the proximate cause of their uneasiness being an epidemic which they attributed to the presence of a line of telegraph in their territory. Major Hashimoto, who commands the Hienchun garrison, having failed to effect an amicable settlement, and having been advised by the chiefs of the remaining 16 tribes to resort to strong measures, despatched a force of 180 men against the insurgents. The expedition set out on the 18th of October, and intelligence has been received that the two tribes, after a loss of 18 men killed and many wounded, made act of submission on the 20th instant. Twenty men, who had taken part in the murder of a Japanese, were arrested, and the head, sword, and rifle of the murdered man, together with 190 yen that had been in his possession, were recovered. On the 22nd ultimo the expedition proceeded against another band of insurgents who had attacked a temple, and, taking them by surprise, killed 8, putting the rest to flight. The Japanese had one man killed on this occasion. On the following day, this remnant of the insurgents tendered their submission, and the Japanese expeditionary force was withdrawn, the prisoners being handed over to the gendarmes.

LETTER FROM AMERICA.

(FROM OUR OWN CORRESPONDENT.)

Ithaca, October 2nd.

At this writing we are still more than a month from our national election day. In times not very far distant, we could read the signs so accurately as to tell in most years of presidential election who was to occupy the White House and receive \$50,000 a year for public service. Then, the different States had their elections in October, and as the State elections went, so was the national choice pretty sure to follow. Now, however, with increasing uniformity in most things—showing the steady consolidation of this people, living under forty-five state governments, into a true nation—only three or four states hold their elections in October. The others have ordained that the state executive and some other officers should be chosen on the same day with the President of the nation. So, despite the oracles and prognostications of party managers and journals, the question is still uncertain as to whether white or yellow shall prevail in our coinage, and as to whether the tendency to a stronger Central Government or to an enlargement of State right shall follow. For the first time since the war, all issues springing out of slavery or the conflict of 1861-65 have been dropped. They are not only dead, but so deeply buried as to make resurrection an impossibility. For the first time, also, a former Confederate General, a man from out of the States formerly

in secession, has been nominated for the national executive office. Never before were there so many candidates in the field. Though uncertainty has often been great and vast before, the cool and level-headed man is prepared to say that uncertainty was never greater than it is to-day. This I write, though my own conviction is that William McKinley and Garret Hobart will be the officers elected to sit in the Presidential Chair and on the Senate's platform.

However the election may go, it is not only a phenomenon of American optimism, but a fact based on law and custom, that the majority of voters will be pleased with the result. True, it is possible that, through our system of state electors who form the electoral college, there may not be, nationally speaking, an absolutely correct expression in majority of the popular vote. There are some who believe that the electoral college is an antiquated and obsolete institution which, like so many other things borrowed from Europe, will not work well in the American republic. As long ago as the late 50's, when but a lad, I heard a powerful plea by the eloquent Theodore Tilton for the immediate abolition of the electoral college. However, it is more than probable that State jealousy and conservatism will still maintain in each state a body of gentlemen chosen as electors who will go through the form of merely ratifying the results at the polls. It is not probable that during this century an amendment to the Constitution of the United States will be made abolishing this institution which our fathers ordained, but which Martin Van Buren (more than any other one man) practically annulled by introducing the national nominating conventions, and the beginnings of the modern processes of caucus and "practical" administration of voting which some call "manipulation," "dictation" "trading," and by other more or less inexact terms. Curiously enough, the Democrats, who lay emphasis on the State as contrasted with the National rights and powers, while also and therefore encouraging local liberty and cultivating to excess the purely popular element, will oppose the proposition. Although they would like above all things to have in all cases a purely popular vote, counted by noses and the number of ballots cast, they will in all probability fiercely oppose the abolition of the electoral college; because, probably more than any other one feature in our Government by checks and balance, it represents in phenomena and majesty, if not in actual potency, the various State governments—the very ribs and vertebrae of the body politic. This year, indeed, is the year of crisis for the Democratic party. Instead of a "solid south," we have the old unity, and as the populists say, tyranny, of the Democratic party broken. And this not by Republicans but by the Populists, who declare that they and they alone are the true Democrats holding to the ancient principles. In the North, the Democrats are divided between those in favour of free silver and those who believe in gold as the one standard and as the only true representative of sound money. Although they have nominated as their standard-bearers, Senator Palmer and General S. Buckner, it is quite within the bounds of possibility that a majority of "gold Democrats" will vote for McKinley and Hobart. It is they who, with the Republicans, have kept up the \$100,000,000 gold reserve in the Treasury and have persistently agitated and personally worked and even sacrificed for the maintenance of American credit abroad.

Despite the disturbance to business and the excitement of political agitation, Americans enjoy a Presidential campaign. They are still very far from being ready to believe that a monarchical establishment, with its tremendous expense, to say nothing of the ideas and principles involved, would be any improvement. Americans understand themselves pretty well. They know also that immediately after the elections, in ordinary times, everything settles down at once and the ordinary grooves are quickly polished into smoothness by the undisturbed run of activities. So will it be in the case of the election of those candidates who represent conservative ideas in harmony with other countries of high civilization. In the other

case (so opponents predict), there will be a distressing financial panic, which will disturb the social and commercial equilibrium for some months. However, we shall see.

Apart from politics, it is evident that the more intellectual part of the country cherish no sad forebodings. The publishers and the student-world give themselves little trouble. Looking over the announcements of the publishing houses for the coming season, one is surprised to find a larger prospective product of books than ever before known in the history of the country. The day is past when in the United States books are considered luxuries. On the contrary, they are necessities. People will have them. Never before were prices lower. One can go into almost any book store in city, town and village, and see stacks of fiction and standard works, for sale, unbound, at from three to ten cents apiece. The print and the paper are good, and one wonders how they can be produced at such prices. The bound books run from fifteen to thirty-five cents. Yet, in addition to the stock already on the market and the constant making of already stereotyped works, nearly one thousand new books or new editions are now advertised. Among these, we notice nearly a dozen, all told, which in fact or in fiction deal with the Pilgrims or Puritans, who in Holland or in England, mewed their mighty strength "before swooping upon New England to make it their home. There they created that "distinctive America," to whose ideal, despite occasional protest and temporary reaction, all parts of the nation are steadily conforming. We as Americans are every year steadily moulting the peculiarities of the Puritans while more and more understanding and actualizing the ideals of the tolerant and sound-minded Pilgrims. One also notices a further contingent of books on Japan and China. Mostly they are not of a very serious character. Even Dr. W. A. P. Martin's "A Cycle of Cathay," is rather a book of personal reminiscences than a mine for information or an epitome of philosophy. The books on Japan treat rather of phases of sea-port life, at least for the most part, while Korea still remain comparatively unexploited. Both theology and fiction are still in demand. Works of travel, exploration and adventure are increasingly numerous and every department of science seems to be represented.

Out of the thousands of books which leave the press, fresh and fascinating during the autumn, winter and spring of 1896-97—each one having about it the uncertainty, mystery, and fascination of the unknown—how many will be heard of or read a century from now? Many will die the very year they are born. Only a few will float over the century mark which divides the 19th from the 20th. Nevertheless, it is a good sign to see publishers so sanguine. While our free public libraries still multiply, and every part of the country, including even South and East, becomes increasingly leavened with literature, we may believe education to be "the cheap defence of nations."

The other indications of faith in the stability of things American, are seen in the colleges and universities. Almost every one of these reports an increased number of applicants over figures of last year. Over a thousand have knocked at the door of Harvard, and out of the crowd numbering many more, this number have been admitted. Yale takes in not many less. The raising of the standard of admission in most of the colleges enables them to get a choice company of students. Out of the thousand or so that have applied, Cornell University has up to this date admitted 550, of whom several score are young women, four of the latter studying law. The favourite courses in Cornell are law and electric engineering. I notice among the new professors two or three who have been brought over from England. The Cornell University Exploring Expedition in Greenland has returned in high spirits. Its members are flushed with their success in discovering new glaciers and mountains, and in adding very considerably to the topographic, geological, and botanical knowledge which we already possess of that alluring part of the North American continent.

One thing Professor Tarr and his assistants have established, and that is, that the glaciers of Greenland have no connection with those on the main North American continent.

The new Korean Minister in Washington need not be lonely, for beside his wife and son there are in the city a colony of eight or ten Korean students, and at Roanoke College, Salem, Va., are two or three more; while in San Francisco and the parts of the United States it is quite probable that there are now all told about 100 natives of the once Hermit Nation.—W.E.G.

LETTER FROM CHICAGO.

(FROM OUR OWN CORRESPONDENT).

Chicago, October 5th, 1896.

From the Atlantic Ocean to the Pacific this country is a political caldron. From the day the monetary issue was squarely defined by the Democratic convention at Chicago the intensity has not for a day diminished. It can be compared to no campaign since that preceding Lincoln's first election and the war, and hardly even to that. For that was a political issue, this an economic one, which involves not only liberties, but bread and butter. The business condition, by universal consent, has been more difficult in the United States during the whole of 1896 than it was even during the panic of 1893. Failures have continued at a high rate, some of them very significant, since they were not the result of poor business, but purely of lessened volume of money. Concerns that were formerly able to get cash on thirty days for their goods could now only get long time paper, the discounts and bank squeezes on which ate up the legitimate profits of the business.

Our position is simply that money, which ought to be only the servant of industry, has become its master. Some years ago we had no money question here, for our various forms of cash were chiefly occupied in performing their proper function of circulating in business and productive channels. Now, however, owing to a succession of monetary retirement and contraction by legislative action, to a long line of extralegal acts by the Secretaries of the Treasury, to the discrediting of our silver money, and to a determined effort by the national banks of the country to establish the false position that the control of the monetary system is not a function of the sovereign, but of banking—from all these causes, on top of the failures and distress which the falling prices of our leading products, wheat, cotton, and everything that we must sell in competition with silver-using countries, and consequently lower our price with every new fall in silver exchange—we have come to a position where all forms of money, and particularly gold, increase in value at a faster rate while lying idle in vaults than by going out to be used for industrial purposes. Money speculating and interest mongering, those two illegitimate monetary transactions wherein money is both sides of the deal, which together make up that bugbear we call the state of the money market, have become so dominant that the legitimate functions, the exchange of money for labour or goods, are suffering.

The political alignments that have resulted are remarkable. Not long ago the only discussion was as to whether the United States should take the lead in restoring free coinage of silver or should wait for an international agreement. No one spoke for a single gold standard. McKinley, the Republican nominee, has always been personally a bimetalist, and voted that way on every occasion while he was in Congress. His backers did everything they could at the nominating convention to keep the money question from becoming the issue. You will remember in Japan that a few months ago the *Cleveland World*, a paper owned and controlled by Mr. M. A. Hanna, McKinley's backer and the manager of the present Republican campaign, sent its editor, Mr. R. P. Porter, to gather materials for a high protective tariff against Japanese manufactures. But the action of the Democrats and the insistence of the eastern monetary centre have relegated

the tariff to the rear, and Mr. Porter's articles were hardly read even by the people of his own party. Instead we have orators going up and down declaring that gold is the only stable thing we have, which in view of the function of money to be the measure of all other things, is somewhat illogical. A sufficient comment on this, as well as on the causes of our distress, is found in the fact that, although we have paid in interest and principal over four billions on our national debt since the war, and its principal is now barely a third of what it was then, it will take a good deal more of all our standard products to pay off the rest than it would have then done to pay the whole. With the monetary stability you have had in Japan, barring the inflation period just following the Satsuma rebellion, you can perhaps hardly appreciate the results of this.

The plain facts of this phase of the issue are that it takes notoriously far more commodities to buy the gold in a dollar now than it did even a short while ago, and this is ruining all our producers, to the unjust advantage of the creditor classes, who thus receive not only the properly earned interest of their bonds, but the improper and unearned increment which is measured by the fall of prices, and which is the difference between prosperity and bankruptcy to the farmer and manufacturer alike. It is this that has shut up our mills, and although Major McKinley has taken for his slogan, "It is better to open the mills than the mints," the veriest tyro in economics, who has not personal interests to serve or is not blindly following his party organization, knows that no tariff increase, which is all McKinley offers, can open or keep open mills while an appreciation of the money standard, with equivalent fall of prices, continues. This phase of the campaign has therefore become a fight between interests, of those on the one side who seek to increase the value of the dollar in which they must be paid—for such a question as that all debts of the country shall not be paid rigidly according to their terms has not yet appeared in any part of the campaign—and of those on the other side who declare it unjust that they shall be forced to surrender more property to discharge debts than the debts were worth when they were contracted.

Closely allied with this contest of interests, wherein the bondholder stands against the producer and developer, the former seeking to get back more than he gave, the latter willing to repay what he borrowed, but asking not to have the ability to do this unjustly taken away from him and his independence destroyed, there stands a desire of the national banks of the country to control the money. Their direct object, openly avowed, is that the Government shall go out of the money business entirely, except as a guarantor of the note issues of the banks; that gold, the one thing that never fluctuates, as they say, shall be the single standard; that this gold money shall then be stored in the vaults of the issuing banks as reserve, and the entire currency of the country be supplied by note issues of the banks themselves, at their own will to inflate or contract "according to the needs of the country," on the security of their stock of gold, government bonds, the capital stock of the banks themselves, and the guarantee of the government. Such a proposition would hardly seem credible were it not an actual fact. It is supported by such arguments as that, since bankers understand money better than other people, they should be allowed to control our money. I do not know a country better able to weigh and appreciate the value of this argument than Japan, after her highly interesting experience with the national banking system she borrowed from us. And it is a curious coincidence that just as we are solving these questions of banks and money over here, you should pass through a cabinet crisis that hinges upon the return to office of two statesmen so intimately associated with the development of sound and stable national finance in your own country, as Counts Okuma and Matsukata. We have watched these changes with deep interest on this side, and though an understanding of the workings of Japanese politics is still not as full as it might and ought to be, still the changes

have been watched with a feeling that, in them all, Japan is successfully solving her constitutional and parliamentary problems.

One more phase I must touch on in brief, for this will be the only letter I can get to you before the election will have taken place, and I wish to give as clear an understanding as possible of the nature of the forces that are demanding the restoration of free coinage of silver on this side. That such action would have an enormous effect upon all Oriental interests I know is well recognized on your side of the Pacific, and I can only account for the failure which I see from advices I receive to take steps to meet the results of Bryan's success and the consequent wiping out of the exchange difference between America and Asia totally, and Europe and Asia at least partially, to a lack of appreciating the seriousness of the troubles which in this country demand the relief which can be obtained in but one way, the lessening or destruction of the present disparity between gold and silver. Whatever effect might otherwise result, if the United States ceases to rest her whole financial system on gold, and again admits silver, the present exchange rates must go up. Yet I have only seen in your papers what seem to be but a few unheeded calls not to risk holding on to such stocks of goods as silk, on which a ruinous loss would be suffered if the exchange premium were wiped out. I was most gratified during my recent trip through Japan to find the conservatism in matters likely to be thus affected, and the preference for investments deriving support from internal development rather than the protection of the gold premium, but I can not think you realize the imminence of a restoration of silver here.

Under the protective tariff policy that has been maintained here, we have so long been restricted to home markets that the workings of foreign trade and exchange have been little understood. To voters in ignorance that foreign trade is not an exchange of money but an exchange of prices, and that a fall in silver exchange lowers gold prices and sends the trade meanwhile to the silver using countries, it has been possible to use such arguments as that we want to use money that will go all over the world, and that a gold dollar has never been worth less than a hundred cents—as if it could be when the mint law says it is a hundred cents. But the influence that the fall of silver exchange has had in depressing the prices of our wheat, cotton, and similar products in order to equate with Argentine and Indian silver prices, is becoming well recognized. It is becoming understood that silver countries have thus a hundred per cent. protection in competing with us, which getting again on to a par of exchange with them will relieve us from. And further, that if we were to remonetize silver, universal bimetalism must follow almost immediately, because, until it did, the United States would have the same advantage against Europe that the silver countries now have against us all, a condition that with our enormous productive capacity Europe could not allow to exist for a month.

I have gone thus much into the details of this campaign because of the deep interest which must exist on your side of the Pacific concerning events likely to affect silver exchanges. And the question here is not simply political nor a craze. It is economic, and a fight solely to restore prices, in both foreign and domestic matters. There is no question of repudiation, all our debts will be paid in full and in terms, unless the fall of prices continues so that we can not get enough even by selling everything at or below cost, to pay these bonds. Our railroad receiverships and farm foreclosures have been telling the tale, and the issue is vital to the core. We must stop the contraction in our volume of money at home, and must cut down or wipe out the disparity in foreign silver exchanges. This is the whole issue.

WILLIAM EDMOND GATES.

Lieut.-General Oku, the new Commandant of the First Army Division, proceeded to the Palace on Wednesday at one o'clock and had an audience with the Emperor.

ALLEGED CONVENTION BETWEEN RUSSIA AND CHINA.

It is alleged by the *North-China Daily News* that a convention has been concluded between Russia and China, and our contemporary publishes a translation of it. The date of the signing is not mentioned, but can be pretty closely inferred from the fact that Count Cassini, who left Peking on the 30th of September, is said to have deferred his departure for three days in order to have the Convention concluded. The translation runs as follows:—

A SPECIAL CONVENTION BETWEEN CHINA AND RUSSIA.

His Imperial Majesty the Emperor of China having received the various benefits arising from the loyal support of His Imperial Majesty the Emperor of Russia at the close of the late war between China and Japan, and being desirous that the communications between the frontier territories of their respective empires and the international commerce of the two countries be managed to their mutual advantage, has commanded the mutual settlement of certain matters in order the better to consolidate the basis of friendship between the two empires. In this connection, therefore, H.I.M. the Emperor of China has specially appointed the Imperial High Commissioners the Princes and Great Officers of the Crown composing the Imperial Chinese Ministry of War, with plenipotentiary powers, to confer and agree upon certain matters, at Peking, with His Excellency Count Cassini, Envoy Extraordinary and Minister Plenipotentiary of H.I.M. the Emperor of Russia to the Court of China, concerning the connecting of the railway system of the Three Eastern Provinces [Fengtien, Kirin, and Heilung-chiang] with that of the Imperial Russian railway in the province of Siberia, with the object of facilitating the transport of goods between the two empires and of strengthening the frontier defences and sea coasts. And, furthermore, to agree upon certain special privileges to be conceded by China to Russia as a response to the loyal aid given by Russia in the retrocession of Liaotung and its dependencies.

1.—Owing to the fact that the Russian Great Siberian Railway is on the point of completion, China consents to allow Russia to prolong her railway into Chinese territories (a) from the Russian port of Vladivostok into the Chinese city of Hunchun in the province of Kirin, from thence northwestwards to the provincial capital of Kirin, and (b) from a railway station of some city in Siberia to the Chinese town of Aiyun in Heilung-chiang province, from thence southwestwards to the provincial capital of Tsitsihar, and from thence to the town of Petuné, in Kirin province, and from thence southeastwards to the provincial capital of Kirin.

2.—All railways built by Russia into the Chinese provinces of Heilungchiang and Kirin shall be built at the sole expense of Russia and the regulations and building thereof shall be solely on the Russian system, with which China has nothing to do, and the entire control shall be in the hands of Russia for the space of thirty years. At the end of the said period China shall be allowed to prepare the necessary funds wherewith, after proper estimation of the value of the said railways, she shall redeem them, the rolling stock, machine shops, and buildings connected therewith. But as to how China will at that date redeem these railways shall be left for future consideration.

3.—China is now in the possession of a railway which she intends to extend from Shanhaikuan into the provincial capital of Fengtien, namely, Moukden (Shengking), and from Moukden to the provincial capital of Kirin. If China should hereafter find it inconvenient to build this road she shall allow Russia to provide the funds to build the railway from the city of Kirin, on behalf of China, the redemption of which road shall be permissible to China at the end of ten years. With reference to the route to be taken by this railway, Russia shall follow the surveys already made by China in connection therewith, from Kirin to Moukden, Newchwang, etc.

4.—The railway to be built by China beginning from Shanhaikuan, in Fengtien, to Newchwang, to Kaiping, to Chinchow, to Lushunk'ou [Port Arthur], and to Talienwan, and their dependencies, shall follow the Russian Railway regulations in order to facilitate the commercial intercourse between the respective Empires.

5.—With reference to the railways to be built by Russia into Chinese territory, the routes along which the said roads shall pass must be protected, as usual, by the local, civil, and military officials of the country. They shall, moreover, afford all facilities and aid to the civil and military officials of Russia at the various railway stations, together

with all the Russian artisans and labourers connected therewith. But owing to the fact that the said railways will pass for the greater part through barren and sparsely inhabited territory in which it will be difficult for the Chinese authorities to be always able to grant the necessary protection and aid, Russia shall be allowed to place special battalions of horse and foot soldiers at the various important points of the railway property.

6.—With reference to the Customs duties to be collected on goods exported from and imported into the respective countries by the said railways, they shall follow the regulations provided by the Treaty of Commerce between China and Russia, ratified in the 1st year of the reign of Tung Chih, 4th day, 2nd moon [20th February 1862 O.S.], regulating the overland transit of goods between the two empires.

7.—There has always been in existence a rule prohibiting the exploitation of the mines in Heilungchiang and Kirin provinces and in the Ch'ang-pai mountains [Long White Mountain range]. After the ratification of this treaty, Russians and subjects of the Chinese empire shall be permitted hereafter to exploit and open any of the mines therein mentioned; but before doing so they shall be required first to petition the Chinese local authorities on the subject who, on the other hand, shall grant the necessary commissions (*huchao*) in accordance with the mining regulations in force in China Proper.

8.—Although there exists certain battalions of foreign-drilled troops (*Lianchun*) in the Three Eastern Provinces, yet the greater portion of the local territorial army corps thereof still follow the ancient regulation of the empire. Should, therefore, China in the future require to reform in accordance with the Western system the whole army organisation of the said provinces, she shall be permitted to engage from Russia qualified military officers for that purpose and the rules for the guidance of this arrangement shall be in accordance with those obtaining in the Liankiang provinces in regard to the German military officers now engaged there.

9.—Russia has never possessed a seaport in Asia which is free from ice and open all the year round. If, therefore, there should suddenly arise military operations in the continent it will naturally be difficult for the Russian Eastern Seas and Pacific fleets to move about freely and at pleasure. As China is well aware of this, she is willing to lease temporarily to Russia the port of Kiaoshou [Chiaochow] in the province of Shantung, the period of such lease being limited to fifteen years. At the end of the period China shall buy all the barracks, godowns, machine shops, and docks built there by Russia [during her occupation of the said port]. But, should there be no danger of military operations, Russia shall not enter immediately into possession of the said port or hold the important points dominating the port, in order to obviate the chance of exciting jealousy and suspicions of other Powers. With reference to the amount of rent and the way it is to be paid, this shall form the subject of consideration in a protocol at some future date.

10.—As the Liaotung ports of Lushunk'ou [Port Arthur] and Talienwan and their dependencies are important strategical points, it shall be incumbent upon China to properly fortify them with all haste, and to repair all their fortifications, etc., in order to provide against future dangers; Russia shall therefore lend all necessary assistance in helping to protect these two ports and shall not permit any Foreign Power to encroach upon them. China, on her part, also binds herself never to cede them to another country; but, if in future the exigencies of the case require it and Russia should find herself suddenly involved in a war, China consents to allow Russia temporarily to concentrate her land and naval forces within the said ports in order the better to enable Russia to attack the enemy or to guard her own position.

11.—If, however, there be no dangers of military operations in which Russia is engaged China shall have entire control over the administration of the said ports of Lushunk'ou and Talienwan, nor shall Russia interfere in any way therein. But as regards the building of the railways in the Three Eastern Provinces and the exploitation and opening of the mines therein, they shall be permitted to be proceeded with immediately after the ratification of this Convention and at the pleasure of the people concerned therein. With reference to the civil and military officers of Russia and Russian merchants and traders travelling [in any part of the territories herein mentioned], wherever they shall go, they shall be given all the privileges of protection and facilities within the power of the local authorities, nor shall these officials be allowed to put obstructions in the way or delay the journeys of the Russian officers and subjects here mentioned.

12.—After this Convention shall have received the respective signatures of their Imperial Majes-

ties [the Emperors of China and of Russia], the articles included therein shall go into immediate force, and, with the exception of the clauses regarding Port Arthur, Talienwan, and Kiaochow, shall be notified to the various local authorities of the two Empires. As to the place for the exchange of ratifications, it shall be left to be decided at some future time, but the exchange shall take place within the space of six months.

It has, furthermore, been agreed upon between the respective Plenipotentiaries of the High Contracting Powers to make this Convention out in three languages, namely, Chinese, Russian, and French; one copy of each language to be held by the respective High Contracting Parties, after the signing and sealing thereof. And it has, furthermore, been shown, upon comparison, that the contents of the documents as given in the three languages aforesaid tally with each other in all respects; but in case of dispute in the future the wording of the French copy shall be deemed the correct version.

If the above be authentic, its importance can scarcely be over-rated. We refrain from comment, however, remembering that from the same source came the bogus "secret treaty" of last spring.

FORMOSA AFFAIRS.

The following letter, from "An Old Correspondent," appears in the *North China Daily News* of the 28th ult. :—

THE SPECIAL JUDICIAL COMMISSION

instituted to try all prisoners charged with participating in the late Hoonim outbreak, and which has been in session for the past eight weeks at Chang-hwa, concluded its labours on the 30th inst. There were altogether 421 persons arrested. Of these, however, only 72 were detained by the Public Prosecutor for further proceedings, and eventually of these only 58 were brought to trial, the remainder being released at once. Of these 58 but 14 were convicted and sentenced respectively as follows : 2 to death, 3 to imprisonment for life, 4 for eleven years, 1 for ten years, 2 for nine years, 1 for five years, and one for three years. As at present advised, this is supposed to include all the punishments it is proposed to mete out for the Hoonim-Taulak émeute.

THE PRESENT POSITION.

With reference to the present condition of affairs, there can be no doubt that the line of demarcation between those who are what may be called professional brigands, or rebels, and the people whom the former have forced to join them, either by their threats or other violent measures, is daily becoming more apparent. The Japanese have not been slow to take advantage of this favourable condition and are giving every encouragement to the lawfully-disposed to come back to their homes, and resume their former peaceful avocations. It is stated that several villages have thus become re-populated, and that the inhabitants have combined amongst themselves to offer their former rebellious comrades strenuous resistance, refusing to afford them supplies or any help whatever. As a result of this the main band of robbers has been broken up into small groups, or sections, and we hear that they are suffering considerably from the lack of provisions which the villagers on the plainlands decline to give them.

SUPPRESSION OF BRIGANDAGE.

From time to time as the calls of hunger become more pressing they make raids on the hamlets nearest to the hills where the robbers' strongholds are situated, and besides seizing what money or provisions they can get hold of, have taken to the old brigand device of carrying off one or two wealthy individuals whom they retain until ransomed by their friends. This latter, while it has intensified the terror of the people, has simultaneously set up and increased the bitterest feeling, and at present the greatest antagonism exists between these and their *ci-devant* associates. These villages are making constant applications to the government to have resident gendarmes and policemen stationed in their various hamlets. Many native volunteers also have come forward and are pressing the military either to allow them to enlist in the regular army or help them to form corps to be drilled and commanded by Japanese officers temporarily "seconded" for that purposes. I have not heard whether the authorities are going to accept either or any of these proposals, but there is one thing certain, and that is that a much more friendly state of feeling now exists between the Chinese and the conquerors, and that there would seem to be no likelihood of any further mistake being made between the innocent and the guilty on the part of the Japanese soldiery in as far as the plain-

land habitations, at any rate, are concerned. The Chief of the Formosa Home Department, who had been sent on, special mission from Taipei to Hoonim to see after the distribution of the Relief Fund granted by the Imperial Bounty and Government, has returned, reporting that most of the refugees have come back to their homes, and very gladly accepted the benevolent and substantial overtures with which they were met, and altogether it is hoped that in a comparatively short time matters will have assumed such a condition as may permit of life, in these regions, once more resuming that harmony which is no less essential for social than commercial prosperity.

19th October.

RECEPTION ON BOARD THE JAPANESE CABLE-STEAMER "OKINAWA MARU."

In response to invitations issued by Lieut.-General Baron Kodama, Vice-Minister of War, and Director of the Formosa Telegraph Construction Section, a large party of officials and others, civil and military, including Baron Suzuki, Vice-Minister of Communications, and the Governor of Kanagawa, recently proceeded on board the *Okinawa Maru*. The guests were received on arrival on board by General Kodama, assisted by Captain Kataoka, the commander of the ship.

The *Okinawa Maru* is a handsome, roomy vessel, constructed with all the latest improvements, and classed 100 A1. at Lloyds. She is fitted with the most recent machinery and everything requisite for cable-laying, lifting, and repairing, and has three cable tanks of large carrying capacity.

The ship was built and fitted by Messrs. Lobnitz & Co., of Renfrew, Glasgow, under the immediate inspection of Captain A. R. Brown. We take the following details from the ship's Register :—

Length from bow to stern post.....	300 feet.
Breadth, moulded	40 feet.
Depth	21½ feet.
Tonnage under deck	1,938 tons.
Tonnage of deck house	99 tons.
Tonnage of Light and air spaces.....	71 tons.
Gross tonnage	2,108
Less Engine and Boiler space	922 tons.
Less Crew space	121 tons.
(Act 1894).....	24 tons.
	1,067

Nett Register tonnage 1,041

The *Okinawa Maru* is a twin screw steamer with triple expansion engines, which, with a steam pressure of 175 lbs., and a speed of 12 knots, show 2,300 indicated horse-power.

In addition to the cabin accommodation for the Captain, Officers, and Electrical staff which is all on deck, there are several roomy cabins comfortably fitted up, on either side of the saloon, which is a handsome room, neatly fitted and upholstered in dark brown morocco leather.

After the party had completely inspected the ship, and the various machinery connected with cable work, as also the engine room with all its details, they expressed unqualified satisfaction and appreciation of the vessel and everything belonging to her.

Full justice was done to an excellent cold collation which had been laid out in the Saloon during the inspection of the parts of the ship, and with the aid of several steam launches, the party landed and returned to Tokyo by rail.

The following particulars, taken from the *Electrical Review*, may interest our readers :—

A few months ago the Japanese Government, as represented by their Glasgow Consul (Mr. A. R. Brown), entrusted Messrs. Johnson & Phillips with the construction of a combined picking-up and paying out gear, together with outfit and stores, for their new submarine cable laying vessel, of which the following is a description :—

The gear is very compact, and has been constructed principally of steel, so as to combine strength with lightness, the weight, all told, being only about 21 tons.

Although specified to pick up under a strain of 23 tons at 175 lbs. pressure, the gear, on official

trial, showed itself equal to a much greater power. Compared with the gear by the same makers fitted on the *John Pender, Great Northern, Chiltern, Electra, Magneta, Recorder, Relay, Cita de Milano*, and many other steamers, it is equally powerful as the three first named, and twice as powerful as the others, while at the same time it is infinitely more compact and lighter than any that have gone before.

The gear stands on a strong steel girder bed on the main deck, and the drums, &c., project through a hatch in the spar deck, and this is fitted with covers, which form the driving platform from the machine. The gear has overhung drums, 6 feet 3 inches diameter X 2 feet 6 inches wide, internally geared, and running loose on a fixed shaft carried on two steel frames, and is arranged for four speeds. The motive power consists of one vertical compound engine, having cylinders 12 inches and 24 inches diameter, by 14-inch stroke, capable of developing 265 h.p., without the use of the condenser, in conjunction with which it will, however, generally be used. The engine is fitted with link motion reversing gear, and also with automatic bye-pass valve, for admitting high pressure steam to low pressure cylinder for starting. The crank-shaft is geared to the first motion shaft of the machine by means of double helical bevil gear. When it is desired to pay out without steam power, the only moving portion of the machine is the drum, which is readily controlled by the brake. To enable the drum to revolve independently of any other part of the gearing, provision had to be made for sliding the drum pinions out of gear, and as it was essential to keep the drums close up to the frames, these pinions have been arranged to draw through the frames. This has been effected in a very neat manner by the makers, two large holes being cut in the frame plates, and a large pocket casting fitting into these, carrying bearings each side of the frames, so that the pinions which gear into drums run between two bearings, the arms of the drum being set back to allow for this outer bearing, and this arrangement ensures a very substantial job. These pinions are put into and out of gear by means of a combination of handwheels, screws, and bellcrank levers. All wheels are arranged to draw out of gear when necessary, so that only the particular set required needs to be in gear.

The brake straps are of steel plate, fitted with elm blocks. The lower parts of the straps have large cast-iron eyes attached to them, and these are kept in position by means of a shaft 3½ inches diameter, which passes through both frames.

The braking power is applied by means of right and left-hand screws working in nuts attached to the upper parts of the straps, the screws being actuated by means of hand-wheels from the starting platform, and when the straps grip the brake drum the pull is transmitted to the machine frames (through the before-mentioned eyes and shaft), and thus to the deck of the vessel. A water service is provided for the brakes, the water being distributed by means of a small Worthington pump.

Each drum is provided with two "knives" for flensing the cable on the drums to suit either an inside or outside lead, as the case may be.

Bow Gear.—There are three sheaves at the bows 51 inches diameter by 11 inches wide, the two outer once being V-section and the middle one U-section. These sheaves are of steel, with gun-metal bushes, and they are arranged to run loose on a steel shaft fixed in blocks carried on four steel girders, which are built into the ship for a distance of several feet, being connected to the beams and to the steel deck, thus ensuring a very substantial job. Each sheave is provided with a cast-iron "whisker" or guard at each side to prevent the cable from coming off. The two outer whiskers carry davits with a cross-bar for convenience in launching mushrooms, grapnels, &c. The side plating of the ship is carried out to meet these castings, thus giving the bows a very neat appearance.

Stern Gear.—This has but one sheave, which is 38½ inches diameter by 11½ inches wide, and is fitted with gun-metal lines to run loose on a shaft fixed on blocks carried by rolled girders. These girders are attached to the deck by means of special castings, which also serve to secure the necessary stopper hoods.

The cable machine is placed just aft of the foremast, and between it and the bow sheaves are placed the two dynamometers (one for each drum) for the purpose of registering the strains that come upon the cables or grapnel ropes. To effect this, a set of leads consisting of A-frames and sheaves is placed at a certain distance on each side of the dynamometer, so that when a strain comes upon a cable or rope the moving part of the dynamometer is raised, the distance raised being the measure of the strain according to the weight of the moving part.

Dynamometers.—The dynamometers are of Messrs. Johnson and Phillips's improved design,

consisting of cast-iron foot-step with steel cylinders, on which a large cast-iron sleeve slides, and to this sleeve the sheave is attached, and also two side rods, which carry a cross-head some distance above. To the cross-head is attached a piston rod with piston, which works on the outside of the steel cylinder, which is filled with oil, and the piston being a loose fit, this acts as a dash pot to steady the movement. The top of the steel cylinder is, of course, fitted with a packed gland.

REBELLION IN THE PHILIPPINES.

[FROM A CORRESPONDENT.]

Manila, 17th October.

Last night the steamer *Isla de Luzon* anchored, bringing 1,900 more troops from Spain, making over 5,000 since the commencement of the rebellion. The troops were landed without their arms, and less display was fortunately observed on this occasion, the Governor-General having expressed a wish that no further triumphal arches be erected and that the troops be marched straight off to their respective barracks. This order gave great dissatisfaction in certain quarters, especially amongst the rowdy element in the Volunteers. The shopkeepers had also agreed not to close on this occasion, having already shown sufficient patriotism by closing and making a holiday on the occasion of each of the other landings, but at the last moment, fearing excesses on the part of the rowdy element, they were obliged to close, stopping all business for the rest of the day.

The *Comercio*, hitherto considered as one of our most serious and formal papers, in welcoming the new troops concludes as follows:—"Welcome to the two new battalions of Cazadores, to whom we send our most sincere and enthusiastic salute, in which is included our desire that when victory accompanies them, as most undoubtedly it will, the Catholic God will protect valour, chivalry, and patriotism, the fundamental principles and backbone of the glorious nation of which to-day and for ever we feel ourselves proud." Many good Catholics will probably ask "Who is the Catholic God?" it being hitherto accepted amongst Christians of every denomination that only one God is the father of all, by whatever road he is approached. The *Comercio*, however, wishes to have a special one of its own now.

One of the first acts of the Governor-General after returning from the Laguna district was to suspend all further military banquets as being very much out of place at the present moment, especially when speakers make themselves ridiculous by holding forth in speeches like that of Mr. Rafael Comenga, reported in my last advice. Consequently, the banquet organised by the naval officers to-night will not take place. The Press have also been forbidden to report such inflammatory speeches in future.

A native corporal with two soldiers carrying provisions was met a few days back in the Anloague Street by two of the new Spanish soldiers recently arrived, who turned round on the natives calling them traitors and other filthy epithets of which alone the Spanish language is capable. The plucky native corporal at once took up his rifle and with the butt end brought one of the Spaniards to the ground, who cried on all the saints in Heaven for mercy, whilst the other took to his heels by the nearest cut to barracks. Hearing the row, up came the police; the corporal explained how he had been insulted whilst on duty, but nevertheless they wanted to arrest him. The corporal in an instant slipped a cartridge in his rifle and pointing at the police told them to come on; he was on service and in the execution of his duty in a place where martial law had been established and the first man that moved a hand he would shoot down. This plucky behaviour of the native corporal so impressed the police that they too made themselves scarce, leaving corporal and soldiers to pursue their way in peace. This occurred in the public street. Imagine therefore what occurs privately inside barracks. It is a marvel how the native troops have remained so loyal from the treatment they receive. For instance, just now they are supposed to receive 20 cents a day pay, out

of which they have to find themselves in everything, yet I have it on undoubted authority from the soldiers themselves that they are only receiving 10 cents per day, the rest undoubtedly finding its way into the pockets of the officers.

Notwithstanding official reports to the contrary, the insurrection is spreading, and should the Spaniards meet with a reverse when Imus, the present stronghold of the insurgents, is attacked, a general rising may be looked for. The Spaniards themselves estimate fully 100,000 insurgents under arms in the provinces of Batangas and Cavite. The Spaniards claim a victory over them at a place called Nasagbu, in Batangas, the estate of the celebrated P. P. Roxas, stating that 124 rebels were killed and only two Spaniards, but this must be taken with a good deal of reserve. At the present moment a victory was necessary for political reasons, and Nasagbu being unfortified, and moreover on the coast and within reach of the gunboats it was signalled out for attack. Even if the victory is as said it no way alters the position of matters, but probably if one figure were taken off the rebel loss and added to the Spanish loss it would be nearer the exact truth.

A hopeful sign for the pacification of the islands is the departure for Spain of the Segundo Cabo or Lieutenant Governor, who leaves in the *Antonto Lopez*, sailing on 21st instant, officially announced in the papers as on sick leave, but in reality sent off under arrest by the Captain-General, who in this action has shown another excellent political move in the face of tremendous opposition and extreme unpopularity with a certain section of the community. This Segundo Cabo belongs to the Archbishop's party who are for wholesale slaughter and destruction regardless of the consequences, and is the man who in the very first encounter shot down right and left every native visible, even hauling them out of their homes and butchering them in cold blood, and who was also implicated in the tragedy of the "Black Hole" of Manila.

The Captain-General shortly after his return last week issued an order prohibiting the Volunteers from making arrests and confining their attention to sentry duty and the protection of Manila in case of attack. Such scandalous abuses were being committed by these bands of ruffians on the pretext of looking for suspected persons that it was high time their almost autocratic powers were cut short. It will not be surprising should the Captain-General dissolve them altogether (if they do not fall out themselves) when the next lot of troops arrive from Spain. Although there are some very respectable inhabitants in this Corps, by far the greater part of them are composed of loafers and itinerant Spaniards whose only object for enlisting was loot, and so far they have made hay while the sun shone, entering defenceless homes at night, violating women and children, arresting and even shooting the husbands on futile pretences, and laying their hands on everything they could get hold of. I know of one case where they heartlessly set fire to a house where two helpless old women were, burning them to death, in the suburb of Sampaloc.

The General prohibited the Volunteers mustering with arms to receive the last soldiers, as these continued triumphal ovations are becoming too much and interfering with trade and business unnecessarily, but egged on by the priests they turned up without arms and, mixed with a motley throng of priests and rowdies, preceded the troops through the streets, calling for cheers for the Segundo Cabo and Archbishop and ignoring the Governor-General. However, the latter need fear nothing; his strictly correct and impartial attitude only calls for praise from all decent people except fanatics, and history will do him justice. Certainly his clear head and calm judgment have saved the Spaniards all through the islands their heads. If the wholesale shooting and slaughtering had been attempted with so few troops here the country would have risen *en masse* and annihilated them.

To give an idea of what the Volunteers' intentions were, one of them was asked to kindly settle a long standing debt. His reply was that he had joined the Volunteers in order to be able to clear off his debts by what he could make.

The following order appears in the *Official Gazette of Manila*, 20th October, 1896:—

General Government of the Philippines, Political Section.

The grave events which have taken place in some of these provinces, by which ill advised crowds have taken up arms against our institutions, can now be considered as dominated, the insurrectional movement being now localized within a very small area.

Whilst those events were being fomented by acts of violence on the part of the seditious, it became necessary to adopt extreme and rigorous measures without taking into account justifications or other matters whatsoever which might hamper their rapid and energetic suppression, but taking in view that the insurrection is suffocated in almost all the provinces of Luzon, it has become necessary, for high political reasons and government, to change the system of correction, adopting in its place one more temperate and moderate and above all conciliatory. Only by such means can be obtained on the one side just and exemplary punishment, and on the other and much more important side the re-establishment of tranquillity in the towns, which amongst other things, they have lost for fear of ill judged punishments; that there may be initiated a movement of attraction towards the cause of our country on the part of those who might otherwise feel inclined to favour the rebellion with indifference or other motives.

"By virtue of this order you will therefore take most especial care not to order any imprisonments which are not thoroughly justified by some grave complication in the actual events or do not serve to investigate the cause of these. Furthermore, you will inculcate a feeling of security in the minds of your people that no unjustified oppression will be dictated, and that the policy of the Government is to give the utmost indulgence with respect to all those who, without having actively and gravely intervened in the rebellion, show a sincere repentance or a loyal adhesion, and finally you will put in practice every available means in your power in order that the villagers return to the normal life in every way and that the tranquillity and morale of which they are so much in need be established in them.

"God preserve you many years.

"BLANCO.

"Manila, 11th October, 1896.

"To the heads of Provinces and Districts and Military Commanders of the Flying Columns."

October 22nd.

News has come to hand of heavy fighting at Montalban, a town in Manila province about 12 miles north of the city, 1,000 insurgents attacked the town and drove off the garrison, taking possession of the barracks of the Civil Guard; these were subsequently reinforced by a column from San Mateo, but they were also driven off. Losses are not given; therefore it is supposed they are heavier than they care to admit.

THE MAILS FROM JAPAN.

The following letter appears in the *Manchester Guardian* of Oct. and:—

Sir,—The letters that left Yokohama by the steamship *Empress of China* on the 21st August last were only delivered in Manchester on the afternoon of the 22nd September, whereas I, a passenger by the *Empress of China*, arrived in Manchester on the night of the 18th September, although I stayed over one night at Toronto, spent six hours at Niagara, and remained three days in New York. I crossed the Atlantic by the steamship *Campania*, which sailed from New York on the 12th September; but had I travelled by the steamship *Teutonic*, that left New York on the 9th September, as some of my fellow-passengers by the *Empress of China* did, I should have reached Manchester by the 16th September—say twenty-six days from Yokohama.

The letters by the *Empress of China* reached Montreal soon after midnight of the 7th September, and of course could easily have come on by the steamship *Teutonic*. What became of them after leaving Montreal is, I think, a question that all merchants doing business with Japan have a right to ask. The delay is a reflection on the Canadian Pacific Railroad Company, and would seem to indicate a want of proper arrangements between them and the postal authorities. The Canadian Pacific Railroad route is a wonderfully speedy and extremely comfortable one for passengers from Japan, but the foregoing experience shows that letters are unaccountably, and it seems to me unnecessarily, delayed; and in this respect the San Francisco route would appear to be far ahead of the Vancouver one, in spite of the fact that nearly all the Pacific Mail Steamship Company's and the Occidental and Oriental Company's steamers now call at Honolulu homeward bound. My friends here tell me that similar delays occur in nearly every delivery of Japan mails via Vancouver, and, not only that, but that letters from Shanghai reach England five to six days ahead of those from Japan by the Canadian Pacific Company's steamers, the explanation of this being found in the fact that a bag is made up at the post-office in Shanghai marked "Via Vancouver and New York." The Japanese postal authorities, I understand, refuse to make up a bag so marked, contending that their duty is simply to mark all the mail-bags from Japan for European "Via Vancouver," leaving the responsibility

for their proper transmission after that on the shoulders of the Canadian Pacific Railroad Company. I hope the whole matter wants looking into, and I feel sure Sir, that you will earn the thanks of all concerned by taking it up and using the influence of your valuable paper to bring about a better state of thing.—Yours, &c.,

JAMES P. MOLLISON, of Messrs Mollison and Co., Yokohama, Japan.
54, Princess-street, Manchester, 29th September.

The *Manchester Guardian* comments on the above as follows:—

The considerable shortening of the time occupied in exchanging mail communications with Japan which has been effected since the completion of the Canadian Pacific Railway makes it the more desirable, in the interest of all concerned, that the mail service by that route should be brought as near perfection as possible. A correspondent, whose letter we publish in another column, calls attention to delays which apparently occur at Montreal. He points out that had he himself come straight through without breaking his journey, he could, by travelling by way of New York from Montreal, have accomplished the whole journey from Yokohama to Manchester in the remarkably short space of twenty-six days. As the mails carried by the Canadian Pacific Railway to Montreal, were brought by the same vessel and train to Montreal as our correspondent travelled by, but did not arrive in Manchester until the afternoon of September 22, or thirty-two days after leaving Yokohama, there was apparently a delay of six days after the mail-bags reached Montreal. We hesitate to believe that a careful comparison of dates from some time past would prove, as our correspondent suggests, that the San Francisco route would, as a rule, prove quicker than the Vancouver route; but, pending the establishment of a quick Atlantic mail service direct from Canada, it seems desirable, in the interest of the Dominion and the Canadian Pacific Railway Company, that every effort should be made to prevent delay at Montreal. The statements of our correspondent might well receive the attention of the Manchester Chamber of Commerce.

JAPANESE AND CALIFORNIAN TRADE.

Among the passengers by the last American mail for Japan, came Mr. W. R. Townsend, as Special Commissioner to this country from the San Francisco Bureau of Foreign Commerce, an organization closely connected with the Board of Trade, the Chamber of Commerce, and the Manufacturers' and Producers' Association. Mr. Townsend, who comes to Japan thoroughly well introduced, will remain here some considerable time before going on to China, and the scope of his mission is clearly indicated in the following extract from the *San Francisco Examiner*:—

About two months ago the Chamber of Commerce, the Board of Trade, and the Manufacturers' and Producers' Association, named a committee to consider ways and means for developing the foreign commerce of San Francisco. The committee consisted of William M. Bunker, W. L. Merry, Frank L. Brown, W. F. Bowers, J. A. Folger, Charles H. Haswell, Jr., M. P. Jones, Charles C. Nichols, A. L. Scott, H. A. Williams, Clinton E. Worden.

The committee organized itself into the San Francisco Bureau of Foreign Commerce, and elected William M. Bunker, Chairman, and W. L. Merry, Secretary, and then issued an address, consisting in part as follows:—

This is not a pioneer movement. On the contrary, all the leading commercial centres of the United States have promptly responded to the new demand for new fields, and are already sending representatives to China, Australia, and Central and South America. These commercial embassies have been favourably received and confident reports have been returned.

If San Francisco is to maintain its commercial rank and position among the great cities of the United States and meet the demands of foreign commerce, we must enlarge the boundaries of our trade and boldly face the keen competition in business. To accomplish these ends and purposes financial aid, the sinews of commerce as well as war, must be secured. It has been decided that a fund of \$15,000 be raised. The amount must be subscribed, subscriptions to be paid quarterly, the money to be disbursed by the committee working under the direction of the Chamber of Commerce, the Board of Trade, and the Manufacturers' and Producers' Association.

Representatives are to be sent from this city to foreign ports, from which, in the judgment of the committee, the best results may be secured in the development and extension of our commerce.

After several meetings and after a searching inquiry into our foreign trade relations, the bureau decided to send a special representative to Japan, and selected as that representative W. R. Townsend. Mr. Townsend has had a wide, varied and successful commercial experience, and is admirably adapted for his mission to the Orient. He goes to Japan to inquire into the trade possibilities of that country, and will regularly report to the Bureau of Foreign Commerce, and his reports will be sent to the Chamber of Commerce, the Board of Trade, and the Manufacturers' and Producers' Association, in order that the members of these organizations may obtain the guiding information of which they stand in need.

CORRESPONDENCE.

Our readers must distinctly understand that we are in no sense responsible for that sentiment or opinion of our correspondents, for the accuracy of their assertions, or for the deductions they may choose to draw therefrom.]

THE TACOMA MAIL SERVICE NUISANCE.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—As is well known for three or four times now in succession (not to go further back), mail matter *via* Tacoma has come straggling in from one to three weeks after that by the succeeding San Francisco steamer. For example, *Harper's Weekly*, of Sept. 12th, did not come to hand till after two later San Francisco mails had arrived. It would seem that the Post Office officials think only of the departure of the steamers and take no thought of the time of their probable arrival. Is there no way of abating this nuisance? It is becoming intolerable. G.

November 9th, 1896.

NOTHING NEW.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—After Mr. Bryan had been nominated and was returning from his notorious Chicago convention with flying colours, it was said that his election as President of the United States was a foregone conclusion—because he represented the people and voiced the sentiments of the down-trodden labourers and the honest farmers; that, in short, the masses would vote for Bryan regardless of party lines, over against the classes, the capitalists and plutocrats, that represented but a small number of votes. Now that McKinley has been elected by a sweeping majority, what do we hear? Its old, old story of bribery and fraud. Even before the election had taken place, but seeing the pending defeat, one of your correspondents wrote:—"From the fact that it had seemed necessary to assess all the monopolies, combines, corporations, insurance companies, banks, trusts, and stock boards, in fact all the advocates of the gold standard to the extent of many millions, it would appear that the silver craze had assumed proportions that engendered alarm in the minds of the Republican campaign managers, alarm that decided them that arguments other and beyond what platform orators and a subsidised press could advance were needed to counteract the logic of silver advocates and Mr. Bryan's influence, so lightly considered by the *Japan Mail*."

In the above, your correspondent "X" says things that he must know are not true. To say that "all monopolies" &c., &c., and "all advocates of the Gold Standard" were assessed, is as false as it is senseless. There are silver "combines," "corporations" &c., who according to "X" were all assessed in order to "counteract the logic of Silver advocates." How else than by bribery can money counteract logic? There is nothing new or original in "X's" insinuation. It is the old calamity howl of defeated "sand lot agitators." We Americans understand this very well. The great mass of the American people—by which we mean the common people, including the labourers and the honest farmer with his "ten acres and a cow"—are known to be honest and cannot be bought. Moreover, it was not alone dishonest silver dollar propositions that turned them away from Bryan, but the anarchistic tendencies of the Chicago platform which Bryan defended, and in so doing "made votes" for McKinley. A distinguished Republican, when asked if he would not deliver several speeches, thought it was quite unnecessary since Mr. Bryan had delivered some very eloquent speeches in favour of McKinley. I hope, however, "X" will not insinuate that Bryan had also been bribed.

Yours, &c., HONEST DOLLAR.

Tokyo, November 6th, 1896.

JAPANESE WANT OF COURTESY.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Will you kindly afford me a short space in the columns your newspaper in order that I may mention of an injustice I have for some time been subjected to. I think it is well known that in Europe and America professional men are treated with courtesy while in the proper pursuit of their respective callings, although, so far, this custom seems to be otherwise in Japan. In following my vocation as an artist I have necessarily been forced to often go into various parts of the country. Any person painting scenes of this country would, no doubt, be obliged to do the same. But while on my way and in those parts engaged

quietly painting, I think it an almost unpardonable sin that Japanese should have been rude to me in any way, or have annoyed me, and the more so because this race is endowed with such high artistic qualities. Many times I have been obliged to deter from continuing a sketch, and frequently on my journeys and on the ground I have met with very uncivil treatment, although I have always paid the charges demanded, sometimes very high, been polite, and also been quite able to converse with the natives in their own language. In the most highly civilized countries of Europe artists maintain, I may say, almost undue privileges outside of the question as to simple politeness the profession being well looked upon. However, it appears to me as being extremely discourteous for Japanese to be any longer rude to a foreigner simply because he is such. Any like occurrence must be highly disconcerting. I think the authorities, who have power, might endeavour to put a stop to any rudeness coming from the people, for it is quite within their power to do so. Thanking you for the insertion of these lines,

I am, Sir, yours faithfully,

E. W. BROOKE.

Yokohama, November 9th, 1896.

MIXED COINS.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Your leading article in this day's paper contains the following statement:—

Suppose that a gold dollar and a silver dollar, each exchangeable for a lb. of tea, had been melted together and minted as one coin twenty-five years ago, and suppose that independent causes had not interfered in the interim to affect the price of tea, then the composite coin would to day purchase two lbs. of tea, just as it did a quarter of a century ago, for its gold part would be worth 1½ lbs. and its silver part worth ½ lb.

It is evident that you are speaking of the use of the supposed coin in Western communities, since you immediately after refer to what would be the case "when we pass to silver-using countries." Your selection of tea as the commodity for illustration might be mistaken by some readers, but for the assurance that you are not considering the state of things in the East. It may perhaps be more convenient to take a Western product, such as flour. Let us suppose that a gold dollar and a silver dollar, twenty-five years ago, were each worth a peck of flour. The gold dollar, by virtue of the gold of which it was made, purchased one peck. Do you mean to say that the same quantity of gold would now purchase one peck and a half? No such change of price has occurred, and certainly it would make no difference in the value of the gold, whether it stood alone or was combined with silver. I am at a loss to understand upon what theory you hold that a certain fixed amount of gold will buy more of any article now than it would a quarter of a century ago, assuming, as you do, that "independent causes had not interfered in the interim to affect the price" of the article. Nor can I discover any reason why two coins, gold and silver, melted together and re-stamped, should be supposed to possess different qualities of purchasing power from those of the same coins in their original form;—unless, indeed, a fixed ratio of gold and silver had been established and recognized. But if this were done, there would be no *raison d'être* of any kind for the mixed coin.

Yours truly,

E.H.H.

November 6th, 1896.

THE NARA SCHOOL TROUBLE.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Your article on the Nara School trouble contains several erroneous statements which should not be left uncorrected.

1.—The Nara School was founded and is maintained by the American Episcopal Mission and not by the American Board.

2.—No Christian, or any other religious services, have ever been held in the School since its foundation in 1888, therefore when it was converted into a Middle School (Chu-Gakko) as far as any religious teaching was concerned no alterations whatsoever were made. The main aim of the School has been to give a pure and moral education to its students, and leave the question, a momentous question indeed, of the choice of a religion to their later and more mature consideration and decision. No coercion has ever been exercised and no allurements displayed. The causes for the dismissal of either a teacher or a student were purely moral, and were enforced always without any partiality on account of the religious creed of the offender. The moral conduct

of its students always has been a model, and all people of Yamato know this fact very well.

Mr. Kawamura endeavours to attribute the causes of the recent troubles and his dismissal to religious matters; but the truth is, the causes are financial and not religious; and his most bitter opponents are Japanese trustees—two of them not Christians—and not foreigners in charge of the spiritual work. As the writer of this letter was one of the three founders of the school—two others being Mr. Tamaki, President, and Mr. Ido, Treasurer—he knows the real causes of these unhappy occurrences since their beginning, that is since the coming of Kawamura. Soon after the school was turned into a Chu-Gakko and the number of students increased rapidly, Kawamura erroneously claimed the whole success for himself and began doing things which could not be tolerated. The first was the procuring from the Nara Ken the office of the Commissioner of Agriculture and Inspector of Rice-fields, with a salary of 15 yen attached to it. He used to be absent from the school for several days consecutively, on the plea that he was persuading the farmers to send their boys to our school, and instead of turning this money to the School exchequer, whence he received a salary of 65 yen per month, he pocketed the Government money. The writer had a consultation with Messrs. Tamaki and Ido about it, but we thought it best not to disturb matters now that the school was so successfully progressing. Last year (Oct. 4th) the writer went to America to solicit funds for a new building and other urgent purposes. Very soon, it seems, Kawamura took everything into his own hands, and usurped the offices of president and treasurer. Last summer, both Messrs. Ido and Tamaki, who had been the real founders of the school and liberally supported it from their own means, resigned. Mr. Ido wrote the writer of this letter a pathetic note, bitterly complaining against Kawamura, saying the school cannot last very long under such management. Mr. Ido did not write me at that time, but I heard afterwards that Kawamura had expended 900 yen of the school without consulting any of the trustees.

From the above facts it will be seen that the Nara school trouble is not a repetition of the Doshisha case. Here the struggle is between two men who founded the school in 1888 and have contributed immense time and labour and money towards its prosperity, and an irresponsible *parvenu* utterly mistaking the value of his services to the school or his ability as an educator, who has tried by sheer rowdiness to overawe those two noble men who have valiantly withstood his destruction-begging despotism. The writer who cherishes towards that school intense love, and its present troubles cause him unbearable pain and anguish of the spirit, sympathises fully and unequivocally on the side of Messrs. Ido and Tamaki, and thinks Kawamura's conduct since his connection with the school utterly undeserving of the sympathy of a just man.

ISAAC DOOMAN.

November 12th, 1896.

[Our account of the affair was avowedly taken from vernacular newspapers, and our comments were based on the information furnished by them.—*Ed., 7 M.*]

YOKOHAMA GENERAL HOSPITAL.

The annual meeting of subscribers to the Yokohama General Hospital took place at the Chamber of Commerce building on Thursday. There were present, Mr. A. O. Gay, Chairman, Rev. E. C. Irvine, Messrs. J. H. Brooke and A. J. Wilkin.

The Chairman presented the following report:—

The last annual meeting was held on November 6th, 1895. The accounts for the year ending September 30th, are now submitted, showing a balance of cash on hand at that time of \$1,024.70. The receipts were larger than for the previous year, owing to the liberal subscriptions, while the expenses have been less, as in the absence of earthquakes and damaging storms there were no important repairs to make.

On the 6th of April a general meeting took place to consider Dr. Mécure's proposal to erect new hospital buildings upon condition of holding the premises for fifteen years. After some discussion, Dr. Mécure's proposition was adopted by a very large vote.

An agreement was then made and signed by the Committee and Dr. Mécure in terms of the understanding. Work was commenced immediately by removing the old main building and a new one has since been erected in its place, which was ready for occupancy on the 29th of September. A new kitchen has since been added, the old one being taken away and other buildings are still in process of being removed.

The hospital, built on the plans submitted at the meeting held in April, affords better and more convenient accommodation than the previous one did even in its better days, and Dr. Mécure deserves great credit for what he has thus far accomplished.

Further improvements are yet to be made. A face wall of stone is to be placed along the front, on the main road, and also on the street on the East side of the lot; this street to be made three feet wider than it is now as it can be done without inconvenience or damage to the property, while it will give easier access to the main gateway which will be on that side.

A separate building is to be erected to accommodate a few female patients to meet a requirement which is often felt.

When all the work in contemplation is completed the community of Yokohama will be better provided with hospital accommodation than it has been heretofore.

Doctor Neil Gordon Munro is associated with Dr. Mécure in the care of the sick.

Resident physicians are now at liberty to take their patients

to the hospital and attend them there upon reasonable terms for accommodation for such patients.

November 22nd, 1896.

SETTLEMENT OF RECEIPTS AND EXPENDITURE FROM OCT. 1ST TO SEPTEMBER 30TH, 1896.

To Balance from last account	\$ 83.95
To Subscriptions collected	8,055.00
To Receipts at the Infectious Wards	347.50

A. O. GAY, Hon. Treasurer.

Yokohama, November and, 1896.

THE DEATH OF MR. W. R. H. CAREW.

FIFTH DAY'S PROCEEDINGS—VERDICT.

Proceedings were resumed at 2 o'clock on Friday afternoon in the British Court before J. Carey Hall, Esq., Coroner, and a Jury, in the inquest into the death of Mr. W. R. H. Carew, who died on the 22nd ult. at the British Naval Hospital.

The Coroner stated, on the Court resuming, that the police had reported, that although their search may not have been exhaustive, they could find no traces whatever of any white arsenic being sold to foreigners last month.

Evidence was then lead.

Yamada Masakichi, cautioned, deposed—I am in the employ of Maruya's.

Do you recognise the lady (Mrs. Carew) standing by my side?—I do not recognise her.

Have you brought the books of Maruya's with you, the day book?—I have not.

Can you tell me from your recollection whether anything was bought at your shop by Mrs. Carew on the 17th October last?—I do not recollect.

Do you recollect if anything, and if so what, was purchased on the account of Mr. and Mrs. Carew on the 18th of last month?—I did not sell anything myself, some other person may have sold it.

Mr. Lowder said he should like to have the first assistant of Maruya's that had appeared recalled to produce his books, because we have had it in evidence that Mr. Carew once sent there for some medicine, while Mrs. Carew was absent from the house, and I should like to know what that medicine was.

The Coroner—I told Maruya that they would be required to attend to-day.

Mr. Lowder—It is of paramount importance that I should get answers to these questions.

The Coroner—What questions?

Mr. Lowder—Whether, on the 17th October, Mrs. Carew went to Maruya's and purchased anti-pyrene, and what medicines were supplied on the 18th, when, during Mrs. Carew's temporary absence, Mr. Carew gave the *amah* an order to send down to Maruya's.

The Coroner—Of course I shall consider any application for adjournment if you think it necessary to obtain this evidence, but I may as well remind you that the first witness from Maruya's when asked if he could identify Mrs. Carew as the lady who called and purchased the poison on the 17th, said he thought it might be her, he thought it might probably be her, but he could not identify her. That answers your first question.

Mr. Lowder—Yes, but the other one is, whether, on the 18th, they sold anything, and if so what, to Mr. Carew, that Sunday, when he sent the order for something through the Eurasian *amah*. This was while Mrs. Carew was absent at Church. I want to know what that something was?

The Coroner referred to the notes of evidence and said that Maruya's boy had said—I do not know that lady, I did not sell any anti-pyrene on the 17th as I was not present.

Mr. Lowder—I am not referring to the 17th, but to the 18th October.

The Coroner—Well, if the evidence is necessary we will have the shopman called.

The shopman was accordingly called for over the telephone, meanwhile

Mr. Edward Owen, of the P. & O. Company,

was sworn. He said—I am employed in the office of the P. & O. Company at Yokohama. I remember the deceased, Mr. Carew, coming into my office on the 13th October last. I was well acquainted with deceased. This was about half-past two in the afternoon.

What did he say to you?—He asked me whether a lady had come into the office on that day. He described her as being tall, and wearing a veil. He said she was dressed in a dark dress. I told him that no such lady had been in the office. Mr. Carew described the lady as being fair.

What occurred after that?—He told me that she had been seen outside the office gates by Mrs. Carew.

And then?—Then he told me that he had received two cards, the first card he said had initials on it—I don't remember what the initials were. The second card also had initials on it, with 1888 on it.

Printed or written?—Written.

Yes?—He said that he had received the first and the second, and the second gave him a clue to this person.

He came in search of this person?—Yes.

Did he produce the card?—No, he tried to find it in his pocket, but could not find it. He told me that these cards were from a lady who had been at his house and asked to see him. He said that he was not at home at the time, and she saw Mrs. Carew who told her that her husband was out, and that she would tell him about the visit.

Did he add anything?—He was greatly mystified as to who this person could be, and told me that he thought it was possibly the lady to whom he had been engaged in England.

Engaged to be married?—Yes.

Did he search any passenger lists in your office?—No.

Mr. Trafford—In the course of your duties, after this conversation which you have referred to, did you book a passage for a lady resembling the lady who was described to you?—I have no recollection of having done so.

Mr. Litchfield—Do you remember any such lady arriving before that date?—No, I do not recollect.

Mr. Lowder—I wish to ask Mrs. Carew one or two questions more.

The Coroner—Very good.

Mr. Lowder—You wish to supplement the evidence you have already given?—I do.

With reference to the letter which you received on the 19th October—which I called a patchwork the other day—you wish to make a statement?—I do.

Will you give your reason?—Because since the letter passed from my possession into your hands, and since reading the report that has been printed in the papers, I have been able to identify the chit as one written by Mr. Carew to myself, and which was received by me on the 15th October. Early on the morning of the 15th, I wrote to Dr. Wheeler to the effect that I wished him to call at the office and see Mr. Carew, because Mr. Carew himself had declined to speak to Dr. Wheeler about his illness. About 10 o'clock that morning, I wrote to Mr. Carew, and a messenger brought back this chit, which should read as follows:—

Dearest Edith—Many thanks for your chit. I am feeling a little better, but still very seedy. Many thanks for sending old Wheeler. He came to my office and talked a lot of rot about my being on the verge of jaundice and knocked me off all drink except Vichy Water, a dozen of which I have ordered to be sent to the house. I have offered \$13,000 down for the house.

Witness—I cannot recollect now the words of the following sentence, but the last one should be Fearfully busy over the lotteries.

Witness—I tore the chit up after reading it and put it in my waste paper basket. On the 19th I received this piece of paper in this condition, and in this envelope. At that time, and as I had received a letter from Mr. Carew addressed to Miss Annie Luke in an envelope written in the same hand-writing as the one now produced, I jumped to the conclusion, that this letter was sent to me with the same object as the first one sent, to cause jealousy. In the state in which it was then received it did not produce any impression in my mind, as I had not remembered or in any way connected it with the chit sent to me on the 15th. Who took the pieces from the basket and who sent them to me, I have no idea.

Will you state what brought to your mind the fact that you had been under a misapprehension in regard to this letter, and when?—It was yesterday; the letter had been in Mr. Lowder's possession for some days, and until I saw it more clearly produced in the newspaper, I never recognised what I now know to be a fact that I received that letter myself.

Mr. George Kircher, Usher of the Court, was then sworn. He deposed, in answer to the Coroner—I received instructions from you on the 3rd

inst. to make every enquiry as to the whereabouts of Annie Luke. I made these enquiries and could find no trace of her whereabouts, nor could I find anybody who knew her, or had seen her.

Mr. Rose—Would it not be as well to call in an expert to consider the handwriting of these letters?

The Coroner—If the jury consider it necessary, but I would suggest that it is a point that had better be postponed until another occasion.

Mr. Trafford—Don't you think, sir, that that is a point that should be left to the jury itself?

The Coroner—I think so too. You can all examine the letters. You are all acquainted with different handwritings, being practical business men, but for my own part I am of opinion that for the purposes of your decision in this case, these letters have but a remote bearing on the case.

Mr. Rose—My own impression was that an expert would have to be called in; that it was indispensable in the decision of the case.

The Coroner—I am ready to abide by the decision of the majority of the jury in the matter. If, after making careful examination of them you think it necessary, then I will adjourn the inquiry for such testimony to be obtained. I would ask you, Mr. Rose, to examine the first letter and the last. The first professes to have come from the person known as Annie Luke, and the other is dated the 29th, and is in the same handwriting as the two letters received by Mr. Lowder and myself. From examining those two letters you ought to be able to form a good opinion whether those two letters were from the same hand. I also remind you that there is no more relation between the envelope and the letter it contains than there is between a bottle and the cork with which it is stoppered.

Mr. Rose (after examining the papers and letters)—I do not press for an expert.

Mr. Lowder—I would remind that jurymen that in addition to examining the first and last letter, he must also examine them all, in order to see whether they have been written by the same hand.

The Coroner—It is my wish that he should do so. My Blundell—My intention was to ask for all the letters at the end of the enquiry.

The Coroner—The witness from Maruya's has not yet come: is the evidence regarding the 18th of importance to your case.

Mr. Lowder—In my opinion it is very important.

The Coroner—Very well. I should be sorry to exclude one jot or tittle of evidence that may be of benefit to your client.

Mr. Lowder—Your honour just observed that there was no more relation between an envelope and the contents, or paper that it contained, than there is between a bottle and its cork. I agree with you in the abstract, but I think in justice to my client I should remind the jury that Mrs. Carew has sworn on her oath as to these envelopes and their contents.

The Coroner—Quite so. Although, gentlemen of the jury, there is no necessary connection between an envelope and the letter or paper that it contains, you have it before you on the oath of the witness, namely, Mrs. Carew, that these particular letters were inside the particular envelopes that have been shown you; and it is my bounden duty to give due weight to whatever Mrs. Carew has said about those letters and their envelopes.

Mr. Lowder—Thank you.

The Coroner—Now, gentlemen of the jury, after you have taken sufficient time, I will be guided by the majority as to the advisability of calling in an expert to judge upon the handwriting of those letters.

Mr. Trafford—Who would you call in this case? The Coroner—That I would leave to the jury. There are five letters upon which you can form an unbiased judgment, and if you consider their writing as doubtful, I will adjourn the inquest and call in an expert.

Mr. Lowder—The Jury should also examine the envelope in which the first letter came.

The Coroner—Thank you. Quite so; then there are six exhibits for you, gentlemen, to examine.

Hayashi, now recalled, said—I have brought a book with me.

Can you tell me if, on the 17th October, Mrs. Carew purchased some anti-pyrene at your shop?—I did not see it.

Will you look up your book?—There is no entry in the book on that date.

Is there any entry against the name of Carew on the 18th?—This is a cash-book, and there is no name in it.

But I am not saying that these things were paid for?—No names are written in this book; it is a cash-book, but the name may be in another book.—(Laughter.)

Well, will you tell us if, on the 24th, any money was paid on behalf of the Carew family?—There is an entry of money being paid for a bed-pan,

85 cents; after that is, Fowler's Solution of Arsenic, 25 cents.

And after that, is there any mention of chlorodyne?—There is not.

Mr. Lowder—Evidently the book that I require has not been brought; and I will not detain the court any longer.

Witness, to Mr. Trafford—I was in the shop on the 19th.

Mr. Trafford, to the interpreter—Does he remember any lady purchasing Fowler's Solution on that day?—As I gave in my evidence on the former occasion, I sold a poison to a lady then.

There were no further witnesses present and the taking of evidence concluded.

The Coroner—Now, gentlemen of the jury, I am prepared to take your opinion regarding the advisability of calling in an expert for passing judgment upon the letters. Those of you who are of opinion that such a course is advisable and desire an expert to be called, will please hold up your hands.

Mr. Rose, alone of the five jurymen, held up his hand.

The Coroner—There is thus a majority of four against one. If the point had been important I should have felt inclined to even accede to the wishes of the one, but as in my opinion these letters have such a remote bearing upon the case, and it is in the interests of all, most especially of Mrs. Carew, that this enquiry, which has already been so unduly prolonged, should be finished, I accede to the wish of the majority. This has been a very difficult and complicated case, and I have been very much impressed with the great care and attention that you have displayed, gentlemen of the jury, all through the case. The question now is, are you ready to consider your verdict, or would you like an adjournment in order to look over the evidence, to consider it more carefully and at length. If you are prepared to go on with the case to-night I am willing to co-operate with you and proceed to sum up. Are you prepared to go on, or would you like an interval to further consider the evidence? Those of you who are prepared will please signify the same by holding up your hands.

Mr. Trafford—If you, sir, are prepared to go on, I think we are.

The Coroner—Is that the opinion of you all? The Jury gave a general consent.

The Coroner—Well, gentlemen, then I will proceed to sum up. This is an important and difficult case, and I am much pleased with the care and intelligence with which you, gentlemen of the jury, have followed the evidence. You will remember that when this enquiry was opened on the Saturday, three medical men had been examined in the forenoon at the Royal Naval Hospital, they were Dr. Wheeler, the deceased's medical attendant, and the two doctors at the Naval Hospital who had conducted the *post mortem* examination. The result of the evidence given by the three medical men was to make clear the fact that the deceased had not died from natural causes. The facts then given made it essential that an expert should be called in to make a chemical and analytical examination of the contents of the viscera of the deceased gentleman, and this examination you ordered me to have carried out. I at once placed the matter in the hands of Dr. Divers, of Tokyo. In the afternoon of that day three other witnesses were examined. They were Miss Jacobs, the nursery governess of Mrs. Carew's; Mr. Porch, Mrs. Carew's brother; and Mrs. Carew herself. The evidence given that afternoon all tended to show that medicine, that arsenic, had been procured from Maruya's by Mrs. Carew's orders. The testimony of Miss Jacobs on this point was clear and unshaken in the brief cross-examination to which she was subjected. Her demeanour was that of an unwilling but truthful witness; and her evidence on every material point remains unshaken. The evidence also pointed to the fact that throughout the week or eight days illness of deceased, his wife, Mrs. Carew, was in sole charge of the nursing by day as well as by night, and received no assistance in the nursing; and that on her own admission she knew that her husband was taking arsenic, yet never considered it of sufficient importance to call her husband's medical attendant's attention to the fact. Gentlemen, you will perceive the gravity of that admission supposing it was afterwards proven that death did result from the arsenic that had been taken. We come now to the second day of the inquest, when other evidence was given, namely the keystone of the whole case—Dr. Divers' evidence. It is hardly necessary for me to read over the clear, and explicit, and forcible terms in which Dr. Divers showed to your satisfaction—must have convinced you—that death resulted from arsenical poisoning. That simplified your duty very much, because it reduces the issue to practically one point, namely who administered the arsenic? Now there are two

possible suppositions at least: one that the deceased administered the arsenic himself: the other that it was administered or was given to him by some one else. If he himself took the fatal dose he must have done so intentionally or unintentionally. If in the first case, it would be a case of suicide, if not, then death would have been due to misadventure. Now for the supposition that he deliberately committed suicide by taking arsenic: there is hardly a jot or tittle of evidence to support it. The supposition, I think, may be safely dismissed. The explanation which Mrs. Carew's evidence on the first day was calculated to suggest, was that the deceased, being in the habit of taking arsenic—of medicinally dosing himself with arsenic—and having in spite of her remonstrances insisted on being supplied with it; and she having found the bottle which she had given to him sealed in paper—the inference intended to be drawn was that he had overdosed himself and had died from the effects of that overdose. Now, with regard to that supposition, Dr. Divers gave some very clear and convincing evidence. From the state of the viscera and the scientific conclusions he drew, he considered it decidedly and distinctly improbable that deceased had himself administered the arsenic from which he died. Arsenic, he showed, was not a cumulative medicine—that is, it is not a medicine which, if taken in small medicinal doses, remains in the system and at last produces the effects of a poisonous dose—that it goes on accumulating until it becomes fatal. On the contrary, arsenic is a medicine that is soon passed through the body and is quickly eliminated from the system. The evidence of the viscera indicated clearly to Dr. Divers that not one dose but a repetition of doses had been given to the deceased. Then, against the supposition that the deceased overdosed himself, was the fact of the great difference in the medicinal and a fatal dose of arsenic—a proportion of 1 to 30. That is, a man accustomed to take arsenic medicinally would have to give himself a dose thirty times the size of the medicinal dose to produce death. An attempt was made to shake Dr. Divers' evidence by cross-examination on that point with regard to the tolerance of arsenic by persons habituated to the use of it; but it seems to me that his evidence was quite unshaken on that point. He laid it down that the idea of a 2 grain dose having been taken by a Western stomach and tolerated was unknown to science. The case of the Stryian peasants was exceptional and by itself; and the evidence seems to negative the supposition that the deceased administered arsenic to himself either intentionally or unintentionally. Then if he did not administer it himself some other hand must have given him the poison. Who can that be? Naturally and inevitably, suspicion will fall on the nurse, upon his wife, Mrs. Carew, who was in sole charge of his nursing, without any assistance, except sending up occasionally a drink of milk, or beef-tea, or something by one or other of the servants. Now, if it was not Mrs. Carew, it may have been someone outside, and that introduces the mention of Annie Luke. The case which the able Counsel for Mrs. Carew has been endeavouring to make out, I take to be this: that on or about the 10th October last, a woman named Annie Luke, with whom Mr. Carew, had previous relations in England or elsewhere, came to Yokohama, and during the course of Mr. Carew's illness, in an interval in which Mrs. Carew was not at the bedside of her husband, found entrance to the deceased's room and administered the poison. If that is not the implication, then I fail to see what the object of all this evidence as to Annie Luke can be. Now, gentlemen, Annie Luke has been seen, according to the testimony of Mrs. Carew on the day of the regatta, the 10th of October. Mrs. Carew swears that a woman, dressed in black, and wearing a veil, called, desiring to see Mr. Carew, and finding that he was not at home she made an appointment for 4.30 that afternoon, and stated that if she did not come then she would come next morning. She did not keep that appointment. That is the sole clear statement as to the appearance in the flesh of Annie Luke. No doubt the *amah* testified that on one occasion during Mrs. Carew's absence from her husband's bedside, a woman called and enquired after Mr. Carew and asked where his bedroom was. She could give us no particulars as it was dark. That may have been Annie Luke, or it may have been a neighbour coming kindly to enquire. What is certain is that Mrs. Carew mentioned about a woman in black on the 10th. This woman, who is called Annie Luke, comes if not into appearance, into hearing, on the 10th, and she disappears and as mysteriously as she appeared, on the 29th after writing a couple of letters—one to Mr. Lowder and one to myself. The most diligent search to find any evi-

dence of her corporeal presence; where she stayed or of her whereabouts during her twenty days' stay in Yokohama, has been ineffectual. Gentlemen, I take upon myself the responsibility of saying that, in considering your verdict, you need not complicate your minds much as to the share which such a person as Annie Luke may have taken in this tragedy. It remains then for you to consider the evidence of Mrs. Carew herself. She admits that on the 20th—after at first denying it—that she sent an order to Maruya's for a bed-pan and a bottle of Fowler's Solution. She does not deny the fact testified by Miss Jacobs, that on the 21st she procured another ounce bottle from Maruya's. Her own handwriting is in evidence to show you that on the 17th and 21st she likewise procured half ounce bottles from Schedel of the Normal Dispensary. In her first evidence she admits having given the arsenic to her husband sealed up in paper. She denies, of course, even having administered arsenic to him as a medicine during his illness. It will be for you, gentlemen, to consider the possibilities of the case. In coming to a conclusion as to the cause of Mr. Carew's death, as to how it was he was poisoned by arsenic, you will consider these various theories—the theory of suicide, intentional or by misadventure, and the theory of homicide by Annie Luke or by Mrs. Carew. It will be your duty, gentlemen—I lay it down as a simple canon of sound reasoning upon this as upon other subjects—to choose the hypothesis to form that conclusion which at the same time is the simplest of all and which fully accounts for all the known facts of the case. The salient facts of the case I may recall briefly in applying that canon of reasoning. Mr. and Mrs. Carew were married in 1889—seven years ago. They lived on happy terms of conjugal affection till quite recently, when by Mrs. Carew's own confession unpleasant discussions arose on a certain point. That point was money matters. In July last—but I had better read Mrs. Carew's evidence as supplying, or assuming to supply what her Counsel, Mr. Lowder, considered was wanting, namely an explicable motive. [The Coroner here read extracts relating to the monetary discussions, relative to the remittances from England; Mrs. Carew's half-yearly allowances and private means.] Resuming, he said—The unpleasant discussions arose in July last. The 10th of last month was regatta day, a very inclement, rainy day, as some of you may remember. On that day two contemporaneous facts make their appearance in the story. One is the mentioning by Mrs. Carew at the Boat-house to her husband, in the presence of other people, of a certain mysterious lady in black, who was afterwards fully particularised as Annie Luke. The second important fact on that day was the obtaining by Mrs. Carew from Dr. Wheeler of an order for arsenic for her own malarial fever. On the 11th October, Mrs. Carew procures from the Normal Dispensary, on that prescription of Dr. Wheeler's a half-ounce bottle of arsenic; on the 15th of October, four days afterwards, Mr. Carew is confined to his house, not to leave it again, except after a week's interval to die. On the 17th, two days afterward, Mrs. Carew procures a second half ounce bottle of arsenic from the Normal Dispensary. On the 19th, Mr. Carew's illness increases in gravity, the symptoms increase in seriousness. On the 19th a bottle is procured from Maruya's for Mrs. Carew by a person whom Maruya's shopman, Hayashi Shichihiro, could not distinctly identify as Mrs. Carew, and who signed the name "Mrs. Carew." The same person called on the 20th and paid for the medicines and obtained the writing on which she had written them on the 19th. On the 20th, the day following, another ounce bottle of arsenic is procured on Mrs. Carew's written order, by Mrs. Carew's own messenger, Miss Jacobs; and likewise on the day preceding his death a third half-ounce bottle was procured from the Normal Dispensary. On the following day, at five o'clock, Mr. Carew died. Those are the main facts upon which you are to draw your own intelligent inferences in order to bring in your verdict. If you reject the supposition of suicide or death by misadventure, if you reject the story of Annie Luke as largely imaginary, suppositional, impalpable, intangible, and unverifiable, you are necessarily driven to the conclusion that arsenic must in some way have been administered by Mrs. Carew. If you come to the conclusion—if the evidence seems to point—that Mrs. Carew's hand was the hand that administered the poison, you are bound by your duty and your oath to find out and determine in your own minds whether it was administered with intent to kill. That is to say your verdict must either be manslaughter—that is to say culpable negligence—or it must be wilful murder. On the side of the negligence there are these considerations to be taken into account. Mr. Carew had, I believe, undoubtedly

taken arsenic medicinally. That was explicitly testified to by Mrs. Carew herself, who said it was prescribed by a doctor in the Straits Settlements, Dr. Simons, and that she administered arsenic herself to him medicinally, so that both Mr. and Mrs. Carew were not unacquainted with the previous administration of arsenic. In support of the statement that he had previously taken arsenic medicinally, we have the testimony of Mr. Dickinson, who declares that some years ago, at Dzushi, Mr. Carew told him that some years previously in the Straits Settlements, he had nearly killed himself by an overdose of arsenic. Then there is the statement of Dr. Munro that the impression was made on his mind that Mr. Carew on one occasion told him that he took arsenic. If you think that this previous administration, or previous taking, of arsenic by Mr. Carew was sufficient to relieve Mrs. Carew from due vigilance during her nursing mission at her husband's bedside, you may come to the conclusion that there was an absence of intent to kill. But while I present these two considerations of the favourable side of the case, it is also my duty to put to you the facts that seem to point in an opposite direction, the facts that seem to point to intention on the part of Mrs. Carew. These are, first of all, the nature of the poison employed. Arsenic, as Dr. Divers told us, is colourless, tasteless, odourless, and very hard to detect by the person to whom it is administered. It is a poison that is and has been frequently chosen for the purpose of poisoning persons. Another fact that seems to indicate intention is the frequency with which the doses of arsenic were procured—no less than six separate times between the 11th and 21st. The third indication that seems to imply intention on the part of whoever administered the arsenic, is the presence of sugar of lead in the intestines of the deceased. It has not even been suggested that the deceased ever administered sugar of lead to himself, and Dr. Divers has explained to you that the fact of sugar of lead having been administered concurrently with arsenic, would be to stop the hæmorrhage, the bleeding of the intestines, which arsenic tends to produce. These are three indications. There is a fourth indication. That is the fact of Mrs. Carew's reticence—silence, her complete silence on the subject of the arsenic being taken to the deceased's medical attendant during those days of his illness and suffering. Gentlemen of the jury, you will now consider your verdict.

The jury retired and were absent just one hour and twenty-five minutes. They left the Court while the room was still illumined by the last rays of the afternoon sun. On their return they found the Court room shrouded in pitchy darkness save for one or two points of light at the reporters' desk and the barrister's table, where some candles had been placed. The room was crowded to the fullest extent.

The Coroner—Gentlemen of the jury, are you agreed upon your verdict?

Mr. Blandell (the foreman)—We have agreed. Our verdict is as follows:—"We find that Walter Raymond Hollowell Carew died on the 22nd of October, 1896, at the Royal Naval Hospital, Yokohama, from the effects of arsenic, but by whom this poison was administered there is no direct evidence to show."

The Coroner—Your verdict, gentlemen of the jury, is an open verdict.

The jury having attached their signatures (with the necessary red wafers) to the verdict,

The Coroner said—Gentlemen, you are thanked and discharged.

H.B.M. COURT FOR JAPAN.

Before JAMES TROUP, Esq., Assistant-Judge.
WEDNESDAY, Nov. 11th.

ARREST OF MRS. CAREW.

At 11.15 o'clock this morning the Court convened in accordance with summons. There were present Mr. H. C. Litchfield, Crown Prosecutor; Messrs. J. F. Lowder and A. B. Walford, barristers-at-law; Messrs. R. D. Robison and J. D. Hutchison, and Mrs. Carew.

The Usher read out the formal announcement: Mr. Chas. Henry Litchfield, Her Britannic Majesty's Crown Prosecutor for Japan *versus* Edith May Carew: charge, murder.

On His Honour taking his seat on the Bench, Mr. Litchfield said—I appear under instructions from Her Majesty's Government to ask for the arrest of Mrs. Edith May Carew for the murder of her husband. I have laid before your Honour this morning a deposition sworn to on oath which you doubtless have now before you.

His Honour—Just one moment Mr. Litchfield. Mr. Lowder—I appear, in company with my learned friend Mr. Walford, for the defence.

His Honour—Have you seen the summons, Mr. Lowder?

Mr. Lowder—Yes, I have seen it.

His Honour—There is a mistake in your client's name, is there not? It is incorrect I believe, what should it be?

Mrs. Carew—Hallowell.

Mr. Lowder—The name of my client is incorrect as it appears in the summons. The name Hallowell should be inserted after the word May.

His Honour—Quite so, then I purpose to amend the summons by inserting the name in that manner.

Mr. Litchfield (resuming)—I have nothing further to ask this morning than to make an application for a remand until to-morrow, and for the issue of subpoenas for the presence in Court of certain witnesses to give evidence on the matter in question.

His Honour—Mr. Litchfield has applied for a remand until to-morrow morning and the issue of subpoenas for certain witnesses; have you, Mr. Lowder, anything to say to that?

Mr. Lowder—Of course I cannot oppose the application, but I ask for time in which to make an application to the Judge whether bail will be accepted, with which I am prepared.

His Honour—Such an application is generally made in Chambers. The Judge, I understand, is in attendance, and I will adjourn the proceedings for a short time in order to allow of your making your application to him. Till then there is a short remand—till you have had time to apply.

Mr. Lowder—As your Honour pleases.

Mr. Lowder and Mr. Litchfield then left the Court for the Judge's Chambers, the rest of the parties remaining in Court. At a quarter to twelve o'clock proceedings were resumed.

His Honour—It having been certified to me by the Judge that bail shall be accepted, in addition to accused herself, in two responsible sureties, nothing remains to be done this morning than to fix the time or duration of adjournment. Have you, Mr. Lowder, those two responsible sureties present?

Mr. Lowder—I now tender as sureties Mr. J. D. Hutchison and Mr. R. D. Robison as substantial British merchants residing in Yokohama.

His Honour—The Court is satisfied with the sureties offered. The Clerk of the Court will make out the bonds and see that they are executed in due form. You applied, Mr. Litchfield, for a remand, for what length of time?

Mr. Litchfield—Till to-morrow morning at half-past ten.

His Honour—Would not to suit better?

Mr. Litchfield—I am quite willing.

His Honour—I wish to consult the convenience of all parties, and I think to o'clock will give us a longer day.

Mr. Litchfield—Very well.

His Honour—Then Mr. Hutchison and Mr. Robison will now enter into the bonds before the proper officer of the Court. The Court is adjourned till 10 o'clock to-morrow morning.

An application made by the Press as to the amount of the bail, met with the reply from the Clerk of the Court—The press is not concerned with anything that does not occur in public Court.

THURSDAY, November 12th.

THE DEATH OF MR. CAREW.—PRELIMINARY EXAMINATION.

The preliminary examination of Mrs. Edith May Hollowell Carew on the charge of murdering her husband, the late Walter Raymond Hollowell Carew, was called on at 10 o'clock this morning.

Mr. H. C. Litchfield, the Crown Prosecutor, conducted the proceedings on behalf of Her Majesty's Government. Mr. Lowder and Mr. A. B. Walford appeared for the defence. Mrs. Carew sat between her Counsel. The Court was crowded all day.

Mr. Litchfield opened by saying—I do not propose addressing your Honour at this stage of the proceedings, but will call witnesses in support of the charge I have made.

Howard James McCleary Todd, sworn, deposed—I am a member of the Royal College of Surgeons, London, and Staff-Surgeon in the Royal Navy. On Tuesday, the 20th of October last, I was asked by Dr. Wheeler to hold a consultation with him over the late Mr. Carew.

Were you acquainted with him?—I knew Mr. Carew very slightly; simply by sight as it were, to nod to and say "How d'ye do." I saw him at his house.

Was he in bed when you saw him?—Yes.

Dr. Wheeler was present, I presume?—Yes, Dr. Wheeler was present.

In what condition did you find the patient?—He was complaining of excessive vomiting, and he was suffering from debility caused by the vomiting.

Did you examine him carefully?—Yes, carefully.

Before you examined him, did you learn what treatment Dr. Wheeler was pursuing?—While I was examining the patient I asked Dr. Wheeler what his treatment was, and he told me.

What opinion did you form as to the complaint Mr. Carew was suffering from?—I considered that he was suffering from derangement of the stomach due to liver affection.

Did you hold a *post mortem* on the body of the patient afterwards?—I did.

You were assisted then by Dr. May?—Yes, I was; Dr. May is surgeon at the Hospital.

Was Dr. Wheeler present?—He was present at the latter part of the examination.

Will you tell us the result of the *post mortem* and the conclusions you formed?—Could I have the statement made by me at the inquest read over; it would be exactly the same.

His Honour—I have no evidence before me, yet. Mr. Litchfield—Could you not give us the result shortly?—Yes.

What did you find?—The only lesions were a contracted liver and inflammation of the bladder. The stomach and intestines were not examined as they were at once sealed up for further examination.

What did you do with the stomach and intestines?—They were put in glass jars; and then I reported the case to the Consul, that I could not give a certificate of death.

Were the glass jars sealed?—Yes.

What did you do with them?—They were sent down in charge of a responsible person to the Consulate; they were in a sealed box.

Who was the responsible person?—One of the attendants. I can give you his name latter on.

A foreigner, not a Japanese?—I can not tell until I make further inquiries.

From your examination of the body of deceased could you state the cause of death?—No. I came down and told the Consul that I could not give a certificate as to the cause of death.

Do you mean by that answer that you could find no symptoms sufficient to cause death?—There were no lesions sufficiently grave to cause death.

Did you examine the body externally?—Yes.

Did you find any marks externally?—None.

No eruptions?—None.

Could you find from your examination if he was a man given to alcohol?—I think he was given to alcohol.

Extensive?—Not extensively. By that I mean he consumed more alcohol than was good for him.

Mr. Lowder—Does inflammation of the bladder cause acute pain?—As a rule, yes.

Mr. Litchfield, in re-examination—Was the inflammation of the bladder that you observed sufficient to cause pain, was it extensive or slight?—I think it was sufficient to cause pain.

His Honour—You may be required to come again Dr. Todd; if so, will you do so when called by messenger?

Dr. Todd—I will, sir.

Edwin Wheeler, M.D. of Queen's University, Ireland, and Licentiate of the Royal College of Surgeons, Edin., also L.R.C.P., Edin., was then sworn.

Mr. Litchfield—Are you practising in Yokohama?—Yes.

Have been for many years?—For twenty-three years.

Did you know the late Mr. Carew?—Yes, he was my patient, and I may say that I knew him intimately.

Did you attend him frequently or otherwise?—I attended him frequently.

How would you characterise Mr. Carew, as a healthy man or an invalid?—He was a healthy man, perhaps given to good living and to taking too much, on occasions only.

During your attendance upon him, prior to October last, what were his complaints, what did he suffer from?—Principally of liver.

Did you prescribe accordingly?—I prescribed for liver complaint accordingly.

What did you prescribe, the usual liver medicine or something stronger?—Tonic for the liver, that was all.

In October last, when were you first called in?—On Thursday the fifteenth. That is, I received a note from Mrs. Carew to go in and see her husband at the office.

Did you see him at the Club?—Yes. At the office at the Club.

He was Manager and Secretary of the Club, I believe?—Yes.

Did you examine him, and what did you conclude he was suffering from then?—I told him, "You are over-stimulating a bit too much; you will have to drop that and go on a diet, and you can't do that very well unless you go home and remain at home two or three days at least." I also told him to order and send up to the house a dozen of Vichy Water, and to drink nothing but that and milk.

Did he complain to you then of feeling ill or of any trouble?—He said he felt weak and out of sorts, and said that he thought his old liver was bothering him. His own words were, "my old liver is bothering me."

Did the symptoms you observed correspond with that?—Yes.

He looked as if he was going to have a bilious attack?—Yes, he looked muddy, and the white of his eye had a yellow tinge. To make him be careful, I remarked, if you don't look out you will have jaundice.

During the time you knew Mr. Carew, had he told you of his habits of life, or did he leave you to discover and judge of them yourself?—I was allowed by him to judge of his habits myself; he only said once that he had had liver bad in Australia, and again about his having to be carried on board his steamer when he was invalided home; and also that he had to leave the Straits Settlements as he could not remain there. At the time I thought he must have suffered from malaria there, as he talked of living in the jungle and having taken very large doses of quinine there.

Did he say anything else about the remedies he had been taking?—No, that was about the only thing he told me of what he had been taking.

He didn't say he had taken arsenic?—No. Prescribed or otherwise?—He never mentioned the subject to me.

You say that you recommended him to go home on the 15th; when did you see your patient, Mr. Carew, again?—On Friday, the next day, the sixteenth.

What was his condition that day?—Much the same, only that he was very sleepy and drowsy.

That would be a liver symptom, would it not?—Yes, that is what I concluded it to be. He was drowsy until Tuesday morning.

Did you prescribe medicine for him?—I told him to go on with the diet; and on the Saturday I prescribed some podophyllin for his liver.

In pill or draught?—In drops; I think I gave it to him on sugar.

You saw him on the Saturday; what was his condition then, was he worse or better?—He was certainly no worse. He remained in about the same condition. He had a little more irritability of the stomach, possibly, on Saturday.

Was he walking about during this time?—He was up and down, sometimes in an arm-chair, and sometimes in bed. He was able to walk about and go into the dressing-room.

You say put him on diet; did you knock him off all his food?—He had soup and toast, beef-tea, and a slop diet generally.

That he did not like?—That is so.

Did you see him again on Sunday, the 18th?—Yes.

Was there any change in the patient by that time?—He was getting restless and talked about going to Kamakura. I did not think that he was in a condition to do so.

Did he complain at this time of inflammation or irritation of the bladder?—He never complained to me of that.

Did you have any means of knowing that he was suffering from irritation of the bladder?—I had no means, whatever.

On Monday, the 19th, did you see the patient again?—I did.

Did you find any change in him?—He was still drowsy and irritable, and perhaps there was a little more stomach irritation.

Did this irritation produce vomiting?—Yes, mostly of a dark green bilious looking nature.

Was that of such a character as you would have expected in an ordinary bilious attack?—I concluded that it was due to bile.

It did not surprise you?—No, it did not. I ordered continued mustard-plasters over the stomach in order to give relief.

Do you know if the plasters were applied?—Oh, yes.

Did you change his diet?—I ordered him another purgative, and the diet remained the same. It was with difficulty that we could get him to take food.

In fact he did not like it?—Yes.

Did you expect by this time relief to the patient by the treatment you had adopted?—On Monday night I thought the continued irritability of the stomach to be very strange. On the Tuesday morning, I asked Mrs. Carew if she had any objection to my calling in Dr. Todd to consult with me, and have a look at him, as the case puzzled me. In the afternoon, Dr. Todd went round with me; I think you have the result of that consultation in Dr. Todd's evidence.

His Honour—I have Dr. Todd's account of it.

Mr. Litchfield—On Wednesday you saw him again?—Yes.

On your usual round or specially?—I paid my usual visit that day. I found him not so well, he had

not passed a good night, though I had given him a hypodermic on Tuesday night. I also tried to get him to take a little bromide of potash in a mixture, but he complained of everything hurting his throat. On that Tuesday night, I saw him about 11 o'clock. I had been out to dinner, and Mrs. Carew came round in a *finricksha* and asked me to see her husband again.

His Honour—Called at your house?—No the house where I was dining at, No. 118, Bluff. She said her husband was not so well; that he was slightly off his head. I told her that that might be the effect of the hypodermic which I had given him. I went round a little before 11 o'clock and saw him then. By that time he was much quieter.

Mr. Litchfield—Did he complain of anything, or of his head?—He complained of excessive thirst and soreness of the throat. Did he say anything about his breathing at that time?—No, not at that time.

Mr. Lowder—I beg pardon, when was this?

Witness—Tuesday night.

Mr. Litchfield—How did you find him next morning?—Not so well. He had passed a restless night; he had been muttering in his sleep.

This was what you were told, was it by the patient?—He told me this himself. He said he had not had a good night.

About the muttering?—Mrs. Carew told me that, also that any sleep that he had had was very disturbed. I told her that this might be due to the hypodermic that he had had the night before.

Did you find him suffering from diarrhoea on Wednesday morning?—Yes, I found him suffering from what I thought was acute diarrhoea.

Did you examine the motion?—Yes. It was a dark greenish black liquid.

Would that be accounted for by the purgative you have told us you administered?—Some of it, but not all; one or two motions would be accounted for by that.

Could you account in any way at this time for the symptoms you observed?—No.

You were still puzzled?—Still puzzled.

On the 21st did you telegraph up for Dr. Baelz?—At midday on the 21st, at Mrs. Carew's request, I telegraphed to Dr. Baelz.

His Honour—Was this request in writing?—Yes, she wrote me a chit, asking me to telegraph to Dr. Baelz.

Mr. Litchfield—Have you got the chit?—No. About 5 o'clock I got an answer from Dr. Baelz, and this telegram [put in] running—"Impossible to-day, would to-morrow evening do? Baelz"—I took up to Mrs. Carew.

His Honour said, in regard to exhibits, he proposed to keep the same letters as were put on them at the Inquest.

Mr. Litchfield—After receiving that telegram did you go up to Mrs. Carew's house?—Yes. After receiving it I went up to the house shortly before dinner time. I told her Dr. Baelz could not come down, but would to-morrow do? I said, "I think we had better go up and see the patient, then you can make up your mind as to what we had better do." The patient seemed to all of us considerably better at dinner-time.

His Honour—When you saw him?—Yes, when we went upstairs. In fact, so much so that he asked me wouldn't I let him have a brandy and soda, as his throat was so dry and constricted.

Mr. Litchfield—Was he out of bed when you saw him?—He was sitting up in bed, and moving about from one side to the other.

Was he physically weak or strong?—He was able to get up and move about.

Did he get up?—He did not get up out of bed, but rose on his elbow in bed and talked.

Did you order a bedpan for him?—No.

Was one used for him?—Yes, one was used for him I know. I saw a zinc bed-pan on the Wednesday, because the diarrhoea was getting rather excessive on that day.

Can you remember when you first saw the bed pan, on the morning or the evening of Wednesday?—The evening, I think; because Mrs. Carew said, "I have got a bed-pan and it will save him getting-up," or words to that effect.

Did you let him have his brandy and soda?—I allow him to have a little, with a quarter of a grain of cocaine in it. I gave Mrs. Carew three tablets.

Mr. Lowder (interposing)—Would you say whether you ordered milk also?—At that time I ordered the brandy and soda alone, as he was having milk in his diet; milk and soda was part of his diet, with some light beef-tea. This diet I had changed on Tuesday.

Dr. Wheeler at this point said that he thought it would simplify matters if the Court would take the statement that he had made at the inquest as his evidence regarding the case. He had signed that statement, which was entirely unbiased, and had been given directly after Mr. Carew's death.

This, to his mind, would be a better course than to continue answering questions.

His Honour—It is not open for me to copy from the depositions taken at the inquest.

Dr. Wheeler—All I meant to suggest was that that statement was true and correct, and I thought that this system of question and answer was not sufficiently accurate to enable me give a connected narrative.

His Honour—It is not open for me to copy from the depositions given at the inquest. Will you give us, in a narrative form from this time, your history of the affair. We have got to the evening of the 21st, at dinner time, when you had received a telegram from Dr. Baelz.

Mr. Litchfield—Up to this time, Wednesday, who had been attending to the patient; nursing, him, etc.?—Mrs. Carew principally. I saw the small China-boy taking in things; I also saw an *amah* about the room, and of course his brother-in-law, Mr. Porch, was in and out.

What was the condition of the bed-room, that is to say the arrangement of tables, drawers, by the bed side, etc.; did you take any particular notice?—The head of the bed was next to the wall, near to his dressing-room. I think there was a small table near the right hand side of the bed. There was nothing odd or noticeable about the room beyond an ordinary bedroom; with the usual things, chairs, etc., about.

Did you notice any bottles on the table by the bed side?—Yes, I think there were two tables, one alongside the bed, and another near the door leading into the dressing-room. There was a bottle on the table containing some bromide of potash that I had ordered, and also a bottle containing a solution of hydrate of chloral, and also a small bottle of tincture of podophyllin, and also a bottle containing a preparation of opium and belladonna. This was for external application. A teaspoonful was sprinkled over a sponge piline and placed over his stomach, over the region where he complained of pain.

Did you notice a small cabinet over the mantel piece? There was a little bric-a-brac thing there; the usual bamboo thing you usually see out here in the East. I do not distinctly remember its shape. Was there any bottles in it?—I do not know. You cannot answer that question?—No, I could not.

His Honour—You did not observe bottles in the cabinet?—No, I did not really take any notice.

Mr. Litchfield—Now will you give us the further history of the affair and the conclusions at which you arrived.

Dr. Wheeler—Again I ask your Honour whether it would not be better to take my statement delivered at the inquest. It is a truthful statement, given at a time immediately after the affair, and is entirely unbiased and uninfluenced by any public opinion since expressed upon the matter.

His Honour—You do not mean to suggest that you may be biased now?

Dr. Wheeler—Such a length of time has elapsed since the evidence was given that there may be some discrepancy between what I may say now and what I said then. When a man has got over his 50th year, and especially if he has lived in the East, his memory is not such that he can go back to events that occurred even half a month before with any degree of accuracy.

Mr. Litchfield—Do you not wish to confirm your previous statement?

Dr. Wheeler—Yes, of course I do, but I thought it would save time, and beside be more accurate, if my statement at the inquest was taken.

His Honour—Mr. Litchfield will put such questions to you as will help you to remember your previous statement. I am afraid I can't copy the evidence given at the inquest.

Dr. Wheeler—Of course I am willing to answer any question.

His Honour—Then I think we had better proceed with the questioning.

Dr. Wheeler—You see, sir, there has been so much backing and filling, first Wednesday then Tuesday being referred to, that my story is not now a consecutive narrative.

His Honour—I understand, but I think we had better proceed with the questions.

Mr. Litchfield—You wish to confirm your former statement?

Dr. Wheeler—Certainly. I signed it then as a truthful narrative of the case.

Mr. Litchfield (to Mr. Lowder)—Have you any objection to Dr. Wheeler seeing his depositions at the inquest? I know that it is unusual.

Mr. Lowder—I should certainly object.

Mr. Litchfield—Now, Doctor, we will proceed. We have got as far as the evening preceding the Thursday, when, I presume, you saw your patient?

Witness—On Thursday morning I received a letter from Mrs. Carew; I think the time must

have been about half past six. I went round and saw the patient about 7 o'clock.

In what condition did you find him?—Decidedly worse.

That is to say, he was weaker than before?—Yes, a little weaker, and he had had no proper rest on the night of the Wednesday. When I went in he was muttering a little, and when I spoke he woke up and answered me clearly. I gave him, seeing that he had had no sleep, some of the solution of hydrate of chloral in milk and soda—15 grains—to give him some rest, knowing that was what he required. I told Mrs. Carew, "He wants proper rest; he has had no rest last night." I said I would come back after Mr. Boag's funeral; and then left. I had made up my mind to see if I could not get Dr. Todd to take him into the Hospital, as I did not like the symptoms at all.

What were the symptoms you did not like the look of?—He was a good deal debilitated and weak; he was in a half-sleep that was not sleep. He could be wakened up when you spoke and would then answer questions.

While you were at Mr. Boag's funeral a communication was made to you, I believe?—Yes.

How soon after that communication was made to you, did you go to the house of your patient, Mr. Carew?—I had first to go and interview the nursery governess—the communication was such that I went round to see the governess, who was at Mr. Lowder's house with the children.

His Honour—Wait one moment, this is new evidence. What nursery governess was this?—Mrs. Carew's. I was about to say her name, Miss Jacobs. She made a statement to me.

His Honour—One moment, we may take that statement or communication, now—

Mr. Lowder—I object to that communication being given in evidence, on the ground that it was not made in the presence of the accused.

His Honour—Have you anything to say to that, Mr. Litchfield?

Mr. Litchfield—Oh, no.

Witness resuming—I then went to see Dr. Todd, who, unfortunately, was out of town that day, but I saw Dr. May. He told me that he could not take the responsibility on his own shoulders of admitting Mr. Carew into the Hospital. Then I drove down to the British Consulate here, and had an interview with the Consul, urging him to use his influence to get Mr. Carew admitted at once into the hospital.

Mr. Lowder—I would explain that my objection to the witness telling the Court what manner of communication was made to him by the governess will not continue if the statement was subsequently made to Mrs. Carew; if he told the accused what statement Miss Jacobs then made to him. I have no objection to the evidence being obtained in that way.

His Honour—I do not think the question was put by Mr. Litchfield.

Mr. Litchfield—No, I did not put it.

Dr. Wheeler—I have been relating how the time actually elapsed.

His Honour—Very well.

Witness—The Consul said he would go at once, and left in a *jinricksha* directly. He went up to the Hospital at once, a few minutes before eleven o'clock. I then went up to the house of Mr. Carew to see the patient again, and found him still worse.

Did you see Mr. Porch at the time of this visit? I met him on the hill as I went up. I said to him, "You go along to the house, as your brother-in-law is getting arsenic in some form, I fear." I further told him that I did not know who was giving the arsenic to him, or whether he was taking it himself; and that I would go to the Hospital and get the stretcher.

His Honour—Mr. Litchfield, do you wish to elicit this evidence?

Mr. Litchfield—Yes. I wish to find out whether or not Dr. Wheeler received certain information, and whether, acting on this, he saw Mr. Porch and gave him some instructions.

Witness—I told him (Mr. Porch) to go up into the room and see that Mr. Carew got nothing but a little milk and soda, and that from himself.

On this same Thursday was the patient admitted to the Hospital?—Yes, after a little delay. I brought the stretcher to Mr. Carew's house a little after two o'clock. He was admitted into the Hospital a few minutes before three o'clock.

When you went to Mr. Carew's house, was Mr. Porch there?—Yes.

Had he been there all the time and followed your instructions?—That I don't know. He was there in the room. I walked alongside the ambulance to the Hospital, and Mr. Porch and Mrs. Carew walked along with me. Mr. Porch was admitted into the hospital, and was allowed to enter the ward with the patient. He accompanied Dr. May and myself into the room.

You heard that the patient died that afternoon, and were afterwards present at the *post mortem*?—Yes.

Did you see Mrs. Carew again, on the evening of Thursday?—Yes. I had a letter from her. I had been out to dinner and went round to see her about 11 o'clock.

Did she make any communication to you?—Yes. She said, "Oh, Doctor, there is a thing I ought to have told you before. You know Walter suffered from a stricture and he has been in the habit of taking arsenic for it, and just a few days ago he asked me to send down to Mariya's and get a bottle of Fowler's Solution of Arsenic and some sugar of lead." I felt a little annoyed, certainly, and all I said was, "It would have simplified matters if you had done so."

His Honour—Done what?—Told me. I said, I think, "It's a pity," or words to that effect. Then she said, "I can't find the bottle; I think they were in that drawer, but I can't find them." I told her not to bother looking for them now, and I went downstairs and off home.

Mr. Litchfield—In your opinion, are arsenic and sugar of lead appropriate remedies for stricture?—I have never heard that they were used direct; they might have been used for something that aggravated stricture. Sugar of lead may be used externally or as an injection in the form of a lotion. They might be used for another disease or affection that might aggravate the stricture somewhat.

Mr. Litchfield—I presume you refer to malaria?—Yes, to malarial fever.

Arsenic is often given in cases of malarial fever?—Yes. Arsenic is a nerve tonic and an anti-periodic, and as an anti-periodic it is used for malarial fever.

In such a case what is the dose that is usually administered?—Generally it is given in the form of solution, say Fowler's Solution, in doses of 5 drops in a little water after meals. That is the ordinary dose; but that dose has been increased on some occasions.

According to your experience?—Yes, that dose may be increased to possibly 10 drops in water after meals; but during the time a patient is taking the larger dose he is generally under the eye of his medical man.

I presume you are acquainted with Fowler's Solution of Arsenic; now how much arsenic is there in an ounce bottle?—Four grains of arsenite of potash are contained in such a bottle; 4 grains to the ounce. It is of a reddish colour. That is caused by the compound tincture of lavender that is put in it to give it a reddish colour and also to give it the lavender smell.

At this time, it being 12.30 o'clock, an adjournment was taken for lunch. On the Court reassembling,

Mr. Litchfield said—Before the adjournment, Dr. Wheeler, you described to us the qualities of Fowler's Solution of Arsenic; can you state, in your opinion, how much larger doses can be taken in safety—you have given us the usual medicinal doses?—Well, I have stated that it has been given up to the amount of 10 minims, medicinally. Some authorities have given more in cases of epilepsy, but the patient has always been watched every day during the time he was taking those large doses.

Do you know how Fowler's Solution is usually procured? Do the druggists here make it up from prescription or is it imported wholesale from England?—It may be made here or it may be imported.

You do not know how it is usually done?—No, I do not. It can be made up here according to the Pharmacopoeia.

On or about the 10th of October, did you prescribe Fowler's Solution of Arsenic to Mrs. Carew?—That was on the day of the regatta. Yes, I prescribed for her Fowler's Solution of Arsenic. I tore a piece off the back of the Regatta programme and wrote, "Liq. Fowler ½ oz." [Exhibit put in and identified.] This is the prescription: the solution was to be taken, 4 or 5 drops after meals.

It was not addressed to anybody?—No, not addressed to anybody.

Is this a prescription for Mr. Carew?—Yes.

It is for some podophyllin digitalis, I think?—Yes. [Exhibit put in, as were also two orders for Vichy water.]

I gather that you had been prescribing for Mr. Carew before the 15th, and for liver?—Yes, on the 10th.

On that occasion did you attend him at his house or at the Club; did he send for you, or did Mrs. Carew ask you to see him?—I am not distinct about it, but I think it may have been at the Club. He said that his old liver was troubling him, and I said that I would give him some powders.

A bundle of prescriptions from the Normal Dispensary were here handed to Dr. Wheeler, and

after examining them he said—There are two prescriptions for Mrs. Carew, two for the children, and one early in October for some lotion for Mr. Carew when he got some dust in his eye. He complained of his eye, and I turned the lid up and said I will give him a lotion that he might apply for a day or two. This was on the 7th of October. All these were prior to the last sickness. [Exhibits put in.] On the 28th August there is a prescription for Mr. Carew, calomel and podophyllin.

Mr. Lowder, in cross examination—Isn't conjunctivitis a symptom of arsenical poison?—It is when it is in both eyes.

You said that you were not quite sure where you made up the prescription for Mr. Carew marked beta?—I think it was on a Sunday, in the house. Yes, it came back; it was in the house on a Sunday where I wrote that prescription. Taking the day into consideration, I now have that impression. He was always at home on Sunday, or out sailing.

His Honour—It was at his house?—Yes.

Mr. Lowder—And now, will you remember whether or not Mrs. Carew called you in?—I prescribed for Mrs. Carew that day; some anti-pyrene for neuralgia.

Was it not for Mrs. Carew's brother?—He was sick also, having slight influenza catarrh.

But my real question was, was it not Mrs. Carew who called you in to see her husband that day?—I called to see Mr. Porch, I think.

I suggest that Mrs. Carew wrote and asked you to come to the house that day?—Yes, I had a note from her, but it asked me to call and see her brother.

I suppose that the fact that the prescription for Fowler's Solution which you gave to Mrs. Carew on the 10th October bore no address was an oversight?—It was an oversight that there was no address on the prescription; the date was there.

Do you remember Mr. Dickinson standing next to Mrs. Carew on the boat-house verandah that afternoon; and that you went over to her and remarked that she was not looking any better for her visit to the country?—I said, "Your trip to Mivanoshita has done you no good?" She said: "No; beastly weather, raining all the time."

Then did you not say that you would prescribe some arsenic for her?—She said, "I wish you would give me the arsenic drops you gave me before"—when they were staying at No. 57, Bluff. She said that the quinine I had been giving her was doing her no good, would I give her the arsenic again. I said, "Certainly, I will write it out now."

His Honour—When did you prescribe arsenic to Mrs. Carew before?—Possibly it may have been in 1893 or 1894. I have prescribed arsenic for her on three different occasions.

Mr. Lowder—Now, Dr. Wheeler, when you visited Mrs. Carew on the evening of the 22nd, you said Mrs. Carew made a communication to you?—Yes.

Now, do you remember you used the phrase "a few days ago"?—Yes.

Did you mean when you made that statement that it was an accurate reproduction of her words? We know that she sent for arsenic on the 21st, so I ask whether, in using the phrase "a few days ago," you may not be wrong?—That is only an expression. She may have said Tuesday, but I only recollect the general conversation.

You did not mean then to use her own words?—No, I could not recollect her exact words. I was given to understand that the thing had occurred a few days ago. It did not refer to an exact date, only a general idea.

Do you recollect Mr. Parsons coming to you on Thursday morning, the 22nd ult., with a message from Mrs. Carew, requesting you to call in Dr. Baelz at once?—Before Mr. Boag's funeral, at 20 minutes before nine o'clock, Mr. Parsons came and said to me, "What about Carew?" I said, "He is very low this morning?" and he said, "What about getting Baelz down?" I answered, "Certainly, if you can get him down, but he can't get down till evening. There is time enough for you to go down and see Mrs. Carew before the funeral starts; I wish Mr. Carew to be kept quiet, as a little after seven I gave him some hydrate of chloral, and as he is a little delirious from want of sleep, tell Mrs. Carew not to worry, and not to answer him if he speaks—to let him sleep, as that is what he required."

On Tuesday, the 20th, when you spoke to Mrs. Carew about bringing in Dr. Todd and obtaining another opinion on the case, did she not readily approve?—Oh, yes. She said, "Do, bring him along."

Do you remember on the occasion when Dr. Todd came in that he recommended you to take away a bottle of the patient's urine?—I did so.

Did you discover any traces of arsenic in it?—

I did not test for arsenic. The only thing abnormal was a slight trace of albumen present.

Arsenic passes off in the urine?—Principally by the urine; but all the excretory organs pass it off. But principally by the urine?—Yes.

Mr. Litchfield, re-examining—But you had no knowledge that Mr. Carew was taking arsenic or any suspicion of it?—None whatever.

And you would not find it unless you specially tested for it?—Yes, and then it would require a most delicate hand to find it. You would require the laboratory of a chemist to find it properly.

Percival Marshall May, M.R.C.S. Eng., and L.R.C.P. Lond., Surgeon in the Royal Navy, sworn, deposed:—

You are at present stationed at the Naval Hospital at Yokohama?—Yes.

Do you remember Mr. Carew being brought to the Hospital on the afternoon of Thursday, the 22nd October?—Perfectly. It was a little time before three o'clock.

When brought to the Hospital he was removed to his room?—He was taken straight from the ambulance and placed in the bed without changing the blanket in which he came.

Had you known Mr. Carew before this?—Only in his business capacity as Secretary of the Club.

What was his condition when admitted into the Hospital?—He was in a more or less state of collapse. His pulse was feeble, rapid, and running; his extremities were cold and clammy. He complained of great difficulty of retaining his breath and had to be propped up to enable him to breathe. He was very restless and tossing from side to side on the bed, and complained of a great pain shooting from the front of the chest to the shoulders behind. He expressed it as a terrible pain. Was he conscious?—Quite conscious. He lapsed into muttering delirium for a few minutes, just at times; then he would come round again and would understand when spoken to.

Did you form any idea of the complaint from which he was suffering?—I had no time to form a diagnosis of what he was suffering from.

You administered stimulants?—Yes.

In what shape?—Brandy, put into the mouth and hypodermically, and ether hypodermically.

Did you find his skin cold?—His limbs were fairly warm when brought in, as he had been well wrapped up.

In fact, he was, in your opinion, a dying man when he came to the Hospital?—Yes; all we could do was to administer stimulants.

He died that afternoon?—He died about twenty minutes or a quarter to five, so far as I can remember.

You assisted Dr. Todd at the *post mortem* examination?—Yes.

Do you agree with Dr. Todd's results?—Yes, I agree with his opinion.

Could you say that he was a comparatively healthy man from the result of the *post mortem*?—Yes, a fairly healthy man. I should like to state further that in addition to the above symptoms, the deceased complained of great constriction, dryness, of the throat—difficulty in swallowing.

Mr. Lowder had no questions to ask.

Mr. Litchfield—It is now 4 o'clock, and as my next witness will take some time, I think it will be convenient to adjourn.

His Honour—Then we will sit at 10 o'clock to-morrow morning.

Mr. Litchfield—Does your Honour propose to sit on Saturday morning? Because if so it will be convenient that the Japanese witnesses whose presence I have asked for, should be requested to attend on Saturday morning.

His Honour—Yes, I purpose sitting on Saturday morning and I will call the Japanese witnesses for that day. The Court now adjourns till 10 o'clock to-morrow morning.

FRIDAY, November 13th.

The preliminary examination of Mrs. Edith May Hallowell Carew on the charge of murdering her husband, the late Walter Raymond Hallowell Carew, was resumed at 10 o'clock this morning.

Mr. H. C. Litchfield, the Crown Prosecutor, conducted the proceedings on behalf of Her Majesty's Government. Mr. Lowder and Mr. Walford appeared for the defence. Mrs. Carew sat next her Counsel. The Court was not so crowded as on the previous day.

Miss Mary Esther Jacob, nursery governess, of No. 2, Bluff, sworn was examined by Mr. Litchfield. Are you a British subject?—Yes.

Previous to the 21st of October last, were you in the service of Mr. and Mrs. Carew as their nursery governess?—Yes.

When did you first enter that service?—On the thirteenth of May, this year.

Did you come out from England?—Yes, to enter their service. I reached Yokohama on the 13th May this year.

In what part of England were you living before you left England?—Somersetshire.

During your service with Mr. and Mrs. Carew were you comfortable in the house, or otherwise?—Yes, comfortable.

You know that Mr. Carew was ill in the latter part of October?—Yes.

Did you lend any assistance in nursing him?—Only on one occasion had I anything to do with him.

Your duty was solely with the children, and you were not asked to assist with the nursing?—No, not at all.

On the 21st of October did Mrs. Carew ask you to take a message for her to the Settlement?—She gave me a small piece of paper, an open chit: it was not covered up at all.

Anything beside?—Another chit, a folded piece of paper, to take to Brett's; another to Schedel's. They were folded and turned down at the corner.

His Honour—The open one was for whom?—For Maruya's. She also gave me a third one to Moss's the furniture shop; and a book to go to Currow's.

Mr. Litchfield—Did she give you any instructions as to the open chit?—Yes. I read it in the room, and I asked her if I had to sign my name.

His Honour—What, to sign the chit?—No, no; at the place, Maruya's. It was not addressed, but inside was written "Mr. Maruya, please give bearer."

Mr. Litchfield—In whose handwriting was this chit?—In Mrs. Carew's.

Did it bear any address at all?—It was an open piece of paper, with "Mr. Maruya" written inside.

His Honour—The words were?—I cannot remember the exact words. But I think it ran

"Will Mr. Maruya give the bearer one bottle of Fowler's Solution of Arsenic, and one bottle of sugar of lead." I believe these were the words, but I am not positive.

Mr. Litchfield—Did Mrs. Carew give you any money to pay for these things?—She gave me 5 dollars and said she wanted change.

Did you take the stores, in delivering these messages, on their way down-town and go into Maruya's last?—Yes.

When you got to Maruya, what did you purchase from him?—Two little bottles, labelled. One had "Sugar of lead" on it; the other "Fowler's Solution of Arsenic."

Did you read the labels in the shop?—The man gave them to me open; he did not put them into any paper at all. I put them into my little bag.

Did you pay for them?—Yes.

When you went on this errand, were you alone or had you the children with you?—The two children were with me in a jinrikisha.

Did the man in Maruya's say anything to you when you bought the medicine?—Yes. He asked me, "why did you buy so plenty deadly poison?"

Had you ever been in his shop before?—No. I think I have never been in the shop before.

His Honour—Can you say so positively?—I have never been in the shop before alone. I might have gone there with Mrs. Carew when I first came out, but I do not recollect having done so.

Mr. Litchfield—You did not go to the shop on the 19th October?—No.

On this 21st, having put these bottles into your bag, did you go homewards?—Yes.

On your way home did you get anything from Schedel?—Yes. As I went down the street, the youngest assistant there—I do not know his name—who was standing on the steps, beckoned to me. He asked me to take a little bottle; it was in paper, sealed up.

Did you take it?—Yes.

Put it in your bag with the other bottles?—Yes. And take it up to the house?—Yes.

About what time did you get back to the house?—I should think it was half-past eleven or a quarter to twelve.

When you got back to the house, what did you do with the bottles?—Mrs. Carew was on the steps to meet us; the children, Mrs. Carew, and I went all together into the dining-room.

Well, when you got into the dining-room what did you do?—I gave the three bottles to Mrs. Carew.

Did you see what Mrs. Carew did with two of them?—I know that she put two of them on the little writing-table near the window.

Which two were those?—Maruya's.

And the third bottle, do you know what she did with it?—No. I noticed the two, but I don't know what she did with the third.

After Mr. Carew's death did you go to Maruya's store again?—Yes.

With your friend, Miss Christoffel?—Yes. On the Friday night, the 23rd.

Why did you go there?—I went to try and get that piece of paper that I had taken to Maruya's.

Did you get it?—No, I could not get it. But when the man was looking for it, he found another piece, which he said—

Mr. Lowder—No conversation; please.

Mr. Litchfield—I did not ask for it.

His Honour—Quite so.

Mr. Litchfield—The man gave you another piece of paper?—Yes. He showed it to us.

Is this the paper you got from Maruya?—Yes.

His Honour—You said he showed it to you?—Yes. Did he not give it to you?—Yes. He let us have it.

Did you take it away?—My friend, Fraulein Christoffel, took it away with her.

Mr. Litchfield then read the paper:—

Mr. MARUYA,

Please give Hearer

1 Bed pan,

1 Bottle Fowler's Solution of Arsenic,

169, Bluff, E. M. H. CAREW.

30, 10.

Mr. Litchfield—When you got back to the house, on the 21st, did you say anything to Mrs. Carew about what Maruya's man had said to you?—No.

Did you make a statement—I can't tell you the words you said—on the subject to Mr. Porch?—Yes, that same day, after tiffin.

Why were you anxious to get back the paper that your took to Maruya's on the 21st?—Because Mrs. Carew on the night of Mr. Carew's death, denied having written the piece of paper that I took. She said it was in Mr. Carew's handwriting. She denied it both to me and Mr. Porch, saying Mr. Carew had written it. I did not hear her deny it to Mr. Porch.

His Honour—Oh, well, that cannot be given as evidence.

Mr. Litchfield—Did she say anything further on that occasion?—Yes.

What was it?—She said that Mr. Carew had taken his own life, and that she had a letter in her possession in which she said he had said so; that he was going to do it, or had done so.

Mr. Lowder, interposing—Or had done so?—No, he could not have written that after he was dead.

Mr. Litchfield—Intended to do so?—I don't remember the exact words, but that is what I understood.

Mr. Lowder—The witness added at first, "or had done so," and then corrected herself by saying that "he could not have written that after he was dead." I should like that to be taken on your Honour's notes.

Mr. Litchfield—You have told us that you were asked to assist once in the nursing, when was that?—On the night of Wednesday, the 21st, when I was having my dinner. Mrs. Carew was at her dinner.

What were you asked to do?—I was asked to see if Mr. Carew would take a glass of brandy and soda, with cocaine in it.

That is, Mrs. Carew told you that there was brandy and soda and cocaine?—Yes.

Did you take the glass to Mr. Carew?—Yes.

Did he drink it?—No.

What did you do with the glass?—I took it downstairs again.

Did you tell Mrs. Carew what he said?—Yes. I told her that Mr. Carew would not drink—would not have it—that he said that he "had taken a whole chemist's shop that day."

Do you know whether he did drink that glass of brandy and soda?—Yes. Mrs. Carew took it to him; she stirred it up and took it to him.

Your duty with the children took you a good deal out of the house to give them fresh air and exercise?—Yes.

Do you remember Tuesday, the 19th of October, last?—Yes. I went out on that morning. With the children?—With one child.

Where did you go to?—We went to the Post Office to meet Mrs. Carew by appointment. She had taken her little boy, Ben, down town.

Did you meet Mrs. Carew?—Yes. I remember Ben running across the road, this side of the road, to meet me. Marjorie was not feeling very well, and Mrs. Carew took her back in a *kuruma*. Ben and I then walked back. We changed the children, Mrs. Carew saying that she was going to take a *kuruma*; she took the little girl, and I the little boy.

Had either of you a *kuruma* that morning?—Not then. I walked down and back. Mrs. Carew said that she had left her *jinricksha* at the chemist's to follow her, but she did not know where the man had gone.

Where did you go too, with Ben?—I went straight to the Post Office, to ask if a mail had come in.

After that?—I went back again as fast as I could, as the mail was in, to see if any letters were awaiting me at the house. The men at the Post

Office had told me that the mail was being delivered.

You were expecting letters by the mail?—Yes. Did you receive any?—I had two.

After that, on the 19th, how were you occupied in the afternoon?—I believe we went to the Bluff Gardens in the afternoon.

On the morning of the 20th, the following day, were you out with the children?—Yes.

What time did you start?—I believe we all went to meet my friend at the Convent at ten o'clock that morning.

His Honour—May I ask who that friend was?—Fraulein Christoffel. I believe it was at ten that morning that I met her.

Mr. Litchfield—You were great friends, I believe?—Yes.

Do you know if Mrs. Carew was out of the house that morning, or whether she stayed at home?—I think she was at home; I am not sure, but I think she was at home.

To His Honour—I don't know whether she was or not.

Mr. Litchfield—You went back to the house, I presume, to lunch and the children's dinner?—Yes.

What did you do in the afternoon of the 20th?—Mrs. Carew sent me down town, I believe, to cash a cheque for her. Ben rode down on Mr. Fearon's bicycle, I remember.

You mean by that that Mr. Fearon was working the "bike," and Ben sat in front?—Yes, Ben sat in front.

Did you cash the cheque?—Yes. Ben was waiting in the Bank when Marjorie and I arrived.

What Bank was it?—The Hongkong and Shanghai.

After cashing the cheque, what did you do?—I went straight back home. Mrs. Carew was sitting by the nursery window, as Marjorie and I came through the garden. She told me through the window that Ben had run into his father's room. I left Marjorie in the garden, and the *amah* took them—the children—out again for a walk.

When did you leave Mrs. Carew's service?—On Saturday, the 24th October.

Before leaving Mrs. Carew's service, had you, for reasons of your own, looked at the waste-paper basket?—Yes.

Where was this waste-paper basket kept?—In the dining-room.

Why did you look there?—I expected to find letters of my own there.

What letters of your own?—From home.

Letters that you had received?—Letters that I had not received.

Did you find any letters there?—I never found any of my own there.

You found fragments of letters there?—Yes.

What did you do with the fragments of letters you found?—I gave them to my friend.

They were fragments of other people's letters?—Yes.

What did you do with those fragments?—I gave them to my friend.

Your friend?—Fraulein Christoffel.

Did she stitch them together for you?—Yes.

When did you find these?—The first time I ever went to the basket must have been on the 23rd or 24th September.

Did you find them all at the same time?—No.

His Honour—Do you mean all the letters?—No, all the fragments. I found all the fragments of the first letter on the 23rd or 24th September.

That is what you mean?—Yes, the fragments of the first letter.

Mr. Litchfield—And the rest?—After my return from Miyanoshta.

That being?—The first Monday in October.

When you returned from Miyanoshta?—Yes. Are these the fragments?

Mr. Lowder—I object.

Mr. Litchfield—I don't intend to put them in, I wish to identify the fragments. I cannot put them in now as they are not addressed to anybody.

Mr. Lowder—I cannot see how you can do that. Until you can have them identified properly, I must object to their being put in.

Mr. Litchfield, to witness—Is this the envelope that contained the fragments of letters that you gave to Miss Christoffel?

Mr. Lowder—I object to that.

His Honour (to witness)—Can you identify any of these papers?—Yes.

Mr. Lowder—My objection to these fragments being introduced is this: Miss Jacob says that she looked into the waste-paper basket and took from thence some fragments which she gave to her friend, Miss Christoffel, these Miss Christoffel afterwards stitched together, and I contend that Miss Jacob cannot now say that she can identify these fragments in their present form. I say that without further evidence it is impossible for these fragments to be identified properly and satisfactorily.

His Honour—I do not see the point of your objection.

Mr. Lowder—You don't see that it follows?

His Honour—I take it that it does not. I do not see why the witness cannot recognize some of the fragments.

Mr. Lowder—In their present state?

His Honour—If she can recognise some of the fragments I do not see any objection.

Mr. Litchfield was about to put the question again to witness.

When His Honour suggested that the question had better be put in a different form. (To witness)

—Do you recognise any of these pieces of paper as being among the fragments that you took from the waste-paper basket?—Yes.

Mr. Litchfield—Can you recognise any of these pieces of paper as being among those fragments of which you have spoken, and if so, how?—This (pointing to one) for certain.

Mr. Litchfield—That is one.

Mr. Lowder—I understood that the witness pointed to one piece of that stitched letter.

Witness—But I can identify them all.

His Honour—Well, we will mark that piece.

Mr. Litchfield—But I can't put them in now, the letters are not addressed to anybody. I only wish to identify the fragments.

His Honour—If they are not put in and marked, what is the use of identifying them. If you do not put them in there is no use in identifying them.

Mr. Litchfield—I intend to use them in the course of this enquiry. I want to know how many pieces of paper she found; what she found; what she did with them; to whom she gave those pieces of paper; and what that person did with them. That is very simple, and I am entitled to obtain the evidence.

His Honour—If she can identify these fragments, you are entitled to make use of the evidence; but such evidence must go on the record. But unless we have the exhibits put in and marked there can be no trace of them on the record.

Mr. Litchfield—I don't think that I can put them just now without raising a serious objection. What I want to find out is what witness found in the basket, and what she did with the fragments. I am afraid she can't identify them further than that.

His Honour—If you keep the fragments out now until further identification, then you will find it necessary to call this witness again.

Mr. Litchfield—Yes. Well, I will put the question in another way. (To witness)—You said that you gave all the fragments that you found to Miss Christoffel?—Yes.

Did you see them after she had stitched them together?

Mr. Lowder—I would suggest that Miss Christoffel is a better witness as to what she did with the fragments she is supposed to have received. I contend that such evidence from the present witness is not circumstantial and is not admissible.

Mr. Litchfield—She might have seen them stitched together.

Mr. Lowder—If she saw them stitched together, she might answer. But I do not think it can be proper evidence from this witness.

Mr. Litchfield—Very well. (To the witness)—Were you present when Miss Christoffel handed me some letters?—Yes.

Were the letters she handed to me in this condition when they were handed to me by Miss Christoffel?—Yes.

Do you remember the date?—No.

His Honour—Do you say you do not remember?—I am thinking: it was on a Sunday.

Mr. Litchfield—What month?—This month.

The first Sunday of this month?—Yes, I think so. It was not last Sunday.

Some other Sunday in November?—Yes, not last Sunday, but the Sunday before.

These are all the questions I have to ask you, Miss Jacob; do you wish to make a statement to the magistrate?—No.

The depositions were then read over to witness.

Mr. Lowder—Before this witness signs her evidence, I wish to put some questions based on an exhibit handed in at the inquest. Is this one of the letters, or are these any of the fragments taken by you from the waste paper basket and handed by you to your friend (the letter of Mr. Carew to his wife that has been pasted roughly together)?—No.

How do you know?—I have never seen it before. Do you recognise the handwriting on this envelope [envelope accompanying the pasted letter]?—No.

It is not like any handwriting you have ever seen before?—No.

Mr. Litchfield—Did you read, so far as you could, any of the fragments before they were stitched together?—No, not all of them. I read some of them at first.

Can you recognise the handwriting of the letter

just shown you?—I do not. I don't know whose handwriting it is. I don't think I have ever seen it before.

To His Honour—I don't recognise that handwriting. I heard of this letter at the inquest.

His Honour—Have you looked at it?—Yes. I never remember having seen any handwriting like that before.

Mr. Lowder—I would ask her: Do you know Mr. Carew's handwriting?—No, I have never seen any so far as I am aware of.

Then for all you know to the contrary, the fragments pasted on that piece of paper, may have been among the fragments that you handed to your friend, although you have never seen them to your knowledge?—I think not.

To His Honour—I feel sure they were not. Witness then signed her depositions, and the Court adjourned till 2 o'clock.

Miss Elisa Christoffel, sworn, was examined by Mr. Litchfield. She said—I am here as a nurse, and am living at No. 6, Bund.

Of what nationality are you?—I am Swiss.

You have told us that you are employed as a nurse at No. 6 Bund, to Mrs. Dunlop's children, I believe?—Yes.

How long have you been here?—I arrived in Yokohama on the last day of November, 1894.

You have been a great friend of Miss Jacob's I believe?—I have.

She has confided to you from time to time, what troubles she has had?—She and I have been in the habit of telling everything to one another.

Did Miss Jacob give you any fragments of paper?—Yes, she did.

Recently?—Not exactly recently, but I do not know the dates; I do not keep any dates. It was a little while ago, once in September, then again in October, but I do not exactly remember the dates.

She did not give them to you all at the same time?—Not at the same time.

Were they in order or in disorder when she brought them to you?—They were in disorder.

Did you stitch the fragments together, making sense of the pieces as well as you could?—Yes, I did.

Did you preserve all the fragments, or did you destroy any of them?—I preserved all of them.

Would you recognise your work—the fragments—again if you saw it?—Certainly I should.

In the presence of Miss Jacob you handed some papers to me on a Sunday in November did you not?—It was on the 8th of November, in the evening.

To His Honour—They were not fragments then; they were in the form of letters now, as I had stitched them together.

Mr. Litchfield (handing up a packet)—Are these them?—Yes, they are.

His Honour—Are you putting them in?

Mr. Litchfield—Mr. Lowder has asked to see them first, and there will be a little delay.

To Witness—Do you recognise this paper as one of them?—Yes.

What about this mark on the paper?—That mark was made, or put on the paper by Mr. Dunlop, when I gave the letters to him to identify the writing.

To His Honour—This is one of the letters that I stitched together. [Letter put in.]

Mr. Litchfield—Can you tell me by looking at them, in what order they came?—They did not come all together.

Do you recognise this as one?—Yes, I do. [Letter put in.]

And is this another?—Yes, that is another. [Letter handed in.]

In answer to Mr. Lowder, Mr. Litchfield said he proposed putting in all the stitched letters.

His Honour (to witness)—Do you know in what order you received them?—I do not quite understand. When I received them from Miss Jacob, they were in pieces, all mixed up, and at different times, of course.

Mr. Litchfield then presented other papers, all in a stitched condition, that witness identified as they were handed to her. Some were in pencil, others in ink. Mr. Litchfield said he thought that one was in Mrs. Carew's handwriting, but there was no internal evidence as to the order in which they were received. He merely handed them up one by one to the witness for identification, and this was the only order that could be maintained in regard to them. (To witness)—There is one in a different handwriting to the others, is there not?—Yes, I saw it when Miss Jacob brought it to me.

Have you any more pieces of paper that you received from Miss Jacob?—Yes, but they are no longer in pieces, they are now sewn in the form of letters. I sewed them together.

Have you got them with you?—No, I have not.

You have not shown them to me, I believe?—No, you have never seen them. I have never shown them to you.

Are they in the same handwriting as the bulk—as the rest?—Yes.

Mr. Lowder—I object, unless the letters are produced.

Mr. Litchfield—Well, we will produce them. (To witness)—Can you produce them?—I could run round and produce them.

I wish you would. I have one more question. After the death of Mr. Carew, did you accompany Miss Jacob to Maruya's store?—Yes, I did.

You received from Maruya's store a piece of paper that has been produced in evidence?—Yes, this is the paper. I recognise it as the order that my friend, Miss Jacob, and I got from Maruya.

To His Honour—It was given to her in my presence.

How long shall you be fetching these letters?—About five minutes.

Mr. Lowder said he should prefer to have the witness produce these letters before he began his cross-examination and also before any other witness was called.

Mr. Litchfield—Well, shall we adjourn till Monday?

Mr. Lowder—Oh, no, I am prepared to go on in ten minutes or a quarter-of-an hour, but I wish these letters produced before we go further.

His Honour—Then the Court will adjourn for ten minutes.

On the Court reassembling, Miss Christoffel again entered the box.

Mr. Litchfield—Have you now brought the remains?—There they are (handing some papers to Counsel). They are the remains of the letters.

Is this all you ever had?—Yes, all.

You received these from Miss Jacob?—Yes. Mr. Dunlop saw the pieces before I sewed them together.

They were in pieces at first?—Yes; then I sewed them together.

Is this another?—Yes, that is another; and this another, and the small piece is another. [Letters put in.]

Have you read those fragments, I presume you had to, in order to put them together?—I had to read them in order to put them together.

Exhibits R. and R. 2,—the original pasted letter—were then handed to the witness and Mr. Litchfield said—

Were the fragments pasted together in this letter among the fragments given you by Miss Jacob?—No, never.

You have never seen it before?—No never, except at the inquest and in this Court.

Do you know anything about the handwriting on the envelope?—No, nothing; I have never seen it before.

To the Bench—I only knew of this letter when in Court, and when it was handed to my friend Miss Jacob.

Mr. Lowder, cross-examining—You were present during the inquest?—Yes, but not every day; twice or thrice, but not every day.

Were you called as a witness?—No, I came with my friend Miss Jacob.

In what part of the Court-room did you sit?—At the back, in the second or third seat, not always in the same.

And was that letter and that letter handed to you to where you were sitting?—No, I saw it from there, when it was produced here.

To the Bench—The letter was produced about here.

Mr. Lowder—Do you mean me to understand, that, sitting right behind on the back benches, you could see a letter and envelope that was only produced at this table?—I can recognise the one that was pasted on the paper, but I do not say anything about the envelope. I have very good sight, and saw the letter when it was held up to be shown.

You are willing to pledge your oath, that the letter now shown you is identical with the paper that was produced in Court during the inquest while you were sitting on the back benches?—I can only say that I saw the letter; I cannot swear to it.

His Honour—I must remind you that you are on your oath now, and that all you have said is binding on you.

Witness—Oh, yes! I understand that, and that is why I said that I could not swear to the letter and envelope just now.

Mr. Lowder—What kind of pen do you write with, a broad or a fine pen?—I generally write with a quill.

Sometimes with steel pens?—Yes.

Do you prefer a fine or a broad one, or a narrow?—I like, I prefer, soft pens. I never have any thought whether it is broad or narrow.

You do a good dealing of writing, I presume?—Not exactly, sir. I am neglecting all my friends by not writing them letters from Japan at all.

How often did Miss Jacob bring you fragments

of paper to piece together?—I can not say for sure, sir.

Try and remember?—I can't tell for sure.

Was the first occasion on the 21st or 22nd Sept. last?—It might be about the 24th or 25th, but I don't know, I never keep dates. The one I gave to-day I had to get from Mrs. Dunlop.

Miss Jacob said it was about the 23rd or 24th?—I can't remember when it was, I can't tell dates.

And when was the last occasion?—I can't tell. But try to refresh your memory?—That would take a long time, even if I had a calendar and went back day by day.

I will give you a calendar?—But it will take a long time.

It does not matter how long it takes, you are here to answer my questions. Here is a calendar, now, do you remember on what date Mr. Carew died?—It was on a Thursday.

Do you remember the date?—It must have been on the 22nd.

Was the last occasion on which you received fragments from Miss Jacob to piece together either after the 22nd October or before?—They all came into my possession before the late Mr. Carew's death.

Can you now tell me the last occasion?—It would take me all night to remember back.

To the Bench—I would have to remember and go back to all my occupations day by day, to remember such a thing. It would take me a whole night's work to go back day by day, to know when I saw my friend, when I went to see her, on she came and saw me.

Mr. Lowder—Well then, tell me how fix this date about the 23rd Sept.?—Because I went out one evening before my friend went away, and she told me on that occasion about the fragments of letters. She talked about them on that occasion when I went up to see her at No. 169.

To the Bench—That was Mr. Carew's house.

Mr. Lowder—Did you tell her that you knew how to piece letters together, have you ever done this before?—No, sir, I never did. This is the first time in my life that I ever did this kind of work.

When you saw Miss Jacob on that occasion, at No. 169, Bluff, did you not set to work together to piece the letter?—No, I did the work alone, at No. 6, the Bund. I was alone.

Did Miss Jacob give you any reason for getting you to stitch these papers together?—Yes, sir. In fact, I advised her to collect those pieces.

When?—When she told me that she had seen them in the waste-paper basket.

Why did you give her that advice?—Because I thought that it would be useful to her one day, if it should come out that men were paying visits there at that house not exactly in the form of house-friends. I was afraid my friend's character might in such a case, perhaps, have to suffer.

So you thought that it would be useful to Miss Jacob and not to Mrs. Carew?—Yes, useful to Miss Jacob should it be known by the husband or outsiders that those visits were being paid.

Now, from the 23rd, 24th, or 25th September, prior to Mr. Carew's death, can you tell me whether these fragments were given to you on ten, twelve, or twenty occasions?—I believe they were brought to me by Miss Jacob on four occasions.

Oh, I thought we might get at it somehow. (To the Bench)—I wish to test this witness's handwriting, and I will ask her to take a seat and write at my dictation.

His Honour—Certainly.

Witness was then furnished with a quill pen, and Mr. Lowder dictated to her several passages from the letters purporting to be written by "Annie Luke;" also several particular phrases, figures, and initials, and then the following sentence—"I was a witness of the execution at Horse-monger Lane this morning. I went there with the intention of observing the crowd gathered to behold it, and I had excellent opportunities of doing so at intervals that occurred all through the night, and which occurred continuously from daybreak until after the spectacle was over. This might not have occurred to your friend, and when we meet I will explain to you more fully, why this thought occurred to me.—Annie. Lowder, Esq., Wright's Hotel."

Mr. Lowder (to witness)—Now will you show me what you have written. [Papers handed to Counsel.] I should like to hand them to the Bench. I should like, if possible, for this writing to be examined by an expert in Tokyo. I will undertake to have it brought back in exactly the same condition as it is, when handed to me.

His Honour—Do you wish me to initial it?

Mr. Lowder—Yes, earmark it. I should also like to know, sir, whether you will let we have some exhibits that were put in by me at the Corner's Inquest, but not put in to-day, even or referred to by my learned friend, in order that I can have them sent to the expert to whom I propose to

send this specimen of handwriting. I refer to exhibits P., S., and S.2, at the inquest.

His Honour—I think that it would be better if the expert came to the Court and examined them here.

Mr. Lowder—But they are not in Court. I offered them at the inquest, and I think I could uplift them as my personal property. I presume that they belong to me, as my learned friend does not want them, and has not referred to them. If necessary, I will give my personal guarantee that they shall come back intact. It would be of very much convenience to me if they were sent to Tokyo.

His Honour—They were put in by you?

Mr. Lowder—Yes, they were put in by me at the inquest.

His Honour—And you claim them as your property?

Mr. Lowder—As a privilege. I put them in, and as Counsel for the accused I think I have a right to them, as my learned friend on the other side has not brought them in on behalf of the prosecution. I consider them to be my property, and ask that they be given back, but I do not put it quite so strongly as that. If they are not required for the prosecution, I ask for them as Counsel for accused in this case.

His Honour—As these proceedings have really arisen from the inquest, I think that the Crown Prosecutor ought to have something to remark upon the application.

Mr. Litchfield—I do not think it advisable that any exhibits should be removed from the Court. They can be examined here in Court, at any time, and for any length of time, and I think that that would be enough.

His Honour—The Assistant-Judge of this Court sits as Coroner, and I think, Mr. Lowder, that you are setting up a distinction that is not recognised in this Court in the matter of Coroner, Inquest, and Magistrate.

Mr. Lowder—But you are not sitting now as Coroner.

His Honour—If I took your view of the matter, I should allow them to go out of my control, but I am averse to such removal.

Mr. Lowder—Of course I bow to you, Honour's suggestion, and concur. I simply asked for leave to have the exhibits as a matter of personal convenience.

His Honour—Then they had better be examined here.

Mr. Lowder had no further questions to put to the witness.

Witness before signing her depositions, said—I wish it to be understood that I took the paper away from Maruya's. The shopmen put it into my hands. I took it away to No. 6, Bund, and kept it there, and it never went on the Bluff. I went to Maruya's with my friend, Miss Jacob, to help her in the talking, as the boys did not seem to understand her.

His Honour—The Court will now adjourn till 10 o'clock, to-morrow.

Mr. Lowder—Does your Honour intend to sit in the afternoon?

His Honour—Not if it can be avoided.

Mr. Lowder—I should rather wish that it would be avoided, myself.

LATEST TELEGRAMS.

(REUTER'S "JAPAN MAIL" SPECIAL SERVICE.)

London, Nov. 10.

Since Mr. McKinley's election many factories are working overtime, and the mills reopened are giving employment to one hundred thousand men. There is a greatly increased demand for wool and cotton.

London, November, 3.

Lord George Hamilton, Secretary of State for India, speaking at Acton, advised the German press not to overstrain British forbearance by continued attacks based on the erroneous assumption of an irreconcilable rivalry between Great Britain and Russia.

(“SPECIAL” TELEGRAM TO “JAPAN MAIL.”)

Hakodate, November 8.

The first snow fell here last night.

Hakodate, November 9.

H.M.S. *Plover* arrived here yesterday.

Much snow has fallen since Saturday night.

(Reuter's Service of Telegrams supplied to the "Japan Herald," the "Japan Gazette," and other Subscribers in Tokyo and Yokohama.)

London, November 6.

The situation at Constantinople is again

growing worse owing to the tardiness of European diplomatic action. The tension in Crete is also increasing owing to the delay in the execution of the promised reforms. The Christian members of the Council are discontented.

London, Nov. 9.

The revival of business in America consequent on the election of Mr. McKinley, is remarkably widespread. Mills and factories that have been idle for some time are reopening.

Exchange. (Tel. trans.)

Exchange on London at Paris 25.21½

Exchange on London at Paris 4.85½

London, November 12.

It is reported that the Transvaal Government has decided to claim £1,000,000 from the Chartered Company, as an indemnity for Dr. Jameson's raid.

The Press rejoice at the settlement of the Venezuelan question. [The telegram announcing the settlement of the Venezuelan question is missing.]

The Porte has officially published a scheme of reforms for the whole Empire, and also orders the Valis (Governors-General) to execute the same forthwith.

The Venezuelan treaty between Great Britain and the United States of America comprises an agreement for the arbitration of farther disputes.

(FROM THE "N.C. DAILY NEWS.")

London, Nov. 2.

A parade of 130,000 business men has been held in New York in favour of McKinley and sound money. There is immense enthusiasm amongst the Republicans, who, while professing the utmost confidence, admit the existence of a large doubtful vote.

Serious floods have taken place in France. The Right Rev. Mandell Creighton, Bishop of Peterborough, has been translated to the Bishopric of London, in place of the Right Hon. and Right Rev. Frederick Temple, the present Archbishop of Canterbury.

The Right Hon. J. Chamberlain has been elected Lord Rector of Glasgow University.

November 3.

Spain is issuing an internal five per cent. loan of four hundred million pesetas (£16,000,000 sterling), to defray the war expenses in Cuba and the Philippines.

November 4.

It is believed in Vienna that the Triple Alliance will not join in collective action, as advocated by the French and Russia Press, against Great Britain on the Egyptian Question, but, on the contrary, the Triple Alliance will probably side with Great Britain.

Nov. 5.

Major McKinley has had a sweeping victory in the Presidential election. There were enormous majorities in his favour in the Eastern, Northern, Central, and some of the Southern states. The majority in New York was three hundred thousand—the largest on record.

(FROM THE JAPANESE PAPERS.)

Nagoya, Nov. 13.

H.I.H. Prince Komatsu leaves here for Kyoto to-morrow morning.

Kobe, Nov. 13.

Marquis Ito arrived at Maiko last evening. He will stay there for two weeks.

The Austrian man-of-war *Panther* put into this port from Nagasaki this morning.

Sendai, Nov. 13.

Mr. Hadano, President of the Hakodate Court of Appeal, arrived here on Wednesday evening. He left to-day to take up his new appointment.

Bakan, Nov. 13.

The rice market has risen, and in consequence the prices of all articles of food and clothing have been increased.

Sapporo, Nov. 13.

Lieut.-General Nagayama, Commandant of the Seventh Army Division, returned here to-day from Tokyo.

Moji, Nov. 13.

Six hundred and thirty Formosa time-expired soldiers arrived at this port from Formosa to-day.

CHESS.

(All Communications to be addressed to the Chess Editor.)

The Yokohama Chess Club meets on Monday and Thursday in each week, at the Club Hotel, No. 5, Bund, from 5 p.m. to 11 p.m.

Visitors to Yokohama, and Officers of ships (whether Navy or Merchant service) who are Chess-players, are welcome to use the Club during their stay in this port.

The Tokyo Chess Club meets at the Tokyo Hotel, every Friday, from 1 p.m. to 7 p.m.

BUDA-PESTH.

This contest seems to have been shorn of some of its glory as per the following clipping:—

Steinitz had entered the tournament on the condition that Lasker would also be found in the ring. The latter, however, could not be induced

to play, as he thought that he would require all his powers in the forthcoming match with Steinitz. To a reporter of a German paper Lasker is alleged to have said that he requires a couple of months' rest before he can play in an important contest. As he had almost exhausted his strength in the Nuremberg congress he could not think of playing again in Budapest, the more so as he will have to prepare himself for his match with Steinitz. The latter, on the other hand, was of the opinion that the Budapest tourney would be excellent practice for the match. Still, as Lasker would not play, the veteran also declined to enter, as he meant to be on exactly even terms with Lasker when beginning the bout in Moscow.

Appended are the scores of all the competitors up to the end of the eighth round.

15—B takes P	15—P takes B
16—Kt takes Kt P, and Black stops moving.	

Black Bishop preaches as under, in the last issue of the *China Mail*.

"One object of a Chess column is:—

That those may play who never played before
And those who always played may play the more,
and for the first of these purposes I should like to combat two popular fallacies concerning the subject. The first is that chess is a mere game, undervaluing of the serious attention it demands. This is not so, Chess is less a game than an in-

tellectual pastime and a sovereign remedy for the worrying cares and anxieties that harass the business men of to-day. It is generally admitted that the cure for muscular weariness is the use of the same muscles in some different manner, and the same rule will apply to the brain.

"Now all worry and anxiety, reduced to its elements, consists of a strain upon the powers of imagination and foresight, and it is exactly these faculties for which Chess furnishes a bracing and stimulating exercise. At the chequered board, black care vanishes, ousted by her fairer sisters Providence and Adaptation, and in the mimic war, with the painless problems it sets the jaded mind, is found the completest relief for the cares that beset the day."

We take the following from the *Literary Digest*.

DINORAUR THE UNCONQUERED.

The great Oriental Chess-champion, Dinoraur, is coming to this Land of the Setting Sun from Araby the Blest. Dinoraur is not only champion, but for years, since he has perfected his system, he has not lost a game. He has a great talisman, "Hisdinor," and a lesser one, "Tabakamuf," to ward off evil positions, and his late great success over his only would-be rival, Catztrayn, was so pronounced that he was considered by all the Orient to be the great and only champion. All hail, great Dinoraur! The scrubby champions of the West crawl but as worms in the sunshine of thy glorious presence!—*The Times, Philadelphia*.

TARRASCH AND MAROCZY.

After Budapest; after Lasker and Steinitz; after Pillsbury and any player who thinks that he can down the American—we may expect a battle royal between the German Doctor and the young Hungarian. The Magyar is of the opinion that he can not be beaten, and backs his opinion by a good-sized wager. The Teuton accepts the deft, and M. Maroczy will have to get his chess-head in good condition to save himself, inasmuch as Tarrasch has, by the terms of the agreement, to beat him only one game.

LATEST COMMERCIAL.

IMPORTS.

Still a most dreary situation. Nothing done in Grey Goods and Yarn, and the godowns of Importers are filling up. Fancy Cottons and Woollens also show a very poor business. A few Turkey Reds and Victoria Lawns are all that has been moved this week.

COTTON PICK GOODS.

	PER POUND.
Grey Shirts—8 1/2 yds. 39 inches	—
Grey Shirts—6 1/2 yds. 45 inches	—

Sold throughout the world. British depot: F. NEWBERRY & SONS, 1, King Edward St., London. POTTER DRUG AND CHEMICAL CORPORATION, Sole Proprietors, Boston, U. S. A.

THE GREATEST WONDERS OF MODERN TIME

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

Sir SAMUEL BAKER, in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the dragoman Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN.
HOLLOWAY'S OINTMENT

Incertainty remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

Mr. J. T. COOPER, in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining 'stock'."

Sold by all Chemists and Medicine Vendors the throughout World. May 1896.

FOR SALE,

Strongly bound in Leather and Cloth, with a Full Index,

HALF-YEARLY VOLUMES OF
THE "JAPAN WEEKLY MAIL."

These Volumes contain Leading Articles dealing mainly with subjects affecting Japan and the Far East, besides numerous Miscellaneous Articles embracing a variety of topics; also Letters by Special Correspondents in Europe and America and other Countries, Commercial Trade Reports, Reviews of New Books, Government Notifications, Translations from Japanese Journals, Editorial Correspondence, Verbatim Reports of Public Meetings and the Law Courts, Theatrical, Sporting, &c., and a large number of Editorial Notes on a great variety of subjects of local and general interest, the whole forming a record not to be found in any other existing publication.

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL" must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, NOV. 21ST, 1896.

SUMMARY OF NEWS.

THE new President of the Royal Academy is Mr. E. J. Poynter.

SLIGHT shocks of earthquakes have been frequent this week in the central provinces.

THE South Australian House of Assembly has passed the Coloured Races Restriction Bill.

PRINCE ARISUGAWA has been appointed to the command of the Japanese Standing Squadron.

THERE have been six suicides in the foreign communities of Yokohama and Kobe during the past fifteen months.

MR. NISHI, Minister to Russia, who is reported to have resigned the post, will, it is said, be appointed a Privy Councillor.

MR. NOMURA TATSUTARO, a railway expert in the Communications Department, having been

ordered to Europe, will leave Japan within a short time in company with Mr. Inudzuka Katsutaro, Director of the Department.

THE Chinese Government have commenced the construction of a large dock at Port Arthur, and experts have been appointed.

THE Niger Company is preparing a large military expedition for which thirty-five British officers have been engaged.

MR. GINBAYASHI TSUNAO, President of the Hokuyetsu Railway Company, died suddenly on the 13th inst. at Niigata, Echigo.

SEVERAL newspapers have been suspended during the week for printing libellous attacks on the Minister of the Imperial Household.

THE resignation of Count Hijikata, Minister of the Imperial Household Department, not having been accepted, he will continue in office.

MR. DE WENDRICH, Russian Consul at Kobe, committed suicide there on Monday, by shooting himself in the mouth as he lay in bed.

BARON HAYASHI, Minister to China, being due at Kobe about the 22nd inst., the people of the port are preparing to tender him a welcome.

MARQUIS SAIGO, Minister of the Navy, paid a visit to Rear-Admiral Oxley, on board H.M.S. *Grafton*, on Tuesday, in Yokohama harbour.

THE Korean Government has prohibited the sale of beans and grain to Japanese traders; they allege that the export of these cereals will cause suffering to the peasantry.

COUNT AND COUNTESS OKUMA gave a very enjoyable garden-party at Waseda, Tokyo, on Tuesday, which was largely attended by the foreign community.

THE Assistant-Judge of H.B.M. Court for Japan has committed Mrs. Carew to take her trial before a Judge and Jury on the charge of wilful murder of her husband.

THE charge made by Mr. Masujima for his legal services to the Tokyo Municipal Assembly in regard to the Iron-pipe Scandal case is causing heated controversies in Tokyo.

MR. SUDO TOKIICHIRO, one of the chief members of the *Shimpo-to*, has withdrawn from the Party. Mr. Taguchi, the well-known economist, is expected to take a similar step shortly.

A VERY severe thunderstorm was experienced in Yokohama and Tokyo in the small hours of Tuesday morning, but beyond interfering with the electric lights no damage was done.

THE Minister of Finance has issued Redemption Public Loan Bonds to the amount of yen 2,015,000. The face value of the Bond is yen 100 yen and it is issued at yen 98 38.

SIXTY-TWO members of the House of Representatives are promoters of several newly projected companies, and ninety-one others are shareholders or officials of public companies.

PRINCE PAK (Boku Eiko) who at one time intended living with H.R.H. Prince Wi-hwa at Kanagawa, has recently removed to Tokyo, having hired No. 17, Hikawa-cho, Azabu.

THE Queensland Parliament has passed an urgent Bill to assist the Queensland National Bank, which has lost its entire capital. The liabilities exceed the assets by £2,500,000.

MARQUIS SAIONJI, the late Minister of Education, will leave Yokohama on the 29th inst. for

France. He proposes staying at Marseilles until February next year, and will then proceed to England. He may return home *via* America.

THE sum of yen 52,000, expenditures for the prevention of epidemics, having been allowed to the Home Department, the amount was drawn from the Finance Department on Monday.

A TREATY of peace has been signed between Italy and Abyssinia. The prisoners held by King Menelik are to be released. Italy recognizes the absolute independence of Ethiopia.

By a strange irony of fate, three hundred and fifty fire engines have been burned in a conflagration that has destroyed the premises of Messrs. Shand, Mason and Co., the Fire-engine Manufacturers.

THE Budget for all the Departments for the thirtieth fiscal year will be printed about the beginning of December. The estimated total of the Budget is two hundred and forty million yen.

In a debate on Armenia in the French Chamber, M. Hanotaux stated that the Powers were agreed on common action, which must not impair the integrity of Turkey. The visit of the Czar, he said, had led to a clear exchange of views between the Powers.

THE Turkish Ambassador in Paris has informed M. Hanotaux that the Sultan has agreed to eight reforms, in which are included the release of innocent prisoners, the protection of peaceable Armenians, the prevention of acts of violence, the granting of relief to the chief sufferers, and reparation to damaged Catholic convents.

LORD LONSDALE, speaking at Whitehaven, said that President Kruger had asked the assistance of the Emperor William at the time of Dr. Jameson's raid into the Transvaal but his Majesty had declined the request. He, Lord Lonsdale, had the Kaiser's authority to state that his telegram to President Kruger meant nothing antagonistic to England or the English.

THE Import trade cannot be reported as improved in any direction, and again there have been no sales of Yarns, Shirtings, Fancy Cottons, or Woollens. At the present time there is a larger stock of unsold Piece-goods lying in the godowns of Yokohama than has ever been the case at any period since the port was opened, due of course to heavy importations upon an existing large stock and the small sales of the last few months. There is but little doing in Metals, though no change is reported in prices. Holders are doubtless overstocked, especially with Bar Iron, several thousand tons of which are in godown awaiting purchasers. These latter are not entirely without wants, but appear to be hanging back for a drop before dealing. Wire Nails and Tin Plates have moved off fairly at late figures. There have been no sales of Kerosene, but former purchases are taken up promptly, while the absence of business makes prices nominal. In the Sugar trade, China and Manila sorts have been depressed through heavy arrivals, but Formosa kinds have been largely taken at a slight reduction in price. Very little doing in Whites. The Silk trade is very quiet, and prices nominal. There has been a fair amount of business in Waste, but the orders on hand appear to be nearly all filled. In the Tea trade a good business has been done considering the time of year and the stock now on the market. Rates of exchange advanced early in the week, and have remained steady to the close.

THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.

Politically and journalistically the week has been the most eventful since the new ministry came into power. On Oct. 25th, the *Twenty-sixth Century* published, for the second time, a severe attack on the Minister of the Imperial Household, and on the 9th inst. the article was reproduced in full by the *Nippon*, which added commendatory notes of its own. The Opposition papers, vigilantly watching for any plausible pretext to open fire against the Government, did not fail to avail themselves of this opportunity to the utmost, and, led by the *Nichi Nichi*, which at once entered the arena, armed with minute rebutting information, as well as by the *Chuo* and the *Tokyo Shimbu*, they accused the Osaka periodical and the Tokyo journal of gross disrespect to the Imperial Court. At the same time, the Ministry were charged with unpardonable negligence in the discharge of their duties, since they suffered such writing to pass unchecked. Naturally the *Nippon*, and others, as the *Tokyo Asahi* and the *Kokumin* tried to repel the accusation of disrespect, but before this wordy warfare had proceeded far, pressure understood to have been brought to bear on the Ministry by the Household Department, resulted in the suppression of the *Twenty-sixth Century* and the suspension of the *Nippon*. The Press Censor's notice to that effect was issued on the 14th inst.

This procedure threw political and journalistic circles into a state of unusual ferment, and provoked a heated discussion in newspaper columns, some of the pro-government papers not hesitating to accuse the Ministry of vacillation, and of breaking the promise embodied in the Premier's speech to the Local Governors. Rarely indeed has such a battle been fought by the two sections of the Tokyo press. It is true that the Opposition papers are numerically much inferior to their adversaries, being only three in number, or, more properly, four, if we include a comparatively insignificant sheet, the *Yiyu*. Moreover, of these three the authorized organ of the Liberals does not devote as much energy to the affair as do the *Nichi Nichi* and the *Chuo*, especially the former, which fights the battle with desperate and, in some respects, admirable skill against the combined strength of the pro-Government papers. These latter, however, have had their ranks thinned by the suspension of the *Nippon* and the *Kokumin*, two of the most unscrupulous fighters, but the *Mainichi*, the *Yomiuri*, the *Tokyo Asahi*, and several others maintain the campaign energetically. The *Yiji* plays a strictly neutral rôle, not discussing the affair at all, and the *Yoroku*, though avowedly independent, is inclined to take the side of the Government.

But the ferment into which the *Shimpo-to* have been suddenly thrown is perhaps more noteworthy. The *Young Shimpo-to*, a not unimportant section of the great Party, have decided to oppose the Ministry uncompromisingly, while the *Shimpo-to* Club, an organization consisting of politicians that have no seats in the Diet and are therefore somewhat less hampered than their colleagues of the Lower House, have resolved that as the Cabinet, in contravention of its original announcement, has "trampled freedom of speech under foot," they disapprove of the Government's procedure. Nothing definite is yet heard as to the attitude of the *Shimpo-to* proper and of the Liberals and the National Unionists.

We entertained a suspicion, writes the *Nichi Nichi*, that as a long time had intervened between the appearance of the offensive article in the *Twenty-sixth Century* and in the *Nippon*, and the administrative steps taken against the two publications, a tacit understanding must have existed between the Ministry themselves and the scribblers that penned the grossly disrespectful diatribe. At any rate, led astray by their wire-pullers and by their anxiety not to impair the friendship of the *Shimpo-to*, the Ministry suffered the offensive article to be distributed and sold with impunity throughout the

country. Can they escape from the charge of neglect of duty? It is now widely understood that the Osaka periodical and the *Nippon* were instigated by an official sitting very close to the Ministerial chairs, and if that official be so devoid of conscience as not to resign of his own accord, the Ministry must compel him to do so. Of course the Chief Secretary of the Cabinet is referred to.

This affair seems to be causing some uneasiness to the Ministry. On Thursday the Premier, the Ministers of Home and Foreign Affairs, of the Navy, and of War, held a long conference, in the sequel of a representation that the Premier had submitted to the Emperor. The *Yomiuri* learns that the Ministers decided to take some resolute step, but what it was we do not learn. It is to be observed, however, that the strong measures adopted in the case of the Osaka periodical and to the *Nippon* have not been very successful. Nobody appears to be entirely satisfied, not even the Household Department.

The *Chuo* does not wonder at any want of promptitude on the part of the Ministry, for the present Cabinet is like a two-headed serpent. One head, representing Count Okuma, desires to go one way, and the other, representing Count Kabayama, moves in the opposite direction. In another article the same paper asks the Cabinet why, if the statements published by the Osaka periodical are a true account of the state of affairs existing in the Court, the Premier does not proceed to apply an efficient remedy. It refers also to the intimate connection subsisting between the *Twenty-sixth Century*, the *Nippon*, and Mr. Takahashi, the Chief-Secretary of the Cabinet, and it maintains that the Ministry must draw a distinct line of demarcation between themselves and those having relations with publications that disturb public tranquillity.

The *Tokyo Shimbu* is surprised to learn that, bewildered by conflicting opinions in connection with the Household Department affair, the Premier submitted the matter to the judgment of the Emperor before taking any Administrative step against the two publications. If so, if the Premier was really unable to bring the opinions of the Ministers into line, then he has forfeited his title to be head of the Cabinet, and should ask the Emperor to relieve him from a task beyond the scope of his ability. The Liberal organ has also much to say about the alleged understanding between Mr. Takahashi, Chief Secretary of the Cabinet, and the two offending publications. It argues that if the Ministry are really resolved to punish any action calculated to bring the Court into disrespect, then they must take decisive steps in the case of that official.

The *Yomiuri* is sincerely sorry to see the Cabinet betrayed into action inconsistent with its platform, for, in its opinion, there existed no necessity for recourse to the old arbitrary method of administrative interference in press affairs. The matter might have been satisfactorily dealt with by criminal procedure. From the point of view of public opinion or of the Ministerial platform, the application of the suppression and suspension clauses of the Press Law was a grave error and deserves strong condemnation. If administrative measures were really needed to restrain the two periodicals, why were there no measures taken before any clamour had been raised by the Opposition papers? The *Yomiuri* itself refrained from alluding to the article in the Osaka periodical, because it feared to furnish to the Opposition a plausible pretext for the Opposition attacking the Cabinet, and it earnestly hopes that, before the Diet opens, the Ministry will make ample amends for the gross blunder it has now committed.

The *Mainichi* has many things to say about the affair. Not placing any ready confidence in the utterances of the Osaka magazine, and entertaining scruples against making Court matters a topic of public discussion, it took no notice of the Osaka periodical's article. However, the mere fact that the character of the Household Minister has afforded so much material for discussion shows that his

armour of virtue cannot be without vulnerable points. As to the contention that an attack on the Home Minister constitutes disrespect to the Court and the Sovereign, the *Mainichi* finds it entirely absurd, for if such an argument were valid, would not an attack on any Minister of State amount to disrespect towards the Sovereign as the repository of whose confidence the Minister holds his portfolio? The *Mainichi* equally regrets the vacillation and weakness of the Ministry, for an extraordinary measure adopted towards two publications long after they had inserted the offending article shows that the Cabinet's action was taken under pressure, and not under conscientious conviction. Our contemporary hopes that the Ministry will repent of their error, and will introduce in the next session of the Diet an amended Press law with the obnoxious clauses rescinded *in toto*.

The Opposition's plan of campaign, writes the *Kokumin*, though mean and contemptible, was nevertheless cleverly conceived. The Cabinet fell into the snare, and were obliged by intimidation to adopt a harsh measure against the two publications. It has been a very shameful discomfiture for the Matsukata Cabinet. What the Ministry must do at this juncture is to thoroughly remodel the Household Department and eliminate every recalcitrant element from the Cabinet.

This article appeared in the *Kokumin's* issue of the 17th instant, and the next day it was suspended on the usual ground of disturbing public tranquillity. We must note, also, that in its issue on the day of suspension, our contemporary went a step farther, and urged that the Ministry must advise the Emperor to remove the Household Minister from his present post, and, in the event of their advice being rejected, they must tender their own resignations; for to beat a lame retreat and to suffer the Household Minister to retain his post would amount to an admission that the Ministry had been worsted in the dispute by Count Hijikata. Rather resign in a body and manfully retire from officialdom, with the resolution to dispel, by the support of the people, the cloud that obscures the discernment of the Sovereign. The *Kokumin* then proceeded to criticize Count Hijikata as brazen-faced, and to aver that unless the Household Department were thoroughly remodelled, no administrative reform could be effected. Possibly the *Kokumin* provoked administrative interference still more acutely in a note alleging that Count Hijikata was dissuaded from resigning by the Vice-Minister of the Household, the Chiefs of the Record Bureau and of the Board of Ceremonies, and by Barons Ito and Suematsu. It adds that the Count originally promised the Premier to resign, but changed his mind in deference to the remonstrances of the above persons, who said that to retire on such trivial grounds would compromise the dignity of the Court, and that to present a *Shintai-ukagai* (a document asking for instructions about resignation) would be sufficient, which advice the Count followed, to the utter surprise and indignation of the Premier and other influential Ministers of State.

The *Tokyo Asahi* criticises in violent language the attitude that the Household Minister now assumes. It accuses him of meddling with the Administration of the State and improperly wielding sway under the ægis of the Emperor, thus inviting public hostility to the Court. Flattered by the magnanimity of the Emperor who, of his unbounded graciousness, dispensed with the necessity of resignation, the Count seems to have determined to remain calmly in his present post. Can such a man be called a really loyal subject? In another article the *Asahi* dilates upon this charge, accuses the Household Minister of having overstepped his competence under the influence of personal indignation, and declares that his action amounts to having intimidated the Cabinet by taking advantage of the privilege he derives from his easy access to the Emperor.

The pro-Government papers are bent on in-

ducing the Household Minister to arraign the Editors of the two publications before a Law Court. Though the original article, writes the *Yomiuri*, may not constitute the crime of disrespect to the Court, it assuredly amounts to the offence of disrespect to the Household Minister. Therefore so long as he suffers the Editors of the two publications to go unpunished, and so long as he does not take steps to clear himself of the accusations preferred against him, the public will be entitled to stigmatize him as a shameless person, entirely disqualified to have access to the Imperial Court. The pretext that to take legal proceedings against the Editors would place the Court in an embarrassing situation, is entirely flimsy, for if the Household Minister is so deeply solicitous of avoiding everything in the slightest degree likely to impair the dignity of the Court, he should himself retire and put an end finally to the scandal. In short, he must choose between the alternatives of instituting legal proceedings to clear his character, or withdrawing from his present position.

The *Mainichi* also argues that the administrative measure taken against the two publications does not in the least dispel the deep sense of anxiety that the public entertain about the Court after reading the article in question. Therefore, the Household Minister is bound to refute the charges brought against him, and to ease the nation's mind.

The *Nichi Nichi* can not understand why the Ministry should not adopt a duly apologetic procedure towards the Sovereign, in view of the consideration that this affair, which must have subjected the august mind to much anxiety, is understood to have originated with a subordinate of the Cabinet, and because, as a result of the Cabinet's remissness in the discharge of its duty it has suffered the slanderous article to be disseminated far and wide. As to the accusation preferred against the Household Minister that he has overstepped the limit of his official competence, the *Nichi Nichi* replies that the Minister was obliged to call the attention of the Cabinet to the affair because the latter failed to take proper notice of it.

The *Tokyo Asahi* would like to know whether there is even one disloyal subject throughout the Empire, and declares that the nation will unanimously deny the existence of such a man. Yet the *Nichi Nichi* accuses some of its fellow nationals of disrespect to the Court. Such a paper deserves condemnation as a public enemy.

The *Chuo* and the *Nichi Nichi* unite in charging the Ministry with improper procedure. The former paper's accusation is based on information furnished by the *Yomiuri* that, on the occasion of an extraordinary Cabinet meeting, held on the 13th inst. to discuss the Household Department affair, Messrs. Takahashi, the Chief Secretary of the Cabinet, and Komuchi, Chief of the Legislative Bureau, were allowed to take part in the debate. The *Chuo* condemns this as an act of gross impropriety on the part of the Cabinet, and denounces it as totally opposed to the spirit of maintaining order and discipline in officialdom. The *Nichi Nichi's* charge is of a graver description. It amounts to questioning the competence of the present Ministry. Our contemporary relies upon statements made by the *Tokyo Asahi* and other journals that the Ministry were obliged, against their will, to take an extraordinary administrative step against the two publications, merely in consequence of the Household Minister's threats. In other words, nine Ministers of State were forced by one official to adopt a line of action really repugnant to them. Can such a Cabinet be considered competent to discharge the grave functions of State?

The pro-Government papers and those opposed to them make a shuttle-cock of the contention that Court affairs have been dragged into the mire of political squabbles. When the former accuse the latter of exaggerating the personal affairs of the Household Minister into matters having relations to the Imperial Court,

the latter reply that the publication of the article in question in an obscure Osaka periodical at first, and its subsequent reproduction in the *Nippon*, were really dictated by a plot to bring about the resignation of Count Hijikata, and to enlist the Household Department in the ranks of the present Ministry.

EDITORIAL NOTES.

X SHOOTING OF MRS. COCKERILL'S SECOND HUSBAND.

THE circumstances under which the late Mr. John A. Cockerill's widow was re-married, and the story of her second husband's probably fatal wounding by a pistol shot, have been given a prominence in the New York press which would not have been accorded but for the Colonel's former conspicuous position in journalism. The main facts of the case are these:—Two months after Colonel Cockerill's death at Cairo, Mrs. Cockerill was married to Walter Lenau, a young clerk in a silk importing house of New York. He was twenty-seven years old, the lady's age being forty. The wedding was a very sudden affair, and was wholly unexpected by the friends of both parties, who were united during an excursion to Hoboken, in the office of a Justice of the Peace of that town. It is related that during the ceremony the bride directed the Justice to omit the word "obey" from the customary formula, it having been agreed between Mr. Lenau and herself that this particular promise should not be exacted. Soon after the marriage, Mrs. Lenau, who was Colonel Cockerill's sole legatee, purchased a fine house for \$10,000, in Englewood, New Jersey, where the couple dwelt in extreme retirement until October 18th, on the afternoon of which day Mrs. Lenau startled the neighbourhood by running into the street, screaming that her husband had shot himself, and calling loudly for doctors:—"twenty doctors, if necessary," was her cry. Medical attendance was quickly at hand, but little hope was given that the injured man's life could be saved. The newspapers intimate that suicide was suspected, but no evidence whatever in this direction has been produced. Nothing could be learned from Mr. Lenau, who was incapable of speech. Mrs. Lenau stated that her husband was in excellent health and spirits on the day in question, and that after an early dinner he occupied himself with cleaning his revolver. She noticed that he handled the weapon carelessly, pointing the muzzle toward his body, and urged him to be more cautious. The moment after she spoke, there was a report, and her husband fell. The idea of suicide, she declared, was not to be thought of. He had no troubles or anxieties, and was living most happily, as was she likewise. The *New York World*, of which Colonel Cockerill was once managing editor, says that "the shooting was the subject of much speculation among some of that gentleman's friends," but vouchsafes no explanation of this mysterious remark.

MISSIONS IN CHINA AND JAPAN.

A CROWDED meeting was held on 29th September at Exeter Hall, under the auspices of the Church Missionary Society, for the purpose of bidding God-speed to the missionaries about to proceed to their stations in Egypt, Palestine, Ceylon, China, Japan, and British Columbia. Sir John Kennaway, the President of the Society, occupied the chair. Short speeches were delivered by Bishop Fyson (Japan), the Rev. J. S. Collins (South China), who are returning to their stations, and also by Mr. S. Painter (Japan), the Rev. W. R. Gray (Japan), who are going out for the first time. The following is a complete list of the missionaries going to China and Japan. South China:—Rev. J. S. and Mrs. Collins, Miss K. Power returning to their stations, Rev. Dr. S. Syngé, Mr. T. Woods, Miss Mary Harmer, M.D., Miss M. G. Harmer, Miss E. M. K. Thomas, all of whom are going out for the first time. Mid-China:—Rev. C. J. F. and Mrs. Symons (returning to their station), Rev. C. E. Bousfield, Rev. E. Thompson, Dr. W. Squibbs, Mr. W. Andrews, Miss I. K. S. Acheson, Miss A. M. Barker, Miss L. S. Digby, Miss M. C. Gilmor, Miss J. Grant,

Miss E. Green, and Miss M. Turnbull, all of whom are going out for the first time. Japan:—Rt. Rev. Bishop and Mrs. Fyson, Miss A. M. Tapson (returning to their stations), Rev. W. R. Gray, Mr. F. E. Hamond, Mr. S. Painter, Miss E. Bryant, Miss A. P. Carr, Miss B. Notidge, and Miss A. H. Wright, all of whom are going out for the first time.

EXHIBITION OF WATER-COLOUR PAINTINGS.

WE are requested to call attention to an exhibition of water-colour paintings, by Japanese artists, to take place in the Uyeno, Bijutsu Kan, or Art Gallery, from the 20th inst. till December 4th. There will be 300 exhibits by twenty six artists, including pictures by the well-known painters Koyama, Asai, Matsui, Kume, Wada, Gosedo, &c. The object of the exhibition is to aid in the rebuilding of Professor Iwamoto's Meiji Jo-Gakko, or Girls' School, destroyed by fire in February of the present year. This Girls' School was among the earliest established, and has been one of the most successful of the many Girls' Schools in Tokyo. Unlike many others, it has not been aided by missionary or benevolent funds. It has been largely the unaided work of Prof. Iwamoto, and his estimable but lamented wife, Mrs. Kaishi Iwamoto, whose death was hastened by the conflagration that destroyed their large and substantial School-building situated in Shimo Rokubanchō, Tokyo, on February 5th of the present year. It is proposed to issue 300 tickets at 2 yen each, each ticket entitling its holders to one of the paintings. The number of the painting will be noted on the ticket, but will not be delivered until the close of the exhibition.

THE "HIMEJI MARU."

WE are informed by the Nippon Yusen Kaisha that news from the south in regard to the Company's steamship *Himeji Maru*, recently reported as having gone ashore, is that the steamer *Seigfried* returned to Hongkong on the 15th inst. with 140 firemen and seamen—and it is supposed some cargo—from the stranded vessel. The *Seigfried* left Hongkong for the scene of the wreck on the 17th to try to save cargo. Surveyors report that there will be little chance of saving the ship if the weather turns bad, which is not unlikely in such an exposed position. Captain Tipple and his officers, with a part of the crew, are standing by the wreck.

DR. L. BUSSE.

MANY of our readers will learn with pleasure that Dr. L. Busse, who has been for six years a Professor in the Imperial Japanese University, has been promoted to the chair of Psychology in Rostock University. Considering the fact that Professor Busse has reached this distinguished post without passing through the intermediate grade of "Extraordinary Professor," his academical career must be pronounced decidedly successful and honorable.

THE REBELLION IN THE PHILIPPINES.

FROM the *Comercio* we learn that a conspiracy was discovered at Jolo (Sooloo) in the 68th Regiment of native troops on the 18th October, and nine men were shot. On the 29th October, a hundred persons convicted of connection with the rebellion were shipped from Manila by the steamer *Isla de Luzon* for the African colonies.

THE CHINESE SCANDAL.

WONG KAI-KWAI, the late Treasurer of the Chinese Guild at Yokohama, has been arrested at Nagasaki—whither he proceeded on the P. & O. steamer *Ancona*—on a charge of embezzling some \$1,500 of the funds of the Guild. He will be brought before the Yokohama Chihō Saibansho on arrival here.

HER MAJESTY'S SYMPATHY.

THE Queen has telegraphed through the Admiralty the expression of Her Majesty's grief on hearing of the sad accident which had befallen Captain Lang and three seamen of H.M.S. *Narcissus* through the capsizing of a boat in Northern waters recently.

WRECK OF THE LUZON.

THE steamer *Luzon*, an old China coaster, formerly the *Conquest*, has been run down and sunk by the steamer *Santander* off Point Santiago in the Philippines. Her crew were saved, but the Chinese passengers were all drowned.

THE MINISTER OF THE IMPERIAL HOUSEHOLD AND HIS CALUMNIATORS.

The *Nijurokuseki* (Twenty-sixth Century), a periodical of some influence in Osaka, recently published a violent attack upon Count Hijikata, Minister of the Imperial Household, accusing him of arbitrary conduct, servility to Marquis Ito, and so forth. The periodical entertains a grudge against the Count, for, having previously penned a similarly calumnious article against him, it was suspended, and arraigned before the Osaka Local Court on a charge of libel. No sooner was it relieved from the ban of suspension than it renewed its hostile utterances, being evidently incensed to the point of blind rancour. Still the matter would probably have been consigned to oblivion, had not the *Nippon* quoted the article in full, and recommended it to the perusal of its subscribers, inserting between the lines commendatory notes of its own. The Household Department thereupon forwarded a letter to the *Nippon*, denouncing the article as a gross misrepresentation, and demanding that it be withdrawn. The *Nichi Nichi* next came forward as the champion of Count Hijikata, and while charging the editors of the original journal and the *Nippon* with calumny, traversed the article paragraph by paragraph, on the strength of information obtained from the Household Department and other quarters. Both the original article and the refutation of the *Nichi Nichi* being of very great length, we are necessarily obliged to confine ourselves here to such portions as appear specially interesting.

The first allegation is that the Minister of the Household is strangely partial to Marquis Ito, and is always ready to assist the latter to obtain audience of the Emperor, whereas his assistance in that sense can not be procured by other notables without considerable difficulty, and even when they are received in audience, they receive warning beforehand not to speak on any political topic. This discrimination extends even to the Princess-Parent of the Emperor and other Imperial relatives, and it is added that when, during Marquis Ito's tenure of power, a Peer submitted a memorial to the Throne, the Minister of the Household used to behave with such arbitrariness that no memorial was allowed to reach His Majesty unless it had been previously examined and approved by the Premier. In answer to the above, the *Nichi Nichi* says that the editors of the two publications (the *Twenty-sixth Century* and the *Nippon*), betray gross ignorance of Court procedure. They do not seem to know that not only Marquis Ito, but also Marquises Saigo and Yamagata, and Counts Kuroda and Inouye enjoy the privilege of special treatment at Court, and are therefore usually admitted to audience whenever they visit the Palace whether to tender the compliments of the season or for any other purpose. Counts Goto, Oki, and Okuma rarely took the trouble to attend at Court, and therefore they were not received in audience by His Majesty. Further, Marquis Ito's connection with the Court, alike as Minister President, as Minister of the Imperial Household Department, and as a member of the Imperial Finance Council, extended over a long period with but brief interruption, and it is, therefore, natural that His Excellency should have had occasion to wait on the Emperor far more frequently than others. As to the implied charge that the Marquis enjoys, or has enjoyed, a special privilege of being consulted on political affairs, such an allegation is obviously absurd, for it amounts to saying that His Majesty declines to place confidence in the Cabinet of the day. Only on extraordinary occasions, as, for instance, during the recent interregnum between the Ito Cabinet and its successor, are the opinions of non-Cabinet statesmen listened to by the Emperor. The editors seem to believe that every statesman or notable received in audience should be allowed to speak freely on political topics. They do not seem to perceive what serious evils must result from such an irregular practice. Moreover, they evidently imagine that ladies connected by blood with the Imperial Family should also

be allowed to discuss important affairs of State. Nothing could be more imprudent and dangerous. It must not be supposed, however, that the channel of communication with the Sovereign is blocked to such of His Majesty's subjects as may wish to submit their views on one topic or another. A Peer, for example, is entitled to memorialize the Throne, and when a memorial is submitted by any noble, it is handed to His Majesty in its original sealed condition by the Grand Chamberlain. According to the nature of the contents, it may be given, in the first place, to the Minister of the Household, or to the Minister of the Department directly connected with the subject discussed in the memorial. But it need not pass through any such channels. When Viscount Tani memorialized the Throne in connection with the dismissal of the late Baron Ozawa from his position in the Department of War, the document, though couched in very strong language, was sent to the then Minister of War; and when, in the latter part of 1887, Count Goto wished to submit his political views orally to the Sovereign, the Minister of the Household declined to convey the Count's request to the Throne—a refusal strictly within his official competence—but told him to embody them in the form of a memorial. The Count did so, and the document was sent through the Minister President of the day. Therefore the allegation that the Minister of the Household opens memorials addressed to the Throne, or that he used to convey them to the Emperor only after Marquis Ito had read them and pronounced their contents unobjectionable, is an audacious fabrication. The culpability of the two editors goes beyond mere falsehood. They distinctly aver that the Emperor is ignorant of all such clandestine practices on the part of the Minister of the Household. In other words, they represent the Emperor as easily gulled. The *Nichi Nichi* learns, and states with all due deference to His Majesty, that the Emperor's faculty of discernment is so keen, and his information about affairs in general so accurate, that not infrequently the Court, the Household Department and even newspapers are forestalled by him in obtaining intelligence, and at times the Minister of the Household, and even Count Matsukata, the Premier, are embarrassed by a question from His Majesty.

The Osaka periodical further alleges that the *Official Gazette*, the *Tokyo Nichi Nichi*, and the *Japan Daily Mail* are the only papers presented in full for His Majesty's perusal, and that from other papers only cuttings not objected to by the Authorities, are shown. Even in the case of the proceedings of the Imperial Diet, refutations used to be appended to portions not favourable to the Government, when Marquis Ito so directed. To this the *Nichi Nichi* answers that many more papers are submitted to the Emperor's perusal, and that whereas, formerly, paragraphs of an immoral character were pasted over, that practice has been discontinued, the whole sheet being handed up without interference. The papers honoured by the perusal of the Emperor and the Empress are these:—

Chuo.
Tokyo Shimbun.

As to the discussions in the two Houses of the Diet, the Emperor is in the habit of sending Marquis Tokudaiji, the Grand Chamberlain, Prince Iwakura, a Chamberlain, and others to the Houses while the Diet is in session. Hence His Majesty is informed about the general drift of the debates before the printed proceedings are submitted for his perusal next morning. The idea that explanatory notes are interpolated on every topic that reflects on the credit of the Government is altogether preposterous.

The *Twenty-sixth Century* further alleges that by way of rewards for distinguished services rendered during the war, Count Hijikata suggested to His Majesty the advisability of making a grant

of 100,000 yen to Marquis Ito, and that the Marquis, in return, advised a donation of 50,000 yen to Count Hijikata. As to that, the *Nichi Nichi* answers that the grant of 100,000 yen to Marquis Ito is a fact (a grant to a Marquis not holding the Grand Cordon of the Chrysanthemum is said to be from 30,000 to 50,000 yen), but that the grant to Count Hijikata was 20,000 yen, the same sum being given to Count Mutsu also. All the rewards were originally recommended by the Chief of the Central Staff, who privately represented the facts to the Emperor, and obtained His Majesty's approval. Not until then did the matter come within Count Hijikata's sphere of duties.

Another charge made by the *Twenty-sixth Century* and endorsed by the *Nippon*, is that the Minister of the Household, by improper procedure, obtained possession of certain Government land forming part of the Imperial Forest Preserves, in the village of Hijikata, Totomi, the birthplace of the Count's ancestors. He obtained the land by lending his influence to Mr. Dogura, the "Forest King" of Japan, who was thus enabled to become the owner of a sacred forest situated at same distance from the Great Shrine of Ise. Lastly, the Minister is accused of having declined to construct a small library for the Emperor because it involved an outlay of 5,000 yen. All those allegations are emphatically denied by the *Nichi Nichi*, and the denials are accompanied by explanations that appear entirely satisfactory. But the *Twenty-sixth Century* does not stop at that. It goes so far as to connect the names of Count Hijikata and Marquis Ito with a Court scandal about a maid of honour, and it endeavours to prove that the two statesmen exerted their influence in the appointment of the Court ladies. The *Nichi Nichi* replies that the appointment of Court ladies is among the official duties devolving upon the Grand Steward of the Empress, but that in practice they are generally chosen by some of the Imperial relatives living in Kyoto. The idea that Count Hijikata and Marquis Ito ever took any part in the selection of these ladies is absurd in the extreme. The concluding accusations preferred against Count Hijikata are that he neglects the preservation and repair of the Imperial Mausolea, and that he surrounds himself with worn-out and incompetent officials, just the type of men constituting the Senate in the last days of its existence. These accusations are accompanied by a catalogue of shortcomings and disqualifications alleged against several principal Court officials.

The above extraordinary articles have evoked indignant criticism from the *Tokyo Shimbun* and the *Chuo*, as well as from the *Nichi Nichi*. The editors of the Osaka periodical and of the *Nippon* are charged with gross disrespect to the Court. The *Chuo* learns, though it declines to believe, that Mr. Takahashi, Chief Secretary of the Cabinet, and Messrs. Uyemura Masahisa and Kuga Minoru, the latter being the editor of the *Nippon*, are secretly connected with the Osaka periodical, and that, acting in combination with a certain official in the Household Department, they undertook to publish these exaggerated reports, with the view of bringing about the resignation of Count Hijikata, whose presence in the Household Department they erroneously suppose to be conducive to the strength of Marquis Ito, and therefore, detrimental to the interests of the present Ministry. It goes with saying that the crushing criticism of the *Nichi Nichi* has elicited a rejoinder from the *Nippon*, which avers that the Household Department being entirely distinct from the Court, an attack made on the former does not constitute any disrespect to the latter. Besides, the *Nippon* claims that its object is to purge the Department of abuses or blemishes, and that it is actuated by motives of pure loyalty.

In the sequel of repeated deliberations the Cabinet has at last decided to adopt resolute measures in the case of the *Twenty-sixth Century*, the magazine that published a gross calumny against the Minister of the Imperial Household, and in the case of the *Nippon*, which reproduced the slanders, inserting between the lines commendatory notes of its own.

The Osaka periodical has been suppressed, and the somewhat less guilty *Nippon* has incurred the penalty of suspension. So far as we remember, the punishment meted out to the Osaka periodical is the gravest hitherto inflicted on any publication during the past decade. It is to be greatly feared that the action of the *Twenty-sixth Century* and of the *Nippon* must have seriously injured the interests of Japanese journalism at large, for the present Ministry were reputed to be very leniently disposed towards the press and to be contemplating the elimination of the suspension clause, whereas they may now conscientiously hesitate to decide that the press is sufficiently improved in tone to warrant the removal of the checks placed upon its utterances by law. Even if they be persuaded to regard the conduct of these two offending publications in the light of a temporary aberration, and even if they persist in their original resolution of rescinding the suspension clause and substituting a provision relating to fines, as certain Tokyo journals have stated, the more conservative members of the House of Peers, if we may judge from the attitude they have persistently assumed towards the press emancipation measure, may think themselves justified in opposing any such measure though it have the approval of the Government and of the House of Representatives.

This affair of the Minister of the Household has evidently created considerable disturbance in the political world. On Friday last, an extraordinary Cabinet Council was convoked about the matter, and next day the Premier and Ministers of State were busy interchanging calls. The Premier and the Home Minister held a conference on Saturday, from about half-past 2 p.m. to 5, and on the same day the Minister and the Vice-Minister of the Household did not leave their office till dusk. On either Friday or Saturday, the Premier had a long talk with the Minister of the Household at the latter's office; the Minister of Justice called on the Premier at his private residence, and Viscount Takashima called on Count Okuma, all in connection, it is said, with the unsavoury business. On Saturday, the Premier and the other Ministers of State intended to be present at the funeral of the late President of the Nippon Ginko, but most of them excused themselves on the plea of urgent official business requiring immediate attention. The Premier, the Ministers of Home Affairs, Justice, and of the Navy, held a deliberation at the Premier's official residence from 1.00 p.m. A News Agency reports that the opinion of those present was divided, the Premier and the Minister of Justice being inclined to leniency, and the Ministers of Home Affairs and of the Navy maintaining that positive steps must be adopted. The Premier pointed out that as the writer of the article evidently did not entertain any malice prepense, and as it was not calculated to affect in any directed manner the interest or dignity of the Court, a sufficient remedy, in his opinion, would be to indicate the portions conflicting with actual facts, and to cause them to be withdrawn. The Minister of Justice, in a speech of some length, supported the view of the Premier. But the Home Minister declared that, as utterances of the kind were extremely liable to lead public sentiment astray, control must be exercised to the full extent sanctioned by law. The Press censors recognized the necessity of imposing restraints upon such writing, and he therefore urged, regardless of any criticism that might be evoked from political parties, that decisive measures be adopted. The Minister of the Navy seconded the view of Count Kabayama. Count Okuma joined the deliberation a few hours afterwards, but did not express any opinion of his own, and the meeting failed to come to any definite conclusion. Ultimately, however, the strong-policy view found favour, as we have seen.

We take the following on the above topic from the *Yiji* and the *Yomiuri*. When the article attacking Viscount Hijikata first appeared in the *Twenty-sixth Century*, the Authorities thought that the language employed was undoubtedly slanderous, but as it was directed only against

the Minister of the Household and a few other officials, and did not seem to imply any malicious attack upon the Court, the Ministry, who came into power with a resolve to impose as little restraint as possible on freedom of speech, did not attach much importance to the incident, but concluded that it would suffice to order the withdrawal of the portions conflicting with fact. In the Household Department also, no particular notice was taken of the article so long as it was confined to the pages of the *Twenty-sixth Century*. But this attitude of indifference was immediately changed when the *Nippon* reproduced the article in full in its issue of the 9th inst. At once the *Nichi Nichi* undertook the task of refutation, and the Household Authorities applied to the Premier to have suitable steps taken with respect to the magazine and the newspaper alike. The Department seems to have gone so far as to indicate that should the Cabinet decline to take up the matter, there would be no alternative except an appeal to the judgment of the Emperor himself. This occasioned the convoking of an extraordinary Cabinet Council on the 13th inst. According to the version of the *Yomiuri*, which vouches for the authenticity of its information, Marquis Saigo opened the debate by observing that, as the article in question not only grossly slandered the Minister of the Imperial Household, but also involved the dignity of the Court, due administrative process must be taken against the periodical and the daily newspaper. Counts Okuma and Kabayama opposed this, and declared that if the article was open to a charge of disrespect towards the Court or calumny of the Household Minister, legal proceedings must be taken, instead of having recourse to administrative process. Mr. Kiyoura, Minister of State for Justice, could not agree with the contention of the Home and Foreign Ministers, for, in his opinion, the statements contained in the article did not constitute the crime of disrespect towards the Imperial Court, and even if the charge of slandering the Household Minister could be sustained, an appeal to the law on that ground would involve much embarrassment for the Imperial Court, since the defendants would be at liberty to plead justification, and to adduce evidence supporting their accusations. Hence the Minister of Justice indirectly supported the motion of Marquis Saigo. Viscount Nomura, Minister of Communications approved the view taken by Marquis Saigo and Mr. Kiyoura. He maintained that although the Ministry were inclined to abolish the power of suspension, and although they actually contemplated introducing an amendment of the Press Law in that sense in the coming session of the Diet, there was no reason to relinquish the penalty of suspension altogether so long as the law remained unamended, and when, as in the case under consideration, an incident occurred justifying the infliction of the penalty. Therefore he urged that the Osaka periodical be suppressed and the *Nippon* suspended. Counts Okuma and Kabayama insisted on the unwisdom of taking such a step, their view being that it was contrary to the spirit of the Cabinet's policy, as announced in the Premier's Speech to the Local Governors. Mr. Takahashi, Chief Secretary of the Cabinet, and Mr. Komuchi, Chief of the Legislative Bureau, who also were summoned to take part in the debate, supported the contention of the two Counts and opposed the idea of resorting to administrative measures. Mr. Kiyoura incidentally suggested that the suppression and suspension provision of the Press Law should be suffered to exist, for the purpose of dealing with writings disrespectful to the Imperial Court, and he further maintained that so long as the Press Law remained unaltered, there would be nothing improper in putting its provisions into effect. The debate was hot and protracted, but at last Marquis Saigo's proposal was carried by the majority. The Osaka periodical was therefore suppressed and the *Nippon* suspended. The *Yiji* informs us that when the question was brought seriously to public notice, a section of officialdom that harbour unfriendly feelings towards the Household Department, or rather towards its Minister, and also the *Shimpo-to* politicians

argued strongly that the Ministry must stick to the promise of liberty of the press proclaimed by the Premier, and must not acquiesce in the demand of the Household Department, whatever pressure be brought to bear. Thus the Ministry were placed in a difficult situation, Count Matsukata, desiring to settle the affair in a quiet way, would doubtless have preferred that the Household Minister should resign rather than that summary treatment be extended to the two offending journals. It is true the Minister of the Household submitted a document formally soliciting instruction as to whether he ought to resign, but the document was returned to him through the medium of the Grand Chamberlain, and the two publications alone had to suffer for the affair. The Household Department, however, is said to be still dissatisfied, apparently thinking that the punishment inflicted on the offending journals is too lenient; and it need scarcely be said that the anti-Household Department section are even more strongly chagrined about what they consider an unjust action on the part of the Authorities. It is apprehended that the agitation created by this trouble may make itself felt one day or other in an unexpected quarter. Rumour alleges that the Household Minister has decided not to take legal proceedings against the two journals. The *Shimpo-to* is reported to be in a state of considerable ferment. The young *Shimpo-to*, that is to say, a club organized by junior politicians identified with the Party, held an extraordinary meeting on Monday morning, and passed a resolution that as the present Ministry, in violation of the promise made in the Premier's speech, have trampled on freedom of speech, therefore the young *Shimpo-to* must stoutly oppose them. Another *Shimpo-to* association, organized by advanced politicians not possessing seats in the Diet, also convoked a meeting on Tuesday evening, but adjourned without coming to any definite conclusion.

The *Chuo* reports that Mr. Takahashi will be dismissed from the Government service, but this seems to us to be hardly possible.

COUNT HIJIKATA.

It is rumoured in Tokyo that Count Hijikata, Minister of the Imperial Household, has tendered his resignation. We find difficulty in supposing that the step can be more than formal. The Minister's name having been brought into undue prominence by slanderous publications, and the Cabinet having been obliged to adopt very decisive measures in consequence, His Excellency, *more Japonico*, may have held himself under a sentimental obligation to tender his resignation. If he really means to go out of office in consequence of the wild and unscrupulous attacks made upon him by the *Twenty-sixth Century* and the *Nippon*, he will merely be doing what his enemies desired to compass when they undertook to slander him.

POLITICAL NEWS.

The Government and the *Shimpo-to* are likely to lose the aid of the well-known economist, Mr. Taguchi, M.P. Mr. Taguchi, it must be remembered, has sketched out a special financial programme of his own—lately reproduced in our columns—the rejection of which by the Government has obliged him and his fellow-thinkers to leave the Government's side. "The other day," writes the *Yomiuri*, "Mr. Taguchi called on the Premier to ascertain his views on this pet financial scheme. The Premier is said to have referred to the subject but did not make any definite statement. Mr. Taguchi next called on Count Okuma, but has not succeeded in seeing him. The *Shimpo-to's* views on Mr. Taguchi's programme are unsettled. To speak the truth, most of the members are unversed in the programme and have not yet deliberated upon it." On the appearance of this note in the *Yomiuri*, Mr. Taguchi sent a letter to that paper. The letter says that he is opposed to the Army expansion programme, to the Tobacco Monopoly, to the Census Regis-

tration Tax, to the Saving Banks' Regulations, to the Industrial and Agrico-Industrial Banks, to the Mixed *Satt* Tax, and so forth; and that a politician who is so far opposed to the Government's measures cannot possibly be regarded as friendly to it. Certainly some of the measures failed to find approval in last year's platform of the *Shimpo-to*, but as Mr. Taguchi alone is responsible for the opposition, the *Shimpo-to* cannot with decency alter its position. He is therefore obliged to assume a position of isolation. It ought to be added that an earnest discussion is said to have arisen between Mr. Taguchi and Mr. Kudo Kokan, on the occasion of the last meeting of the Standing Committee of the *Shimpo-to*, held in the latter part of October, as to the position that the *Shimpo-to* should adopt toward the new Government. Mr. Taguchi did not attend the extraordinary general meeting of the Party held early this month.

Even the *Chuo* admits that such leading men of Kumamoto extraction as Barons Yasuba, Fujimura, Yamada, and Yoneda, Mr. Kiyoura, Minister of Justice, and so forth, have held repeated councils concerning the advisability of extending help to the Ministry in power. If they persist in this opinion and proceed to win over their fellow provincials, the National Unionist Party is in danger of a split.

Viscount Tani has come from his retreat in Tosa and is calling on one Cabinet Minister after another. The *Nippon*, and politicians who endorse its views, were earnest in recommending the Viscount for the portfolio of Education or of Agriculture and Commerce. Hence the virulence with which the *Nippon* criticizes the present holders of the portfolios of these Departments.

ECONOMIC NEWS.

The financial troubles in Osaka are far from being settled, and the stock market is suffering from unusual depression. The shares of the Naikan Railway, for example, which especially after amalgamation with the Hankai Railway, occupied a high place in public favour, being quoted at 41 *yen*, though only 5 *yen* had been paid up, have now fallen to 25 *yen*, though 7½ *yen* have been paid up. A "potential share" of the Kii Railway, upon which one *yen* security had been paid, commanded, at one time, a price of above 10 *yen*, but after 5 *yen* more had been called in the quotation fell to less than 4 *yen*, or 33 per cent. below the amount actually subscribed. In a similar way, a share of the Chugoku Railway Company, upon which 13½ *yen* had already been called in, stands as low as 6 *yen*, a share of the Omi Railway Company, upon which 5 *yen* have been paid, is quoted at 2 *yen*, and a share of the Kiwa Railway, upon which the same sum has been paid, is quoted at 2.20 *yen*. Even at those figures far below the actual amount of subscription, persons desiring to sell their shares can not easily find purchasers. It is not precisely known how far those now owning these shares have incurred loss since the extraordinary fall in the stock market, but a considerable sum must have been "dropped," especially by owners of "potential shares."

The *Shogyo* gives some interesting information relating to the connexion of members of Parliament with railway and other business enterprises recently projected, or about to be projected. It has discovered that 62 members are projectors of companies which have not yet obtained charters, and that 91 others are either Directors or shareholders of companies already engaged in business. The capital of the companies with which these 153 members are connected, aggregates about two and a quarter million *yen*. There is, of course, nothing strange in such a state of affairs, though some Japanese seem thoughtless enough to question the capacity of these members for impartial legislation.

As an example of the feverish desire prevailing in Japan for the construction of railways,

we may note that, in Chiba Prefecture, there are no less than 36 railway Companies, two of which have opened their lines for traffic, six others have obtained charters, and the remaining 28 are awaiting official sanction. It is said that the Railway Council is at a loss what course to pursue in the case of more than 300 applications submitted from various parts of the country, for in addition to the fact that several different applications have been made for one and the same road, the Authorities have not yet reached any definite decision as to the routes for railway construction in several localities.

The flood that visited the Kei-Han districts in August last resulted in a considerable accumulation of silt at the mouth of the Osaka Harbour, and ships that call there are now subjected to unusual inconvenience, being obliged to anchor a long distance away from the city. The Osaka Shippers Union estimates that the loss resulting from this aggregated over 40,000 *yen* in lighterage, towage, and so forth during the three months of August, September, and October. The Osaka Chamber of Commerce has taken the matter up and has represented to the Local Office the necessity of immediate dredging operations.

Another economic complication is reported from Osaka. In May of last year, the Nippon Copper Company was started in that city with a capital of 300,000 *yen*, one-half of which has been already called in. Plant was purchased, fixed in place, and set working. It appears, however, that Mr. Hirose Tan, President of the Company, did not make cash payments to the merchants that sold the machinery to the Company, but appropriated the money to his own private uses, and gave promissory notes to the merchants. These notes were discounted by the Sumitomo Bank, the amount thus obtained being 76,000 *yen*. The notes matured on the 10th inst., but as the President had no money to meet them, he applied to the Bank for a renewal. The Bank peremptorily refused, and he thereupon absconded. The merchants who sold the machinery to the Company reposed so much confidence in the President, that they had consented to endorse the promissory notes, and being consequently obliged to make good the sum due to the Bank, they obtained an order of distraint on the property of the Company. Mr. Okamoto Kisaburo, one of the creditors, holds machines worth 15,000 *yen* that he has made for the Company, and has also been obliged to pay 6,000 *yen* on account of his endorsement. The defaulting President has been guilty of another piece of sharp practice also. Availing himself of the credit he enjoyed as President of a different company, he issued a promissory note, in his capacity of President, for a sum of 15,000 *yen*, putting the proceeds into his own pocket. He is further indebted to the extent of 30,000 *yen* to other creditors. It appears that he perpetrated all these fraudulent acts to make good losses incurred on the stock exchange. Fifteen thousand *yen*, however, he invested in land in Formosa, and a further amount was devoted to purchasing a tract in the vicinity of Osaka.

The Liquidating Committee of the Sawa Firm have concluded their work. They have found, after thorough researches, that the Firm is indebted to the extent of 1,249,000 *yen*, and that its assets amount to 544,536 *yen*. A few days ago, the committee summoned all the creditors of the Firm, and after laying before them the exact state of affairs asked them to be satisfied for the present with the sum that the Firm had in hand, postponing the payment of the remaining debts to some future occasion, when the Firm would be in a position to redeem all its obligations. The creditors consented without raising any serious objection, and thus the Firm has escaped bankruptcy, but how it is to keep up its business we are not told.

Straw braid is one of the staple exports that have lately shown a sudden development, as may be seen from the following Customs returns:—1892, 155,162 *yen*; 1893, 378,349 *yen*; 1894, 743,399 *yen*; 1895, 1,387,643 *yen*; 1896

(up to September), 1,255,867 *yen*. The braid is made chiefly in Kasaka, Bitchu; Oita, and a few other places. It is in contemplation to convene a grand meeting of straw-braid manufacturers and merchants in Kasaka, for the purpose of organizing a guild and taking various steps calculated to promote the prosperity of this industry. The projectors are of opinion that if manufacturers and merchants unite cordially to push the export of the commodity by their combined efforts, it will be possible to find a market abroad for from three to five million *yen* worth.

UNIFICATION OF GOVERNMENT BONDS.

The *Oriental Economist* is in favour of unifying Japanese Government Bonds to facilitate the investment of foreign capital. Japanese Government Bonds recently placed on the regular list of the London Stock Exchange are Redemption Bonds issued subsequent to 1892, amounting to some 60 million *yen*. Though the date of redemption lies in the remote future, foreign capitalists are naturally prejudiced against War Bonds. It is, therefore, not to the advantage of this country to differentiate between its bonds, when endeavouring to attract the investment of foreign capital. Indeed, the multiplicity of Government Bonds now constitutes a grave obstacle to the sale even of Redemption Bonds abroad. Though regularly quoted, Redemption Bonds are in great part held in Japan, and consequently when a foreign capitalist wishes to invest his money in Japanese Government Bonds of a specified description, he has to go to the trouble of depending upon a third party. Suppose a London merchant wants to buy in Japan Redemption Bonds of 1892 to the extent of 100,000 *yen*. The broker who receives such an order would find it difficult to effect the purchase by time bargain. Suppose, however, that the foreign capitalist does not specify the date of the issue of the Bonds he wishes to buy, but only gives an order to purchase Redemption Bonds? In that case his broker would be able to obtain various Bonds to any large amount. Hence arises the necessity of unifying Government Bonds. At present there are ten different kinds of Bonds, totalling, in the fiscal year 1896-1897, 376,800,000 *yen*. But of these ten kinds of Bonds, Foreign Loan Bonds are already in the hands of foreign capitalists. The new Loan Bonds were redeemed in October last, while the old Loan Bonds and the Civil War Bonds, totalling this year a little over 17 million *yen*, are to be reduced to seven millions during next year. These may be excluded from the project, as not suitable for sale to foreigners. Therefore, there remain only six varieties, namely, Pension Bonds, Navy Bonds, Redemption, Railway, War, and Public Undertakings Loan Bonds. In 1901 these six Bonds will reach their climax and total 499,340,000 *yen*. The total sum of 494,740,000 *yen* obtained by subtracting from the above figure 4,600,000 *yen*, representing the Foreign and Old Bonds, may be set down as the whole amount of Bonds that might be fairly offered to foreign capitalists. Though differing in the original purposes for which they were issued, the Government is bound to redeem them all equally, whether the loan was applied for military objects, or for matters of a more peaceful character. Such redemption has become more trustworthy since the Supreme Legislative Office was inaugurated, as every new outlay contemplated by the Executive must obtain that office's approval. The multiplicity of denominations simply embarrasses foreigners intending to invest in Japanese Bonds, and they will be at a loss to choose, say between the Redemption Bonds and the Public Undertakings Bonds. The *Economist* suggests that all the bond issues be called the Imperial Japanese 5 per cent. Bonds, for, thus unified, foreigners intending to invest money in Japanese Bonds would be saved from needless perplexity. The unification would greatly facilitate the entry of foreign capital into Japan.

PROTOCOL TO THE COMMERCIAL TREATY BETWEEN CHINA AND JAPAN.

As the text of Japan's new Commercial Treaty with China contains nothing relating to the former's abandonment of the manufacturing privilege secured by the Shimonoseki Treaty, it was at first supposed that the Shimonoseki Treaty, would hold after all, and that articles manufactured in China by Japanese or other foreigners would rank with imported goods, and would consequently be free from any special taxation. But a protocol has now been published, in which the Japanese Government distinctly concedes China's right to tax articles manufactured by Japanese subjects in China, provided only that such tax shall not differ from, or exceed, the impost paid by Chinese manufacturers. Thus Japan has explicitly renounced that particular privilege. Had she not done so, a nice question might possibly have arisen. It might have been claimed that Japan's failure to avail herself of all the provisions of the Shimonoseki Treaty did not disqualify other Powers from taking everything that the Treaty gave, such action being based on their most-favoured-nation right. But the protocol just concluded in Peking virtually abrogates the free-manufacture clause of the Shimonoseki Treaty, and disposes finally of any question in that sense. As for the compensation obtained by Japan, namely, special sites for Japanese settlements in Shanghai, Tientsin, Amoy, and Hankow, it is evidently viewed by the Japanese with much satisfaction. Until quite recently, the only Powers having settlements of their own at Chinese open ports were England and France. Germany made a new departure last year by applying for and obtaining a site for herself in Tientsin—the success of her demand being attributed by many persons to the service she had rendered to China in assisting to drive Japan out of Liaotung. But Japan will now stand on the same level as these Great Powers in the matter of settlements. There can be no doubt that her position will be greatly improved in Chinese eyes, and that her commercial opportunities will be increased.

The following is a translation of the Protocol to the Commercial Treaty between China and Japan, as published in the *Official Gazette* of the 11th instant:—

Art. I.—It is hereby agreed that special Japanese settlements shall be formed at the places newly opened to commerce, and that affairs relating to roads and police shall be under the control of the Japanese Consul.

Art. II.—Regulations with respect to steamers or ships owned or chartered by Japanese subjects at Suchow, Hangchow, and Shanghai shall be determined after conference with Japan, on the basis of the Provisional Regulations for the conduct of business by foreign merchants at those places, issued by the Shanghai Customs on August 3rd of the 22nd year of Kwangsu.

Art. III.—The Government of Japan concedes the right of the Chinese Government to impose upon articles manufactured by Japanese subjects in China such a tax as may seem expedient, provided that the said tax shall not differ from, or exceed, the tax paid by Chinese subjects; and provided that the Chinese Government shall, when the Japanese Government so desires, immediately provide sites for the formation of special Japanese Settlements in Shanghai, Tientsin, Amoy, and Hankow.

Art. IV.—Instructions shall be issued in Sunfu, in Shantung, that no Chinese troops shall approach, or take possession of any position, within 5 Japanese *ri*, that is to say, about 40 Chinese *li*, of the limits of any positions held by Japanese forces in accordance with treaty stipulations.

The above Protocol shall be drawn up in the Chinese and Japanese languages, and after comparison, the two copies shall be signed and sealed, each side taking one of the copies.

(Here follow the signatures of Baron Hayashi and the three Chinese Plenipotentiaries.)

(Dated) 19th day of 10th month, 29th year of Meiji.

13th day of 9th month, 22nd year of Kwangsu.

THE POLICE.

We observe that the *Kobe Herald* has fallen into the error committed by two of its Yokohama contemporaries—or, to speak more correctly, has adopted their error. Referring to the alleged ill-treatment of a woman by four policemen, as related in the columns of the *Yorotsu Choho*, our Kobe contemporary says that its own special inquiries have failed to elicit anything contradictory of the *Yorotsu Choho's* story, and then adds:—

The authenticity of our own information, we observe (from the *Japan Herald*), is borne out by the fact that the metropolitan newspaper which narrated the case did so "without manifesting the slightest concern, indignation or surprise,—as though such an occurrence was one of the most ordinary character." We have here revealed a pretty state of things.

It has been shown in these columns that the alleged absence of "the slightest concern, indignation, or surprise" on the part of the *Yorotsu Choho* is in reality an absence of knowledge on the part of the *Japan Herald* and the *Japan Gazette*, for the *Yorotsu Choho* headed its paragraph "Extraordinary Policemen," and closed it with the words, "talk of the acme of what is extraordinary, this is a case in point." So far, then, from failing to exhibit the slightest concern, indignation, or surprise, the *Yorotsu Choho* did in fact exhibit most marked surprise. Hence the "fact" in which the *Kobe Herald* finds confirmation of "the authenticity of its own information" turns out to be not a fact at all but a flagrant falsehood. It is worth noting here that the two Yokohama journals which so grossly misinterpreted the *Yorotsu Choho* and misled their readers, have not made the slightest attempt to correct their blunder. They know now that they were mistaken, egregiously mistaken, yet they do not take the trouble to correct the false impression produced by their mistake. It is one thing for four Japanese policemen to be guilty of a brutal abuse of power—policemen commit crimes of that nature sometimes—but it is another and totally different thing that Japanese public opinion, as represented by a vernacular newspaper, should consider such occurrences to be "of the most ordinary character." Two Yokohama English journals have maligned Japanese public opinion on the strength of their own defective rendering of a vernacular newspaper's article, and they have not either the courage or the honesty to withdraw their libel though they are now well aware of their its total falseness.

This incident is curious in several respects. The *Kobe Herald*, for example, thinks that "the publicity given to the matter of the alleged outrage of the 29th of Oct. by vernacular journals precludes the idea that it is wholly baseless," and adds that "Japanese editors would surely not dare to lend their papers to the dissemination of such incriminating details were they not quite sure of their ground." Suppose that we apply this canon of inference to the case of the two Yokohama journals referred to above. Are we permitted to conclude that because they gave publicity to a flagrantly false version of an event, their falsehood can not have been entirely baseless? Are we permitted to conclude that the editors were quite sure of their ground since they lent their papers to the dissemination of such a libellous inference? On the contrary, it is plain that they were grossly careless, if not absolutely reckless, for had they addressed the most trivial inquiry to their translators, they would have discovered their blunder. But, of course, it will be held an unpardonable crime to hold foreign journalists to the rules imposed by them on this Japanese *confrères*.

What the *Yorotsu Choho* itself now says is this:—

As already pointed out by the *Japan Mail*, the very manner in which we gave publicity to the case should have taught the *Japan Gazette* and its congeners that it was wholly out of the common, a flagrant breach of the law, and discussed in our columns not because it was significant of inefficient legal procedure, but by reason of the extraordinary outrage therein set forth.

All this, however, does not touch the alleged outrage, which, moreover, is now supplemented by the *Kobe Herald*. Inquiries undertaken by that journal are said to have shown that the

police make a habit of behaving with great brutality towards women arrested on suspicion of a certain offence. Should it prove that these charges are well founded, the newspapers concerned in bringing them to light will deserve public gratitude. We ourselves find it difficult to believe that such outrages are perpetrated, but without full investigation we do not venture to express any definite opinion.

THE ATTEMPT TO UNIFY BUD- DHISM IN JAPAN.

It has been well said that however insignificant, from an arithmetical point of view, be the progress made by Christianity in Japan, the introduction of the foreign creed and the advent of its vigorous propagandists have at any rate had the effect of rousing Buddhism from the *dolce-far-niente* mood into which it had fallen owing to long centuries of undisturbed existence. To this it may be added that Buddhists were not slow to recognise the great disadvantages under which Christianity laboured owing to constant friction among its numerous sects. They decided to consolidate the strength of their own faith by constructing a creed to which all their sects could conscientiously subscribe, and with that object they appointed, some years ago, a compilation committee. But when the result of the latter's labours came to be examined, it was found that four doctrines deemed essential by a branch of the Nichiren Sect had been omitted from the new creed. A strong protest was at once lodged by the aggrieved sect, but the committee urged that the doctrines in question were much too abusive of other sects to be given a place in a general declaration of belief. The strange part of the matter is that the upholders of the eliminated doctrines decided to appeal to the law. They brought an action against the committee, and great excitement prevailed at the Tokyo Local Court on the 10th of November, when the case came up for hearing. Barristers of eminence are retained by both sides, and the public watch with curiosity to see how the judges of a law court will decide a question lying apparently so far beyond their legitimate purview. As yet the legal process has not advanced beyond its preliminary stages, and its further hearing has been postponed until the end of November.

THE LAST SPEECH OF BARON KAWADA.

An interview that a representative of the *Osaka Asahi* had with the late President of the Nippon Ginko on the 4th inst., a few hours before he was suddenly taken ill, elicited the last utterance that he made on economic subjects. People said, he observed, that the Nippon Ginko had lately abandoned the liberal policy it previously pursued and substituted another having a restrictive tendency. That was an erroneous idea, for the Nippon Ginko's policy had undergone no change whatever. Born as he was in such a remote place as Tosa, the Baron disclaimed any particularly deep acquaintance with the principles that are supposed to govern a scientific financial policy. But he did know that in whatever situation one was placed, one must guard with jealous care the credit attaching to it. Much more was this important in economic matters where men relied mainly on credit. The Nippon Ginko regulated its business in strict conformity with principles of credit. When Mr. Kawakami, the late manager of the Nippon Ginko, behaved in an arbitrary manner at the Osaka Branch, he subsequently had to atone for his acts by resignation. Mr. Kawakami took these arbitrary steps in the capacity of a Manager of the Bank, and therefore, to defend the credit of the Bank, the Baron thought it obligatory to implement the promise made by its manager. Baron Kawada knew well the necessity for adopting certain remedial measures in connection with the present critical condition of the Osaka market, but he did not approve the methods pursued

by Mr. Kawakami. The Osaka merchants, he further observed, had not kept in view the necessity of guarding their credit. They were prone to abuse the confidence based on that credit. Osaka, though a trading centre since the time of Hideyoshi, and therefore familiar with trading customs and the credit system, instead of following the systematic methods pursued by English business-men, was too fond of imitating the irregular methods in vogue in America. Did the bankers of Osaka in pursuing their business take into due consideration the balance between supply and demand? To his mind they did not seem particularly careful in regard to this essential principle in business. They were given to speculate and enter into business far beyond the capacity of their resources. But when once they encountered a reverse and things became critical, they bowed their heads to the Nippon Ginko and implored its help. Then by forecasting the inclination of the Bank, they tried their hands again at speculation in stocks or rice. He could never consent to extend help to such a set of business men; their doings were calculated to abuse the credit of the nation and create economic troubles. Impelled by the enthusiasm that necessarily follows a victorious war, the people had become feverishly excited and started one enterprise after another. As to the wisdom of granting licenses to such enterprises, the Baron maintained silence, since the matter did not come within his province, but so long as he presided over the affairs of the Bank of Japan he was resolved not to countenance any project calculated to disturb the economic tranquillity of the country.

CURRENT NEWS.

A singular event is recorded by the vernacular press. It appears that a Parisian banker, now visiting Japan, recently invited Messrs. Okura, Yokoyama, and several other noted business men of Tokyo to the Kwagetsuro, Shimbashi. About a dozen *dansesuses* of the locality were summoned to brighten the entertainment, and everything was going with the pleasant *abandon* characteristic of such an affair, when suddenly the sound of a gun was heard from some place behind the room where the party were assembled. Pellets of shot struck the *shoji* and two of the *geisha* were slightly injured. The entertainment was at once abandoned, and after enjoining the landlord of the house to report the matter to the Police Station, the guests and host left the restaurant. The Kyobashi police immediately instituted strict inquiries, and soon succeeded in eliciting the facts. It appears that a merchant living at the rear of the Kwagetsu restaurant has a profligate son. The father, incensed at the continued dissipation of the youth, forbade him to leave the house, and contrived means to confine him in the second storey so that he might have leisure to repent. The sounds of music and dancing recalling delights in which he could no longer participate, seem to have upset the youth's moral equilibrium. He conceived the idea of putting an end to the pleasure of others since he could not himself enjoy it. Unfortunately, a gun of some kind—the vernacular press says a rifle, but a fowling-piece seems more probable—was kept in the room, and having loaded it with small shot the young rascal fired in the direction of the room whence the noise of revelry proceeded. He is now in prison, awaiting trial.

Constable Yoshitomi, of the Kanda Police Office, received a mortal wound in the discharge of his duty on the 14th instant. As he was going his rounds at about 2 a.m., he saw a young man of suspicious appearance carrying a large bundle, in the immediate neighbourhood of the Kanda Miyojin. He stopped the man and told him to come to the Kanda Office. The man had no choice at first but to acquiesce. He had proceeded only a few steps, however, when he extracted a revolver from his bundle, and fired at the constable, striking him in the lung. Yoshitomi, being an adept in the art of *jiujitsu*, grasped the man by the wrist, threw him with force against the stump of

a tree growing close by, and, before he could recover his feet, bestrode him and attempted to bind him with a cord which constables always carry. The man struggled hard to free himself, and managed to discharge his pistol again, the bullet, this time, striking a button of the policeman's uniform and glancing off. The constable's wound was now beginning to paralyse him, and he had no strength to bind the ruffian, but fortunately, at this critical moment, two policemen on duty a short distance off, hearing the sound of a fire-arm, ran up and aided their wounded comrade who, though almost unconscious, still grasped the hair of the burglar with desperate strength. Yoshitomi was carried to the nearest doctor's, but little hope is entertained of his recovery. The criminal proved to be a mechanic of Hokkaido, who had arrived in Tokyo only a few days previously, after having broken into a watch-maker's shop at Yokosuka. The revolver he carried had been stolen from the Gendarmes Station at Yokohama when he was on his way to the capital.

Marquis Sho, the former Prince of Liuchu, has arrived in Tokyo from his native place, where he has had his residence since the incorporation of Liuchu into the Local System of Japan. He was accompanied by the Marchioness, and their son, Baron Sho, and had a retinue of some twenty attendants. As soon as the party reached Kyoto, the ladies changed their coiffures and costume into pure Japanese fashion.

The *Tokyo Economist* seeks to show how far the recent rise in the market prices of commodities has conferred benefit on land-owners. It commences by quoting the following table from the Monetary System Investigation Committee's Report:—

	Average prices of commodities in Tokyo. (standard of comparison.)	Average prices of commodities in Osaka. (standard of comparison.)	Average for both Cities.
1873	100	100	100
1874	104	108	106
1875	107	106	106
1876	107	104	105
1877	107	107	107
1878	105	113	109
1879	105	117	111
1880	98	114	106
1881	95	105	100
1882	95	108	101
1883	96	121	108
1884	99	129	114
1885	104	135	119
1886	101	129	115
1887	104	130	117
1888	118	131	119
1889	114	136	125
1890	119	147	133
1891	118	145	131
1892	122	141	131
1893	123	—	—

It is seen from the above that, during the given twenty years, the price of commodities in Tokyo and Osaka rose more than 30 per cent.; in other words, the purchasing power of money fell to that extent. Hence a land-owner having to pay taxes amounting to 100 yen in 1873, was able to effect the payment in 1892 with thirty per cent. less commodities, which is equivalent to saying that his land tax was reduced by 30 per cent. in two decades. In other words, what was originally a tax of 26 per cent., actually fell to 1.75 per cent. Consequently, if the Government desire to keep the rate uniform, it must now raise the tax to 3.25 per cent., a step which the *Keisai Zasshi* deems quite proper, especially since, owing to the development of material civilization, increase of population, and so forth, land-owners are now reaping unusual benefits in several respects.

The vernaculars papers report that the Korean Local Officials at Chhang-won and Masan, in Kyong-sang-do, have issued proclamations interdicting the export of grain and beans. It is added that when Japanese merchants, engaged in the business of export, seek to remonstrate with the Local Officials on account of this arbitrary measure, they are denied admission by Korean soldiers posted at the gates of the offices. The officials aver that if the export of grain and beans be left unchecked, the poorer classes will

be precluded from enjoying the benefits otherwise resulting from the unusually good harvest of the present year, and will be obliged to pay for their food as much as they have to pay in years of dearth. They have proclaimed that Koreans detected selling grain to foreigners will be punished and the grain confiscated. This order has already been enforced. The Japanese Merchants' Union in Fusan has reported the matter to the Japanese Consul in that place, and the latter has opened negotiations with the Korean Authorities.

CONTEMPORARY ECONOMIC ABILITY.

The *Tokyo Economist* has a very interesting comment regarding the economic ability displayed by contemporary Japanese. Marquis Ito, it says, thoroughly understands the principles of national economy and can discern the bearings of all questions of interest and disadvantage, profit and loss. He is not a statesman that is influenced by any bias. He is, however, a man addicted to the "smiles all round" policy, and is liable to blindly adopt the prejudice of others; therefore his economic policy can never be depended upon. Count Inouye understands both the scientific and practical features of political economy, and is endowed with a courage that enables him to carry out his resolutions. His weakness lies in his disposition to easily become tired. Count Okuma is comprehensive, but withal liable to fall into error. One of his most striking characteristics, it may be noted, is though he make a mistake, he will not swerve or fear the defeat looming ahead. Count Matsukata is apt to go astray; but his long experience of financial matters and his long struggle with financial troubles, have convinced him of the absolute necessity of following a regular system. When once spare room is seen in the State's finances, he is sure to deflect from his proper orbit. Mr. Shibusawa, from his long experience, has acquired the courage that rises about illusions. But it is not possible for the public to put faith in all that he says or does. Mr. Masuda Takashi has succeeded in penetrating into the core of things, but his influence is still comparatively weak. The Economists identified with the Mitsubishi are on the rising curve of influence. They are very shrewd in discerning the drift of affairs, and that is probably due to the acuteness of Mr. Shoda. They should, however, be on their guard against impulses that may lead them into hazardous speculations. Mr. Sonoda, of the Specie Bank, unlike his late fellow clansman, is a shrewd man both in theory and practice. Satsuma's economies are excellently exemplified in Count Kuroda's doings in Hokkaido and in Mr. Mayeda's management of the Department of Agriculture and Commerce. Though ardent patriots, they rarely succeeded in effecting much, simply because they did not thoroughly digest the principles of political economy. Among journalists there is, or rather was, Mr. Fukuchi Genichiro. Though possessing a knowledge not particularly deep, his shrewd sense saved him from falling into grave errors. But Mr. Fukuchi is no longer connected with journalism, and Mr. Fukuzawa stands alone as its representative. Mr. Fukuzawa's acquirements are not profound, but his career has enabled him to perceive that a moderate policy is most advantageous in everything. His economics are permeated with this guiding principle. At one time he up held the doctrine of protection and once advocated a fallacious currency system. But these principles have long since been abandoned. Here the *Keisai's* comment ends. We might quote what Viscount Watanabe, the late Minister of Finance, has said of Mr. Taguchi himself, the editor of the *Keisai*, as an economist. "His ideas are too scientific for a practical economist and too practical for a genuine economic thinker."

THE TOBACCO MONOPOLY.

PUBLIC attention is beginning to turn with evident interest to the question of the monopoly of leaf tobacco, as contemplated by the Japanese Government. Several of the vernacular journals have approached the subject, but it must be confessed that their writings do not indicate much insight or research. The *Nichi Nichi Shimbun*, for example, recently asserted, on the alleged authority of Mr. F. M. JONAS, an English tobacco expert of acknowledged competence, that a Government monopoly, if well designed and properly carried out, could not fail to stimulate the tobacco industry, thus benefiting the Treasury, the producers, and the country at large. Such a proposition is secured against adverse criticism by the large hypothesis involved—"if well designed and ably carried out"—but, as we read on, we find that the *Nichi Nichi's* conception of a "well designed and ably carried out" system does not bear close scrutiny. For example, our contemporary observes that since growers would be sure of selling their produce, the Government being bound to take it, a great stimulus must be given to production, so that a considerable surplus would remain for export after supplying the home demand. Simultaneously with this forecast, we are told that the price must be kept low, in order to ensure a market abroad, and thus we have producers stimulated, on the one hand, by the prospect of a certain sale, and deterred, on the other, by the necessity of selling cheap. Further, it is argued by the *Kobe Chronicle*—though we cannot discover whether that journal is originally responsible for the theory—that when the new Treaties come into force, "the importation of foreign tobacco into Japan is bound to be checked, since there will be an import duty of 35 per cent. on tobacco;" and, again, that, "if the price of the home product remains where it now is, the duty will mean a great displacing of imported tobacco by home growths." Arithmetic seems to have been entirely neglected in formulating these statements. The consumption of tobacco in Japan may be put at about eight hundred thousand piculs, or a hundred and seven million lbs. (av.) yearly. That seems to us a sufficiently liberal estimate. The consumption in the United Kingdom is fifty-six million lbs., and the double of that quantity approximately, should suffice for Japan. Now the Government proposes to raise an annual revenue of ten million *yen* from the monopoly. Therefore, as we showed in a recent article, the Government, under the proposed system, will be obliged to sell the tobacco at 17 *yen* per picul over cost price. Hence, if we take the average price paid to the producer as 8 *yen*, it follows that Japanese leaf tobacco would pass into the manufacturer's hand at 25 *yen* per picul. But

there are several varieties of foreign tobacco that can be profitably laid down in Japan at about 12 *yen* a picul, and they are of a nature qualified to compete with the home-grown leaf. These tobaccos, after paying an import duty of 35 per cent. *ad valorem*, could be sold for 16 or 17 *yen*, against 25 *yen* for the Japanese leaf. Thus the duty fixed by the new tariff, so far from checking the import of foreign tobacco, will enable the latter to compete at ruinously low rates with the home product. We are not acquainted with the motives that induced the experts of the Finance Department to choose 35 per cent. *ad valorem* as a proper import duty. Presumably their idea was to subject the foreign leaf and the home leaf to equal taxes, and, indeed, we have heard it stated that the tax to be levied on home-grown tobacco under the monopoly system is assessed at 35 per cent. Obviously, if that be so, and if the average price of Japanese leaf tobacco be some 8 *yen* a picul, then, to raise a revenue of ten million *yen*, a consumption of about 3 million piculs annually must be contemplated, or 7 times the consumption of the United Kingdom. Moreover, the idea of an *ad valorem* duty on tobacco is thoroughly faulty. Such a duty could not be imposed efficiently without having in the Custom Houses a staff of experts qualified to appraise the innumerable varieties of foreign tobacco. Japan does not possess so much as a solitary expert of that nature. We are disposed to think that the import duty of 35 per cent. *ad valorem* was fixed without due reflection. England levies a specific duty of 3s. 2d. on every lb. of leaf tobacco entering her ports, and there are no discernible reasons why Japan should not do the same: that is to say, why she should not double or treble her proposed impost, and place it on the practicable basis of a specific duty instead of the wholly impracticable one of an *ad-valorem*. Concerning the tobacco monopoly, as mapped out in the Bill passed by the Diet last session, we have already spoken in terms of the strongest disapproval, and we may now add that we believe the scheme to be impossible. The Government would enter the market as a helpless quyer. Unqualified to appraise the leaf that must nevertheless be bought, the officials would be at the mercy of the producers. They have not, and can not procure, experts to assist them, and even if they had experts, the task awaiting the latter would be hopeless. It does not appear that any idea has been formed of the magnitude of the work to be commenced on January 1st, 1898. There will be 1,600,000 piculs (two years' supply) of tobacco to be taken over by the Government. Such a quantity, packed and baled for the English market, in bales of 2 piculs each, would require 85 steamers, each of 3,000 tons, to carry it away. Or, if the bales—Higo standard, of 70 catties each—were placed side by

side, they would extend to a distance of 830 miles. A staff of one hundred competent experts would have to work for 230 days consecutively to properly examine and assess such a huge quantity. Meanwhile, the tobacco trade would be virtually suspended. Can these things have been considered by the framers of the system. We have also shown that, under this plan, the Government's initial outlay would be about 14 million *yen*, and that the yearly cost of working, including interest on capital, loss by damage and dead stock, &c., would be 3½ millions. Thus, to raise a revenue of 10 millions, the tobacco must be sold at a profit of 13½ million *yen*, or 17 *yen* per picul, supposing the consumption to be eight hundred thousand piculs. In other words, the price of the leaf would be more than trebled for manufacturers, and, at the same time, the Government would incur immense risks and responsibilities. Such figures alone should be prohibitive, even though the other reasons adduced above did not exist. We do not wish to be understood, however, as altogether condemning such a source of raising revenue; the method alone is in question. There is nothing that we can see to prevent the Government from adopting the plan followed in England, namely, passing the tobacco through State warehouses and levying a tax on it *en route*. The details of such a scheme have been elaborately worked out by Mr. F. M. JONAS, the English expert referred to above. We need not reproduce them here. It will suffice to set forth their salient differences. First, under Mr. JONAS' system, the Treasury is not obliged to invest any capital over and above the cost of building warehouses: the 13 million *yen* that would have to be paid out for the purchase of the leaf under the monopoly system is entirely dispensed with. Secondly, no official experts are required: the routine of placing the tobacco in the State warehouses, issuing warrants against it and ultimately removing it, is purely mechanical. Every transaction has to go through a duly regulated channel and is accompanied by proper vouchers, the services of experts, whenever needed, being provided by the dealers themselves. Thirdly, full precaution is taken against leakage of revenue—a danger of large proportions under the monopoly plan, as we showed in a recent article—the tobacco never leaving the Government's hands until it goes into the factory, and remaining, even there, under the surveillance of excise officers. Fourthly, the total yearly cost involved in collecting a revenue of 10 million *yen* is only half a million *yen*, against 3½ millions under the monopoly system. Fifthly, no interference with the tobacco trade takes place: it goes on precisely as usual. Sixthly, the Government is saved from all risks: a certain and trustworthy source of revenue is provided,

capable of being raised or lowered according to public needs.

It appears to us that no room for hesitation exists between two schemes so radically different in every important feature.

GERMANY AND ENGLAND.

RECENT telegrams from Europe have placed us in possession of the fact that the German press has of late shown marked hostility to England, and that the bitter animosity of its tone has aroused in Great Britain a reciprocal feeling of deep umbrage. We do not suppose that the *Hamburger Nachrichten* can be taken as a type of German journalism: it is generally regarded as Prince BISMARCK'S organ. Be that as it may, however, one of its latest articles contains a degree of unreasoning anger that does not stop at the grossest perversion of fact. Here is a condensed translation of the article, which we quote from the *Literary Digest*:—

Everything that has happened lately in Asia Minor and in the Far East is only only a prelude to the great struggle to be fought between Russia and England. While the Northern Colossus has shoved his advance guards near the gates of India, and is working ceaselessly on the road necessary for the transportation of troops, England nervously prepares for the defence. England wants Arabia, Syria, and Armenia to attack the Russians on their march to India, she wants Crete to hold the Russian fleet stationed in the Black Sea in check, she wants the island of Quelpart as a basis of defence against the fleet of Vladivostock. But England does not act as a "firebug" in Turkey solely to obtain new possessions. She hopes that a European war will bring about what she hoped to realize by setting Japan and China by the ears—a revival of her influence in the Far East. This will also lead England to intrigue in Korea. Russia's Siberian railroad is progressing, and Russian troops will soon be easily transported to Vladivostock; but until this railroad is finished, Russia wants peace. That is the reason England brought about the war between China and Japan. England thought it would be easy to get Japan to part with the isle of Quelpart and Port Hamilton, if Japan were allowed to take possession of Korea. In a similar manner England now wishes to put Greece in possession of Crete; in this case the Suda Bay will be made a British naval station. That England did not obtain the fruits of her villainous policy in the Far East may be regarded as an instance of the justice of divine Providence. It is her custom to set the Powers against each other, and to make off with the body. May she be defeated in her aim to bring on a general conflagration! The English, Danish, and Greek courts lately endeavoured to bring about an understanding between England and Russia, but that is impossible. Fire and water would sooner unite than these two. Turkey, therefore, is safe as far as Russia is concerned. Turkey acts at present as a buffer-state of Russia. The vitality of Turkey is often underrated. In reality her strength, based upon Moslem fanaticism, is great in a war against England. Turkey wants only money to be formidable, and Russia can give her all the cash she needs. Turkey is a strong sword in the hands of Russia, and the Czar would have to go insane to break this sword. There is a rumour that England intends to do a trick similar to the bombardment of Alexandria in 1882. The Cretan fortresses Candia, Khanea, and Retimo and their ports are to be occupied by British forces, and a British protectorate is to be declared over Crete. This seems to be the reason why the Turkish troops in Crete have been concentrated in those fortresses. But England had better look out. Russia and France will not stand such things now.

So far as the field of European policy is concerned, this German journal need not be refuted here. But could there possibly be wilder or grosser falsehoods than the assertions that Great Britain "set China and Japan by the ears" and that she "brought about the war between them," because she thought that "it would be easy to get Japan to part with the isle of Quelpart and Port Hamilton if Japan were allowed to take possession of Korea?" As a matter of fact, England's efforts,

for years previously to the war, had been devoted to endeavouring to keep the peace between Japan and China. We know, and our knowledge on this particular point is absolutely indisputable, that the uniformly maintained attitude of British Diplomats in the Far East with regard to Korea and Japan's grievances there, was that, if the two Eastern empires came to blows about the Peninsula, Russia alone would benefit by the issue. Not only British diplomats, but British publicists also invariably took that line. Witness the writings of the Honourable Mr. CURZON, of Mr. HENRY NORMAN, and of innumerable essayists in English magazines and newspapers. Moreover, no one having any knowledge, however superficial, of the course of events during the period while Japan's relations with China were growing dangerously strained, can be unaware that Great Britain's rôle was that of mediator, and that she exerted every effort, short of armed intervention, to avert a final rupture. Is it credible that the editor of the *Hamburger Nachrichten* is ignorant of all these things? If, not being ignorant of them, he has yet written in the strain quoted above, no words are sufficiently strong to denounce his malevolent duplicité. If he is ignorant of them, then it follows that he has undertaken to discuss a grave international problem without the slightest preliminary effort to acquaint himself with essential particulars. Between the two alternatives he has to choose, and whichever he selects, the credit of the journal he controls is reduced to a sorry plight. As to England's alleged hankering after Quelpart and Port Hamilton, and her defeated hope of inducing Japan to cede these places to her in the event of the latter Power's acquiring Korea, the simple answer is that if England wanted either Port Hamilton or Quelpart, she would take it without any of the intriguing attributed to her by the German journal. The proof is that she did take Port Hamilton in 1885, without any previous reference whatever to either China, Japan, or Korea, and if she gave it up a year later, she did so because the contingency that might have made its tenure useful had passed out of sight, not because any objections worth considering were raised against her continued occupation. We should be sorry to think that any English journal, however wanting in self-respect or under whatever dictation it acted, could be induced to play the contemptible part taken by the *Hamburger Nachrichten*, or to attack in terms so flagrantly prejudiced a nation for which Englishmen in general entertain sentiments of respect and amity. It is to be feared, however, that no friendship, however sincere, can long survive the present attitude of the German press towards Great Britain.

A COMPOSITE COIN.

IN reply to our correspondent "E.H.H.," we would point out, as he himself of course perceives, that any attempt to establish uniformity or divergence between, on the one hand, the depreciation of a particular commodity in terms of gold, and, on the other, the appreciation of gold in terms of silver, can not be of much use, and may be very misleading. It was never our intention to suggest such an investigation. We referred to the case of wheat because "E.H.H." chose it himself in a previous letter, and, in a manner, challenged us to show that its gold price had undergone any such alteration during the past 25 years as has the gold price of silver. Except for the immediate purposes of answering our correspondent, we attach little general importance to figures dealing with a particular staple only. Further, it is unnecessary, we hope, to rebut the implication that we selected years of maximum or minimum quotations. We made no selection of any kind. Consulting MCCULLOCH'S Dictionary of 1871, we found that "the average price of British wheat for the week ended April 24th, 1869, the only year mentioned in the book, was 45s. 5d. per quarter," and consulting the London *Economist* of October 3rd, 1896, we found that the "Gazette Average" on Sept. 26th was 24s. We took these figures without even examining the records for intervening dates. Had we been seeking figures favourable to our own point of view, we could have taken the price ruling on August 29th, 1896, when the quotation was 22s. 4d. per quarter. As to "E.H.H.'s" figures they are difficult to follow. He says that the average price of wheat in 1862 was about 79 cents a bushel, and that the average 36 years ago was "almost identically 86½ cents." But in the *American Almanack*, a universally recognised authority, we find that the minimum price of wheat in 1862 was 130 cents per bushel, and the maximum, 155 cents. How an average of 79 cents can be obtained from those quotations, we do not see. Again, going back 36 years, to 1860, we learn, from the same authority, that the minimum price was 135 cents and the maximum 170 cents. Yet "E.H.H." takes the average as 86½ cents. As long as our statistical authorities differ so enormously from those employed by our correspondent, reference to figures can not affect our mutual deductions. Passing, however, from concrete examples to the abstract principle underlying this argument, we find that "E.H.H.," by implication, attributes to us the proposition that "the purchasing power of gold, with regard to wheat, has steadily decreased (increased, our correspondent of course means to say) with the appreciation of gold in relation to silver." We should indeed be rash to assume any such position, and

rasher still to claim that "every decline in silver must necessarily be accompanied by a decline in the price of wheat." The price of wheat, or of any other commodity, may, within a given period, be so largely influenced by factors entirely independent of the ratio between gold and silver as to remain, for a time, unaffected by a change in that ratio. All that we claim, all that bimetallicists claim, is that a general depression of gold prices has been caused by the demonetization of silver. The curve of descent may have showed great variations at different periods, but it has been, on the whole, a downward curve.

With regard to the question of a composite coin, "E.H.H." seems to think that, in advocating such a system, we ignore the difficulty of introducing it, as compared with the difficulty of internationally fixing a ratio between gold and silver, and that, failing the composite plan, we deprecate the ratio resource. By no means. We see very plainly, and have distinctly stated, that to induce all countries to adopt a common medium of exchange would be a most arduous undertaking; and since, during the past sixteen years, we have steadily advocated international agreement in the matter of a ratio, it should not be necessary to repeat now that we are fully sensible of the advantages attending that expedient. But the fixing of a ratio by international agreement would not, in our opinion, be a radical remedy. If a uniform system of coinage be essential—as every financier admits that it is—for the smooth and convenient conduct of commerce between the different parts of the same country, then it is impossible to deny the larger proposition that a uniform system is essential for any group of different countries trading together. "E.H.H." himself admits it, for he speaks of "a universal system of coinage" being "a welcome addition," yet he still declines to concede the advisability of a composite coin. We wrote that the union of the two metals would be a practical fixing of the ratio between them, and would obviate the danger incidental to employing them separately, namely, the expulsion of the more valuable token from circulation. "E.H.H." does not see that. He thinks that "if the silver pieces were rated at an unchangeable value" (he means, of course, an unchangeable gold price), "they would do their work as well as any combination that could be invented," and he refers to the melting pot as the inevitable dissolver of any union that opposed the withdrawal of either metal on account of its superior value. Why the melting pot? To what use would the components of the composite coin be applicable after separation in the crucible? The reason, the only reason, that the more valuable of two coins disappears from circulation is that the obvious interest of every one having a payment to make is to make it in the over-valued

metal, which thus comes to be the sole, or virtually the sole, currency of the country. But under the system of composite coins, payments could not be made indiscriminately in either gold or silver: the composite coin would be the only legal tender. "E.H.H." appears to have overlooked that vital point. So far as we can perceive, a uniform currency for the whole civilized world would necessitate recourse to a composite coin. That any one should maintain the competence of either gold or silver separately to discharge such a function, is a hypothesis scarcely worth consideration. Meanwhile, half a loaf is better than no bread. As a step towards a universally uniform coinage, a universally fixed ratio between the metals used in the present system of different coins would be most desirable, apart from many other reasons in favour of such a reform.

THE HEBREWS.

I.

NATIONS, like individuals, have their birth and growth; they reach the acme of their prosperity; they decline, they die and disappear, and are only known to have existed by the crumbling monuments and fragmentary records that they have left behind. Not so with the Hebrew race, which does not decay and refuses to die. It has passed through an ordeal of suffering, perhaps greater than that endured by any other race, but still it survives, the same strong, unbroken race that it was thousands of years ago. Unless we except China, Judaism is the one vestige of the remote past that has entirely defied decay or dissolution. Mightier peoples than Israel have appeared on the great stage of humanity, but they have vanished like the shadowy figures of a phantasmagoria. On their ruins other peoples have arisen, or conquest and admixture have so modified them that beyond a few centuries no man can trace his ancestry. There is a solemn grandeur in the tremendous sweep of vision that the Hebrew takes of the course of time. He has seen all the ancient world-wide monarchies arise, flourish, and fall. Old ages, empires and systems have perished and left him behind, and new civilizations, empires and systems have sprung up to find him here before them, and likely to remain when they too have gone. He dwells under all stars, drinks of all streams, speaks all languages, enlists under every flag. Ancient as history, he possesses an indestructible youth. Threatened in all lands and times with destruction, like the Burning Bush he flourishes unconsumed in fire, a burning lamp shining on amid convulsions and tempests, an ethnological miracle, an undying witness of the truth of revelation, and a perpetual reminder of the future glories of our race.

The Hebrew is descended in the line of Isaac, from Abraham, who must not be pictured as a solitary traveller with his wallet and scrip, but as a mighty nomad sheik, at the head of an encampment of 1,300 tents, the father of nations. Lord Beaconsfield, stung by insinuations aimed at his pedigree, told the noble lord that "the sons of the Crusaders are by the side of the sons of Levi muddy-blooded barbarians." The Englishman, though he might trace his ancestry back to the Roman

period or to a Saxon thane, is but of yesterday in comparison with the Hebrew. The descendants of the Patriarchs prefer to be called Hebrews, or Israelites, to being called Jews, which last word is suggestive of old clo' and Shylock.

It has been supposed that the ten tribes, which were carried away into captivity before Judah, are concealed in some unknown region of the earth, but history finds no trace of them as now existing in any part of the world, and there is nothing in the Bible to make us believe that they anywhere have a distinct separate existence. A large proportion never went into exile, for only 27,280 captives were carried away by Sargon, this second deportation being apparently much larger than the first under Pul and Tiglath-pileser; and if only ten times as many were destroyed in the siege and previous wars, what became of the rest of Israel, whose warriors in the time of David numbered 1,100,000, which implies a population of several millions? The captives themselves were not allowed to settle in one district and therefore could not keep up an organized community. Besides, we know that many Israelites—from Asher and Manassah and Zebulon—came back with Judah, and a reunion of the divided Kingdoms took place in the celebration of the Passover (2 Chronicles xxx., xxxi., and xxxiv. 8,9). Moreover, the prophets Jeremiah and Ezekiel, Hosea and Micah declared that Judah and Israel would return together. And in the offerings made by the returned exiles at the Feast of Dedication, 12 he-goats were offered for a sin-offering for all Israel according to the number of the tribes. Many of the two kingdoms chose not to return. These are spoken of as dispersed among the people in all the provinces (Esther 3:8). And from the descendants of these it doubtless was that devout men out of every nation under heaven came to the Passover, and were present at the Pentecostal outpouring of the Holy Spirit. After the Return, because of the numerical superiority of the tribe of Judah, Jews became the common name for all Israelites. From all which we infer that after the restoration the old distinction between Judah and Israel was lost, and that the ten tribes, as a distinct nation having ceased to exist, all Israelites once more became one people, recognizing themselves as the descendants of the twelve ancient tribes.

Dr. Pressel divides the modern Jews into three great classes according to the countries over which they are dispersed. "The first class, inhabiting the interior of Africa, Arabia, India, and China, occupies the lowest stage of civilization. Though greatly superior to their Gentile neighbours, they are semi-barbarous and ignorant of their own literature, history, and religion, with which they mix up various heathen rites. The second and most numerous class is in Northern Africa, Egypt, Palestine, Persia, Asia Minor, European Turkey, Poland, Russia, and parts of Austria. It embraces the bigoted, strictly orthodox, and Talmudical Jews, including the sect of the Chasidim (the Zealots of Josephus) to the number of about one million, and the small but interesting party of the Karaites, who reject all rabbinical traditions. The vast majority of these Jews are extremely ignorant of all but Jewish learning. Socially they stand very low. They are to be regarded as the only proper exponents of what the Talmud really is. The third class is re-

presented by the Jews of Central and Western Europe and of the United States. These mingle with their Gentile neighbours, and indeed in some respects are their superiors. Religiously they belong to the party known as 'reforming,' who attempt to eliminate the old Talmudical element from their religion and to adapt it to Western civilization. Consciously or unconsciously, Western Judaism is rapidly drifting into Unitarianism or Deism."

This division must not be imagined to be fixed like the boundary lines between the states of Europe. Both in America and Europe are three parties: one, consisting of those that are conservative of old forms and habits in synagogue, education, and worship; another, of those that in education, synagogue, and worship conform to the highest ideas prevalent in their respective countries; and a third, of those that propose to drop all the externals of Judaism and retain only a pure Deism. The editor of the *Jewish Messenger* of New York says:—"Our Judaism, perhaps, is more hereditary than personal, and we slip into the doctrines and customs of our fathers, too ignorant to criticize, and too stolid to condemn. We are so comfortable in our Judaism, that we are fearful to investigate whether it is divinely inspired or not. We sedulously walk in the beaten path, more from a selfish feeling of safety than anything else, and worship tradition with its hundred heads simply because it is a labour to think." But a writer in *Blackwood* shows that rationalism is threatening, nay, now working, a revolution among the Jews. No people have hitherto been more steadfast to their traditions than the Hebrews. But they evidently are giving way to modern thought and sloughing off the petrified, crystallized opinions of ages. The Talmud up to this century has been the supreme authority, the oracle of the Hebrew world. But the Jewish reformers have cast down this hitherto supreme standard, as effectively as the Protestants did that of papal infallibility. With it have gone down all its minute and almost infinitesimal prescriptions of forms for all matters of worship, morals, and manners. They educate their children in the common schools, mingle freely with Gentiles in the legislature and in politics generally, and advocate the change of their Sabbath to the Christian Sunday as a matter of expediency. It is an interesting question how far this change may favour the final Christianization of Judaism.

The distinction has been claimed for the Hebrew that, unlike all other races, his blood is untainted. But Dr. Neubauer, himself a Hebrew, speaking before the Anthropological section of the British Association a few years ago, contended that the Hebrews, unlike the Gypsies, are not perfectly pure; that the Israelites of old were descendants of a mixed race that had crossed the breed in Egypt; that from the time of the Second Temple intermixture took place with converts; that Jews intermarried with non-Semitic tribes, and that under the Roman empire conversions became so frequent that laws had to be passed against those who would be circumcised. A Jew, he said, was not particular as to the nation his wife belonged to, if only she professed his religion. We may, therefore, safely conclude that the Hebrews, like other races, are not of pure and unmixed blood.

Strangely hated has been the Hebrew. From the time of the Pharaoh of the Oppression till the other day in Russia he has been scattered, spoiled, a byword, a hissing, and an execration in the earth. When the Hebrews were restored from Babylon, foreign nations often controlled their destinies. Their worst calamities commenced with the Roman war A.D. 66. Before that they had been banished from Rome A.D. 21, massacred in Alexandria A.D. 42, and in a tumult with the Romans in A.D. 50, 30,000 were killed. But in this war town after town was taken and sacked, and multitudes slain. Jerusalem was invested and captured, 1,100,000 perished, and an immense multitude was led into slavery; and 60 years later another revolt took place and 580,000 were slain. While Christianity was under the ban the Jews, who sympathized with the Roman rulers in their oppression of Christians, flourished. But at the conversion of Constantine they began again to suffer. The code of Justinian debarred them from civil rights. After the rise of the papal power their afflictions were augmented. The era of the Crusades was a time of still deeper gloom. The Crusaders seizing a Jew by the beard would plunge his sword into his breast crying, "Hierosolyma est perdita"—Jerusalem is destroyed. This became a toast at their banquets, and was contracted into H.E.P., and thus pronounced as one word, from which sprang, perhaps, the cry "Hep, hep, hep, hurrah!" They have been expelled from most of the countries of Europe, and have suffered many forms of oppression, depredation, pillage, torture, outlawry, starvation, and massacre. The streets of many cities were deluged with their blood; they were burnt alive by thousands; their sufferings, in short, beggar description. Why this cruelty and hatred? Why the false charges trumped up against them from time to time? Was it because of their religion? Or their usury and extortion? Or that they might be despoiled of their possessions? Whatever the cause, extortion, and massacre, and banishment continued until 200 years ago, when toleration began to be extended to them, and during this century their just rights have been largely yielded to them. Surely we may hope that out of affliction, so protracted and severe, much good will come:—

Wine oozes from the trodden grape.
Iron's blistered into steel.

II.

In an unjustifiable attack upon the persecuted Jews in Russia, Goldwin Smith has called them "a parasitic race." If what he says of them is true in that particular country, it would be equally true of them everywhere. What is there in the character of the Jew to excite this onslaught upon him? He is ambitious of getting on in the world, it is true; but is not the Anglo-Saxon or the Anglo-American tarred with the same brush? We are told that his love of ducats is excessive; but do not the descendants of Covenanters and Puritans race hard and in as crooked a way after the dollar as any Hebrew? And "if he succeeds better than most is it not because he is temperate, industrious, and frugal in an unusual degree? Has he not learned to exercise that self-respect and self-control which constitute the first condition of success in any form of human enterprise?" If he is sharp and hard, what else could be expected of him after the cruel oppression of centuries? Good has

come of this oppression, but not unmixed good. But how seldom do we find him justly arraigned before Courts of Law!

So far from being a parasite, he is the very embodiment of self-help. He is not fond of hard manual labour, but you find him occupying all positions, from the princely merchant or banker to the muleteer or itinerant clothes-monger. He is neither a drunkard nor a beggar. Thrifty and keen-witted in prosperity or adversity, he is under obligations to nobody. He provides for his family, his sick and his poor. Mr. Smith says that he is found "inserting" himself into this or that nationality for purposes of gain. We wonder if this is true of no other nation! For what purposes do merchants of England, America, France, Germany and Italy come to Japan? If the Jew is selfish and sordid, so are we. If we apply the lash to them for sins of covetousness, it will not be amiss for us to prepare ourselves for a similar chastisement.

The Hebrew is certainly an interesting study for many reasons. Physically he is said to be peculiar. Dr. Shultz, of St. Petersburg, says that while the average height of other races is 66.15 inches, that of the Jews is 64.46, while in general the width of the body, when the arms are extended, exceeds the height by about 8 inches, with the Jews this measurement often falls one inch below the height. The Hebrew is not as prolific as some other races, but as to longevity the results are largely in his favour. The average duration of the life of well-to-do Hebrews is 10 years longer than that of Gentiles; and this is due to their superior hygienic habits, and to the sturdy constitution transmitted by ancestors who also observed strict sanitary precautions. Immunity from disease is a characteristic of the race. Dr. Mapother, of Dublin, in his lectures on Public Health, says:—"The striking immunity of the Whitechapel Jews in the last as well as all former epidemics (cholera) was due to their timely distribution of animal food, and to their excellent hygienic observances, which have made the longevity of this race one-third greater than that of most European peoples." Dr. Hough says:—"They have had in recent times so very marked an immunity from plague that it was the motive of odious persecutions." Tschudi, in speaking of the plague of 1346, says that this malady did not affect the Jews of any country. Frascati mentions the fact that the Jews escaped completely the epidemic of typhus in 1505. This is true also of a similar epidemic in 1824. These statements of medical authorities have been compiled by Dr. Maurice Davis, who says that "Jews suffer little from intermittent fevers, convulsions, mesenteric wasting of children, and inflammations of the respiratory organs. On the other hand, they suffer frequently from non-inflammatory skin diseases, internal stomach affections, and ruptures. Jewish children are free from certain hereditary diseases and from scrofula. The Jews commit suicide much less frequently than other religionists." Than others they have fewer illegitimate children. James Parton says of them that "they are probably at the present hour the chastest seven millions of people under the sun." The family feeling among them is very strong, which assures to aged and infirm parents, to infants, to children, the utmost solicitude. Their charity is unsurpassed. They do not forget that their sacred scriptures hold up as the consummation of iniquity the

conduct of those who "drive away the ass of the fatherless, who slay the widow and stranger, and murder the fatherless;" that the old Testament declares that "cursed be he that perverteth the judgment of the stranger, fatherless, and widow," and requires all the people to say Amen; and that it represents Job as uttering in his calamities:—"If I have eaten a morsel myself alone, and the fatherless have not eaten thereof; . . . then let my arm fall from my shoulder-blade, and my arm be broken from the bone." They have orphanages, asylums, refuges, and mutual help societies, and all this is done in no parsimonious way, but on the most liberal scale. Baron Hirsch's devotion of three millions sterling of his fortune to the relief of his persecuted brethren in Russia is a magnificent illustration of what is done every day by Hebrews in very humble circumstances. Educationally, too, they rank very high. "In almost every country they have equal advantages with Christians, and are found in more than equal proportion among the most educated and educating classes of to-day." In Berlin, where the Jews are but five per cent. of the population, they are 30 per cent. of the students; this is true also of Austria. In the whole of the German Empire, where the proportion of Jews is only one in seventy-five, in all the higher institutions of learning the proportion of Jews is one in ten. In Germany they already hold seventy professorial chairs in the universities; and all agree that the tide of Jewish influence in education and learning is still rising." It is only a little while, say 30 years, since the Jew was first admitted to practice at the bar of England, yet he has already reached the front ranks. Sir George Jessel held a seat in the foremost files of English judges as Master of the Rolls. The control of the world's finances is largely in their hands, and in addition to the money-power they control to a large extent the Press of Europe. They are the leaders of progressive and democratic journalism in the Teutonic States. Out of 23 liberal and progressive papers of the Berlin daily press there are only two that are not in one way or another under Jewish control. In Dresden at a representative gathering of the press, 29 out of 43 were Jews. In Austria the same thing appears, for out of 340 authors 225 are Jews. We should not therefore wonder when we are told that Jewish pens lead public opinion through a good part of Europe. Wealthy families of Hebrews are intermarried with the aristocracies of Europe, their richly dowered daughters being given in marriage to the haughtiest members of the nobility. Hebrews take high office in Europe and America. They are acceptable candidates for legislative assemblies of Italy, Austria, Germany, France, and England. In the English House of Commons they have representation out of all proportion to their share of the population, for while they are only one in 800 of the population, recently they held 9 out of its 658 seats. Lord Beaconsfield blew the Hebrew horn thus:—"There is no race that has so delighted, fascinated, elevated, and enobled Europe as the Jewish." "Who," he asks, "are the great composers who hereafter will take rank with Homer, with Sophocles, with Praxiteles or with Phidias? They are the descendants of those Arabian tribes who conquered Canaan, and who by the favour of the Most High have done more with less means than even the Athenians. When the Russian, the French-

man, and the Anglo-Saxon amid applause of theaters yield themselves to the full spell of a Mozart, a Meyerbeer, or a Mendelssohn, it seems difficult to comprehend how those races can reconcile it to their hearts to persecute a Jew."

Here then is a people without a country and without a king, scattered among all the nations but distinct as any, by their observance of the Mosaic institutes a true nation, animated by a common national hope and inspiration that tropical suns cannot consume, nor the frosts of the North chill; with national characteristics that nothing can obliterate: for neither spoliation, nor exile, nor massacre can break their proud spirit, or bend the iron sinew in their neck. Far mightier, far greater, nations have existed, measured themselves against this mysterious race, and passed away. For Israel, though tenacious and patient in the highest degree, has been as an anvil on which they have been broken (Jeremiah 50: 23; 51: 19-25), and still survives a race with capacity to rise to the highest place and to do the greatest things.

To this race, Paul tell us, "pertained the adoption, and the glory, and the covenants, and the giving of the law, and the service of God, and the promises, whose are the fathers, and of whom as concerning the flesh, Christ came, who is over all, God blessed for ever." This race has as its crowning distinction that it was God's chosen people, unto which in due time should come the Son of God. If they were guilty in His crucifixion of the most stupendous crime that can be laid to the charge of the human race, it may be said in extenuation that "they did it ignorantly in unbelief." To this remarkable people we are debtors. "We are debtors" indeed "both to the Jew and the Greek." We owe somewhat to all the ancient nations that aimed at the empire of the world, but chiefly to the Greeks, the Romans, and the Israelites. Those three most highly gifted races of antiquity have supplied us with the loftiest ideals of thought and conduct. To the Romans we owe much as regards forms of government and systems of law. To the Greeks we are indebted for a teaching and an inspiration powerful still in philosophy, science, and art. But we owe far more to the Jew than to the Greek or Roman, because what he has given to us has a far more powerful bearing upon the world of thought, feeling and conduct, than science and art and all the arrangements of State. The most powerful factor and agency in the destinies of men and nations is the religious feeling. From this race we have received the sacred Scriptures of which they had been the custodians for long ages, for unto them had been committed the oracles of God. Our Saviour was a Jew, born of a Jewish maiden, reared in a Jewish home. The Jew bore witness to the one true God, to the Divinity of the Holy Scriptures of the Old Testament, to the existence of the unseen eternal world, to the doctrine of sacrifice as a principle of the Divine government, and to the truth of the final judgment. There is a fable of a Roman who, swimming to save his life, saved his MSS. from destruction by carrying them in his teeth. But the Jew, swimming through seas of blood, carried with him his sacred writings and the religious sentiment, for which the world is to-day his debtor. "Salvation is of the Jews." Matthew Arnold in his "Culture and Anarchy," is fond of quoting God's word

to Zechariah (9:13): "I have raised up thy sons, O Zion, against thy sons, O Greece!" And Israel raised up by God for this end is more epoch-making and powerful in the sphere of religion, than Greece in philosophy and art. For the Semitic spirit stands for all that is spiritual in our nature, which as over against the æstheticism of Greece—Israel against Hellas—is of incomparably greater value in the education and up-lifting of the world. It ill becomes us, therefore, while we behold the Church of Christ standing before us in all the grandeur of her proportions, to forget that her foundations were laid by Jewish hands.

Space is left for only a glance at the question, For what is the Hebrew race reserved? If these few millions—variously estimated from 6 to 10—a mere drop in the ocean of humanity, with culture, education, wealth, energy and practical ability out of all proportion to their numbers, have been able to impress themselves upon every department of life, and that too at so small a remove in time from a period of disability and bondage, what may we expect of them in the years to come? By pure tests of intellect they will take the first place the world over in law and medicine, in science and education, in music, on the stage, and in finance. A recent writer has put his judgment on record thus:—"The rapid rise of the Jewish element is a fact which may be observed all over Europe, and if this rapid upward movement continues, the Israelites a century hence will be the masters of Europe." Heine has well said that the Jews, who decline to practise any form of idolatry, and have followed after a Law during more than 3,000 years, are "the people of the spirit," and not even their worship of wealth can destroy the passion or the hope with which their teachers are still inspired. It seems clear that as Almighty God works up His mighty forces of light, heat, magnetism, electricity, in His secret laboratories, so the God of all grace is pleased to prepare the mighty potencies of His Kingdom of redemption, and that He is thus qualifying Israel to take its rightful place among the nations of the world, and possibly restore to them the Holy Land. One would think that a secret exultation must spring up in the heart of every Hebrew when reminded of Beaconsfield's boast that one-half of Europe worships a Jew and the other half a Jewess; how much more when he comes to know that a Prince of David's line has wrought out the redemption of the human race, and that the process of reducing the whole world to His sway is now rapidly going on. One wonders that he does not hasten to claim Him for his Messiah, who has established a new order of things, dimly prophesied by Hebrew seers of ancient time, an order of things that required for its inauguration and establishment energy, wisdom, and resources nothing short of divine. But the veil is on the Hebrew's heart. When that veil drops, as drop we are sure it will, he will "kiss the Son," David's son and David's Lord. Jew and Gentile shall be gathered into one fold under one Shepherd, and the effect of this wonderful conversion will be, to both Jew and Gentile, as Paul tells us, "life from the dead." G.M.M.

THE COMPOSITE COIN.

A correspondent, "T.S.T.," sends us an interesting letter on the subject of a composite coin. He has taken much pains to demonstrate that our position is entirely false, and, being convinced of the success of his demonstrations, he draws from our supposed discomfiture a general inference unfavourable to the soundness of the bimetallic cause. It will not surprise "T.S.T." to learn that we do not agree with him. He appears to have failed to grasp the fundamental point of our proposition, namely, that if a composite coin came into universal use as the only medium of exchange, there would no longer be such things as gold prices or silver prices, independently: there would be only prices expressed in terms of the two metals compounded in a fixed proportion to represent the unit of value. It would almost seem as though "T.S.T." had become so accustomed to regard "price" solely as the number of gold tokens or silver tokens for which an article is exchangeable, that he cannot easily conceive it as a number of gold-silver tokens. Hence he is betrayed into charging us with uttering a puerile platitude, namely, that "the purchasing power of a certain coin will remain the same unless something occurs to make it purchase more or less." We are not sensible of having written anything that warrants such a construction. The case is very simple. Owing to the arbitrary divorce of the two precious metals from their old union as monetary tokens, one of them has been degraded almost to the rank of a mere commodity, while the other has been raised to a fictitious value by the excessive duties imposed upon it. To re-unite them and make them share in discharging functions for which one alone is inadequate, is the remedy proposed by bimetalists. But, in our opinion, if that remedy is to be thoroughly effectual, the separate existence of the two metals in the coinage of the world—of course there is no question here of subsidiary coins—must be terminated. Otherwise, the different facilities enjoyed by different nations for procuring one metal or the other, would perpetuate the distinction of gold-using and silver-using countries, and so long as that distinction exists, fluctuations of exchange are inevitable. Hence we arrive at a composite coin as the final resource. With a coin of that kind as the world's unit of value, there would be no such thing as "gold prices" or "silver prices;" there would be gold-silver prices only. "T.S.T.'s" "second" and "third" suppositions consequently cease to be significant. Of course there are conceivable circumstances under which no metal, or combination of metals, would serve for coinage purposes. But with such remote contingencies we need not concern ourselves, more than we need now pause to rebut our correspondent's accusation of "carelessness in the use of the term price," since it is not to our carelessness but to his own misapprehension that the confusion is due. If he insists on taking our composite coin to pieces, and discussing the fragments independently, whereas their perpetual union and interdependence for coinage purposes is the basis of our whole scheme, his conclusions naturally diverge from ours. Perhaps we should add that we entirely differ from our correspondent's interpretation of the general conclusion deduced by both monometallists and bimetalists from the experience of the past 20 years, namely, that "a single standard has been steadier than a double one would have been." To discuss that question in full would take us far afield, but we cannot suffer to pass without challenge a statement so opposed to our own rendering of the bimetalists' case a statement which, if accurate, would be equivalent to announcing that the doctrine of bimetalism had been totally abandoned.

Count Kuroda having recovered from his illness, proceeded to the Imperial Palace on Wednesday at nine o'clock and had audience with H.M. the Emperor, staying till eleven o'clock. Afterwards he visited Count Matsukata, at his official residence, Nagatacho.

GARDEN PARTY AT WASEDA.

Their Excellencies Count and Countess Okuma gave a garden party on Tuesday afternoon at their suburban residence in the Waseda district of Tokyo. Count Okuma's proverbial good fortune in the matter of weather did not forsake him on this occasion, for though rain poured in torrents throughout the afternoon of Monday and until the small hours of Tuesday morning, a fine sunshiny and calm day succeeded, so that the beautiful garden at Waseda, now aflame with autumnal tints, looked all the brighter and fresher for the storm that had so recently passed over it. About six hundred guests were present, including His Imperial Highness Prince Komatsu, Their Excellencies Count Matsukata, Viscount Nomura, Viscount and Viscountess Hijikata, Marquis and Marchioness Nabeshima, Marquis Saigo, Marquis and Marchioness Hachisuka, Baron and Baroness Sanuomiya, nearly all the Foreign Representatives, and a great number of other notables, naval, military, official, and civilian. Refreshments were served at four o'clock in spacious booths of bamboo and trellis-work, and it must be confessed that owing partly to the very extensive character of the accommodation, and partly to the great taste that had been employed in harmonizing these constructions with their surroundings of conservatory and rockery, this, the least romantic feature of social gatherings in modern times, acquired quite an interesting and picturesque character. Everything was in duplicate: receptions in foreign and Japanese style; costumes of the East and the West; refreshments European and Japanese, and music Occidental and Oriental. His Imperial Highness Prince Arisugawa would have attended, but it happened that the official announcement of his promotion to the chief command of the Navy having been made that very day, involved some ceremonies which detained him. Only a few Yokohama residents were present, but the foreign community of Tokyo was largely represented. The display of day fireworks was exceptionally fine, and the orchids and chrysanthemums, of which Count Okuma has an extensive collection, elicited universal admiration. The party broke up at half-past four.

THE PEST.

The plague appears to be spreading apace in Taipeh. Between the 28th ultimo and the 12th instant, 150 cases have been reported, 37 of them ending fatally. On the 12th inst., a private soldier and a boy of the Taipeh garrison were attacked by the disease, and considerable alarm was caused among the troops. According to a letter that reached the *Yomiuri* from Taipeh, under date of the 5th inst., the malady first appeared within the castle premises, that is to say, the most important and relatively the most healthy quarter of the town. Subsequently, the disease spread from the castle and invaded the Chinese streets. The cause of the outbreak is shrouded in mystery, but some aver that the sewerage work undertaken a short time ago and not yet complete must have engendered the trouble, the smell emitted from the excavations being exceedingly offensive. Be that as it may, the Authorities are now hurrying up the completion of the work, and at the same time the utmost pains are taken to clean the streets and dwelling places. The outbreak of the disease has seriously affected the trade of the place, general goods' shops and restaurants suffering principally. Lime and carbolic acid alone are in large demand. The supply of Formosan lime has been exhausted and the price of carbolic acid has been doubled. Loud complaints are heard about the insufficiency of the medical force in Formosa, where, even in ordinary times, the inhabitants are obliged to seek the help of doctors far more frequently than in Japan. Taipeh now presents a very dreary appearance. From Kelung also one pest patient has been reported.

THE PEKIN CLUB.

The extraordinary story of the Pekin Club incident has again come before the public, and as the facts are now stated by a French newspaper, the *Messager de Chine*, which undertakes to defend the action of Count Cassini and Mr. Gérard, we may, perhaps, accept the version as correct. It runs thus:—

The Pekin Club has always been considered a Diplomatic club, because every one belonging to a legation is a member by right. The members of the Customs Service may also belong to it, but they must submit to the formality of ballot. The quasi-official nature of this point of reunion was a thing so well understood that its president up to now has always been the *doyen* of the Diplomatic body. However, last year the choice of the Club, instead of falling on Count Cassini, Minister of Russia, who was *doyen* at the time, fell upon Colonel Deaby, Minister of the United States.

Justly annoyed at a proceeding for which there was no precedent, and which was widely considered to be the result of a secret arrangement at the diplomatic victories of our ally, Count Cassini resigned; at the same time M. Gérard, chivalrously taking the part of the representative of the nation which is our friend, followed his example and took with him almost the whole staff of the legation.

The matter would certainly have remained there, but for the recent occurrence of a little incident which has been maliciously exaggerated. M. Gérard, being obliged to consult the back number of a paper, and having always considered the Club as a centre of news and information at the disposal of the staff of the legations went to the Club at about half-past eight in the morning to look through the file.

The Committee of the Club was informed of this and wrote, we are told, a letter on the subject.

Englishmen will scarcely think it necessary to comment on the above. Their idea of a club is that it is a social institution where all the members meet on an equal footing and enjoy equal rights. As to the inference drawn from the fact that every one belonging to a legation is a member by right, the same might be said of the Tokyo Club, where *Chefs de Mission* and Secretaries of Legation are admitted *ex officio*. But to no one has the idea ever occurred that the Tokyo Club is a Diplomatic Club. Nothing, we think, is to be more heartily deprecated than a tendency to drag politics into the intercourse of every-day life. If the *Messager de Chine's* account of the action taken by Count Cassini and M. Gérard be accurate, we are unable to detect the smallest justification for their conduct. But such men are not deliberately guilty of gross solecisms. Probably the story has another side, not yet exposed to the public. Meanwhile, it invites attention once more to that now anachronistic institution, the *Doyen* of the Diplomatic Corps. If the Diplomatic Corps in Pekin preserved any remnant of its old traditions, if it maintained a vestige of the solidarity that once made it so powerful for the peaceful accomplishment of great ends, there would be sound sense and plain utility in the position of *Doyen*. But what could be more anomalous than that a body of officials who work constantly to defeat each other aims and injure each other's interests, should accord the privileges of seniority and leadership to one of their number?

SINGULAR LIES.

Some American newspapers appear to be provided, just now, with correspondents in Japan who forward information manufactured out of whole cloth. Recently the American public were informed that the town of Kobe had been wiped out by a conflagration, but Kobe stands to this day unharmed by any such catastrophe. A later tale represented Japan in the clutches of such a terrible famine that the Japanese Government had issued permission to destitute parents to sell their daughters. The fabricator of this villainous lie went on to detail the provisions of a law said to have been enacted on the subject, and gave the prices for which girls were selling, with various other details equally false. The only way of accounting for this extraordinary series of falsehoods is that their concoctor confounded Japan with a province of China, where the sale of girls is said to have been resorted to recently by parents reduced to the verge of starvation. Even that hypothesis, however, does not cover the correspondent's deliberate inventions about the details of the so-called law.

KOREAN NEWS.

A singular item of intelligence from Sôul is that a Japanese girl named Kogawa (?), while galloping her horse in Kyo-dong, knocked down and seriously injured a boy of ten. Do Japanese girls gallop horses through the streets of the Korean capital?

Another site has to be selected for the grave of the late Queen of Korea. A hundred thousand dollars had been expended preparing the site originally chosen. But the Royal geomancers pronounce it an unlucky spot.

The King of Korea, in an edict relating chiefly to the removal of the remains of the late Queen and the ancestral portraits to the Kyeng Won Palace, remarks in a casual manner, "We must also remove to the new Palace. Therefore, let the work of construction of the buildings be hastened as much as possible." His Majesty does not appreciate the fine frankness of classing himself with the bones of a dead lady and the portraits of his ancestors. He probably forgets, also, that, having remained so long in the Russian Legation, his departure from it will be a kind of political cataclysm.

The new Governor of Sôul is leading a tumultuous life at present. Recently, obeying the sentiments of reform inculcated during his residence in the United States, he ordered that all houses and booths built on the public thoroughfares should be torn down. The owners protesting, he pleaded the inexorability of the law. Now he is followed, wherever he goes, by some fifty petitioners crying, "Let the law go to rest; we don't want our houses pulled down."

The Japanese *Chargé d'Affaires* in Sôul and Mrs. Kato held a reception on the evening of the Emperor's birthday. There was a fine display of fire-works, somewhat marred by a high wind.

The recent robbery from the Government granary in Sôul has resulted in a sentence of 40 strokes of the bamboo for the Chief of the Granary Division, and dismissal for the Chusa. Apparently the Chief, after getting his beating, goes back to his exalted position.

The farce of submitting and refusing resignations continues to be played with animation in Sôul. The Prince Minister, the Minister of the Home Department, and a Privy Councillor were the latest to go through the performance.

CHINA NEWS.

In China, the pawnbroker's shop is an institution possessing, in some respects, an almost official character. A first-class shop pays a registration fee of several thousand taels and has a capital of 30,000 Tls. or upwards. It is the only legally recognised institution of the kind, and in return for such recognition it is compelled to take in any sum that the Mandarins desire to deposit with it, at a good round rate of interest. Thus the first-class pawn-shops hold large funds, the interest on which is applied to support public colleges, to pay pensions, and so forth. In these shops the limit of the period for redeeming an article is 18 months. There are also second-class and third-class pawn shops, in which the redemption period is limited to 16 months and 6 months, respectively. In the first and second-class institutions the rates of interest are 2 per cent. *per mensem*; in the third-class, 3 per cent. Third-class pawn-shops are supposed to be run by exiled convicts, and that is the status officially accorded to their owners; but to be catalogued with convicts does not deter a Chinaman from undertaking a profitable business. Since the first-class shop alone pays a registration fee, there is, of course, a strong disposition to evade that obligation by working with a capital nominally less than 30,000 Tls. In the English, French, and American settlements at Shanghai, forty-six so-called "second-class" pawn-shops are now officially considered to fall within the category of "first-class." Their owners have been summoned before the Chinese magistrate, and the principal of them has been temporarily suspended. It is possible that as these institutions are within the foreign settlements where the authority of

Chinese officialdom is a negative quantity, some curious complications may occur.

The mission of commercial men sent to China from Lyons last spring, have just returned to Chungking after a journey through the mountains and gorges in the regions of the upper Yangtse. They penetrated as far as Sungpao, and the impression produced upon them by the grandeur of the scenery was most vivid. But of the practical results of their extended travels no estimate can yet be formed.

The anti-foot-binding movement, inaugurated by the missionaries in China, is distinctly gaining ground. Many women have pledged themselves not to bind their children's feet, and some have unbound their own, though the latter procedure is of little value, a foot that has been bound for years being incapable either of recovering its original shape, or of performing much useful service when deprived of the support of the bandages.

The Chinese are generally supposed to be particularly law-abiding, peaceful people, but, in point of fact, no men will fight more fiercely to save their pockets. An illustration is furnished by recent events in the province of Kwangsi. The inhabitants of a certain district in that province had for many years refused to pay more than three-fifths of the taxes due by them, namely, 16,500 taels in money and 7,200 piculs of rice. Recently a new Governor determined to deal with these defiant folk. He ordered the district magistrate to collect the annual tax and the arrears. No sooner did the magistrate make the attempt than he and his assistants were attacked and driven back to the Yamên. They took steps to arrest the ringleaders of the mob, but that night the prison was broken open and its inmates released. All this involved the death of many subordinate officials. Then followed the despatch of troops and the capture and decapitation of several of the most prominent rioters. Not a few others are "wanted" for a similar fate. Of course the people had to make act of submission. They buried their dead and promised to make good their arrears of taxation. Little note is taken of such occurrences in China: they are lost in the immensity of the country and in the multitude of its population. Did they happen in the Occident or in Japan, the whole world would hear of them.

The "Grand Old Man" of China, whose return to Peking was expected to be the signal for his restitution to power and honour, is now in the hands of the Board of Punishments, awaiting the infliction of a penalty. It appears that some one suggested to him the pleasure of a little trip into the Palace Park, which lies in the immediate vicinity of his lodging in Peking. He innocently adopted the suggestion, and was carried through an unfrequented part of the Park in his court chair, the keepers and eunuchs bowing obsequiously to him as he passed. The next day, he received an official intimation that he had been guilty of a breach of etiquette, and was to be "handed over" for punishment. The incident is said to have led to a sharp dispute between the Emperor and the Empress Dowager, who has always been Li's warm patroness. It has also evoked some thoughtless remarks from local foreign journals, which regard Li's treatment as an insult to the Crowned Heads and Potentates by whom he was received on his recent tour, and go even so far as to suggest that a protest should be lodged by the Foreign Representatives in Peking, as if foreign interference in such a matter could be justified on any pretext.

One of the big Krupp guns mounted in the Dieng-nong-sang fort, opposite to Kwangtow on the Min River, burst during practice on the 17th of October, killing three men and wounding eleven others, of whom two have since died. It does not appear that the fault lay with the gun. The Chinese officer in command was to blame for experimenting with native powder and shot.

From an Imperial Decree recently published in Peking it appears that the estates originally granted to the lineal descendants of the Sage Confucius to support their ducal rank, measured

2,308 acres, and were in the provinces of Kiangsu and Shantung. But, in the course of centuries, the usurpations of local officials reduced these estates to nothing, and left the "sacred" family destitute. In 1868, the Emperor magnanimously ordered that 125 acres of the purloined property should be restored, and now finally it has been decreed that the Duke of Yen shall receive a yearly sum equivalent to the produce of the original estates.

ACCIDENT AT THE SHOREIKAI.

An event that might have had serious results occurred on Saturday evening in the hall of the Shoreikai where the Tokyo Dramatic and Musical Society gave its recent performance. It was desired to obtain photographs of the amateur actors and actresses in costume, and grouped as they had actually been in some of the scenes. Professor Burton kindly promised to take the photographs. The work had to be done by flash light, the hall being too dark for other methods, and everything was arranged by Mr. Kondo, Professor Burton's photographic assistant, who, having always proved himself trustworthy and competent, was left to settle the preliminaries up to the time of exposure. Two flash lamps were used, one to be manipulated by the Professor himself, the other by Mr. Kondo. Before the amateurs had appeared upon the stage, a trial photograph was taken. The lamps worked perfectly and an excellent negative was obtained. The next exposure was made in exactly the same manner, the actors and actresses being then in position, but on this occasion Mr. Kondo's lamp—or, to speak more accurately, the lamp at which he happened to be stationed, for he and Professor Burton had made no discrimination—exploded with an almost deafening noise, and several of the fragments struck Mr. Kondo, cutting him severely about the mouth and hands, or burying themselves in his right arm and shoulder. Miss von Fallot, also, received a few pellets of tin that made flesh wounds on one of her hands, but happily—and remarkably—nobody else was touched. Mr. Kondo was taken to one of the dressing rooms, where the ladies most kindly bathed and bandaged his wounds. Dr. Majima was soon upon the scene, and under his directions Mr. Kondo was conducted to the Tokyo Hospital, accompanied by Professor Burton, who remained until everything possible had been done for the injured man's comfort. We are glad to be able to say that the wounds are found to be trifling, and with the exception of a possibility that the first joint of the right-hand thumb may have to be amputated, Mr. Kondo will be none the worse. As to the cause of the accident, we are not in a position to speak. It may have been adulterated magnesium, or it may have been one of many other things. Perhaps when Mr. Kondo describes exactly how he mixed the flash powder, an explanation may suggest itself. Nothing is stranger than the very limited area of the explosion's operation. Professor Burton was standing within four feet of Mr. Kondo, yet the latter received the whole charge.

BUDDHIST SCANDALS.

Within the past two or three years Buddhism in Japan has been discredited by scandals of a more or less serious character, justifying the constant criticisms of the vernacular press that until the chief representatives of the faith become really self-respecting in their lives, they can not hope to win the respect of others. A fresh example of these scandals is furnished at one of the most celebrated temples in Japan, the Western Hongwan-ji of Kyoto. It is alleged that the chief manager of the temple's affairs has been guilty of peculation and grossly arbitrary acts, and a strong agitation for his dismissal has been set on foot.

Count Kabayama, Home Minister, who went to his villa at Takata for shooting on Tuesday evening, is said to have returned to Tokyo on Wednesday evening.

OPENING CEREMONY OF THE KABUKIZA THEATRICAL CO., LTD.

We imagine that to very few among our readers is the name "Kabukiza" unfamiliar. By foreign residents and tourists alike this, the chief theatre of Tokyo, has been visited frequently and the admiration evoked by the histrionic displays seen there have been recorded time and again in books and essays. Hitherto the performances given there has been conducted under the management and at the risk of a few individuals, but since the fortunate ending of the war with China the generally prevalent tendency to form business companies on joint-stock lines has made itself felt in the theatrical world, as elsewhere, and has resulted in the organization of the *Kabukiza Kabushiki Kaisha*, or Joint-stock Kabukiza Company, the chief promoter being Mr. Minagawa. The Company held its opening ceremony in the Kabukiza on the 10th instant, the stockholders and their friends being alone invited, a wise limitation, for had not such limits been imposed uncomfortable crowding must have resulted. At half-past one in the afternoon the ceremony commenced with an opening speech from Mr. Minagawa, President of the Company, who spoke briefly but with considerable eloquence. He noted that this new departure in the theatrical domain was one evidence of the expansive spirit that had been developed in the nation owing to the war with China; that the progress of art, to which histrionic performances conspicuously belong, was a measure of national civilization; that the Company had been established in the interests of such progress, and that, by bringing the management of the stage and all its concerns under the control of the joint-stock system, it was hoped not only that public interest would be broadened and accentuated, but also that improvements, the lack of which had hitherto tended to check histrionic development, would be successfully introduced. After his speech, which was delivered in the front of the stage, the curtain rising disclosed to view a wide scene beautifully decorated with peonies and bamboos, emblematic of peace and longevity. Here Danjuro, assisted by several of his pupils performed a dance which, like all Japanese dances, was devoid of meaning to persons unacquainted with the history and sentiments of the people among whom the spirit of such displays has been educated through the course of centuries. The central idea of this dance, the *Kodakara Samba*, is based upon harmony, peace, and absence of change, and it constantly serves as a species of congratulatory prelude on public occasions, being, in fact, one of the various grades of *Sambaso*. The literal meaning of the term *Kodakara* is "the treasures of children," and innumerable canons dictated by an artistic instinct not easily appreciated by outsiders, have to be rigidly observed by the dancers. Danjuro, of course, was inimitable. Though of small stature and slender frame, the great actor seemed to fill the wide stage upon which he danced, and throughout the whole performance the audience remained wrapt in breathless attention, showing a spell-bound appreciation of these stately and graceful motions of hands and feet that harmonized so excellently with the spirit of tranquillity, symmetry, and unity permeating the scene. "The Two Kagekiyo" and the "Adachigahara" were subsequently given. We have not space for any detailed account of the drama, familiar to every Japanese, in which Kagekiyo, the famous Heike warrior, is the hero. It must suffice to say that Kagekiyo's rôle was taken by Danjuro, with all his wonted skill. In the tragedy of Adachigahara the heroine is Sodehagi, whose lover being a rebel and her father in the Imperialist forces, she suffers such grief that her eye-sight is destroyed by constant weeping. She, also, was personated by Danjuro, and so forcible was the representation that there were very few dry eyes in the audience. It is to be hoped that the formation of this company will inaugurate a new era for the Japanese stage, by putting an end to the financial abuses that have hitherto tended to check its development.

THE LATE MR. G. DE WENNDRICH.

The news of Mr. G. de Wendrich's unhappy death has caused much sorrow in Tokyo, where, during several years' residence at the Russian Legation, the deceased made numerous friends. Mr. G. de Wendrich was a man of exceptionally fine physique and gentle disposition. Nothing less likely could have been conceived than that he should take his own life. But who can measure the point where existence may become an intolerable tragedy for any of us? In this case no rumours suggesting even the remotest chance of such a catastrophe seem to have reached Tokyo. It was known, indeed, that Mr. de Wendrich suffered from asthma, and possibly the malady may have become too distressing to make life endurable. But such an explanation appears wretchedly insufficient where there is question of a young man, otherwise endowed with splendid strength and without any blot on his official career. We can only wait, hoping to learn that the act was prompted by temporary aberration rather than the result of insupportable suffering. The past fifteen months constitute a very black era in the history of Settlement life in Japan. Five suicides by men who, under ordinary circumstances, should have had a long vista of usefulness and happiness before them, and the mysterious death of another whose fate seems likely to involve the saddest consequences of all, make a record for which Yokohama and Kobe can show no precedent.

The *Kobe Herald*, in announcing the sad event, said that it took place at about 8.30 a.m. on Monday morning. The report was heard by the unfortunate gentleman's servants who, on going to the room and discovering what had happened, at once summoned assistance. Mr. E. H. Gill, a friend of the deceased, was the first to arrive, we believe. Life appeared to be extinct then. Dr. Thornicraft reached the house a minute or two later, but nothing could be done. The deceased gentleman left a note for Mr. Gill, who messaged with him. In this note he asked Mr. Gill to say good-bye for him to his friends. His affairs, we understand, were left in perfect order, having, it would seem, been brought up to date with a view to death. When discovered on Monday morning he was lying in bed, undressed, as though asleep. Mr. de Wendrich was planning to go home in the latter part of next year, and had told his friends that he should spend the summer on the hills, leaving for Russia in the autumn. He passed the greater part of last summer on Rokko-san, where he interested himself in the work of cutting paths around the hillsides, work which was as useful as it was unselfish.

TROUBLE AT THE NISHI HONGWAN TEMPLE.

The dissatisfaction that the so-called "Reform party" among the Hongwan priests entertain towards Mr. Atsumi, Presiding Manager of the Temple, and his subordinates, has spread to the students of the Hongwan Buddhist College, and has resulted in the expulsion of 100, out of some 130, of the youths. The cause of the Reformers' complaint is alleged misappropriation of educational funds by the Authorities of the Temple. Early this year, the Lord Abbot of the Temple invited several thousand believers to the hall of the Temple, and personally addressed them on the necessity of raising a fund for encouraging and carrying on education and propaganda. His proposal was that five *sen* per head should be levied per mensem during the next decade from the parishioners of the Sect, his estimate being that 600,000 out of the total of one million persons might be counted on to pay that sum. In 10 years a fund of 3,600,000 *yen* might thus be raised, and that amount would serve the purpose in view. This programme was at last carried into effect from July, and already a considerable sum has flowed into the treasury of the Hongwan Temple. Messrs. Kiyozawa and Inaba, graduates of the Imperial University, whither they had been sent by the Hongwan-ji, and several others, also of Hongwan extraction,

now serving as teachers at High Schools in one district or other, saw reason to suspect that the Presiding Manager and his subordinates were misappropriating the proceeds of these subscriptions, by using them for architectural and other purposes. In order to ventilate these suspicions, they started a special periodical in Kyoto with Mr. Kiyozawa as editor. One of the higher secretaries of the Temple took the part of the "Reformists," and personally urged Mr. Atsumi to resign his post, but Mr. Atsumi's answer was to dismiss the Secretary. The agitation proving congenial to the ardent youths of the Sect, 100 students of the college took it up, and, on the 4th inst., forwarded a notice to the Director that, as they had some questions to address to the Educational Authorities of the Temple, they should, for the present, absent themselves from school. The Director and teachers of the College tried to dissuade them from such a reckless proceeding, but this only added fuel to the fire, and finally, on the 11th instant, the Director of the College had no choice but to expel these 100 students. The recalcitrant young priests are now living in a body at a temple in Kyoto and are deliberating what steps they must take next.

"PAST AND FUTURE OF FORMOSA."

The Rev. W. Campbell, already well known as the author of several interesting works on Formosa, has just published a most timely brochure containing a brief but excellent description of the island, a succinct epitome of its history, and a capital map, this last being among the most severely felt wants of the time. The little volume is a reprint from *The Scottish Geographical Magazine* for August. It is brightly written and full of interest from cover to cover. Mr. Campbell is well qualified for the task he has set himself, for his residence in Formosa seems to date from a quarter of a century back. His account of the island's topography suggests the justice of the exclamation wrung from its first Portuguese visitors in the 16th century *Ilha Formosa*! The long range of mountains bisecting it from north to south attains a height of nearly 13,000 feet, and on the north-east coast are to be seen the steepest sea cliffs in the world, "lofty masses, rising some 7,000 feet sheer from the water's edge and wooded to the summit." Takow, the author thinks, will ultimately become the head-quarters of the export and import trade, for at Takow alone do good harbour potentialities exist, a natural lagoon, about seven miles long with an average breadth of half a mile, and divided from the sea by a narrow spit of coral. Easy processes of widening the entrance and dredging out some sandbanks within would convert the place into a splendid harbour. Half-a-dozen years ago the Chinese entertained the project, but it remained still a project when the time came for them to leave the island. Mr. Campbell's estimate of Formosa's resources is this:—

It is safe to say that Formosa is an exceedingly rich island, because the alluvial plains of the west, far stretching and well watered, offer simply illimitable opportunities for raising sugar-cane, rice, sweet potatoes, ground-nuts, indigo, ginger, turmeric, and such like. Moreover, its present fruit production is sufficient to show what abundant increase would follow the introduction of any kind of general and systematic method of cultivation. Large beautiful pine-apples can be had almost for the lifting, and probably not more palatable and wholesome fruit could be found anywhere than the Sable-luo-skinned oranges, or those juicy and delicious little *pumelos* from Bantan. During 1894 twenty-one million pounds of tea, and over forty thousand hundredweights of camphor, were shipped from Formosa. It has been ascertained that rich coalfields exist, not only in the north—where they have long been worked in European style—but in the A-li-kang region, twelve days' journey farther south. The petroleum wells at Toa-kho-ham, and the sulphur deposits near Tamsui, could also be turned to great account; while it was owing to the recent war that negotiations were broken off between the Government of Formosa and the representatives of a Chinese syndicate for conceding exclusive right to work the gold mines in the island. In short, the wealth of this still undeveloped country may be seen on considering that, during 1895, trade to the value of four and a million pounds sterling passed through the ten or twelve European houses doing business there.

He is full of confidence that these resources will be rapidly developed under Japanese rule, and we share his opinion.

ARTIZANS AND APPRENTICES.

Now that the technical education of apprentices is becoming more and more important, Mr. Teshima Seichi, Director of the Tokyo Technical College, sends to the *Kokumin no Tomo* some timely remarks as to the question whether artizans earn sufficient to educate their sons and brothers. He finds it impossible to draw any hard and fast line between the artizans of today and their predecessors in regard to the amount of wages they receive, but he thinks that it is undoubted that the former are enjoying better pay, taken as a whole, than did their predecessors, and that their household life is more comfortable. The main thing in domestic economy among artizans is the price of rice, this bears an intimate relation to the standard of living. Comparing general wages now earned by artizans and those received in the Keio era, that is, a little over three decades ago, Mr. Teshima obtains the following comparative table:—

Daily wages.	Price of Rice.	Rice purchasable per day's wages.
Keio... 4 momme. 8 go per 100 momme. 4 sho 7 go + 1896... 56 sen..... 8 sho 5 go		per one yen... 4 sho 6 go +

The purchasing power of a day's wages 30 years ago was a little greater than its power to day, but other factors have to be taken into consideration. In the first place, work was very irregular in the olden days, and mechanics were liable to be thrown out of work for days together. They often did not find anything like continuous employment. Those that worked for more than 20 days in a month were lucky: if they worked for more they were considered fools; but now-a-days the case is entirely different. Artizans consider it their duty to continue in regular employment for 25 days per month, and therefore their earnings must be far greater than in the olden days. Coupled with this, another factor must be taken into consideration, namely, the relative cheapening of many articles of daily necessity. For instance, clothing, fabrics, porcelain, and so forth. The artizans of to-day must therefore enjoy far greater prosperity than their predecessors of 30 years ago. But though they earn more, they do not spend their earnings in a more profitable manner. In fact, they seem to spend more on luxuries and superfluities than is consistent with their station. Mr. Teshima points to the striking increase in cheap theatres and cheap *yose* in Tokyo since the Restoration, whose best customers are artizans. The artizan class, he concludes, are far better off at present than they were three decades ago, and it is strange, under the circumstances, that the technical education of apprentices should be so neglected. The fact is that while artizans themselves do not appreciate the benefits of education, the Authorities also fail to provide sufficient facilities for artizans to educate their sons, brothers, and apprentices.

We (*Japan Mail*) can not reconcile Mr. Teshima's statement about cheapened clothing, fabrics, and so forth, seeing that, in the twenty-one year period 1873 to 1893, the average price of commodities in Tokyo and Osaka rose more than 30 per cent.

ADMINISTRATIVE ACTION AGAINST NEWSPAPERS.

On the 18th instant, the *Kokumin Shimbu* was suspended for publishing matter calculated to disturb the public peace. The *Kokumin*, true to its old tendencies, had associated itself strongly with the *Twenty-sixth Century* and the *Nippon* in the affair of the Household Department.

On the 17th instant, the *Niju-shichi-hachi Shimbu* of Osaka was suppressed for having republished in full the *Twenty-sixth Century's* article against the Household Department, although distinctly warned not to do so.

On the 16th instant, the *Shimotsuke Shimbu* was suspended for the same offence as that alleged against the *Kokumin*.

MEDIA OF EXCHANGE IN THE UNITED STATES.

We take these interesting paragraphs from *Bradstreet's*:—

The following table sets forth in detail the amounts of the different kinds of money coined or issued in the Treasury and in circulation on October 1:—

	General stock, coined or issued.	In Treasury.	Amount in circulation Oct. 1, 1896.
Gold coin.....	\$600,544,217	\$121,723,737	\$478,771,490
Standard silver dollars	437,202,141	380,688,063	56,513,178
Subsidiary silver	75,354,781	15,126,483	60,228,298
Gold certificates	40,388,519	1,591,000	38,797,519
Silver certificates	364,476,504	20,945,030	354,431,474
Treasury notes, Act July 22, 1890	121,004,183	46,040,303	81,963,880
United States notes.....	316,681,016	96,133,716	249,547,300
Current certificates, Act June 8, 1872.....	34,715,000	410,000	34,305,000
National bank notes	331,639,357	12,834,194	320,805,163
Total	\$4,157,945,845	\$675,613,556	\$4,383,302,289

As compared with the corresponding date last year there was an increase of over \$8,800,000 in the amount of gold coin in circulation, while the standard silver dollars show an increase of a little less than \$1,500,000. Silver certificates show an increase of nearly \$14,000,000, United States notes show an increase of nearly \$9,200,000, and national bank notes show an increase of nearly \$14,000,000. On the other hand, the subsidiary silver in circulation shows a decrease of nearly \$1,200,000, gold certificates show a decrease of over \$11,900,000, and Treasury notes one of over \$18,000,000, while currency certificates show a decrease of over \$18,000,000.

The total volume of money in circulation on October 1 amounted to \$4,383,302,289, which represents a decrease of over \$3,200,000 as compared with the corresponding date last year. The population of the United States, on the 1st inst., is estimated by the Treasury experts at 71,774,000. On the basis of these figures the circulation per capital is put them at \$22.05. This represents an increase of 57c. for the month, but a decrease of 52c. as compared with the corresponding date last year.

It may be of interest to note that, if the American figures held for Japan, this country should have a circulation of some 1,660 million *yen*, taking her population at 42 millions and calculating the gold dollar as 1.8 *yen*. But her actual circulation of all kinds can not exceed 370 million *yen*, and probably falls far short of that figure, for in speaking of 370 millions we include the total coinage put into circulation since 1870—namely 225 millions—whereas there can be no doubt that a considerable portion of it has left the country. It will at all events be safe to say that Japan's media of exchange have to be three times as active as those of America.

ELECTRIC LIGHTS IN A THUNDER-STORM.

Those that had not retired to rest when the thunderstorm of Monday night swept over Tokyo and Yokohama, between 2 a.m. and 3 a.m., had an opportunity of observing, with considerable accuracy, the effect of such a phenomenon on the electric lighting apparatus. Exactly in proportion as the storm approached, its influence upon the electric lights became more and more perceptible. At first they merely paled for a few seconds; then, when the rattle of the thunder became louder, and the intervals between the peals and the flashes grew briefer, the lights sunk to scarcely perceptible points, and finally, when the storm burst right overhead, they went out altogether, refusing to do any more duty for several hours. To be exposed to incidents of that kind does not enhance the merits of electricity for lighting purposes, and to be suddenly plunged into darkness does not lessen the terrors of a thunderstorm at night for people who find such things terrible.

RECEPTIONS AT THE BELGIAN LEGATION.

We are asked to say that Madame la Baronne d'Anethan will commence her receptions from next Saturday afternoon, and will continue to be at home on succeeding Saturdays until further notice.

CORRESPONDENCE.

[Our readers must distinctly understand that we are in no sense responsible for that sentments or opinion of our correspondents, for the accuracy of their assertions, or for the deductions they may choose to draw therefrom.]

"THE TACOMA MAIL SERVICE NUISANCE."

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—For the enlightenment of your correspondent, who, under the above heading, addressed to you a letter on the 9th inst., we beg sufficient space in the next issue of your journal to bring to his notice the fact that some cause other than that implied by his remark—"It would seem that the Post Office officials think only of the departure of steamers and take no thought of the time of their probable arrival," must be sought in explanation of his experience of the slow delivery here of mail matter *via* Tacoma.

A comparison of the "runs" during the past six months made by the steamers from San Francisco with those made by the steamers of the N.P. S.S. Co. from Tacoma to this port, gives an almost identical time by each route.

"G's" complaint being without precedent, we were not prepared with the figures from which we have arrived at the above result, and were, consequently, unable to point out the inaccuracy of his remark at once.

We shall be pleased to receive from "G." details of the circumstances which have caused him to term a "nuisance" a mail service fully recognised by both the U.S. and H.I.J.M.'s Postal Departments, and appreciated, we believe, by the general public.

Thanking you in anticipation for the insertion of these lines,

We remain, Sir, yours faithfully,
DODWELL, CARLILL & Co.,
Agents, N.P. S.S. Co.

Yokohama, November 14th, 1896.

THE COMPOSITE COIN.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Your argument in regard to the supposed composite coin seems to me so typical of much that is said in favour of a change of the standard of value now in use by the greater part of the civilized world to a supposedly better one, that I venture to ask you indulgence of a little analysis of it.

You have given us an abstract statement under the form of a concrete illustration. The former, separated, consists of two parts: (1) "The purchasing power" of the "composite coin" would be a constant quantity "provided (2) that independent causes had not interfered" . . . to affect "prices." [You wrote the prices of tea, but I have made it general.] The meaning of the first part of this statement must depend on the meaning given to the second, and to get at this, we must ask, what are these *prices*, that in the case supposed are not affected by independent causes? Are they prices in gold, or in silver, or in the composite coin? I suppose you were not thinking of copper, or iron, or wampum, or any other standard of value not mentioned at all in your discussion. Let us take each supposition in turn.

First supposition:—"The purchasing power of the composite coin will remain stable unless prices as measured by this coin vary from some cause independent of the relative purchasing power of the gold and silver which compose it." That is to say, the composite coin is treated as one simple thing, and the gold and silver which compose it are left out of the account. For the moment, there are no such things as gold prices, or silver prices, but only prices in composite coin. The only factor in the case is the relative value, or exchange rate, of this coin upon one side, and commodities in general upon the other. The proposition then comes to mean that so long as nothing occurs to disturb this relative value, the purchasing power of the coin will not change. Its purchasing power, that is say, will remain the same unless something occurs to make it purchase either more or less. In this form, the proposition is indeed quite indisputable, but does not seem to be the valuable economic truth we are in search of.

Second supposition:—"The purchasing power of the composite coin will not change unless gold prices vary from independent causes." This is obviously untrue. Gold prices, and hence the purchasing power of the gold in the composite coin, might remain unchanged by any cause whatever, and yet if silver prices varied the purchasing power of the composite coin must change with them. If the gold and silver dollars which make up the composite coin would each at the beginning buy say a bushel of wheat, and

later the silver dollar would buy only half a bushel, while the wheat value of the gold remained unchanged, then the composite coin could buy only a bushel and a half. Third supposition:—"The purchasing power of the composite coin will remain unchanged unless silver prices vary from independent causes." This also is untrue, in the same way and for the same reason, *mutatis mutandis*, as the second supposition.

Unless then I am wrong in my reasoning, your abstract proposition is either devoid of all practical meaning, or else it is plainly untrue. And the reason is, it seems to me, that you have inadvertently used the word "price" as if it meant something else than the rate of exchange between some one definite thing which we agree for the time to regard as the standard of value and the thing or things for which it is exchanged, as if there were such a thing as "price" which is neither gold price, nor silver price, nor price in any particular medium of exchange.

And now for the particular illustration out of which I have endeavored to abstract your general proposition. You say: "Suppose . . . that a gold dollar and a silver dollar, each exchangeable for a lb. of tea, had been melted together and minted as one coin twenty-five years ago, and suppose that independent causes had not interfered in the interim to affect the price of tea, then the composite coin would to-day purchase two lbs. of tea . . . for its gold part would be worth $\frac{1}{2}$ lbs. and its silver part worth $\frac{1}{2}$ lb."

To make this statement true, I am tempted to leave out the dates;—"now," and twenty-five years ago," it would then be a hypothetical statement:—"If the relative value of gold and silver so changed that the gold in the composite coin would buy $\frac{1}{2}$ lbs. of tea, and the silver $\frac{1}{2}$ lb., the purchasing power of the coin would remain unchanged." This is obviously true, but totally unimportant unless it could be shown that the probability is that the variation in purchasing power of gold and silver would be of such a nature that depreciation in the one would always be exactly offset by appreciation in the other. But the case is quite the contrary, for out of all possible variations, those in which appreciation and depreciation would not offset one another are immensely more numerous.

The only alternative, then, is to take your dates as you put them down. In that case, your illustrative case is plainly untrue. "Now" (November, 1896), the purchasing power of the silver and gold dollars is at a ratio of about 1 to 2, and it is quite impossible that the silver dollar should purchase $\frac{1}{2}$ and the gold dollar $\frac{1}{2}$ of anything.

I have written on this matter at length because of the moral. And the moral it appears to me, is this. If so keen a controversialist as the editor of the *Japan Mail* is led, in arguing abstractly for bi-metalism, by carelessness in the use of a single term, to lay down confidently propositions which are either meaningless or obviously false, the attempt to bring about bi-metalism on *a priori* grounds must be a perilous one, and most of those who are attempting it had far better let it alone.

Before closing, may I add a word upon the truth which seems to be behind your statements, and which I conceive to be this; that a joint standard, if it could be adopted and maintained, would probably be more stable than a single standard. I say *probably* only, for it is quite possible that gold for instance might remain comparatively stable, while silver fluctuated greatly. Then the single gold standard would be more stable than the double standard. Some economists maintain that that has actually been the case during the last 20 years; that gold, measured by the price of labour, which they maintain to be the proper measure, has been relatively stable, while silver has fluctuated greatly. Others, using *commodities* instead of labour as the measure, maintain that silver has been steady and gold changeable. The point to notice here is that *both* these opposing schools agree that the experience of the last 20 years has shown a *single standard to have been steadier than a double one* would have been, they disagree as to which the steady one is. We can at the best then only maintain abstractly that in the long run the double standard, if maintained, would *probably* be steadier.

If this were all, I suppose most of us would be bi-metalists. All standards of value, we know, are more or less unstable and imperfect. Modern discovery and invention, constantly increasing the production, now of one precious metal, now of the other, seem to have brought in a new element of uncertainty. And so, more than ever, we all want the best possible standard, the greatest attainable certainty in an uncertain world. In one direction, bi-metalism seems to offer greater certainty. But consider also the uncertainties that attend it. It must depend upon international agreement, and

all experience teaches us that international agreements are uncertain things. Then, supposing an agreement made and faithfully observed, there is the further uncertainty whether any combination of Governments, even with the best will in the world, can maintain the double standard. As to that, assertions are as positive upon one side as upon the other. If *certainly* is what we want, then surely "better endure the evils that we have than fly to others that we know not of."

One consideration more. The progress of science and discovery has so vastly increased the production of *both* the precious metals that it seems to me at least that under present conditions a double standard would very probably be a *constantly falling* standard, while gold, whose production has doubled within a few years, may easily, if maintained as standard by the principal nations of the world, cease even apparently to appreciate, nay even decline in value. Bi-metalism in a remedy only for an *appreciating* standard. If, as is not impossible, the tide should turn the other way, bi-metalism would make matters many times worse. If some of us think we have been beaten with whips in an era of falling prices, an era of rising prices might make us feel that we had been beaten with scorpions.

Very truly yours,

November 14th, 1896.

T. S. T.

MIXED COINS.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—When I first addressed you with regard to the employment of "mixed coins" I certainly had no idea of probing the "first principles of the bi-metalists," or of advancing any deeper proposition than that the use of gold and silver united in a single token would have no practical result, in the absence of an international recognition of fixed ratio. If I had thought of seriously opening "a discussion that has been exhausted time and time again," I should not have been satisfied with suppositions examples, nor with any but exact figures; and I should have avoided reference to a product which is, in fact, subject to fluctuations apart from its actual value. In other words, I should have endeavored to write with much more care and precision. Since, however, you have taken wheat as an illustration of the theory that the depreciation of silver is balanced by the appreciation of gold, you will allow me to submit one or two facts bearing upon this point. You state that "a bushel of wheat cost $2\frac{1}{2}$ sovereigns 29 years ago, and can now be bought for $1\frac{1}{2}$ sovereigns." For "bushel" you intended to say "quarter." I presume, the price of the bushel having been, 29 years ago, about one-eighth of the sum you name. Looking at this statement, one is led to inquire why you selected the period of 29 years. For ordinary comparisons, it would seem more natural to use round numbers, and speak of what was the case 25 years, or 30 years, ago. The explanation seems to be that the price of wheat was at its very highest range just 29 years ago, and that you found an extreme example in the exceptional year 1867. If I am wrong in this assumption you will of course correct me, but meanwhile it would appear that the change in the purchasing power of gold cannot be accurately estimated by comparing an abnormally high price, several years back, with the price now ruling; especially as the latest current quotations are considerably in advance of that which you give, being nearer $1\frac{1}{2}$ than $1\frac{1}{2}$ sovereign per quarter. If I be permitted to take such years as suit my purpose, I can easily show that in a lapse of 29 years—from 1862 to 1891—the price of wheat actually increased; the average in 1862 having been about 79 cents a bushel, while in 1891 it was about \$1.00. In 1889, also, it was higher than in 1860. Moreover, the very latest price in America, last month, for wheat sold to England—86 $\frac{1}{2}$ cents—was almost identical with the average of 36 years previous. It is hardly possible, in face of such figures, to hold that the purchasing power of gold, with regard to wheat, has steadily decreased (increased?) with the appreciation of gold in relation to silver, or with the depreciation of silver in relation to gold. If this were strictly true, it would follow that every decline in silver must necessarily be accompanied by a decline in the price of wheat, whereas recent circumstances have shown how entirely independent wheat may be of silver fluctuations. In July last, silver was worth 69 cents an ounce, and wheat worth 61 cents a pound (bushel?). Since then silver has fallen to 65 cents (in Oct.) and wheat has risen to 86 cents. There have, indeed, been periods in every year since 1859, with nine exceptions—that is to say, in 27 out of 36 years—when wheat has been lower than it is at

this moment. Yet silver never began to touch the extreme limit of depreciation until 1893.

It is not my desire, as I have said, to enter the broad field of bi-metallic discussion, and under no circumstances would I venture to contend against one, who, like the Editor of the *Japan Mail*, has studied the subject profoundly from every point of view, and who consequently has resources at command with which the casual observer cannot pretend to compete. No person, I may add can be more thoroughly convinced than I of the expediency of establishing a fixed ratio by universal agreement. The only question I have wished to examine is the incidental one of the practicability of mixed coins. In spite of all that has been said, it still appears to me that such coins would be useless until after the adoption of an undeviating ratio. You, Mr. Editor, assert that the "union of the two metals would be a practical fixing of the ratio between them," and would obviate the great danger that arises from the employment of gold and silver separately—that of "expulsion of the more valuable token from circulation." But if it were proved advantageous to withdraw either metal, on account of its superior value, the circumstance of its being united with the other in a composite coin would be no hindrance. The melting pot can be made available both ways. What is chiefly needed is a plan by which silver can be safely restored to its former usefulness as a medium of exchange. The experiments of the United States have not succeeded. They have cost the Government enormous sums, and have thrown the national finances into confusion. The only hope seems to be in a general agreement that silver money shall stand at a fixed and permanent proportion of value to gold money. It may be hard to win the unanimous consent of European countries to this arrangement, but it would be infinitely harder to bring about the adoption of an identical system of currency by the whole world. The common ratio could be accepted without upsetting the existing system of any nation, and if it were once subscribed to, the essential reform would be accomplished. Is it worth while to speculate upon what may be done toward "practically" fixing the ratio by a scheme which would encounter opposition far and wide, when we have before us the simpler proposition to fix it positively and absolutely by the consent of civilized governments. Let us get the ratio first, and the universal system of coinage may be a welcome addition afterward. But even should the universal system be accepted, and should its use be made compulsory everywhere, to the exclusion of all other tokens, I still fail to see what purpose could be served—(parity once established)—by composite coins, that would not be equally well served by coins of one metal only. It may be that they would be open to no objection; but if the silver pieces were rated at an unchangeable value, they would be as fully entitled to confidence, and would to their work just as well, as any combination that could be invented.

I am, Sir, yours obediently,

E. H. H.

November 15, 1896.

H.B.M. COURT FOR JAPAN.

Before JAMES TROUP, Esq., Assistant-Judge.
SATURDAY, November 14th.

THE DEATH OF MR. CAREW.—PRELIMINARY EXAMINATION.

The preliminary examination of Mrs. Edith May Hallowell Carew on the charge of murdering her husband, the late Walter Raymond Hallowell Carew, was resumed for the third day at 10 o'clock this morning.

Mr. H. C. Litchfield, the Crown Prosecutor, conducted the proceedings on behalf of Her Majesty's Government. Mr. Lowder and Mr. Walford appeared for the defence. Mrs. Carew sat next her Counsel. The Court was again crowded.

Hayashi Shichiro, a shopman from Maruya's, was called, but did not answer.

Mr. Litchfield—Is any other Japanese waiting? The Usher—No, none are present.

Mr. Litchfield—Then I will take Ah Kwong, the Chinese boy.

Ah Kwong entered the box. He said that he was living at the Convent. He knew Japanese, and Mr. Wileman was called in to interpret.

His Honour (to the Interpreter)—You will have to use the easiest colloquial, not high-flown Japanese.

Mr. Wileman—Very well, sir.

Ah Kwong then said—I live at the Ladies' Church on the Bluff.

His Honour—I understand that to be the Convent.

Mr. Litchfield—Can the witness understand you, Mr. Wileman?

Mr. Wileman—He seems to, so far.

Mr. Litchfield—How old are you?—Twelve.

Mr. Lowder—I would remind your Honour, that the Witness has not been sworn.

Mr. Wileman—Then I will caution him now.

Witness said he understood he was to speak the truth.

Mr. Litchfield—He is living at the Convent, I understand, does he profess any religion?

Witness did not understand the purport of the question.

Mr. Lowder—May I apply that there should be a proper Chinese interpreter procured to examine this witness, as I do not think that he understands Japanese sufficiently.

Mr. Litchfield—What language does he speak?

Mr. Lowder—I believe he comes from Hong-kong.

His Honour (to the Interpreter)—Ask him if he speaks Chinese?

Mr. Wileman—He says he comes from Canton, that is where his home is.

His Honour—Does he speak Chinese?

Witness—Yes.

His Honour—He added something else.

Mr. Wileman—That he does not understand Japanese very well.

Mr. Litchfield—But he seems to be speaking it very well now.

Mr. Wileman—Yes, very well, so far.

His Honour—How long has he been in Japan?

Witness—Not quite a year and a half.

His Honour—I see a Chinese woman who came with him, ask him what kind of language he speaks to the Chinese woman?

Witness—I speak to her in Chinese.

His Honour—It is hardly to be expected that a boy should be able to understand Japanese well after a residence of a year and a half. He would be a clever boy if he does. Mr. Litchfield, can you not procure a Chinese interpreter?

Mr. Litchfield—I might in course of time. Let the boy stand by for the present. Are any of the Japanese witnesses present.

The Usher—No, none at present?

His Honour—Have you any other witnesses present?

Mr. Litchfield—Not at present, I had made arrangements for the Japanese witnesses to be called this morning, but they are not here. I am afraid I shall have to ask for a remand.

His Honour—The men from Maruya's ought to be here. I have received a communication from the Kencho informing me that they were summoned to appear this morning. I will send over and inquire why they have not come. In the meantime, the Court will adjourn for a quarter of an hour.

Mr. Litchfield—Very well, we will wait a few minutes.

The Court resumed at a quarter to eleven.

Mr. C. D. Moss, Chief Clerk, reported, on His Honour taking his seat—I handed some exhibits, marked Epsilon to Phi, to Mr. Walford on his application. They were handed to him in the sealed envelope, and I opened it in his presence. On the exhibits being returned to me I could not find the first one—Epsilon.

His Honour—The exhibits, Epsilon to Phi, were in an envelope, a closed envelope, not a strictly sealed envelope?

Mr. Moss—It was closed by me.

His Honour—And when the envelope was returned to you?

Mr. Moss—I examined the exhibits with the list and failed to find the first.

His Honour—Epsilon is missing?

Mr. Moss—Yes.

His Honour—Let me look at them. Mr. Walford, what have you to say about this?

Mr. Walford—I received the exhibits from Mr. Moss in a closed envelope. That envelope was opened by Mr. Moss, with my consent, and he took the exhibits out. I did not look at the lettering of the exhibits, and am unable to say whether this particular paper—the one that is said to be missing—was one of them or not. When Mr. Moss reported the absence of the exhibit, after I handed the envelope back to him, I made a search but was unable to find it.

His Honour—You say that you did not look at the lettering of the exhibits?

Mr. Walford—I did not look at the lettering of them. Therefore I am unable to say whether that particular exhibit was inside the envelope when handed to me. I have since made a search, and an enquiry of the two persons sitting next to me, with the result that I have not found the exhibit.

His Honour—Were they out of your hands?

Mr. Walford—They were spread out on this desk.

His Honour—Mr. Moss, are you perfectly cer-

tain that Epsilon was in this envelope when you opened it before Mr. Walford?

Mr. Moss—I am certain that it was there. I made the mark on the exhibit yesterday and placed it in the envelope, which was closed almost immediately.

His Honour—Are you sure it was there when you put the exhibits in the envelope yesterday?

Mr. Moss—I am morally certain it was there. It was put in immediately after it was marked as an exhibit, within a second afterwards.

His Honour—You closed the envelope?—With-

in a second of the marking of the outside.

His Honour—Were the exhibits, Mr. Lowder,

in your hands?

Mr. Lowder—I handled one or two of them.

His Honour—Did you notice Epsilon?

Mr. Lowder—No.

His Honour—Did you examine the lettering of the exhibits?

Mr. Lowder—No.

His Honour—You did not notice it at all?

His Honour—The exhibit Epsilon was a full sized piece of note-paper, was it not?

Mr. Litchfield—I have not got it. I think it was the one I put in first. I think it would be a large piece of note-paper.

His Honour—Not the size of a half sheet?

Mr. Litchfield—No, of full size note-paper.

His Honour—Will the Usher see that no person leaves the Court without first obtaining the permission of the Court.

To Mr. Walford—Were the exhibits handled by your client?

Mr. Walford—Yes, they were handled by my client.

Mr. Litchfield—I am under the impression that I saw Epsilon this morning, on the table, but I would not like to say that I am sure about it.

Mr. Walford—Was it among the others?

Mr. Litchfield—Yes, but I should not like to say so positively.

His Honour—We will now go on with the witnesses.

Hayashi Shichiro, cautioned, examined by His Honour.

What is your occupation?—I am an employé.

Of whom?—An apothecary named Kyo Riunosuke.

Mr. Litchfield—Is Maruya's store in Bentendori, an apothecary's and a book-seller's combined?—Yes.

Do they also sell fancy articles, articles of toilette?—Yes.

Does your duty lay in the drug-store or in that and the book-store combined?—With the drugs only.

Do you remember supplying any medicine to a foreign lady on the 19th October last?—I do.

Did you supply any arsenic?—Yes, as I deposed before, I sold arsenic.

Anything besides arsenic?—Yes, sugar of lead.

Do you know who the lady was?—I do not remember.

Do you remember if she came alone, or was accompanied by anybody?—I think, probably, she came alone.

How came you to sell the arsenic, did she ask for it, or did she produce any writing?—She spoke, and produced a writing afterwards. She applied for it verbally, afterwards producing the writing.

What was on the writing, do you remember?—“Fowler's Solution of Arsenic, 1 oz.”

His Honour—In English?—Yes.

Mr. Litchfield—Anything else?—Yes, and “Sugar of Lead.”

Was any name written on the paper?—Yes, “Mrs. Carew.”

Was the person who came on the 19th like Mrs. Carew—the lady sitting here?—I saw the woman, but I do not recollect whether she was Mrs. Carew.

To His Honour—I can not recollect her face. I do not recognise her (Mrs. Carew) as the person who came on the 19th.

Mr. Litchfield—Can you recollect how this person was dressed?—In black clothes; in black looking clothes, or something resembling grey or mouse-colour.

What height was she, tall or short?—She was of ordinary stature, she was not particularly small—she was ordinary.

Of slight figure?—She was not a fat person; not stout.

And as to complexion and hair—did you notice?—I do not well recollect the complexion, or the colour of her hair.

Had you ever seen her before, on a previous occasion?—I saw her for the first time then. I might have seen her before, but I do not remember well.

You mean that that was the first time that you took particular notice of her?—Yes. I do not particularly remember the face.

Did you sell any more arsenic in October, on the 20th?—Yes, I did sell some.

Who was that sold to?—I sold it to a messenger who brought a writing—a note—from Mrs. Carew.

To the Bench—It was a male messenger.

Mr. Litchfield—(showing note)—Is that the note he brought?—Yes. [Exhibit put in.]

Mr. Litchfield—It reads—“Mr. Maruya, please give bearer one bed-pan, one bottle Fowler's Solution of Arsenic; E. M. H. Carew, 169, Bluff, 20.10”—folded and addressed to “Mr. Maruya, Bentendori.”

Witness—This Japanese character on the note reads Masa; it is part of the name of Yamada, who gave evidence here at the inquest.

Mr. Litchfield—Was that character put on the note at the shop when it was brought; or when was it written?—Yamada wrote it.

His Honour—Did you see Yamada write it?—No.

Do you know Yamada's writing?—Yes.

Do you recognise it as Yamada Masakichi's handwriting?—Yes.

Mr. Litchfield—What size bottle did he give the messenger?—A one ounce bottle of arsenic.

Yamada gave the arsenic and the bed-pan to the messenger.

His Honour—Did you see Yamada give to the messenger this Fowler's Solution of Arsenic and the bed-pan?—Yes, I saw him give them to the messenger.

Mr. Litchfield—On the 21st of October did you supply more arsenic, and if so, to whom?—I did.

Did you sell to that woman anything besides arsenic, at that time?—I also sold sugar of lead to her.

When she came to the shop she brought a piece of paper, did she not?—She did.

What size piece of paper?—About the third of a half-sheet of small note-paper.

Was this piece of paper signed?—It was not signed.

Is that the woman—(Miss Jacob stood up)—the person who came on the 21st?—Yes. The handwriting in which this note was written was the same as that which wrote the order for the bed-pan.

Can you say whether this piece of paper was in the same handwriting as that sent on the 19th?—I am not sure about the note of the 19th. I do not remember what the writing was like on the 19th, but the note on the 21st was in the same hand as that in which “bed-pan” was written.

To His Honour—I do not know whose handwriting it was on the 19th.

Mr. Litchfield—Do you recognise the writing of the 19th as the same as that of the 20th and 21st?—I do not recollect.

Did you know that this Fowler's Solution of Arsenic was a dangerous preparation, dangerous to life?—Yes.

Before selling it, did you warn any of these three people—the purchasers—of its character?—I did.

Which did you warn, the woman who came the first time, the messenger who came the second time, or the woman who came the third time?—I warned the person who came the first time, and the person who came the third time.

Have you your sale-book with you?—Yes.

What is the first entry in it, the date of it?—From August the 6th of this year.

His Honour—What is this book?—A book we enter sales in when people do not pay for goods at the time they purchase them: the credit book.

Mr. Litchfield—You have another book?—Yes, the cash-book.

When does that go back to?—The 12th of August.

Are all sales of drugs sold at Maruya's store entered in those books day by day?—Yes.

Can you tell me then, how much arsenic, if any, has been supplied by you during the months of August, September, and October—to anybody. Are there any entries in that book beside the three sales already alluded to?—No.

Can you say whether you have supplied Fowler's Solution of Arsenic, during this year, to any foreigners in any considerable quantities?—I have. I have sold it to Owston, the birdstuffer and skin-preserver.

That would be white arsenic, would it not?—Yes.

Any other sale to foreigners?—No. I sold it twice to Owston, but to no other foreigner.

Mr. Lowder, in cross-examination—Have you any entry, on the 17th October, of the sale of antipyrine?—I have not. That enquiry was made at the inquest, and I can not find any entry though I have looked up the books for that date.

Do you remember Mrs. Carew coming in person and purchasing some antipyrine?—I do not remember. How much did she buy?

A small tin, about two inches square?—It is not in the register.

His Honour—The question was, did he remem-

Did you sell any more arsenic in October, on the 20th?—Yes, I did sell some.

Who was that sold to?—I sold it to a messenger who brought a writing—a note—from Mrs. Carew.

To the Bench—It was a male messenger.

Mr. Litchfield—(showing note)—Is that the note he brought?—Yes. [Exhibit put in.]

Mr. Litchfield—It reads—“Mr. Maruya, please give bearer one bed-pan, one bottle Fowler's Solution of Arsenic; E. M. H. Carew, 169, Bluff, 20.10”—folded and addressed to “Mr. Maruya, Bentendori.”

Witness—This Japanese character on the note reads Masa; it is part of the name of Yamada, who gave evidence here at the inquest.

Mr. Litchfield—Was that character put on the note at the shop when it was brought; or when was it written?—Yamada wrote it.

His Honour—Did you see Yamada write it?—No.

Do you know Yamada's writing?—Yes.

Do you recognise it as Yamada Masakichi's handwriting?—Yes.

Mr. Litchfield—What size bottle did he give the messenger?—A one ounce bottle of arsenic.

Yamada gave the arsenic and the bed-pan to the messenger.

His Honour—Did you see Yamada give to the messenger this Fowler's Solution of Arsenic and the bed-pan?—Yes, I saw him give them to the messenger.

Mr. Litchfield—On the 21st of October did you supply more arsenic, and if so, to whom?—I did.

Did you sell to that woman anything besides arsenic, at that time?—I also sold sugar of lead to her.

When she came to the shop she brought a piece of paper, did she not?—She did.

What size piece of paper?—About the third of a half-sheet of small note-paper.

Was this piece of paper signed?—It was not signed.

Is that the woman—(Miss Jacob stood up)—the person who came on the 21st?—Yes. The handwriting in which this note was written was the same as that which wrote the order for the bed-pan.

Can you say whether this piece of paper was in the same handwriting as that sent on the 19th?—I am not sure about the note of the 19th. I do not remember what the writing was like on the 19th, but the note on the 21st was in the same hand as that in which “bed-pan” was written.

To His Honour—I do not know whose handwriting it was on the 19th.

Mr. Litchfield—Do you recognise the writing of the 19th as the same as that of the 20th and 21st?—I do not recollect.

Did you know that this Fowler's Solution of Arsenic was a dangerous preparation, dangerous to life?—Yes.

Before selling it, did you warn any of these three people—the purchasers—of its character?—I did.

Which did you warn, the woman who came the first time, the messenger who came the second time, or the woman who came the third time?—I warned the person who came the first time, and the person who came the third time.

Have you your sale-book with you?—Yes.

What is the first entry in it, the date of it?—From August the 6th of this year.

His Honour—What is this book?—A book we enter sales in when people do not pay for goods at the time they purchase them: the credit book.

Mr. Litchfield—You have another book?—Yes, the cash-book.

When does that go back to?—The 12th of August.

Are all sales of drugs sold at Maruya's store entered in those books day by day?—Yes.

Can you tell me then, how much arsenic, if any, has been supplied by you during the months of August, September, and October—to anybody. Are there any entries in that book beside the three sales already alluded to?—No.

Can you say whether you have supplied Fowler's Solution of Arsenic, during this year, to any foreigners in any considerable quantities?—I have. I have sold it to Owston, the birdstuffer and skin-preserver.

That would be white arsenic, would it not?—Yes.

Any other sale to foreigners?—No. I sold it twice to Owston, but to no other foreigner.

Mr. Lowder, in cross-examination—Have you any entry, on the 17th October, of the sale of antipyrine?—I have not. That enquiry was made at the inquest, and I can not find any entry though I have looked up the books for that date.

Do you remember Mrs. Carew coming in person and purchasing some antipyrine?—I do not remember. How much did she buy?

A small tin, about two inches square?—It is not in the register.

His Honour—The question was, did he remem-

ber?—I did not sell any antipyrine to Mrs. Carew on the 17th October. There is an entry in the register that I sold antipyrine on the 8th October.

Mr. Lowder—To Mrs. Carew?—The name Carew is on the register, but I did not sell it myself.

Have you any entry in Mrs. Carew's name on the 18th of last month—or Mr. Carew I don't mind which—of a sale of anything?—There is an entry on that date.

His Honour—A sale of what?—Sugar of lead and chlorodyne.

In the name of Carew?—Yes.

Mr. Lowder—Who paid for it?—I do not recollect.

Who came for it?—A boy, who brought a note from Carew—whether Mr. or Mrs. Carew, I do not know.

Have you not that writing?—The person who came to pay, took it away.

Who was that person?—A woman.

Do you know her?—No.

When was it paid for, on what date?—On the 20th, I feel sure; but I could tell if I could see the register, which I have not brought with me.

Was it the same woman who came on the 19th and purchased sugar of lead and arsenic?—Yes, the same.

Mr. Litchfield (to the Interpreter)—Will you ask him this question: Although he cannot recognise the person who paid on the 20th for the purchases made on the 18th and 19th, did she not resemble Mrs. Carew in appearance?—I cannot say.

Can't you say, whether she was of the same height same figure, same or similar complexion as Mrs. Carew?—No, I can not say that I recognise the woman as being the same as Mrs. Carew.

His Honour—He says that he is an employé of Kyo Ryonosuke, is Kyo Ryonosuke the same as Maruya?—They are different persons.

Well, is he employed at Maruya's shop?—Yes, I am an employé of the Maruya firm.

But you said that you were employed by Kyo Ryonosuke?—Yes, so I am; Kyo Ryonosuke is the chemist there, and is employed by the Maruya firm: I am his employé.

The depositions were then read over to the witness and signed.

Mr. Litchfield—That is the only witness I have this morning.

His Honour—The gentlemen within the rails—[Counsel, journalists, Messrs. Hutchison, Robison, and Porch]—will remain in their seats; the public will retire from the Court.

The members of the press and Counsel were requested to make search among their papers for the missing exhibit, but they reported non-success. They were then at liberty to retire. The other gentlemen present also reported that they could not find the missing paper, and retired.

His Honour—The Court stands adjourned till Monday at 10 o'clock.

Mrs. Carew remained behind to be examined in regard to the missing exhibit, and a female searcher was sent for. We learn that the paper was eventually found in the cuff of Mrs. Carew's dress. She was then remanded till Monday, on bail.

MONDAY, November 16th.

THE ALLEGED MURDER OF MR. CAREW.

MR. WALFORD RETIRES FROM THE CASE.

The Court resumed at ten minutes past ten o'clock this morning. Mr. H. C. Litchfield, the Crown Prosecutor, occupied his usual position at the Barristers' table, next to him being Messrs. Lowder and Walford, for the defence. The accused, Mrs. Edith May Hallowell Carew, sat behind Counsel in a seat adjoining the prisoner's box. Messrs. Hutchison and Robison occupied the old reporters' box. The Court was crowded.

His Honour, on taking his seat, announced that after the Court had been cleared of the public on Saturday, a search was made for the missing exhibit Epsilon, and on its not being found among the papers on the Barristers' table or elsewhere, he had had the accused searched by a woman searcher in the employment of the Court. This searcher had afterwards reported that the missing exhibit was found in the cuff of the dress of the accused. She had then delivered exhibit Epsilon to the Court, and it had since been replaced with the records of the Court.

Mr. Walford—The matter, sir, to which you have just referred is one about which I feel very strongly, and in which the Clerk of the Court and myself might have been seriously compromised. I therefore find it impossible to act any longer for the accused in this case. Had I been engaged alone in the case, I should naturally have hesitated before retiring; but I am glad to think that the defence remains in the hands of my able and learned friend, and I know that the interests of the accused will in no way suffer.

Mr. Walford then bowed to the Bench and left the Court.

Harry Vansittart Dickinson, a clerk in the employ of the Hongkong and Shanghai Banking Corporation, was then sworn and examined by Mr. Litchfield.

Are you a British subject, resident in Yokohama?—Yes.

Have been resident here for some years, I believe?—Yes.

In the month of October last were you staying on a visit at a house on the Bluff?—Yes. I was staying at No. 160, Bluff on a visit.

From about the 26th of September till the 12th October, was it not?—I forget the exact date, but it was in the last days of September till the 13th October.

You are a friend of Mrs. Carew's, I believe?—Yes.

And had for some time been on friendly terms with Mr. Carew?—I had always been on friendly terms with Mr. Carew, with one exception.

That exception led to a quarrel between you and Mr. Carew, did it not?—That exception was a quarrel with Mr. Carew some years ago, that has long since been made up.

While you were staying on the Bluff were you in correspondence with Mrs. Carew?—Yes.

Frequently?—Yes.

Mr. Litchfield asked for the production of the Epsilon series of exhibits.

His Honour—I ought to explain, Mr. Litchfield, that in the lettering of these exhibits one letter has been dropped; there is no letter Psi in the series; you will bear that in mind.

Mr. Litchfield, to witness—Is this letter Epsilon, in your hand-writing?—Yes.

Was it addressed by you to Mrs. Carew?—Yes.

Just turn to the last page of that exhibit. There you will find written:—"I have been thinking much about your probably having to meet this woman. I wish for your sake you could refuse to, but have come to think that you cannot well do so. Do you know anything against her? If not, you should meet her, I think. It would bring you endless bullying refusing, and I want that to be avoided if possible. If you refuse, refuse on the ground that he has insulted you before others, and you do not wish for a repetition. Refuse first on those grounds, and after that on account of his relation to her. That is to say, if you refuse at all." Was that letter written by you to Mrs. Carew?—Yes.

Was this letter—exhibit Ro—addressed to you?—I understand that this letter was picked up in Mrs. Carew's waste-paper basket, so that this particular letter was not addressed by Mrs. Carew to me, but I recollect receiving a letter of very similar import, but I do not recollect the wording. I recollect the main questions in the letter. I recollect being asked that question.

To His Honour—My letter was in reply to the question then put, but I do not recollect receiving this letter.

Mr. Litchfield—Do you know the woman referred to in your letter, part of which I have just read?—I never knew her.

Was it Annie Luke?—No.

I do not wish for her name to be given, unless you like to do so, but do you know who she is?—I have since heard of her, heard about her, and who she was.

Did you never send any letters that you received from Mrs. Carew back to her?—I never did.

Now, as to exhibit Zeta, is that in your hand-writing?—Yes.

It was also written to Mrs. Carew?—Yes.

Amongst other things you say, "Never mind my coming in to dinner. I shall not feel hurt if I am left out of your parties, nothing he can do will hurt my feelings now. It is worse for you than me to hear all his abuse. I am only afraid that he will say something rude to me before others and I cannot sit quietly under that. Only you would be treated worse than ever if we come to an open row again." Had Mrs. Carew been complaining to you of her husband's ill-treatment?—Yes. She told me of her husband's ill-treatment of her.

Then further on you say:—"I tear the half sheet off, I jot down points re your will. Are you coming to the Bank to-morrow?" and then there is the Postscript. "I would go and see Litchfield some time before he gets into a busy season. Tear all this up when you have taken a note of it, the notes re the will, I mean. Of course you destroy letters." Did you write that?—Yes.

Was this letter, exhibit Eta, written by you to Mrs. Carew?—Yes.

You there say in part, "It will be necessary to be quite in accord with each other on broad questions. We must be able to answer alike."—Was that written by you?—Yes, quite so.

Those remarks did not refer to these present proceedings, magisterial or otherwise?—No. To entirely different matters.

They were written some time ago?—Yes; some long time ago; some time before these things happened.

Then you go on to say, "I know nothing of the legal proceedings; you can say of course that I recommended going to a lawyer in case your husband proved too difficult to manage about the money. Nothing more. Your note with the cap has disturbed me very much. It makes me mad to think of what you are subjected to, and of what you may be subjected to. Please be so careful not to drive him into any violent acts. He shall be punished, but that would be but a small compensation for any harm done you. You must tell L. about last night"—that L. refers to Litchfield, I presume?—Yes.

"And say that you really cannot see when you may be compelled to leave him for fear of personal violence."—Him, I presume, is Mr. Carew, and not Litchfield?—Yes, Mr. Carew.

"Ask his advice as to what you should do if you should ever get frightened, it will cause him to hurry up with the case any way. It is quite clear to me now—at all risks, at all hazards, Divorce. You must not mind your poor brother's and father's feelings over the scandal. Your personal safety is of more importance to us all than any scandals, and then you have your children. If you succeed in proving the necessity for divorce you will have no trouble in convincing the Court of the unfitness of your husband to have the care of the children. You will then always have the comfortable feeling of having done rightly by the two little beings for whose lives you are responsible. Now and always I will help you in all things if you want me, and I know you do, and be with you while I may. Keep up your heart, my dear one, and do not give in under his cruelty and coarseness. If you are ever offered personal violence you must appeal to your brother and servants for immediate help, and to your lawyer for further guidance. Send for me whenever you may need me. Burn all this when you have read and learnt the early part." Did you write that?—Yes.

Mr. Litchfield—Exhibit Iota, is that written by you to Mrs. Carew?—Yes.

Exhibit Kappa, was that written by you to Mrs. Carew?—Yes.

In that you say:—"I should think you might ask for the letter. I should do so without hesitation. Ask L. if you like, but I should go and do it. I think I will come up as arranged to the house. If I see the usual signal, I could also look in after tiffin perhaps, though I am not certain re this. I should go and ask for the letter, however, taking care that no strangers are near you." Do you know what letter that refers to?—It was a letter that Mrs. Carew told me she knew to have been addressed by her husband to somebody care of the Post Office.

Exhibit Lambda, is that a letter written by you to Mrs. Carew?—Yes.

Exhibit Mu, was that written by you to Mrs. Carew?—Yes.

Now in this pencil note exhibit, Omicron, you say, "I will send you the 'Play Actress'; but in a P.S. add, 'I will give you the 'Play Actress' when I see you.' This is a novel, is it not?—Yes, it is a novel.

Did you show the "Play Actress" to Mrs. Carew?—I believe I did. I got it out of the Library at the Club for her, but I cannot recollect whether I gave it to her or sent it.

To His Honour—I am not sure which I did.

Mr. Litchfield—The only purpose of the question is for fixing something else.

To Witness—The book is in the Library of the Club?—Yes.

It was taken out by you about the 28th September and returned on the 9th October?—I can't recollect the date on which I took it out.

Somewhere about that time, the end of Oct.?—Yes.

Have you read the novel?—Yes.

The heading of one of the early chapters is the "Lass in black," is it not?—I am not sure.

You are not sure?—I could not tell you, it is so long since I read it.

You can't remember that heading?—I have no recollection of it.

Exhibit Mu, did you write that?—Yes, I wrote that to Mrs. Carew, it is in my handwriting.

Mr. Litchfield—The exhibits I shall now show you I have not yet read, and I do not know if anything attaches to them. [After reading the papers, Mr. Litchfield said to witness]—Is that (Sigma) in your handwriting, and was it written to Mrs. Carew? Do you remember that note?—Yes, I wrote that note.

Mr. Litchfield—Did you write—"Grown tired of you is good, but not to my thinking strong enough

However, you will know best what you write. I call his treatment of — brutal. Ask Litchfield on Monday, if in the event of your getting away with or without his consent, if he can force you to return to him and if you find that he has such a power, then I should tell L. the real state of affairs, how it is impossible for you really to live with him as a wife, and your real wishes on the subject?—Yes, I wrote that?

His Honour—Did you write all these letters?—Yes, I wrote all those notes to Mrs. Carew.

Did you write Exhibit Epsilon to Mrs. Carew?—Yes.

And Exhibit Phi?—Yes.

Exhibit Ki?—That is in my own handwriting, and was sent to Mr. and Mrs. Carew.

Mr. Lowder had no questions to put, and the witness signed the depositions.

Reginald Colomore Porch, of no present occupation, was then sworn. Examined by Mr. Litchfield, he deposed.

Are you the brother of Mrs. Carew?—Yes.

How long have you been in Yokohama?—Since March the 21st.

During that time have you been residing with Mr. and Mrs. Carew at 169, Bluff?—Yes.

You remember Mr. Carew's illness?—Yes.

Do you remember the day he died?—Yes.

Do you remember, as you were going up to tiffin that day, meeting Dr. Wheeler?—Yes.

Did he give you any instructions as to the care of Mr. Carew?—Yes.

What were they?—He told me to remain in the house till he came with a stretcher to take Mr. Carew to hospital.

Did he give you any instructions in regard to Mr. Carew's diet?—I do not remember him giving me any such instructions.

You remained in the house until Dr. Wheeler returned. Did you remain in Mr. Carew's room all that time?—Yes. I had tiffin downstairs, and then remained in Mr. Carew's room from one o'clock till nearly three.

His Honour—When was your tiffin?—From half-past twelve till one.

Mr. Litchfield—Do you know if Mr. Carew had any tiffin that day, beef-tea or anything?—I don't think he did; he may have had some beef-tea.

Mr. Lowder had no questions to ask.

His Honour—Mr. Litchfield, what is the course you now propose to take in regard to witnesses?

Mr. Litchfield—I have arranged for Mr. Schedel to appear at 2 o'clock; the *amah*, I understand, can not appear to-day; and if I can get a proper interpreter we will have the China boy, Ah Kwong called. To-morrow I have asked Dr. Divers. I have written asking whether he can come down; if he can then we will have his evidence.

His Honour—Very well; the Court will adjourn till 2 o'clock.

On resuming after tiffin.

Joseph Schedel was called. He said he was a chemist residing in Yokohama, at No. 77-A.

Mr. Litchfield—Are you a German subject?—Yes, sir.

Carrying on business as a druggist at No. 77-A, Yokohama?—Yes.

From time to time have you supplied drugs to the Carew family?—Yes, sir. Since 1893, I have supplied the Carew family with medicines.

Was the document now handed to you, exhibit Ca, received at your store, and how does it read?—"Mitte, liq. Fowleri, 4 or 5 drops after meals, E.W."

Was that supplied?—Yes.

How much was it?—Half an ounce; a $\frac{1}{2}$ oz. bottle.

To whom?—To Mrs. Carew.

The date of this was?—The date was put on by my assistant, Mr. Vollbehri, and is 11.10.96.

This is exhibit Cb., did you receive this?—Yes, I received this. I remember it quite well.

On what date?—The 17th October, 1896.

It reads, "Normal Dispensary, please send one bottle of quinine; please refill accompanying bottle E. M. H. Carew, 169, Bluff, 17.10.96."?—It is Liq. Fowleri, the same as the original prescription in the hand-writing of Dr. Wheeler. There is a chit accompanying this prescription now that shows that it had been sent to Mrs. Carew's house.

Mr. Litchfield—I believe his chit is signed in Japanese.

Mr. Wileman, the Court Interpreter—The characters, I regret to say, I cannot make out.

His Honour—The termination is ski.

Mr. Wileman—It might be, I am not prepared to swear it.

Witness—It is a receipt for medicine sent out and is drawn up in my own handwriting.

Mr. Wileman—I have inquired of the office writer, and he says that the characters are the cursive form of the square character, and that the final letter is *yu*—short for mail or *Yubin*.

The word would be *Konoyu*. The top word might be *Kita*.

Mr. Litchfield (to witness)—Can you identify this chit as being sent to your store?—Yes, and it was supplied to Mrs. Carew. It reads, "Please send a small bottle of Fowler's Solution, I cannot send the empty bottle as it was broken." This was supplied on the 20th October, 1896.

It was a half-oz. bottle?—Yes, a half-oz. bottle of Fowler's Solution of Arsenic.

Have you searched the bundle of prescriptions which you handed in to the Coroner's Inquest?—Yes, then; at present, no.

And did you find whether you had supplied arsenic to the Carew family on any other but the three occasions you have just testified to?—I have not supplied any other arsenic to them.

Mr. Litchfield—What is the date of this series?—It begins with the 27th February, 1895, and ends with 7th October, 1896.

Is this another series?—Yes.

Mr. Lowder—What are those dates?—26th January, 1896, and ending with 26th June, 1896.

Mr. Lowder—It occurs to me that those two series overlap.

Mr. Litchfield—Possibly, I have merely taken the prescriptions from them, the first, second, and last; but all are open for examination.

Mr. Litchfield—Is this another series from your store?—Yes, sir. From the 31st July, 1896, up to 11th September, 1896.

These, another series, are prescriptions for Mr. Carew?—Yes. There are no special dates, but all belong to the year 1893, except that the chits from Mr. Carew himself are signed and dated.

There is also a series for October, 1896?—Yes. A list of all the prescriptions supplied from July 4th, 1893, to 22nd October, 1896, written by the book-keeper at the Normal Dispensary to the Carew family was also put in. Witness said—

This is an exact copy from the entries in my ledger of prescriptions and medicines—the sales. Mr. Lowder had no questions to ask.

Ah Kwong, the small China-boy was now called. Kwong How Chong, Interpreter at the Chinese Consulate, was cautioned and then gave an affirmation to give a correct interpretation of the boy's evidence.

His Honour—The boy has given his name and says he is 12 years of age, and lives at the Convent, is that correct?

The Interpreter—Yes, sir.

His Honour—Will you now caution the witness? This was done.

Mr. Litchfield—How long have you been in Yokohama?—Not quite a year and a half yet.

During that time have you been in the service of Mr. and Mrs. Carew?—Yes.

His Honour—During the whole of the time you have been in Yokohama?—I entered the service of Mrs. Carew in May, of last year—the fifth Chinese month.

Mr. Litchfield—When did you leave that service?—This month.

What day this month?—I can not remember the date.

Did you while in that service, have rooms at Mrs. Carew's house; did you live in the servants' quarters there, or where?—I lived in the servants' quarters, along with the Japanese at 169, Bluff.

Can you give me the names of the Japanese servants who were there during the time you were in Mrs. Carew's service?—One was named Kit-chung.

What was he?—A steward.

His Honour—A house-boy?—A steward.

Mr. Litchfield—Anybody else?—No, no other.

Do you mean that there were no other servants employed by Mrs. Carew, or do you mean that was the only servant living in the servants' quarters?—That was the only one who lived with me.

What other servants were there in Mrs. Carew's employ?—Rachel.

Anybody else?—Asa, a female.

Anybody else?—Yasunobu, another female, and a boy named Yasuda.

Any more?—There was a betto named Jimbeisan. Now, what were your duties?—I was a table-boy, and also had to open doors.

Do you remember when Mr. Carew was ill, in October last month?—I do not remember the date, but it was some time last month.

During that time did you carry the meals from the kitchen to Mr. Carew's room upstairs?—Yes.

What kind of things did you carry, soups or drinks?—Soup and bread.

Did you have anything to do with giving medicine to Mr. Carew?—No, I had nothing to do with that.

Do you remember the day Mr. Carew died?—He died on the 22nd day of last month.

Can you remember whether you carried any food from the kitchen to Mr. Carew on that day—the

day he died?—He was in the Hospital by that time.

Deceased went to the Hospital between 3 and 4 o'clock in the afternoon, before that time did you carry any meals upstairs to Mr. Carew?—I do not remember.

Do you know whether or not Mr. Carew had anything to eat or drink on that day?—I do not know.

Where were you all that day, upstairs or downstairs?—Downstairs.

Did you not go upstairs at all?—I went upstairs once during the day he was removed to the hospital.

What did you go upstairs to do at the time?—A lady visitor came in.

Was Mrs. Carew upstairs with her husband at that time?—Several other visitors went upstairs, the Doctor and others; I can't remember who they were.

What time in the morning was this?—About 3 o'clock in the afternoon.

Was Mr. Carew taken off to the Hospital shortly after that time?—Soon after the arrival of the doctor, Mr. Carew was taken to the Hospital.

But what I want to know is this, was it shortly after this lady called that Mr. Carew was taken to the Hospital?—Before Mr. Carew was removed to the Hospital the lady visitor came.

Did the lady visitor go upstairs?—No.

Who did she ask to see, Mr. or Mrs. Carew?—She asked for Mr. Carew.

What did the lady look like—had you ever seen her before?—Yes, I have seen her before.

How many times?—Three or four times.

Do you remember the first time you saw her?—I could not remember.

She called at the house?—Yes, several times.

At any time did she go indoors?—She went indoors.

On each time did she ask to see Mr. Carew?—

Two or three times she asked to see Mrs. Carew.

Mr. Lowder did not cross-examine.

His Honour—Have you any other Japanese witnesses?

Mr. Litchfield—I have to make an application for an adjournment until Wednesday at 11 o'clock, as I have found that Dr. Divers can not get down here until after 2 o'clock to-morrow, and I have no other witness at present.

Mr. Litchfield—There is the Eurasian half-caste Rachel Greer, but she is not able to appear. I understand, she may be able to come on Wednesday.

His Honour—There was another man from Maruya's present on Saturday.

Mr. Litchfield—Possibly, I may call him too.

His Honour—Have you anything to say Mr. Lowder; does such an adjournment suit you?

Mr. Lowder—Yes.

His Honour—Then the Court stands adjourned till Wednesday at 11 o'clock.

WEDNESDAY, NOV. 19TH, 1896.

The Court resumed at 11 o'clock this morning and continued the magisterial enquiry into the charge preferred by the Crown Prosecutor against Mrs. Edith May Hollowell Carew, of the murder of her husband. Mr. Litchfield again appeared for the Crown; Mr. Lowder for the defence, Dr. Stuart Eldridge sitting next to Mr. Lowder to tender medical advice. The accused occupied a seat near the dock. The Court filled very rapidly, a large number of spectators standing in the passage way.

Dr. Edward Divers, Professor of Chemistry in the Imperial University, Tokyo, was sworn.

Mr. Litchfield—You are a Professor of Chemistry at the University of Tokyo?—Yes.

How long have you resided in Japan?—About twenty-three years.

Before coming to Japan did you hold any medical appointments in England?—Yes.

Of what nature?—For many years before coming to Japan, I was a Professor of Materia Medica and Therapeutics, in the Queen's Hospital Medical School, Birmingham.

Then?—Lecturer on Medical Jurisprudence in the Medical School of the Middlesex Hospital, for four years. Before these appointments, I had been, all my adult life, connected with Medical Schools.

On Saturday, the 24th of October last, did you receive in Tokyo a box under seal?—Yes. It was sealed by the Naval Hospital's (Yokohama) seal, once, and a British Consular seal in three places.

His Honour—Did you observe whether it was the Consular or Court seal?—I did not distinguish; it was the Royal Arms.

To the Bench—Included in the sealing was an envelope bearing the words, "Arthur Hyde Lay." That was how it was signed. That may perhaps throw light on the sealing.

Mr. Litchfield—From whom did you receive the

box?—From Mr. Rentiers, of the British Consulate, Yokohama.

Were the seals unbroken when you received the box?—Yes.

Did you open the box, and if so what were the contents thereof?—I opened the box on the morning of the 26th, finding three bottles—large jars or bottles. The bottles were sealed, the sealing-wax stamped.

What impression did the sealing wax bear, if any?—It was quite untouched.

But what impression was there?—The British seal, Court or Consular, I can't say.

His Honour—Or Hospital?—That I can't say, I did not observe. The seals were on the mouth of the jars. I have no recollection of the seal; it was a regular seal, but whether Hospital, Court, or Consulate I can't say.

With the Royal Arms?—That I can't say. It was a regular large seal of the same size as the seals on the box.

Mr. Litchfield—Did you open the jars on Monday, the 26th?—Yes. I opened one or two, not all of them, that day. I can't be certain whether I opened all three that day; but, I think, I opened the third on the 27th.

To the Bench—I did not open the third bottle on the 26th, that I am now certain.

Mr. Litchfield—What were the contents of the jars that you first opened?—In the one, the stomach with a portion of the gullet. In the second was the liver, and one kidney.

And in the third?—It was easy from the outside to see: in the third was almost all the intestinal canal, and adhering to the upper part of the canal, was a portion of the pancreas—I can't give you a common name, as sweetbread is hardly applicable. Also in the jar a quantity of bloody fluid.

Had these been part, or portions, of a human male body?—Yes. Pardon, I can't say whether male or female—portions of a human body.

Did you submit the contents of these jars to chemical analysis?—Yes.

In the stomach, what did you find?—In the stomach, which, of course, was duly tied when I received it, about half a pint—I measured it—about half a pint of fluid, somewhat thickened, only by solid matter. This fluid matter was free from special odour.

Fresh in condition?—This fluid was without putrefactive or any medicinal odour. After the fluid was poured out, I saw on the wall of the stomach near the fundus, near the dependent part—in life dependent part—not far from the gullet opening, a number, perhaps eight, minute specks, circular specks, of whitish pasty matter. Just within the gullet, two little minute angular particles of apparently the same substance. Ultimately it proved to be the same substance. I found nothing else in the stomach.

To His Honour—I should like to ask if I am to only answer the questions, or to go further in my replies. I ask this for instruction. I have been telling you about the stomach. Have I to testify further and tell you how I found what was in it?

His Honour—Mr. Litchfield will put to you the questions that he thinks will bring out the information he requires.

Dr. Divers—All I wish to know is whether I have to go further than that. I do not wish to testify further than you desire.

Mr. Litchfield—What did these white particles and specks, on chemical analysis, prove to be?—White arsenic.

As to the fluid contents, what chemical appearances did they present, if any?—They were analyzed. They were grey in colour, otherwise, as previously described, they showed nothing beyond what I have already told you. By the chemical analysis minute quantities of arsenic and of lead were found—very minute.

His Honour—You are still at the stomach?—Yes. Minute quantities of arsenic were found there.

Is that in the fluid contents of the stomach?—In the stomach by two chemical analysis I find arsenic, once in the specks, and once in the contents.

In the fluid?—Yes. May I add, to make the matter clear, the spots and specks adhered to the walls of the stomach, the fluid contents naturally washed, or moved, about.

Mr. Litchfield—On examination of the liver what did you find?—In appearance, nothing.

Was it healthy?—Yes, healthy in appearance.

His Honour—Healthy, did you say?—Yes, healthy, but small. Healthy for my purpose; not noticeably unhealthy. Chemical analysis lead to the discovery of arsenic and lead. The quantity of arsenic, expressed as white arsenic, was one-sixth of a grain.

Mr. Litchfield—Did you examine the bladder and one kidney of the deceased?—I did not ex-

amine the kidney. I did examine the contents of the bowels, and the bloody fluid outside the bowels, which I expect contained pancreatic fluid. I found arsenic and lead in both cases—in both fluids—the contents of the bowels and in the bloody fluid; though minute in quantity, it was most marked in the contents of the bowels. The arsenic was minute in quantity.

Could you form any opinion, from appearances, as to the form in which arsenic had been taken into the intestines or bowels of the deceased?—Only as regards the specks and spots of whitish matter in the stomach; and lead, I may add, I suppose. What I find and what has been administered are two different things. But the appearance of the stomach and *duodenum* pointed to the administration of the arsenic, not largely in the solid form—not largely as white arsenic—pointed to, I have said. For there was no inflammation of the stomach or *duodenum*. What I have said is an indication only: it is quite consistent with the administration of arsenic in solution, judging from history,—or in either form, either as white arsenic or in solution.

Chemically, Dr. Divers, arsenic is used in medicine, I believe?—Yes, it is used in medicine.

You know Fowler's Solution of Arsenic?—Yes. How much arsenic in an ounce bottle of Fowler's Solution, ought there to be?—Four grains of white arsenic.

According to the British Pharmacopœia, I presume?—Yes, British, Japanese, and all Pharmacopœias so far as I know; with an insignificant difference. The ounce is 437½ grains; the solution of arsenic is sometimes made as a 1 per cent. solution, that is, 4 grains in 400, or 1 in 100: a little less than the ounce.

What is the usual medicinal dose of Fowler's Solution of Arsenic?—Solution, from 4 to 10 drops.

In what quantity would the administration of Fowler's Solution become dangerous to human life?—In larger doses than 10 drops continued; I am speaking of ordinary cases.

What is the smallest fatal dose of white arsenic?—The smallest dose of which there is satisfactory record is that of two grains.

Suppose arsenic is taken by a man under a medical diet of "slops" would the action of the arsenic be different to that of a man on his ordinary or full diet?—In the case of white arsenic? Well, I think we will speak first of solution. The effect upon a comparatively empty stomach would be more rapid—I am speaking of a man on medical diet—the arsenic in solution would be more rapid than in the case of a full dieted person. In the case of white arsenic the difference would be still greater—the white arsenic probably passing through the alimentary canal unabsorbed.

As to the quantity of arsenic required in such a case, it would be less than in the case of a man on full diet?—I cannot give a valuable opinion, I think, yes.

To His Honour—I think it would have to be larger in the case of a man on full diet, in order to be fatal, than to a person on a slop diet.

Mr. Litchfield—As to rapidity of its action?—The arsenic might escape absorption on a full diet.

What are the chemical effects of arsenic taken in considerable—large—quantities, on the mental and bodily faculties of a human being?—Extraordinarily depressing; there is excessive depression of body and mind. I do not know whether I am to include pain in the answer?

Mr. Litchfield made no reply to the question, but put another—In your opinion what quantity—the lowest quantity—would be required to produce this extreme mental and bodily depression?—A categorical answer to that question is impossible: it would depend on so many circumstances.

To His Honour—It would vary according to circumstances, but from 25 drops to a quarter of an ounce of solution, upon an ordinary person.

Mr. Litchfield—What are the symptoms,—can you explain them to us, Dr. Divers—usually produced by taking dangerous doses of arsenic?—There is the excessive vomiting within a few hours, and later excessive diarrhoea—excessive purging. Pains in the epigastric region—the stomach region—and in the abdomen, so excruciating as to be entitled, indiscribable. Marked throat symptoms; these being dryness and thirst; painful sense of constriction—tightness to the throat, and great distress in swallowing. Besides these are the extraordinary depression of the vital faculties; of the heart and circulatory system, and later of the respiratory system; of the voluntary muscular system; of the mental faculties. In two days, or so, before or later, strangury, that is, pain in passing water—great pain in the urinary passages. Another very general symptom is cramps, in the lower limbs more especially. These are the symptoms of poisoning with solid white arsenic, more particularly on full stomach, or with solution of arsenic. The more marked symptoms

are those of collapse; those of extreme weakness. Great variety has been observed in the symptoms of arsenical poisoning.

From your examination of the organs sent you, and from the appearance that they presented and the result of your analysis, could you form—did you form—any opinion as to the cause of death of the person to whom they belonged?—I suppose I should say a negative opinion.

His Honour repeated Mr. Litchfield's question—Could you form any opinion as to the cause of death from your examination of the organs sent you?—Well, I did form an opinion, but it was a negative opinion. The parts presented nothing remarkable.

His Honour—You say you formed a negative opinion?—The parts presented nothing remarkable, therefore negatively death by arsenic I found; there being no disease therefore negatively death by arsenic I found.

Mr. Lowder did not cross examine the witness.

Mr. Litchfield—It is now nearly half-past twelve o'clock and I will ask for an adjournment until 2 o'clock, when the Eurasian *amah* Rachel Greer, can appear, I understand.

The Court then adjourned for tiffin.

Kanaye Chiaki, otherwise known as Rachel Greer, was called.

Mr. Litchfield said he understood the witness was in a rather bad state of health, and asked that a chair be provided for her.

Mr. Wileman then cautioned her.

To the Bench she said—I am a servant, living at 169, Bluff.

Mr. Litchfield—Were you in the employ of Mr. and Mrs. Carew from the month of March till the 22nd October this year?—Yes.

Are you still in the employ of Mrs. Carew?—Yes.

Do you remember the day that Mr. Carew died, the 22nd October last?—Yes, I do.

How long before that had Mr. Carew been confined to his room upstairs?—I do not remember the day exactly, but I think six or seven days.

During that time who was in attendance on Mr. Carew—during the time he was confined to his bedroom?

The Interpreter—Witness inquires, Mr. Litchfield, do you mean as regards food?

Mr. Litchfield—I mean in regard to nursing and food?—Mrs. Carew nursed him.

What food did Mr. Carew receive during the time he was upstairs?—At first he ate the same as all the others; afterwards he ate beef-tea and corn-flour.

At first, during that time, did Mrs. Carew and Mr. Carew partake of food together upstairs—You have drawn a distinction between first and then afterwards?—There was a table brought into the room at first at which Mrs. Carew and Mrs. Carew's brother had their meals. Mr. Carew had his at a little table by the side of the bed.

Was that little table the same little table on which Mr. Carew's medicines were kept?—There was no medicine on it at first.

The Interpreter—She now says she is not quite sure about the tables.

Mr. Litchfield—When was medicine first put upon that table by the bedside, on the little table you have spoken of?—I do not know whether it was the same table or a different table. There were several tables in the house, and I am not sure about the one that was used.

Did you ever see any medicines on any tables by the bedside?—The medicines were all on the table by the side of Mr. Carew's bedside, close to his pillow: on a small table.

And before Mr. Carew was supplied with his meals from time to time, were these bottles of medicine cleared from that table, or was a new table brought up to serve meals upon?—The medicines were always by the side of Mr. Carew, and I think it was on another table that the food was placed.

Were you waiting on Mr. Carew at meal-times, after Mr. and Mrs. Carew ceased to have meals together?—I was told to take beef-tea and corn-flour from the kitchen, and I took it and gave it to my master.

Can you say during that time how many times you brought food—beef-tea and corn-flour—to Mr. Carew?—Many times; I don't know how many.

Did you take some every day?—Sometimes three times in a day, and sometimes once; the Chinese boy took it when I did not take it.

Do you remember taking any beef-tea and corn-flour to him on the day he died?—I don't recollect well, but I think I took it once in the morning.

By the morning, do you mean tiffin-time or early morning?—I do not remember the hour very well; but I think it was before twelve o'clock.

Do you know where Mr. Carew used to keep his medicines, his stock of medicines, not those on the small table of which you have spoken, but others?—There was a foreign chest of drawers

upon which stood a small Japanese chest of drawers—cabinet—with a mirror, and in the drawers of this Japanese cabinet Mr. Carew used to keep a lot of medicines before he was ill.

These medicines, were they in small bottles or large bottles?—They were generally small bottles; the drawer was small.

These small bottles, were they full or empty?—They were mostly used; the corks had been opened.

Do you know if these bottles were refilled from time to time?

Witness—Do you want to know whether my master refilled them?

Mr. Litchfield—I want to know if you knew whether they were refilled?—I never went to open the drawers frequently, but if I wanted a stud I would go there.

Did your master ever send you to the cabinet for medicine?—No.

Was this chest of drawers in your master's dressing-room or in the bedroom?—In the place where he changed his clothes.

I believe Mr. Carew, on one occasion during his illness, told you to go, or told you to send to, Maruya's for medicine, did he not?—Mr. Carew gave me, on one occasion, a memorandum, and I gave it to a *kurumaya* to take to Maruya's.

Do you remember what day that was?—It was on the 17th or 19th, when Mrs. Carew was not at home; I think probably the 18th.

Was the *kurumaya* whom you sent, in the employ of Mr. Carew, or was he a stray man from the station at the top of the hill?—He was an outside *kurumaya*.

Did that man bring anything back to the house from Maruya's?—He brought back a bottle.

One?—I don't remember well, whether it was one or two.

I suppose you can't remember whether there was one or two parcels, whether two bottles were in one parcel, or not—can you tell me?—I do not remember very well whether he brought back one parcel or two parcels.

Did you give the parcel, or whatever it was that the man brought back, to Mr. Carew?—Yes.

You took it upstairs to him in the room?—I took it to the room and gave it into his hands.

What did Mr. Carew do with it?—I don't know, as I went out of the room.

Was that the only occasion that you were ordered to send to Maruya's for medicine or anything, from Mr. Carew?—I received writing from him only once.

Did you ever, on any other occasion, buy medicine from any other druggist for Mr. Carew?—I do not remember.

Can you speak English at all?—I can't understand it very well. I can understand something of what is said—ordinary, little, everyday things I understand.

Can you write English at all—that is English characters?—I can write my own name, but not much else.

English numerals?—I can write them a little.

Mr. Lowder—When you took cornflour and beef-tea to your master during his illness, from whom did you receive it?—Sometimes I made it myself; sometimes I got it from the cook, who made it. I made it when the cook was not there.

Did you ever receive it, beef tea or cornflour, from the hands of Mrs. Carew?—I never did.

Witness then signed her depositions.

Mr. Litchfield—That is all the witnesses that I have to call, your Honour.

Mr. Lowder—I call no evidence, sir.

His Honour—Do you wish to address the Court?

Mr. Litchfield—Upon the evidence I have laid before your honour, I ask that the case may be laid before a jury. The evidence, as in all such cases, is essentially circumstantial, but I think I have led sufficient to prove a *prima facie* case, and therefore sufficient to justify you, sir, in committing the accused, and thus enable the case to come before a jury. The medical evidence, I submit, pointed to the fact that the deceased came by his death by arsenic or some other kind of poison. The evidence furthermore showed that arsenic in considerable quantities was admitted into the house shortly before the death of the late Mr. Carew. Part of the evidence further traced that arsenic into the hands of Mrs. Carew, and showed that Mrs. Carew was the chief nurse during the last and fatal illness of her husband. It is further shown, in spite of all appearances to the contrary, that the accused led one person to believe that serious differences, if not irreconcilable differences, existed between herself and her late husband. These are the broad facts of the case, and I ask you to commit her for trial on that.

His Honour—I am of opinion that the evidence is such as ought to be placed before a jury. I am not sure if, at the beginning of the case, when it was

first called, the charge was sent to the accused. I will ask the Clerk of the Court to read the charge.

Mr. C. D. Moss (Chief Clerk) then read the following charge:—

In Her Britannic Majesty's Court for Japan, Kanagawa. The 11th day of November, 1896.

Henry Charles Litchfield, Barrister-at-law and Her Britannic Majesty's Crown Prosecutor in Japan, of Yokohama, Japan, on oath charges that he hath just cause to believe and suspect that on the twenty-second day of October in the year of Our Lord one thousand eight hundred and ninety six Edith May [fall well] Carew did wilfully feloniously and of her malice aforethought kill and murder one Walter R. H. Carew contrary to the form of the statute in such case made and provided and against the peace of Our Lady the Queen Her Crown and Dignity.

HENRY C. LITCHFIELD,
H.B.M. Crown Prosecutor for Japan.

Sworn at Yokohama aforesaid this eleventh day of November, 1896 before me
JAMES TROUP, Assist.-Judge

His Honour—There was a mistake in the charge as first drawn, but that has been rectified by the word *Hallowell* being placed between May and Carew. I must now ask her Counsel, whether he desires, in accordance with the rules of our Court, that the whole of the depositions be read over to the Accused. With your consent I purpose to dispense with that; as she has heard them read over to the witnesses.

Mr. Lowder—I am quite willing to waive it.

His Honour then cautioned accused in the usual form—that she was not obliged to make any statement now unless she wished; that she had nothing to hope from any promise that may have been held out to her, nor need fear any threat that might have been made to her to make a statement as to her guilt, but if she had anything to say it would be taken down in writing and could be used against her on her trial.

Accused—I have no statement to make.

His Honour—I will take that down and you will sign it.

Mr. Lowder—The accused wishes to add the word "now"—I have no statement to make now.

His Honour—Yes, that may be added.

His Honour—I have already expressed my opinion that the evidence is such, that it is sufficient to put accused upon her trial before a jury. I therefore commit you, Edith May Hallowell Carew, into custody to await your trial until you are delivered by due course of law.

The accused then resumed her seat.

His Honour—As the accused is represented by Counsel I need only add that she is entitled to a copy of the evidence that has been given in this Court. Will Mr. Dickinson and Miss Jacobs be good enough to come forward to enter into recognizances to appear at the trial.

Mr. Dickinson was alone present.

His Honour—Before the Court rises, I wish to say, with regard to persons summoned to serve on juries, that the Court will in future accept no excuses from persons who do not put in an appearance when summoned. No excuse will be valid save that of serious sickness or the like. Mere forgetfulness of the times set for appearance, or variations of watches, will not be treated as valid excuses, nor penalties be remitted on those grounds. I hope the gentlemen of the press will give my remarks publicity.

Mr. Dickinson then entered into his own recognizances of \$100 to appear at the trial to give evidence.

His Honour instructed the Usher to bring Miss Jacobs before the Court on her appearance.

Mr. Lowder—I am not at present instructed to ask for bail, but I will ask that accused may—of course in proper custody—be allowed to return to her home to get such articles as she may require to-night.

His Honour—You ask for bail before the Judge?

Mr. Lowder—I am not prepared at the moment with bail.

His Honour—Instructions such as you wish shall be given.

The Court then rose.

LATEST TELEGRAMS.

(REUTER'S "JAPAN MAIL" SPECIAL SERVICE.)

London, November 16.

A treaty of peace has been signed between Italy and Abyssinia. The prisoners held by King Menelik are to be released. Italy recognizes the absolute independence of Ethiopia.

The Niger Company is preparing a large military expedition for which thirty-five British officers have been engaged.

("SPECIAL" TELEGRAM TO "JAPAN MAIL.")

Hakodate, Nov. 19.

Yesterday at 11.30 a.m. a sharp earthquake occurred here, but no damage has been reported. Last night a fire broke out, which was not suppressed until five houses had been destroyed.

(Reuter's Service of Telegrams supplied to the "Japan Herald," the "Japan Gazette," and other Subscribers in Tokyo and Yokohama.)

London, Nov. 14.

The South Australia House of Assembly has passed the Coloured Races Restriction Bill.

Lord Lonsdale, speaking at Whitehaven, said that President Kruger had asked the assistance of the Emperor William at the time of Dr. Jameson's raid into the Transvaal but his Majesty had declined the request. He, Lord Lonsdale, had the Kaiser's authority to state that his telegram to President Kruger meant nothing antagonistic to England or the English.

The Queensland Parliament has passed an urgent Bill to assist the Queensland National Bank, which has lost its entire capital. The liabilities exceed the assets by £2,500,000.

Exchange.

(Tel. trans.)

London, November 17.

The treaty of peace between Italy and Abyssinia was undoubtedly due to Russo-French influence. King Menelik wired both to H.M. the Czar and President Faure the moment the treaty was signed.

(FROM THE "N.C. DAILY NEWS.")

London, November 7.

In a debate on Armenia in the French Chamber, M. Hanotaux stated that the Powers were agreed on common action, which must not impair the integrity of Turkey. The visit of the Czar, he said, had led to a clear exchange of views between the Powers.

The brigands who had captured Captain Marriott have released him, the Turks having paid his ransom.

Mr. E. J. Poynter has been elected President of the Royal Academy.

London, November 9.

The Earl of Selborne, Parliamentary Secretary to the Colonial Office, speaking at Edinburgh, stated that before the meeting of Parliament the Venezuela Question would be satisfactorily settled.

Prince Bismarck continuing his revelations in the *Hamburger Nachrichten* attributes Germany's refusal to renew the Secret Treaty with Russia to English influences.

Messrs. Shand, Mason & Co.'s Fire Engine Factory was burned on Saturday, and three hundred and fifty engines were destroyed.

The Turkish Ambassador in Paris has informed M. Hanotaux that the Sultan has agreed to eight reforms, in which are included the release of innocent prisoners, the protection of peaceable Armenians, the prevention of acts of violence, the granting of relief to the chief sufferers, and reparation to damaged Catholic convents.

London, November 11.

Lord Salisbury, speaking at the Lord Mayor's Banquet in the Guildhall, stated that he had many advisers as to a method whereby to induce the Great Powers to adopt our policy, and alluded to the favourite advice of Mr. Courtney and Mr. Morley, which was a pretty and almost idyllic conception of the conditions of international policy. He said that he could see no cause for abandoning the policy hitherto pursued or for relinquishing a single acre of land we at present occupy. He was glad that the nation now understood that isolated action with regard to Turkey was impossible, and that the European concert seems to be at present better fitted to cope with the question than ever before. He said that the Sultan alone can ameliorate the lot of Christians and Mussulmans. He eulogised Lord Cromer and Sir H. H. Kitchener, saying that the latter's performance would challenge comparison with any in our annals. He announced that the Venezuelan Question was settled in conformity with the suggestion by

America to apply the principle of civil law, whereby the validity of the title would be admitted after a certain lapse of time.

The *Novosti* reports that during the late war China offered Formosa to England, but that Lord Rosebery declined to accept it.

(FROM THE JAPANESE PAPERS.)

Sendai, Nov. 10.
The new colours for the Second Regiment of Cavalry arrived here to-day by a sub-lieutenant.

Komatsu, Nov. 19.
H.I.H. Prince Komatsu came here last night. This morning he went to Arashiyama.

Kagoshima, Nov. 18.
Count Sano, President of the Red Cross Society, arrived here yesterday.

Yamaguchi, Nov. 19.
Baron Arichi, Vice-Admiral of the Navy, left for Hagi to-day.

Matsuyama, Nov. 19.
Major Hiyai, belonging to the Twelfth Regiment at Marugame, who was appointed *attaché* to the Forty-fourth Regiment, arrived here to-day.

Moji, Nov. 19.
Major Marukami and seventy-five Formosa troops left here to-day for Formosa by the *Chihaya Maru*.

Nagasaki, November 19.
The British man-of-war *Immortalité* put into this from Korea to-day. The Russian man-of-war *Bobre* put into this port to-day from Korea.

Nemuro, November 18.
The *Harima Maru* of the Nippon Yusen Kaisha, on her way to Shari, Kitami Province, damaged her engines and returned here escorted by the *Gembu Maru*. To-morrow she will return to Hakodate towed by the *Shinagawa Maru*.

Nara, November 19.
Marquis Ito met Marquis Yamagata at the Kikusuiro last night.

Hiroshima, November 19.
Lieut.-General Nishi arrived here to-day from Ujina.

Hakodate, November 19.
A fire broke out at Ebisu-cho at 6 p.m. yesterday and many houses were destroyed.

CHESS.

(All Communications to be addressed to the Chess Editor.)

The Yokohama Chess Club meets on Monday and Thursday in each week, at the Club Hotel, No. 5, Bund, from 5 p.m. to 11 p.m.

Visitors to Yokohama, and Officers of ships (whether Navy or Merchant service) who are Chess-players, are welcome to use the Club during their stay in this port.

The Tokyo Chess Club meets at the Tokyo Hotel, every Friday, from 1 p.m. to 7 p.m.

SOLUTION OF PROBLEM No. 259.

PROBLEM No. 264. By Rev. J. JESPERSEN.

WHITE.
White to play and mate in two moves.

BUDA-PESTH TOURNAMENT.

This came to an end a month ago. It seems to have been a much smaller affair than was hoped or expected by some of the European and American players. We give the result.

Charousek and Tschigorin a tie; Pillsbury, third prize; Janowski and Schlechter, fourth and fifth, and Walbrodt and Winawer six and seventh prizes. Tarrasch was awarded a special prize for the best score against the prize-winners.

Charousek and Tschigorin had each 8½ games to their credit; Pillsbury, 7½; Janowski and Schlechter, 7 each; Walbrodt and Winawer, 6½ each; Tarrasch, 6; Albin and Maroczy, 5 each; Marco, 4½; Noa, 4, and Van Popiel, 2.

A telegram in the American papers brought by the O. & O. steamer *Coptic* says that at Budapest, on October 28th, the fourth game of the tie match between Charousek and Tschigorin for the first prize at the international chess masters' tournament was played. Tschigorin had the move. The opening was a two knights' defence, Charousek was beaten after forty-six moves. Tschigorin therefore takes first and Charousek second prize. In the third game, played on October 27th, Charousek won, Queen's gambit declined, after sixty-one moves.

CORRESPONDENCE-CHESS.

GAME No. 606.

Another fine game, in which the winner shows resource in difficulty:—

FRENCH DEFENCE.

| 40—P to K R 3 | 40—Q to B 8 ch. |
| 41—K to R 2 | 41—Q takes Kt P |
| 42—Q to Kt 8 ch. | 42—K to R 4 (j) |
| 43—Q takes R ch. | 43—K to R 5 |
| 44—Q to Q 6 | 44—Q takes B P |
| 45—Q takes R P ch. | 45—Q to R 4 |
| 46—Q to Q B 6 | 46—Q to Q sq. |
| 47—Q to Q R 6 ch. | 47—K to Kt 5 |
| 48—P to R 3 ch. | 48—K to Kt 6 |
| 49—Q takes P ch. | 49—K takes P |
| 50—Q to B 6 | 50—Q to Kt sq. ch. |
| 51—R to Kt sq. | 51—Q to Kt 8 ch. |
| 52—K to R 2 | 52—Q to K 5 (k) |
| 53—Resigns. | |

- (a) The commencement of a fine attacking combination.
(b) This seems stronger than P to B 5.
(c) Better than P to B 4, to which the reply would be as—B takes P, with a strong attack if Bishop were capt. ed.
(d) Very good. If the Bishop is taken Kt takes P wins without difficulty.
(e) Kt takes P is also threatened, besides Kt to Kt 5.
(f) To protect the Rook in the event of P takes R or P to K 6.
(g) Presumably to liberate the Knight without allowing Black to exchange; but White should here have treated the Bishop. From this out Black gradually realises the upper hand, but the remainder of the game is full of interesting positions.
(h) The only move.
(i) White's attack having gone, he plays cleverly for a draw.
(j) Any attempt to save the piece would result in a draw at the best.
(k) White cannot save the Q P, and Black Pawn must Queen.

STEINITZ AND LASKER.

These masters were to meet for their duel in Moscow at the beginning of this month and we presume the contest is in progress now. We ought to have some news ere long.

W. H. K. POLLOCK.

News reaches us of the death of this bright young player. Born at Cheltenham, England, in 1859 he had for the last few years resided in Canada where he edited numerous Chess columns and occasionally astonished the Chess world with some of his brilliant play. He was in the Hastings Congress but only succeeded in securing £6.10.0 "Consolation money."

GAME No. 607.

SCOTCH GAMBIT.

- | | |
|----------------------------------|-------------------------|
| WHITE.
H. E. Elliott. | BLACK.
C. T. Friend. |
| 1—P to K 4 | 1—P to K 4 |
| 2—Kt to K B 3 | 2—Kt to Q B 3 |
| 3—P to Q 4 | 3—P takes P |
| 4—Kt takes P | 4—B to B 4 |
| 5—B to K 3 | 5—Q to B 3 |
| 6—P to Q B 3 | 6—Kt to K 2 |
| 7—B to Q Kt 5 | 7—Kt takes Kt (a) |
| 8—P takes Kt | 8—B to Kt 5 ch. (b) |
| 9—Kt to B 3 | 9—Q to K Kt 3 |
| 10—Castles | 10—B takes Kt |
| 11—P takes B | 11—Q takes K P (b) |
| 12—R to K sq. (c) | 12—Q to B 4 (d) |
| 13—B to Q 3 | 13—Q to B 3 |
| 14—Q to R 5! | 14—P to K R 3 |
| 15—P to Q 5 | 15—Castles (e) |
| 16—B to Q B 5! (f) | 16—R to K sq. |
| 17—P to Q 6! | 17—P takes P |
| 18—B to Q 4 | 18—Q to Kt 4 |
| 19—Q to B 3 | 19—R to B sq. (g) |
| 20—R to K 4 | 20—Kt to Kt 3 (h) |
| 21—B takes P ch. | 21—K takes B |
| 22—R takes R, and Black resigns. | |

- (a) Making White's centre; castles is the right play.
(b) A very imprudent capture, which subjects Black to a harassing attack.
(c) Threatening 13—B to K Kt 5.
(d) If 13—Q to Q 4, 14—P to Q B 4, 15—P to Kt 5, 16—P to K 5, 17—Q to R 5 ch, 18—Q to R 5 ch, 19—R takes Kt, and wins.
(e) Black's best defence seems to be:—
16—Q to B 2
17—R takes Kt ch
18—R to K sq. ch
19—Q takes Q ch
20—R to B 4 ch
(f) This is no better.
(g) White's powerful B's are moved with excellent judgment.
(h) 19—P to Q 4 was useless because of 20—R to K 5.

(b) A slip, of which White takes instant advantage. If so—K to B 3, and B to Q 4 wins.
The game was lost in the opening by Black, but White's grip of the attack from the 12th move calls for commendation.
(a) The recognized Kt to Kt is much better, although it results in a tedious defence; but that is the natural outcome of the opening.
(b) With both the adverse wings broken White should have no trouble in winning.
(c) The simpler and better course was B takes B, followed by P to K 4.
(d) Owing to White's leniency the second player has slipped out of his opening trouble.
(e) The end game is pretty managed pawn play, in which Black's advantage of a P plus, is nullified.

COMING EVENTS.

Berlin has resolved to hold an international tournament in 1898; and Tschigorin speaks of a project of an international tournament in Russia between first class prize winners of all countries, and to be confined to 10, or, at the utmost, 12 competitors, but a two-round contest; and Pillsbury has similar ideas about a New York tournament.—*Field*.

GAME NO. 608.

RUY LOPEZ.

WHITE.	BLACK.
W. Crane, jun.	G. W. Hall.
1—P to K 4	1—P to K 4
2—Kt to KB 3	2—Kt to Q B 3
3—B to Kt 5	3—Kt to B 3
4—Castles	4—Kt takes P
5—P to Q 4	5—B to K 2
6—Q to K 2 (a)	6—Kt to Q 3
7—B takes Kt	7—Kt takes B (b)
8—P takes P	8—Kt to Kt 2
9—Kt to Q 4 (c)	9—Castles
10—Kt to Q B 3	10—Kt to B 4
11—Kt to B 5	11—P to Q 4
12—Kt takes B ch.	12—Q takes Kt
13—B to K 3	13—Kt to K 3
14—Q R to Q sq.	14—P to Q R 4 (d)
15—Q to R 5	15—P to Kt 3 (e)
16—Q to B 3 (f)	16—P to B 3
17—B to R 6	17—Kt to Kt 2
18—P takes P	18—R takes P? (g)
19—Kt takes P	19—P takes Kt
20—Q takes P ch.	20—Q to K 3
21—Q takes R and wins.	

(a) This continuation is thought by Lasker and other experts to be the most difficult to defend of all the Lopez attacks.
(b) If 7. Q P takes Kt, & P. takes P—Kt to B 4, & R to Q sq.—B to Q 4, & P to K 6—P takes P, & Kt to K 5—Kt to Q 3, & Q to R 5 ch—K to B sq., & R takes Kt and wins.
(c) A new-fashioned attack is 9. P to Q 4—Castles, & B to Kt 3—P to Q 4, & P takes P—P takes P. This was played by Porger v. Lasker at Nuremberg.
(d) A thin threat to win the exchange. 14. P to B 3 at once was more businesslike.
(e) Creating an unnecessary "hole." We like P to B 3.
(f) Reserving R 6 for the B.
(g) A fatal oversight which loses R and a P for Kt. He should have recaptured with Q, having a fairly and good game.

SAM WELLER ON CHESS.

(With sincere apologies to the shade of Charles Dickens.)

"Sammy," said Mr. Weller, "vot's chess?"
"Vell!" ejaculated Sam, "the innocence an' youth a-budded on to a bald 'ed is a beautiful an' a touchin' sight."

"Don't be rude, Sammy, my boy. Respec' your elders, as the Catechism says."

"All right, old 'un, 'I've a taste for the antique,' as the lodgin' 'ouse boarder said ven the landlady asked him if he was a enjoyin' of the nine-year-old chicken."

"That will do, Sammy. Vot I want to know is, vot's chess?"

"'I'm a comin' to it,' as the hungry fox said ven it caught sight of the lame duck. Chess, my rewered relic, is one o' them things you fights mortal shy on if you valties peace o' mind and such like 'ousehold comforts."

"Samivell," examined Mr. Weller, starting from his seat in evident alarm; "Samivell, you don't mean for to an' say as 'ow it's a widdler?"

"Widdler, no, nor yet a shepherd," laughed Sam.

"Vell, vot on earth is it?" said Mr. Weller testily.
"Now just keep cool, an' you'll be all right," as the monkey said ven he was a-puttin' of the kitten into the kitchen oven. Chess, as I was a-goin' to observe ven you kep' a-interruptin' of me is a thing in vich you starts off simple an' unsuspectin' like an' then finds you've a-took on a lot more than ever you thought for."

"That 'ere description, Sammy applies uncommon vell to widders."

"How you keep a-harpin' on widders. Chess 'as nothin' at all to do with 'em. It's a game, vot you plays on a board with Kings an' Queens, an' Pawns an' things. Some big swells can play it with a 'ankercher a-tied over their eyes."

"Do you take me for a Juggins, Sammy?" said Mr. Weller, in a hurt kind of tone; "'ow could they see to play with a 'ankercher over their eyes?"

"I'm not a-gammomin' of you," replied Sam, "they plays it from mem'ry."

"Vell, vell, vot you say may be true," said Mr. Weller, evidently only half convinced, and consequently disposed to be captious. "But, after all, Sammy, isn't it a-flyin' in the face o' Providence, this 'ankercher work? Vot's the use o' 'avin' eyes if they're to be a-banded up? It ain't Christian, Sammy, my boy, it ain't Christian."

"That's as it may be," said Sam oracularly.
"The fact is, they does it to make the game pop'lar. They thinks 'the end justifies the means,' as the small boy said ven he was a-diggin' into the jam pot with the shoe horn."

"Still, Sammy, it's a kind o' a-standin' on their 'eds ven they'd be heaps more comfortable on their feet. Vudn't the game be just as pop'lar if they played it with their eyes open, and the tackle a frontin' of 'em?"

"I don't know," said Sam. "You see, this blindfold business is out o' the common and you goes to look at it same as performin' fleas or any other instructin' an' improvin' sight. Ven you gets there a very haffable party with a bald 'ed vot they calls the Seccert'ry, sidles up an' asks you if you vudn't like to fine the club, an' ses he thinks your 'ed's somethink like Morphy's, with a touch o' Blackburne about the whiskers, vich he says was two great players, an' he wheedles an' fusses—"

"Ah," interrupted Mr. Weller, with a sigh, "that's 'ow the widders comes over us, Sammy."

"Speak for yourself," replied Sam; dily, "don't go for to 'sociate me with 'em."

"Don't boast, Sammy, my boy, don't boast, 'You never know vot's afore you,' as the fallin' star said ven it landed in the mortal pit."

"It seems to me," said Sam, somewhat impatiently, "that 'we're sort o' gettin' no forrader, as the hen said ven she was a sittin' on the pot egg. Now, vot is it you're a-drivin' at about this 'ere chess?"

"I was a-wonderin', Sammy, vether it was a game vere a man like me vud be at 'ome at. Vot do you say, Sammy, my boy? 'I'll be guided by you,' as the drunken man said to the airy railins."

"You might 'ave a shot at it," said Sam.

"There's all sorts of players, an' you'd 'av to play amazin' bad to be worse than some o' 'em."

"Vell," said Mr. Weller, in a tone of relief "that's a troublesome subject disposed on," as the cannibal king said ven he'd a-eaten of his mother-in-law. But I hope you're right concernin' the widders, Sammy. Don't laugh, my boy don't laugh. You may know a main lot about chess, Sammy. I gives in to you there, but ven it comes to widders, Sammy, and at this point there was a ring of pathos in Mr. Weller's voice, "ven it comes to widders, Sammy, you've a lot to learn, my boy, a lot to learn."

And here, apparently overcome by his feelings, Mr. Weller subsided into contemplative silence.

H. T. BLAND.

MAIL STEAMERS.

THE NEXT MAIL IS DUE

From Hongkong	per P. M. Co.	Saturday, Nov. 21st.
From America	per P. M. Co.	Tuesday, Dec. 1st.
From Canada, &c.	per C. P. R. Co.	Monday, Nov. 23rd.
From Europe, via Hongkong	per N. D. Lloyd	Wednesday, Nov. 25th.
From Hongkong	per P. & O. Co.	Saturday, Nov. 28th.
From Europe, via Hongkong	per N. M. Co.	Wednesday, Dec. 2nd.
From Hongkong	per C. P. R. Co.	Thursday, Dec. 3rd.
From America	per O. & O. Co.	Tuesday, Dec. 29th.

* China left Hongkong on November 12th. † City of Rio de Janeiro left San Francisco via Honolulu on November 12th. The English mail is on board the steamer Hiroshima Maru.

THE NEXT MAIL LEAVES

For Victoria, B.C.	per N. P. Co.	Saturday, Nov. 21st.
For Hongkong	per P. & O. Co.	Sunday, Nov. 22nd.
For Hongkong	per C. P. R. Co.	Monday, Nov. 23rd.
For America	per P. M. Co.	Tuesday, Nov. 24th.
For Portland	per O. R. & N. Co.	Wednesday, Nov. 25th.
For Europe, via Hongkong	per N. D. Lloyd	Friday, Nov. 27th.

PASSENGERS.

ARRIVED.

Per British steamer *Verona*, from Hongkong via ports.—Mrs. Lam K. Sum and Miss A. Thomas in cabin.

Per British steamer *Doric*, from Hongkong via ports.—Mr. H. Hennessey, Mr. De Luze, Mrs. McDonald, Mr. R. de Villard, Master de Villard, Mr. C. W. Wrightson, Mr. E. Forbes, Dr. F. F. Epsague, Mr. K. S. Torii, Mr. C. Narahara, Mrs. de Villard, Mr. F. H. Loring, Mrs. Wrightson, Mr. J. Davenport, and Mr. E. Kellman in cabin. For San Francisco:—Mr. L. E. Clayton, Mr. J. Samson, Mrs. Thiel and child, Mr. A. Sheffield, Mrs. Buchheister, Mr. C. L. de la Cerna, Mr. Quan Moon, Mr. J. Jones, Mr. E. J. Houle, Mr. Buchheister, Mr. H. Geslien, and Mr. D. W. Loring in cabin.

Per American steamer *Peru*, from San Francisco via Honolulu:—Mr. Leland F. James, U.S.N., Mrs. S. M. Jarvis, Mrs. S. A. Jarvis, Mr. C. Grunwaldt, Mrs. Grunwaldt, Mr. E. W. Brown, Mrs. Brown, Mr. Leon Renant, and Miss J. Clery in cabin. For Kobe:—Rev. Sidney Swan in cabin. For Shanghai:—Mr. and Mrs. E. C. Dalton in cabin. For Hongkong:—Messrs. Norman McDonald, Henry McDonald, L. Ferguson, and E. D. W. Fahee in cabin.

Per French steamer *Salasia*, from Marseilles via ports:—Mr. and Mrs. Ruegg, Messrs. Verons, Drumbrack, Colton, Coltingham, Ishida, and de Cuers de Pogolin and five children in cabin.

Per British steamer *Coptic*, from San Francisco:—Mr. T. Takagi, Mr. D. H. Blake, Mrs. D. H. Blake, Mr. S. Shikata, Mr. J. Kono, Mr. G. A. Taylor, Captain A. E. Bouguin, Mrs. A. E. Bouguin, and Mr. S. Arakawa in cabin; Rev. W. C. Grainger in steerage. For Kobe:—Mr. H. L. Baggallay and Mrs. H. L. Baggallay in cabin. For Shanghai:—Miss L. R. Jenkins and child, Miss E. Inven, Miss Addie Sloan, Mrs. P. McCormick, Mr. W. S. Jackson, and Mrs. W. S. Jackson in cabin. For Hongkong:—Mrs. W. K. McKibben and child in cabin; Mr. J. Martins in steerage.

Per Japanese steamer *Yokohama Maru*, from Shanghai via ports:—Professor J. C. Ballagh, Rev. A. V. Byron, Messrs. R. Yamada, C. N. Croese, and H. Beithell in cabin; Mr. and Mrs. T. Yoshida, Miss Kawada, Mr. and Mrs. M. Nishiwo, Messrs. S. Shimura, J. Murao, M. Ridley, and Ah On Sang in second class, and 38 Japanese, 5 Europeans, and 7 Chinese in steerage.

DEPARTED.

Per British steamer *Doric*, for San Francisco:—Mr. A. C. Byer, Mr. and Mrs. O. Buchheister, Mr. L. E. Clayton, Mr. G. J. Campbell, Mr. C. L. Delacamp, Lieut. W. P. Day, U.S.N., Mr. E. Forbes, Mr. B. Guggenheim, Mr. H. Geslien, Mr. Lee Coon, Mr. E. J. House, Mr. H. D. Humphries, Hon. R. W. Irwin, Miss Irwin, Mr. J. Jones, Mr. and Mrs. S. Koya, Mr. D. Kobayashi, Mr. and Mrs. D. Loring, Miss Loring, Mr. Quang Moui, Mr. O. H. P. Noyes, Mr. J. Samson, Mr.

A. Sheffield, Mr. and Mrs. J. Stemme, Mr. H. B. Simon, Mr. and Mrs. E. R. Smith, Miss Marcia Smith, Mrs. Thiele and child, and Mrs. E. Welchman in cabin.

Per American steamer *Peru*, for Hongkong via ports:—Mr. G. Stafford Northcote, Miss C. A. Sutro, Mrs. J. C. Hubbard, two children, maid, and native servant, Mrs. L. L. Reamey, Master Reamey, Mr. and Mrs. F. H. Loring, Mr. R. R. Read, Mr. E. W. Maitland, Mr. Lu Hein Sang and native servant, Mr. and Mrs. F. W. Chang and child, Mr. Chang Tso Fan and native servant, Mr. V. Q. Ng and native servant, Mr. One Shu Lun and native servant, Mr. Chas. Rogers, and Mr. and Mrs. Lamar Lyndon and amah in cabin.

Per French steamer *Ernest Simons*, for Shanghai via Kobe:—Mr. D. Lartien, Colonel Sartorius, Messrs. Otto H. Miller, Geo. B. Pettengill, Paul Kleinwort, E. Kellmann, McGill, John Faickney, Aboddy Powers, H. J. Holm, A. S. Hay, G. Thomas, L. Goetschell, J. W. Adams, Mrs. and Miss Hunt, Mrs. W. Balfour Kinnear, Mrs. C. S. Moore, Sister Marcienne, Sister Pauline, Sister Francois de Salis, Sister Adeline, Mr. L. Maitland, Misses Kelley and Macklin, Messrs. R. Finch and servant, Michelau, Bien, Courandy, S. Cumoodin, E. David, Sellier, A. C. Newcombe, J. Shekury and infant, Mano, Hayashi, F. Doi, K. Takenouchi, T. Kikuchi, T. Oka, Sh. Kawakami, T. Nagasawa, K. Yagi, T. Okamura, Dr. H. Ito, Mr. Lam Tze Un, and Rev. and Mrs. Garret in cabin.

Per Japanese steamer *Kobe Maru*, for Shanghai:—Madame Victoria Ferry, Mr. L. F. James, and Mr. Bruce in cabin. For Nagasaki:—Mr. M. Yamawaki in cabin; Mr. M. Larsen, Mrs. Sugano, Mr. Mariano Jacobo, and Mr. S. Omori in second class. For Shimonoseki:—Viscount Y. Yamao, Viscountess Yamao, Mr. T. Matsuo, and Mrs. J. A. B. Sohre in cabin; Mr. M. Yamato and Mr. T. Bahasaki in second class. For Kobe:—Miss M. C. Bongen, Miss D. Gorrie, Mr. H. Miyabe, Mr. and Mrs. Porter Chandler, and Mr. H. Kobayashi in cabin; Mr. T. Nagata, Mr. Lin Ching Chi, and Mrs. Kondo and 3 children in second class. For Vladivostok:—Mr. and Mrs. K. Nakamura and child in cabin; 59 passengers in steerage in all.

Per British steamer *Coptic*, for Hongkong via ports:—Mr. H. A. Held, Mrs. M. R. Norris, Mr. A. M. Hankinson, Mr. H. Hennessey, Dr. Sprague, Mr. and Mrs. C. W. Wrightson, Mrs. J. K. Robison, Mr. G. A. Taylor, Mr. and Mrs. E. H. Tuska, and Mr. B. Roth in cabin.

CARGOES.

Per French steamer *Ernest Simons*, for Shanghai via Kobe:—Raw Silk for Europe, 774 bales; Waste Silk for Europe, 356 bales.

Per British steamer *Doric*, for San Francisco:—

REPORTS.

The British steamer *Doric*, Captain H. Smith, reports:—Left Hongkong the 5th November, Amoy the 6th, Shanghai the 9th, Nagasaki the 11th, and Kobe the 13th. Arrived at Yokohama the 14th November. Had fine weather throughout the passage.

The British steamer *Coptic*, Captain I. Sealby, reports:—Left San Francisco the 3rd November at 1.33 p.m.; thence to port, strong variable winds, accompanied by frequent squalls, and moderate to high seas. Arrived at Yokohama the 19th November at 6.20 a.m. Passage, 14 days, 23 hours, 19 minutes.

The Japanese steamer *Yokohama Maru*, Captain R. Swain, reports:—Left Shanghai the 13th November at 6.40 p.m.; had light north-easterly breeze and partially clear weather, but hazy inclined. On approaching Woosung Bar, found steamer (name unknown, it being dark) showing signals of distress, having grounded in taking the bar, "7.15 p.m. anchored at Woosung." On the 14th weighed anchor and proceeded, with light, to moderate easterly and south-east winds, cloudy but fair weather; on approaching Goto Islands wind veered into N.E. quarter and increasing to a fresh breeze with gloomy and unsettled weather

and threatening rain up to arrival at Nagasaki, the 15th, at 9.15 p.m. After arrival at Nagasaki set in with heavy rain which continued until noon on the 16th. Left Nagasaki the 16th at 5 p.m.; had moderate N.W. winds and clear weather, after showing Iwo-shima wind veered to northward and gradually increased to a hard gale with rapidly increasing sea and threatening, unsettled weather, which continued up to approaching Rokuren, arriving at Shimonoseki the 17th at 10 a.m. Left Shimonoseki the same day at 3 p.m.; had light north-easterly winds through whole of Inland Sea accompanied with fine, clear weather, arriving at Kobe the 18th at 12.30 p.m. after some delay at Quarantine Station. Left Kobe the 19th at noon; had light to moderate N.E. winds and fine, clear weather; passed Oshima at 7.54 p.m.; thence to Rock Island, which was passed the 20th at 9.50 a.m., had moderate N.E. winds and continued fine, clear weather; thence to arrival at Yokohama the 20th at p.m., had fresh N.E. winds and fine, clear weather. Saw nothing of importance during the passage.

LATEST COMMERCIAL.

THE GREATEST WONDERS OF MODERN TIME

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the dragoman Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN.

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations. Mr. J. T. COOPER, in his account of his extraordinary travels in China, published in 1891, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining 'stock.'"

Sold by all Chemists and Medicine Vendors the throughout World.
May 1st, 1896.

MILKMAID BRAND CONDENSED MILK

The "Milkmaid" Brand is guaranteed to contain all the cream of the original milk. In the process of manufacture nothing but water is removed, nothing but the best refined sugar added.

Avoid low-priced brands from which the cream has been abstracted, and ask for the "Milkmaid" Brand, the best for all purposes.

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL" must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, NOV. 28TH, 1896.

MARRIAGE.

At the residence of the officiating clergyman, 15, Tanikiji, Tokyo, on Wednesday evening, 25th., by the Rev. John W. Wadman, assisted by the Rev. B. W. Waters, of Osaka, the Rev. CHARLES A. TAGUE, of Hiroshima, to Miss GRACE LUCKER, of Rochester, N.Y., formerly of Fukuoka. (Kobe Papers please copy).

SUMMARY OF NEWS.

A VERY violent rain-storm prevailed in Yokohama on Thursday night.

MR. N. J. JORDAN has been gazetted British Consul-General at Söul.

H.I.H. THE CROWN PRINCE was present at the Imperial University sports on Saturday.

IN Fukuoka Ken, the number of applications for new railways now total fifty-nine.

MR. HARAGUCHI, Superintendent Engineer of the Railway Bureau, sent in his resignation

recently, but it will not be accepted by the Authorities.

SIR EDMUND FREMANTLE, K.C.B., has attained to the full rank of Admiral of the Fleet.

ANOTHER frustrated political plot is reported from Korea, but the particulars are not yet to hand.

THE Tokyo Rice Exchange is not working smoothly, and in consequence the market is almost at a standstill.

H.I.H. THE EMPEROR visited Yokosuka on Wednesday and inspected the late Chinese battleship, *Chinyen*.

SMALL-POX is very rife in Kobe. One foreigner has succumbed, and the Kobe Club has been temporarily closed.

ALL hope of saving the *Himji Maru*, of the Nippon Yusen Kaisha, now on the Paracels reef, has been abandoned.

MARQUIS SAIONJI, the ex-minister of State for Education, leaves for Europe on Sunday by the French mail-steamer *Salasia*.

ON Saturday the Y. C. and A. C. defeated the Navy at Association football. On Wednesday the Navy beat the Shore at Rugby football.

THE last sailing race of the season took place on Saturday, when 17 boats entered. The *Albatross* won Mr. Lowder's consolation prize.

THE entertainment arranged at the Public Hall on Wednesday by the Yokohama Circle of the King's Daughters, was a pronounced success.

RUSSIA has rejected the proposal made by France to establish International control of Turkish finance on similar lines to the Egyptian question.

A FRENCH creole of Yokohama shot his wife, a Eurasian, during the course of a quarrel on Monday. He is now awaiting trial at the French Consulate.

A TELEGRAM from Lyons, dated the 18th inst., states that the rice crop in Italy is very bad, and that a petition to the Government to reduce the import duties will be made.

THE total expenditure for repairing the damage done by floods and storms in nearly all the prefectures has reached yen 8,000,000, which will be allotted in the Budget for the thirtieth fiscal year.

THE profits of the Sangu Railway Company from the 1st inst. up to the 10th, were yen 2,963 and those of the Sobu Railway Company yen 6,378 respectively.

THURSDAY was Thanksgiving Day and was duly celebrated by the American residents, mostly around the dinner-table, when turkey and cranberry sauce was the chief item on the bills of fare.

AT a meeting of the Tokyo Ikai (Tokyo Medical Association), at Sakamoto cho, Nihonbashi, on Sunday last, Dr. Hasegawa Tai was chosen President and Dr. Takamatsu Ryoun, Vice-President.

BARON HAYASHI, Minister to China, arrived at Shimbashi Station on Tuesday at 3.20 p.m. He proceeded direct to the Department of Foreign Affairs. It is said that he looked in very good health when he alighted at Shimbashi.

THE decision of the Venezuela Arbitration Court is not expected before the end of the year, hence the German Press regard the Venezuela settlement as an admission on the part of Great Britain

of the right of the United States to supersede any American Republic in the case of a dispute with European Powers.

CAPT. DAVIES, of the *Radnorshire*, rescued ten Chinese junkmen from a water-logged and sinking junk, on his recent voyage from Hongkong to Amoy.

A QUESTION as to the jurisdiction of the Consular-General Court of the U.S., in Yokohama, in the matter of granting judicial separation and alimony, was argued before Mr. N. W. McIvor on Wednesday. He has reserved judgment.

IN a debate in the Reichstag upon duelling in the German Army, the Minister for War, amidst protests, strongly defended the practice of duelling, as the honour of officers demands the right of self-defence, notably against insults by civilians.

BARON MATSUDAIRA MASANAO, Governor of Kumamoto Ken, being appointed Vice-Minister of the Home Department, the vacancy in Kumamoto will be filled by Mr. Chiba, Governor of Miyagi Ken, who will be succeeded by Mr. Anraku, Secretary of Kumamoto Ken.

THE Representatives of the United States and China came to Yokohama on Friday afternoon and visited Rear-Admiral Oxley on the British man-of-war *Grafton*, his flag-ship. The usual salute was fired as each Minister took his departure.

THE trial of the pyx took place at the Osaka Mint on Saturday, when five yen worth of gold coin, some twenty *sen* and 10 *sen* pieces of silver and five *sen* pieces of nickel were tested in the presence of Baron Tajiri, Vice-Minister of the Finance Department.

DURING a debate on the Foreign Estimates in the French Chamber of Deputies, M. Hanotaux, Minister of Foreign Affairs, being asked to define the relations between France and Russia, declared that it was not expedient to supplement the precise statements of the Czar and President Faure regarding the *entente*, the existence of which was undeniable. Referring to Egypt, M. Hanotaux declared that France abandons none of her claims and she was now not alone, having a friendly nation who supports her.

THERE is very little to be said about the Import trade, only a few sales of Textiles having taken place, and these have been retail in quantity. There is no doubt, however, that before long buyers of Yarn and Piece Goods must be forced into the market from sheer necessity to fill wants, though they may at first do only a hand-to-mouth business; and in regard to the immense amount of piece goods at present in godowns in Yokohama it must be remembered that stocks in Japanese hands are now at the lowest possible ebb. Nothing to report in the Metal trade—heavy stock, values unchanged. The Kerosene trade is quiet, dealers waiting for a reduction before proceeding to take more Oil. A shipment of Langkat has arrived at Kobe, and it is stated that arrangements are now complete for a constant supply of this Oil to Japan. The Sugar market is quiet, and the small business done has been on the basis of a reduction in value. A dull week is reported in the Silk trade, prices having a downward tendency in the face of a heavy and accumulating stock. There has been a spurt in the Waste business, over 6,000 piculs having passed the scales. The Tea trade has not been great, but this is probably due to the absence of desirable leaf, as there appears to be rather a good demand for the time of year. However, for the parcels taken full rates have been paid. Exchange has again continued steady.

THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.

The Household Department affair continues to absorb the attention of the vernacular press. Among thirty-three leading articles that have appeared in the principal Tokyo papers during the week, no less than twenty-five are either directly or indirectly, devoted to this matter. These twenty-five articles may be subdivided, for the sake of convenience, into those concerned with the question whether the original article published by the Osaka periodical constituted the offence of lese-majesty; those that urge the Government to thoroughly remodel the organization of the Cabinet and also of the Household Department; and those that charge the Cabinet with having violated in practice the promises it enunciated on coming into power.

The *Nippon* and the *Tokyo Shimbun* are conspicuous among papers of the first subdivision. The former took up the question immediately on being released from the sentence of suspension, and discussed it with unabated energy and vehemence. The arguments of the chauvinist journal provoked equally energetic rejoinders from the *Tokyo Shimbun*, until, at last, the latter brought upon itself a sentence of suspension. The articles are of considerable length, especially that of the *Nippon*, for nearly the whole of six or seven pages of its last Sunday's issue were occupied solely by this subject. We need not trouble our readers by reproducing the angry wrangling of the two journals, but will confine ourselves here to the apparently new phases of this ill-advised controversy.

The *Nippon* searches the history of Japan for a defence of its procedure, and by a curious process of reasoning, quotes first, the career of Somo Kumei, who, in the latter days of the Tokugawa Regency, boldly attacked the Tokyo Administration for neglecting the care of the Imperial Mausolea; and secondly, the conduct of the senior statesmen of the present time who also, at a somewhat later era, charged the Regency with arbitrary conduct and with disregard for the Imperial Court's interest and dignity. These attacks delivered against the Regency which, according to the *Nippon*, enjoyed the favour and confidence of the Court, did not constitute the offence of lese-majesty. Any act really constituting that heinous offence must be severely dealt with, according to the laws of the realm, but the very fact that the Household Department contented itself with having the obnoxious publications subjected to administrative measures is a convincing proof that they were not thought to have perpetrated an offence so serious. The *Nippon*, with extraordinary pertinacity, then reverts once more to the alleged misdeeds of the Household Minister, declares that he appropriates only 10,000 yen annually for the repair and preservation of about 200 Imperial tombs, which are thus left in a state of comparative neglect; asserts that, in consequence of perfunctoriness in the discharge of his duties, he was the means of exposing the Emperor to great danger when His Majesty crossed the railway last summer en route for the Riding School; affirms that he abused his power and interfered in administrative affairs in the matter of the recent suspensions and suppressions of publications, and so forth and so on.

The *Tokyo Shimbun's* article is equally lengthy and is full of heavily leaded passages which Japanese journalists use freely when discussing important topics. It replies that the comparison between the Tokugawa Regency and the Household Department is entirely out of place; argues that the reason why the present Cabinet, after pledging itself not to interfere with political discussions by recourse to suspension or suppression, had no choice but to take that step in the present case, was precisely because the incriminating article was held to constitute the offence of lese-majesty; and declares that to represent the present Cabinet as having been compelled, contrary to its will and in obedience

to pressure from the Household Department, to take administrative measures against the press, is an insult to the Ministry and especially to the Home Minister, since it amounts to representing the Cabinet as mere tools of the Household Department. It further contends that to persist in slandering the Household Minister after he has been enjoined by the Emperor not to resign, is to call in question the propriety of the Sovereign's judgment. As to the alleged neglect in the matter of preserving the Imperial mausolea, the *Tokyo Shimbun* asks its opponent whether it wishes to have them tricked out with gaudy decoration like that employed in the case of temples, and defends the Household Minister in the Riding School incident by declaring that the affair was a pure accident which could not possibly have been provided against by any care on the part of the Household. Lastly, the Liberal organ asks the Cabinet whether the significant dilatoriness of its procedure in the case of the Osaka periodical, was not due to dread lest any summary measures adopted against the press might alienate the sentiment of the *Shimpo* to; whether, in other words, the Cabinet was not betrayed into attaching undue importance to its own political interests at the expense of the Imperial Court's dignity, which it suffered to be injured with impunity. This article of the *Tokyo Shimbun* fell under the displeasure of the Press Censors, and the paper was suspended on the 24th inst., that is, on the very day when the *Nichi Nichi* was permitted to reappear after having been under the ban for three days. As to the *Nippon's* allegation that the Household Department appropriates only 10,000 yen annually for the preservation of Imperial mausolea, the Department has sent it a note that the statement is incorrect and must be withdrawn.

The *Nippon's* persistence has evoked indignant protest from the *Chuo*, which avers that the *Nippon* has now exceeded all its previous disrespectful utterances, for it has even called in question the propriety of the Home Minister's action towards it and the *Twenty-sixth Century*, inasmuch as it represents the Minister as having been forced by a certain section of the public to abuse his official power. Can the Government simulate any semblance of consistency when it suffers such doings to go unchecked?

The *Mainichi's* opinion about the subject is tolerably moderate. It argues that when the Matsukata Cabinet decided—erroneously it is true—to admit a foreign element into its composition, it must have been prepared to assimilate that element and to make it keep step with the general movement. The Ministry, however, have not taken this comprehensive and magnanimous course, but, by regarding these unsympathetic colleagues in the light of *Banshoku Daijin*, have simply driven them more and more into a divergent route. No such persons ought ever to have been admitted into the Cabinet if they were to be treated in such a stand-off and discourteous manner. The only alternatives open to the Cabinet at this juncture are either to win the goodwill of these *Banshoku Daijin*, or, if that judicious and far more statesmanlike policy be found unfeasible, to cast them out from the Ministry.

The *Yomiuri*, the *Kokumin*, and the *Mainichi* urge strongly the necessity of taking firm measures towards what they insultingly designate the *Banshoku Daijin* in the Cabinet, that is to say, the Ministers who, though intrinsically devoid of power and merely allowed to mess with their colleagues, nevertheless exert considerable influence in the conduct of administrative affairs, owing to their connections with the statesmen recently in power. The Ministers of whom these papers write in such disrespectful terms are Viscounts Enomoto and Nomura, Marquis Hachisuka, and Mr. Kiyoura. The *Yomiuri* regrets to see the Ministry so lacking in strength and spirit as to be unable to deal summarily with the *Banshoku Daijin*, and declares that, so long as that foreign element is suffered to sit at the same table with the real

leaders of the Cabinet, the latter will be prevented from taking proper measures should a question of importance present itself for discussion and settlement. In another article the same paper argues that, if the Matsukata Cabinet desires to establish thorough homogeneity in its ranks, and also to establish itself on a firm basis, the *Banshoku Daijin* must either be limited to a wholly subordinate rôle, or be driven out of the Government. The *Kokumin* is particularly bold in this respect, for it does not scruple to assert that if the "mess-together Ministers"—a term which we believe to be of Korean origin—go a step further in their obstructive policy, they may begin to hold secret meetings with the Ito Party, and it may become necessary to shadow them with detectives. Should things reach such a pass, nothing could be more ignominious to the Cabinet, and it ought, therefore, to eliminate the foreign element at once.

The pro-Government papers are still strongly prejudiced against Count Hijikata, and earnestly desire to have him replaced by some *persona grata* to themselves, as Viscount Tani or Prince Konoye. Apart from the vehement *Nippon*, the *Kokumin* expresses this sentiment strongly, and the *Mainichi* in a guarded tone. The Matsukata Cabinet's doings, writes the *Kokumin*, with reference to the Household Minister's affair, were too timid; they were even ignoble. Not satisfied with suppressing and suspending publications, the Ministry dismissed the Vice-Minister, and the Chief of the Peace Preservation Bureau of the Home Office. These steps were dictated by the awe with which the Ministry regards the Court. Now what step is the Household Minister about to take so as to proclaim his respect for the Court, since it was his want of virtue that compelled the editor of the *Twenty-sixth Century* to indite a strong article against him? Is it not he that has dragged this Court affair into the field of party quarrels by asking a certain class of journals to uphold his cause? The Household Minister must not sit complacently with folded hands, after having placed the Cabinet in such a discreditable predicament. The *Mainichi's* article simply says that if more decided measures be not taken to settle the present trouble, another agitation may break out. It refers also to the close relations existing between the Household Department and the men of Tosa extraction, or the latter's intimates. The Minister and the Vice-Minister of the Household, and the Chief of the Imperial Estates Bureau, are all Tosa men.

The *Yiji* offers, in this context, a judicious and timely suggestion for the consideration of the Government and of the public in general. Some hold, observes that independent paper, that the Household Minister must resign, not because the attack made against him by the Osaka periodical was necessarily well founded, but because the incident proves his armour of virtue to be anything but invulnerable. Such a contention must be regarded as devoid of sanity. The article in question neither exhibits any want of respect towards the Court on the part of the writer, nor carries any particular weight as an attack upon the Household Minister. It is simply the utterance of an impertinent youth, and if anybody's character may be impaired on the strength of such a writer's declamations, no one can be secure. To contend that a Minister must resign on such a flimsy pretext, is to make his tenure of office more insecure than that of a shop boy. Of course if the Minister of the Household resign on other grounds, that is entirely a different matter. But the *Yiji's* point is that he must on no account resign because of the present affair. To tell the truth, the *Yiji* is somewhat scandalized by the incident, and is pained at seeing both the Government and the public thrown into a state of ferment by such a trivial cause. It is as if the administration of the country had been degraded to children's play.

The *Nichi Nichi* wants to know whether the authorities deem themselves exempted from any

further responsibility in connection with the affair, so soon as they have dismissed the Vice-Minister and the chief of the Peace Preservation Bureau of the Home Department. Is not the Home Minister and is not the Cabinet itself responsible?

The *Nippon* attempts to persecute its rival the *Nichi Nichi*, which enjoys the special privilege of publishing the official notices of the Department of Communications; a privilege which of course imposes upon local post offices and others the necessity of subscribing for the paper. The change of Ministry without any corresponding change in the *Nichi Nichi's* privilege, has brought about a strange conjuncture, for the *Nichi Nichi* is now found attacking the government whose patronage it enjoys. The *Nippon* considers such a state of affairs to be entirely opposed to the spirit of official discipline, and urged that the *Nichi Nichi* must be deprived of its privilege. It should be added here that the Department of Communications notified the *Nichi Nichi* that the existing relation will be severed at the end of next February.

The *Nichi Nichi* and the *Shogyo* comment on the new Japan-Germany Treaty. The former strongly criticizes Viscount Aoki, as responsible for the defects in the Revised Treaty, a responsibility which the late Cabinet must share. Count Okuma, however, was under no obligation to employ the Viscount. He is at liberty to recall any Minister guilty of the offence of exceeding his powers. Yet the Count, without taking this course and without even adopting a remedial measure devised by his predecessor, has quietly ceded to Consular Courts jurisdiction in matters relating to patents. Though the inconvenience is only temporary, still it must be considered detrimental to the dignity of the Empire and of its people, and for that Count Okuma must be held responsible. The *Shogyo* hopes that the Japanese Government will promptly open special negotiations in this matter and devise some means to provide against the extension of Consular jurisdiction.

EDITORIAL NOTES.

THE U.S. ELECTION.

A TELEGRAM from Chicago, dated Nov. 4th, in the *Tacoma Daily Ledger* says:—"The returns from the entire country, although incomplete in some States, are of a nature to insure the election of McKinley. A sufficient number of States have declared for the Republican party to make certain 264 votes in the electoral college for its leader. The States whose votes are sure for him are as follows:—

California	9
Connecticut	9
Delaware	3
Illinois	13
Indiana	14
Iowa	15
Maine	6
Maryland	8
Massachusetts	15
Michigan	14
Minnesota	9
New Hampshire	4
New Jersey	10
New York	36
North Dakota	3
Ohio	23
Oregon	4
Pennsylvania	31
Rhode Island	4
South Dakota	4
Vermont	4
West Virginia	6
Wisconsin	12

Total 364

The New England States have, as was expected, given heavy pluralities for McKinley without exception. The Republican ticket was successful in Massachusetts beyond what was claimed for it by the most enthusiastic prophet of Republican success. New York and Pennsylvania vied with each other for the largest plurality, and the figures at hand do not indicate which one has surpassed the other. Each state has given the Republican candidate a plurality of between 375,000 and 380,000.

To these States, Illinois is a good third in its plurality for the winning candidate. If the percentage of gain over the presidential election of 1892, that has so far been given continues to the end, it will give a plurality of not far from 175,000.

MONTHLY CUSTOMS RETURNS.

The following is a summary of the Customs Returns for October, showing the foreign trade of the Empire for the month:—

	1895.	1896.
Exports	13,771,947.466	13,544,662.820
Imports	11,039,546.000	15,204,424.400
Total exports and imports	28,809,087.220	28,749,087.220
Excess of imports		1,719,761.580
Exports	238,094.908	
Imports	443,476.016	
Miscellaneous	19,448.710	
Total	701,019.634

SHOOTING A WIFE IN YOKOHAMA.

A FRENCH creole named Armand Tanet has been arrested and charged before the French Consulate with firing at his wife with a revolver, on Monday night. The man's wife was a Miss Peignot, and her husband was once employed in her late father's livery stables. He was a ne'er-do-well, and notwithstanding the efforts of his friends never succeeded in keeping any permanent employment. Lately there has been reason to suspect that his intellect has become deranged and a subscription was raised to get him off to Shanghai. Meanwhile his wife left him and went to live with some friends at No. 138, Settlement. On Monday evening Tanet went to see his wife, and after some conversation with her, in which he strove to persuade her to come back to him,

he fired a revolver. The shot struck the woman's cheek. She then grappled with her husband in an endeavour to get the revolver away from him, and in the attempt the revolver went off, the bullet this time grazing Mrs. Tanet on the left side of the head. Fortunately at this moment the police came on the scene and the man was secured. Mrs. Tanet has had a very narrow escape.

THE STRANDED "HIMEJI MARU."

THE *China Mail* of Nov. 16th says:—"The *Siegfried*, with the salvage party and 140 of the shipwrecked Japanese steamer *Himeji Maru*, arrived this morning from the Paracels Islands. The *Siegfried* arrived at the distressed steamer on Tuesday morning about eleven o'clock. She was found to be in a very dangerous position in a cove behind a high reef. Capt. Tipple pulled off to the *Siegfried*, but afterwards returned to his ship. On Wednesday nothing could be done owing to the heavy seas, which were breaking over the ship. On Thursday efforts were made to rescue the crew, which was accomplished after considerable difficulty, the rescue boats being twice capsized but fortunately with no loss of life. The captain refused to leave his ship, and the purser, the second engineer, a steward, boy, and a cook were left behind on the steamer. It is feared if a strong North wind rises that she will become a wreck; already it is believed the cargo is completely destroyed. The *Siegfried* will make another voyage to the reef to-morrow or next day to bring away the Captain and others who decided to stay behind.

The *Hiroshima Maru*, that arrived in Kobe on Tuesday, brought on from Hongkong 138 officers and men from the ill-fated steamer *Himeji Maru*, which was driven upon the Bombay Reef of the Paracels, on October 1st. The larger number were naval men who were on their way to England to bring out the *Fujiyama*. The *Kobe Chronicle* learns from Captain Anderson that when the *Hiroshima* passed the Paracels she had a westerly current of 22 miles in 24 hours. It was no doubt due largely to this current that the *Himeji* got upon the reef. It was at half-past four in the morning when she struck, and a strong monsoon was blowing at the time.

JAPAN AND FORMOSA.

A CORRESPONDENT writes to the *China Mail* as follows from Tainanfoo, Formosa:—"The people here are now being treated with much consideration by the authorities. . . . The Japanese high authorities know now the true state of affairs, and, as I expected, the people are reaping the benefit in milder treatment. I have just returned from a visit to the Pescadores. Stormy weather prevented my visiting Kapoos—the island where the *Bokhara* was wrecked; but from Fisher Island by the aid of a glass I could distinguish the monument which was erected. On all sides one can see signs of Japanese possession,—in Makung harbour a Japanese man-of-war, and one or two merchantmen. In the town of Makung several Japanese shops in which can be bought foreign goods. All around can be seen the Japanese policeman with his inevitable note-book, the gendarmes, and soldiers. North of Makung they have enclosed a large piece of ground as a Japanese cemetery. In this cemetery are some six or seven huge mounds, and a large monument in the centre indicating that nearly 1,000 soldiers who died of plague are buried in these mounds. There is also a flourishing Japanese school in which Chinese lads get from \$3 to \$4.50 to come and learn Japanese. A few of the Chinese have cut off their queues and adopted foreign dress. The majority of the people are as poor and as wretched as ever they were. . . . It is wonderful how the 50,000 inhabitants who live on these brown, barren rocks manage to eke out an existence. They seem to be getting on well with the Japanese, and I have heard few complaints."

WEDDING IN TOKYO.

AT the residence of the officiating clergyman, 15, Tsukiji, Tokyo, on Wednesday evening, the marriage of the Rev. Charles A. Tague

and Miss Grace Tucker of Rochester, N.Y. (formerly of Fukuoka), was celebrated in the presence of a small company of friends. The Rev. John W. Wadman, assisted by the Rev. B. W. Waters of Osaka, performed the ceremony. The ritual was read from a beautiful souvenir, entitled, "The Wedding Ring," presented by the Rev. M. Rowe, the bride's former pastor in Rochester. The four Misses Wadman acted as Maids of Honour. The marriage knot was tied beneath a beautiful floral bell of white chrysanthemums fashioned after the Old Liberty Bell of Independence Hall. The wedding march was excellently rendered by Miss M. A. Spencer. All the arrangements reflected the highest credit upon the worthy hostess, Mrs. Wadman. After the supper, the happy couple took their departure amid showers of best wishes, rice, and old shoes for their future home in Hiroshima.

FUNERAL OF THE LATE MR. DE WENDRICH.

The funeral of the late Mr. de Wendrich took place on Wednesday morning, at Ohno, Kobe. There was a large attendance, says the *Chronicle*, including the members of the Consular Corps, representatives of the Japanese Prefectural Government, and a detachment from the Austrian cruiser *Panther*. A large number of beautiful wreaths had been sent by the numerous friends of the deceased, including one from the Captain and Officers of the *Pamiat Anova*. The pall-bearers were Messrs. R. von Krencki, P. de Lucy-Fossarieu, J. F. Connelly, J. Carey Hall, W. Braess, W. F. K. Fearon, E. Jubiot, John G. Walsh, Ryle Holme, A. H. Groom, E. H. Gill, H. E. Reynell, C. P. Hall, and Dr. Thornicraft. The funeral service was performed by the Rev. J. L. Atkinson. The flags at the various Consulates and over several offices in the Settlement were flying at half-mast all day.

ARRESTING A LEITH STEAMER AT SEA.

Her Majesty's gun-boat *Circe* brought into Yarmouth last month the Leith steamer *Cavendish* under extraordinary circumstances, remarks a Kobe contemporary. The *Cavendish* was towed into Yarmouth the previous day, disabled, by the London steamer *Urpeth*. No agreement having been made for salvage for services rendered, it was found impossible to serve a writ on the *Cavendish* until the next morning, and her captain attempted to take advantage of the opportunity to leave without giving a bond. A Customs House officer was put on board to prevent him, but the Captain engaged two tugs and left late for the Tyne. Some hours later the *Circe*, which is a powerful fishery cruiser, arrived off Yarmouth, when the commander was informed of the *Cavendish's* escape. The *Circe* at once started in pursuit, and on coming up with the *Cavendish* the latter surrendered, and the *Circe* took her in tow to Yarmouth, where she was put under guard until all the legal formalities had been complied with.

RESCUED IN MID-OCEAN.

The *Strait Times* hears that the steamer *Prins Heinrich* arrived at Colombo on the 24th October, with 65 men, women, and children, officers, crew, and passengers of the steamer *Taif*, which foundered in mid-ocean on her way from Mauritius to Bombay. Most of these on board got away from the ship in safety, but 12 were drowned. Those who took to the boats were picked up by a sailing vessel, and on this they were for over a month, the sailer being bound for the China seas. At length the *Prins Heinrich* was spoken by the sailing ship, and the shipwrecked people were sent on board her, and conveyed to Ceylon.

BRITISH CONSULAR CHANGES.

The following notification appears in the London *Gazette* of the 9th October:—The Queen has been graciously pleased to appoint John Carey Hall, Esq., to be her Majesty's Consul for Hyogo and Osaka, to reside at Hyogo; Joseph Henry Longford, Esq., to be her Majesty's Consul at Tamsui; Henry Alfred Constant Bonar, Esq., to be her Majesty's Consul at Tainan; William Joseph Kenny, Esq., to be her Majesty's Consul for Hakodate and Ni-

gata, to reside at Hakodate; and Ernest Miles Hobart-Hampden, Esq., to be her Majesty's Vice-Consul at Tokyo.—Mr. J. J. Quin has since resigned the service, leaving a vacancy at Nagasaki, so a redistribution of posts will shortly be announced.

RUGBY FOOTBALL.

It is a pity that the old prejudice against Rugby football dies so hard a death. Under the present rules it is a more exciting game than "Socker" and certainly far from dangerous, the rough and tumble elements of its infancy having been gradually eliminated. Yet in this far-distant portion of the East, though many Rugby players are now resident in the port, we only see the game once or twice in a season, when naval teams can get together. On Monday afternoon the officers of H.M.S. *Undaunted* and *Plover* beat the officers of the *Grafton*, under Rugby rules, by four goals to two tries. The flagship must look to its laurels.

NAVAL NEWS.

The *Ancona* is bringing up two bower anchors and cables for H.M.S. *Plover* to replace those recently lost in the Behring Sea.—On Nov. 6th No. 20 torpedo boat, belonging to the Hongkong Naval Yard, in charge of Lieutenant Taylor, with a crew from the *Narcissus* for training purposes, struck on a rock and had to be beached on the south side of Stonecutter's Island to prevent her sinking.—During the heavy gale in Hongkong on November 5th, the accommodation ladder was swept away from the side of H.M.S. *Narcissus*. A steam cutter, lying alongside, which was having a boiler hoisted out, was swamped by the heavy sea and sank. Divers have been sent down to search for both, but up to the present no trace of them has been discovered.

H.M.S. "IMMORTALITÉ."

A most enjoyable concert was given on board H.M.S. *Immortalité* on November 19th, while the vessel was at Nagasaki. Captain Chichester and officers and ships' company seem to have been most profuse in their hospitality, while concert was above the average in quality. We understand that the *Immortalité* will leave Nagasaki for Hongkong shortly to have her funnels lengthened. But before undergoing that operation, however, it is possible she may carry over to Chemulpo the monument that has been at made Nagasaki to be erected in memory of the 48 victims of the *Edgar* disaster. The monument will not be erected until next spring, as the foundations cannot be laid properly while the frost is in the ground.

THE "FUJI-YAMA KAN."

The battle-ship *Fujiyama*, which has been built in England for the Japanese navy, and is now under equipment, is expected to leave for Japan in March or April. The *Fiji* states that it is proposed to bring her out by way of the Cape of Good Hope. The draught of the vessel is 27 feet, and to come through the Suez Canal she would have to discharge her armament, coal, etc., to lighten her; in addition she would have to pay a considerable fee for passing the canal. To come round the Cape would take about four weeks longer than to come via the Canal. But the discharge and unloading of the armament, etc., would take about two weeks, so that the delay will be only a fortnight in taking the longer route.

INTERNATIONAL COURTESIES.

The crew of the *Olympia*, our Nagasaki contemporary says, contemplates giving a dinner to the men of the Russian men-of-war in port in return for a like courtesy extended to them by the Russian blue-jackets at Vladivostok during the festivities attendant on the celebration of the recent anniversary of the coronation of the Tsar.

LI HUNG-CHANG'S COFFIN.

An amusing story is told by the Chinese papers about Li's coffin which was on board the *Glenariny* when the vessel was on fire recently in the Red Sea. The coffin was not burnt, as at first reported, but was sold by auction by the underwriters, an English museum becoming the purchaser. The underwriters, it is said, have written

to the ex-Envoy offering him the value of the coffin, but the great man, with superstitious fears, declined to take the money. The *China Mail* remarks that this is the first time in his life probably that Li has refused money.

RUGBY FOOTBALL.

A GAME of football under Rugby Union rules was played in Yokohama on Wednesday between a fifteen from the ships of Her Majesty's fleet now in harbour, and a team picked up by the shore. The Navy were infinitely superior to the Shore, which is only to be expected considering the length of time that has elapsed since most of the latter have played. Besides, the Navy had Dunkin, a tower of strength, who did all the scoring of the day. The Navy won by 10 points—2 tries, and 1 dropped goal—to nil.

TROOPS FOR MANILA.

The Spanish transport *Colon*, with heavy reinforcements of men—cavalry, artillery, marines, and sappers and miners, and large stores of munitions of war, arrived at Singapore on the 29th October, and, having taken 600 tons of coal, left during the night for Manila. The *Colon* is the largest steamer of the Compania Transatlantica which has ever been to Singapore, and is a very fast ship, making the run from Barcelona to Singapore in 23 days. She is to be followed by her sister-ship the *Cavadonga* with two battalions of troops on board.

LITERARY SOCIETY.

THERE was a fair attendance at the meeting of the Yokohama Literary Society last evening when the Rev. E. S. Gale read a capital paper on "The Korean Coolie." Mr. Griffin, who presided, thanked the reader, and hoped that he would give the Society another paper before he left Yokohama. The musical part of the programme included.—Overture, "Fra Diavolo" (Auber), the Misses Sale; song "Les Rameaux" (Faure). Mr. den Arend; trio, "Ye Shepherds" tell me" (Mazighi), Messrs. Lewis, Whitefield, and Crane.

KOBE NEWS.

OWING to an outbreak of small-pox among the servants, the Committee of the Kobe Club have deemed it prudent to close the Club for a short time. This action seems to have evoked sharp criticism.—The foreign laundry in Kobe is meeting with difficulties, the Japanese laundry men being leagued against it and resorting to all sorts of underhand means to impair its credit: articles of clothing being actually stolen in transit.

QUICK DOCKING.

UNDER this heading the *Nagasaki Shipping List* of Friday says:—The Russian Volunteer Fleet steamship *Yaroslavl*, a vessel of 4,300 tons, entered the Mitsu Bishi dock at 8 30 a.m., on Wednesday, was cleaned and given two coats of paint and launched again by 5.15 o'clock the same day. In other words the operation took just 9 hours 15 minutes, which we believe is record time.

THE LATE CAPTAIN HARDY.

THE late Captain W. H. Hardy, whose death we announced on Monday morning, was a Suffolk man, being a native of Ipswich. He arrived in Japan in 1873 and after several years work in the Siberian trade and sealing voyages, entered the N.Y.K. service as a diver. He was buried in Kobe on Monday.

ASSAULT.

A FRENCH sailor named Louis Rey, (19 years of age), belonging to the M. M. steamer *Salasie* was sentenced in the French Consulate on the 21st inst. to one month's imprisonment for having wounded two jinrikisha men named Sofu and Okada, in Yokohama Settlement, on the 19th inst. The accused was drunk at the time.

SMALL-POX AT KOBE.

SMALL-POX has been very rife among the Japanese at Kobe and now a foreigner has succumbed, Mr. H. W. Vince, of Messrs. Strauss & Co., sinking on Friday after a very brief illness. He had only been in Japan some eighteen months. Another foreigner is also sick with the disease in Kobe.

CURRENT POLITICS.

The Standing Committee of the *Shimpo-to* met on Saturday afternoon to discuss what attitude the Party ought to take in connection with the Household Department affair. After an excited debate, lasting for about two hours, it was decided to leave the matter in the hands of general commissioners elected from among the Standing Committee, with the understanding that the Commissioners should endeavour to bring about a result consonant with the dignity and prestige of the Party. It was also decided to send the following circular to members of the Party in the provinces:—

"The fact that the Matsukata Cabinet, after pledging itself to safeguard freedom of speech, should have suddenly suppressed or suspended publications, will probably strike you with surprise and engender suspicion; for whatever conditions exist with the Government, these administrative measures amount to a distinct breach of a public promise. It is consequently, needless to say that the Party, in conformity with the resolutions adopted on the occasion of its last extraordinary meeting, must publicly censure the action of the Government. None the less to conclude that because the Government have acted erroneously in this matter, everything else undertaken by them must be similarly blameworthy, and to immediately open a general campaign against the Ministry for that reason, must be accounted a hasty procedure. In view of this consideration, the central office of the Party, is now conducting negotiations with the Government so as to induce the latter to duly review their procedure and put into genuine practice the promises made by them to the people. Should there be no hope of arriving at a satisfactory result in this negotiation, the central office will not fail, at the proper juncture, to take whatever steps the occasion dictates. For purposes of reference, the opinions held by the central office with regard to the affair of the Household Minister may be briefly stated thus:

1.—The Central Office sincerely regrets that the Opposition have debased the affair of the Household Minister into a weapon for party squabbles.

2.—It being an original tenet of the Party that the Household Department must be made to hold aloof from politics, the Central Office, even though challenged by the Opposition with reference to this affair, is determined not to accept the challenge.

3.—There may be in the Household Department many points demanding reform, but the Central Office is of opinion that to insist on such reforms at present, when party discussion has been carried to fever heat, might drag the Department into the vortex of political warfare.

4.—Consequently, the allegation that the Central Office has preferred to the Cabinet a demand for the resignation of the Household Minister is simply a capard fabricated by the Opposition.

Postscript.—Some of the Cabinet Ministers are reported to have made the following remarks on the occasion of an extraordinary Cabinet Council held to discuss the Household Department affair:—"Although no objection is entertained to the Government's introducing, in the next session of the Diet, an amendment of the Press Law striking out the clauses relating to suppression and suspension, there is no reason to relinquish the power of suspension and suppression so long as the Law remains unamended." "In the case of political discussions, the power of suppression and suspension need not be exercised, but in matters relating to the Imperial Court it must be employed so long as the Law remains unaltered." Such absurd arguments can not be approved by the Central Office. In short, any error committed by the Cabinet will be distinctly recognized as such by the Central Office and will be unreservedly censured; but, at the same time, the Central Office will endeavour to

make the Cabinet adopt such praiseworthy measures as shall atone for the fault it has been betrayed into committing."

The Editor of the *Tokyo Shimbun* has been arraigned before the Tokyo Local Court on the charge of endeavouring to bring officials into public contempt. The newspaper itself explains that the cause of the prosecution is to be sought in the attack directed by it against Mr. Takahashi, the Chief Secretary of the Cabinet.

It is confidently believed that Baron Ito contemplates starting an organ of his own and one of Marquis Ito's in Tokyo and in the Kei-Han districts. The *Jiyu*—now an insignificant daily—announces that it will cease publication, and that it will be replaced by a new daily called the *Meiji Shimbun*, of which the first number will appear on the 3rd prox.

We read in the *Jiyu* that certain influential intercessors have appeared upon the scene, and have succeeded in removing any feelings of umbrage that may have temporarily estranged the Cabinet and the Household Department. One or two questions that have arisen in the sequel of the present affair remain to be disposed of.

It is an invariable habit with the opponents of a Cabinet in Japan to prefer against prominent Ministers charges of misappropriation of public funds. When Count Matsukata was Premier in 1892, some of the *Jiyu-to* politicians accused him of providing a sum of half a million yen for election expenses, the money being taken from some reserve or surplus not very distinctly indicated. Those that were present in the Lower House when Count Matsukata repudiated this accusation from the rostrum, can not have forgotten the indignant vehemence with which he uttered five words of denial, and the conviction this disavowal carried. Now again we find the *Tokyo Shimbun* charging Count Okuma with having presented eight thousand yen to the members of the former *Kaishin-to*, on the Emperor's birthday. Mr. Ozaki Yukio is made the retailer of this story, and it is added that the *Kaishin-to* were not content. Of course the money is supposed to have come out of the secret service fund of the Foreign Office, but the publication of such a charge shows either that the editor of the *Tokyo Shimbun* is ill informed, or that he counts on finding his readers very ignorant.

Despite the fact that the central office of the *Shimpo-to*, in a circular addressed to the Party's constituencies a few days ago, denied explicitly that any demand had been preferred for the removal of Count Hijikata, the *Nichi Nichi Shimbun* now alleges that the *Shimpo-to* have asked for the removal, not of Count Hijikata only, but also of four Ministers of State, namely, Viscount Enomoto, Marquis Hachisuka, Viscount Nomura, and Mr. Kioura, and that they desire to have the portfolios given to men of their own Party. Our contemporary further alleges that a secret meeting of the Cabinet was held on the 19th inst. to consider this demand, and that a decision in the sense of a compromise was adopted, the Government agreeing that the Ministers indicated should be removed, but that favourable opportunities for effecting their removal must be awaited. With that answer the *Shimpo-to* representatives finally consented to be satisfied. The *Nichi Nichi Shimbun* is seldom mistaken in its political intelligence, but of course it does not now enjoy the same facilities for obtaining information that it did formerly. We see no reason to attach any credence to this particular story, for although the leaders of the *Shimpo-to* have displayed a most singular want of tact in their attitude toward the Cabinet, and have made themselves decidedly ridiculous by their theoretical expression of confidence in the Government, and their practical declarations of distrust, it is incredible that they should prefer such a demand as the above, or that, if preferred, the Government should listen to it.

We have before us two utterances attributed to

prominent statesmen, on the subject of the Household Department affair, and the consequent suspension and suppression of publications. The first appears in the columns of the *Nichi Nichi Shimbun* and is attributed to Viscount Shirane, formerly Minister of State for Communications. "This business of disrespect to the Throne" the Viscount is represented as saying, "is an astonishing affair. Matters relating to the Imperial Court ought always to be spoken of with the utmost deference, but truly when it comes to marshalling a pack of falsehoods about things of which His Majesty has not even any cognisance, and dragging the Court into the arena of party squabbles, it is impossible to speak in terms of too great condemnation. For my own part, having just recovered from an illness, I have made preparations for a trip to Europe, but it seems to me that I must abandon my intention, and fight this battle of the Household Department to the bitter end." The second utterance is published by the *Yorodsu Choho*, in the form of an interview that one of its staff had with Count Okuma on the 21st instant. His Excellency is made to say:—"The Cabinet does not consider that this discussion about the Household Department was actuated by any want of respect towards the Throne. Doubtless the language employed is not without points lacking in politeness, but that is a mere question of literary unskillfulness. The Cabinet, indeed, was at first disposed to attach little importance to the incident, but when the discussion was taken up here and there, and seemed likely to reach even the Sovereign, the Minister of Home Affairs had recourse to the suspension and suppression of publications in accordance with the provisions of existing laws. The Cabinet deeply regrets this occurrence, but accepts full responsibility for what it has done. It has been alleged that a split has taken place in the Cabinet in connection with the affair, but there is no truth in such a statement. If any proof were needed of the respect entertained by this Cabinet for freedom of speech in political discussion, instances could be adduced of cases where language much stronger than that applied to the Minister of the Household was suffered to pass without Administrative interference. I need scarcely deny the allegation that the Minister of the Household brought pressure on the Cabinet in this matter. The Minister of the Household is concerned with the affairs of the Household, and has nothing to do with the Administration. His interference would not be tolerated. As to his resignation, there has been no talk of anything of the kind in the Cabinet, and it is absolutely false to say that the Cabinet meeting on the 22nd instant had anything to do with such a subject. Equally incorrect is the rumour that there has been a want of unanimity among the Cabinet Ministers. From the moment that want of unanimity occurs, the Cabinet falls, as was the case with the Ito Cabinet. I can further assure you that the talk about a schism on the part of Mr. Kioura, Viscount Nomura, Marquis Hachisuka, and Viscount Enomoto is quite baseless. Those four Ministers have most loyally followed the Premier's lead. Did they entertain a different view, they would either resign or have to leave the Cabinet."

There is no reason to doubt that the *Yorodsu Choho's* report is correct. It finally disposes of many rumours previously disturbing the public mind.

HEREDITARY PROPERTY OF PEERS.

The *Oriental Economist*, after most laborious researches, has succeeded in arriving at some definite figures regarding the extent of the family property of peers registered in the Imperial Household Department. The *Economist's* figures are mainly gleaned from the *Official Gazette*, and date from 1884 to 1895 inclusive. At the end of last year, the peerage consisted of a little over 600 members, of whom 206 possessed hereditary property as follows:—Princes 9, Marquises 17, Counts 32, Viscounts 127, Barons,

10. Classified as Court or feudal nobles, and Peers created since the Restoration, the following figures result.

	Court Nobles.	Feudal Nobles.	Newly created.
Princes	6	3	0
Marquises	4	12	1
Counts	10	21	3
Viscounts	27	104	6
Barons	4	4	1

Total..... 51 144 11

Stocks and land belonging to peers by hereditary right are as follow:—

		Yen.
Pension Bonds		97,000
Navy Bonds		29,300
War Bonds		40,000
New Pension Bonds		2,525
Redemption Bonds		683,350
Nippon Ginko		1,660
Specie Bank		30
15th National Bonds.....	109,851	
Nippon Yusen Kaisha.....	3,744	
Marine Insurance Company	583	
Nippon Railway Company.....	28,588	
Hokkaido Tanko Railway	430	
	Y.-registered value.	
Wet arable land.....	1,848 cho	716,911
Dry arable land.....	440 cho	72,000
Dwelling land	550,000 tsubo	370,000
Salt fields	2 cho	800
Swamps and ponds.....	63 cho	570
Forest land	3,263 cho	15,000
Fields	599 cho	4,000

The *Oriental Economist* estimates the current price of the foregoing bonds and shares at about 35 million yen, and the landed property at 5 millions; in all, 40 million yen.

It next proceeds to discuss the influence that hereditary property exercises on the economy of the country. Peers being forbidden to use their hereditary property for purposes of business speculation, stocks and bonds incorporated in the list of family property must be considered as virtually withdrawn from the market. The consolidation of so much capital may, without exaggeration, be considered as a factor tending to tighten the market. The *Economist* is apparently opposed to the system of family property, and thinks that the comparatively scarce holding of such property by newly created Peers shows that they also regard it as useless. Hereditary property tends to interfere with the free development of the peers, a point borne out by the comparative scarcity of able men among the wealthier feudal peers as compared with their poorer brethren of Court extraction. Even the main purpose for which such property is intended, the maintenance of the status of the peerage, will soon not be easy of fulfilment, for while the property of peers, being subject to various inconveniences and restraints, can only be increased slowly, far more slowly than the advancement of the status of the people, commoners will soon amass larger property than their titled neighbours and thus throw them into the shade. Hence the system should be abolished.

MARITIME EDUCATION.

The Tokyo Mercantile Marine College has just turned out 49 graduates, thus bringing up the list of its alumni to 273. Owing to deaths, however, the number actually stands at 241 only. These are now occupying the following positions, namely, 41 captains, 80 mates, 11 engineers, and 49 assistant engineers, 11 first lieutenants in the service of the Imperial Navy, and so forth. The navigators brought up at the institution played a distinguished part during the recent war, and their services were duly acknowledged by the Government. Thus six of them received military orders, while 177 others obtained either pensions accompanied by decorations or rewards with or without decorations. The scope of the Institution has been considerably expanded, and it is expected that after a few years it will turn out more than 100 graduates annually.

Our readers are already aware that the expansion of marine transportation business since the war has been extraordinary. At the end of 1894, Japanese steamers and sailing vessels aggregated only 212,925 tons, but the figures

now stand at 339,721 tons. In 1894, ships built after the foreign model numbered 1,467, of which steamers constituted 745 and sailing vessels the remainder. There must therefore be some 2,000 ships at least registered in the Government list. Again, in 1894, there were 198 Japanese and 286 foreign captains qualified to command ships of over 500 tons displacement, Japanese and foreign mates or engineers for ships of the same standing being 692 and 471 respectively.

PATENTS, TRADE MARKS, ETC.

The Department of Agriculture and Commerce has issued the following:—

DEPARTMENTAL ORDINANCE No. 9.

Art. I.—If any person residing abroad desire to apply for a patent of any invention, or for registration of a trade mark or design, or to preter a claim in connection with the same, he must appoint a deputy, duly furnished with power of attorney, residing in Japan.

Art. II.—A foreigner forwarding an application or claim in connection with patents, trade marks, or designs, must append a certificate of nationality.

Art. III.—Applications, specifications, claims, or any other documents or communications addressed to the Patents Office, must be written in Japanese.

Art. IV.—Whenever a power of attorney, certificate of nationality, or any other document is written in a foreign language, a translation must be appended.

(Signed) VISCOUNT ENOMOTO,
Minister of State for Agriculture and Commerce.

(Dated) Nov. 20th, 1896.

These rules have been enacted primarily to facilitate transactions of the nature referred to on the part of Japanese subjects residing abroad, but their provisions will, of course, have equal force in the case of foreigners that apply for patents, registration of trade marks, and so forth. It appears that Japanese residing in foreign countries have hitherto been in the habit of investing their attorneys in Japan with the character of inventors for the purpose of taking out patents or registering trade marks, and much inconvenience has resulted to the Patents Office no less than to the applicants themselves. The attention of applicants should also be especially directed to the fact that all fees must be paid to the Patents Office, not in coin or bank notes, but in registration stamps (*tsuki inshi*), which have to be duly cancelled by the seal or signature of the applicant. The Patents Office is strictly forbidden to receive any fee in cash, and, consequently, should cash accompany an application, it must of necessity be returned, needless delay and trouble being thus caused.

DRUGS IN JAPAN.

The drug and chemical trade has advanced in Japan in proportion to the progress in other lines of industry. Pills, ointment, powders, and so forth, in addition to the so-called *kaden myovaku* (patent drugs ranged under the title of hereditary family secrets) included only 140 varieties twenty years ago. Since the stamp duty was enforced in 1886, a considerable change has come about in the drug trade. The "hereditary family secret drugs" have been gradually superseded, and drugs compounded after the foreign style have appeared in large numbers. "Quinine Bitters" has enjoyed a remarkable popularity for about ten years, and at present every druggist of note has among his list of drugs one or more compounded with quinine bitters "for restoring the disorders of the digestive organs." Indeed, drugs of this description are now very numerous, there being at least 40 varieties. Even "hair-restorer" has run to five or six varieties in Japan. The latest introduction from abroad in the "jikyo-gwan," a Japanese name for pills manufactured by the Lion (Whelpton's?) Pills Dispensary, England, which are advertised as the best remedy "for bracing up the system and restoring bodily vigour." Importers have not spared money in vaunting this pill's miraculous virtues, and the money thus spent is believed to have been repaid a thousand-fold.

THE SPINNING INDUSTRY IN CHINA AND JAPAN.

The *Mainichi* gives a very clear exposé of the relative circumstances of the spinning industry in Japan and China, especially with respect to Japan's recent surrender of the privilege of free manufacture. Our contemporary's purpose is to prove that the abandonment of that privilege really confers a substantial benefit on Japanese spinners and enables them to compete successfully with spinners working in China. Those that seek, writes the *Mainichi*, to minimize the advantage accruing from the excision of the free-manufacture clause and the consequent imposition of a tax by the Chinese Government on goods manufactured by natives or aliens within its own dominions, hold that even if an impost of 10 per cent. belevied on commodities in China, Europeans and Americans will not be deterred from investing capital in the shipping industry, since they are contented with a narrow margin of profit, say 5 to 7 per cent. Thus they can compete with success against Japanese spinners. Our contemporary does not, of course, maintain that the imposition of a 10 per cent. duty will prove prohibitive to the foreign spinning industry in China, seeing that even the Osaka capitalists who decided from the outset to elect a mill in Shanghai, are steadily proceeding with the enterprise. But it is certainly true that were no such duty imposed, Japanese producers of yarns would be entirely precluded from shipping commodities to China. There are in China seven mills, at which the spindles in operation and those to be newly added, total 135,000 and 90,000 respectively. There are also seven other mills in course of construction, their spindles aggregating 235,000. In this latter figure the portion representing Japanese enterprise is only 60,000, the remaining 170,000 being the property of Western capitalists. The Japanese are not so devoid of the spirit of enterprise as to shrink from starting industries in China or elsewhere, but everybody must admit that, other things being equal, no people carrying on business in a foreign land can reasonably hope to achieve the same measure of success as they would if working at home. Suppose then that China imposes a tax of 10 per cent. on the spinning industry within her own dominions, how will the case stand as compared with the same industry conducted in Japan? According to information from most trustworthy sources, the spinning business in China, if free from all taxes, should give a net profit of 15.04 per cent., which will therefore be reduced to 5.04 per cent. after the imposition of a 10 per cent. tax. Turning to Japan, we find at present 57 mills with spindles aggregating 1,300,000, of which only 610,000 are in operation. During the last half-year, after adding 12,071 yen to their reserves, these mills declared an average profit of 10.5 per cent. However, as various miscellaneous expenses must be incurred in shipping yarns to Shanghai, a Japanese mill can not expect to clear more than 9.57 per cent. on the sale of its products to China. Even at that rate, a clear margin of 4.53 per cent. appears in favour of the Japanese producers, a margin sufficient to guarantee success in competition with producers carrying on business in Shanghai. If, as some estimate, the clear profit accruing on the spinning industry in China, after a tax of 10 per cent. is deducted, amounts to 7 per cent. instead of 5, then, in the same way, there remains on Japanese yarns shipped to China a margin of some 2½ per cent. Hence, the *Mainichi* concludes, the retrocession of the free-manufacture clause confers a substantial gain on the Japanese spinning industry.

These figures are very interesting so far as they go, but their value would be much enhanced by a clear statement of the reasons that enable cotton mills in China to realize a profit of from 15½ to 17½ per cent., whereas cotton mills in Japan yield only 10½ per cent. So far as we can see, the salient difference in the conditions under which the industry is carried on in the two countries is that, whereas the Chinese mills obtain their supplies of raw material in China, the Japanese have to carry theirs from China to

Japan, so that the cost of the cotton is enhanced by export duty and freight. But, on the other hand, Chinese manufacturers have to pay freight and import duty on the coal used at their mills, and it would consequently seem that neither side possesses any special advantage over the other—at all events, nothing to account for a difference of from 5 to 7 per cent. in the net profits realized. It is evident that some explanation of this point possesses the greatest interest, for upon it seems to depend the relative capacity of Japanese and Chinese labour and organization for industrial purposes.

THE PRESS AND COUNT HIJIKATA.

We have alluded at some length in our leading columns to the series of blunders into which the *Kobe Chronicle* has been betrayed in connection with the affair of the *Twenty-sixth Century*. But before dismissing the subject some reference should be made to our contemporary's unfortunate hyperbole when it alleges that, "except three hireling prints, every paper in the empire says there is some truth in the allegations" against Count Hijikata, and, above all, when it adds that the Ministry's act in suspending the *Nippon* and suppressing the *Twenty-sixth Century*, was "instigated by a notorious evil-doer, unless every newspaper in Japan lies horribly." The "three hireling prints" are the *Nichi Nichi Shimbun*, the *Tokyo Shimbun*, and the *Chu-o*. These papers the *Kobe Chronicle* calls "organs of Marquis Ito, Count Hijikata's accomplice." The description is misleading. The *Chu-o* is the organ of the National Unionists; the *Tokyo Shimbun*, the organ of the Liberal Party; and the *Nichi Nichi* is certainly not controlled by Marquis Ito, though generally friendly to him. At any rate, nothing could be more unjust than to stigmatise these papers as "hireling prints" in contradistinction to other Japanese journals. Among the great Tokyo dailies there are very few that are not affiliated with some political party just as closely as are the *Chu-o* and the *Tokyo Shimbun*, and much more closely than is the *Nichi Nichi Shimbun*. If these three are "hirelings," then nearly all are hirelings. At any rate, to say that "unless every newspaper in Japan lies horribly," Count Hijikata is "a notorious evil-doer" is one of the grossest exaggerations we have ever seen in print. There has been no such unanimity on the part of the press. Only two newspapers of importance, the *Nippon* and the *Kokumin*, can be said to have endorsed the charges brought by the petty Osaka periodical. The others have kept silence, or condemned the *Twenty-sixth Century* with more or less vigour, or merely discussed whether the impugned article could be justly regarded as disrespectful to the Imperial Court. Moreover, no impartial man could rise from a perusal of the *Nichi Nichi Shimbun's* reply to that article without being convinced that the Osaka periodical's attack is a tissue of wanton falsehoods or ignorant blunders. So far as we can discern, the whole affair is a political plot having for its object a radical change of *personnel* in the Household Department. All students of Japanese politics know that Marquis Ito owes something—perhaps a good deal—of his great influence to the confidence placed in him by the Emperor. Nothing, therefore, could further the aims of his political opponents better than to undermine that confidence, or, at any rate, to re-organise the Household Department in such a manner that it should interpose between the Marquis and the Emperor, instead of being eminently friendly to him, as it is at present. Such schemes are common incidents of party conflicts, the world over. But happily they are not always promoted by the aid of gross personal slanders, and, in this case, only the most reckless of the plotters, namely, the *Twenty-sixth Century*, the *Nippon* and the *Kokumin*, have lent their columns to an attack upon the morality of an old man who has hitherto enjoyed the reputation of being one of the most conscientious and least self-seeking officials of his time.

THE HOUSEHOLD DEPARTMENT AFFAIR.

Had the Government, writes the *Yiji*, turned a deaf ear to the clamour of the Opposition papers, and, had it met the demands preferred by the Household Department with the calm reply that the interference of that Department in matters of administration could not be recognised, the affair would have ended without creating any particular agitation. But the Ministry, instead of adopting that manly line, began to show signs of perturbation and therefore of vulnerability, so that, by unwillingly fomenting the tumult, they were ultimately constrained to have recourse to suppression or suspension in the case of several journals. The adoption of Administrative steps towards the press must have grave consequences for the Ministry, when it is remembered that they publicly pledged themselves to safeguard freedom of speech, and that, while this announcement caused considerable discomfiture to the Opposition, it placed the *Shimpo-to* in a position of triumph. But the relative situations of the Ministry, their supporters, the *Shimpo-to*, and their opponents, the *Yiji-to* have been suddenly reversed by the ill-advised proceeding of the Cabinet. Another point that causes the *Yiji* much uneasiness is that the Household Department has been dragged into the arena of political squabbles, for the pressure that a certain section of the public brought to bear on the Government by clamouring about alleged disrespect towards the Court, was unmistakably dictated by party feeling. Careful perusal of the article originally published in the Osaka periodical convinces the *Yiji* that its author intended merely to allege incompetence and immorality against certain officials in the Household Department, and that he had no idea whatever of causing any annoyance to the Court itself. A distinct line of demarcation must be drawn between the virtue of the Emperor and the character or doings of Court officials. The Emperor is sacred and inviolable, but no such doctrine applies in the case of the Household officials. If, therefore, it is disrespectful to the Emperor to call in question the conduct of courtiers who enjoy His Majesty's confidence, it must be equally so to criticize unfavourably the doings of Ministers of State or other functionaries who are also repositories of Imperial trust, or even to find fault with Laws or Regulations issued after obtaining the sanction of the Emperor. The *Yiji* does not place credence in the statements of the article in question, but as no man is infallible, there may be times when courtiers are really blameworthy. Can it be disloyal to criticize their misdeeds with the view of purifying the Throne from contact with such vicious persons? If the statements of the article were really slanders not borne out by facts, why did not the slandered persons take calm and proper steps, either by causing the withdrawal of the article or by recourse to criminal procedure against the writer? The measure that a section of the public and the officials of the Household Department adopted against the journals that published the article, show that they do not scruple to plunge the Court into the sea of political agitation. The *Yiji* concludes by declaring that such results inspire much solicitude.

"Acquainted as we are," writes the *Tokyo Economist*, "with the connection that existed between Count Hijikata and a fellow like the late Takamatsu Yasuo"—we (*Japan Mail*) can give no information about this individual—"we do not like to see the Count presiding over the Department of Home Affairs." Still the *Economist* can not approve the steps that the *Twenty-sixth Century* and the *Nippon* took for the purpose of bringing about the downfall of the Household Minister. On the other hand, if the *Twenty-sixth Century* or the *Nippon* were open to the charge of disrespect towards the Court or of seeking to bring officials into contempt, they ought to have been proceeded against criminally. Thus the Matsukata Cabinet took Administrative measures against them was entirely wrong, quite irrespective of any promise

that the Home Minister had made with regard to freedom of speech. The real motive of suppression or suspension is to convey a warning, and to ensure the maintenance of public tranquillity. It is not a punitive measure. But when, as in the present case, a periodical was suppressed about three weeks after it had published an obnoxious article, and a journal was suspended several days after it had reproduced the article, the true object for which the suppression and suspension clauses were provided, can not possibly have been attained. According to the information of the *Economist*, the Department of Justice did not consider that the publication of the article constituted the offence of disrespect to the Court, though the attempt to bring Court officials into contempt was plain enough. Since, however, the Household Department was not disposed to take legal proceedings against the editors of the two publications, the public procurators themselves refrained from moving of their own accord. Thus it results that the measures adopted against the journals by the Government, though administrative in form, were essentially criminal in spirit; and the *Keisai* is consequently constrained to condemn the Cabinet.

THE YIJI'S EXPLANATION OF THE LATEST KOREAN TROUBLE.

Pending the arrival of fuller particulars as to the arrest of five or six Korean officers on the 21st inst., the following note from the *Yiji* is worth reproduction, that paper being conspicuously well informed about Korean affairs:—"The official telegram that reached the Foreign Office from its Korean Representative is to the effect that five or six Korean officers, together with a captain of the Body-guard, had been arrested on the charge of plotting to induce the King to return to the Old Palace on the occasion of His Majesty's contemplated visit to the Queen's Mausoleum. Thus the official message does not contain any reference to the arrival of the Russian blue-jackets and others mentioned in private telegrams. The *Yiji* is disposed to doubt whether such a plot can have been really concocted, especially when it is remembered that owing to the almost universal disapproval of the king's continued residence in a foreign Legation, the Korean Court has been obliged to repair the Myong-re Palace, and the date of His Majesty's removal thither from the Russian Legation was approaching. It is conceivable that certain politicians, not pleased to see the King leave his present asylum, may have fabricated the above rumour to frighten His Majesty, deter him from carrying out his original intention, and, at the same time, bring disgrace on their rivals. If this explanation prove incorrect, and these military officers did really conceive such a scheme, a plausible explanation is not wanting, for they are followers of Li Yun-yong, who was removed only a few days ago from the War Office to the Department of Agriculture and Commerce, and therefore they probably entertain hostility towards Min Yong-hwan who superseded Li. Apprehensive, therefore, that Min will dismiss them, these officers may have conceived the idea of getting the person of the King into their own hands when he leaves the Russian Legation, inducing him to return to the old Palace, and rehabilitating Li and others that are identified with the so-called English-Language Party. At any rate, the gradual ascendancy of the pro-Russian Party at the expense of the English Language Party must have culminated in the present trouble. Though not mentioned in the official message, the arrival of Russian blue-jackets at Seoul may have taken place in consequence of a request from the Korean officials who are near the person of the King and also of the King himself.

The Third National Bank gave banquets at Yaomatsu-ro, Mukojima, to over five hundred customers on the 22nd and 23rd inst. The chief directors delivered speeches in regard to the future of the bank.—*Hochi Shimbun*.

THE CABINET AND THE PRESS.

FIVE of the newspapers placed under the ban of suspension in connection with the attack made on the Minister of the Imperial Household and the Household itself, have been permitted to resume publication. They are, the *Nippon*, the *Kokumin*, the *Kagawa Shimpō*, the *Hokkoku Shimbun* and the *Shimotsuke Shimbun*. The *Nichi Nichi Shimbun* is still under the ban, but will doubtless be released very soon. With regard to this last journal, we do not see how it can have hoped to avoid suspension, writing as it did. For it very plainly stated its suspicion that a tacit understanding had existed between the Ministry and the authors of the journalistic attacks on the Household Department, and it endeavoured, with unmistakable clearness, to indicate Mr. TAKAHASHI, Chief Secretary of the Cabinet, as the prime mover in the whole matter. Considering that the Ministry had already suspended the *Nippon* and the *Kokumin* and suppressed the *Twenty-sixth Century*, it can scarcely be denied that the *Nichi Nichi* passed the bounds of propriety when it accused them of complicity in the very offence which they were openly punishing.

Certainly this business has been unfortunate for the Cabinet. In one sense it is a legacy bequeathed to them by their predecessors. For the *Twenty-sixth Century* published its first article on June 25th. That article, however, did not by any means approach the subsequent utterances of the same periodical in violence, nor did it make any attack upon the personal character of the Minister of the Household. Its gist was a complaint about the number of peers recently created, and about the rewards bestowed on Marquis ITO and Count MUTSU, who, in view of the Liaotung affair, deserved, it said, to be punished rather than recompensed. The writer ignorantly blamed the Minister of the Imperial Household, Count HIJIKATA, and the Lord High Chamberlain, Marquis TOKUDAIJI, for failing to advise the SOVEREIGN against the bestowal of so many distinctions, and called upon those two officials to resign. Two days later (June 27th), the magazine was suspended, and remained under the ban until October 22nd, when the present Home Minister released it. Meanwhile, legal proceedings had been instituted against the editor by the Public Prosecutor, on the charge of *Kwanri bujyoku* (attempt to bring officials into public contempt)—in our issue of Friday last we erroneously described this action as one for libel—and, after acquittal by the Osaka Local Court on July 17th, he was sentenced by the Osaka Court of Appeal, on October 23rd, to six weeks' imprisonment with hard labour. On October 25th the magazine was once more issued, after an interval of three months, and in its pages there now appeared an essay of the most violent

nature, accusing Count HIJIKATA of corruption, disloyalty, immorality, and treasonable favouritism, and declaring that the re-organization of the Household Department was an urgent necessity. No official notice was taken of this article, to the evident disappointment of those by whom it had been inspired. There seems to be little room for doubt that their intention had been to bring about Count HIJIKATA'S resignation, for they hoped in that way to weaken Marquis ITO'S power by removing an official to whose co-operation they wrongly attributed much of the Marquis' influence at Court. Seeing their scheme likely to fail, they had recourse to the *Nippon*, a journal whose intemperate utterances are familiar to our readers. On Nov. 9th, it reproduced the Osaka periodical's article, adding its own endorsement. The Ministry must now have found themselves greatly embarrassed. Never since the first enactment of press regulations in Japan had there been a case calling more loudly for Administrative interference, and although, upon assuming office, they had given an indirect pledge to respect the liberty of the press, they were here confronted with an incident that proved the inexpediency, if not the impossibility, of observing such a pledge unreservedly. It is all very well to talk of law courts and libel suits, but there are some matters that can not be made the subject of judicial inquiry without inconvenience of the gravest character. The nature of several of the accusations preferred against Count HIJIKATA was such that their full investigation by a court of law was out of the question, and, on the other hand, to pass them without notice could scarcely be tolerable. We ourselves believe that the wisest plan would have been to prosecute the editors of the *Twenty-sixth Century* and the *Nippon* on a charge of *Kwanri bujyoku*. Both had been guilty of the grossest contumely by republishing, in greatly aggravated form, matter the utterance of which had already been judged a criminal offence by the Osaka Appeal Court. The Authorities, however, thought differently. On the 14th of November they suspended the *Nippon* and suppressed the *Twenty-sixth Century*. What happened between the 9th and the 14th, we do not know, but it is suggested by some that there may have been a struggle between, on the one hand, the reluctance of the Ministry to revert to an unpopular method of procedure in defiance of their own implied promise when assuming office, and, on the other, the insistence of the Household Department that some step must be taken to mark the Cabinet's disapproval of such disgraceful licence. We find difficulty in crediting that explanation, being convinced that the true cause of the delay in taking Administrative measures was due to a belief that the incident would fall flat, and might be

suffered to die of inanition. When, however, it was perceived that a serious agitation had been started by the efforts of the *Nippon*, the Authorities saw no alternative except to interfere. There seems to be a pretty general idea that the *Twenty-sixth Century* and the *Nippon* worked from the first in collusion, and derived their inspiration from the same source. As to that we can not speak, but certainly it may be assumed that both publications acted in the interests of Marquis ITO'S opponents, and believed themselves to be serving a section, at any rate, of the present Ministry. It was a most blundering kind of service, for by driving the Cabinet to have recourse to the suspension and suppression clauses of the Press Regulations, they almost created a split between it and its political supporters, the *Shimpō-to*, and have assuredly postponed the complete recognition of freedom of speech. Prior to this incident there seemed to be every probability that the Government would introduce, in the next session of the Diet, a Bill practically abolishing the right of the Administration to suppress or suspend newspapers and relegating restraint of the latter entirely to the law courts. But that hope can scarcely be realized now, for no Government could propose the abolition of safeguards to which it had itself been compelled to have recourse six weeks previously. Thus, from every point of view, this affair has eventuated mischievously for the Ministers now in power, and it certainly has not tended to demonstrate the press' qualifications for the freedom so clamorously demanded on its behalf.

THE TOBACCO MONOPOLY.

REFERRING to Mr. JONAS' letter, published in our correspondence columns, we find, from the English Board of Trade Returns, that during the half-year ended June 30th, 1896, duty was paid on 26,350,392 lbs. of unmanufactured tobacco, and 2,452,609 lbs. of manufactured, making a total of 28,803,001 lbs. for the half-year, or 57,606,002 lbs. for the whole year. Moreover, there were remaining in the warehouses on June 30th, 126,195,394 lbs. of unmanufactured, and 2,687,982 lbs. of manufactured tobacco, or 2½ year's supply. It is thus a fair estimate that 2 years' supply is always on hand. How much larger the consumption of tobacco is in Japan than in England, we do not know. Our own idea is that a difference of 50 per cent. would be under the mark. Let us, however, take 33 per cent. Adding, then, 33 per cent., and adding also 15 per cent. on account of the fact that one-half of the tobacco in the English warehouses is stripped and the rest closely butted, we arrive at 85,256,882 lbs. as the annual consumption for Japan, or 63,942,661 cattiees. Hence the amount that may be expected to be awaiting purchase on January 1st, 1898, that is to say, two years'

supply, will be 127,885,322 catties, and the capital required to purchase it, at the low rate of 8 *yen* per catty, will be 10½ million *yen*, approximately, instead of eight million, as the Government is said to have estimated. Such differences of figures, however, bear no relation, in point of importance, to the consideration that if the Government carries out the programme as submitted to the Diet last session, it will assume a position such as no business man would contemplate for a moment. It will be absolutely at the mercy of any combination of growers or merchants and manufacturers. For example, the growers of Satsuma tobacco, should they be dissatisfied with the price paid by the Government, may unite and refuse to grow unless the Government agrees to pay more, and it is evident that such a precedent, once established, may be followed year after year. Tobacco growers in Japan are not like planters in other countries: they can devote their land to other purposes if any inducement offers. With regard to merchants and manufacturers, they too can combine and refuse to buy unless the Government lowers its prices, for they know that the tobacco must be sold whatever happens. Truly, apart from the exceedingly undignified position in which the Government might, and probably would, find itself placed, it is difficult to see whence a revenue of ten million *yen* is to accrue under such circumstances. Whatever officials were responsible for the scheme submitted to the Diet last session, and whatever members of the Houses formed the Committees that recommended the scheme, they have plunged the Administration into a pretty dilemma, for any attempt to carry out such a programme must end in disastrous failure. On the other hand, the simple and certainly successful alternative offers of passing the tobacco through Government warehouses and levying a tax on it in transit, without assuming any responsibilities of official purchase or sale, and without in any way disturbing the course of the trade. That is the English method, and, after all, English procedure, whether fiscal or financial, is generally a pretty safe model. We believe that tobacco is destined to be one of the Japanese Treasury's chief sources of revenue hereafter. Assuming the annual consumption to be sixty million catties, a tax of 50 *sen* per catty—that is to say, about one-fourth of the duty levied in England—would give a gross revenue of thirty million *yen*, and if the English warehousing system be adopted, the cost of collecting that great revenue would probably not exceed half a million *yen*, apart from an initial outlay of about a million for building warehouses. If, however, the monopoly programme be followed, he must be a sanguine man that will predict any large gain to the Exchequer.

COUNT OKUMA AND THE FOREIGN RESIDENTS.

THE *Yomiuri Shimbun*, in reporting a speech delivered by Count OKUMA at a recent meeting of the *Nikkan Tsusho-Kai* (Japanese and Korean Coöperative Commercial Society), has put into the Minister's mouth language that conveys a somewhat false impression of what was really said. It is true that the version given by the Tokyo journal differs very materially from the translation that has been published and severely commented on by a Yokohama English Journal, and to make the difference clear, we here place the *Japan Gazette's* translation and the accurate translation side by side:—

Japan Gazette Version.

European residents then in this country were not men of good social position and I think even those of to-day are, generally speaking, not men of high standing. There might have been among diplomatic officials and others some ranking above the middle class, but most of the foreign merchants then were of the lower class. But even those low class people were far superior to the natives, and regarded as versed in everything. Naturally we Japanese wondered at their superior knowledge. I myself called upon several foreigners to ask certain questions, when I was a young student, thinking they were learned professors, but they were really inferior even to graduates of middle schools of to-day.

True Translation.

Comparing Europeans and Japanese, I do not think that the Europeans then (at the beginning of the *Meiji* era) in Japan were a particularly high class of persons (*amari rippa na h'to de wa nakatta*) nor do I think that those here now are particularly high class. On the whole, I think they would not have been reckoned higher than middle class in Europe. Among diplomatic officials there may have been men of high standing, but the general run of merchants were of the middle and lower classes. Middle and lower classes though they did belong to, however, when we compare them with the Japanese of the time, how great was the difference in the degree of their civilization? The foreigners living in Yokohama, Nagasaki, and so forth seemed to know everything and were many degrees superior to the Japanese. Their ideas were so large that the Japanese were quite astounded. I was a student at the time, and I remember that on one occasion, thinking that a certain foreigner was a wonderful scholar, I went to ask him a question, but when I look back now I recognise that he was not equal even to a middle-school graduate. Still I was surprised by the explanations I received from him, &c.

It will be seen that even the *Yomiuri's* report conveys a very different impression from the *Japan Gazette's* translation. We do not find in the Japanese journal anything about the foreigners of early *Meiji* days "not being of good social standing," or anything about "most of the foreign merchants being of the lower class," or anything about "these low class people." Count OKUMA simply stated, in courteous terms, what we all very well know, namely, that the foreigners who came to Japan for purposes of trade in the early days were not representatives of the highest classes in their own countries. The whole gist of his speech was directed to prove that the Japanese now in Korea can not claim any such superiority over the Koreans as the foreigners in Japan in the early days could claim over the Japanese, and that if, despite the superiority of the foreigners, the Japanese were opposed to them and constantly committed outrages against them, every allowance ought to be made for the uncivil treatment occasionally received now by the Japanese in Korea. If he re-

minded his hearers that the foreign traders visiting Japan in the early seventies were not of the best class as foreigners, and were yet far superior to the Japanese in all the moral and material equipment of modern civilization, it was because he wished to draw from the patience then displayed by Western Governments a lesson of self-restraint for Japan to-day in her attitude towards Korea. We are speaking on the strength, not of our own conjecture, but of information sought and obtained from Count OKUMA himself, and our readers will agree with us that no reason whatever exists to misinterpret him as having commented unfavourably on either the intelligence or the social standing of the foreign merchants that came to Yokohama and Nagasaki a quarter of a century ago. Of the foreign merchants now residing at the Treaty Ports, His Excellency assures us that he said nothing whatever.

FURTHER MISREPRESENTATIONS.

QUITE an epidemic of misrepresentations has attacked the local English press of late. Several of the cases have been alluded to by us, and we have now to notice another, which is, perhaps, the worst of the whole. This time it is the *Kobe Chronicle* that has been misled. We quote its words in full:—

If the critics of Japan and her institutions would turn their attention to the case of Count Hijikata and the *Niju-roku Seiki*, they would find much more substantial ground to go on. Here is a newspaper which has published reports of gross immorality and shameful intrigues in the Imperial Household, not in the least reflecting on His Majesty, but accusing the Court officials of most disgraceful conduct, and of systematically hoodwinking their august master. * * * The accusations were categorical and circumstantial, and Count Hijikata brought an action for libel against the paper. The Osaka Court found that the newspaper had told the truth and nothing but the truth: but an appeal was lodged against the verdict, and the rehearing will take place on the 24th inst. before the Court of Cassation in Tokyo. Meantime the Osaka paper foolishly repeated and added to the charges, and so did the *Nippon*, while the press of the whole Empire is in slightly qualified agreement with them, excepting only the *Nichi Nichi*, *Tokyo Shimbun*, and *Chuo*, the organs of Marquis Ito, Count Hijikata's alleged accomplice. To return to the charge while the case is pending in the Court of Cassation is contempt of court, or would be in English law, and we presume (subject to correction) that there is some similar proviso in Japanese law. If there is not, there ought to be. But what has Count Hijikata done? He has somehow got the Government to suspend the *Nippon* and suppress the *Niju-roku Seiki*. This in our humble opinion is the very worst thing that could have been done. If the Government had any faith in the Judicature, there was no need to call out the Press Regulations which had been so ostentatiously put away. If Japanese courts of law are deserving of confidence, Count Hijikata stands convicted by the Osaka court, branded as a thoroughly depraved and shameless intriguer and libertine, a seducer of Court ladies, and a faithless and dangerous adviser of the Emperor. And, except the three hiring prints named, every paper in the Empire says there is some truth in the allegations, though they hesitate to endorse them in their entirety. But it is especially the law court that concerns us. We are to come under the "protection" of Japanese law courts. The protection accorded to the *Niju-roku Seiki* by the Osaka Court is annulled by the arbitrary act of the Home Minister, under a set of tyrannical Press Regulations which the Government is pledged to discard. It is not that the judge has punished the over-rash paper for commenting on a case *sub judice*; it is not that the verdict of the judge has cleared Count Hijikata's character. It is an arbitrary act, not to be tolerated in any free country and not to be safely committed in any country that wishes to have corruption exposed, and it is an act instigated by a notorious evildoer, unless every newspaper in Japan lies horribly—which we admit they sometimes do. But if there is no truth in the allegations, how are we to depend on the verdict of the Court? And if we admit that, once

in a way, a verdict on questions of plain fact, easy to be known as true or untrue, may go utterly wrong and be reversed on appeal without discrediting the judiciary, what are we to think of the Ministry which is not content to leave the matter to the Courts? The natural, obvious, inevitable inference is that Count Hijikata is afraid of the law courts, that he has reason to be afraid; and that the Government cannot trust the judges to give justice. And what are we to think of a judiciary which can be overridden by such a man? Or of a Ministry which will bolster him up, even swallowing its most solemn promises for his sake? This unwarranted interference with the course of justice is the most serious anti-revision argument we have seen yet; and as we have never opposed the new treaties, but always did and still do support them, we feel compelled to express our regret and protest in the strongest possible terms.

It is almost difficult to know how this singular article deserves to be treated, for from beginning to end it is one of the strangest series of blunders we have ever encountered in print. In exposing its mistakes, however, we shall perhaps be able to interest our readers by conveying to them a clear idea of an incident now agitating Japanese journalistic and political circles to an unusual degree.

The *Kobe Chronicle* alleges that Count HIJIKATA brought an action for libel against the *Twenty-sixth Century*. He never did anything of the kind. The Public Procurator brought a criminal suit against the editor of the paper on the charge of *Kwanri bujyoku*; that is to say, wantonly attempting to bring officials into contempt.

The *Kobe Chronicle* alleges that the *Twenty-sixth Century*, prior to the above suit, "published reports of gross immorality and shameful intrigues in the Imperial Household, * * * accusing the Court officials of most disgraceful conduct, and systematically hoodwinking their august master." It further alleges that "these accusations were categorical and circumstantial," and that "the Osaka Court found that the newspaper had told the truth and nothing but the truth." All this is completely erroneous. The *Twenty-sixth Century's* first article, submitted to the Osaka Local Court, contained no charges whatever of gross immorality or shameful intrigue, and did not in any way impugn the personal character of Count HIJIKATA. It merely expressed dissatisfaction with what it called "the indiscriminate creation of new Peers;" accused Count HIJIKATA and Marquis TOKUDAIJI of negligence in the discharge of their official duties, since it was their business to advise the SOVEREIGN; called upon them to resign, and finally declared that, in view of the blunder committed by Marquis ITO and Count MUTSU in the matter of the Liaotung Peninsula, the rewards bestowed upon them were altogether misplaced. Thus the Osaka Court knew nothing about any "categorical and circumstantial accusations of gross immorality and shameful intrigue" on the part of Count HIJIKATA. No such accusations were published until four months subsequently, and their truth or falsehood could not have concerned the Court in any way, unless it had undertaken to adjudicate upon an issue not before it, and unless it

had projected its perception into a distant future and applied itself to examine a libel that had not yet been uttered.

The *Kobe Chronicle* alleges that "Count HIJIKATA stands convicted by the Osaka Court, branded as a thoroughly depraved and shameless intriguer and libertine, a seducer of Court ladies and a faithless and dangerous adviser of the Emperor." A falsified slander could scarcely have been penned. The *Twenty-sixth Century's* article embodying these charges was published on October 25th. The trial before the Osaka Local Court took place in the preceding June. What the Court had to determine was the unique issue whether the editor of the periodical had been guilty of a wanton attempt to bring officials into ridicule. It decided in the negative, being of the opinion that the impugned article might have been inspired by *bona-fide* solicitude for the public good. There was not the remotest question about Count HIJIKATA'S morality. No breath of slander had yet been raised against him. Further, the Public Procurator at once appealed against the judgment of the Local Court, and, on October 23rd, the Osaka Court of Appeal reversed the verdict of the lower tribunal, and sentenced the editor to six weeks' imprisonment with hard labour, and a fine of 10 *yen*. Twenty-five days after the latter judgment, the *Kobe Chronicle* pens an article declaring that Count HIJIKATA stands "convicted by the Osaka Court, branded as a thoroughly depraved and shameless intriguer and libertine, a seducer of Court ladies, and a faithless and dangerous adviser of the EMPEROR." Even assuming that any of these issues, or anything resembling them however remotely, had come before an Osaka Court, why does the *Kobe Chronicle* accept the verdict of the lower tribunal and completely ignore the diametrically opposite finding of the higher?

The *Kobe Chronicle*, referring to the suspension of the *Nippon* and the suppression of the *Twenty-sixth Century*, alleges that "the protection accorded to the *Twenty-sixth Century* by the Osaka Court was annulled by the arbitrary act of the Home Minister, under a set of tyrannical press regulations." Underlying this accusation are many false hypotheses. The first of them is that suspension and suppression were resorted to by the Authorities pending the hearing of an appeal made by Count HIJIKATA against the verdict of the Osaka tribunal. There was no such appeal, for the simple reasons, first, that Count HIJIKATA had never instituted any suit, and secondly that, if any one needed to appeal, it was the editor of the *Twenty-sixth Century*, who had been sentenced by the highest Court in Osaka to imprisonment with hard labour. The second singularly false hypothesis of the *Kobe Chronicle* is that a legal tribunal has any competence whatever to "protect"

a newspaper against an Administrative order of suspension or suppression. After all that has been written and spoken about the Japanese Press Regulations, our Kobe contemporary seems to be still ignorant that the Regulations create Administrative powers entirely independent of the Judiciary. The Administration can suspend or suppress a publication, but can not imprison or fine the editor. The latter result can be achieved only by due process of law. What the Osaka Court had to determine was whether the editor of the offending magazine should be imprisoned. Neither its verdict, nor the verdict of the Court of Cassation on appeal, could have constituted the remotest protection against an Administrative order of suspension or suppression. What makes the *Kobe Chronicle's* contention doubly ridiculous is that the *Twenty-sixth Century* was already under sentence of suspension when the Public Procurator brought action against its editor. These are the facts:—The original article was published in the *Twenty-sixth Century* on June 25th, and the periodical was suspended on June 27th, that is to say, while the ITO Cabinet was still in power. Almost simultaneously, the Public Procurator instituted a criminal suit against the editor, on the charge of *Kwanri bujyoku*, or wilfully endeavouring to bring officials into contempt. The Osaka Local Court, before which the action was brought, pronounced in favour of the defendant, on July 17th, as already explained. Against that verdict the Public Procurator appealed, and, on October 23rd, the Osaka Appeal Court reversed the finding of the lower tribunal and sentenced the accused to 1½ months' imprisonment with hard labour, and a fine of 10 *yen*. On the 22nd of the same month the ban of suspension was removed, and on the 25th, the periodical appeared again, containing an article in which not only the former accusations were repeated, but also a number of serious charges were brought against the personal character of the Minister of the Imperial Household. Of this second article no notice was taken by the MATSUKATA Cabinet, until a leading Tokyo newspaper, the *Nippon*, reproduced it, with commendatory notes, on November 7th. Considerable excitement then ensued in journalistic and political circles, and, on Nov. 14th, the *Nippon* was suspended and the *Twenty-sixth Century* suppressed. Thus the *Twenty-sixth Century* was under sentence of suspension from June 27th to October 22nd, during which time the two law suits were tried in Osaka and the editor was sentenced to imprisonment on the day after his magazine had been released from suspension. Yet the *Kobe Chronicle* imagines that the Courts of law have power to protect a journal against suspension or suppression, and is so extremely silly as to say that "the Judiciary has been over-ridden by Count HIJIKATA"

because the Administration exercised powers which are vested in it quite independently of the Judiciary, powers with which the Judiciary has not the faintest shadow of concern, and exercised them in respect of an article which had never been brought within the purview of any law court!

Is there, in the nature of things, any imperative reason why nine out of every ten charges brought by the local English press against Japanese officialdom or the Japanese Judiciary should be so disfigured by ignorance or carelessness as to render the accusers objects of ridicule in Japanese eyes? The upshot must be that just complaints and unjust will all be lumped together in the same category of blundering sillinesses.

THE EXHIBITIONS OF PAINTINGS AT UYENO.

WANT of space has hitherto prevented us from recording the impressions conveyed by the two exhibitions of Japanese paintings recently held in the Uyeno galleries under the auspices of the Fine Art Society and the *Kangwa-kai*. Nor, indeed, is there much to be added to what we had occasion to write about previous displays of the same kind. There are undoubtedly some painters of considerable, we may even say great, skill in Japan at present; that is to say, painters whose works show admirable force of line, directness of method, and purity of conception according to Japanese canons. One has always to remember that a Japanese picture does not assert an idea but rather suggests it. In that respect it is perfectly in accord with the ethics of the nation. It has not the vagueness of the impressionist school or the insistence of the realistic. It does not show only such portions of a scene as are consonant with the painter's mood at the moment, neither does it enforce a hard-and-fast conception to the exclusion of every other fancy. It simply records glimpses of nature, sufficiently accurate to command sympathy, but seldom so complete as to be without need of the beholder's mental assistance to interpret them fully. Hence it results that numbers of Japanese paintings make no pleasanter appeal to alien minds than do the "woven-paces and waving hands" of Japanese dancing, or the fragmentary utterances of Japanese poets. The Japanese critic draws from an exhaustless fund of associations, from a wealth of historical allusions, from a mine of time-honoured conventionalisms, materials to supplement the painter's brush, the dancer's pose, and the poet's outlines. But all that auxiliary world is a virtually unknown region to the foreigner, and his appreciation is consequently as faint as his conception is imperfect. Of course the same may be said as to the appreciative faculty of a Japanese critic set down in a gallery of European paint-

ings. He, too, would be without the atmosphere essential to an intelligent estimate of what he sees. But his defect would not impair his judgment so seriously, for the Occidental artist is far more independent in his conceptions, than the Japanese. He translates his idea into language much of which can be read by any eyes, alien or to the manner born. If these things were kept in mind, the public would probably be less tormented by critics that have only one point of view and one measure of excellence. Long centuries of the practice of art were needed before Europe began to think seriously what art really signified, and even to-day it would be difficult to find experts that are agreed on a definition. Japan lived apart from the world for two thousand years. Her art developed along lines identical with those followed by Europeans art up to the Middle Ages. Then the two diverged, Japanese art remaining in the old route; European turning into a new direction. Some critics praise the conservatism of the former; others, the liberalism of the latter. We are not about to discuss such a formidable subject here, our only purpose being to note this additional difference and to insist on the caution that it dictates to critics. Yet there is no possible ground for pretending that any of the above considerations excuse such displays of pictures as those recently made at Uyeno, or that the most appreciative of Japanese critics could have found in them anything to admire. Nine out of every ten lacked the faintest title to be shown in public. It is astonishing that such pictures should be granted space in any gallery. Evidently no discrimination whatever is exercised by the hanging committee: every one that sends in a drawing can be sure of having it shown, and the affair thus becomes not a fine-art exhibition but a bazaar. On the other hand, it is noteworthy that the really able artists of the era did not show their usual unwillingness to contribute, and it is also noteworthy that their pictures secured the distinction they deserved at the Judges' hands. NOGUCHI YUKOKU, TAKI WATEI, YAMANA KWANZO, KAWABATA GYOKUSHO, SATAKE SUIKO, ARAKI KWAMPO, MURASE GYOKUDEN, and ISHII CHOKEN, all obtained special prizes; and in the second rank (silver medals) came NOGUCHI SHOHIN, IMAO KEINEN, KISHI CHIKUZO, and NOMURA BUNKYO. There were 32 recipients of copper medals (third rank), of whom OGATA GEKKO and UNRIUIN SOSAN were the most remarkable, but of the 202 artists that were awarded certificates of merit, we confess that very few seemed worthy of that distinction. The exceptions were perhaps, as follow:—

SUBJECT.	PAINTER.
Rice in rain	Takayama Seisho.
Barn-door Fowl	Hirayama Kwantei.
Barn-door Fowl in Autumn rain	Toda Giyokusho.

Flock of Ducks	Araki Jippo.
Parrot in <i>Kiri</i> tree	Koyama Unzan.
Cherry and Pheasant	Araki Gyokusho.
Snipe and Autumn Flowers	Yamashita Suiho.
Carp and Iris	Shimamura Shungetsu.
Ducks in Moonlight	Shinoda Koho.
Hawk	Nakamura Kinjo.
Monkeys in a Valley	Suyesada Gyokusho.
Peonies	Fukuda Veisai.
Carp under Wistaria	Kida Kwamitsu.

In some cases, notably OGATA GEKKO's pictures of FUDO and GYOKAN NO KWANON, it seemed to us that the Judges' awards were not sufficiently appreciative, but, on the whole, there was little to criticize on that score. The great trouble is the almost total absence of any discrimination. Good artists can scarcely be expected to send pictures to a gallery where the most miserable daubs are in overwhelming majority, and we are surprised that so many good artists did send to these recent displays.

MONTHLY SUMMARY OF CURRENT JAPANESE LITERATURE.

The last number of the *Bungaku-kai* publishes an unsigned article of considerable length on "English Literature in Japan" which is well worth epitomising. The author sets out by showing the wide influence of English literature throughout Japan. He acknowledges that students that can read and understand Shakespeare or Milton are few, and he thinks that men like Mr. Tsubouchi Yûzô have conferred an immense benefit on the reading public by furnishing translations of English poetical masterpieces. When the enormous difficulties that Mr. Tsubouchi had to encounter are considered, his *Hamlet*, observes the *Bungaku-kai*, is to be regarded as a *tour de force*. The English writers who for a long time were most studied in this country lived at the latter end of the eighteenth or the beginning of the nineteenth century, when English literature was passing through one of its transition periods. The taste for the classical literature of an earlier date was confined to a few readers. One of the principal reasons why Byron and Wordsworth found such favour was the comparative ease with which their poems were understood. Even Mr. Tsubouchi, than whom perhaps no one has laboured more diligently to render familiar to Japanese the beauties of English literature, was for a time carried away with the tide and confined his attention largely to comparatively modern writers. We are not in favour of constant change, but we think that some system should be followed in introducing students to a knowledge of English authors. Mr. Tsubouchi, who, as is well known, is at the head of the Waseda Semmon Gakkô, has done much to further the progress of English studies in that institution, and his influence in the school is likely to be felt for a long time to come. Turning to the history of the English Literature department of the Imperial University, it is important to say something about the character of the instruction given by the men who have occupied the chair of English Literature. We do not know how far Professor Dixon was acquainted with English literature, but it cannot be said that he was successful as a teacher of this subject. He figured rather as a grammarian than as a literary scholar, as is shown by the works he published. He was succeeded by Professor Wood. As far as we are aware, the only thing that Mr. Wood has published in Japan is an article on Tennyson, contributed to the *Tetsugaku Zasshi*, but there is no denying that as a teacher he has shown himself to be a *littérateur* of no mean order, and to him belongs the credit of creating in the University an interest in English literature never before known. If the *Teikoku-bungaku* is to be credited, Professor Wood is a man who has no desire for world-wide reputation as a writer. His hobby is teaching, and to this he has given his whole mind. He has been succeeded by Mr. Lafca-

dio Hearn. Mr. Hearn has been hitherto known as a newspaper correspondent and a contributor to foreign magazines. He is undoubtedly a most polished writer and a ripe scholar, but this does not guarantee his success as a teacher at the University. Much has been made by some of the fact that he has become naturalised in this country and has married a Japanese, but to us these circumstances signify nothing of importance. It is as yet too early to predict anything certain, but we cannot say that we shall the appointment with the delight shown to some quarters. It is said that Mr. Hearn's mind is permeated with poetic thought and it is predicted that this will attract students. The knowledge of young Japanese students of English is sadly deficient. We have never yet heard of one who has thoroughly mastered the spelling of English and the art of grammatically constructing English sentences. We do not say that it is impossible to gain an extensive acquaintance with English literature without being able to spell or write correctly, but certainly it is to be expected that the students of English in the University should be able to accomplish both of these tasks. Furthermore, it is reported that many of the expositions of Japanese professors of English are far from reliable. Though the study of grammar and the study of literature are different, it is correct to say that only students acquainted with the structure and the niceties of the English language, appreciate the beauty of English literary masterpieces. As has often been remarked before, the modern student is far inferior to the men who passed through the University seven or eight years ago. The influence of nationalism has been felt throughout all branches of knowledge, and the slovenly literary habits of the student of English to-day are among the results of the wave of anti-foreign feeling that swept over the country a few years ago.

To us, continues the *Bungaku-kai*, it is a subject for profound regret that the men bearing the title of *Yeiigo Gakusha* (English scholars) should be without any literary ideas of their own. All that can be said of them is that they are admirers of, and lecturers on, English literature. They possess none of the qualities esteemed by high-class students of other subjects. In days gone by, there was no such thing as a student of the Confucian classics not being able to compose an essay in Chinese, but in modern times the study of the English language and the study of English literature are carried on by different persons. Even in the case of such men as Professor Toyama, of the Literary Department, and Professor Sakurai, of the Science Department of the Imperial University, and of Professor Kanda Naibu and a few others that might be mentioned, either language or literature is almost exclusively studied and taught, and it is only in men like Professor Saitō of the First Higher School that we find scholars competent to teach both the English language and English literature. The increase of such teachers is the great desideratum of the age. The two subjects need to be studied together from the very first. It is only thus that the power of English literature can be fully realised in this country.

The *Sekai-no-Nihon* and the *Kokumin-no-tomo*, though primarily political organs, both devote considerable space to the discussion of literary topics. The former has articles on "Reach"; "Japanese studying in America," "American Universities," by Dr. Gotō Seitarō; "Swinnburne's Recent Works"; "On the Decline in the literature of the Practical School of Writers in Germany," and on "the Mother of English Novels." The gist of the last named article is that there are in English novels few mothers whose characters excite respect. Though women are held in high estimation in England, the personages that figure as mothers in the standard English novels are objects of contempt rather than of admiration, says the *Sekai-no-Nihon*. Examples are culled from various works but we have no space to quote them. An article that appeared lately in the *Athenaeum*

on "The tendency of Modern Romance," is reproduced in the *Sekai-no-Nihon*, and the same organ publishes a short history of the Newspapers and Magazines of the Western world.

The *Kokumin-no-tomo*, among numerous articles on foreign subjects derived from Western sources, has one on the necessity of painters and writers turning their attention to the lower classes. In the West not a few poets have uttered in never-to-be forgotten language the thoughts of the working-man, and numerous are the artists that have made themselves famous by representing scenes of peasant life. Neither Chinese poetry nor prose condescends to portray the lives of the sons and daughters of toil. If they are mentioned it is only with the object of causing merriment. Their hardships and their numerous merits receive little or no sympathetic expression or recognition. Japan in the past has followed too closely in the wake of China in this matter. The creation of a literature and art devoted to the description of the hitherto little-known country life of Japan is a task the performance of which men with learned leisure would do well to undertake. Japanese poets, instead of discouraging *ad nauseam* on such subjects as flowers, birds, the wind and the moon, would do well to study and describe Japan's ever growing industries. All allusions to these subjects in Japanese literature, says the *Kokumin-no-tomo*, have hitherto been characterised by a most offensive superiority of tone, and read like the observations of unconcerned spectators rather than the remarks of writers that appreciate labour at its real value.

The *Kokumin-no-tomo*, like the *Taiyō* and the *Sekai-no-nihon*, aims at supplying its readers with a history of the press, of science, and of the general course of events in Europe and America. In this line these magazines are fulfilling a most useful function.

The *Waseda Bungaku* has an interesting article on the character of the illustrations that appear in modern novels. The primary object of illustrations, says this organ, is to assist the author by making more vivid the scenes that he portrays, but it has become customary of late to insert pictures having no earthly connection with the subject under treatment, with the object of pleasing the eye. Thus the function the pictures are expected to fulfill in many cases is to atone for the real or supposed literary defects of the book. This device smacks too much of the peep-show, and should not be resorted to by authors whose works have any pretension to literary merit. The only thing that can be said in favour of these illustrations, is that they are an immense improvement on the hideous daubs that used to disfigure this class of literature: Prior to 1877, the illustrations employed by novelists were of the crudest description. The publication of various newspapers and magazines made a change. The popular sketches of such artists as Yoshitoshi and Yeiitaku were much in request, but it was not till the year 1884-1885 that the modern style of illustration was introduced by Mr. Yano Fumio in his well known and popular work, the *Keikokubidan*. What may be called the age of lithography then commenced. But printing from woodcuts, from copper plates, and from zinc plates did not cease. The supersession of the old methods of printing by lithography was the means of introducing a marked change in the world of fiction. To a number of able writers the old features of the popular novel were most objectionable, and they would have considered it a disgrace to attach their names to such works. So that with a new class of illustrations there appeared on the scene a new class of writers. But printing from blocks was by no means discontinued. On the contrary, it underwent numerous improvements, and the skill of the *Ukiyo-ye* style of artists was again called into request. In order to meet the demand for popularly illustrated works, the great novel publishing house, the Shun'yō-dō, was established. Some of the work accomplished by this firm was of a most elaborate description, a single picture often displaying some

20 or 30 different colours. Block-printing was carried to great perfection by the Shun'yō-dō; and the Hakubun Kan, the present well-known house, followed in the wake of the older establishment. The Shun'yō-dō has of late been utilising the services of such foreign-style artists as Koyama Shōtarō and Asai Chū, whose pictures are lithographed, and among modern illustrations occupy a foremost place in public estimation.

The magazine from which we have been quoting furnishes an account of the present state of fine art in Japan, of which we give the following epitome. The various schools of art have shown considerable activity during the past few months and Art Societies have been holding meetings at which urgent questions have been discussed. The *Nihon Kaiga* (繪畫) Kyōkai divides the paintings presented to it into three classes, namely, (1) Pictures of pronounced Oriental Style. (2) Pictures of foreign style. (3) Pictures of mixed style. At a meeting of the Society, recently held, the Vice-President, Mr. Okakura Kakuzō, delivered an address in which he said that the important facts connected with art at the present time were the doubts which had been expressed in various quarters as to the value of purely Japanese painting, and a marked revival of interest in foreign styles. Mr. Koyama Shōtarō has already expressed his opinion on this subject in the *Sekai-no-Nihon*. Recently the *Nihon* has been writing in the same strain. It seems, observes this organ, as though Japanese pictures were about to be utterly defeated by their foreign rivals, and that without a struggle, for no one is forthcoming to do battle with the foe. The great weakness of painters of purely Japanese pictures is the blindness with which they follow the lead of their predecessors—the aversion which they show to reproducing natural objects without alteration of their form. The *Pomouri Shimbun* states that the Tōkyō Bijutsu Gakkō has decided to allow students that have finished a course extending over four years to start on painting tours, assisting them in the matter of travelling expenses. The *Mainichi Shimbun* observes that since the Bijutsu Gakkō has created a Foreign-Style Department in the School, artists of the Japanese and foreign styles have fraternised with each other on equal terms, and adds that there are signs of a satisfactory amalgamation taking place. Hitherto the Meiji-Bijutsu-Kai and the Bijutsu Gakkō have been at daggers drawn on account of the latter establishment's figuring exclusively as a champion of the pure Japanese style. The concession made by the Bijutsu Gakkō to which we have referred was the means of reconciling the two bodies to each other for a while, but, according to the *Nihon* the lovers of strife and dissension found in almost every public body have, by creating new issues, again set the parties at variance. The *Waseda Bungaku*, commenting on this, says that wherever fundamental principles are opposed, union is impossible, but when these have been brought into harmony, it is a subject for deep regret that united action should be rendered hopeless by the interference of mere lovers of agitation.

The *Waseda Bungaku* publishes the first part of an essay on "The prose-writing of the Kamakura era," which contains a large amount of useful information. The subjects treated by the essayist so far are, (1) The general character of the Kamakura era and the state of literature in that age. (2) Japanese national characteristics as revealed in that literature. The essayist thinks the Japanese an extremely emotional people and that this characteristic affects literature in various ways. (3) The history and literature of the age that preceded the supremacy of the Kamakura Shōguns. (4) The state of Society in the age under review and the influence of literature thereon. (5) The extant records, documents, and letters of the period.

Commenting on the lack of musical taste among the Japanese and the unprogressiveness

* A summary of Mr. Koyama's views was given by us a few months ago.

of music in Japan compared with other studies, the *Waseda Bungaku* speaks with approval of the plan followed by the Ueno School of music at concerts, when, as our readers are aware, the audience is regaled with specimens of foreign composition and with classical Japanese music in turn. The friendliness with which performers of the two schools regard each other is, in the opinion of the magazine we are quoting, likely to lead to good results.

The following statistics, furnished by the Tōkyō Zushokan, are instructive, as showing the relative importance of subjects of study in Japanese estimation:—

A TABLE OF BOOKS LENT IN SEPTEMBER LAST.

Subjects.	Japanese and Chinese Books, Works.	Foreign	Total	Per Centage on Total
1. Religion.....	951	9	960	8.4
2. Philosophy and Education.....	2,002	207	2,209	5.4
3. Literature and Language.....	2,000	406	2,406	18.6
4. History, Biography, Geography and Travels.....	2,877	901	3,778	28.7
5. Law, Politics, Sociology, Economy, Statistics.....	5,384	225	5,609	13.9
6. Mathematics, Science and Medicine.....	6,394	315	6,709	21.6
7. Engineering, Military Science, Arts and Industries.....	3,312	84	3,396	8.4
8. Miscellaneous.....	2,649	204	2,853	7.0
Total.....	30,337	2,294	32,631	100.
Daily Average.....	1,383	70.3	1,453.3	—
Increase on last year's numbers.....	4,688	207	4,895	—

The publication is announced of a gigantic history called *國史大系, Kokushi-taiki*. The contents of this work include a number of rare monographs which, owing to the difficulty of procuring copies, are almost unknown to the reading world. The *Kokushi taiki* consists of 17 volumes and covers no less than 13,000 pages. The first volumes are to appear some time this month and the remainder will be published in batches from month to month. The price of the work will be 20 yen. The Keizaiasshi-sha, 7, Yazaemon-chō, Kyōbashi, Tokyo, are the publishers.

As the result of 20 years' labour Mr. Owada, Kenjin has produced a Dictionary which ought to supply a long felt need. The new work is called the *日本大辞典, Nihon Daijiten*. It is published by the Hakubun-Kan, 3 chōme, Honchō, Nihon-bashi Tokyo, and if applied for at any time during the present month may be obtained for 1 yen 80 sen, instead of 3 yen, the price at which it will be sold later on. Competent reviewers speak very highly of the work. The *Kokumin-no-tomo* says that no dictionary of the kind has hitherto been published. This statement we cannot endorse. It deals with polite language as well as colloquialisms of various classes; numerous examples are given of the senses in which words are used. The explanations are said to be very clear and the general arrangement of the work is adapted to the convenience of students. It covers 2,000 pages.

The *日本大辞典, Nihon daijisho* has now reached its seventh edition. It has been considerably enlarged and improved and now covers 1,500 pages, containing over 165,000 explanations and over 20,000 examples. The first edition of the work was published in 1893 as the result of seven years' incessant labour. It gives classical, colloquial, provincial, and slang terms, words imported from the west, and proverbial sayings. Its price is 2 yen 80 sen and it is published by the 明法堂 Meihōdō, Urajimbō-chō, Kanda, Tōkyō.

The Sanseidō are unusually active in the publication of Dictionaries. In addition to the *Wa-Ei daijiten*, by Captain Brinkley and others, they have published the *Taikoku daijiten*, which we cannot recommend, compiled by Messrs. Fujii Oto-o and Kusano Tami; and a German-Japanese Dictionary by Dr. Takaki Jumpei, a teacher in the Higher Commercial School (which consists of 1,603 pages and sells at 70 sen), and they announce the publication at an early date of another great work the *Ei-Wa daijiten*, which, if advertisements are to be relied on,

will surpass everything in the same line with which students are familiar. Messrs. Okura are about to publish a work entitled the *Kotugo daijisho*, compiled by Messrs. Ochi-ai and Hatakeyama. The *言海, Genkai*, an extremely valuable dictionary, has now reached its Tenth Edition. For terms used by actors we may refer students to the *Kabuki Shimpō* (歌舞伎新報), which is now devoting space to the publication of a vocabulary of theatrical terms, with full explanations of their meaning. Commenting on the remarkable activity shown by scholars and publishers alike in lexicography, the *Waseda Bungaku* observes that a full and reliable dictionary of colloquial Japanese has yet to be compiled. When this work is forthcoming lexicographers will be in a position to compile a Japanese Webster.

The Fifth Edition of Mill's Political Economy, translated by Mr. Amano Tameyuki, has been published and sells at 1 yen 75 sen, at the Fuzambō (富山房), Urajimbō chō, Kanda, Tōkyō.

Mr. Mochichi Rokusaburō, a teacher in the Yamaguchi Higher School, has published a work entitled *Keizai-Tsūron* (A General Treatise on Economy), which gives the views of the new school of Political Economists and is thoroughly abreast of the age. The book sells at 1 yen per copy and is issued by the last named publishing company.

Dr. Hozumi Hassaku is the author of a book called the *Kempō tai-i* (The Substance of the Constitution). This work, it is said, was written at the suggestion of Viscount Inouye, the former Minister of Education, whose idea it was that a clear exposition of the Laws of the Constitution was a great desideratum. The views hitherto expressed on the Japanese constitution, says the *Sekai no-nihon*, in reviewing this work, have been too much marked by the English, French or German bias of the jurists that have written on this subject. Moreover, great difference of opinion as to the proper application of certain laws of the Constitution has arisen in the course of discussions in the Diet from time to time. Dr. Hozumi's work aims at supplying a strictly legal interpretation of the Laws, and of summing up the conclusions reached by those that have studied the constitution in connection with its practical working since the opening of the Diet. The *Kempō tai-i* is issued by the Yawo Publishing House Ginza, Tokyo (formerly the Hakubunsha).

The Hakubunkan announces the publication of two new translations. The first is that of a German work on Races and Mankind, the author of which is Dr. Lange Rabel (?). The original translator was Mr. Seki Chōzō. Professor Tauboi Shōgorō, perhaps the most able anthropologist in Japan, has thoroughly revised Mr. Seki's work, and the newly published volume is said to be a very accurate rendering of the original. The other translation is that of Mr. Robert Mackenzie's History of the Nineteenth Century, by Mr. Kōda Naritomo.

Messrs. Maruya and Co.'s recently issued catalogue contains an announcement of the appearance of a translation by Mr. Abe Toranosuke of Dr. Ingram's Work on "The Philosophy of the History of Economic Science," a standard work which has already been translated into German. Dr. Ingram gives in this book a philosophical history of the development of Economic Science from the days of the Greeks and Romans down to the present day.

The *Kokumin-no-tomo* (No. 320), contains a review of Messrs. Eastlake and Yamada's "Heroic Japan." The style and general get-up of the book are praised, but exception is taken to some of the views expressed, and attention is drawn to the omission of historical details that would have thrown light on the events described. In the opinion of the *Kokumin-no-tomo* the book cannot be regarded as a full or impartial history of the War, and seems rather designed to fascinate youthful readers than to make clear to thinking men the course that events took at that critical

time. Regarded as a whole, the work does not seem worth the money and time spent on it, concludes the reviewer we are quoting.

The Sendai Second Higher School have for several years issued a bi-monthly magazine called the *有志會雜誌 Shōshikai Zasshi*. The *Shōshikai*, is a kind of "Earnest Endeavour" Society, as its name implies. It is divided into an Athletic and a Literary Department. The magazine usually consists of about 100 pages, and the contributors to it are, as a rule, students or teachers in the school. Mr. Yamamoto is now publishing an interesting series of articles on "The development of the Japanese Banking System and the establishment of Industrial Banks." It is the custom of some of the students to write for this magazine accounts of their travels and experiences during the long vacation. The October number contains these narratives.

Corresponding with Mr. Fukuzawa's *Hyakuwa*, published in the *Yūji Shimpō*, the *Taiyō* is publishing a hundred short essays from the pen of Dr. Kaiō Hiroyuki. Even the title of the new series of essays constitutes an amusing antithesis to the name of Mr. Fukuzawa's contributions, the *福翁百話 Fukuō-hyakuwa*, which may be read, "The 100 discourses of a Happy old Man." Dr. Kaiō calls his set of discourses the *食見百話, Hōmō Hyakuwa* "The Hundred Essays of a Miserable Old Man." Mr. Fukuchi, the former editor of the *Nichi Nichi Shimbun*, has also come into the field with another series called *社會百題 Shakai Hyakudai* (One hundred Social Questions). Commenting on this new development, a wit predicts that it will not be long before the number of such writers reaches the figure eight and that they will constitute an amusing comment on the term *uso-happyaku*, eight hundred lies) since they deal with a variety of subterfuges and falsehoods.

The latest number of the *Taiyō* is well supplied with readable articles and the illustrations are well executed, among them being pictures of Mr. McKinley and Mr. Bryan, and a lithograph of the attendants at the Religious Conference held in Shiba on Sept. 26th, which reveals the fact that Dr. McCauley was the only foreigner present. Among other articles are a Review of "Mr. Henry Dyer's Evolution of Industry;" "The Object of Free Marriage;" "The Pioneer Photographer of Japan;" "Mr. Fenollosa's Views on Art;" No. 13 of Dr. Kato's Short Essays on "The number of our Ancestors 990 Years Ago." The copy of the *Taiyō* before us contains, including advertisements, nearly 300 closely printed pages. It is issued fortnightly on the 5th and 20th of each month.

The 明治評論, *Meiji Hyōron* has an article entitled "The aged Fukuzawa Yukichi as a newspaper writer," in which reference is made to the great influence wielded by the Mita sage. It is generally thought, says this organ, that education is Mr. Fukuzawa's forte; and so it is to a large extent. But he is greater as a writer than as a teacher, and the *Keiōgijuku*, principally owing to this fact, has turned out more newspaper writers than any similar institution. Mr. Fukuzawa is endowed with the rare gift of being able to make subjects both clear and entertaining. He knows his power and would not exchange it for any other kind of power, and he knows too that no office would add one iota to his usefulness in the world. Some time ago he was offered a doctor's degree. But he resolutely refused the offer, saying that he had no desire to be anything but plain Mr. Fukuzawa. He has had numerous opportunities of entering the Government service, and in the opinion of many there are few high posts that he would be incompetent to fill. But he has always been averse to sacrificing his independence even for the sake of serving the Government. It is essential that a newspaper writer should be ahead of his age; that he should be capable of presenting in popular form the re-

aults of the investigations of specialists; that he should have the power of generalising; should know how to group facts under the theories which explain them. These qualifications Mr. Fukuzawa possesses in an eminent degree. What is known as the "Mita style" has never been successfully imitated. It has a charm of its own. By means of the simplest language the profoundest and most delicate feelings are expressed. The writing, moreover, is full of spirit and deep earnestness. The present success of the *Yiji Shimpō* is largely due to Mr. Fukuzawa's guidance and writing. This paper is not written for students, neither is it written for politicians. Its aim is to reach the middle classes, the business section of the community, and the work it has accomplished in this mission is something to be proud of.

The same number of the *Meiji Hyōron* has an article on the New Style of verses that Professor Toyama and others have been publishing, and from which great things are expected in some quarters. The writer goes somewhat fully into the character and alleged objects of this kind of poetry, and comes to the conclusion that its superiority has been exaggerated and that it is most unlikely that it will retain a permanent hold on the minds of literary men. Professor Toyama's first attempt in this direction, the *Shin tai Shishō*, was a failure, and his more recent work entitled *Shin tai Shika Shū* (A collection of New Style Verses), has not been more successful.

Two *Teikoku Bungaku*, has, among other subjects, articles on a Chinese Novel entitled *西廂記*, *Seishōki*; "The Compilation of Dictionaries and the History of Lexicography in Japan" (not yet concluded); "The Origin of *Kana*" (to be continued); "Nature as represented in Dante's Divine Comedy" (a translation). Among the miscellaneous literary subjects discussed by this journal are the character and tendency of Chinese poetry when compared with Japanese. The author of this subject contends that the minds of Chinese poets are oppressed by Confucianism and that any natural flow of thought and expression of feeling are consequently impossible with them. They write on birds, flowers, or the age in which they live. Their poems are characterised by wearisome sameness and are exclusively mechanical in form. There is no such thing as the flight of the imagination. It is pinned down to material things and has no wings wherewith to soar. Chinese poets seem to be entirely devoid of high aspirations.

A writer in the same number of the *Teikoku Bungaku* brings similar charges against Japanese poetry, which he describes as displaying "shallowness of feeling, lack of imagination and absence of the meditative spirit." Poetry to be worth anything, continues this writer, must display strong feeling—intense love or hatred—or must deal in wild fancies and imaginary combinations of men and things for the sake of the effect they produce on the minds of readers.

Ye have left your souls on earth.
Ye have souls in heaven too!
Double-lived in regions new!

wrote Reach. The poet must deal with two worlds. While accommodating himself to the wants and the circumstances of this mundane sphere, he must soar to heavenly heights and gaze on the beauty of a world to which the vulgar crowd have no access. "To me it seems," concludes this writer, "that all Japanese poets are unworthy of comparison with their Western *confères*." He hopes that the writers of the new style of verses may show themselves to be made of different stuff to the material that forms the mental web and woof of the typical Japanese poet.

In the same magazine we find some very sensible remarks on "The capital and the provinces," as places of residence for literary men. It is customary, writes the *Teikoku Bungaku*, for literary men to regard the capital as the only place worth living in, and to count residence in

the country as banishment. It is said that the comparative ease with which folks obtain a living in the country renders them less keen than the inhabitants of the capital. Men are apt to go to sleep where there is little competition and next to no intercourse with persons of thought and enterprise. But, observes our contemporary, there is no reason why this state of things should last. From a literary point of view the country offers, as a field of investigation, greater attractions than the metropolis. For the literature of a country to deal solely with the phases of city life is by no means desirable. It is said that one of the great causes of the deterioration of French romances was the undue prominence given by them to the corrupt practices of Parisian society.

Under the title "The translations of Fuchian (不知庵)," an author whose work has been appearing in the *Sekai no Nihon*, the *Teikoku Bungaku* remarks that the style of this busy translator is most unsuitable to the books chosen for translation. It is altogether too formal. To render, for instance, many parts of the younger Dumas' "La Dame aux Camélias" into stilted Chinese is to make it ridiculous. It is far more easy, says the *Teikoku Bungaku*, to adequately reproduce the contents of English novels than to bring out in Japanese the humour, delicacy and facile grace of the French. Fuchian's *Tsubaki Hime*, the title in Japanese of the above work, is not likely to prove a literary success. The *Bungaku kai* is equally severe when commenting on another work entitled *Tsumi to Batsu* (crime and punishment) by the same translator.

The *Teikoku Bungaku* congratulates the *Shinri*, the German Protestant organ, on the literary character which, in an increased degree, it has lately assumed. It has always aimed at being something more than a religious organ, but in the numbers recently issued its articles and items of news have a distinctly literary hue. In last month's issue the translation of "Maria Stuart," by Shigetsu and Jiteki (assumed names) is severely criticised. The *Shinri* maintains that in some cases the translation expresses the exact opposite to the original. To take an instance; the words:—*Mög' es sein Glück mit seinem buhm nicht erkaufen!* are translated *Saru gayu eni kokka no anzen wo hakaran tame go hyōban wo kinsutsuke tamō koto wa hanahada shikarubekarasu to sonji age tatematsurimasuru*. The *Shinri* proposes the following as a substitute for the above:—"Nano tament kokuri mimpuku wo uran to wa kamayete nashi tamai so." The *Teikoku Bungaku* argues that the correction of the *Shinri* is founded on a misconception of the meaning of the original, and quotes this as an example of a literary Jupiter found nodding. It is surprising, says this author, that a writer who has given to the world so many proofs of his minute acquaintance with German literature should be betrayed into a mistake of this kind. In regard to the general character of the review of the translation of "Maria Stuart" published in the *Shinri*, the *Teikoku Bungaku* expresses great admiration. The writer of the review, says this organ, shows an intimate acquaintance with the subject, and power in expressing his thoughts not usually found among this class of writers.

DISTURBANCE IN KOREA.

The *Asahi Shimbun* issued an extra on the 23rd inst. in which it stated that several Korean Military officers have been arrested on a charge of trying to abduct the King and carry him to the Keifuku Palace on the occasion of the King's visit to the Murei Palace. The plot was discovered by a Korean who lately returned from Russia. Three Russian officers and eighty seamen with a piece of ordnance, entered Seoul the same morning (23rd).

Marquis Saionji is to leave his villa at Omori on the 29th inst. at half-past seven o'clock, taking train thence for Yokohama. He leaves for Europe by the French mail steamer.

RATES OF INTEREST IN ENGLAND AND JAPAN.

Mr. Matsuyama Chuzaburo, writing in the *Tokyo Economist*, discusses the difference in the rates of interest prevailing in England and Japan, and says that it is far smaller than might appear at first sight. This circumstance makes the prospect for Japanese Government bonds in London devoid of much hope. People often say that as the ruling rates of interest on money in England and Japan is 2 and 5 per cent. respectively, and as there is therefore a difference of 3 per cent. between the two, Japanese consols will be eagerly bought up in London when foreign capitalists are assured of the stability of Japanese finance. A careful inquiry into the subject must convince these folks of the fallacy of their idea. The Japanese are familiar even with the relative amount of risk involved and other incidental causes that produce this difference of 2 or 3 per cent. in the rate of interest. Do not bankers charge interest at the rate of 7 to 8 per cent. on advances, while the Government can raise its loans at 5 per cent.? Mr. Matsuyama does not believe that investment in Japanese consols is deterred by the uncertain confidence that the Japanese Government enjoys abroad. The risk in this case is chiefly due to the fall in the gold price of silver and to the subsequent rise in the market price of commodities. The result is that interest paid in Japan has a less purchasing power than interest paid in England. In England, however, the rise in the silver price of gold has resulted in a fall in the market price of commodities, as the following table shows:—

1873.....100.....	1883.....77.....	1893.....66
1878.....82.....	1888.....69.....
Thus it will be seen that the market that stood at 100 in 1873 fell to 66 within the lapse of two decades, that is to say, a fall of 34 per cent. In other words, the purchasing power of money steadily increased at the yearly rate of 1.7 per cent. in England. Debtors in England are now actually obliged to pay 1.7 per cent. more than the promised rate of interest, and interest calculated at 1.5 per cent. in London really amounts to 3.2 per cent. This contention is borne out by the gradual fall of interest in England:—		
Average between	Market rate.	Bank of England.
	per cent.	per cent.
1871 to 1875	3.50	3.53
1883	2.94	3.40
1888	2.38	3.30
1893	1.58	2.50

The depreciation of silver and the rise in the market price of commodities are conferring an unexpected boon on debtors in Japan. Subjoined are some comparative figures showing the rise in the market price of commodities:—

1873.....100.....	1883.....103.....	1893.....121
1878.....104.....	1888.....112	

The rise during the two decades was 20 per cent., or a trifle over 1 per cent. per annum. Therefore, though nominally 5 per cent., the rate of interest in Japan is only 4 per cent. If, as in the case of England, the money market shows an increase of 1 per cent. in the rate of interest, this contention of the writer's could be made more convincing, but he regrets to find that in practice there has been a fall in the money market. But as this must be due to improvement of law, greater safety enjoyed by creditors, the development of national wealth and mechanisms of circulation, and so forth, the apparent anomaly can not by any means impair the validity of Mr. Matsuyama's position. The relative difference in the real rate of interest between Japan and England will not disappear so long as the wide discrepancy now existing in the purchasing powers of silver and gold continues. Therefore, foreign capitalists will not jump at Japanese Bonds as at something particularly tempting. The common saying of Japanese capitalists and producers that though wages are low in Japan it is difficult to maintain competition with foreign capitalists because interest on money is higher, is entirely fallacious. Mr. Matsuyama, in another article, observes that the rumours that foreigners were contemplating

investing in Japanese bonds, and that, even Baron R. R. Schickel was coming to Japan next spring with a view to purchasing mines, are all without credible foundation. We (*Japan Mail*) do not profess to follow Mr. Matsuyama's reasoning, but merely quote it as an example of what some Japanese economists think.

A LAWYER'S BILL IN TOKYO.

A dispute having arisen between Mr. Masujima, barrister-at-law and member of the Tokyo Bar, and the Tokyo City Council in connection with the former's bill for his work in the Tokyo Water-pipe scandal case, Mr. Masujima is about to sue the City Council in the Tokyo Local Court. When the Water-pipe scandal was first discovered, the City Council determined to arraign the Directors of the Iron Foundry before the Tokyo Local Court, and the services of Mr. Masujima were retained. By his advice, the Directors of the Company were sued in the Court for damages amounting to one million yen. Mr. Masujima became, subsequently, associated with six other prominent members of the Tokyo Bar, but all the preliminary proceedings were undertaken by him. Before the case reached its conclusion he was obliged to go to America on business of the Nippon Yusen Kaisha, and no definite arrangement was made between him and the City Council as to his bill of costs. When Mr. Masujima returned home, he asked the Council for 20,000 yen as his own fees and 10,000 each for five other lawyers, the sixth preferring to undertake the work gratis. A violent discussion ensued in the City Assembly, as reported at the time, the debate resulting in the resignation of Mr. Tomita Ginnosuke. Baron Kusumoto, Chairman of the Tokyo City Assembly, volunteered to act as mediator between Mr. Masujima and the City Council, but the Council were not disposed to concede Mr. Masujima's demands and Baron Kusumoto was obliged to withdraw. Mr. Masujima next addressed a strongly worded letter to Marquis Kuga, Governor of Tokyo, demanding the settlement of his claim and stating that, if the demand was not complied with by the 18th inst., he should be constrained to have recourse to law. The letter reached the Governor on Monday, the 16th inst., and he at once placed the matter before the Council. That body thought Mr. Masujima's proceeding too coercive, and argued that they were not warranted in acceding to the demand. An answer to that effect was sent to Mr. Masujima. Mr. Masujima will therefore institute a law-suit against the City Council in the Tokyo Court. We have not yet learned what the other barristers are doing in the matter. On the Tokyo City Council are such prominent men, as Viscounts Tani and Soga, Baron Nagaoka, Messrs. Shibuzawa Eiichi, Koizuka Ryu, and Matsuda Hideo.

THE PLAGUE AND OTHER EPIDEMICS.

Pest patients in Formosa aggregated 84 by the 15th inst., of whom 34 succumbed and five have recovered. On the 15th inst. seven fresh patients were reported in Taipei, of whom one afterwards died. Two pest cases that appeared in Taipei garrison have been taken to hospital; and one trooper was infected on the 16th inst. Small-pox is raging in Hyogo Ken. Up to the 10th inst. no less than 1,248 persons were affected, the latest weekly report from Kobe alone showing 312. The late cholera and dysentery returns are very serious. Up to the end of September, 1,062 cholera patients were reported, of whom 500 died. At the same date dysentery had attacked 82,460 people, and carried off 20,209. It is estimated that the number of people succumbing to one epidemic or another up to the end of September must have reached 35,000 throughout the country.

KOREAN NEWS.

The Korean Court is said to be very much embarrassed by a proposal made in connection with the engagement of Russians as advisers. The proposal is to the effect that if the Korean Court will give a written promise to invest these advisers with full powers, Russia is ready to furnish any number of them. Japanese correspondents spread this rumour, but it seems quite incredible. We also read in the vernacular press that after Min Yong-hwan returned from his official mission to Russia, bringing with him a number of Russian officers whom he had engaged as advisers to the Korean Army, several Russian civilians arrived in Seoul, and have since put up at the Russian Legation. These new comers are waiting, it is said, for a definite settlement of the above proposal before they decide to enter the Korean service.

The appointment of Min Yong-hwan as Minister of War is said, by Japanese correspondents, to have resulted from two influences one exercised by the King and the other by certain prominent Koreans desirous of inducing their Sovereign to leave the Russian Legation. Out of deference to Russia, the King and a section of his courtiers wished to give to the ex-Ambassador to St. Petersburg some important seat in the Cabinet, and as Li Yun-yong, the holder of the portfolio of War, had gradually lost favour with both the King and the Russian Representative, the idea of superseding him by Min began to be entertained, the post appearing, moreover, especially suitable for Min, since several Russian officers had returned in his train and would be connected with the War Office in the capacity of advisers. While the King was revolving this plan, certain Koreans who objected to seeing their Sovereign living within a foreign Legation, thought that if Min were appointed Minister of War, there might be a chance of getting him to urge the King's return to his own palace, for Min being a *persona grata* with the Russians, such a proposal would not give offence if advanced by him. Hence they advocated the replacing of Li by Min, and the change seemed likely to encounter no obstacles. But Li being a leader of the English Language Party and therefore backed by the Americans, it was impossible to deal with him in any summary manner. Hence it was ultimately decided to remove Cho, the Minister of Agriculture, Commerce, and Industry, who had no one to back him. He was accordingly "persuaded" to tender his resignation, and his comparatively unimportant portfolio was given to Li, the latter's place being filled by Min, and Cho being appointed a Cabinet Councillor.

Kin Pyong-si has at last wearied the King by his persistent resignations of the Premiership, and Yun Yong-sun has been appointed Acting Premier.

Min Yong-chun has, for the third time, received a sinecure, namely, the post of Court Councillor. Some say that the consideration persistently shown by the Court to him is due, not to any favour with which he is regarded, but to the fact that he is wealthy, and that hopes are entertained of getting him to contribute to the Court's expenses. He has already been obliged to perform that kind of service, and it was apparently to reward him for it that a sinecure was conferred on him.

The Prince Parent is leading an unenviable life at his palace. He is allowed only 300 yen per mensem. This being insufficient to maintain his numerous household—more than one hundred in all—he is obliged, it is said, to sell off land that he owns in various part of the country.

It appears from a story related by the *Independent* that official paymasters in Seoul exercise a degree of discrimination not hitherto accredited to them. A certain gentleman, whose name is not given, succeeded by devious devices in obtaining the post of chief of the civil law bureau and judge in the Supreme Court. But when pay day came the Finance Department sent no salary to the new judge, on the ground that he did not know civil law from uncivil.

Thinking that the War Office would be more liberal and less particular, he had his ermine exchanged for the uniform of a regimental Colonel. But once again disappointment awaited him, for the War Department concluded that a Colonel unable to distinguish the shooting end of a gun did not deserve any salary. The "advisers" are evidently doing good work in Korea.

The Independence Club, a Korean organization in Seoul, is about to issue a semi-monthly magazine, compiled in the mixed Korean and Chinese script. This is the first periodical of the kind published in Korea.

A representative of the *Independent* interviewed Min Yong-hwan, who recently returned from his mission to Russia, and found him quite enthusiastic over what he had seen in the Occident. Min seems to have been struck chiefly by the universal spirit of industry that prevails in Europe and America.

The Seoul *Independent* says:—

Some of the China and Japan papers very justly criticise the appointments of Kim Ok kyun's murderer, Hong Chong-wo, to the position of Master of Ceremonies, and of the former Yi Sé-chik to the position of Chief of the Diplomatic Bureau in the Royal Household Department. But the amusing part of the whole affair is that when Prince Komatsu of Japan was making a visit to Seoul some days ago, the convicted forger and attempted assassin, Yi Sé-chik, loomed up in the Japanese Legation as big as life, to greet the Prince. If we are not mistaken, the Japanese Court convicted him as a forger, and the Japanese Court punished him for the attempted assassination of Pak Yong-ho. But now he has been received by a Prince of that country as a welcome guest. What a change!

We can not believe that Prince Komatsu wittingly received Yi Sé-chik. At all events, if the Korean Government sent such a person to call on the Prince at the Japanese Legation, it was something very like an insult. *Apròpos* this Mr. Yi Sé-chik, we find in the *Independent* a note well worth quoting:—

It is reported that Mr. Pak Yong-ho who has been exiled from Korea since last year, and who is now sojourning in Japan, intends to go to Europe or America. He told a newspaper reporter that the cause of his leaving Japan is solely due to his health, which has not been good for the last two years, as the climate of Japan does not agree with him. But the real cause of his going away from Japan is said to be the fear of being assassinated, as there are rumours in Japan that an assassin has come to Japan from Korea to kill him. We advise Mr. Pak that he need not be afraid of that, because Mr. Yi Sé-chik is very busy just at present with his diplomatic functions in the Royal Household Department, and Mr. Hong Chong-wo is engaged in arranging the ceremonial matters in the same Department. They have not the time to attend to such a trifling business as killing Pak Yong-ho.

Here, too, is another paragraph from the same source:—

We are glad to hear that the Governor of Seoul has requested the Japanese Consul in Seoul to issue an order to the Japanese shopkeepers along the streets inside the South gate to Chongno to tear down their stores which were built inside the original limit. The Japanese Consul promptly complied with the Governor's request and issued an order to his people to that effect. The Japanese merchants are, without a murmur, tearing down their shops, leaving the streets the proper width. We congratulate the Governor of Seoul, the Japanese Consul, Mr. Kato, and the Japanese merchants for their progressive spirit in this matter.

THE HONGWAN-JI COMPLICATION.

We have received a letter from the Secretary of the Nishi Hongwan Temple in Kyoto calling our attention to the fact that the complication recently described in these columns does not concern the Nishi Hongwan-ji, as we erroneously stated, but the Higashi Hongwan-ji. Our readers are doubtless aware that these two great temples are both situated in Kyoto, and that the latter is an off-shoot of the former. We have to apologise for the error.

CHINESE NEWS.

The Chinese Government have issued instructions to the Viceroy and Governors throughout the Empire to establish schools for teaching the English language and Western sciences in all the principal cities. The reason assigned is that China, in order to keep herself on terms of equality and in touch with the Great Powers of Europe "must educate the masses and encourage inventive genius and foreign learning among her people, together with that love for country and home and that devoted patriotism so conspicuously ingrained in the hearts of those who have studied such languages and sciences." It is a new experience to find the Peking Government talking of equality with European Powers as a thing to be aimed at by China. Hitherto any suggestion of equality has been deemed an insult to the Celestial Empire. As for the Emperor's instructions, their result will depend entirely on the mood of their recipients. The Central Government in China has no manner of control over its provincial satraps.

A somewhat serious outrage on the part of Chinese semi-officials occurred on the 5th of November in the Peiho river near Tientsin. A lighter loaded with goods for an English steamer was being tugged down the river when she fouled one of the Government rice-junks, which were anchored eight deep. The tug and lighter were immediately boarded by a mob of junkmen, and though the crew of the former managed to beat off their assailants, the latter was held prisoner by several hundred of the invaders until representations from the British Consul induced the Viceroy to take steps for her release. This forcible capture of a British vessel within sight of the settlement of Tientsin naturally caused some excitement.

News from Shensi is to the effect that although the Mahomedan rebellion is virtually over, the disbanded troops are committing wholesale outrages. They help themselves to anything they need, and have even had the audacity to make their way into the district magistrate's *Yamen* and to steal his wife's valuables off her person. The beheading of several of their number, and the issue of Imperial proclamations had no effect on them, but a heavy rain-fall with its usual Chinese accompaniment of roads two feet deep in mud seems to have checked them for the nonce.

The Scandinavian Alliance Mission have commenced the publication of a newspaper in Shensi. It is called the *Sh-tsen Yuenpao*, and its editor is the Rev. Mr. Henriksen. The paper is to contain Chinese and foreign news and, of course, its main purpose will be to disseminate Christian truth. Such efforts have probably more effect in China than any steps taken by officialdom.

It is alleged that Li Hung-chang's so-called "offence" in entering the palace grounds in Peking was not due to any carelessness on his own part. Indeed, everybody had difficulty in comprehending how an old official of such long experience could have perpetrated a blunder of the kind. The story now told is that, at the close of his first audience with the Empress Dowager on his return from the Occident, the Imperial lady suggested that Li should examine the improvements and changes made in the grounds during his absence. He proceeded to do so, encountered a eunuch, failed to give the man a sufficient *douceur*, and was reported to the Emperor, who, being at daggers drawn with the Empress Dowager, gladly seized the occasion to slight her. The Board of Punishments sentenced Li to be deprived of all his offices, but the Emperor commuted the penalty into the loss of a year's salary.

The problem how to conciliate England so as to induce her to consent to an increase of the customs tariff, seems to be growing more and more difficult of solution by China. The Cassini Convention, according to the terms of which—if it be a genuine document—China has practically promised to assist Russia in the event of a war between the latter and Great Britain, will not help matters much. Neither will the agreement made by Taotai Sheng promising that the

American syndicate represented by Mr. Bash shall have the privilege of supplying whatever materials the Hang-yang Ironworks cannot provide for the Peking Hankow (650 miles) railway. The Han-yang Ironworks are not likely to be of much use for the purposes of the line, and it is said that Li Hung-chang's idea had been to give the order for these materials to British manufacturers as a kind of sop. The greatest difficulty will be with Japan, however. Her new commercial treaty with China makes her mistress of the situation, for unless she agrees to the contemplated change, goods from all parts of the world might be passed through her ports to China at the rates fixed by the old tariff.

OPENING OF THE PRISON GATE HOME.

The Prison Gate Home, or *Nhutsugoku-nin Kyusei-jo*, established by the Salvation Army in Otowamachi, Koishikawa, Tokyo, has been successfully opened. The buildings, for there are three altogether, comprise two large workshops, accommodation for no less than forty ex-prisoners, rooms for the officers in superintendence, etc.; three moderate-sized dwelling-houses, surrounded by gardens, being used for these various purposes. Otowamachi is quite a distance from the centre of the city, but the location is very healthy, so that the immediate environment of the Home leaves nothing to be desired. The opening ceremony was conducted by Brigadier W. M. Powell, assisted by 26 Salvationist officers and cadets, only two of these being foreigners. After the guests had inspected the buildings, the ceremony began with a rousing song, to the tune of "The Bell-ringer":—

*Susumi yuki, susumi yuki /
Susumi yuku, Kyusei Gun /
Kirisuto no hai to shite,
Susumu maga Kyusei Gun /*

Brigadier Powell then gave a short but graphic description of the Salvation Army's Prison Gate Homes in other lands, and emphasized the fact that out of the thousands of ex-prisoners who passed through the Homes, not more than 15 per cent. ever served another term of imprisonment. So greatly beneficial had these Homes been recognised to be that in Great Britain, India, and elsewhere, the Government made annual grants to the Army for the furtherance of the work. The speaker was aware that some attempts of a similar nature had already been made in Japan, but their failure, or the moderate degree of success attending them, was, in his opinion, owing to the absence of lively belief in God and the neglecting to place such institutions upon a sound and fervent religious basis. The Home is under the immediate charge of two Japanese Salvationists, one of whom has been no less than thirteen times in prison; and it has begun with six ex-prisoners. That lively interest in the working and result of the Home is felt was proved by the presence of a number of metropolitan prison-officials. The Keishicho warden, Mr. Yamashita Fusachika, was represented by his Secretary; while among others present were the Governor of the Ichigaya Prison; Chaplain Honda Choun (Nishi Hongwanji Sect) of the Sugamo Gaol; two Police Inspectors from the Koishikawa Police Office; Mr. and Mrs. Hara, until recently attached to the Hokkaido State Prison; Rev. Mr. Namai, of the Aoyama Gakuin; the editor of the *Fukui Shimpo*, etc. Refreshments in Japanese style were served after the ceremony was over. It has since been concluded to begin the manufacture of soap, as an employment for the inmates of the Home, for these inmates are expected to support themselves and the Home at the earliest possible date. The undertaking certainly deserves every success.

THE REBELLION IN THE PHILIPPINES.

We hear little from Manila, says the *China Mail*, as almost every source of information outside of the ably-censored Spanish papers published at the capital, is practically closed. The news therefore—if news it can be called—consists of either rumours, or officially-cooked misstatements. From the general tenour of the rumours, however, it may be safely stated that the Spanish authorities are not making great progress in the suppression of the rebellion. This, from a trade point of view, is to be regretted, as it points to a prolonged period of unsettled commercial conditions. We heard several days ago that the Spanish troops had suffered a severe reverse at the hands of the rebels, and that the Spanish loss was about 300. That report seems now to be confirmed, and the organisation and discipline of the rebels are apparently astonishing the authorities. Some time ago a rumour was in circulation that the General who was second in command at Manila had disappeared, and all sorts of stories were in circulation. It is now stated that General Blanco sent this officer to Spain, for the good of his health—on so-called sick leave. A large number of troops are said to have been ordered from Home, and many of these are alleged to be on the way. To judge from the tactics of the rebels, it would appear they are led by some heads other than Indian. Dr. Rizal, whose movements we have previously noted, is now in the fortress at Manila, awaiting disposal.

We hear of a sad incident which happened a few miles outside of Manila. The son of Mr. S. Morris, who had gone on a photographing expedition, came upon some rebels, and, as he showed fight, he was cut down and killed. This event seems to prove that life is not safe at any distance outside the capital.

The attack upon the rebel positions in Cavite commenced on the 8th or 9th November. The *Comercio* of the 10th, the latest date received, refers to the affair briefly and guardedly as follows:—

"A note has been communicated by the Headquarters to the Press on the operations now coming to a head in Cavite. According to this, yesterday the attack was commenced on the entrenched positions of Cavite Vieja and Noveleta, which were defended by more than ten thousand rebels. General Rios' brigade, divided into two columns and supported by the vessels of the squadron, after a fierce combat obtained possession of the Noveleta isthmus, the redoubt and village of Bincayan, which were destroyed, and of the Imus road, which was fortified. Our loss was thirty-five killed, including five officers, and a hundred and three wounded, including one staff officer and four other officers. Our troops conducted themselves heroically, so much so that the officers cannot find words to sufficiently praise their gallantry. The circumstance of the field of operations being so near and the ease with which information can be transmitted to the enemy necessitate great reserve as to the plans projected for the suffocation of the insurrection, but we may assure our readers that the valiant army will soon arrive, covered with glory, at its goal. The sensible losses which these operations have cost are the best proof of the manner in which our soldiers, both Peninsular and native, are fighting, not hesitating to shed their blood."

According to information received from a private source the affair bears a different complexion from that placed on it by the above. Operations commenced in earnest on Sunday, the 8th November. The rebels are said to be strongly fortified and provided with Nordenfildt and other quick-firing guns, and in the attack on Noveleta, notwithstanding the assistance from men-of-war in the bay, the Spanish troops were obliged to retire with heavy loss. Whereas the official account states the loss at 35 killed and 103 wounded, it is said that on Monday midnight (9th) the steamer *Isabel I.* moored alongside the quay close to the Magallanes monument with 240 severely wounded, all of whom were taken to the military hospital in Iloilo; and on Tuesday morning the steamer *Filipino* came up the river at 11 a.m. with 60 more wounded, some of them slightly only and able to walk. This makes 300 wounded in place of 103 as stated in the official

account. The rebel loss is not stated in the extract quoted above from the *Comercio*, but it is said to have been given out at 400. Considering, however, that the rebels were all behind parapets and in rifle pits, which the Spaniards were unable to take, this must be purely conjecture and published for political motives. On Wednesday, 11th, news was received that the Spaniards had lost 200 more men in a second unsuccessful attempt to take Novelta. The Spaniards estimate the insurgent force there as 10,000 men, so what they may be in Imus, the great stronghold seven miles inland, it is impossible to say. In order to buoy up public opinion the newspapers came out with extra editions on Monday afternoon, anticipating as usual glorious victories and stating that the first shot fired from the cruiser *Castilla* was so well directed that the shell burst in the public square just at the moment when the same was crowded with people. Reference to the map will show that Imus is just seven miles from the coast and considering that the *Castilla* was anchored at least one mile from the shore and that Imus was invisible, this is rather a "tall" order, especially when it is considered that between Imus and Cavite lie the towns of Cavite Viejo and Noveleta, both of which are held by the insurgents. Dr. José Rizal returned to Manila by the transport *Colón* on the 3rd November, and was consigned to prison, at the disposition of the military authorities.

1,383 troops arrived by the *Colón*.

According to a Madrid telegram of the 4th Nov. General Polavieja accompanied by four other Generals had arrived at Barcelona to embark for the Philippines.

Madrid, November 4th.

The issue of a loan of ten million dollars in Manila, the operation to be undertaken by the Banco Español Filipino, is under consideration.

The export duty on tobacco is to be increased.

The Provincial of the Order of St. Augustine has received a letter, dated the 20th October without the name of the place where written, from the Rev. Father Domingo Candelas, the parish priest of Talisay, Batangas. Father Candelas having disappeared from Talisay when it was attacked by the rebels it was supposed that he had been murdered. Later news negated that supposition but stated that he had been wounded. Father Candelas now writes with his hand, but does not say whether it is correct that he was wounded. He simply stated that he is well, that he is not ill-treated, and that there are with him, in the same circumstances as himself. Señor Domingo Martínez, Señor Manuel Martínez, and Herminio Miguel, a sergeant of infantry, all Europeans.

The revolt of one of the native regiments in Mindanao has now been suppressed, and the Mutineers, broken up into small groups, are trying to leave the island by ones and twos. On the 28th October fifteen men connected with the outbreak were sentenced to be shot.

Madrid, October 15th.

Marshal Blanco telegraphs that a Spanish outpost at Talisay having been attacked by the insurgents, he despatched a column of 400 men to assist the outpost; but the column was unable to cut its way through the superior forces entrenched in strong positions, and had to fall back with a loss of two officers and sixteen men killed, one major, one subaltern, and twenty-one men wounded.

On hearing of this reverse Marshal Blanco sent two battalions, who succeeded in rescuing the garrison outpost, who made a dash through the insurgent lines.

The Marshal, in a later telegram, states that his object in moving forward was to assume the command in person in the province of Laguna, to seize promptly some strategic positions on the frontier of the provinces of Cavite and Catangas, and to check an advance of the insurgents which might be dangerous in the populous districts of both provinces. The occupation of Talisay by the rebels obliged the Marshal to move towards Lipa and Catangas, with a view to stop the onward march of the rebels; and he left two regiments to guard the lines from Tananan to Colomba. The Marshal concludes by stating that he will not telegraph unimportant daily skirmishes, and that he has garrisoned Manila and Cavite with the European troops which had recently arrived.

The Government will immediately prepare fast steamers to take out several thousand men, and has telegraphed offering Marshal Blanco all the forces he may require. The intelligence has caused much sensation in Madrid.—*Standard Correspondent*.

St. Sebastian, October 15th.

The Minister of State in attendance upon the Court to-day communicated to the Queen-Regent a telegram from Manila announcing that the

mutiny of the soldiers of the disciplinary battalion in the island of Mindanao had been completely suppressed.—*Reuter*.

Madrid, October 16th.

The unfavourable news received from the Philippine Islands yesterday has caused great anxiety here, which has been increased by later telegrams, confirming the report of the check sustained by the Spanish force. It was hoped that the troops already sent out would be sufficient to cope with the situation, but it is now regarded as possible that further reinforcements will be required.

The *Correspondencia* says the necessity of sending further reinforcements with the object of stamping out the insurrection is unanimously recognised.

The rising prove to be more completely organised than was supposed at first.

The *Heraldo* states that in consequence of yesterday's telegrams it has been decided to despatch further troops.—*Reuter*.

The following is an extract from a leading article in *El Imparcial*, reproduced in the *Diario de Manila* of 25th October, having curiously enough been allowed to pass the censorship:—

To the brave woman, loving wife, and pure Aragonese by birth and blood who attempted to march in the attire of a soldier from Zaragoza to Cuba.

In my country there is a legend reading thus, applicable to this woman in the striped uniform:—

"Do you wish to compare the pool to the sparkling fountain?"

"The sun rises and dries up the pool but the fountain remains for ever."

The fountain is the race and this, thank God, remains and will continue to remain in Spain, limpid and generous gushing without ceasing, and flowing without contamination to clear away the evil caused by the mephitical emanations from the pool.

The pool. . . . What is the pool but the personification of our perturbed politics, our corrupt administration, the pernicious example from high places, putrid leaven which is fermenting below, and the impunity with which the evil-minded boast, owing to the apathy or cowardliness of the right-minded?

No, we must not despair, for the race remains, and the fountain; but. . . . the sun of justice is tardy in rising to dry up the pool.

—*Daily Press*.

MARINO DE CAVIA.

STEAMER BREAKDOWN.

The Norwegian steamer *Hermann Vede Falsburg*, Capt. Reimers, arrived in port on Sunday morning six weeks out from San Francisco. The Captain reports that the crank shaft has got out of order. After making necessary repairs he will proceed to Calcutta, his destination. He is carrying a cargo of wheat.

CORRESPONDENCE.

(Our readers must distinctly understand that we are in no sense responsible for that sentiment or opinion of our correspondents, for the accuracy of their assertions, or for the deductions they may choose to draw therefrom.)

THE N.P. MAIL.

TO THE EDITOR OF THE "JAPAN MAIL"

SIR,—The Agent's answer to "G."s complaint of the 9th inst. causes me to come to the latter's aid in hopes that the "preponderance of evidence" may be on his side. For three months I have had reason to note the difference in mail service between the two routes mentioned, as my travelling companion's mail has been coming by San Francisco owing to the letters having been addressed that way, while my own mail, not having been specially addressed by my correspondents, has, almost invariably, come by Tacoma, with the result that his "home news" is usually a week or two later than mine and frequently his New York letters, mailed later than mine, get here far ahead.

A recent instance showed by postmarks that if, instead of putting the mail on a steamer at Tacoma, the United States authorities had taken the time to send it on down to San Francisco to the next steamer, we would have had it much sooner. I regret that I cannot give exact dates, but I have just sent the post-marked envelopes back to my correspondents to show them the absurdity of allowing their letters to come that way. I do not know how long the N.P. steamers

have taken to make the run in comparison with the San Francisco steamers, nor can I imagine why the United States postal officials give them the preference, but I do know that I have had letters from New York in eighteen days by the Canadian Pacific steamers and I have had them take thirty-six days via Tacoma, but never as long as that via San Francisco.

Very truly yours, (ANOTHER) "G."
Tokyo, November 17th, 1896.

SOME PERTINENT QUERIES.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Article XVII. of the Revised Treaty with Great Britain stipulates that British owners of Patents and Trade-marks shall enjoy the same rights as Japanese owners of similar property.

It will soon be important to know what those rights are. They are, I believe, summarised in the "Regulations for Patents, Trademarks, and Designs" reprinted from the *Japan Weekly Mail* of 5th Jan., 1889, and, as several points in that publication seem obscure, I shall be glad if you or some of your correspondents will kindly enlighten me on the subject.

According to sec. XXIV. s.s. 3.—Patents become invalid "when a Patentee has imported and sold patented articles from abroad" (The italics are in the original.)

Taken literally, this means that every one, whether foreigner or Japanese, who brings foreign patent goods of any kind into Japan, is thereby disqualified from the exercise of patent rights.

This seems absurd. Let us assume, although we have no right to do so, that the clause is loosely drawn, and that similar patented articles are referred to. What do we then find? Simply that the import by foreigner or Japanese, alike, of the goods for which patent rights have been secured, will invalidate those rights.

Turning to Trade-marks. I assume that foreigners have no rights here, either as regards patents, trade-marks, or designs, until the Revised Treaties come into force, and I suppose that Japanese, who exercise, since 1st February, 1889, the rights conferred by the Regulations, have been able since that date to register such marks as they think fit, subject to the rights of their co-nationals, even though such trade-marks are the property of foreigners. That being so, and supposing the foreigner registers his marks as soon as he has the power, he will in many cases find himself forestalled by Japanese, and will have no remedy, for by s. VIII. of the Trade-mark Regulations, registration will be granted according to priority of application. It is true that Art. II. s.s. 3 refuses registration when the mark closely resembles one already in use by another person, but it is probably a moot point whether foreigners can claim protection by virtue of it, as they were not the "persons" contemplated when the Regulations came into operation, and were, as far as their provisions were concerned, non-existent.

By Art. VI. the exclusive use of any trade-mark is limited to 20 years from date of registration. I am under the impression that in Europe the ownership of a trade-mark does not lapse but exists in perpetuity. I shall be glad to be set right if I am in error. The apparent injustice is tempered by the proviso Art. XVI., giving power to apply for renewal.

As I write, it occurs to me to propound another question which is of public interest.

The protocol to the Revised Treaty provides that the duties on unenumerated articles of Import shall be those of the *General Statutory Tariff of Japan for the time being in force*.

What is this General Statutory Tariff? What are the rates of duty it imposes? Can it be promulgated or modified at a moment's notice?

The subject is one of great importance. The number of unenumerated articles is very great and comprises goods which are likely to form a large portion of the Imports of the country. For instance, all kinds of Machinery, Tools, Locomotives, Ships, &c., are unenumerated articles, and are liable, it seems to me, to any rate of duty, even a prohibitive one, which the Japanese Government deems fit to impose, and the rate may be varied from time to time, to the injury of importers, without sufficient notice.

It will be remembered that the present tariff limits the duty on unenumerated articles to 5% ad val. It seems regrettable that some definite arrangement of a similar kind was not made in the new Tariff. Some little time ago, one of the Public Departments submitted to tender some goods of the unenumerated class for delivery during and up to the close of 1897. The present tariff may be superseded by that time. The new one contains no scale of duty; so far as I know no statutory tariff exists, and when it does come, it may turn

out that the rates are very much higher than was expected, and that certain classes of foreign manufactured articles, especially machinery, are virtually prohibited.

Yours faithfully,
IMPORTER.
Yokohama, November 17th, 1896.

[In a few days we shall publish a revised version of the Japanese Laws of Patents, Trade Marks, &c., together with the Regulations bearing on the operation of those laws. After making the publication, we shall answer our correspondent's questions.—Ed. J. M.]

A MISTAKEN IMPRESSION.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—May I ask as a favour that you do whatever you may be able to help dispel what seems to be the universal impression prevailing in the interior, that a foreign lady who wears a veil is a "tekake." In North East and Central Japan, whether residing or travelling, I always hear it called out after me when wearing a veil, the veil being referred to as the sign and proof.

It happens that it is one of fashion's dictates just now that ladies wear veils, but there are those, of whom the writer is unfortunately one, afflicted with a skin upon which sun, wind, dust, and simple cold always produce effects which are positively painful. The thinnest gauze veil even is a great relief and comfort. Hence its use.

On the other hand, it is a torture for an honest woman to hear "tekake, tekake" shouted after her by little boys, big boys, and men constantly, whenever she appears on the street.

I eagerly wish that all Japanese might know that if a foreign woman were that shameful disgraceful thing—a concubine—she would never robe herself by any outward sign that others might know her low character; on the contrary, she would strive by all possible means to hide the secret of her shame.

I have taken many a serious cold at this season of the year, simply because I dreaded to begin wearing a veil; knowing by the experience of many years in Japan the inevitable result, because of the seriously mistaken impression which seems in some unaccountable way to have gone out all over the land. So that for some women, whether they wear a veil or not, there is real discomfort. What can one do in such a case?

Yours, &c.,
November 20th, 1896.

THE BIRTH-RATE.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—One trembles to take up a pen in the face of so much learning and wisdom as are evinced in a recent article in your paper entitled "Birth Rate," but it is taken up very modestly by one who feels much too humble to call herself by that greatly misinterpreted title "the new woman," however she may admire the same.

The writer in the "Revue Scientifique" is doubtless learned, logical, and widely observant, having probably actually seen the creature which his pen (or imagination?) describes, the "virilized" woman. I doubt if many others have seen her.

Reading the same article brought some queries to my feminine mind regarding some other possible causes, which may have had some effect in decreasing the birth-rate at least as much perhaps, as woman's new "costume," be it much or little, which the learned writer seems to think a cause of the mischief.

I wondered too why the blame for decrease in the birth-rate is laid all at the feet of the women. Why not lay a part of it at the feet of those ease-loving bachelors who think more of their freedom—yes, more of their undisturbed enjoyment of their cigars even—than of a wife, or the taking of cares of domesticity upon themselves.

I queried why the learned writer should not consider the fact that there is an increasing army of men going down to drunkard's graves, every year equal to all the slain in any war the world has ever seen. Why not consider that probably the death of every one of these affects some woman, as mother, wife, or sister or daughter, or, it may be, as forced to be unwedded and obliged to "make her life like that of men" to the extent of toiling to earn her daily bread and very likely that of others dependent upon her?

Why not consider this fact of alcoholic deaths as one of causes why there are several tens of thousands less of men than women in the United States, especially in New England, the part of the country referred to by the said writer?

More than all, I wonder and wonder again why the writer in his broad sweep of the horizon to discover the cause of the decrease in the birth-rate, does not take into account the deteriorating hereditary effects on the human race of alcoholics and narcotics.

Learned scientists and high authorities are freely declaring that alcohol and tobacco are altogether pernicious, depressing, and degenerating in their effects upon the human system and upon offspring. So widely has this come to be an acknowledged fact that all but two or three of the United States and Territories have enacted laws for teaching the effects of alcohol and tobacco upon the body in all their public schools.

That which has enfeebling effect on the children of the drinking man, on the growing boy to dwarf his mind and soul and boy, and cut short his life, can but have effect on the man himself. Is it not reasonable to suppose that it may take away of his "virility" at least as much as the new woman is "virilized" by her new Turkish trousers?

Is it not reasonable to suppose that it decreases the birth-rate as much as the occupation of some women who are compelled to support themselves as type-writers, telegraph operators, lawyers, or doctors, finding these occupation more to their comfort than those of the seamstress or washerwoman?

Why is not the study of the effect of alcohol and narcotics on the birth-rate, as legitimate a subject for scientific investigation as the new woman and the birth-rate?

Then, too, I query why the French women are brought up as models, when there is probably no city in the world with so large a proportion of illegitimate children as Paris, nor anywhere where the evils of licensed prostitution are more marked.

Why not justly charge vice and sin and profligacy with cause for decrease in the birth rate as well as a handful of women who may be working out an honest problem in an honest way?

Allow me to say, and then I will stop my musing, that I have known and heard of many who are likely to be called the "new woman," but I have never heard of one who did not believe the choicest, holiest treasure of woman is motherhood.

And whether married or single, one object of her work is the betterment of the world for the sake of the little child, for she believes that every child has the inherent right to be well born, free from taint of alcohol or nicotine or opium or evil virus on nerve or muscle.

Some such *fin-de-siècle* women have learned that the effect of narcotics (alcohol being a true narcotic) is so frightful on heredity that they refuse to become wives and mothers rather than to be guilty of bringing feeble children into the world. These are some of my queries, and I still query if all the causes of decrease in birth-rate are revealed yet, and if they were, I question if the female sex would be found more at fault in the matter than the male.

Yours, &c.,
November 19th, 1896.

THE PATENT LAWS.

(TO THE EDITOR OF THE "JAPAN MAIL.")

SIR,—With reference to what "Importer" wrote about the Japanese Patent Law, etc., I am happy to say, that I hear it stated that the Authorities are going to revise the whole of the said Laws, so as to fit them to the new state of affairs; of which revised Laws, I suppose, you will of course publish a translation, and not a revised version of the Laws (1889?) you kindly referred to.

Allow me to ask you, also, whether you have got any such report confirming my information about revision of the said Laws, for editors of papers are generally presumed to be better informed.

Yours truly,
R. OZA & WA.
Tokyo, Nov. 24th, 1896.

[We have no such information. On the contrary, we believe that the existing law is to stand.—Ed. J. M.]

THE NARA SCHOOL.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—The letter which the Rev. Isaac Dooman sent you about the Nara High School trouble being a gross misrepresentation of actual facts as well as defamatory to me, I wish you to spare me space in your paper so that I may rebut the charges unjustly laid at my door.

Needless to say that the sudden prosperity which the Nara High School attained in only two years was due to the liberal support of the American Episcopal Board and to the untiring exertions of Mr. Tamaki, the proprietor, and of Mr. Ido, the treasurer, of the School, as well as to the earnest assiduity of the teachers. Whatever pains I took on behalf of the Institution were of small account, and I do not like to say anything about what the rev. gentleman charges me with having done, either explicitly or implicitly. I desire to confine myself to such portions of the charges as are of a public character.

In the first place, I must remind the reverend gentleman that the post I received from the Local

Office originated with Mr. Tamaki, who, with the primary view of promoting the prosperity of the school, obtained for me, after conference with the Governor of the locality, two official functions, namely, the superintendence of the local experimental farm and the inspection of the farming of Nara Prefecture. It is true that I received on that account a monthly allowance of 15 *yen*, but it is not true that I frequently absented myself from my school duty, for I undertook my inspection tours chiefly during the summer vacation. The travelling expenses I was allowed were hardly sufficient to maintain my official position, as Mr. Suyeta, the Chief of the Agricultural and Commercial Section of the Local Office, is well aware. There were five trustees in the School, two of whom were foreigners, another two were Japanese Christians, and the fifth was a Japanese who had not yet embraced Christianity. In addition to them, there was a treasurer whose consent was necessary for any outlay. It is quite absurd, therefore, to say that I could have spent 900 *yen* without obtaining the consent of the treasurer and the trustees. Can it be really believed that if the director arbitrarily spent such a sum, the treasurer and the trustees would and could have suffered him to do so with impunity? Why was he not obliged to refund the sum? Not only in matters of school economy, but even with regard to the arrangement of school affairs, I did not hear one word of caution from the lips of the trustees during the two years that I was connected with the school. That the school incurred a debt of 900 *yen* is unquestionably true, but it was no fault of mine, as Mr. Patton, one of the trustees, frequently declared to me and the students, especially when the trouble unfortunately broke out at the school. He frankly admitted that it was due to the fault of the trustees.

I am constrained to differ diametrically from the reverend gentleman as to the cause of the present trouble. When, on Oct. 1st of this year, I, in company with the teachers and students, visited the Himuro Shrine and paid respect to it, the Trustees sent me a strongly worded letter, demanding an explanation why I, the director, who believed in the Christian creed, conducted myself in such a way before a Shinto Shrine. Again, when two deputies of the students met Mr. Page, of Osaka, in order to petition him to retain my services and those of other teachers, Mr. Page told them that Mr. Kawamura was very cool in furthering the object for which the American Board maintained the school, namely, the propagation of the Christian creed, and that, therefore, he must be made resign. Mr. Patton was present when the two deputies saw Mr. Page.

Lastly, as Mr. Dooman left Nara in October of last year and has not visited the place since that time, I strongly suspect that he may have been unjustly prejudiced against me by hearing only one side of the affair.

Yours obedient servant,
K. KAWAMURA.
Takamatsu, Sanuki, Nov. 19th, 1896.

THE TOBACCO MONOPOLY.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—At the last meeting of the Tokyo Economical Society, an official of the Finance Department told the members present that the Government estimated to spend 8,000,000 *yen* in buying up the whole of the tobacco held in Japan on the 1st Jan. 1898. It may be taken for granted that there will be found to be quite two years' consumption in the country, for if it were not so, we should have prices of tobacco very much higher than they are. I contend that with the crop grown in 1897 and the balance from the previous year, there will be quite two years' supply. In England there is always in the bonded warehouses 2 years' supply at least. Now, taking the estimate of 8 *yen* per 100 *kin*, which, I am told, is a low appraisement, the total to be purchased would be 100,000,000 *kin*, according to the above estimate. In England the consumption, according to the last returns, is put down at 1.66 lbs. per head of the population; the consumption of tobacco must be greater in Japan than in England, because smoking goes on all day here, whereas, during business hours, no smoking takes place in England. Again, here the women are great smokers, so it may fairly be estimated that the consumption in Japan is quite one-third more than that of England—or say 2.20 lbs. per head of population—and taking the population in Japan at 42,000,000, this gives a total of 92,400,000 lbs.=69,300,000 *kin*—of bitted tobacco. Now, taking the Government's estimate of the tobacco to be purchased at 100,000,000 *kin* and that this is two years' consumption, one year's consumption would be 50,000,000 *kin*. From this must be deducted at least 25% for loss in

weight, damaged tobacco, and unsalable stock. This gives 37,600,000. Again, it is necessary to deduct from this quite 15% for butts and stalks, the bulk of the tobacco imported into England being strip, namely the mid-rib of the leaf removed or else well butted close up to the leaf, whereas Japanese tobacco is sold with these included. This gives a total of 31,875,000 *kg* as the Government's estimate; or if the Government is to get its anticipated revenue of 10,000,000 *yen* out of this amount of tobacco they will have to obtain a profit of more than 26 *yen* per 100 *kg* of unbutted tobacco, and more than 31 *yen* per 100 *kg* of butted, in order to get a revenue of ten million *yen*. The money is to be borrowed, so there will be an immediate charge on the revenue. Mr. Sakagata also mentioned that old godowns were best for the storage of tobacco. In this I quite agree, if such godowns are two-storied and fit for the storage of such an easily damaged commodity as tobacco, but if they are one-storied and of such a type as the Akasaka Godowns, which I hear the Government have leased or bought for the storage of the Tokyo tobacco, they are totally unfit for the tobacco to be stored in for any length of time, and if tobacco is stored in such godowns, where the loss of the Government will end I do not know. The Government must recognize from the start that it is handling a dangerous article that damages easily, an article the good keeping of which depends greatly upon its storage. What is required are well built, two-storied (at least) godowns, well ventilated, with plenty of room for handling the tobacco, and plenty of floor space, because the piling up of new tobacco may result, in fact is nearly certain to result, in a big loss by damage. If the godowns are new the tobacco is easily protected from any damage by placing planks between the walls and the tobacco, but the godowns are better when built for some time and allowed to dry. Under this Monopoly Law the godowns ought to be well under way by now. I believe there is plenty of money granted for their building.

Your obedient servant, F. M. JONAS.

LITERARY CARNIVAL AT THE PUBLIC HALL.

"What's in a name," once asked the Bard of Avon. Many a man, yea, and woman too, has asked a similar question not once nor twice in the course of their pilgrimage through life's deariestnesses. Such a question is certainly pertinent when one visits a Literary Carnival in Yokohama arranged by the merry band of the King's Daughters Circle and finds on entering the portals of the Public Hall that it is only the old familiar fancy-fair passing itself off under a new name. For sooth to tell beyond a few stray mottoes hidden away in the recesses of the stalls, and that had to be sought for most diligently, there was little of the literary element about the affair. But there was plenty of fun—and after all, what's in a name? So long as there are plenty of bewitching maidens decked out in becoming costumes to shower sweet blandishments on all and sundry what matters the name they employ; the tag is convenient even though it may scarcely fit the occasion. Mrs. Theodore Morris, the President of the Yokohama Circle, has a band of energetic young ladies around her now, and they turned the Public Hall into a very pretty play-room on Wednesday. Just at the entrance was pitched the old lucky-wheel—it went on this occasion by the most unpoetic name of "Portia's Grab"—represented by the three caskets that stood in the proud palace of Belmont in the days when noble Bassanio went wooing the gracious Portia. And, as in Shakespeare's tale, the luck fell out (at times) sadly different to expectations, for Dame Fortune has still her favourite son. The Lady at the Well was Miss Thorn, a fairy of many charms. Next came "Vanity Fair"—with a few suggestions from Thackeray's immortal work. Here presided Miss Annie Watt, Miss Jane Watt, Miss Muriel Thomas (a stately and sweetly-serious barrister-at-law, bewigged and begowned), and Miss Trixie Sharp. In the corner was a very widespread Refreshment Booth, with maidens principally dressed in caps and gowns that at one time adorned the wardrobe of Miss Muffet—these ladies were the Misses Marion, Ada, and Lillian Sale, Hilary Moss, Leslie Herb, Jennie Manley, Bella Goddard, and Rosie Cameron (Red Riding Hood). Turning on to the stage one found some alcoves in charge of "A.B.C." girls—Londoners and others who have sojourned there will know the alphabetical signification. They were Miss Averill, the Misses Eldridge, the Misses Moss, and Miss Wheeler. Their stalls were labelled, "Over the Tea-Cups." In the green-room was arranged the "Old Curiosity Shop," in charge

of Miss Mabel Sharp ("Little Nell") and Miss Cissie Carst. Having passed the threshold a most amusing sight was encountered, "Satires on Books." Among them was "The Light of Asia"—a bottle of kerosene; "A mere cypher"—0; "All sorts and conditions of men"—a directory; "English composition"—hard cake; and sundry other whimsicalities of the sort. In addition, there were some stands of Korean, Chinese, and Japanese curios of a most advanced type and certainly mirth-provoking. In the centre of the hall was placed the Candy Stall, and at the receipt of custom stood Miss Poole (Candy-stick), and Miss Kulu (lemon-drop). Opposite, along the wall, was a stall labelled "Books and Book-markers"—really the most literary part of the whole show, and yet deplorably deficient in anything actually relating to the cult, unless book-markers can come in as poor relations—where Miss Annie Moss (a Greek vestal) and Miss May Merriman were in charge and did a roaring trade. The flower-stall was a very pretty erection, with a thatched roof. It was loaded with lovely flowers presented by Messrs. Boelmer and Mr. Manley. Towards evening sundry curiously fashioned lanterns cut out of pumpkins and melons—the work of Mr. Auguste Manley—were lighted up and presented a pleasing appearance. The little ladies in charge of the flower-selling were Miss Frances Cameron, Miss Edith Wilson, Miss Carol Merriman ("Topsy," to the life), and Miss Bessie Burns. A lemonade well was in charge of Miss Jennie Loomis and Miss Myrtle Bagnall; there was also a "k'rect weighing machine" near by. Perhaps one of the most attractive stalls was that entitled "Hansel and Gretchen," where young ladies—the Misses Ena Grosser, Anna Meier, Voight, and Reiz—dressed in old German costumes gave everyone a warm welcome and cordial refreshment.

The success achieved was phenomenal, crowds turning up both in the afternoon and evening, and the young ladies are to be congratulated on the amount of their "takings." In the afternoon the Town Band attended, and in the evening the string band of H.M.S. *Undaunted* played a capital section of music, while Miss Thomas sang "The Promise of Life," and Mr. Den Arend, Schumann's "Two Grenadiers." The Yokohama Circle, we understand, attained its fifth anniversary on Wednesday.

IMPERIAL UNIVERSITY ATHLETIC SPORTS.

The autumn athletic meeting of the Teikoku Daigaku Undokwai (Imperial University Sports Association) was favoured with most pleasant weather on Saturday afternoon, and the large play field in the University grounds at Tokyo was therefore more than usually crowded with undergraduates, the boys of the Higher Middle School, lads of the Nobles' School for Boys, and students of the Higher Commercial School; while many ladies, foreign and Japanese, graced the sports with their presence. The rising ground on the west side of the field was set aside for spectators, the Imperial grand-stand, and the band of the Guards, and here long streamers were stretched from which flew flags of every nation, with Japanese flags forming the centre of the device. Very pretty was the effect obtained, the bunting and reddening foliage of the low maples that crown the hill harmonizing well in the brilliant sunshine that flooded a cloudless sky. Soon after the commencement of the sports H.I.H. the Crown Prince arrived. He was greeted with three rousing cries of "Banzai" as he walked up to his seat on the grand-stand, and on his departure an even more boisterous cheer was raised. The Prince stayed till the eleventh race, when the sun was beginning to drop behind the hill; the air was then getting chilly. During the afternoon the College of Engineering paraded before the Prince the Champion Flag of the river, won by its crew at the spring regatta.

The form of the various competitors was much in advance of previous years, and several of the University records were broken. In the Long Jump, Tominaga cleared 16ft. 10in., beating the last record by nearly two inches; and the same athlete broke the University's previous best High Jump by three inches, clearing 5ft. 4in. In the Pole Jump, Kamio beat last year's performance by one inch—5ft. 9in. Already the vast benefits conferred in youth by athletic sports and outdoor exercises generally are beginning to show in the form and physique of the University students: the present set of young men at the Teikoku Daigaku are better set up and more generously developed than those of a few years back. On Saturday afternoon, for the first time in the annals of these sports, the University team of fifty almost held its own in the tug-of-war with the Mombusho School; three times

they tugged, and only in the last rally did the Commercial school-boys manage to pull the University down. This contest, always amusing, was additionally so on Saturday by reason of the intense enthusiasm prevailing among the hundreds of school-boys present. They yelled and cheered, groaned and shrieked as the fortune of war wavered from side to side, the noise being terrific. The erstwhile indifferent school-boy of Japan now has this in common with his Western brother, a genuine interest in manly sport, and this ardour will doubtless be maintained as steadily by him during the years of his early manhood as it is in the west. Athletics, after some struggles and disasters, have now come to stay in Japan, to borrow an expressive colloquialism of the day. At the close of Saturday's sports the prizes, that were both useful and ornamental in form, were presented by the President of the University. A word of notice is due Professor Kikuchi Dairoku, who again bore the burdens of Judge. He has consistently supported the sports since his return from England, pushing them resolutely in the years when their fortunes were at their lowest ebb; and now that he has the pleasure of seeing them firmly established in the life of the University he still sticks to his post, developing enthusiasm and encouraging fresh effort. Results:—

100 YARDS RACE.

T. Inouye.....1	K. Tomita.....4
I. Sato.....2	I. Taguchi.....5
S. Yamamoto.....3	

Ten started. Inouye soon opened out from the ruck and half way down had secured a lead of two yards. This he increased nearing the tape, though Sato and Yamamoto made a game attempt to catch him in the last 10 yards. They were unsuccessful, Inouye getting home by four yards: very little between second and third. Time, 10 9/10 secs. It should be explained that this is a grass-track, and owing to the configuration of the ground, that gives a lap of 360 yards only, the 100-yards straight is really five yards short of that distance.

THROWING THE HAMMER.

S. Murata.....1	M. Arakawa.....4
M. Kashiwagi.....2	I. Taguchi.....5
K. Tomita.....3	

Murata threw 91ft. 6in. being several feet behind the University record of 1894, when 96 feet were covered. There were ten entries.

LONG JUMP.

T. Tominaga.....1	M. Maruo.....4
S. Murata.....2	Mita.....5
Shimomura.....3	

The previous record for this event on the University ground was 16ft. 8 1/2 in. On Saturday Tominaga cleared 16 ft. 10 in. and secured a special prize. Shimomura, the third placed man, was penalised 13 inches, and yet covered 16ft. 7in.

220 YARDS RACE (final).

T. Inouye.....1	Ishikawa.....4
I. Sato.....2	S. Murata.....5
Oda.....3	

The preliminary heats in this event were run off during the preceding week, leaving ten men in. Inouye opened out before turning at the corner and increased his lead along the top of the field. Turning into the straight he had the race easily in hand and won eventually by about six yards: a close finish for second and third. Time, 27 1/5 sec.

THROWING THE CRICKET BALL.

T. Tominaga.....1	Odawa.....4
S. Murata.....2	I. Maruo.....5
Ibara.....3	

Though the air was perfectly still, the University record of 90yds. 2ft. 9in. was not approached, Tominaga, the day's winner, only covering 84 yards 2ft.

HIGH JUMP.

T. Tominaga.....1	K. Okamura.....4
S. Murata.....2	M. Maruo.....5
T. Inouye.....3	

In this event another University record went, Tominaga jumping 5ft. 4in., surpassing the previous best leap of 5ft. 1in. He was awarded a special prize. Murata, the second man, cleared 5ft. 3 1/2 in.; Inouye, third, 5ft. 3in. Two of the competitors hugely delighted "the gallery" by taking diving jumps over the tape, landing neatly on their back and shoulders.

THREE-LEGGED RACE.

Inouye and Nambu.....1	Ogudo and Saigo.....4
Sato and Tsukiyama.....2	Murata and Hyodo.....5
Nakaya and Tomita.....3	

The competitors ran very well together, none falling till the very end, when excitement caused three pairs to collide and tumble over one another

in a desperate attempt to get third place. Time, 11 secs.

NOBLES' SCHOOL FOR BOYS.

Two races were arranged on the ground for the lads of the Nobles' School for Boys, races in which the Crown Prince took a great deal of interest—one of 100 yards the other for 200 yards. About twenty boys ran in each, the results being:—

Kuroda	1	Hitotsuyanagi	1
Yagyu	2	Yanagita	2
Niire	3	Soga	3

440 YARDS (final).

T. Inouye	1	Ode	4
Ishihara	2	K. Okamura	5
Hanaoka	3	Otoe	6

Twelve started in this handicap, but Inouye, the scratch man, after getting through the crowd, won as he pleased; little separated second and third. Time, 58 $\frac{1}{2}$ secs.

POLE JUMP.

M. Kamio	1	S. Nakaya	3
T. Tomimaga	2	Nakamura	4

The winner cleared 9ft. 9in., getting a special prize for surpassing the previous record, 9ft. 8in. The competition was very close.

MOMBUSHO SCHOOL RACE.

Moriwaki	1	Yamada	3
Ishizaki	2		

This contest aroused the excitement among Commercial School-boys to fever heat, and the winner had an ovation at the end. Time, 49 $\frac{1}{2}$ secs.

880 YARDS RACE (final).

T. Inouye	1	Okamura	5
Hanaoka	2	Togawa	6
Otoe	3	Oda	
K. Tomita	4		

There were twenty-one starters in this event. Otoe lead round the first time and maintained the pace till nearing the top, when Inouye, scratch, passed through his men, and assumed the lead going into the straight. Inouye then won easily, Hanaoka got passed Otoe only on the tape. Time, 2m. 23 $\frac{1}{2}$ secs.

GAKUSHI RACE.

Imamura (S.)	1	Ishiwii (J.)	3
Yoshino (T.)	2		

Five entries. The initials after the names belong to the college from which each graduated. This was a close race, Imamura only snatching victory on the tape. Time, 29 $\frac{1}{2}$ secs.

SPECIAL MEMBERS (PROFESSORS) RACE (100 yards).

Prof. Sakura	1	Prof. Okada	3
Prof. Tamba	2	Prof. Terao	4

This race was run by the Professors in their walking costumes, just as they stood. Professor Sakura got the best of a desperate struggle by about a foot from Professor Tamba. Time, 15 secs.

OBSTACLE RACE.

Taguchi	1	Honga	2
Asakura	2	Nakaye	3

This event, as usual, was very amusing. It attracted 20 starters. The men had first to jump over a hurdle and crawl under a pole—there were six of these obstacles in 20 yards—then swing themselves along some trellis-work; next vault through hoops; then walk along the top rail of some hurdles; rush through several long miller's sacks; scramble over a ten foot bamboo fence; plunge through a hammock netting, and then dash for home with a bale of charcoal. There was a dead heat for first place. Time, one lap, 2m. 67 secs.

AUSTRALIA AND JAPAN.

By JOHN PLUMMER, M.J.S.

Sydney, October 21st, 1896.

The Coloured Races Restriction and Regulation Bill, introduced by Mr. Reed, the Premier of New South Wales, into the Colonial Legislative Assembly, has passed the third reading and been sent up to the Legislative Council, but whether it will receive the approval of that body has yet to be ascertained. The measure is directed principally at Chinese and Indian immigration, the number of Hindoos and other natives of British India finding their way into the colonies being steadily on the increase, while in northern Australia the Chinese constitute the great majority of the population. Mr. Reed, in the course of his somewhat lengthy speech on the second reading, said:—"I repudiate altogether the notion that this bill is aimed at the Japanese particularly. The bill is not aimed at that especially gallant and progressive race—they merely happen to be included

in it. It has a much wider application. If the Japanese had been singled out they would have been entitled—and properly entitled—to resent it. But nothing of that sort has been done. We are simply endeavouring—and I think it is better to do it at once—to place upon our statute-book legislation which, without picking out any particular nation or country, defines the policy of Australia with respect to the whole subject; and so far as that is concerned, I think that this bill is not at all calculated to awaken susceptibilities." He maintained that by passing the bill much future misconception and difficulty would be avoided. With one or two exceptions, the whole of the speakers, both for and against the measure, spoke strongly in favour of avoiding giving offence to the Japanese people. Mr. McMillan, ex-Colonial Treasurer, and head of the Sydney firm of Alexander McArthur and Co., while admitting the importance of keeping Australia for the Australians, suggested that the measure should not come into force until Asiatic settlement on an extensive scale was threatened. He said:—"I candidly admit that if we had the power, and if the British Government give us the power, I would go to any extreme of prohibition to prevent a large number of these coloured people from settling in the waste lands of the tropical parts of Australia. We occupy, I must confess, rather a mean position. We propose to shut out a nation which is rising into the first class by energy, by intellect, and by material resources—I mean the Japanese. What is the position which an Australian takes up? An Australian will not allow a Japanese to come into his own country; but he goes into Japan and calls himself a British subject, and any man who attempts to shut him out he threatens with the British flag. There is no doubt that any British subject can get into Japan as a free citizen, without any stigma being cast on his colour or his race. We are creating an anomaly, and, in my opinion, a very mean position for ourselves as British subjects. I am not denying the necessity for this legislation, although I do not agree with many people that it is as imminent a danger as they think; but I say most emphatically that this is the first of a series of acts which must bring us face to face sooner or later with the particular tie which binds us to the mother country. For instance, if I digress, there is a general idea amongst colonial statesmen that we ought to be able to make independent treaties, even with foreign countries. That is another question which is in the near future. But I would ask the Premier to seriously consider that it may be better to suspend the operation of this bill until it is known what the action of the British Government will be. Nobody can say at this moment whether it will be allowed or disallowed. I think it will be more courteous, more dignified, and equally independent if we allow sufficient time to the British Government to give a clear-cut opinion on this question before they allow their bill to come into operation. Of course the Premier may say, when he replies, or through a colleague, that communication has been had with the British Government, that the Government are aware that the bill will be allowed, and that the British Government are in sympathy with what undoubtedly is the feeling of the great majority of the people in these colonies. I will offer no objection to the bill. I am in sympathy with the ultimate design of the bill. At the same time, I think it is only right that those who see these serious points, and who desire that in this most important legislation touching on our position as British citizens and touching on international rights, should very carefully go about the business, and surround it with all that prudence and judgment which are so essential in doing such a great act.

Mr. McMillan's remarks may fairly be accepted as representing the general tone of public opinion in New South Wales. There exists a strong desire to avoid giving offence to Japan; but at the same time it is contended that, after all, should the bill become law, the Japanese in Australia will not be placed on a worse footing than are Australians in Japan. On this point one of the speakers in the Legislative Assembly remarked:—"Subjects of the British empire have not the right of free entry into Japan. They can only visit Japan when they have a passport. I have in my hand a pass given to a gentleman in Sydney during this year. It is only for a period of one month. Its conditions are that he must have the pass with him wherever he is found in Japan, that he must show it to any police-officer who asks him, that he must show it to the landlord of any inn in which he may lodge, and that refusal to show the passport at any time he is asked for it by Japanese officials will render the bearer liable to be brought to the nearest open port. Further, the passport is not transferable. Then it goes on to say, 'The bearer of this passport is

forbidden to trade or conclude contracts in Japan.' It also says, 'The bearer of this passport is not permitted to rent any house or to reside in Japan.' Also, 'The holder of this passport is warned that the game license conveys no right to a foreigner to discharge firearms while in Japan.' So that practically the Japanese do not allow our people this free right of entry to Japan. An Australian, merely as a visitor, holding this passport in his hand, has a right there on sufferance for a short fixed period. The gentleman who had this passport issued told me he was treated with anything but courtesy by the Japanese officials. They fussed round, and wanted to see his passport on every possible occasion, and made the thing as vexatious as they possibly could. This, of course, is merely a matter of administration, and I am not saying that we ought to exhibit any retaliatory spirit. I am only replying to the argument that the Japanese allow our people free entry into their country, while we propose to refuse the same concession to them. We simply say, 'We will not allow you to come here unless you pay a certain poll-tax; but when you do come we will allow you something you do not allow our subjects—that is, the free exercise of the rights of citizenship in the country.'

Several of the colonial papers are not slow in perceiving the many difficulties to which the impending legislation may give rise. The Sydney *Evening News* says:—

"At the present time, when the Legislative Council is on the eve of considering the bill sent up by the Assembly to restrict the immigration of coloured aliens, some features in connection with the measure point to a possibility that it may perhaps not be very readily approved by her Majesty's advisers in England. The bill as passed by the Assembly in the course of debates aggregating less than five hours' duration, restricts the immigration of all coloured races whether British or foreign subjects, and it will, if agreed to by the Council, most likely be reserved by the Governor for the Queen's assent as a measure of an extraordinary character or one inconsistent with obligations imposed upon her Majesty by treaty, the Governor's power of assent not extending to such bills. The Premier says he has the precedent of a Canadian Act of Parliament for saying that Royal assent will be given to his bill, but even so, the home authorities have another precedent to quote on the other side. In 1876 the Queensland Legislature passed an Act "to amend the Gold Fields Act of 1874, so far as relates to Asiatic and African aliens." Governor Cairns sought the advice of the then Attorney-General (Mr. Griffith), who said the bill came within the scope of his Excellency's jurisdiction, as he did not consider it was inconsistent with obligations imposed upon her Majesty by treaty, or that it contained anything whereby her Majesty's prerogative or the rights or property of British subjects not residing in the colony, or the trade and shipping of the United Kingdom and its dependencies might be prejudiced. The Governor was not, however, satisfied, and considered that the measure might involve a breach of international comity. He therefore sought the personal assent of her Majesty, and it was refused. The bill now before the New South Wales Parliament not only applies to Chinese and Japanese, but to Indians who are subjects of the Queen, thus going much further than did the Queensland Bill of twenty years ago. Since then public opinion has changed considerably, and the political power and importance of the colonies has vastly increased, but the ruling of the Secretary of State for the Colonies has important bearings upon the present question. Lord Carnarvon, the Minister at the time, wrote, in summing up his conclusions upon the whole of the representations made to him: "I have given much thought to the course which I should pursue in respect to this bill, for I should be most unwilling even to appear to infringe upon the privileges of self-government enjoyed by the inhabitants of Queensland. . . . And I am very sensible that the regulation of Chinese immigration and the preservation of order under the complications which too frequently result from it are amongst the most difficult questions of internal administration with which a colonial legislature has to deal. I have, however, felt myself constrained after full and careful consideration to advise the Queen that this bill is one which should not receive her Majesty's approval in its present shape. . . . I trust that they (the Queensland Ministry) will feel able to recommend provisions which will not only be less calculated to cause injury to British subjects of Asiatic or African origin, but will appear less directly and exclusively aimed at the subjects of a friendly Power with which it is for the advantage of the Empire at large that free intercourse should be maintained."

The *Sydney Morning Herald* says—"The real question is whether such a measure is required, and whether the danger against which it is intended to guard has any present existence. Certainly little support is given to it by the figures dealing with the influx of Asiatics into Australia. The alleged fears of timid women about Syrian hawkers and the trade-union jealousy of Afghan camel-drivers seem but a meagre basis for an act of legislation of so wide a scope. It is difficult to fully understand the patriotic importance attached in some quarters to this rather factitious-looking measure. But it is impossible to deny that the feeling has an existence throughout the colonies, and wherever the bill may be introduced few will care to incur the responsibility of opposing it. Nor can it be denied that circumstances might at any time arise which would convert the most doubting to a prompt recognition of the immediate necessity of passing such a measure if Australia was to be preserved for the white race. The bill is offered as a measure demonstrating the statesmanlike foresight of its authors in providing against a danger not yet visible. If at the same time they could make us feel satisfied that all the dangers and necessities actually in sight are already adequately provided for by legislation, the case for the Aliens Bill might be regarded as complete. In the meantime it is gratifying to be able to allay the alarm of cricketers lest Prince Ranjitsinhji should be excluded from Australia by this sweeping measure, by mentioning that the statesmanship of the Premier proved equal to the emergency by the addition of a clause placing a dispensing power in the hands of the Government."

The *Sydney Daily Telegraph*, discussing the leading features of the measure, alludes to its application to Japan. "Hitherto," the writer says, "we have differentiated between Chinese and Japanese immigrants, not because one was more or less desirable than the other, but because there had been no influx from Japan of sufficient proportions to cause alarm. In Queensland, however, this is not so, the Japanese element there amounting in the north almost to the dimensions of an alien colony. A complete Act, such as the Government now aim at passing, must, therefore, include Japanese with other coloured peoples. Of course, this trenches upon the ground of international diplomacy, which, in the present state of the world's affairs, may prove even more critical than that involving the status of Indian subjects of the Empire. The Chinese have always regarded their exclusion as a national insult. And that they have not yet forgotten it is proved by the fact that during Li Hung-chang's recent visit to England he made it a special point of complaint. Whether England cares to have the more peppery and powerful and assertive Japanese nation also placed in an attitude of perpetual protest against the invidious action of the colonies, has to be seen. The position is bristling with difficulties, but the greatest of all would be the trouble certain to arise if we were to let matters drift, and make no effort to stop the alien influx until it had flooded the country, perhaps beyond redemption."

The New South Wales provincial papers generally seem to be in favour of the measure. The *Maitland Daily Mercury*, explaining on what grounds the colonists are warranted in excluding coloured peoples, even British subjects or subjects of Governments with which Great Britain has treaty relations, says—"It behoves us, first of all, to maintain, at all hazard, the British character of the community. We do not want the future Australian to be a composite white and coloured blood. That end can be attained only by preventing coloured races from becoming denizens of Australia. A second equally strong ground is that we cannot tolerate races among us to whom we are not prepared to give, and who cannot exercise, equal political rights. There must be no inferior race in Australia. Doubtless, something may be said about the brotherhood of man, but, just as individuals may be pardoned for allowing race feeling to restrict them in foreign marriage ties with coloured folks, so may communities be permitted a similar indulgence of race feeling. And, moreover, a blend cannot be argued for on the ground that it would be advantageous to either race. On the two grounds we have indicated Australia may therefore justly claim freedom from the Government of the Empire to exclude from her shores coloured races, though they be British subjects or peoples with whom the Imperial Government is friendly. Our right of self-government is a mockery, unless it includes power to regulate the components of our population. We should, in present circumstances, expect the aid of England if Japan or China, at the point of the sword, insisted upon sending into Australia dangerously large detachments of their people. And, if we are threatened

with a gradual, an insidious, but none the less certain and menacing irruption of these and other peoples whom we do not desire for the purposes of admixture with our own, the mother-country must help us. She must see that it is an essential part of Imperial policy that she should help us. She is no mother at all, but only a cruel stepdame, if she does not. That the irruption we speak of is not immediately threatened, we admit. But we do well to provide in time, and the measure of the Government, with the amendment introduced in committee, giving power to suspend operation of the law in circumstances likely to occur, is in all ways acceptable and praiseworthy."

The *Wagga Wagga Express* declares that the measure "is not a party question, nor one which affects New South Wales alone; it appeals to the sympathies of all dwellers in Australasia. The time has arrived when it becomes an absolute necessity that some drastic measures should be taken to prevent the increase in a British land of any coloured races. We have already had numerous instances of the undesirableness of dusky visitors to the back blocks in the shape of Indian hawkers and others, but their presence is but a minor phase of a far greater question. The problem we have to face is the prevention of an invasion of the black, brown, and yellow races of Asia and Africa, and the bill at present before parliament aims at a wholesome check to Australia being used as a rubbish tip by the coloured surpluses of other countries. It is possible that the policy of Great Britain may be to maintain a friendly relation with the newly risen Power in the Pacific, in contradistinction to the actions of Russia, Germany, and France to step in and rob Japan of her fruits of victory over China. It is no doubt a matter of Imperial policy to keep on good terms with that Power; but Australians occupying a position in the Empire cannot forget that their shores have been brought within striking distance of that Power boasting the largest fleet in the Pacific, and, as we have seen, a highly trained army. Their little islands are as heavily populated as Great Britain, and require an equal outlet. But, whatever happens, Australians should band themselves together and preserve their shores from the intrusion of other races. We have seen in the Hawaiian group, where the Chinese population have outnumbered the Europeans and the remains of native population: the effect of the policy of open immigration: the visitors have numerically gained their point, a result brought about by a policy of national eulchre. What has happened there may, and will occur here unless the strongest possible measures are taken to prevent an overwhelming influx of undesirable colonists. The late Governor of Queensland, in his recent speeches in England, has pointed out the danger which is imminent, from the proximity of such a Power as that of Japan, and this should show Australians the necessity of preserving the purity of their population, and also preparing for any eventualities in the way of organising their military and naval forces in which they seem to have taken only a small degree of interest. Australians have to take such steps as will repel the advance of alien races, in spite of Imperial notions which may lie in the direction of preserving friendly intercourse with those who would prove anything but desirable assistance in the way of colonisation. The purity of the blood of the Caucasian should not be tainted with that of the lower types, and this will most assuredly occur if, in the ordinary run of events, the dusky strains are admitted, if not welcomed. The responsibilities of the future are so much dependent upon the prompt and vigorous action of the politicians of the present day that all party feelings in the legislature of New South Wales should be sunk in the desire to bring about a result which will in some manner further cement the effects of the branches of the Empire. The main desire is the preservation of the race, and to those who can appreciate the disastrous result of a mixture of black, brown, or yellow, the necessity of the mother colony giving a good lead will be more than apparent."

The foregoing extracts may be regarded as indicating the general tone of Australian opinions. There is no hostile feeling towards the coloured races residing in the colonies, unless it be the lower class of Chinese, whose presence would be regarded as unwelcome anywhere, and there will not be the slightest interference with Asiatic immigration, unless it begins to assume large proportions. Practically, the measure is a defensive one, intended less to meet an existing state of affairs than to guard against possible contingencies. It must be remembered that while in the southern portion of the colonies the numbers of Chinese have become materially reduced, their places have been largely taken by

Afghans and Syrians; while in the northern portions more than half the population consists of Chinese, Malays, Afghans, and other coloured races. As regards the Japanese nation, there is no feeling in Australia save that of respect and goodwill, and, however severely the new legislation may press upon other peoples, it will not, so far as the colonists are concerned, tend to diminish the friendly relations subsisting between Australia and Japan.

U.S. CONSULAR-GENERAL COURT.

Before N. W. McIVOR, Esq., Judge.
WEDNESDAY, November 25th.

SMITH V. SMITH.

This was a case in which Mrs. Ida May Smith brought an action against her husband, Mr. Alfred Gillmore Smith, for permanent alimony and judicial separation.

Mr. J. F. Lowder appeared for the plaintiff, Mr. G. H. Scidmore for the defendant.

His Honour, on the case being called, said that a demurrer had been filed in the case by the defendants' counsel, due notice of which had been served on the plaintiff's Counsel. He was prepared to hear the arguments on such demurrer.

Mr. Scidmore—May it please the Court. In filing a demurrer in this cause, the defendant wishes it to be distinctly and clearly understood that he is not trying to dodge an issue on the facts; for he feels that this is an action impudently and inconsiderately instituted, and would not, I believe, have been dragged into the publicity of this tribunal had my learned friend been candidly and fully instructed by his client and her abettors. The defendant, if necessary, is fully prepared to meet the facts stated in the petition, and is quite willing to fight the case on its merits, but until his demurrer is disposed of, must be content to suffer in silence the imputations unjustly cast upon him. This is an action for divorce *a mensa et thoro* with alimony *pendente lite* and permanent alimony during the joint lives of the parties. The petition is as follows:—

1. The defendant is a citizen of the United States resident in Yokohama.
2. On the 1st day of November, 1893, the plaintiff and defendant were lawfully married at Yokohama, where they cohabited together until the spring of 1895. When, on the recommendation of her medical adviser, and with the consent and approval and at the cost of her husband, the plaintiff left Yokohama on a temporary visit to the United States, where she now is.
3. Whilst so absent from her husband as aforesaid, and without any fault on her part the defendant wilfully abandoned and deserted her and wholly separated himself from the plaintiff and positively refused thereafter to live or cohabit with her, or to allow her to live or cohabit with him.
4. The defendant further neglected and refused and still neglects and refuses to provide the plaintiff with reasonable support and maintenance suitable to her situation and to his condition of life, or with the means of returning to Yokohama or of defraying the expenses of this action.

The plaintiff therefore pray:—

1. A decree of judicial separation from the defendant.
2. That the defendant be ordered to pay to the plaintiff such alimony, *pendente lite*, as to the Court may seem fit.
3. That the defendant be ordered to pay to the plaintiff, during the joint lives of the plaintiff and the defendant such permanent alimony or separate maintenance as to the Court may seem fit.
4. That the defendant be ordered to pay to the plaintiff all the costs and expenses incurred or to be incurred by her in the prosecution of this action.
5. That the plaintiff may have such other or further relief as the nature of the case may require, or as to the Court may seem fit.

J. F. LOWDER,
Counsel for the Plaintiff.

Sworn to and subscribed by W. L. Merriman, who states that he has personal knowledge of the facts stated in the foregoing petition.

This 7th day of November, 1896.

W. L. MERRIMAN.

N. W. McIVOR
Consul-General.

The petition, I must assume, for I can find no other probable authority, is based upon Regulation 229 of this Court, which regulation reads as follows:—229.—Divorces may be granted from the bonds of matrimony, upon the following grounds 1st., habitual drunkenness; 2nd, extreme cruelty; 3rd, wilful desertion by one party of the other for a period of over two years; 4th, failing wilfully to supply the wife with the common necessities of life, having the ability so to do, for a period of over two years; 5th, adultery of either party, remaining uncondoned at the time the action is brought; and

7th, conviction of either party of a felony. To entitle a party to maintain an action for divorce in any of the United States courts in the empire of Japan, it must be alleged in the complaint, and proved at the trial, that the applicant for six months next preceding the time of commencing the action, has been, and still is an actual resident of Japan. In proceedings of this nature, the courts are authorised to make and enforce all suitable orders in relation to the children of the parties to the action and in relation to compelling the payment of alimony, either *pendente lite* or subsequent to the determination of the case; and also, to make suitable disposition of all common property of or belonging to the parties of the action." The defendant's demurrer to the petition is as follows:—

The Demurrer of Alured Gillmore Smith, the defendant, to the petition of Ida May Smith, above-named plaintiff.

This defendant, by protestation, not confessing all or any of the matters and things in the plaintiff's petition contained, to be true in such manner and form as the same are therein set forth and alleged, doth demur to the said petition, and for causes of demurrer sheweth:

1. That this Court has not jurisdiction of the subject matter or cause of this action.

2. That no cause of action is stated in the said petition.

Wherefore, and for divers other good causes of demurrer appearing in the said petition, the defendant doth demur thereto, and humbly demands the judgment of this Court whether he shall be compelled to make any further or other answer to the said petition, and prays to be hence dismissed, with his costs and charges in this behalf most wrongfully sustained.

It will be observed that the first ground of demurrer involves a direct attack upon the validity of this regulation 229. This regulation with others, was made—

Mr. Lowder—In order to shorten my learned friend's argument, I may state that my petition in this case is not based on that rule. I shall not in any way rely on that rule 229 in my answer to my friend's arguments.

Mr. Scidmore—That is an entirely new feature of the case.

His Honour—Then I understand that your case, Mr. Lowder, is not based on any rule or regulation of this Court?

Mr. Lowder—My petition, sir, is based on the Common Law, not on any particular rule of this Court, but on the rules of Equity.

His Honour said he wished to understand the scope of the arguments. He took it that Mr. Lowder's contention was that his petition was not invalid because of absence of any rule of the Court, but was based on the assumption that Federal Courts in the United States, failing the provision of any statutes to that effect, could assume jurisdiction in the district in which they sat.

Mr. Lowder—Not only that, in which I entirely agree, but that this Court has power to assume jurisdiction and dissolve the bonds of matrimony.

Mr. Scidmore—Then I take it that my learned friend's position is that, although there is no provision for such a case in the rules governing this Court, the Court can assume such jurisdiction?

Mr. Lowder—My contention is that my petition has not been brought under any particular rule governing this Court, but is brought under the rules of Common Law and the rules of Equity.

His Honour took it that the Common Law to which Mr. Lowder referred was the Common Law of England that was introduced into United States prior July 4th, 1776. By the regulations under which that Court was established it was provided that upon the Court finding no rules of its own applying in certain cases, then it was to turn to any local statutes for its guidance and thus enable the judge to guide himself by provisions provided in the body of the Common Law. He took it that Counsel for the plaintiff rested his case on the rights conferred in the laws—the common law—of England prior to July 4th, 1776.

Mr. Lowder—The law of England as introduced into the United States.

Mr. Scidmore—Then I take it that the demurrer is held not to apply to the rule of Court?

His Honour—I take it that you may confine the scope of your arguments to its bearing on the Common Law and to such statutory provisions as are not in force here.

Mr. Lowder—I merely repeat that I rely upon the provisions of the Common Law and the rules of Equity.

Mr. Scidmore—The statutory provision under which this Court was established was No. 4086, of the revised Statutes of the United States—that is the federal statutes. Let us now seek for the divorce jurisdiction of this Court: it is certainly not found in the law of admiralty; and as to the Common Law, my learned friend may

tell you that it in accordance with the Ecclesiastical Law, and that its main features were imported by the colonists into America and hence form part of our Common Law. To what extent the ecclesiastical law has been adopted by us is a question that might be interesting, but in the present case I submit that the provisions of that law relating to divorce have never been recognized as a component element of our legal system. The reasons for this are various; one good reason is that the colonists wisely omitted the establishment or importation of ecclesiastical courts. Colonists carry with them laws but not Courts, and so the ecclesiastical Courts which alone in England could grant divorces were not imported into America. That is the language, supported by numerous authorities of both countries, which you will find in Section 214 of Stewart on "Marriage and Divorce." But a most convincing reason you will find further on in the same section of Stewart's work and also on page 565 of the *American Law Review* for 1888, where it is stated that the jurisdiction to grant divorces is in all cases statutory and no court, though having jurisdiction of the parties, can grant a decree of divorce except for causes provided by the statute under which it acts. No less than 29 decisions selected from all parts of the nation are cited in support of this dictum. I am glad that I am provided this morning with most of them. In support of this argument—that divorces are viewed in no other light than regular exertions of legislative power—Counsel quoted a case in the Maryland Courts, decided in 1829 and reported in 19, *American Decisions*, p. 240.—*Crane v. McGinnis*. Then, he continued, in 1852 we have the case of *Wright v. Wright's lessee*, in which the case of *Crane v. Crane* is affirmed. This was reported in 56, *American Decisions*, p. 724. Under the American statute law we must look to the American Statutes to ascertain grounds for divorce, and in support of that I will refer to the Illinois case in 1856. That was *Hamaker v. Hamaker*, reported in 65, *American Decisions*, page 706. The same view was taken in Arkansas in 1857, in the case *Baumann and Baumann*, 68, *American Decisions*, p. 174. And again in California, in 1858, in the case *Conant and Conant*, 70, *American Decisions*, pp. 721-722. The Wisconsin case decided in 1882, *Cook and Cook*, reported in 43, *American Reports*, 706. In the state of Massachusetts, in the year 1894—two years ago—the case of *Kelley and Kelley*, 42nd *American State Reports*, page 389, in which it was held, "In this commonwealth no power exists in any Court to pass an order for the payment of alimony *pendente lite*, or of permanent alimony, in a matrimonial cause of any description, except under provisions of statute conferring such power." The doctrine is reiterated in *Erkenbrach v. Erkenbrach*, 96, *New York 456*, 42, *American State Reports*, in which Ruler, C.J., says, "The courts in this State have no common law jurisdiction over the subject of divorces, and their authority is confined altogether to the exercise of such express and accidental powers as are conferred by the state."

Coming nearer home, and in view of the fact that we have to look to the laws of England to determine to what extent ecclesiastical law was adopted, I will call your Honour's attention to the case of *Burtis v. Burtis*, decided in the state of New York in 1825, reported in *American Decisions*, Vol. 14, p. 564. This is by the Chancellor of the State as the presiding judge of the Equity Court, who says, "Thus it appears that the law of England concerning divorces and matrimonial causes was never adopted in the colony of New York. It was not adopted in fact or in practice and it was never the law of the colony." I may call your Honour's attention to the well-known historical fact that in South Carolina, one of the earliest settled British colonies in America, and one of the thirteen original states of the union, divorces are not provided for by law and are denied by the Courts. For a time, I must say, during what was known as the "carpet-bag" administration, divorces were granted, but only for a short time; and thus we find that for a period of a century and a half there were no laws of divorce in that state of the Union whatever. The authority for this is Hubbel's *Legal Directory for the United States*, 1899, page 591. Then, as to the question of the equity jurisdiction of the Court: I think I have shown that so far as the common law side is concerned this Court has no jurisdiction—that is, the ecclesiastical law is no part of the common law as imported into America, and therefore no part of the common law as administered by this Court. I think that I have demonstrated that with regard to the common law jurisdiction of this Court, it does not include any of the divorce powers known to the ecclesiastical law. Then as to the equity powers, such divorce jurisdiction as is very

commonly exercised—frequently and commonly used—by the courts of equity in the United States is the outcome of powers confirmed by statute only. (Pomeroy's *Equity Jurisprudence*, vol. 1, Section 112.) You will observe that this in an action the object of which is to alter the personal status of the parties. In one sense it has often been called and described as an action *in rem*. I have another authority for this which is the well-known Virginia case, and I think that it is of importance, as Virginia was one of the oldest of our colonies and in which the laws of England received a special prominence. I am referring to the case decided in 1826 (*Almond v. Almond*) quoted in 15, *American Decisions*, p. 782. So much for the laws of the several States; what then can we find under the federal jurisdiction? I cannot find an instance of an application for divorce made to a Federal Court. The reason for this is obvious. The nearest approach to such an application was a suit to recover alimony previously decreed in a State Court—*Barbour v. Barbour*, 21, Howard, 582, wherein the Supreme Court remarked, "We disclaim altogether any jurisdiction in the Courts of the United States upon the subject of divorce or for the allowance of alimony, either as an original proceeding in Chancery or as an incident to divorce *vinculo* or to one from bed and board." I had prepared my arguments, your Honour, on the assumption that the petition was drawn up under rule 229, but as the learned Counsel for the other side relies upon the Common Law, I have had to eliminate that part of my contention; but in my view, some part of the argument for the first portion of the demurrer is applicable to the second. The demurrer sets forth under the rules of the Court that the Court has no jurisdiction in this case; the second part was that the petition should be dismissed as it does not state the cause of action. [Counsel then quoted the prayer of the petition and said that one of the first facts disclosed was that the petitioner was not domiciled within the jurisdiction of the present Court.] My learned friend may contend that in this instance the domicile of the husband is the domicile of the wife. The authorities upon that point, I submit, though somewhat conflicting, especially on the rule, establish that where a wife's absence is involuntarily she thereby acquires a separate domicile. Counsel then quoted Stewart on "Marriage and Divorce," and added that even this authority showed that there was a conflict between the American rule and the English rule in regard to the practise. He could only refer the Court to the practise on the Pacific Coast. Counsel, again referring to the prayer of the petition, said that there was no allegation here as to the commencement or the duration of the neglect and refusal, or as to the supply of the common necessities of life, or as to the ability of the defendant to supply such necessities. The petition does not state what, if any, allowance, from her husband the plaintiff has been and is now receiving; nor does it state what is the situation of the plaintiff and the condition in life of the defendant. The relief asked for is somewhat ambiguous and contradictory in a sense. The first prayer of the petition asks for judicial separation, a term of law, if I am correctly informed, that was introduced by a British Act of Parliament passed in 1858. The second prayer of the petition is for alimony *pendente lite*. On that subject I will refer you to Lawson's "Rights, Remedies, and Practice," Vol. 2; and also *Foss v. Foss*, 2 Illinois Appeals, 411. *Angelo v. Angelo*, 81 Illinois, 251. Finally, I submit, that it is well established in the practise in these proceedings that the petition must allege every fact the existence of which is necessary to the granting of the divorce. It must set forth substantially in the terms of the law relied upon all to acts necessary to give the Court jurisdiction over the parties, and so as to make out a good *prima facie* case. Counsel finally quoted Stewart on "Marriage and Divorce," section 330-331; and closed his argument.

Mr. Lowder, in reply, said that he did not think that it would be necessary to advert at length to the last series of arguments presented by his learned friend, especially as he was not prepared to hear them raised upon the present demurrer. The demurrer was based on two grounds, first of jurisdiction and the second that no cause of action was stated. If the petition failed in those respects, he submitted that there was no necessity to raise the question of domicile. His learned friend said that the prayers of the petition were contradictory. If he had said that they were in the alternative he would have said what was meant. It was true that the plaintiff asked for judicial separation and also asked for alimony as to the court might seem fit. The argument on the other side was that the Court had no jurisdiction to grant a judicial separation; no jurisdiction to allow alimony; no jurisdiction to grant separate maintenance; no

jurisdiction to grant alimony *pendente lite*. If that was so, he was sure His Honour would agree with him that, however limited the jurisdiction of the Court might be, justice would fail by want of power or competence to do justice. In considering the demurrer, the Court would have to take the allegations contained in the petition as proved. What did they find these allegations to be? That on the 1st of November 1893, the parties were lawfully joined together in matrimony and cohabited together till the spring of 1895. Then, on the advice of her medical attendant, and with the consent and at the cost of her husband, the plaintiff went on a temporary visit to the United States. There she remained at present owing to her husband refusing to support her or send her the wherewithal to pay her passage back to Yokohama. These statements of the petition must, for the purposes of the demurrer, be taken as true, and it would be a denial of justice if the Court found that the plaintiff's petition must be dismissed on the ground of want of jurisdiction. And then as to the other ground of the demurrer that no case could lie owing to no cause of action being stated in the petition, his learned friend—

His Honour—Pardon, one moment. I suppose you have cases to quote in support of your conclusion. If the Court should decide that it has no jurisdiction, does it necessarily follow that there would be no other Court open to the plaintiff?

Mr. Lowder—Yes.

His Honour—Because, otherwise, there would be an injustice.

Mr. Lowder—Yes. Because the defendant is here and no other action could be brought against him. A case brought in another court against him would fail.

His Honour—For want of jurisdiction?

Mr. Lowder—Yes.

His Honour—Are you advised on that point?

Mr. Lowder—That is my argument.

His Honour—I suppose you raise the point of her domicile?

Mr. Lowder—It does not necessarily follow that she has a domicile at all. All that the documents before the Court show is that her husband has left her in the United States, whither she went on a temporary visit, and she cannot get back for want of funds. I think that her domicile is with her husband; as my learned friend just now quoted in one of the cases he cited, the husband has the power of choosing the domicile for the household and changing it whenever he may think fit.

His Honour—You think then that the fact of her domicile cannot be questioned?

Mr. Lowder—On the facts before the Court it cannot be questioned.

His Honour—I think you might like to show how she is placed at the present time.

Mr. Lowder—I have it from the States that she has no domicile there, and that no action could be brought by her there.

His Honour—Possibly that meant at the time the opinion was given. When that opinion was stated she had not been from Yokohama long enough, perhaps, to obtain a domicile in the States.

Mr. Lowder—She is an involuntary absentee. She did not return to the States to obtain a domicile. I contend that her domicile, under the circumstances, is the domicile of her husband.

His Honour—She is not absent then, in the sense that she is an involuntary absentee by effect of physical and moral force?

Mr. Lowder—Certainly not, she was not so at first.

His Honour—I have presented this aspect of the case, Mr. Lowder, for the purpose, not of showing bias or anything of that description, but in order that I may have the help of Counsel in coming to a conclusion upon the matter.

Mr. Lowder—I am much obliged to your Honour, for so doing, and shall do my best to help clear up the matter.

His Honour—I hope I have not interrupted your argument seriously.

Mr. Lowder—Oh, no. I did not know that the question of domicile was going to be raised at this time. I had no idea it was going to be brought forward on the demurrer. In this case the husband fixes the house of the parties, and then, leaving his wife without funds in the United States, he deserts her. With regard to the cause of action not being shown, I will refer your Honour to Bouvier. He says: "The only causes for which such a divorce is granted in England are adultery and cruelty. In this country it is generally granted also for wilful desertion, and in some States for other causes." I rely on that. I will also direct your attention to another passage in Bouvier, in which he says:—"In general, if a wife is abandoned by her husband without fault of her part, and left without adequate means of support, a bill in equity will

lie to compel the husband to support her without asking for or procuring a decree of divorce." I will also refer you to Showler's work on "Husband and Wife." My learned friend has also said that in regard to the absence of jurisdiction, the ecclesiastical law could not be applied here because it had not been adopted in any way in the United States as part of the common law, and therefore such jurisdiction could not be accorded to this Court. He said that it had never existed in the United States even by implication. On such a point I cannot do better than refer to the very able work of my learned friend himself, where, on pages 98-99, he says:—"There is no Federal Statute of the United States upon the subject of divorce, consequently we must look to the Common Law or to the Law of Equity or to the Ministerial regulations for information under this head. In England, previous to the secession of the American colonies, divorces were only granted by the Ecclesiastical Courts administering the Canon Law. These divorces were of two kinds, a *vinculo matrimonii*, on a total dissolution for causes existing before the marriage; and a *mensa et thoro* granted for causes arising after marriage, such as intolerable cruelty, adultery, perpetual disease, and unnatural crime." I hardly think, in the face of that declaration, that it lies in his mouth to tell now us that ecclesiastical law was never adopted in the United States, until he brings out another edition.—(Laughter.) I doubt whether there is a better authority than Mr. Scidmore on this particular point.—(Laughter.) The case that has been very able discussed to-day by my learned friend is admirably met by Nelson on "Divorces and Separation." The work was published in 1895, and is the latest authority on Marriage and Divorces in the United States. The chapter I refer to is not very long, but it is very learned, and I intend to adopt the whole of it in my argument. [Counsel then read the chapter that gave all the latest cases and decisions in nearly all the States of the Union, showing that Courts of Equity have granted relief in such cases, when asked to grant alimony, and so prevented a multiplicity of cases being brought against a husband by tradespeople who have supplied goods to the wife in her support]. In conclusion, Mr. Lowder said—This is a case where such jurisdiction should be exercised. The Court in giving its decision would do well to rule in favour of the wife and declare that it will not refuse justice to the plaintiff.

Mr. Scidmore, in summing up, thanked his learned friend for referring to him as a high authority on the point of law in question. The learned Counsel certainly placed a higher value upon this little work than he (the author) did. Since that work was produced the author—he said it in all modesty—had learnt more law, and he trusted sounder law, than he then propounded.—(Laughter.) At any rate, he referred his learned friend to the preface of that book where he would find it stated that the work was written for students and as a guide to the high authorities. In regard to the question of domicile he would inform his learned friend that there were many courts in the United States open to the plaintiff if she sought for divorce. In North Dakota or Oklahoma a residence of ninety days was all that was required. In other courts a residence of two years was necessary. He did not think that if the Court found that it had no jurisdiction here that plaintiff would find herself without remedy. The authorities just quoted by his learned friend had more bearing on alimony than on divorce, and nothing thus far advanced by him had extended farther than that. Some Courts of the States might have such equity jurisdiction, but it was only in certain cases, and then their decrees did not carry with them a separation.

His Honour said that, in view of the serious nature of the issues, the number of authorities cited, and the importance of the Court's findings, he would defer passing on the demurrer until some later date. The decision of the Court was reserved.

A VERY CURIOUS CASE.

On Nov. 14th, at the Hongkong Magistracy, before Commander Hastings, Captain Innes, master of the steamship *Chingtu*, was charged at the instance of a Japanese, Mochitaka Taka, as follows:—"That you, on board the British steamship *Chingtu*, then in Victoria Harbour, in the waters of this Colony, unlawfully and injuriously and against his will and without any legal warrant, authority, or reasonable or justifiable cause whatsoever, imprison and detain the complainant for a space of time, to wit from about 7 a.m. on the 12th November, 1896, to 12.30 p.m. on the 13th day." There were seven similar charges at the instance of six Japanese women and one man. Mr. A. B.

Johnson, Crown Solicitor, conducted the case on behalf of the Police: Mr. J. J. Francis, Q.C., appeared on behalf of the defence. Mr. Francis said that the charge was not denied but the case was justified. M. Johnson then outlined the facts of the case which were these:—The eight Japanese arrived in Hongkong on the *Chingtu* having gone aboard as stowaways at Kobe. They were discovered at Fenchow by the officers of the ship, and were then taken below, and on arrival in Hongkong were put into a cabin and the door locked, and kept there until mid-day on Friday. From information which the Police received they went on board and the Japanese were let out of the cabin. It appears that a Japanese in Hongkong boarded the *Chingtu* and offered to pay something on account of the passage money of the eight stowaways, but the Captain demanded \$800, which was thought too exorbitant. Then communication was had to the Japanese Consul. The Magistrate in his decision said:—"The defence is absolutely and utterly useless and groundless. I was surprised that the Japanese consul had been communicated with." The Japanese consul possesses no extra-territorial rights here. If the man had been a Frenchman or Turk or a German the same course would have held good; he could have been brought up here and prosecuted. As to the idea that it was out of regard for our Vagrancy Ordinance, I think it is useless; your action is absolutely unjustifiable in keeping these people locked up. The reasons are not far to seek. You are a regular trader to Japan and were afraid to get into trouble with the Japanese authorities. It is perfectly competent for the Japanese authorities to search your vessel in their own waters and safeguard their own laws in any way they like, but the long arm of Japan does not extend to Hongkong harbour. As a ship-master, I think you have discredited the British flag in locking up these people. Japanese women have been brought here time after time, and the case has been remanded for ten minutes and exorbitant passage monies have been paid. This is an indictable offence on which I can commit you, but under section 80 I will deal with the case myself, and I will fine you \$75 with the alternative of two months' hard labour on each case." An appeal has been lodged.

LATEST TELEGRAMS.

(REUTER'S "JAPAN MAIL" SPECIAL SERVICE.)

London, Nov. 23.

During a debate on the Foreign Estimates in the French Chamber of Deputies, M. Hanotaux, Minister of Foreign Affairs, being asked to define the relations between France and Russia, declared that it was not expedient to supplement the precise statements of the Czar and President Faure regarding the *entente*, the existence of which was undeniable. Referring to Egypt, M. Hanotaux declared that France abandons none of her claims, and now she was not alone, having a friendly nation who supports her.

BUDA-PESTH.

We take the following interesting slip from the columns of the *San Francisco Chronicle*.

The games necessary to decide the tie which existed between the first and second prize-winners of the Budapest tourney resulted in favour of the Russian master, Tschigorin, his opponent, Charousek, being, apparently, easily disposed of. It is a remarkable fact that Tschigorin, who has always been regarded as a player of the first rank, never before succeeded in winning a first prize in any international tournament he had entered. He came within an ace of doing so, however, in the New York tourney of 1889, when at the conclusion of the scheduled games he was tied with Weiss. The tie match ended in a draw.

Rudolph Charousek, who has suddenly leaped to the front among chess players, is a native of Prague, Bohemia, and is 23 years of age. When 5 years old his parents emigrated to Hungary, and he learned chess at college at Kaschen in 1891. He is not a "book-player," and his study of theory has undoubtedly given the keen edge to his naturally sharp intuitive qualities. At the Nuremberg tournament he scored 5½ games against the prize winners, being only one point below Lasker, whose score was 6½. The Budapest tournament is his first record, he having won against Pillsbury, Tschigorin, Winawer, Maroczy, Noa, Popiel, and Albin, and drawn with Tarrasch, Walbrodt, and Schlechter, and lost to Janowski and Marco.

A game played between Tschigorin and Charousek at the recent Nuremberg tournament is not without interest at the present time. The score, with notes made by Emil Kienmayer of the *Philadelphia Ledger*, follows:—

(a) White now could continue Kt to Kt 6. The game then would proceed 4—Kt to Kt 5, P to Q 4; 5—P takes P, Kt to Q R 4; 6—B to Kt 5 ch; P to B 3; 7—P takes P, P takes P; 8—B to K 3, etc. White winning a pawn, but being subjected to a strong attack. Tschigorin very often adopted the two knights defence, and he is probably the foremost exponent of this particular opening. It was quite bold on Charousek's part to adopt it against the Russian.

(b) Well played. Black cannot well continue now P to B 4, for it would open the K Kt file, giving White a king's side attack. White now is enabled to play Kt to K 3, followed by Kt to K B 5.

(c) K R to K sq. followed by Kt Q sq and Kt to K 3 was probably better.

(d) This move is not very promising. Black has no time for a queen's side attack. He should have played B to B sq or B to Kt 4, followed by Kt to K 2, and eventually Kt to Q 4.

(e) This, of course, enables White to win the exchange. But White, after playing Kt to B 6 ch, followed by Q takes R, would have difficulty in extricating the queen.

(f) P takes P was probably better. Black, it seems, overlooked the winning combination White had on hand.

(g) Beautiful play, forcing Black to capture the Kt, then opening the K R file. Black had no other play. His queen was attacked, and had he moved the queen White would have continued Kt to B 6 ch, winning the rook.

(h) Brilliant play. Black is obliged to capture the rook, for White threatens Q to R 3 and mate in a few moves. K takes R, of course, causes the loss of the queen.

(i) R to R sq was not any better. White would have continued Q takes K P.

(j) Necessary to stop the advanced Kt P, but Black's game is a hopeless one, and White's next move, R to K B sq, causes the surrender. White then threatens Q to H 8 mate. Should Black answer K to Q 3, then Q B 8 ch, and if K to Q 4 or Q B 3, then Q to B 3 ch, winning the rook.

The following are the prizes played for at the

Budapest tournament:—First, 2,500 crowns; second, 2,000 crowns; third, 1,500 crowns; fourth, 1,000 crowns; fifth, 600 crowns; sixth, 300 crowns; seventh, 200 crowns. A special prize of 100 crowns for best scores against prize-winners was awarded to Tarrasch.

GAME NO. 610. EVANS GAMBIT.

WHITE. J. Gunthers.
1—P to K 4
2—Kt to K B 3
3—B to B 4
4—P to Q Kt 4
5—P to B 3
6—Castles
7—P to Q 4
8—B to R Kt 5
9—P to Q 5
10—Q to R 4
11—Kt to R 3
12—B to K 2
13—Kt to B 4
14—P to Q 6
15—Kt to Kt 6
16—Q takes R P
17—Kt to R R 4 (b)
18—B takes Kt
19—Kt to B 5
20—K R to Q sq.
21—K to R 8
22—Q takes R P
23—R takes P ch. (c)
24—R to Q sq. ch.

BLACK. W. Steinitz.
1—P to K 4
2—Kt to Q B 3
3—B to B 4
4—B takes P
5—B to R 4
6—Q to B 3 (a)
7—Kt to R 3
8—Q to Q 3
9—Kt to Q sq.
10—B to Kt 3
11—P to Q B 3
12—B to B 2
13—Q to B sq.
14—B takes P
15—R to Kt sq.
16—Kt to Kt 5
17—Kt to K 3
18—Kt takes B
19—Kt to K 3 (c)
20—B to B 2
21—R takes Kt (d)
22—K to Q sq.
23—K takes R
24—Resigns. (f)

(a) Mr. Steinitz considers this the best move for the defence but up to the present he has not by any means proved it to be so, if we may judge by the result of encounters in which he has tried it against M. Tschigorin, as well as by the result of the present game.

(b) Evidently the correct reply. Black cannot now prevent the knight being posted at B 5, which is at once fatal to his position.

(c) If K takes P the following variation would ensue:—16—Kt takes B ch.; Q takes Kt; 17—Q R to Q sq.; Q to B 2; 18—Kt takes P; and whether Black recaptures with Queen or Rook, White wins by 19—R to B 4, as the case may require.

(d) If K to Q sq., White would probably have replied with 20—Kt takes B; K takes Kt; 21—Q to R 3 ch.; P to Kt 5; 22—Q takes K P ch.; K to Kt 5; 23—Kt to Kt 6 ch., etc.

(e) Mr. Steinitz had doubtless overlooked this possible sacrifice.

(f) The Queen must fall in exchange for a Rook, after which White has an easy win; or if Black play Kt to Q 5, then P takes Kt and wins.

GAME NO. 611.

QUEEN'S GAMBIT DECLINED.

40—R (B) to Q Kt sq.
41—B takes R
42—K to Kt 2

NOTES FROM "THE FIELD," LONDON.

(a) A fine move in conjunction with the subsequent P to K 4 Janowski plays with wonderful lucidity.

(b) If 13—B to B 3, then 13—Kt to Kt 5; 14—Q to K 4, B to K 5, and wins. Janowski must have foreseen all these variations, which shows him to be a player of great depth of calculation.

(c) The hasty move spoils the combination. 24—R to B 4 would have given him a decisive advantage.

(d) White having had such a lucky escape (as it appears).

should not have tempted fortune by the capture of a Pawn that opens the Q file. If he wanted a P-win, why not B takes P ch.?

(e) The following beautiful variation shows how far Steinitz looks into a game. Supposing he had played the tempting 18—P to B 7, the continuation might have been: 19—R takes P ch.; 20—R takes R; 21—K takes B ch.; 22—K takes R; 23—K takes R; 24—K takes R; 25—K takes R; 26—K takes R; 27—K takes R; 28—K takes R; 29—K takes R; 30—K takes R; 31—K takes R; 32—K takes R; 33—K takes R; 34—K takes R; 35—K takes R; 36—K takes R; 37—K takes R; 38—K takes R; 39—K takes R; 40—K takes R; 41—K takes R; 42—K takes R; 43—K takes R; 44—K takes R; 45—K takes R; 46—K takes R; 47—K takes R; 48—K takes R; 49—K takes R; 50—K takes R; 51—K takes R; 52—K takes R; 53—K takes R; 54—K takes R; 55—K takes R; 56—K takes R; 57—K takes R; 58—K takes R; 59—K takes R; 60—K takes R; 61—K takes R; 62—K takes R; 63—K takes R; 64—K takes R; 65—K takes R; 66—K takes R; 67—K takes R; 68—K takes R; 69—K takes R; 70—K takes R; 71—K takes R; REPORTS.

The British steamer *Empress of Japan*, Captain Lee, reports:—Left Vancouver, B.C., the 9th November at 2.30 p.m. calling at Victoria, B.C.; sailed from Victoria, B.C., at 10.35 p.m. the same day; Amstignak Island (Aleutian Group), was passed (distance 13 miles) at 7.17 p.m. on the 15th; Kinkasan was passed at 7.40 p.m. on the 21st. The passage across the Pacific was exceptionally fine; experiencing smooth sea, generally and fine winter weather throughout the passage. Arrived at Yokohama the 22nd November at 2.40 p.m. Time from Victoria to Yokohama, 11 days, 22 hours, 34 minutes.

The British steamer *Victoria*, Captain A. Gove, reports:—Left Tacoma, Wash., the 6th November at 9 a.m., and Victoria, B.C., at 7.30 p.m.; experienced strong westerly winds throughout the passage. The meridian was crossed at midnight in lat. 50° 30' N. on 15th inst. On the night of 22nd, when off Imboye-saki, encountered a furious gale and very heavy sea, which commenced from E.S.E. gradually hauling to the southward and S.W., increasing in force until 2 a.m. on 23rd, when it commenced to moderate. Arrived at Yokohama the 23rd November at noon. Time of passage, 15 days and 12 hours.

ARTIFICIAL PERFUMES. CAUTION!

Messrs. J. & E. ATKINSON warn their customers against the Artificial Chemical Perfumes at present so extensively offered. Though strong they are *nasty*, and from a hygienic point of view their use is to be strongly deprecated.

ATKINSON'S "NATURAL" PERFUMES are made from flowers, and possess all their natural fresh sweetness. They cannot be surpassed either in delicacy or strength.

ATKINSON'S "WHITE ROSE."
"A charming Scent."—H.R.H. The Duchess of York.

J. & E. ATKINSON, 24, Old Bond Street, London.

May 4th, 1895.

THE GREATEST WONDERS OF MODERN TIME

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the druggist Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN.

HOLLOWAY'S OINTMENT

In certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations. Mr. J. T. Couves, in his account of his extraordinary travels in China, published in 1891, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the remaining stock."

Sold by all Chemists and Medicine Vendors throughout the world.
May 1st, 1896.

MILKMAID BRAND CONDENSED MILK

The "Milkmaid" Brand is guaranteed to contain all the cream of the original milk. In the process of manufacture nothing but water is removed, nothing but the best refined sugar added.

Avoid low-priced brands from which the cream has been abstracted, and ask for the "Milkmaid" Brand, the best for all purposes.

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL" must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, DEC. 5TH, 1896.

MARRIAGE.

On the 26th November, at the Episcopal Church, Kobe, by the Right Reverend Bishop Fyson, assisted by the Reverend G. H. Davies, Chaplain, HERBERT WILLIAM, eldest son of the late Herbert Irving Bell, of Plaisance, Mauritius, to ISABELLA JOHNSTONE, third daughter of William Johnstone Steele, Esq., of Annandale Lodge, Vanbrugh Park, Blackheath, London.

SUMMARY OF NEWS.

DR. JAMISON'S release has been ordered owing to ill-health.

THE Japanese cruiser *Yoshino* left Yokosuka on Tuesday for Manila.

RUMOUR has it that Count Goto will be appointed a Minister of State at no distant date.

H.M.S. *Grafton* having docked at Yokosuka, Rear-Admiral Oxley has hoisted his flag on the

Undaunted. Vice-Admiral Sir Alexander Bulmer is visiting Singapore in the flagship *Centurion*.

COMMANDER IWASAKI, Inspector of Naval Shipbuilding, and staff, left for England on Sunday last.

A SEVERE storm swept over Hakodate on the 28th November, doing great damage to the shipping.

ON Saturday a sixteen mile bicycle race took place in Yokohama, the men riding in relays of two miles each.

THE *Moscow Bourse Gazette* strongly protests against the Russian Government's organizing relief for the Indian famine.

A SPECIAL railway carriage is being constructed for H.M. the Empress at a cost of yen 20,000. It will run on eight bogie wheels.

IN accordance with the Bank Regulations, a new Vice-president will be appointed in the Bank of Japan at an early date.

THE football match on Saturday between the Y.C. & A.C. and H.M.S. *Undaunted* resulted in a draw, each side obtaining a goal.

ST. ANDREW'S Day was duly celebrated in Yokohama and Kobe by large public balls, the St. Andrew's Societies being the hosts.

H.I.H. THE Crown Prince will spend the winter at Namadzu, a town that enjoys a warmer winter climate than the capital possesses.

THE British Government has given a written pledge to France that the Niger expedition will not touch any point in dispute with France.

A GERMAN libel suit was determined in Yokohama last week, Mr. P. Vanier being fined in the nominal sum of 100 marks for libelling Mr. Vollbehr, of the Normal Dispensary.

EIGHTY or ninety Japanese are now residing at Bangkok. They desire to have the Treaty between Siam and Japan concluded quickly and a Japanese Consulate established there.

MARQUIS SAIONJI, and several officials in the Communications, Agricultural and Commercial, and the Educational Departments, left for Europe by the French mail steamer on Sunday.

THE Portuguese Collaco, who was convicted in the Yokohama Chihō Saibansho, on the charge of stealing some old postage-stamps, has been acquitted on appeal by the Tokyo Appeal Court.

THE *Times* states that the Russian mission to Abyssinia has secured great influence with the Negus, and that the mission will remain in Abyssinia so long as the British remain in Egypt.

Two fires occurred in Yokohama this week. The first involved the total destruction of Farsari's photographic studio on the Bund; the other the complete loss of a two-storied godown at No. 130, China-town.

MESSRS. AOYAGI and Takahashi, of Yokohama, have applied to the authorities for permission to form the Shinhin Kisen Kaisha (Kanagawa and Yokohama Passenger Steamer Company). They are backed by a capital of yen 50,000.

YOSHIMURA SEITARO, aged 19, living at No. 4, Takegawa-cho, Kyobashi-ku, who fired into a room of the Kagetsu restaurant at Kyobashi the other night, has been sentenced to one month's imprisonment at the Kyobashi-ku Saibansho.

ON the 28th ultimo, while the lighter *Ebisu Maru*, owned by Mr. Fushimi, of Matsukage-cho, Yokohama, was receiving some iron for the Nippon Railway Company, from the British

steamer *Agapanthus*, the tackle-chain parted, the whole of the iron and tackle fell on the craft, and the lighter sank immediately. It was afterwards floated. The crew were saved.

ON Monday a strike of draymen occurred in Yokohama, with the result that foreign sailors and others were, for the first time in Japan, engaged to drive drays through the streets of Yokohama.

THE *Tairen Maru*, of the Nippon Yusen Kaisha, collided with the British steamer *Achilles*, of the Blue Funnel line, on the 27th of Nov. when the former was putting into Moji. Both steamers suffered slight damage.

THE Powers have presented a Note to the Porte declaring they will organise the Gendarmerie and judiciary in Crete without the Porte concurring, unless the Porte carries out the reforms promised in the trade issued in August last.

MR. KITO RYOSUKE, a dispenser in Maruya's Apothecary's Shop, Benten-dori, Yokohama, has been fined 10 yen at the Chihō Saibansho on a charge of having sold solid arsenic (to Mrs. Carew) in violation of the Japanese regulations for the sale of medicines.

TOWARDS dawn on Friday, the high pitched slope just behind the Akagi Shime, Ushigome, Tokyo, broke away, causing damage to the house occupied by Mr. Okamoto, and a house-maid was crushed to death. The accident was due to the heavy rain of Thursday.

BARON MATSUDAIRA, the new Vice-Minister of the Home Department, is appointed Chief Commissioner of the Tokyo City Reform Assembly and a member of the Railway Council, in place of Mr. Matsuoaka, the former Vice-Minister, who has resigned.

IN a speech at Pretoria, President Kruger condemned the damaging reports that it was the intention of the Transvaal to forcibly break the London Convention. He was confident that Great Britain would fairly meet the claims arising through the Jameson raid.

IN addition to the suit entered in the Tokyo Court by Mr. Masujima to recover his fees—\$20,000—in the Water-works scandal case, the Tokyo City Assembly have been served by Prof. W. K. Burton with a bill for yen 130,000 as fees for services rendered by him in preparing the plans of the Tokyo Water-works.

AFTER several weeks of absolute stagnation, a small trade has set in for Yarn, and some business is doing in Doubles, 42 Plain and 60 Gassed. In all other sorts business is very quiet, and Shirtings are quite lifeless, while Francies and Woollens remain without enquiry. A poor tone prevails in Metals, buyers only taking small lots to keep stocks running. The Kerosene market has experienced a slight drop, in sympathy with the fall in Kobe and Nagasaki, but business has not been attracted to any great extent, though the empty state of up-country stores should cause traders to come in shortly. There have been some few transactions in Brown Sugars, the heavy stocks causing a weakening in quotations. The prospects for White sorts are very good. In Raw Silk, the heavy and accumulating stock (in spite of large direct exports) has caused holders to weaken considerably. Consequently, a fair amount of silk has passed the scales, but the tendency is still downwards, as the present stock is about 21,500 piculs. Waste Silk is very active and prices notably harden in the face of a stock of 13,500 piculs. Tea is firm, with purchases running on the better grades, now becoming very scarce. Exchange continues steady.

THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.

The public excitement about the Household Minister's Affair has virtually subsided, but the Ministry's repeated resort to administrative measures against the press in connection with that affair has provoked a new outburst of controversy about freedom of speech. Seven or eight articles have appeared on the subject, but the trend of opinion is not uniform, as will be gathered from the following brief summary.

The *Mainichi* advises its contemporaries to combine once more into a league and bring pressure to bear on the Government and the Legislature with the object of having the suppression and suspension clauses expunged from the Press Regulations. The Ministry are believed to be contemplating the introduction of a Bill in that sense in the approaching session of the Diet, and newspaper men themselves must spare no effort to promote the attainment of the Cabinet's purpose.

The *Yomiuri* warns the Ministry that the introduction of the above Bill will not be sufficient, since, judging from experience hitherto garnered, and from the disturbance that the recent Household Department's affair created, the Bill will be opposed by a majority of the House of Peers, secretly backed, perhaps, by the "mess-together Ministers," and the reform may once again fail of achievement. The *Yomiuri* recalls a high-handed procedure that Earl Grey took against the House of Lords when the Reform Act was opposed by it, and advises the Japanese Ministry to push their Bill through the House of Peers at all hazards, staking their tenure of office on its success.

The *Nichi Nichi* still prefers to assume an attitude of isolation on the question of press emancipation. It devotes three or four articles to the enunciation of its position. It maintains that freedom of speech, as set forth in the Constitution, means freedom within the limits indicated by law, and not absolute freedom. It is true that administrative interference in journalistic affairs is inevitably more or less inconvenient to the press itself, and necessarily more liable to error than legal procedure would be. Still, recourse to the law has the advantage of lacking promptitude and efficiency and can not serve as a means for controlling the press with anything like the thoroughness of Administrative interference. Just as the press wields potent influence in rousing public sentiment to uphold a good cause—as witness its accomplishments during the late war, and also at the time when Count Okuma was about to conclude, in 1889, a disadvantageous revision of the Treaties, so newspapers have the power to demoralize the public mind, with results of which the assassination of the late Viscount Mori by Nishino Buntaro and the throwing of a bomb at Count Okuma by Kurushima Tsuneki are signal instances. Moreover, the tone of the press does not yet justify the removal of all restraint; witness the intemperate and contumelious utterances of certain journals in connection with the Household Minister's affair. Therefore, the *Nichi Nichi* concludes that press censorship ought not to be done away with, but must be suffered to exist as before.

Three articles, bearing either directly or indirectly on the question, have been published by the *Fiji Shimpo* this week. Their motive is not so much to advocate the abolition of all restraints on freedom of speech, as to rebuke journalists and publicists for the intemperance of their utterances. While admitting that a great improvement has taken place in the general tone of politics, and asserting that the authorities need no longer apprehend any disturbance of public tranquillity from occasional violence on the part of a limited section of public writers, the *Fiji* nevertheless regrets that the progress of general knowledge is far

from being satisfactory, and that various prejudices are still entertained on questions relating to religion, morals, education, and so forth. The existence of these prejudices offers a barrier to complete freedom of speech and pen. The excited discussion that the affair of the Household Minister evoked is a good illustration, for though the quarrels that occurred about it were apparently of a purely political character, still the tone of the controversialists was so low as to be entirely irreconcilable with the spirit that ought to co-exist with freedom of speech and pen. Evidently education is yet far from being thoroughly diffused, and the degree of public knowledge is still defective. Hence, to maintain that mere abolition of all restraints on the press would elevate Japan to the position of a country where freedom of speech may be safely enjoyed, is a patent fallacy. Unless education be more thoroughly diffused, and unless its beneficial effects be fully attained, genuine freedom of speech can never be used without abuse.

Japanese thinkers, writes the same paper in another article, are still prone to run from one extreme to another. They lack moderation and temperance. That is especially the case in politics, as the heated squabbles that have just subsided demonstrate. So unrestrained and violent was the language employed by the two opposing sections, that outsiders might easily have imagined that some heinous crime was the subject of debate. The mere fact that such strong language was thought necessary to compass a certain object, constitutes a plain proof that Japanese publicists have not yet developed the faculty of refined reasoning, an unavoidable consequence of deficient education. The *Fiji* considers that Judging by the quality of the theories advanced by leading politicians, the nation can not yet be said to have emerged from a crude condition: it stands much in need of fuller education.

In a third article the same paper indicates the course that the Authorities ought, in its opinion, to pursue should they be subjected to embarrassing queries by the House of Peers, in connection with the apparent inconsistency between their original promises and their recent performances towards the press. Some members of the Upper House are sure to ask why, if the Government were resolved to repeal the suspension and suppression clauses, they suppressed or suspended so many journals in connection with the Household Minister's affair. Reply frankly, says the *Fiji*, that the steps taken against these journals and periodicals were the result of a temporary aberration. Only by a frank avowal of error can the Cabinet emerge from its embarrassing situation.

The *Nippon* writes much about the prestige of the Cabinet, and also about the so-called *Banshoku Daijin*. It argues that the ineptitude of the Ministry to make the "mess-together Ministers" subservient to their will, and induce them to move in line with their colleagues, reflects seriously on the Cabinet's reputation. It further says that comparatively unimportant members being an unavoidable element in every Cabinet, the mere presence of *Banshoku Daijin* would not affect the dignity of the present Cabinet. When, however, as rumour alleges, these *Banshoku Daijin* are understood to be betraying the interests of the Cabinet in which they are suffered to sit, not only must their disloyal conduct be condemned strongly but the incompetence of the Cabinet to deal with them in a proper manner is a distinct slur upon its strength and influence.

Foiled in their attempt to drive Count Hiji-kata from his present post, writes the *Tokyo Shimbun*, the wire-pullers of Count Okuma's party have shifted their ground and started a crusade against what they call the "foreign-element" in the present Cabinet. They have succeeded in expelling Messrs. Matsuoka and Onoda from the Home Office, and are now contemplating a similar coup in the cases of

Viscounts Enomoto and Nomura, Marquis Hachisuka, and Mr. Kiyoura, whom they regard as inimical to the Matsukata Cabinet and whom they insult by the title of "mess-together Ministers." They seem to have entirely forgotten that these four Ministers never had any intention of entering the Cabinet, but were induced to do so by the advice of the Senior Statesmen and at the request of the Premier himself. The Premier must have been perfectly well aware that these four men entertained opinions of their own when he prevailed upon them to assist him in the administration of State affairs. Consequently, to dismiss them on the pretext that their opinions are not in accord with those entertained by Count Okuma's party, would be an act of gross injustice and discourtesy not only to the four Ministers but also to the Senior Statesmen. Count Okuma's relation to the Government is shrouded in mystery, continues our contemporary, for instead of frankly traversing any opinions of his colleagues that dissatisfy him, he keeps silence in the Cabinet, and then secretly inspires his followers outside to deliver assaults against these four Ministers. A statesman leading a political party ought not to act as the Count is acting.

The troubles among the Buddhists of Japan elicit critical remarks from several papers. In truth, the Buddhist house seems to be divided against itself, for while the Sodo Sect is at a loss what to do about its standing difficulty, the autonomy of its two centres, the Jyodo is in a state of commotion with regard to the election of its Chief Abbot; the United Sects are seriously perturbed by the litigation that has grown out of the elimination of four cardinal tenets of the Nichiren Sect from the general creed, and the most popular and influential sect of all, whose principal temple is the Higashi Hongwan-ji, has been so shaken by recent agitation that its very stability is threatened. The *Yomiuri* and the *Mainichi* ascribe these difficulties to the fact that Japanese Buddhism has fallen behind the general march of the time. The latter journal says that, in addition to that main cause, the interference of the Government with Buddhism and Shintoism has gradually deprived both religions of the spirit of independence, so that they have lapsed into a helpless state of internal corruption. Official control must given up; the present patriarchal system, sometimes hereditary, as in the case of the Hongwan-ji, must be thoroughly re-modelled, and absolutism must be replaced by a representative organization.

The *Yomiuri* argues that the troubles of the Higashi Hongwanji are attributable to a conflict between the old ideas and the new, just such as overtook the Japanese Government some thirty years ago, and that this wave of reform will sooner or later extend to other sects. The event is alike inevitable and beneficial, and will in the long run rouse Japanese Buddhism from stagnation and purge it of corruption. The disorder that has overtaken the administration and the finances of the Higashi Hongwanji, writes the *Nippon*, is attributable to the sensuality of its Lord Abbot and his immediate advisers. No one need be much concerned about the downfall of the Shin Sect, but every one would regret if the most influential source of religious influence in Japan were paralysed.

The *Nichi Nichi* writes strongly against the passage in the recent circular of the *Shimpo-to*, where it is declared that the party will make the Government atone for their past errors. Do the Cabinet and the party confound personal and State matters, and can a fault that has been committed by the Administration be atoned for by any subsequent good deed? Such a method of evading responsibility can never be tolerated in State affairs, unless the administration is to be reduced to the position of a mere party tool. Further, the assertion made in some quarters that the Government, heartily repenting of their broken promise to the *Shimpo-to* in the matter of freedom of speech, have once

more pledged themselves, by way of atonement, to introduce a Bill of Press Law amendment in the next session of the Diet, seems quite incredible, for, if true, it would mean that the Cabinet, instead of atoning for its error, is about to deviate still farther from the straight path. If the Ministry are really conscious of having committed a fault, they must crave the Emperor's indulgence. To make a secret stipulation with a political party and try in that way to shuffle out of their responsibility, is a fashion of procedure not to be tolerated in the case of Ministers of State.

The *Yomiuri* suggests the advisability of abolishing the Military Board of Inspection. It offers this suggestion not because the long absence of Marshal Yamagata, the Chief of the Board, apparently indicates the superfluity of his presence, but rather because the very fact that the Chief of the Board can be away for a long while without in any way retarding the Board's business shows that no special need exists for such an institution. The question of abolishing the Board has been talked of ever since the ing opening of the Diet but has not been pushed in deference to the influential personages serving on the Board. The Diet ought not to be deterred by any such trivial considerations, especially when the retrenchment of administrative expenses is deemed absolutely necessary.

The *Yiji* regrets to learn that the work of the Administrative Reform Committee has been brought to a standstill owing to various objections raised against their proposals, and that the Committee have held a special meeting with the view of facilitating progress. Administrative reform is a step to which the Cabinet was committed soon after its organization, and any failure to redeem the pledge would greatly impair the Government's prestige. If the dissatisfaction engendered by the Administration's ill-advised procedure against the press be followed by a fresh cause of dissatisfaction in the failure of Administrative reform, the public will despair of the Government's future.

The reason—writes the *Nippon* on this subject—why the Administrative Committee previously appointed failed to achieve any worthy work, was because they limited themselves to a narrow circle, excluding from their purview not only the Household Department, but also diplomacy, military affairs, justice, and so forth. They conceded too much in one direction and too little in another, thus failing to maintain proper equilibrium. Hence their work proved quite unfruitful.

EDITORIAL NOTES.

SET-ON BY BANDITS.

A MOVING tale, set forth with all the adjectives that a Japanese reporter has at easy command, is given in the vernacular press, regarding some recent adventures of Miyazaki Gaku, a travelling drug-peddler. Miyazaki was recently in the neighbourhood of Nampho, Chhnn Chhōng-do, with a large stock of wares, when a band of roving tiger-skin dealers attacked him. At first he tried the gentle art of philosophic remonstrance, but the assailants paid scant heed to his words. Then he drew his sword and, after laying about him with commendable vigour, cut an exit through the crowd. Next he procured the assistance of a neighbouring village headman to recover his stock of stolen goods, and after securing what remained of them, fell asleep. Then the Koreans approached again, and tying him with a stout cord, dragged him along the road for a distance. Though thus rudely awakened, Miyazaki retained his presence of mind, warning the raiders of the dire consequences that would ensue upon the Japanese Minister hearing of the affair. Soon he found himself in a local dungeon, and though stripped of all his valuables, managed to retain a small dagger concealed in his left armpit. This dagger came in handily later, when the captive was

brought before the village Headman. When this official began to interrogate him, Miyazaki broke away from his captors and clutching the Headman by the throat brandished the dagger before his eyes. We are not surprised to learn that the Headman thereupon turned pale, and acceded to Miyazaki's demand that he (Miyazaki) should be allowed to put on women's garments and flee to the coast. At Ninsen he eventually arrived and told his tale to a sympathetic Japanese Consul.

CHRISTMAS TOYS.

MESSRS. LANE, CRAWFORD, & Co. have again laid the children of Yokohama, Tokyo, and in fact all Japan, under a great Christmas obligation by importing for them an excellently selected stock of toys. The rude and simple play things of children who came into possession of the nursey wonder-lands of the seventies and early eighties have long since been beaten out of the field by an artistic community of humanlike, highly finished—both anatomically and scientifically—toys that seem to bear no relation whatever to the playthings of a few decades ago. The question whether the latter-day child derives as much pleasure from his subtly devised toy as did his predecessor of years gone by from the archaic timber images then obtainable, is one of interesting possibilities, but does not concern us in this note. What we strongly advise is an early visit, by young and old, rich and poor—for the tastes and purses of everyone have been considered by Yokohama's premier store—to inspect the splendid variety of toys on view at No. 59, and more particularly the mechanical menagerie that includes lions, bears, camels, and elephants that move and roar as naturally as their prototypes in the Zoo. For the nautical minded—and what boy is not so inclined?—there are on sale some splendid steamboats with beautifully finished and perfect engine-rooms. Mechanical figures are also abundantly represented, as well as all the old favourite games of drawing-room, parlour, and nursery.

THE HONGWANJI TROUBLES.

THE troubles now affecting the harmony of the Higashi Hongwanji at Kyoto are detailed at length in the *Yiji*. We have already alluded to them in previous issues and need only say that specific charges of extravagant living are now preferred against the Rev. Mr. Atsumi, the Treasurer; and of immorality against the hereditary Lord Abbot. As is well known, the Temple, a few years ago, was burdened with a debt of two millions of dollars; this has been cleared off, while the cost of the handsome new buildings has also been entirely defrayed by the munificent donations of the faithful. Now it is alleged that a fresh debt of yen 600,000 has been incurred through the Treasurer's extravagance and the Lord Abbot's sensuality—strange tales regarding which are circulating throughout Japan. The reform party, which includes all the members of the Hongwanji College in Kyoto, and the Middle School of the Sect in Tokyo, is led by Prof. Murakami Sensei, of the Imperial University, and Mr. Inouye Yenryo, of the Philosophic Institute, Tokyo—both men of plain living and high thinking. They have issued a manifesto to more than 800 influential priests of the Shin Sect, in which they declare their conviction that a radical reform is necessary in the internal administration of the Temple. They enjoin the priests to uphold the cause of righteousness. Professor Murakami was the Director of the Hongwanji High School, in Tokyo, but resigned the post a few days ago. Upon this being known, the students forwarded a manifesto to the Authorities, over their joint signatures, stating that they would remain away from school until the era of purity returns.

A GERMAN LIBEL SUIT.

A LIBEL suit has just concluded in the German Consular Court, in which the defendant Mr. P. Vautier has been fined the nominal sum of 100 marks for libelling Mr. Vollbehr, assistant at the Normal Dispensary. The action arose out

of a fire insurance claim on some damaged postage-stamps in the collection of Mr. Vollbehr, the defendant being called in to assess the damage. After this was done the plaintiff accepted without demur the very great reduction made in his claim by defendant. Mr. Vautier then expressed some disparaging opinions in public regarding the matter, and with particular reference to Mr. Vollbehr's character. Upon this the latter brought action for libel. The Court found that the defendant had the right to make whatever remarks he pleased in his confidential report upon the assessment of damage, but that he was not justified in repeating them in public. It therefore inflicted on the defendant a nominal fine.

WARNING TO MARINERS.

CAPTAIN MAHLMANN, of Kobe, publishes the following report, received from Capt. Dithleisen, for the information of mariners:—While piloting the Austrian Lloyd's steamer *Gisela* through the Suwo Nada on the 27th instant, a Japanese schooner-rigged junk was sighted flying signals of distress. A life-boat was lowered from the *Gisela*, and the Chief Officer succeeded, after much difficulty, in saving the whole crew (four). They were taken on board and brought on to Kobe. It appears that the junk was disabled during the N.W. gale which was then blowing. The junk had to be abandoned by the *Gisela* owing to the weather and night coming on. The position of junk when abandoned was to the southward of Heigunshima, lat. 33° 44' N., long. 132° 14' 30" E., exactly on the track of steamers bound through the Suwo Nada. It is, however, possible that she was broken up during the night, or drifted S.-Eastward, as it was blowing a strong gale from the N.-West, all through that night.

PROPOSED SHANGHAI DOLLAR-NOTES.

A SPECIAL meeting of the ratepayers of Shanghai has been called by seven members of the Municipal Council and many land-renters to authorise the issue of dollar notes by the municipality. This meeting, we learn from China papers, is the outcome of a suggestion made about a month ago to the Municipal Council by Mr. Alford, head of the firm of Messrs. Jardine, Matheson and Co., at Shanghai. The supply of dollar notes in Shanghai is not nearly up to the demand, and this state of affairs is believed to be brought about by the acceptance of notes in the interior. Formerly it was necessary for traders going into the interior to carry silver with them, but the natives now accept bank notes as currency. The notes have gradually been absorbed by the natives in the interior until it was found that the banks in Shanghai, by reason of the restrictions under their charter, could not keep up the supply to the demand. The Municipality have now come to the rescue and purpose issuing notes to the value of five lakhs of dollars. The individual value of the notes will be from \$1, \$5, \$10, up to \$100. The issue of these notes will be a benefit both to the community and the Council.

THE NEXT FRENCH MAIL.

A TELEGRAM received yesterday afternoon by the Messageries Maritimes Company says that the Company's steamer *Saghalien*, outward bound, arrived at Saigon with her engines in a disabled condition, and will stay there for repairs. Her passengers, mails, and cargo for Japan will be brought up by the Company's steamer *Tamise* sailing from Saigon to-day, the 5th inst.

NEW BRITISH WARSHIPS.

THE Fairfield Shipbuilding Company, Glasgow, have launched the British first-class cruiser *Diadem*, the christening ceremony being performed by Lady Currie. The vessel is of 11,000 tons, and 16,500 horse-power. Her armament includes forty-one guns, and she will fire in sixty seconds 15,000 lbs. of shot. Preparations are being made at Chatham for the construction of a new first-class armoured battle-ship, to which it is proposed to give the name of *Goliath*. The vessel will be one of a new type, and intermediate dimensions—a

class between the *Majestic* and the *Renown*. She will be 390ft. long and 74ft. broad and she will have a displacement of 12,900 tons. The order for the propelling machinery has been placed with Messrs. John Penn and Sons, who also engined the *Magnificent* and the *Illustrous*. Triple expansion engines driving twin screws will be supplied with steam by twenty sets of Belleville tubular boilers, with a maximum of 13,500 horse-power, giving a speed of eighteen knots per hour. The *Goliath* will be constructed in a building slip, and the first keel-plates will be laid on Monday, January 4, 1897. The Lords of the Admiralty have sanctioned an expenditure upon her of £120,000 before the close of the present financial year.

COMING FASHIONS FOR MEN.

In England, though a paper now and again announces the coming fashions, they are always ladies' fashions. In Paris the forecast for men's costume during the coming season has been published in the leading paper. As it seems to be derived from an English source, it may make interesting reading for those who cannot get such information at home. Black is gradually to go out of wear, and to be succeeded by chevrons and homespuns of not too aggressive a pattern. Evening vests are to be made entirely of silk, and the lapels are to be embroidered with coloured silk. The MacFarlane is to be universal. Dress coats are gradually to disappear as the jacket gets more and more in vogue. Overcoats are no longer to be made of beaver or witney, but of heavy chevrons, rough, thick, and warm. Lastly, lines are quite exploded in trousering, checks being the only wear. And now as we know what they say in Paris, we know what we must do in London.—*Westminster Gazette*.

THE CZAR IN SCOTLAND.

AFTER the Czar left North Britain, a Scottish newspaper reckoned up its country's grievances in connection with his visit. First and foremost comes his letter thanking the "English" people for the honour done to him at Leith, Dundee, Aberdeen, and Ballater. Next comes the presence at Balmoral of Lord Edward Pelham-Clinton, in despite of the fact that the Duke of Argyll is by hereditary right Master of the Royal Household in Scotland. Lastly comes the presence at Balmoral of the English Lord Steward, without a commission from the Scottish Lord Steward—Albert Edward Prince of Wales.

THE U.S. BATTLESHIP "TEXAS."

THE U.S. battleship *Texas* has been very unlucky ever since her launching, and now comes news of an accident to her while in Cob dock, Brooklyn Navy-yard. Owing to some unexplained cause, the main injection valve on the starboard side near amidships was broken in fourteen feet below the water line on November 9th. In a few minutes the engine-room was flooded and the *Texas* gradually sank till she touched bottom. There was only a few feet of water under her at the time. The battleship has since been floated.

THE CASTLE CASE.

Mrs. WALTER M. CASTLE, of San Francisco, who was sentenced at Clerkenwell Sessions, London, to three months' imprisonment, without hard labour, after having pleaded guilty, by the advice of her counsel, to a charge of shoplifting, was released from Wormwood Scrubs Prison on Nov. 10th on medical grounds, by order of the Home Secretary, Sir Matthew White Ridley. She is to return to America immediately.

"EN ROUTE."

THE 12th number of *En Route*, the newspaper published at intervals by the two French journalists, MM. Leroy and Papillaud, will make its appearance next week in Yokohama. It will consist of 10 pages, printed in French, English, and Japanese, and will contain 73 illustrations by the photogravure process by Mr. Ogawa of Tokyo. Messrs. Leroy and Papillaud are very pleased with the reception they have met with at the hands of the managers of the local Banks and

shipping firms, hotels, and other companies from whom they have received quite a number of advertisements. After this number is issued MM. Leroy and Papillaud contemplate spending the remainder of their stay in Japan in visiting the places of interest throughout the country. The subscription to *En Route* is \$2.00, and several lists are being circulated around the Settlement and Bluff.

CUSTOMS DUTIES.

THE following is a comparative table of foreign Currencies and Japanese Silver *Yen* in use at the Imperial Custom Houses of Japan, to be adopted in calculating values of imports and to be in force from the 1st January to the 31st March, 1897:—

Country.	Foreign Currency.	Japanese Silver Yen.
Austria-Hungary	Krone	395
Belgium	Franc	376
British India	Rupce	571
Denmark	Crown	522
France	Franc	376
Germany	Mark	464
Great Britain	Pound	9470
Italy	Lira	376
Netherlands	Guilder	784
Norway	Crown	522
Portugal	Milrei	2107
Spain	Peseta	376
Sweden	Crown	522
Switzerland	Franc	376
Turkey	Piastre	686
United States of N. America	Dollar	1,956

Note.—The comparison of Foreign Silver Currencies, except Rupee and Japanese Silver coin, will remain as heretofore.

IMITATION WHISKY.

THE other week the Customs authorities at Calcutta confiscated 150 cases of imitation whisky, which had been consigned to a well known firm of wine merchants in Calcutta. The bottles were labelled "Finest Malt Whisky," and a fictitious Scotch name also appeared on the labels in large letters. In a corner of the label, and in tiny characters, were the words "Made in Germany." The bottles, on being submitted to analysis, were found to contain not a particle of malt spirit. It is said that similar seizures are likely to be made shortly. The consigners of the "whisky" are a Hamburg firm.

THE CHARGE AGAINST A PORTUGUESE.

SOME months ago A. R. Collaco, of Yokohama, was found guilty of stealing some postage-stamps from a dealer's collection in Motomachi, and sentenced by the Yokohama Chihō Saibansho to one and a half months' major imprisonment and six months' police surveillance. This was on September 24th. The accused appealed against the sentence, and on the case being retried in the Tokyo Appeal Court, he was acquitted, the five Judges of appeal finding the evidence against him insufficient for conviction.

NEW RAILWAY TROOPS.

THE new Railway Troops will be mustered on the first of December. Connected with this scheme, the railway line between Ofuna and Yokosuka and other lines in the vicinity of Tokyo will be leased by the Authorities, and the railway troops will be allotted to these stations, taking the place of ordinary Station Masters, conductors, etc.

DISOBEDIENT SEAMEN.

On Thursday, in H.B.M. Court for Japan, Capt. Carl Rehberg, of the British ship *Sumbawa*, charged Casimiro Vinderlich, carpenter; Jean Saintillan, John Foret, Wilhelm Reich, and Louis de Lain, A.B.'s with refusing duty. Defendants pleaded guilty, and were each sentenced to five days' imprisonment; to pay the costs of the Court \$1.50 each, and be put on board their ship on the expiry of their sentences.

THE LAST OF AN OLD WAR-SHIP.

THE U.S. sloop-of-war *Swaifara* has been towed into the "bone-yard" at San Francisco to be broken up. She was once well-known in Eastern waters.

AU REVOIR.

Mr. C. N. CROSSE, barrister-at-law, left Kobe by the French mail steamer *Salasie* for a short visit home. He will, says the *Chronicle*, be absent from Kobe about six months. Before

leaving, Mr. Crosse was made the recipient of a handsome time-piece presented to him by a few of his intimate friends who held a farewell dinner in his honour at the Oriental Hotel.

VESSEL ASHORE.

A SHANGHAI paper says:—It is feared that the steamer *Sultan*, previously reported as being ashore above Kiukiang, will remain there for the winter. Two tugs have been dispatched to her assistance, but owing to the rapid fall of the river there is very little prospect of her getting off until the water rises next spring.

STRAINED RELATIONS.

A WAR correspondent of the *Imparcial* of Madrid left Singapore for Manila, on the 9th November, in the *Cavadonga*. A result of the rebellion, the *Straits Times* says, is that the relations between the Spanish residents in Singapore hailing from Europe and those from the Philippines are getting very strained.

HOW A PHOTOGRAPHER'S STUDIO BURNS.

MR. N. MORGIN, the Superintendent of the Fire Brigade, is evidently a man of humour. In his official report of the fire at the photographic studio of Messrs. Farsari and Company he says:—"On my arrival there I found that the place was developed in flames." So it was, to be sure, but who but a wag would have thought of the "developed"?

VESSEL ASHORE.

THE Japanese steamer *Asosan Maru*, which left Shanghai for Japan on Thursday, Nov. 26th, with a general cargo, is badly ashore above Gough Island, on the Yangtze. Lighters and tugs have been sent to her assistance from Shanghai and the cargo is being discharged.

NAVAL FUNERALS.

Two naval funerals took place in Yokohama on Thursday, from the Royal Naval Hospital. The first was that of James Ingham, engine room artificer of H.M.S. *Pigmy*, the other, Edward Pearce, A.B., of H.M.S. *Eolus*. The band and firing party were from H.M.S. *Undaunted*.

A LAUDABLE AMBITION.

THERE is no doubt, says an American exchange, that the new Lord-Mayor of London, Alderman A. Faudel-Phillips, will signalize his year of office by great brilliancy. He proposes to commemorate the 60th year of the Queen's reign by raising the sum of \$5,000,000 (gold), with which to free the London public hospitals from debt.

THE ACCIDENT TO THE "BAYARD."

WHEN the French flag-ship *Bayard* was entering Hongkong on her last voyage, she managed to touch the Dumail Rock, and thereby twisted her main shaft and lost one of her propellers.

MADAME NAKANO'S RECEPTION.

WE are requested to state that Madame Nakano is prevented by unavoidable circumstances from holding her usual reception on Monday next, the 7th instant.

ST. ANDREW'S DAY IN KOBE.

THE Kobe evening journal sentimentally remarks:—St. Andrew's Day, 1896; a dark and stormy morning; a bright, sunny afternoon; a glorious and long-to-be remembered evening.

THE JAPAN WEAVING COMPANY.

The *Nippon Orimono Kaisha* (Japan Weaving Company), whose financial difficulties have been more than once alluded to in these columns, has now decided to reduce its capital from 750,000 yen to 450,000, so that the face value of its shares, hitherto 50 yen, will now become 30 yen only. It has applied for permission to start business again, as a joint stock company, under the name of the New Japan Weaving Company (*Shin Nippon Orimono Kaisha*), this change to be effected from February next, until which time work will be carried on by the old Company as before.

THE TREATY REVISION COMMITTEE.

The Committee appointed to make preparations for the operation of the Revised Treaties, is said to have concluded that the points demanding chief attention are administrative police, jails, and local administration. Among these three, the most important is pronounced to be that of administrative police. The Committee find that the exact limits of the police's competence not being clearly defined, they have in some instances exceeded their powers, and in others fallen short of them. Under any circumstances, such a state of affairs calls imperatively for reform, and the Committee justly think that the reform should be undertaken and completely carried out before the era of mixed residence commences, so that the treatment of Japanese subjects by the police may be exactly the same as the treatment of foreigners. The problem of jails has long been under consideration, and has received due attention from the foreign Representatives, for it is plain that, owing to the different modes of life of Occidentals and Orientals, a cell provided with a mat, a Japanese pillow and a wadded quilt, though suitable enough for a Japanese inmate, might be quite unsuitable for a foreigner, and a similar observation applies to the matter of food. An interval of more than 2½ years still separates us from the earliest date at which the Revised Treaties can go into operation, but the Japanese Government acts wisely in taking time by the forelock, for no precaution should be neglected that tends to remove any cause of friction or complaint. If we may judge from the tone of the majority of the local foreign journals published in Japan, there will be a strong disposition on the part of a section of the foreign residents to gird at Japanese administration and seek pretexts for arraigning it. Hence the abolition of Consular Jurisdiction and the opening of the whole country to foreign residence will certainly be attended by more or less trouble. It is well that the Japanese Authorities should make plain their desire to get rid of everything capable of causing complications. The appointment of this Committee and the recommendations it has made up to the present, ought also to remind the Japanese people that they owe a considerable debt of gratitude to Treaty Revision, and even to the difficulties that have impeded its consummation. The problem has proved a perpetual spur, urging the Japanese Government to push on reforms of various kinds, which, though doubtless they would ultimately have been achieved for their own sakes, would scarcely have been undertaken and carried through with such expedition under different circumstances.

Perhaps it may be well to refer here to a false impression for which the *Japan Gazette* is responsible. Rendering the Japanese name of the Committee (*Tyaku Shiko Jumbi iin*) by "Treaty Enforcement Committee," and construing "enforcement" in its literal sense, without reflecting that there are as yet no treaties to enforce, and that the appointment of a Committee for such a purpose would, under any circumstances, be a frivolous absurdity, the *Gazette* wonders why the Japanese should be so "anxious to enforce the new Treaties," and asks whether they anticipate, on the part of foreigners "acts which will require force to subdue." Having made these comments and created this mischievous notion about the Committee's functions, the *Gazette* calmly observes:—"Perhaps, however, the translation is a little at fault and the word enforcement may not express the actual meaning." That is certainly a most charmingly naïve confession of irresponsibility. Does the *Japan Gazette* think that it is in no respect responsible for its own translations, and in no way concerned about the deductions it draws from doubtful renderings of Japanese names? No person possessing the most rudimentary knowledge of the Japanese language could have misled the editor of the *Japan Gazette* so egregiously as to persuade him that the Japanese term for the Committee in question conveys the signification of "enforcing;" that is to say, using force. "Treaty Enforce-

ment Committee" may pass muster as an abbreviated rendering of "Committee for making preparations with regard to the operation of the Treaties;" but before undertaking to instruct the public about the exact significance of the abbreviated translation, and above all, before construing it in a sense calculated to alarm the foreign residents, whereas the real purpose of the Committee's appointment is to remove all causes for alarm, the *Japan Gazette* might at least have consulted some one competent to interpret the Japanese original. To publish a false and harmful interpretation and then to say placidly "perhaps, however, the translation is a little at fault," when a Japanese employé competent to explain the translation correctly is seated in the next room, may be taken as an illustration of the conscientious care bestowed by some journals in presenting Japanese subjects to their readers.

THE "TWENTY-SIXTH CENTURY'S" APPEAL.

The Court of Cassation in Tokyo has rejected the appeal of the Editor of the *Twenty-sixth Century*. We explained in a previous issue that the editor was indicted, in the first instance, before the Osaka Local Court, on a charge of insulting officials. This action was taken by the Public Procurator under the 141st Article of the Penal Code, which forms part of the Section relating to interference with the exercise of public functions. The Article reads:—"An insult by gesture or word against a public officer in the discharge of his functions, or on account of his functions, and in his presence, shall be punished with major confinement for a period of from one month to one year, and a fine of from 5 to 50 yen. The penalties shall be the same if the offence has not been committed in the presence of the functionary, but by means of the press or public speech." In considering suits brought under this Article, the Japanese Judiciary seems to distinguish, as far as possible, between insults of a vindictive or mischievous character, intended to bring an official into contempt, and writing which, though amounting to an insult, does not intentionally exceed the limits of legitimate criticism actuated by zeal for the public welfare. It is a distinction difficult to make in many instances, yet certainly it ought to be made, in the interests of free speech. The essay in the *Twenty-sixth Century* that formed the basis of the Public Procurator's charge, was not the essay concerning which so much commotion now prevails. The latter—published four months later by the same periodical—did not confine itself to questions connected with Count Hijikata's discharge of his official functions, as the former had done, but embodied also sweeping charges against his moral character. In the Osaka Local Court the editor obtained a judgment in his favour. That happened in July, about a month after the publication of the original essay. The Public Procurator appealed against the judgment, and on October 23rd the Osaka Appeal Court reversed the finding of the lower tribunal and sentenced the editor to 40 days' major confinement and a fine of 10 yen. The editor, in turn, appealed to the Supreme Court in Tokyo, and, on the 27th instant, that tribunal rejected his appeal and confirmed the sentence of the Osaka Appeal Court. Thus it results that, on account of the first essay published by it (on June 25th) against the Minister of the Imperial Household, the Lord High Chamberlain (Marquis Tokudaiji), Marquis Ito, and Count Matsui, the Osaka magazine suffered suspension from June 27th to October 22nd, and its editor has to go to prison for 40 days, and to pay a fine of 10 yen. On account of its second offence—the publication of a far more violent article, on October 25th, that is to say, while the criminal suit against the editor in respect of the first essay was still *pendente lite*—the periodical has been suppressed, but whether any further criminal proceedings will be taken against the editor remains to be seen.

MEETINGS AND SPEECHES.

The last ten days have been prolific of meetings and speeches. On the 21st inst., the United Chambers of Commerce of Japan, which had been in session for some days discussing the amendment of the Business Tax Law, invited the Premier and other Ministers of State to the Imperial Hotel. Five days later, the Tokyo Commercial and Industrial Association invited the same statesmen to the same place, and lastly the Tōa Kyokai (Oriental Association) held a meeting on the 27th inst., Count Okuma, the Minister of Foreign Affairs, being the principal guest of the evening. On all these occasions, hosts and guests delivered speeches, so that we are confronted by quite a large number of public utterances. At the banquet given by the United Chambers of Commerce, Mr. Shibuzawa, the President of the Tokyo Chamber of Commerce, addressed the guests, among whom the Premier, the Minister of Justice, the Minister of the Household, and the Vice-Minister of War spoke in reply. Mr. Shibuzawa's address was to the effect that, willing as business men are to, bear their share of public burdens, so far as their resources permit, and to increase the receipts of the Treasury as much as possible, they are constrained, at the same time, to take care that the permanent prosperity of their business shall not be impaired, for unless commerce and manufactures flourish, national welfare can not be assured. With a view to attaining that great object, the United Chambers of Commerce which represent the business classes throughout the country, have carefully considered the new Business Tax Law, which is to go into force from January next, and have come to the conclusion that the changes proposed by it are too sudden. They have decided, therefore, to ask the Government to amend the Law, so that trade may not be prevented from attaining development commensurate with that of other great branches of national affairs.

The Premier, in reply, referred briefly to the vital importance that mercantile transactions bear to the mechanism of the State, and then proceeded to direct the attention of the leading business men, whose guest he was that evening, to the great discrepancy existing between the inflowing and outflowing currents of Japan's foreign commerce this year, and also to the extraordinary enthusiasm that prevails for business enterprise. He further dwelt forcibly on the immense power and influence that credit possesses in the world of business, and expressed doubts whether, in that respect, Japan did not fall below China, though the latter had been vanquished by the former in the recent trial of strength. Passing from generalizations to particulars, the Premier referred to the part that Japanese merchants played in exporting or importing goods. Last year, the volume of the country's foreign commerce stood at above 200 million yen, but of that total about eighty-five per cent. was managed by foreign merchants, fifteen per cent. only being in the hands of Japanese. Count Matsukata hoped that more resolute exertions would be made so as to secure at least a third or a half of the whole trade for Japanese merchants. He made no special allusion to the main subject of Mr. Shibuzawa's address.

Mr. Kiyoura, Minister of Justice, Count Hijikata, Minister of the Household, and Baron Kodama, Vice-Minister of War, spoke subsequently, but as the two latter confined themselves chiefly to complimentary phrases, it will be sufficient to notice here the gist of the speech made by the Minister of Justice. Mr. Kiyoura informed his hearers that the Codes Investigation Committee were engaged in revising the Commercial Code, with the view of amending it *in toto*, the only portions that had as yet been put into force being the chapters on the Law of Companies, of Bankruptcy, and of Cheques. The Committee, in carrying out the work of investigation and amendment, were determined to avoid, as far as possible, any disturbance of usages that had been prevalent in business circles since ancient times, and they therefore desired to obtain minute information

from Chambers of Commerce whenever such usages were in question.

The speech delivered by the Premier on the occasion of the Tokyo Commercial and Industrial Association's entertainment was short. He observed that the danger of a financial panic, so much apprehended a short time ago, seemed to have gradually grown less. Still economic agitation being common and generally periodic, the public ought not to be thrown into consternation, but should calmly and deliberately seek to benefit by the experience that these incidents afforded, and to turn the occasion to account with a view to improving the mechanism of business, since everything is more susceptible of improvement when under the stress of disaster than when it is in the tide of prosperity.

Count Okuma observed that the commerce of Japan, like her diplomacy, had assumed an active character since the War, whereas formerly it had been almost entirely passive. He hoped that the business men of Japan would duly appreciate the value of the Revised Treaties and would endeavour to avail themselves to the utmost of the new opportunities thus created.

The Foreign Minister's speech on the occasion of the meeting of the Oriental Association was of far greater length, and though much of it was of a retrospective character, it contained interesting declarations of the views entertained by His Excellency. The topic was appropriate alike to the occasion and to the office of the speaker. It was "Foreign Policy." His Excellency dwelt at first on the system of exclusion adopted by Japan while the Administration was in the hands of the Tokugawa Regency. He referred to the arrival of Commodore Perry; the agitation that ensued, shaking the Regency to its very foundations; the abolition of feudalism in the most remarkable manner, without bloodshed, and the restoration of the Imperial Government. All these events were, either directly or indirectly, the fruits of foreign intercourse. They were followed by a complete revolution in the social system and in the various institutions of the realm. Almost everything had been thoroughly remodelled after Western patterns. Foreign experts had been engaged for service in Japan and Japanese students had been sent abroad for study. There must have been an aggregate of something like a thousand men in each of these categories. The efficiency and benefit of the new methods were signally proved during the late Japan-China War, when Japan sent some two hundred thousand troops and transport coolies over the seas, and maintained them for more than a year, without in any way overstraining her resources. None the less there was still much room for improvement. Her science, industry, and commerce were inferior to those of Western countries, and her religion and morality could not for a moment claim any superiority to those of the Occident. Her wealth, too, stood at a low level. England's wealth must be at least fifty times greater than Japan's, and even Italy ranked far above her in this respect, though neither England nor Italy could boast such a wide territory or so numerous a population. Count Okuma then referred to the foreign policy of Japan. Observation showed him that people were disposed to regard tactics and manoeuvres as the essence of diplomacy. For his own part, he could not concur in such a view. The art of diplomacy, according to his conception, was to conduct the empire's foreign affairs with integrity and candour. No reason whatever existed for shrouding diplomatic procedure in mystery and secrecy. Japan was very fortunately situated with regard to her diplomacy. For while, from a domestic point of view, she possessed an Imperial Family that occupied the Throne for some thirty centuries without break, ruling over people thoroughly permeated with patriotism and public spirit, abroad she had the happiness to feel that no country entertained any animosity towards her. Her diplomacy, therefore, might follow peaceful lines, and the officials charged with its direction were free from harassing cares. Count Okuma himself set great store by the spirit of youthful ardour, for a nation devoid

of that spirit must be reckoned practically dead. But ardour must be tempered with reason, and any expansion not based on sound principles must be disapproved. The first essential for ensuring the preservation of peace in the realm of a country's foreign affairs was the development of commerce, to the end that the ties growing out of mutual material interests might be strengthened between State and State. Japan must seek above all things to foster the growth of her trade and industry, and any country wilfully or arbitrarily attempting to check her progress in that direction must be resolutely dealt with. The Count concluded his speech by referring to the great mission devolving upon Japan, the foremost nation in the Orient, the mission of guiding China into the path of civilization and progress.

CURRENT TOPICS.

The *Nichi Nichi* criticises as preposterous the statements said to have been made by Count Okuma to one of the staff of the *Yoroku Choko* and epitomized in these columns on the 25th instant. Our contemporary is indignant that the Count should regard the accusations in the *Twenty-sixth Century's* article as unimportant, and that he should attribute to defective scholarship the indecorous allegations contained in the article, whereas, in reality, they indicate disrespect towards the Imperial Court. The *Nichi Nichi* is surprised that the Ministry should take such a trivial view of their duties, and still more surprised that Count Okuma, speaking to a newspaper interviewer, should have used the words:—"The Home Minister seems to have taken decided measures against the offending papers," as though the Count himself had not been present at the numerous councils held by the Cabinet to discuss the Household Department affair.

The *Yoroku* has undertaken the useful task of sending members of its staff to leading officials or publicists to interview them with respect to the Household Department agitation. From Mr. Kudo Kokan, a member of the Diet and one of the leaders of the *Shimpo-to*, statements worthy of note have been elicited. Mr. Kudo has a reputation for straightforwardness and integrity. Asked by the interviewer what the *Shimpo-to* means when it says, in its circular to the provincial members, that it will seek to make the Government take steps in redemption of past errors, Mr. Kudo replied that the Party is resolved to urge the Government to introduce an amended Press Law, striking out the suppression and suspension clauses, and that, though the question is still in course of negotiation, there are ample grounds to hope that the Government will be persuaded. Should that hope prove fallacious, the *Shimpo-to* will have no choice but to sever its connection with the Cabinet. For his own part, at any rate, Mr. Kudo was resolved to take that course. As to the Household Minister's tenure of office, Mr. Kudo told his interviewer that information obtained from a trustworthy source pointed to Count Hijikata's resignation at an early date.

Statements made by Mr. Kawashima Jun, M.P., to a representative of the *Chuo* about the absorbing question of the day will be welcomed by those that denounce the *Twenty-sixth Century's* article as wanting in respect towards the Court. When the *Twenty-sixth Century* re-appeared after four months' suspension, and published an article criticizing the Household Minister, Mr. Kawashima received a copy of the periodical from an anonymous sender. Perusal of the article inspired a feeling of indignation, but when the *Nippon* reproduced it in such a manner as to throw the public into a state of ferment, Mr. Kawashima, though suffering from illness, could not sit idle. He called on certain Ministers of the Cabinet, and asking them what they intended to do, received reassuring answers. Mr. Kawashima thinks that any writer venturing to attack the internal condition of the Household Department, is just as blameworthy as a man who parades his own domestic troubles before

the world, with the view of enlisting the assistance of public opinion to settle the complication. Though the Household and the Court are apparently distinct, any attempt to expose the condition of the former necessarily and naturally involves the latter, and therefore a writer venturing upon such ground deserves to be severely censured for violating the duties that every loyal subject ought to observe towards the Sovereign.

The accounts given by the pro-Government papers and those opposed to them in connection with the resignation of Mr. Matsuoka, the Vice-Minister, and Mr. Inoda, Chief of the Peace Preservation Bureau, of the Home Department, are diametrically at variance. The pro-Government papers write that the two officials were dismissed because they failed to exercise due vigilance, and even betrayed the Government, in the matter of the Household Minister, into trouble; whereas the Opposition journals aver that they were sacrificed to the convenience of the Home Minister. The *Yomiuri*, for instance, says that when Mr. Inoda called the attention of Mr. Watanabe to the *Twenty-sixth Century's* article reproduced in the *Nippon*, the latter, instead of showing it to the Home Minister, privately consulted the Household Minister, and thus indirectly promoted the agitation. Count Kabayama, who learnt afterwards of this improper performance on the part of his immediate subordinate, was highly incensed, and called upon him, as a matter of official discipline, to tender his resignation. In point of fact, the Authorities did not see any necessity to adopt resolute measures in the case of the *Twenty-sixth Century* and the *Nippon*, for the attacks were directed against Count Hijikata and Marquis Ito alone, and showed no disposition to impair the dignity of the Court. Only when the *Nichi Nichi* and others tried to make capital out of the incident, and to estrange the Cabinet and the Household—in other words, employed the affairs of the Court as party weapons—were the Authorities compelled to take measures against the *Twenty-sixth Century* and others. Hence Count Kabayama does not stand open to any charge of want of timeliness in his procedure.

The *Chuo* reports that the Home Minister was induced to dismiss his two subordinates for reasons connected with the convenience of the Department, and that he was much embarrassed when they demanded the reasons for being required to send in their resignations.

The *Fiji* thinks that the steps taken by the Government in connexion with this problem wear the aspect of impartiality, for whereas the *Twenty-sixth Century*, the *Nippon*, and the *Kokumin*, were either suppressed or suspended, on the one side, the *Nichi Nichi* and the *Tokyo Shimbu* were suspended on the other; and against the removal of the Director of the Mausolea Bureau of the Household Department may be set the resignations of the Vice-Minister and the Chief of the Peace Preservation Bureau in the Home Department. Our contemporary further learns that the Home Office will call upon one other of its officials to resign, and the Household Department will do the same in the case of three of its officials. But though the complication may seem to be settled in that way, no one can be sure that another difficulty may not, at any moment, strain the relations between the Cabinet and the Household.

POLITICAL ORGANS.

According to the *Miyako Shimbu*, the present "Outs" will soon have quite a phalanx of newspaper organs. They already possess the *Nichi Nichi Shimbu* and the *Tokyo Shimbu*, and they are now credited with the intention of purchasing the *Eiri Nippo*, a second-class journal, and improving it into a first-class publication under the name of the *Asuma Shimbu*. A similar course will be pursued with regard to the *Niroku Shimbu*. The *Fuyu Shimbu*, now an unimportant sheet, though once the organ of the Liberals, will be remodelled, and

issued under the title of the *Meiji Shimbun*, and the *Seikai no Nippon*, hitherto regarded as the organ of Count Mutsu, will be transformed into a leading journal from the beginning of next year. Organs of the Party are to be started in Kyoto and Osaka also. There appears to be some uncertainty about the future complexion of the *Chuo*, though hitherto, as the organ of the Choshu section of the National Unionists, it has supported the present "Outs." Barons Ito and Suye-matsu are accredited with much activity in this matter, and we can well believe it, for they are exceptionally shrewd men, with an intelligent perception of the immense influence that well conducted newspapers can exercise on public opinion. We venture to offer one suggestion to them, however, and to the *Shimpo-to* also, for the matter of that. It is that a paper should be published for the purpose of bringing political affairs within the ken of the lower-middle classes and of women. It is very remarkable that despite the keen interest taken in politics by a majority of those possessing the franchise and by all members of parties or persons connected with officialdom, ordinary tradesmen and ladies have only the most superficial conception—and sometimes not even that—of the questions of the hour. To a certain extent the same may be said of Western countries, but in Europe or America if a lady or a store-keeper does not understand politics, it is because of lack of interest, not of opportunity. Any European of ordinary education can read newspapers printed in the language of his or her country, but a political discussion couched in Sinito-Japanese and presented in ideographic script, is quite beyond the educated potentialities of females or work-a-day folk in Japan. Would it not be well worth while to cater for the understanding of this large section of the population, instead of leaving it to be fed entirely on social little-tattle and sensational *feuilletons*? The party that first gets the fair sex to comprehend its platform and study politics through its spectacles will have stolen a long march on its adversaries.

BARON HAYASHI INTERVIEWED.

Baron Hayashi, Japanese Minister to Pekin, who is staying in Tokyo on furlough, has been repeatedly interviewed by journalists since his return. The account that the *Fiji's* representative gives of a conversation that he had with the Baron seems best worth quoting. Baron Hayashi remarked that China after the war was not so enfeebled or distressed as Japanese might suppose. In that colossal old kingdom not only were many provinces not directly affected by the war, but even those that felt its direct effects appear to be forgetting it entirely. On his way home, Baron Hayashi called at Yingkow and inspected its market. He found trade very brisk, and to all appearances it had not suffered at all from the War. Nor is the Chinese Government so helpless as Japan might think. The English papers published in China, indulging in wild imaginings, wrote as if the foreign policy of the Court of Pekin depended upon the will of two or three big Powers. But that is a false impression, for though China may be reduced to a more abject state and suffer hereafter more crushing defeats, she does not at present feel any particular pain, and does not rely on any Powers for anything. It is true that she may be obliged to seek the protection of England if Russia prefers certain strong demands, and *vice versa*; but possessing from the earliest ages vast self-conceit, she will never readily acquiesce in the demands of other Powers or follow their advice. If driven to bay, she may develop a resolution to oppose the whole of the outer world at the point of the bayonet. She does not yet avail herself of the lessons dearly bought during the war, but still keeps up her antique institutions. That is inherently due to the system itself. The ministers in the Tsung-li Yamèn are not wanting in ability; nor are the statesmen of China wholly asleep. From the Emperor downwards the statesmen at the Court of Pekin thoroughly appreciate the importance of learning English; the Emperor himself is taking lessons in that

tongue, and his statesmen are making their sons and brothers follow the Imperial example. The root of nearly all China's troubles lies in the system of appointing officials. The civil service examination, the gate to officialdom, is based on a knowledge of the ancient classics, now so entirely out of date. But this system being the corner-stone of China's administration two hundred years ago, it is difficult for her to do away with it. It is true that among the statesmen now at the Court of Pekin are men whose vision was suddenly extended by the allied Anglo-French invasion. Many of them were then in their thirties. They are not unreasonably prejudiced against foreign institutions, but their hands are tied by the vast conservatism of their surroundings. The foregoing remarks may sufficiently explain why China is so inert and devoid of an efficient central mechanism. But when the present generation has been replaced by the new men now growing up, China will gradually be awakened from her condition of stagnant lethargy. Cho In-kwan, who acted as China's Plenipotentiary when the new Treaty was being negotiated, may be considered as the vanguard of the progressive section, and the fact that he, though versed in foreign languages and familiar with foreign manners and customs, is suffered to sit in the Yamèn at Pekin is a proof that China will not lapse again into irremediable retrogression. When the pressure from without grows more insistent, and when the old conservative statesmen retire from the stage, the political and administrative atmosphere of China will be freed from its present stagnant tone. Just as the institutions of China still wear an aspect of age, so does the original relation that the Chinese people assumed towards the Japanese continue without particular modification. In official circles the whole blame of the war is laid on the shoulders of Li Hung-chang; others do not seem particularly concerned at the defeat sustained at the hands of Japan. Therefore not only are Japanese journeying and residing in China free from molestation or annoyance, but even in such a place as Yingkow the number of Japanese is gradually increasing. There they are carrying on trade unmolested. Such is not the case in Japan. Songs composed during the war are here as popular as ever. Chinese are insulted and not infrequently pelted with stones, and men of good standing who ought to influence the ignorant public differently, are in the habit of using abusive language towards Chinamen. Such things do not conduce towards maintaining good friendship between the two Powers; nor will they promote commercial and diplomatic relations. No abuse thrown at China will stimulate her into progress. China must be treated as an old conservative country, and Japan should strive to promote mutual feelings of amity, so that commerce between the two Powers may be developed and utilized to the utmost extent.

THE MAHOMMEDAN REBELLION.

The Mahomedan rebellion has had such a hydra-headed existence, exterminated half a dozen times by telegram, and resuscitated as often by rumour, that its final suppression is difficult to credit. However, the end seems to have come at last. An Imperial Decree, issued in Pekin on November 9th, declares that the insurrection is crushed and distributes rewards to the various officials concerned in stamping it out. The number of Mahomedans that fought is put by the Decree at two hundred thousand, all of whom have been either annihilated, or driven into the mountains between Kansu and Thibet, where they are gradually being hemmed in. If that estimate be near the truth, the affair strikingly illustrates China's hugeness. A rebellion in which the Government's troops were faced by two hundred thousand men, went on for months after months without producing so much as a ripple of excitement in the life of the nation. As for the outer world, it has scarcely given a second thought to the slaughter of tens of thousands of men, women, and children.

GENERAL MEETING OF THE NIPPON YUSEN KAISHA.

The Nippon Yusen Kaisha held its half-yearly regular meeting in the Young Men's Christian Association Hall, Kanda, Tokyo, on the 25th inst. There were present 1,870 shareholders, including Mr. Iida Son, the Treasurer of the Imperial Household, who represented the Household. Mr. Kondo, the President of the Company, took the chair and a clerk read the report containing the returns of the half-year from April 1st to Sept. 30th. The President proposed that the rate of dividend, put at 10 per cent. in the report, should be changed to 12 per cent., which amendment was adopted unanimously. The question of the election of Directors having then been proposed for discussion, a large majority of those present declared in favour of re-electing the officials now in office, though an objection was raised that one of the Directors held, at the same time a similar function in the Oriental Steamship Company.

The Business account, as approved by the shareholders, runs as follows:—

	Yen.
Brought over from the previous account	314,190.577
Special Reserve	427,561.394
Profit for the half-year	482,217.924
Total	1,223,969.895
Depreciation of the value of Buildings...	9,670.000
To Reserve Fund	57,000.000
To Reserve Fund for equalizing Dividends	427,561.394
Rewards	11,200.000
Dividend (12 per cent. per annum)	528,000.000
Carried forward to the next account.....	190,538.501

Total 1,223,969.895
The portions of the report that bear on the Company's foreign services are as follow:—

EUROPEAN LINE.

The line was opened in March of the present year, and a tolerable amount of cargo has been obtained on both outward and homeward voyages. Imports of iron, machinery, and so forth from Europe have considerably increased, but exports from the East have not shown a corresponding advance. In point of fact, freights have fallen to an unusual extent: the rate per ton of 50 cubic ft. has been reduced to 5 shillings between Singapore and Marseilles, and to about 6s. 3d. from Singapore to London. Apparently the service can not be maintained without difficulty by an individual or even a company, and although rates of freight rise higher than they are to-day, the undertaking can not prove profitable for some years; while, so long as rates retain their present low level, a loss amounting to many thousands of yen is unavoidable. When, however, the new steamers now in course of construction for the purposes of the line are completed, and when the service, which is at present only once a month, has been increased to once every fortnight, a greater number of passengers and more cargo may be obtained, and, assisted at the same time by State aids, in conformity with the provisions of the Navigation Encouragement Law, doubtless the service will gradually yield a suitable return.

BOMBAY LINE.

In continuation of the previous half-year's undertaking, the service on this line has been maintained, and as the movement of cotton was very active during June and July, two or three extra steamers were put on, these vessels not being required elsewhere, or having been chartered for the purpose. When the service was opened in 1893, the Company found itself exposed to strong competition from a combination between the P. & O. Company, the German Lloyds, and an Italian Company, so that considerable hardship was experienced. But owing to the firm support received from the Union Spinners and also to the alliance with Messrs. Tata, Sons, & Company, as well as to the judicious means employed for meeting this rivalry, the Company was able to hold its ground against the combined forces of the league. After a time, both parties became convinced of the disadvantages of competition, and at

last, after mutual conferences, the struggle was discontinued from July of the present year. On Aug. 26th, the Department of Communications issued a notification with respect to the line (the gist of the notification was given in these columns at the time). According to the notification, the service might be reduced to one steamer per calendar month, but the Company, having accepted the trust, is determined to keep up the original arrangement by sending one ship every four weeks.

AUSTRALIAN LINE.

While, in conformity with the resolution passed at an extraordinary general meeting of the company, the Directors were discussing measures to carry the resolution into effect, orders were received from the Minister of Communications to open a mail service to Australia, similar to the Bombay service, for the space of 4 years and 6 months, computed from Oct. 1st of this year. (The particulars of this service were noted at the time in these columns.) Subject to the approval of the Minister of Communications and according to the amount of freight that offers, the Company intends to confine the service to Melbourne for the present. This undertaking is to be put into practice from next half-year, but as the arrangements have been completed during the half-year under review, the matter is mentioned here.

AMERICAN LINE.

As one of the three lines decided upon by the Company, the service to Seattle, Washington Territory, U.S.A., was opened in August. The service was started with the view of effecting a junction with the Great Northern Railway, which terminates at that seaport, and which is regarded as being the most perfectly organized through line in that country, as well as the shortest route to the Eastern part of the United States. Negotiations had been conducted with the Railway Company for many years and a definite agreement was arrived at by representatives of the Company specially sent over in June. A contract was arranged for the joint conveyance of passengers and cargo by the two companies, and for issuing through tickets or bills of lading between America and Europe, on the one hand, and Japan, China, and other Eastern places, on the other. On August 1st the *Miki Maru* started from Kobe as the pioneer steamer of this new line and reached her destination after calling at Yokohama and Hawaii. Since that time, the service has been continued once a month between Hongkong and Seattle, and during the half year under consideration two steamers have been employed for it. The enterprise not having yet passed the inception stage, and moreover, the tea season having been past when the service was initiated, the cargoes on outward voyages have been far smaller than those obtained on the homeward route. But when a junction is regularly established between China and Vladivostok, and new steamers of greater speed are employed, both passengers and cargo will doubtless be attracted to a greater extent. There are three other Companies engaged in shipping business between the American continent and Asia, and it will prove a difficult task for the Company to establish this new enterprise on a profitable basis. But the line being an important highway for connecting the Western and Eastern hemispheres and for furthering the development of the national resources, the Company, for the sake of the objects attainable by the service, must be prepared to experience considerable hardship.

Mr. Kondo, the President of the Nippon Yusen Kaisha, in his address delivered at the recent half-yearly meeting of shareholders, said that, in 1883, the Company owned 45 steamers with an aggregate displacement of 64,157 56 tons. At the end of September, 1896, the Company had 54 vessels, over and above the nine purchased from the Government on a 15 years' installment plan free of interest—in all 63 steamers, with an aggregate displacement of 126,579 01 tons. In other words, during the last three years they had added 18 steamers, or 62,421.45 tons. Again, in 1893, the distance covered by the Com-

pany's coasting and foreign services aggregated 14,600 nautical miles; but now they traversed 49,300 miles, or about three and a half times the former routes. If the 63 registered steamers were arranged in one straight line, they would extend a little more than 2.92 miles, while when the twelve new steamers were finished one mile more would be required for such a display. With the expansion of the Company's business their assets naturally increased considerably, and whereas in 1893 they amounted to 12,507,713 in round numbers, the figures now stand at 20,254,765 yen, approximately. Even if the sum of 3,300,000 yen, representing the first installment of new shares called in, be subtracted, the actual increment amounts to five million yen, or an increase of 56 per cent. as compared with the original capital of 8,800,000 yen. The last three years mark a memorable epoch in the history of Japan's maritime communications. During the Japan-China War, the Company allowed the Government to requisition nearly all its steamers, while at the same time it chartered a large number of foreign vessels and fulfilled the demands of its ordinary business. Convinced of the necessity for expanding its foreign services in conformity with the general extension of national affairs in the sequel of the War, the Company, with the approval of the shareholders, increased its capital from 8,800,000 yen to 22,000,000 yen in June, 1896. The original programme of expansion has been steadily pursued, and while the European and American lines have been actually initiated, the Company is contemplating opening a third, to Australia, beginning in October. Notwithstanding extraordinary demands on its resources, the Company had been able to twice declare an extraordinary dividend aggregating 1,232,000 yen, over and beyond the ordinary dividend; it altered, from November 1894, he mode of paying dividends, and whereas formerly they were paid once a year, payment is now made twice yearly. Moreover, it altered the mode of repaying debts amounting to 2,350,000 yen, and what was previously paid out of the profits was now met by reserves in the assets, and in this way a sum of 470,000 yen had been repaid during the last three years.

MR. MASUJIMA AND THE TOKYO CITY COUNCIL.

Mr. Masujima, as our readers are aware, has brought a civil suit into the Tokyo Local Court against the City Council to recover his professional fees in the Tokyo Water-pipe scandal case. He has sent a letter to each of the Tokyo newspapers, briefly stating the reasons that obliged him to adopt this procedure, as well as a copy of the petition lodged in the Local Court. The letter states that the petition represents the actual facts of the case, and adds that such a law-suit will furnish a good object lesson in the days to come when social customs and public sentiments enter on their decline, besides settling an important point in the relation that public body bears to a private individual. On April 23rd, 1896, the petition states, the Plaintiff was entrusted by the City Council with the control of the prosecution in the Iron-pipe scandal case, and after having intimated to the Council that the amount of fees would be determined in accordance with custom, that is, after the proceedings had advanced to a certain stage, the Plaintiff entered, on behalf of the Council, a civil suit for damages to the amount of 1,003,543 401 yen, against certain persons. In drawing up this petition and entering suit, plaintiff underwent considerable trouble. On June 19th, Mr. Masujima embarked for America on business connected with the Yusen Kaisha, but was recalled to Japan on July 15th. He returned home on August 3rd. Prior to his departure and also after his return he took proper measures with regard to obtaining a distraint on the property of the defendants in the Water-pipe scandal case, and secured a favourable order for the Civil Council in this matter. Soon after his return, he was asked to make some arrangements in regard to a

question of fees that had arisen between the Council and some other barristers who had been briefed in the case, and also to intimate in advance the amount of his own fees. After consultation with his colleagues, he replied that the aggregated fees in the case brought in the Court of First Instance should be fixed at 50,000 yen, of which plaintiff was to receive 20,000 yen. At the same time, Plaintiff suggested to the Council that they should discuss the best means of dealing properly with the barristers' fees. The Defendants (the City Council), on the plea that a number of barristers were engaged in the prosecution, asked that the whole case, up to the very end, should be undertaken for 50,000 yen. When Plaintiff rejected that proposal, the Defendants admitted, on September 3rd, after repeated negotiations, that 70,000 yen was a proper sum. But when this proposal was voted on in the Assembly, it was negatived. Then the City Council proposed to pay in full discharge of fees in the case up to the last stages, 20,000 yen to the Plaintiff as fees in the preliminary prosecution, and another 5,000 yen for the prosecution in the Courts of second and last instance, in all 25,000 yen. On September 11th, the City Assembly took this proposal into consideration and rejected it. Then the Council opened negotiations with Plaintiff on another basis, asking that the question of fees should be left entirely to the Council. The Plaintiff replied that if the Council were willing to accord him the treatment proper to his position, he would be ready to leave the matter in its hands. Opinions on this point were frequently exchanged, but the Council failed to grasp Plaintiff's real ideas on the matter, and on October 3rd, they unreasonably deprived plaintiff of the brief entrusted to him. At this juncture Baron Kusumoto tried to intercede between the parties, and on October 19th, at that gentleman's residence, Mr. Terada, Secretary of the Tokyo Municipal Office, stated, on behalf of the Council, that proper treatment would be accorded Plaintiff; in other words, that the Council would pledge itself to pay 25,000 yen as fees to Plaintiff, or even a sum larger than that. But, subsequently, the Defendants' statements were discovered to be lacking in sincerity, and Baron Kusumoto sent a note to the Plaintiff to that effect, adding that he was obliged to withdraw from the negotiation. On November 14th, the Defendants once more intimated to the Plaintiff that they would relieve him of their brief, and asked that all documents relating to the case should be returned at once. The Plaintiff did not think that acquiescence in such an unjust demand was proper, and, instead of sending back the documents, urged the Defendants to pay his fees. This demand they refused to comply with. The Plaintiff's petition concludes by saying that the Council's actions are at variance with the dictates of fidelity, and are not only open to the charge of unreasonableness, but also amount to gross discourtesy, especially when it is remembered that an attorney's fee is determined by the barrister alone and not appraised by the client; that a barrister who is unreasonably deprived of a brief before the case is brought to a definite conclusion is entitled, irrespective of the existence or non-existence of any agreement, to demand such a fee that he would have received at the close of the case. It must also be considered that the fees now demanded are less than 2 per cent. of the damages sued for in the Water-pipe Scandal case, and less than one-fifth of the fees fixed by the by-laws of the Tokyo Barristers' Association. Therefore, the Plaintiff prays that the Council be ordered to pay him the sum of 20,000 yen with interest thereon, at the rate of 6 per cent. per annum, calculated up to the time that intervenes between the lodging of the suit and final judgment.

The four torpedo destroyers ordered by the Chinese Government from Tele & Co. at Shanghai, each cost 330,000 Kuping taels. Their speed is guaranteed at 32 knots. The construction of the destroyers has been superintended by the officers of the Foochow Shipbuilding yard.

"THE TWENTY-SIXTH CENTURY"
CASE IN THE COURT OF CASSATION.

Our readers will doubtless be interested in hearing some particulars about the appeal carried to the Court of Cassation by the editor of the *Twenty-sixth Century*, who was sentenced to 40 days' imprisonment by the Osaka Court of Appeal. The appellant was represented by Messrs. Hanai, Uyemura, Motoda, Takahashi, Yamada, and Iida, Tokyo barristers of repute. They were confronted by Mr. Oto, a Public Procurator of the Court of Cassation. The case, it must be remembered, arose out of an article published in the 21st number of the magazine, on June 25th, an article entirely distinct from that published in the next number (October 25th), which threw the public into such an unusual state of ferment, and which obtained for the periodical a sentence of suppression. The case for the appellant was opened by Mr. Hanai, who protested that the article in question did not constitute the offence of a criminal attempt to bring officials into contempt, inasmuch as it simply criticized the procedure of the Household Minister, and neither affected his official functions nor impaired his official dignity, which results were the very essence of the crime of *Kwanri bujyoku*; that the original judgment (of the Osaka Appeal Court) had not given consideration to the question whether any contumelious motive really existed; that the passages which the Appeal Court regarded as the pith of the article did not go beyond accusing the Household Minister of neglect of duty, and inculcating the principle that persons employing contemptible means to curry favour with the great and powerful, should be held up for public condemnation, and punished; that the affair of the Household Minister had been quoted solely as an example in that context; and, finally, that the retrocession of the Liaotung Peninsula and the titles conferred on Count Ito and Viscount Mutsu had no relation to the official functions of the Household Minister. Mr. Yamada also spoke for the appellant. He too maintained that the retrocession of the Liaotung Peninsula and the successive creation of Peers could not be connected with the official duties of the Household Minister, and that consequently, the attacks made by the editor against the Minister on those grounds were irrelevant and could not bring him in contempt.

The Public Procurator replied that the article transgressed the bounds of temperate criticism, and brought contempt on Government officials; that all affairs relating to the Household Department came under the control of the Minister; that if a published article constituted the crime of *Kwanri bujyoku*, no necessity existed to determine the writer's motive before convicting him of the offence; and that the Court of Cassation need not concern itself to judge whether this particular passage or that embodied the gist of the article, or whether the ultimate object of the writer was to deter those that fawn upon the great and powerful. Hence the appeal was unreasonable, and was not based on any sound argument. The other barristers spoke for their client in nearly the same sense as Messrs. Hanai and Yamada. Judge Harada presided. The appeal was rejected, and the sentence of imprisonment has been enforced.

AN EX-CHIEF JUDGE ON JUDGE
BESSHO.

Mr. Miyoshi Taizo, ex-Chief-Judge of the Supreme Court, sent, a few days ago, a long article to the *Mainichi* on the Judge Bessho affair. As the Japanese Judiciary is now under keen observation by foreigners, in view of the approaching enforcement of the Revised Treaties, we proceed to cull from the article passages that strike us as interesting:—

Mr. Miyoshi quotes, in the first place, the articles in the Law of the Organization of Law Courts that provide for the independence of Judges, and also the articles in virtue of which the Minister of Justice is entitled to transfer

Judges even without their consent. He then argues that, whether the transfer of a Judge be due to the death of another Judge, his resignation, or his removal, and even when it originated in the will of the Minister of Justice, any Judge ordered to change the locale of his official functions can not disobey the order on the pretext that, according to his judgment, it is unnecessary; the power of deciding the necessity or otherwise of the step is vested in the Administration and, according to the law, is exercised by the Minister of Justice. A desire that the Minister should refrain as much as possible from exercising that power is not unreasonable, but to insist that such a desire should constitute the true interpretation of the provision, and that the law should be applied only in cases when no Judge willing to remove is available, must be pronounced an unreasoning contention, that confounds the domains of the Administration and of the law, and annuls the right of selection invested in the Executive. Such a method would not only disappoint able Judges, who have a title to expect that their promotion shall not proceed according to strict and mechanical routine, but also would ultimately retard the progress of the Judiciary so as to make it lag behind the general progress of State affairs. It is true that to ensure the independence of the judiciary certain provisions are in force to guarantee a Judge's tenure of office, but it ought not to be forgotten that Judges are merely a particular class of civil functionaries, appointed for the purpose of putting into operation the mechanism of the courts of law, and that, consequently, they are just as much bound as other public servants to obey the powers invested in the Administration. Even if an order of the Minister of Justice be at variance with the provisions of law, a Judge, on receipt of such an order duly issued, has no recourse, should he consider himself aggrieved, than to appeal to the Premier, for the law does not give him any right to protest against the order. An appeal made to a Disciplinary Court can not avail him, for a Court of that nature possesses no competence to pronounce judgment with respect to an Administrative order emanating from the Minister of Justice. If the Court were competent to render judgment in cases of the kind, Judges would have to be legally invested with the right to sue the Minister of Justice in opposition to his orders. With regard to the Judge Bessho case, so long as the Minister of Justice persists in refusing to withdraw his order of transfer, the Judge cannot escape the binding effect of the order, notwithstanding the judgment pronounced in his favour by a Disciplinary Court. The verdict of the latter Court, therefore, must be considered an empty affair, possessing no efficacy whatever. That this ridiculous farce has been brought about was because the Disciplinary Court exceeded its competence and trespassed upon the province of the Administration.

A Disciplinary Court differs from an ordinary civil and criminal law court in this, that, being established principally with object of maintaining discipline and good order in the ranks of officialdom, any faulty judgment rendered by it involves grave consequences and may disturb the mechanism of the Administration. The Disciplinary Court that sat in the Bessho case should have exercised the utmost care and observed the strictest secrecy in the discharge of its duties, for the result of its proceedings was not only watched with keen attention by the public at large, but also exercised serious indirect influence on such of the judges now holding commissions as are too much debilitated by age to perform their functions promptly and efficiently. When, therefore, the general character of the day's proceedings of the Court appeared in the newspapers on the following morning, Mr. Miyoshi felt considerable uneasiness and regret, as it seemed to him that the news had been furnished to the papers with the intention of sounding the drift of public opinion and of influencing the nature of the verdict. It has to be remembered that the Supreme Court is composed of Judges of erudition, whose experience extends over 10 years; that is to say, Judges that ought to be models to

others in subordinate Courts in the matter of upholding discipline and good order. Viewed from that standpoint, the incident naturally caused Mr. Miyoshi much distress. It is true that he was unable to ascertain through whom this official secret had leaked out, and that, consequently, the incident could not necessarily be regarded as impairing the honour and dignity of the Court over which he presided on that occasion. None the less, his sense of responsibility was greatly disturbed, and that was one of the reasons that induced him to resign his post.

The Law for the Organization of Courts that went into force from 1890, distinctly lays down the qualifications of Judges and Public Procurators, at the same time containing certain provisions guaranteeing and safeguarding their positions. But are there among the numerous occupants of the Bench—exclusive of the *alumni* of the College of Law of the Imperial University and those that have passed competitive examinations—any Judges or Procurators adequately equipped for the proper administration of the law? Few indeed are the jurists that are satisfactorily equipped. Strictly speaking, when this Law was put into force in 1890, these unqualified Judges or Procurators should have been relieved of their posts. The legislators of the day, however, placed too great weight on length of service and experience, and determined that all Judges and Public Procurators then holding commissions were to be considered as duly qualified. They thus extended to them the same rights and privileges as the Law conferred on *alumni* of the College of Law and others that had passed the competitive examinations. Such magnanimity was extraordinary, and in return for this exceptional favour these Judges and Public Procurators were prepared to make every possible return to the State and the Sovereign. Mr. Miyoshi candidly confesses that he was himself one of the number who benefited by this magnanimity of the Government and the Emperor. But now, too worn for service and fully aware of his ignorance, he confesses that he had long felt uneasiness whenever he considered the matter. He felt that he was obstructing the promotion of junior judges, and might also bring discredit on the Imperial Japanese bench in the eyes of Japanese and foreigners. He was determined to open a way to the remodelling of the Judiciary, and resolved on sacrificing himself in furtherance of that great aim. He accordingly represented his resolution to the Minister of Justice and other important dignitaries between June and July of last year. He requested that he might be permitted to resign. The idea, though it obtained approval, was considered premature, and he was obliged to await a proper opportunity. Certain circumstances arose in connection with the Bessho case that opportunely eventuated in the attainment of this desire, and he resigned. The independence of Judges is guaranteed by the law, for the sake of ensuring stability in the Judiciary. The special privileges extended to Judges were never intended to protect those that became too worn out for the proper discharge of their duties. Judges of enfeebled intellect, however, often refuse to acquiesce in the advice tendered them by others to retire; while others go even further and, by misconstruing the letter of the law, refuse to be removed. These men obstinately assert what they consider their "judicial independence" and, carried away by their feelings, parade this mistaken firmness and inflexibility as something to be admired. The public thoughtlessly applaud in too many cases, being ignorant of the internal system of the Judiciary. The public does not seem to realise that the Minister of Justice, being the highest executive officer in the service, gives the final judgment. Judges are under the direct control of the Chiefs of the Courts to which they are subordinate, and all these Courts are under the control of the Minister of Justice. In conclusion, the ex-Chief of the Supreme Court wishes to draw the public's attention to the grave duties that will devolve on the Judiciary on the morrow of the enforcement of the Revised Treaties, and to the absolute necessity of having competent Judges to administer the laws of the realm.

THE FOREIGN TRADE OF JAPAN DURING THE FIRST HALF OF 1896.

HER BRITANNIC MAJESTY'S Consular Officials are now showing most commendable activity in the compilation of trade reports. A few years ago, theirs were the only documents of the kind published, and even in the case of men so zealous, the usual effect of monopoly was not altogether unobservable. The reports from Japan, which then made their first appearance in the columns of the *Japan Weekly Mail* and were subsequently sent to London, used to reach the printers' hands between May and July in the year succeeding that to which they referred, and nobody seemed to think that the process was at all belated. Nor are we even now prepared to say that greater expedition might have been used, for information in those days was incomparably more difficult to obtain than it is at present. Probably the first misgivings entertained as to the timeliness of the reports was suggested when the Japanese Imperial Customs began to publish monthly returns and annual summaries of trade, with the result that the Consular Reports had become ancient history, statistically speaking, before they found their way into the hands of the public. Still, an interval elapsed before changes corresponding with this new departure could be effected in official routine, but ultimately the Consuls recovered their old position of preëminence, and Mr. J. H. LONGFORD'S Summary of the Trade of 1895, sent to London in the opening days of last January, had the honour of being the most expeditiously compiled document of its kind ever submitted to the Foreign Office. Mr. HOBART HAMPDEN has now given us an equally timely report on the trade of the first six months of the current year. The document must have been completed in July, or August at latest, since there has been time for it to reach the Foreign Office, be published, and come back to Japan by the beginning of November. It is an excellently prepared report, evincing a thorough grasp of the subject and written in an exceptionally lucid style. We observe that Mr. HAMPDEN offers no explanation of the remarkable excess of imports over exports; an excess amounting to 27 million *yen*, approximately, at the time when he wrote, but now totalling over 50 millions. Doubtless the fact may be referred, in some degree, to the fictitious prosperity that always succeeds a victorious war. Great sums of money were spent among the people during the second half of 1894 and the first of 1895, and a corresponding demand for imported goods must have been stimulated. Moreover, a marked rise in the earnings of labour, owing to the withdrawal of many thousands of able-bodied men to the ranks of military coolies and of the army itself, and to the development of industrial enterprise, placed the working classes in a

position to spend much more than is their wont. But we are persuaded that another cause also was at work, namely, the exceptional facilities offered by the Specie Bank's London Agency. Indeed, when it was announced last year that the Government had no intention of disturbing the market by buying silver with the gold received from China, but that such portions of the indemnity as might be required in Japan would be transmitted thither by indirect routes, we ventured to predict that the trade returns for this year would show evidence of that programme in the form of an excess of imports. A like phenomenon, but of an opposite character, was produced in the early eighties. The Treasury stood in need of specie to redeem the fiat currency, but naturally shrunk from direct purchases of silver with depreciated paper. The plan adopted was to make advances to producers on easy terms, and to buy exporters' bills at rates higher than foreign banks could afford to offer, by which means a great part of the specie accruing from the export trade, instead of going to balance payments on account of imports, flowed direct into the Treasury's vaults, and a marked stimulus was given to exports. It is easy to see how, by dealing with imports in a similar manner, the Treasury has been able, during the present year, to remit large amounts of silver from London without actually purchasing the metal. It is also possible, though not very probable, that the prospect of the new Tariff's going into force may have induced importers to bring in supplies while Customs dues remain low. But inasmuch as the change of rates can not take place before the last quarter of 1897, at soonest, precautions in that sense are not likely to have been largely taken.

Mr. HAMPDEN brings out many interesting facts. Speaking of the import of metals, he says:—

As it has recently been suggested that the import of bar, plate, and sheet-iron is a trade lost to England, and fallen entirely into the hands of Belgium and Germany, it may be well to state that the revised returns for last year show that while Belgium is to be credited with \$937,164 worth of bar and rod-iron during 1895, Great Britain, although losing her leading place of previous years, still contributed \$865,361 worth, considerably more than three times as much as Germany; and that of plate and sheet-iron, \$709,115 worth were of British, \$179,084 worth of Belgian, and \$17,856 worth only of German manufacture, a proportion which for some years past has been nearly constant. The increase under the various headings of iron manufactures aggregates \$856,159 for the half-year under review.

He has devoted special attention to the cotton spinning industry, which, indeed, is well worthy of attention. We quote:—

The cotton industry this year bids fair to establish a record. An impulse was given to the import of raw cotton by the abolition from April 1 of the duty, which had enriched the Treasury by a sum of over \$500,000 during 1895. Already, by the end of June, raw cotton, to the quantity of 126,615,380 lbs. had been imported, the value of which, close upon \$18,000,000, exceeded the import for the corresponding half of last year by \$6,500,000, and approximately equalled the total import during the period of 23 years from 1848 to 1890. As this bulk of raw material would overtax the existing number of spindles in operation at the beginning of January—viz., 632,130, divided among 38 mills—it is not surprising to learn that it is estimated that before the close of 1896 the number of spindles in Japan will exceed 1,000,000. The present activity of the weaving industry may be imagined when it is added that, besides the raw cotton, not far from \$6,000,000 worth of cotton-yarns were imported between January and June, which is considerably more than half the total import of yarn of any previous year except 1848 and 1894. Japan aspires to supplant Bombay yarns in China, and it will be seen, on reference to exports, that Japanese spinnings command a

great and rapidly-growing sale abroad, but that the progress in the export of cotton fabrics is less marked. On the other hand, the import of cotton goods—a field in which Great Britain is supreme, not 1 per cent. being supplied by other countries—shows a substantial advance, amounting to \$1,911,389. Every item, except drills, T-cloths, and Turkey-reds, participates in this increase; but the largest share is to the credit of satins, which are coming into growing favour as sleeve and collar linings for Japanese winter clothing, displacing the native cotton fabric hitherto employed. It may be noted in passing that a new use has been found for cotton in this country, as a substitute for hemp in the making of fishing-nets; it is said to resist the effects of immersion and the attacks of fish better than hemp, but judgment must be suspended until statistics are to hand, showing whether this discovery of two years ago has made any real way among the fisherfolk for Japan.

The great activity now prevailing in the cotton industry is exemplified in the export of cotton yarn, no less than in the import of that article and of raw cotton already alluded to. The export of cotton yarn (to China and Korea) practically began as recently as 1894, and in 1895 had reached the considerable total of 4,110,524 lbs. and \$1,044,179. This record was already beaten as early as the end of April this year, and the total for the first half of 1896 amounted to 7,020,185 lbs., with a value of \$1,613,257. Japan millowners are congratulating themselves that freights for Bombay yarn to Shanghai are 3 rs. higher than those under a recent agreement between the shipping companies for raw cotton from Bombay to Japan, and they expect with the advantage gained by the abolition of the import duty on raw cotton to be able to undersell Bombay spinnings at Shanghai by as much as \$1 per bale.

Mr. HAMPDEN speaks of woollen manufactures also, but we doubt whether he does full justice to the quiet yet steady progress which that branch of enterprise is making in Japan. It is true that woollen articles of apparel have not yet been taken largely into wear by the Japanese, and probably many years will elapse before the demand for such goods becomes so great as to attract much enterprise to their manufacture. At present, they are needed chiefly by wearers of foreign costume, and in the form of rugs, hose, and shawls. It is beyond question that the serges and tweeds now made in Japan are thoroughly suited for clothing purposes, and as for the rugs and shawls, they may be said to have supplanted, or to be in process of supplanting, the imported article. Mr. HAMPDEN speaks of the Japanese manufactures being "conspicuously wanting in excellence of quality and durability." He is doubtless right in the main. The Japanese themselves are sensible that they have not yet succeeded in producing a thread equal to the English. But that can be a question of time only, and we have to observe that durability is an advantage with certain limits.

The great majority of persons that buy rugs, shawls, and blankets in Japan do not care for an article that will last more than four or five years. That degree of durability suits their purpose well enough, and to get beyond it at an increased investment of capital is an idea having little attraction for them. The blankets and rugs made from shoddy at the Shiba factory are precisely the kind of thing that the lower orders look for, and it must have struck every observer that the imported red rug formerly seen almost universally on the shoulders of *jinrikisha*-men or over the knees of their fares, has been replaced by a striped article of much soberer hue, a home product. We do not suppose that Japan will ever have an EDWARD THE THIRD to bring over Flemish weavers and fullers as instructors, nor yet a CHARLES THE SECOND to order that every one shall be buried in a woollen shroud. Without such official aid her woollen

manufacturing industry has already reached the stage of assured success, and we venture to predict that one of the most important articles of import in this section, *mousseline de laine* (*to-chirimen*) will soon find itself in sharp competition with a Japanese rival. It is worth noting in this context that German flannels have entirely lost caste in Japan. Nobody will look at them now-a-days, and those that find a market are said to be sold, for the most part, as British goods. Japanese woollens, too, benefit by adventitious aid of that kind in some cases. We heard recently that one of the proprietors of the Senju Factory, visiting a shop in Ginza, was offered articles that he had himself supplied under contract, the salesman assuring him solemnly that they were the best British goods. Mr. HAMPDEN mentions, we observe, that, in connection with the increased demand for army clothing necessitated by military expansion, a large order for wool will be, or has been, placed with a Sydney firm. It is a curious fact that the Japanese have hitherto found it cheaper to purchase Australian wool in Liverpool than to get it direct from the place of production. The cheapening of freights from Australia now that steamers of the Nippon Yusen Kaisha have begun to ply regularly, will doubtless cause a change. Mr. HAMPDEN does not notice, we observe, that wool is beginning to be largely used in the manufacture of the well known *Sakai-dansu*. Originally of cotton only, these attractive carpets and rugs afterwards became a mixture of cotton and jute, then of cotton and hemp, and finally of cotton and wool. The material last added promises to improve the quality of the manufacture greatly.

Mr. HAMPDEN is to be congratulated upon having compiled a report of exceptional interest and timeliness.

POLITICAL SENSATION.

It has been very interesting to watch the course of the agitation, now beginning to subside, with reference to the attacks on the Household Department—interesting, not in the sense that such occurrences can ever be regarded with mere curiosity by friends of Japan, but because the attitude of the press and of politicians has served to gauge the progress of public opinion. The attacks having been originally inspired by party plotters—men that aimed at removing what they believed to be one of the main buttresses of Marquis ITO's influence—naturally became at once a subject for party controversy, which means, of course, that a great many intemperate opinions were expressed on either side. With these we need not concern ourselves, for not only does their extravagance put them out of court, but also they are overshadowed by far more important issues. In the opinion of many persons the main question is whether or no slanders

uttered against officials of the Household Department constitute the crime of disrespect towards the Court itself. Speaking generally, there should be no difficulty in answering such a question in the negative. As the *Fiji Shimpō* justly points out, it has always been maintained that a Minister, though he holds office nominally as a repository of Imperial confidence, or a law, thought it has received Imperial sanction, may be publicly criticised without reflecting in any way on the EMPEROR himself, and in the same manner officials in the Household Department are open to journalistic comment quite independently of the Imperial Court. But there are limits to every proposition. It becomes a nice point whether the dignity of a SOVEREIGN is not vicariously compromised by accusations that his access to the journals of the day is unduly circumscribed by his *entourage*; that he is played upon by the Minister of the Household in the pecuniary interests of the Premier, and by the Premier in the pecuniary interests of the Minister; that his audiences are unfairly regulated, to the advantage of certain politicians and to the detriment of others, and that he is practically prevented from recognising the rights of his nobility. Undoubtedly people in a Western country would deem that such things, if written about the daily doings of their SOVEREIGN, reflected upon his competence and represented him as a monarch without much discernment or power of self-assertion. We can not be surprised that many Japanese view the matter in that light, for in Japanese opinion the faintest breath of criticism directed against the EMPEROR is sacrilege. Still, the very fact that the SOVEREIGN is placed on such an eminence makes it unlikely that the assailants of Count HIJIKATA contemplated the slightest disrespect towards the THRONE. They must have known that anything of the kind would effectually alienate public sympathy. A great deal will certainly be heard about this subject, for the Opposition journals are plainly determined not to let it rest, failing to observe, apparently, that their own insistence must contribute to the very consequences they deprecate. Five years ago, no such controversy would have been possible, we think. People would have feared lest its echoes might reach the THRONE. But times are changing. Young Japan no longer shrinks from treading on her teachers' shadows, or speaks with bated breath in the vicinity of Imperialism. Still more striking, however, is the position that the Government's political supporters, the *Shimpō-to*, have been driven to assume. From the very outset they have been embarrassed by the record of their own vehemence in the past. Men who, eight months previously, had denounced the *Fiji-to's* alliance with the ITO Cabinet as craven suicide, unconditional

surrender, a wholesale sacrifice of principles, and so forth, could not, with any semblance of consistency, enter into a precisely similar alliance with the MATSUKATA Ministry. Hence the strange manifesto issued last month, wherein, while virtually avowing confidence in the Cabinet, they proclaimed their resolve to watch it closely, and attack without mercy any deviation from the straight path. Their attitude, in short, was one of professed belief without practical trust. To politicians already treading such delicate ground the recent episode of suspended newspapers and suppressed periodicals doubtless came with most disturbing effect. Emphatic opposition to the Government must have seemed, for a moment, the only alternative. Happily there was still one road of retreat open—a committee. Experience garnered in nine sessions of the Diet had shown how successfully questions may be hidden away in the darkness of a committee room. The *Shimpō-to* appointed a committee, and gave it general instructions to do the best it could under the circumstances. At the same time, they issued the extraordinary circular of which we published a translation on the 24th instant, saying that the Government had sinned so as to require sharp censure, but not beyond redemption; that it might be given a chance of doing better, and that the Central Office of the Party would endeavour to make the Cabinet "adopt such praiseworthy measures as should atone for its fault." A strange document this, to be sure, when we recall the fact that, until a year ago, Japanese Cabinets asserted absolute independence of political parties and of parliamentary majorities, acknowledging responsibility to the Sovereign alone. Things move fast in Japan, but have they really moved so fast that a political party can openly arrogate the position of mentor to the Government, graciously promise support to the Ministers of the CROWN if they behave well, and grandiloquently announce that steps shall be taken to make them atone for a blunder into which they have just fallen? The *Shimpō-to* must be presumed to know that the arrogant tactlessness of their proclamations can not fail to hamper the Government, and that alliances secured on such terms are too humiliating to be welcome. It seems to us that these politicians find much difficulty in reconciling their past intemperance as untrammelled and destructive free lances with the exigencies of their new rôle as a constructive and disciplined party. Their long habit of independent and uncompromising opposition has impaired their faculty of subordination. They are furnishing now to the nation an object lesson in the difficulties of the system they clamour to introduce, for until parties learn to trust and follow their leaders, party cabinets are impossible.

THE TOKYO MUNICIPALITY AND PROFESSOR BURTON.

SOME of the vernacular newspapers publish a statement that Professor BURTON, acting through his legal adviser, Mr. MASUJIMA, has presented to the Tokyo City Council a claim for a large sum of money on account of plans prepared by him for the Water-works now in course of construction in the metropolis. The story circulated by these journals is that the City Council invited the late Major-General PALMER and Professor BURTON to draft schemes for the Water-works; that both gentlemen complied; that their plans were sent to Germany for examination by experts in that country; that Professor BURTON's plan was preferred by the German engineers; that it was handed to Professor FURUICHI, Chief Engineer of the Home Department; that he used it as the basis of the scheme now actually being carried out; that no further communication was held by the City Council with Professor BURTON, and that the latter has consequently sent in a claim for 130,000 yen, being 2 per cent., approximately, of the estimated cost (6½ million yen) of the works. This account requires considerable correction according to information possessed by us. In the first place, Major-General PALMER was never invited by the City Council to prepare any plan for a system of Water-works in Tokyo. He never had any connection whatever with the City Council. In 1888, a private company was formed in Tokyo for the purpose of supplying the most populous parts of the city with pure water. The programme was limited, but could have been ultimately extended so as to embrace the whole city. The Company proposed to construct the works under a five per cent. Government guarantee, and hand them over to the city, free of all charge, after a fixed term of years. In every respect the proposal was most liberal, and all necessary guarantees were given for the protection of the public. But the Cabinet refused to sanction the scheme, on the general principle that such undertakings ought not to be left to private enterprise. Ultimately, the documents embodying the results of the investigations made by the Company's experts for the purposes of the scheme were given to the City Council, the latter paying a sum that represented the expenses actually incurred by the Company in compiling the documents. Doubtless Major-General PALMER's plans and estimates were among the documents. He had prepared them for a trifling fee on the understanding that if the work was undertaken, its direction should be entrusted to him with proper remuneration; a stipulation that became void, of course, on the dissolution of the Company. Nevertheless, the City Council did not acquire any right of property in Major-

General PALMER's plans, and if it sent them to Germany for examination in conjunction with Professor BURTON's—the latter, we may note *en passant*, were compiled on a wider basis under different circumstances and at a later date—it adopted an entirely unwarrantable course. Moreover, we venture to doubt whether any sending to Germany took place. We have no special information on the point, but neither do we see any reason why German experts should have been consulted, considering that the Home Department has always had recourse to Dutch advice for such purposes, and that to consult engineers in Europe who had no acquaintance with the local conditions on which the plans were founded would have been a manifestly unwise step. With regard to Professor BURTON, there is no question that he designed the Water-works at the request of the City Council, and that he did so independently of his duties as a salaried official of the Departments of Education and Home Affairs. We are not aware that he made any stipulation as to fee at the time, but it is probable that he relied upon the unwritten law obeyed in all Western countries, namely, that if his plan was adopted, either proper remuneration would be given to him, or he would receive the appointment of engineer in charge of the works. In that expectation he seems to have been disappointed. No remuneration was offered to him, and Professor FURUICHI, Engineer-in-Chief of the Home Department, was placed at the head of the works. It is alleged that Mr. FURUICHI used Prof. BURTON's plans with immaterial modifications. As to that, we cannot speak, but we are fully persuaded that Mr. BURTON has not brought any charge of professional impropriety against a colleague. The plans were made for the City Council, and it rested with the City Council to acquire all rights in them before handing them to any engineer except their compiler. At all events, Professor FURUICHI's part in the matter remains to be elucidated, and for the moment we have only to observe that no charge of any kind has been brought against him by Professor BURTON. The City Council's action, however, is inexplicable, except on the hypothesis of most singular ignorance. They may possibly have imagined that, as Professor BURTON was in the service of the Central Government, his services might be requisitioned by any local government without remuneration; but that, of course, is a total misapprehension, and the sooner that such delusions are signally dispelled, the better for all concerned. With the Tokyo City Council we can not feel the smallest sympathy. Its *personnel* includes several men of acknowledged ability and business aptitude, yet its conduct in connection with the Water-works has been egregiously lacking in each of those qualities. We are in a position to say that the Council was in receipt of warnings that should

have averted the immensely costly and scandalous frauds connected with the iron pipes, but it treated the advice with more than indifference. We are also in a position to say that it has been warned about other difficulties which will certainly declare themselves soon, yet it has maintained the same demeanour of unconcern. It has bungled its relations with the barristers originally briefed in the water-pipes suit, and it seems to have made even a worse bungle of its relations with the engineer originally employed to plan the works. How such inept procedure is to be reconciled with the character of the individuals constituting the Council, we do not understand.

THE "KOBE CHRONICLE" AND COUNT HIJIKATA.

THE *Kobe Chronicle* has very frankly admitted the errors into which it was betrayed in connection with the HIJIKATA case. They were errors due, for the most part, to incorrect information obtained from Japanese sources, and though their acknowledgment thus becomes easier, we are nevertheless fully sensible of the straightforward and manly line taken by our Kobe contemporary. On one point, however, another word is necessary. The *Kobe Chronicle* writes thus:—

(11) "The second singularly false hypothesis of the *Kobe Chronicle* is that a legal tribunal has any competence whatever to protect a newspaper against an Administrative order of suspension or suppression." We are exceedingly sorry. We did truly think that legal tribunals were for the protection of all individual rights. We candidly accept the *Mail's* correction, and admit that we have misunderstood the principles of Japanese jurisprudence. Justice is not necessarily the same thing as law.

We can not regard this retraction as fair. It is so worded as to convey the impression that legal tribunals in Japan are not constituted for the protection of individual rights, and that we are responsible for such an assertion. Our contemporary can scarcely have intended to saddle us with that statement. He doubtless attached importance to the introduction of the qualifier "all"—"all individual rights." Well, but did the *Kobe Chronicle* ever suppose that the Law Courts had competence to protect a Japanese journal against an Administrative order of suppression or suspension? If the Law Courts had such competence, what basis would there be for any outcry against the suspension and suppression clauses of the Press Regulations? It is precisely because those clauses empower the Minister of Home Affairs to suppress or suspend without resort to legal process that so much agitation is directed towards their abrogation. The protection of a Law Court in such a matter could be exercised in one way only; namely, by enacting that a journal might not be suppressed or suspended without the approval of the Court. An enactment in that sense would deprive the Ad-

ministration of all its objectionable power, and remove every ground of complaint against the Press Regulations. An editor may no longer be imprisoned or fined in Japan except by sentence of a legal tribunal. If his paper might not be suspended or suppressed except by a similar process, the press of Japan would stand on practically the same footing as the press in England; and all the commotion on this subject among political parties would be senseless vapour. So far as we understand Japanese affairs, there are still three sets of Regulations the provisions of which deprive a man of the protection ordinarily extended by Law Courts to individual rights. They are, the Press Regulations, the Peace Preservation Regulations, and the Premonition Regulations. In every session of the Diet the Lower House has passed resolutions for rescinding the second and third Regulations and amending the first, but the consent of the Upper House has not been obtained, and the Regulations consequently stand unaltered. In all other respects individual rights have the full protection of the Law Courts, theoretically at any rate. With regard to the Osaka periodical, it was actually under order of suspension when the Public Procurator proceeded against it legally for bringing officials into contempt; it was released from suspension the day before its editor was sentenced to imprisonment with hard labour, and it was again placed under suspension for a new offence before the editor's appeal against the sentence of imprisonment had been heard by the Court of Cassation in Tokyo. But the administrative orders of suspension, which concerned the periodical only, and the legal proceedings, which concerned the editor personally, were absolutely unconnected, and neither would or could exercise the slightest influence upon the other.

As to Count HIJIKATA'S position, it is certainly singular, when viewed by Western eyes. The *Kobe Chronicle* goes too far, we think, when it says that "of all the vernacular newspapers in Japan, there are only three that have not given a distinct, though in some cases qualified, endorsement to the very grave accusations against him." A juster statement of the position would be that several—not all—of the journals ranged on the side of the present Cabinet have condemned Count HIJIKATA, and that all the opposition journals have supported him. In short, the controversy has assumed essentially the character of a party fight, and where bias is so plainly manifest, none of the witnesses can be trusted implicitly. The one and only really independent journal, the *Fiji Shimpō*, scoffs at the idea of Count HIJIKATA'S resigning because "an impertinent youth" has undertaken to slander him, and records its opinion that the article in the *Twenty-sixth Century* "carries no particular weight as an

attack upon the Household Minister." We can not honestly say, therefore, that public opinion, as represented by the press, condemns Count HIJIKATA. For aught we know to the contrary, he may be the victim of a very unprincipled political intrigue. Indeed, that is the view taken by many people. Still, his moral character has been impugned in the most open and uncompromising manner, and he nevertheless seems disposed to take no steps for the purpose of vindicating it. The suspension or suppression of a dozen journals, and the imprisonment of as many editors for the offence of *Kwanri bujoku*, constitute no refutation whatever of the worst accusations preferred against the Minister. Englishmen find it very difficult to associate the idea of innocence with inaction under such circumstances. But we are in Japan, not England, and one of the strangest habits of the Japanese is to suffer newspaper attacks in silence. Time and again during the past 25 years the characters of individuals have been assailed with reckless vehemence and the fullest elaboration of details by this journal or by that, yet of libel actions at law during the same period, there have not been too many to count on the fingers of one hand. Is the moral perception of the Japanese exceptionally callous about such matters? We are inclined to think so. Their trust in time is large. *Hito no uwasa mo shichi-fu-go nichi*—rumour's life is 75 days. That is what they have been taught by precept, or learned by experience, to believe, and when they combine it with the aphorism *yabu wo tsutsuite hebi wo dasu*, which corresponds with our "let sleeping dogs lie," the result is strong disinclination to meddle with the adjustments that truth is always working to effect. There is another cause, too, for this apathy: the press has not earned so much respect that its utterances command very serious attention. In nine cases out of every ten, the most defamatory of its assertions provoke only mirth or contempt. The law requires that if a newspaper publishes an attack upon any one, it must, at his demand, give equal publicity to a denial. What more can any reasoning man require, asks the average Japanese. To push the matter farther is to incur certain trouble and expense, to risk the reproach of vindictiveness, and to effect little; for the Judiciary is inclined to appraise the sin of slander rather by the quality of the slanderer than by the dimensions of the libel. In not one case, not even so much as one case, have damages of a prohibitory amount been awarded in a libel suit. There could be no stronger practical proof of the low status of the Japanese press than the indifference with which its assaults are regarded, nor could anything tend more effectually to diminish its sense of responsibility than the licence it is suffered to enjoy. The question for Count HIJIKATA is whether he should depart from the

custom of his generation. It is a difficult question. The public sense of proportion would certainly be shocked by such a spectacle as the Minister of the Imperial Household proceeding against an utterly obscure Osaka periodical on a charge of libel; and if a plea of justification were set up in defence, personages that the Minister would properly shrink from citing as witness, and affairs that his official duty forbids him to discuss in public, might be involved. Resting where it is, the episode is very unsatisfactory, and we fear that it must eventuate in a greater injustice than any yet done.

THE REPORTED COMPLICATIONS IN KOREA.

THERE is reason to think that the rumours sent across the wires three days ago as to the arrest of several Korean officers for plotting to compel the KING'S return to his own palace, are unworthy of serious attention. The KING, essentially a timid man, has been pleased with his asylum in the Russian Legation, and would be glad, doubtless, to remain there for an indefinite time. But to satisfy that *penchant* he must have abdicated his royal position, for though, under momentary stress of circumstances, a monarch may be justified in taking refuge in a foreign Legation in his own capital, to live and hold his court there month after month can scarcely be reconciled with the idea of sovereignty. Various plausible excuses were invented from time to time to postpone HIS MAJESTY'S return to the palace, for in addition to his own feeling of security in the Russian Legation, there are considerations that render his continued stay there very desirable in the eyes of several of his *entourage*. The former interpreter of the Russian Legation, for example, who now occupies a high official position, and several other prominent men, must be very well aware that the KING'S departure from the Legation will certainly not inure to their benefit, or to the permanence of their political influence. Much delay has been contrived by pretexting the condition of the palace and the necessity of repairs; but that plea has ceased to be effective, since the palace is to be entirely ready for occupation at the end of this month or the beginning of next, and the KING'S removal thither can not reasonably be delayed beyond the middle of December. It seems most improbable that a plot to hasten the event can have been formed within a few days of the time when it would have taken place without recourse to extraneous pressure of any kind. What we should naturally expect, under the circumstances, would be a plot to keep him where he is, and there are very strong suspicions that something of that kind is the true explanation of the news just received. To persuade the KING that some of his subjects were

conspiring to obtain possession of his person, would have been an excellent device to excite his alarm, and make him seek new pretexts for prolonging his stay in the Russian Legation. If that hypothesis be correct, it would follow that the officers arrested on a charge of plotting to compass the KING'S removal to the palace, are themselves the victims of a plot. It is possible, however, that they may have been partisans of YE YUN-YONG, who has just been transferred from the position of Minister of War to the comparatively insignificant post of Minister of Agriculture. The downfall—for YE'S transfer is virtually a downfall—of a Minister of War in Korea signifies loss of position in the case of many officers who, under a more civilized system of government, would be independent of such vicissitudes. These men may have conspired in some way, for YE'S change of office and his replacement by MIN YUNG-WHAN signifies another success to the pro-Russian section at the expense of the English-language politicians. Whichever of the above two hypotheses be correct, the affair is evidently of secondary importance, a fact confirmed by the meagre nature of the telegrams sent by the Japanese *Chargé d'Affairs* in Söul to the Government in Tokyo. Fictitious importance was imparted to the incident by the arrival of some 80 Russian marines in Söul. But that was a mere coincidence. The marines were not a special force summoned in consequence of the emergency. They went to Söul for the purpose of relieving the former Legation Guard, and their arrival in the Korean capital was followed by the departure of over 70 men the next day. These "coincidences" are not always credible, but in the present case credence is facilitated by the fact that Admiral ALEXIEFF, Commander-in-Chief of the Russian Naval Force in the East, arrived at Chemulpo on the 12th inst., in the *Rurik*, accompanied by the *Admiral Nachimoff*, two gun-boats and two torpedo-destroyers, so that an opportunity for changing the Legation Guard in Söul presented itself in the natural order of things. It may be presumed that those interested in the restoration of a normal state of affairs in Korea will make every effort to hasten the judicial examination of the officers arrested in connection with this so-called plot, in order that the true facts may become known, and that no further pretexts may be furnished for the KING'S maintenance of a line of conduct that has become quite farcical, and, if persisted in, will certainly suggest most inconvenient constructions.

Count Kuroda, being still in bad health, left Tokyo for Atami on Tuesday.

In consequence of snow, the railway between Nagano and Naoetsu, Nagano and Karuizawa, Karuizawa and Yokogawa will be blocked from six o'clock p.m. on the 2nd inst. till the 31st of March next year.

KOREAN NEWS.

An unprecedented event is reported from Söul. Ye Chung-suk, Magistrate of Sakyung, having received a bribe of \$845 from the defendant in a law suit, gave the case in the municipal gentleman's favour. Ye relied on the favour that he enjoyed in high places, and had the injured plaintiff proved less obdurate, the magistrate's confidence would not have been misplaced. But the plaintiff repaired to Söul, and after having been knocked about for a time from bureaucratic pillar to departmental post, he finally placed a memorial in the hands of the Minister of Law while the latter was passing along the street. The Minister summoned the magistrate to Söul, and the Supreme Court, assisted or directed by Mr. C. R. Greathouse, tried him, found him guilty, and condemned him to imprisonment for life with hard labour. A double record was thus achieved: an official was punished for the first time in Korea for taking bribes, and the crime elicited a sentence of imprisonment for life with hard labour for the first time in the history of the world. The Korean Government must set about building prisons very briskly if it means to follow that precedent.

A former *Chusa* of the Korean Home Department has memorialized the Throne, urging that no Korean should associate with the Japanese, and that the officials of the Royal Household Department who visited Prince Komatsu on the occasion of his recent visit to Söul, should be punished. He also recommends that the editor of the *Independent*, being a foreigner, be expelled from Söul. Conservatism must be lifting its head in Korea when such memorials are sent in.

The execution of soldiers for comparatively trifling offences seems to be common in Korea. One day, a man is shot in the presence of his company for breaking the military regulations; the next, a non-commissioned officer meets the same fate for raising a disturbance during the night, while under the influence of liquor, and insulting a post-office official. In the latter case the condemned man was certainly a loss to the service, for when he was about to be shot, he invited his company to the place of execution, and addressed to them an impressive and excellently composed speech, urging them to take example by his fate and avoid his error.

Fate was in a decidedly ironical mood when she impelled the King of Korea to issue his recent edict, announcing that, although he had promised to buy land for the railroads granted to American and French projectors, he could not afford to buy any more, and must therefore refrain from granting further concessions of the kind for one year. The edict was manifestly directed against the Japanese, who are trying so energetically to obtain a concession for the Söul-Fusan railway. Korea is under exceptional pecuniary obligations to Japan, having borrowed from her three million yen, the repayment of which seems to have been quietly put off to the Greek Kalends. Yet it is Japan above all states that is to suffer from Korean impecuniosity.

A DISCLAIMER.

By a displacement of inverted commas and an erroneous division of paragraphs, the *Japan Herald* makes us attribute to America a state of affairs similar to that existing in Japan with regard to the press. Quoting a portion of a leading article from our columns, our local contemporary makes us conclude thus:—

"There could be no stronger practical proof of the low status of the Japanese press than the indifference with which its assaults are regarded, nor could anything tend more effectually to diminish its sense of responsibility than the licence it is suffered to enjoy. *This we think is also largely true of America.*"

The words we have italicized, "*This we think, is also largely true of America,*" do not appear in our article. They are an expression of our contemporary's opinion, and should stand at the head of the paragraph following the quotation, not at the tail of the quotation.

CHINESE NEWS.

It would seem that all the stories hitherto circulated about the immediate furnishing of money by an American syndicate to build the Pekin-Hankow Railway are erroneous. Director-General Sheng has petitioned the Pekin Government for a loan of ten million taels to commence operations. He guarantees to obtain the other forty millions by the time that the Government loan is exhausted, and he recommends that no money be raised abroad until one-half of the line has been finished. He further advises that when foreign money is needed, it should be procured from America so as to avoid the mutual jealousy of European States, and that the rolling stock also should be bought in America for the same reason. If Sheng has to find twenty-five million taels in China before he goes abroad for money, it is possible that he may have considerable difficulty in carrying out the railway project.

There is a rumour that the Tsung-li Yamén has recommended the raising of export duties in China to ten per cent. *ad valorem*, the idea being that if Chinese exporters have to pay that amount, foreign importers can not object to a similar increase of import duties. It is a strange specimen of economical reasoning. For, in the first place, the export trade is in the hands of foreign merchants, so that every increase of export duties has to be paid primarily by them, and in the second place, duties upon exports for foreign consumption come ultimately out of the pockets of the foreign consumers.

The Municipality of the foreign settlement of Shanghai—that is to say, the British, American, and German settlement, as distinct from the French—contemplate issuing dollar notes on their own account. If they carry out the project, it will be a very striking illustration of the *imperium in imperio* that exists in the Far East under the present treaties. A foreign community living within China's dominions will be issuing, without any permission from the Chinese Government, bank notes for circulation almost entirely among Chinese subjects. That foreign banks established in China and Japan should have charters investing them with note-issuing competence, neither the Chinese nor the Japanese Government possessing any power of supervision or control, is curious enough. But a foreign municipality in China paying its way with its own paper would be still more curious. Financially speaking, there is nothing whatever to be urged against the programme, but politically it looks decidedly singular.

A new rapid has been formed in the Yangtze below Chungking. Big and little rocks, tumbled down by a furious current, have been lodged at a narrow place and piled upon each other until only four feet of water offers for the passage of boats. At the date of latest advices the river, owing to a continuous downpour of heavy rain coming after three months of intermittent wet, had been nearly 22 feet above its normal level, and there was uncertainty whether the flood would have the effect of aggravating or removing the new obstruction.

The new military academy in Nanking was opened on November 28th. Its buildings are extensive and conveniently planned. Commissioners Tsien, the director of the academy, has had several years' experience in the Tientsin military academy and has a working knowledge of German. The institution is to accommodate 120 cadets, and the number is already nearly full.

It is alleged that a young Belgian official, chief clerk in the Brussels Foreign Office, by name the Chevalier de Wouten d'Oplinter, has been engaged by the Chinese Government for the purpose of reorganizing the system of business in the Tsung-li Yamén, so as to place it on European lines.

The district treasuries at Daichu and Dainan, Formosa, will open on the 21st of December, and those at Hozan and the Pescadores on the 1st of January.

COUNT HIJIKATA AND THE "KOBE CHRONICLE."

In its issue of the 25th instant the *Kobe Chronicle* persists in its singular errors about Count Hijikata. "There seems to have been no serious doubt," our contemporary writes, "as to the truth of the accusations against Count Hijikata, or, at any rate, a sufficient portion of the accusations. The Court of Law decided against him on his libel action." We have only to repeat that there never was any libel action; that the accusations against Count Hijikata's personal character were not published until four months after the trial at law alluded to by the *Kobe Chronicle*; that the trial ended, not in the manner indicated by the *Kobe Chronicle*, but in the sentencing of the *Twenty-sixth Century's* editor to six weeks' imprisonment with hard labour, and that, consequently, if any inference is to be drawn from the trial, it must be an inference in favour of Count Hijikata. It is most unfortunate for the *Kobe Chronicle's* fair-fame that it should have been thus egregiously misled, and that, on the strength of flagrant perversions of fact, it should have lent its columns to assist in fixing foul slanders upon a grey-haired official of high standing and hitherto unblemished reputation.

FIRES IN YOKOHAMA.

At five minutes to ten o'clock on Monday night, a fire broke out in an upper room of the premises at No. 16, Bund, occupied by Messrs. Farsari & Co., photographers, and within an hour the whole place, with its valuable machinery, stock of plates, and photographic materials, was consumed. Gentlemen in the smoking-room of the Public Hall had a fine view of the conflagration, the flames shooting up high in the still, windless air. The Yokohama Fire Brigade, under Superintendent Morgan, were early on the scene and an abundant supply of water was obtained by two hydrants and a steamer. The police brigade also lent valuable assistance, while a fire-party from the Russian gunboat *Manjour*, in command of an officer, did good work in subduing the flames. Unfortunately, one of the Russian sailors was seriously injured during the operations, a stove falling from an upper-room directly on to him. How the fire originated is still a mystery. The place and stock were insured to the amount of \$6,000 in an office of which Mr. Shand is agent.

The second fire within less than 24 hours broke out in Yokohama about six o'clock on Tuesday evening. The Y. F. B., on getting the alarm, proceeded with a couple of hose-reels and stand-pipes to the scene of the conflagration, a two-storied godown at No. 130, China-town. This place is divided into two, one part being occupied by Mr. H. G. Waggott, the other by Mr. H. B. Collins. The Yokohama Fire Brigade and the Police brigades managed to get the flames under control in less than an hour, but could not save much of the building or its contents. How the fire originated has not yet been discovered. Supt. Morgan reports that there were very few goods in the godown. The building we understand belonged to Mr. J. D. Hutchison, and was insured in the London and Lancashire Fire Office.

HAKODATE.

(FROM OUR OWN CORRESPONDENT.)

Hakodate, November 25th.

The steamer *Aswanly* from Yokohama, bound to San Francisco, put into this port yesterday to land Mr. Rayner, the fourth engineer, who had been attacked by small-pox, and two others whose symptoms were doubtful. Rayner died to-day, and one of the other cases is small-pox, one still doubtful. These have been isolated. The Captain of the *Aswanly* had the remainder of the crew vaccinated, and proceeded to Muroran to load bunker coal. This port is free from contagious disease, and at present otherwise healthy.

THE REV. JOHN ROSS AND THE QUESTION OF TORTURE BY ROMAN CATHOLIC PRIESTS.

The Rev. John Ross refuses to withdraw his charges against the Roman Catholic Bishop of Manchuria. He says that it will be time enough to do so when the Bishop himself shall have denied that "the photographer, Pung (or P'eng), was tortured in his compound on the 13th and 14th of March." The case has now assumed a strange complexion. On the one hand, we have the Rev. John Ross publicly preferring certain accusations; on the other, the Rev. Léon Robert publicly declaring those accusations to be baseless; and now, finally, the Rev. John Ross replies that, with a solitary exception, the Rev. Léon Robert is inaccurate in every one of his statements. Under such circumstances, it is difficult for outsiders to form any clear conception of the truth. Our readers can not have forgotten the affair. It had its origin in an essay contributed by Mr. Ross to the *United Presbyterian Christian Record*. He there stated that M. Léon Robert, a French Catholic Missionary in Shanghai, replied that, in view of such charges, the French Consul-General in Tientsin had visited Newchwang and Mukden; had investigated the matter; had obtained the release of certain Chinese incarcerated for alleged complicity in M. Léon Robert's unlawful practices, and had received a personal apology from the British Consul at whose instance the men were arrested but who now "regretted that he had been sadly misled." To every one of those rebuttals the Rev. Mr. Ross replies "inaccurate," and admits only that the French Consul-General visited Mukden. It is strange that there should be difficulty in eliciting the facts of an affair so flagrant.

THE ANTI-FOOT-BINDING SOCIETY.

The lady promoters of the Natural Feet Society and the International Woman's Union have aimed high but unfortunately their bolt has fallen short. Through the United States Representative in Peking, in his capacity of Doyen of the Corps Diplomatique, they addressed to the Emperor and Empress Dowager a memorial praying that steps might be taken to put an end to the cruel practice of foot-binding. Mr. Denby duly forwarded the memorial to the Tsung-li Yamén, but that august body's reply was disappointing:—

We beg to state that the memorial of the said societies evidences the fact that the object in view is to do good. But the usages and customs prevailing in China are different from those of Western countries. The binding of feet is a practice that has been in vogue for a very long time. Those who oppose the binding of their children's feet are not compelled to do so, while, on the other hand, those who wish to carry out the practice cannot be prevented from doing so. Custom has made the practice. Those in high authority cannot but allow the people to do as they are inclined in the matter of binding the feet of their children; they cannot be restrained by law.

We have therefore the honour to inform Your Excellency that we find it difficult to carry out the request made and present the memorial to their Majesties the Empress Dowager and Emperor. We will keep the memorial in the archives of the Yamén, and beg that Your Excellency will communicate the above for the information of the two societies.

The affairs of the Osaka Seido Kaisha (Osaka Copper Smelting Company) which were greatly upset, have been reduced to order, and Mr. Akiyuki is selected as President, and Messrs. Matsura, Honda, and Nakamura directors.—*Asahi Shimbun*.

THE POWER OF CREDIT.

Credit, we are told by all public economists, is the main spring of present-day business. The *Tokyo Economist*, while supporting the axiom, says that the credit-system is by no means a late growth in Japan, but instead of illustrating its remarks by pointing out shops that give long credit, or have been in the habit of affording long credit to customers for many years past, it prints an account of a business that enjoys unlimited credit from its customers. The place in question is the Ninhen Bonito Store, situated in a narrow lane not far from the Echigoya—the silk mercery of the Mitsui Company. This homely establishment has been in existence for more than 200 years and enjoys the highest credit of any shop in Japan. It is the custom in this country to make presents on various occasions of domestic festivity, such as marriages, births, and other anniversaries, and at these times, dried bonito is a very favourite form of gift. To avoid overstocking a friend with dried bonito on such occasions, it is usual to send, instead of the fish, a voucher drawn on the Ninhen store, that can be redeemed at any time for an amount of bonito, 50 *sen* worth up to three *yen* or more. The amount of such vouchers issued by the Ninhen store is said to total 103,800 a year, and taking them at an average of 75 *sen* each, it follows that some 77,000 *yen* a year are deposited with the establishment "for value to be received." The vouchers can only be exchanged for dried bonito and then at the Ninhen store. In pre-Restoration days it was nothing unusual for these vouchers to be held for two or three years before being redeemed; meanwhile, the proprietary had the use of the money for nothing. Nowadays the vouchers are handed in more promptly; still it is not extravagant to suppose that the Ninhen establishment enjoys the privilege of using 79,000 *yen* and upward per year free of interest. Such a state of things can find no equal anywhere else in Japan: probably no where else in the world.

LI HUNG-CHANG.

The more we hear of Li Hung-chang's misfortune in Peking the less hope does there appear to be that he can ever recover his old power and influence. When the aged statesman took over his seals of office in the Tsung-li Yamén on the 1st of November, it is said that only subordinates were there to receive him, and that his colleagues did not arrive until some hours later: a studied insult full of significance. Li evidently assumed the Tsung-li Yamén post because he shrunk from offering himself as a fresh target for the attacks of his enemies, who would not have failed to denounce his refusal as disloyalty. Unfortunately for Li, a relative of Weng Tung-ho, his greatest enemy, happened to be supervising the work of restoration in the park when the ex-Viceroy entered in a Bath chair. It was probably the first time that a Bath chair had ever invaded the sacred precincts, and the sacrilege of the situation was made complete by the fact that its occupant was the hated iconoclast, the father of new fashions and alien systems, whose reforms had proved so futile in the hour of his country's direst need. Li's career is a paradox. Born before his time, he has nevertheless outlived it.

REFORM IN CHINA.

The Rev. Gilbert Reid, whose career in Peking has attracted much attention, and whose success in gaining access to high Chinese dignitaries has been unprecedented, says that Prince Kung is ready to receive a stranger with no better introduction than genuine good wishes for China's welfare. Mr. Reid is hopeful about China. He is one of the many optimists who, for the past twenty-five years, have been detecting signs of reform never consummated. The bases of his faith are that, in accordance with memorials addressed to the Throne, schools are to be founded in every province for giving instruction

in Occidental knowledge; that the Chinese classics are no longer to be the sole subject at literary examinations, but will be supplemented by Western learning; that a university is to be established in the metropolis where the sciences of Europe will be taught; that men are beginning to write more and talk more about foreign subjects, and that railways are at last on the eve of becoming an accomplished fact. Side by side with these signs of the dawn of better days it is interesting to read the memorial of a censor who declares that official extortion prevails to such an extent in the metropolitan province of Chihli as to threaten wide-spread disaster.

THE ALLEGED POLICE OUTRAGE AT KOBE.

The Police Authorities of Hyogo Prefecture have caused to be published by the newspapers originally responsible—the *Kwansei Shogyo Nippo* and the *Kobe Yushin Nippo*—a contradiction of the story that, on October 29th, four constables, having arrested a girl on suspicion of an offence against good morals, subjected her to very improper treatment. The procedure alleged against the police was of such a nature that it could not possibly have served any purpose connected with their duty, and, if true, must have been prompted by a spirit of purely wanton mischief. We ourselves caused inquiries to be instituted, and the resulting information is to the effect that the Kobe police have lately been endeavouring to suppress an abuse only too familiar to their Yokohama *confères*, namely, the keeping of disorderly houses within a foreign settlement under the title of hotels or restaurants. These places are maintained and frequented by foreigners of the lowest class, and the difficulty of dealing with them under present conditions of divided jurisdiction is very considerable. The proprietor of one such house was charged before H.B.M.'s Consul in Kobe on the 25th of November, but the evidence for the prosecution being insufficient, the Consul contented himself with putting the accused on recognisances for his good behaviour. Another house, the name of whose proprietor we refrain from publishing, has been watched by the police, and several of the women employed there have received punishment, to the great annoyance of the owner who has frequently complained and is much incensed against the police. It was with reference to one of the girls connected with this house that the story in question circulated, by the girl herself of course. The Police Authorities, however, deny flatly that she was subjected to any treatment of the nature described by the Kobe journals and copied by the *Yorodsu Choho*. What happened, they allege, was that the girl having been arrested and searched, was released by the constables, without any report to a superior officer, the ground of release being absence of incriminating proof. The constables have been severely punished for acting in such an independent manner, but not for ill-treating the girl. If it is denied that she was ill-treated in any way. There the matter must rest. We presume that a statement made by responsible officials is at least as worthy of credence as a story told by a woman that leads a life of shame.

PROFESSOR KUROKAWA ON LACQUER.

Professor Kurokawa, of the Imperial University, one of the highest authorities on the history of Japan and her fine arts, delivered a short lecture the other day before the Lacquer Society of Tokyo. In ancient times, observed the learned Professor, the use of lacquer in the field of fine arts was very limited, being employed mostly for delineating certain characters on wood. But the art of using lacquer for decorative purposes gradually extended, until we find it employed for *kinpun makiye*, "gold-dust pictures." Under the general term of *makiye*, various styles, each differing slightly from the other, came into vogue, as for instance, *chiriji*

(dust-ground) and *Nashiji* (pear-grained ground). The difference between the two consisted merely in the size of the gold specks used, those in the former being finer than those in the latter. Both appear to date from the time when the Imperial Court was at Nara, before it removed to Kyoto in 794 A.D. We gather from old chronicles that it is highly probable that another gold dust process, called *hirachiri-raten*, very similar in style to *chiriji*, was known about the *Kwanpei* and *Yenki* eras (889-922 A.D.). This process was first used in decorating Buddhist images and paraphernalia, and even the interior of Buddhist temples, as may be inferred from the internal decoration of the Chuzen Temple at Hiraizumi, one of the oldest Buddhist edifices in Japan.

The style termed *makiye* must have been known from about the *Tempei* era (729-748 A.D.), though mention of it first appears in the records of the reign of the Emperor Buntoku (851-858 A.D.). The lecturer thought that *makiye* should be subdivided into two main divisions, *makiye* connected with divine services, and the other merely a curiosity of fine art. The *makiye* or *hirachiri-raten* (gold dust and inlaid shell work) was used in decorating sacred furniture, and also the sheaths of swords worn by courtiers on ceremonial occasions. Other *makiye* wares were made to satisfy the taste of connoisseurs. It should be added that *raten makiye* was principally used in decorating objects required for Shinto temples.

CORRESPONDENCE.

[Our readers must distinctly understand that we are in no sense responsible for that sentiment or opinion of our correspondents, for the accuracy of their assertions, or for the deductions they may choose to draw therefrom.]

SINGULAR CUSTOMS IN A FISHING VILLAGE NEAR NIIGATA.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Hoping that the following may be of interest to the readers of your paper, I venture to trespass upon your valuable columns and ask you to insert it.

Yours truly,

T. SASAKA.

November 28th, 1896.

In the county of Nishi Kambara, Niigata Prefecture, Echigo Province, there is a fishing village called Manose, which consists of about two hundred houses. It is said that, from ancient times, singular customs have prevailed in this village, and among them the strongest, is an objection to making marriages with persons living in other villages.

Men when still young are said to be accustomed to learn carpentering in this village, and on attaining the age of maturity and after marrying, they will leave the village and journey through the districts of Aizu in search of work. After having made a good sum of money, they give up carpentering and take to fishing, and in the end succeed to the family estates. It is also said that it is the custom of the village that no one should be allowed to succeed to an estate unless he has taken a journey for the sake of work. So, every year, a party of young men from about seventy to one hundred in number, take a journey for the sake of work.

During the time they are engaged in work, they return to their homes only once every year, about the middle of August (on the days of the Festival of Lanterns, according to the old calendar) when they remain for a short period only. After their return home, and after they have met their parents, wives, and children, whom they had not seen since their departure, they start for the scene of their labours again in September.

Although it may sound ridiculous to us, it is said to be a fact that most of the young wives give birth to little ones in May so regularly that the cries of babies may be heard in most of the houses of the village at that time of the year, the births generally amounting to fifty or sixty.

THE "MONMOUTHSHIRE'S" MAIL.

TO THE EDITOR OF THE "JAPAN MAIL."

Post and Telegraph Office,
Yokohama, November 30th, 1896.

SIR,—Will you kindly spare me space in your valuable paper to inform the public of the following incidents, which, to our great regret, have happened? The mail per steamer *Monmouthshire*, for Victoria and beyond, was advertised to close at this office on Saturday, the 28th inst., at 8 p.m., and when we were about to make her

mail up on the same evening we were advised by the Agent that, owing to bad weather, her departure from Kobe had been postponed, and that consequently, she would be unable to leave here on Sunday morning as previously advertised, but would probably sail on Sunday evening. We awaited definite notice from the Agent of the hour of departure, the usual custom being to convey to us such notice as enables us to give to the public due intimation of the postponement. But no notice came to hand, and when we asked the Agent this morning, we learnt to our great surprise that the *Monmouthshire* had left here early this morning, so that the mail-matters marked "per s.s. *Monmouthshire*," or intended to be despatched by her, are all left behind.

We shall dispatch the above mail by the first opportunity and by the quickest route. Meantime, we have thought it better to inform the public and those that posted letters by the said route, so that they may amend their correspondence.

T. UNAGAMI,
Director.

MIXED COINS.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—On reading the article "XX. on Silver," which appeared in your Weekly issue of the 7th inst., I tried to work out your theory that a coin minted 25 years ago, composed of a mixture of $\frac{1}{2}$ gold and $\frac{1}{2}$ silver, would automatically redress any divergence in the ratio between the two metals and form a coin "the purchasing power of which would be a constant quantity;" following is the result:—

In your illustration you assume

$\$1$ S. = 1 lb. Tea.

$\$1$ G. = 1 lb. Tea.

ergo $\$1$ S. + $\$1$ G. = 2 lbs. Tea.

If silver declined in terms of gold to half its former value then

$\$1$ G. would = $\frac{1}{2}$ S.

and $\$3$ S. would be required to buy $1\frac{1}{2}$ lbs. Tea; but according to your article

$\$1$ G. would buy $1\frac{1}{2}$ lbs. Tea.

ergo $\$1$ G. would = $\frac{2}{3}$ S.

How do you account for this discrepancy? It seems to me that there is something wrong in your arithmetic, and that it is not correct according to

COCKER.

Shanghai, November 18th, 1896.

[Certainly if it be assumed that silver has declined in terms of gold to half of its former value, our figures are incorrect. On that hypothesis we should have written "the gold component of the coin would now purchase $\frac{1}{2}$ lbs. of tea and the silver component $\frac{1}{2}$ lb. G. would then be equal to a S. But in the article referred to we used merely illustrative figures, without any assumption as to a definite ratio between the metals. If G had appreciated 50 per cent in terms of S, then the statement would have been that the gold component would now buy $\frac{1}{2}$ lbs., and the silver component, $\frac{1}{2}$ lb.—Ed. J.M.]

THE NARA SCHOOL ONCE MORE.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I am glad that Mr. Kawamura is willing to allow others also to have a share in the honour of the sudden prosperity of the Nara School with himself. Those of your readers who have seen the Tokyo dailies or weeklies when speaking on this matter well knew that they all have attributed the cause of its growth solely to the personal influence of Mr. Kawamura, and as they all spoke about the trouble in an authoritative manner, I very naturally concluded, as every sane man would have, they were directly or indirectly, inspired by him. However, let us come to the real cause of the trouble.

1.—My previous letter did not imply that Mr. Kawamura was not helped by Mr. Tamaki in procuring for himself the post of "Agricultural Adviser."

2.—Mr. Kawamura is mistaken when he says, "I took my inspection tours chiefly during the summer vacation." Mr. Kawamura could not have forgotten my reproving him in the teachers' presence for devoting too much time for his agricultural enterprise and neglecting his other duties to the School. He told one of the Trustees that he would *sappuku* if I reproved him once more.

3.—In regard to the 15 yen salary from the Kencho, he says it was not sufficient for his travelling expenses. (a) I believe the Japanese Ken Government pays the expenses of its officials. (b) Even if he did spend the money for his travelling purposes, it was his duty to have submitted an explanation to the School Committee.

4.—Mr. Kawamura has kept absolute silence in regard to the cause of the resignation of the President, Mr. Tamaki, and the Treasurer, Mr. Ido,

several months ago. These two gentlemen, as stated in my previous letter, have been the real founders of the School, and have contributed immense labour and treasure towards its prosperity. They resigned simply because Mr. Kawamura had virtually usurped their position. When they resigned the dismissal of Mr. Kawamura was only a question of time; because without them the School could not be continued.

5.—The progress of Christianity in the School since my absence, judging from the official organ of the Mission *The Church in Japan* (I'll send a copy if desired) has been very satisfactory to the foreigners in charge of the spiritual work in Yamate. To this progress Mr. Kawamura himself has contributed not a little!

6.—Mr. Kawamura knowing that at present the question of religion in the Mission Schools in Japan is their most vulnerable place to prejudice public opinion against them, he has separately attempted to give the Nara school a mortal thrust in this weak point. Let me say here that, in my opinion, there is no Government School in Japan whose students have enjoyed more *real* religious freedom than those of the Nara Chugakko; and their moral conduct has been a model to be copied by all. The principal law of the School being absolute religious neutrality, therefore Mr. Kawamura was guilty by knowingly violating the Constitution and taking the students to a Shinto shrine. His guilt would not have been *less* heavy even if he had taken them to a Christian Church. It will be seen that Mr. K.'s action has a dual aspect: to the school authorities he was guilty of violating its constitution of religious neutrality, and to his Christian spiritual overseers (Mr. K. is a Christian) he was guilty of violating his Christian vows. Mr. K. has repeatedly dwelt upon the second point, and left the first untouched. How could the religious neutrality in a school be kept sacred and intact if its principal would act as Mr. K. acted?

Finally, Mr. K. charges me with ignorance on account of my absence from Nara, consequently being prejudiced against him "by hearing only one side of the affair." The truth is that I have kept myself well posted about the school during my absence from Nara, Mr. K. himself being the chief source of my information. As to the recent troubles, if Mr. K. after leaving the School had acted like a gentleman, and kept silence, his inaccuracies—monetary, educational, and religious—would have been all forgiven and forgotten. But unfortunately since his dismissal he has never ceased from struggling to destroy the School, first its buildings, then worse than all, its reputation. That all my statements in regard to Mr. Kawamura are correct can be proved from the numerous letters of thanks which I have received from the Japanese friends of the School, the chief of which is from Mr. Tamaki.

Hoping your unbounded kindness will find a place for this letter,

I remain very respectfully yours,

ISAAC DOOMAN,

Tokyo, December 1st, 1896.

THE AOMORI-TOKYO LINE.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR.—I am sure the matter needs but to be mentioned to receive due attention from the Directors of the Japan Railway Co. From Aomori to Fukushima passengers are supplied with foot warmers, which, on arrival at 3 a.m. at Fukushima, are removed, no more being supplied. It is evident that they are most required at that time of the morning. Perhaps the well-heated offices of the officials in charge make them rather forgetful of the discomforts of the long railway journey from the North at this time of the year. The carriages, admirably suited for summer requirements, need some little attention to make them even fairly comfortable in winter. The Station Masters and other officials along the line are exceedingly obliging, but the matter of the comforts of passengers does not lie with them.

I enclose my card, and remain, yours, etc.,

COLD FEET.

Yokohama, Dec. 3rd, 1896.

The Emperor of Russia, says the *Westminster Gazette*, offered the Order of St. Andrew to Lord Salisbury during his visit to Balmoral, but it was declined in accordance with the rule which forbids a British Minister to accept any foreign decoration. Except Royalties, the only British knight of the Order of St. Andrew has been the Duke of Wellington, who received this order from the Emperor Alexander I. a short time after the battle of Waterloo.

REVIEW.

Dichtergrüsse aus dem Osten.—Japanische Dichtungen übertragen von Professor Dr. K. Florenz in Tokyo. Dritte verbesserte Auflage. Leipzig: C. F. Amelang's Verlag. Tokyo: T. Hasegawa.

Poetical Greetings from the Far East.—Japanese Poems from the German Adaptation of Dr. KARL FLORENZ, by A. LLOYD, M.A. T. Hasegawa, Tokyo.

PENDING the preparation of his critical translation of the *Manyōshū*, the chief classic among collections of ancient Japanese poetry, Dr. Florenz has issued a small volume of poetic paraphrases of selections from the *Manyōshū* and other well-known Japanese verse, for which readers who are seeking novel literary entertainment and admirers of unique-book making will be much indebted. And to the Rev. Arthur Lloyd many who enjoy musical English will be put under obligation for his excellent rendering into English verse of Dr. Florenz's *Dichtergrüsse*.

It is not our purpose to make an exacting review of either of these books. Suffice it to say in this connection that the direct translations, German text, if compared with similar work by other scholars, appear to be faithful representations of the Japanese originals: "on the whole" Dr. Florenz remarks, "as accurate as the fundamental differences between the spirit of the Japanese and German languages would allow;" also that Mr. Lloyd's English paraphrases of the German translations are throughout graceful and pleasing, and are for the greater part faithful transcripts of the letter as well as of the mood of the German verse.

Our chief interest in these books, however, lies not so much in their relation to each other or to their Japanese originals as in their literary excellence,—that especially considered,—and in their worth as specimens of odd and attractive book-making. Each page of the volumes is a work of art from the hand of some Japanese master, and, as a rule, is illustrative of the poem impressed upon it. Take, for example, the two pages depicting a snow-laden landscape, illustrating the little lyric entitled "*Endlose Liebe*." Both the writers and the artist have wrought in thorough sympathy, and the result is almost without fault, so far at least as literary and artistic intent goes. The ancient pine, an overfilled stream, the farm houses covered with snow, and white mountain—heights, speak for the artist; and from the writers are given as accompanying texts these almost interchangeable verses:—

ENDLOSE LIEBE.

Wo ich ferne des Mikane
Hohen Gipfel ragen seh,
Fällt der Regen endlos nieder,
Nieder endlos fällt der Schnee.
Ganz so endlos wie der Regen
Und der Schnee vom Himmel thau,
Ist auch endlos meine Liebe,
Seit ich dich zuerst erschaut.

ENDLESS LOVE.

Far away I see Mikane
Raise his towering peaks on high,
Here it rains without cessation,
There the snow falls ceaselessly.
As it rains without cessation,
As the snow falls ceaselessly
So unending is my passion
Since thy face I first did see.

Another noticeable page is that devoted to "*Augenäusung*" or "*Ocular Delusion*" whose English text is,—

I watched a petal fall from the tree,
It fell but flew back again;
What could it be? I rushed to see:
There did I spy
A hovering butterfly!

The verses overhung by flower-clustered branches and the falling petals crossed by the flight of flower-like butterflies make a delightful and expressive picture. Then there are the pages on which appear three poems,—meditations on the transitoriness of life,—their story told by the artist in the autumn leaves fluttering down across the melancholy words. But, like happy interpretations appear throughout the books. We should enjoy pointing out what seem to us numerous successes of the kind, but we here note only the fact that such successes have been achieved.

As literary productions merely, these volumes are desirable, but, presented to the public in their unique artistic form, they ought to receive a generous welcome. Particularly now as another holiday season approaches, these poetical greetings from the far East, can easily be made fitting messages of remembrance from Japan to many a home in Europe and in America. As gift books chiefly these volumes have evidently been prepared. As such they are marked successes.

ST. ANDREW'S BALL.

It has long been a source of wonder to other nations, that the British race—we are speaking of the peoples that collectively go to build up the United Kingdom of Great Britain and Ireland—although the best colonizers and most capable pioneers of trade and industry in foreign lands, are yet the most absolutely homesick race the world has seen. The Englishman wherever he may pitch his tent abroad, is ever turning in memory to the well-loved green fields and trim hedge-rows, the placid rivers or old world commons, the broad moors and pleasant dales, deep lanes or red-brown crags of his own particular county; the Irishman is continually harking back in thought to the Emerald Isle and its wondrous beauties, and the Scotsman is always hearing the wail of the "Heimweh" calling him back in contemplation to the far away land of "brown heath and shaggy wood." Yet the patriotic nostalgia that consumes the heart of the most reticent Scot is very often described, even by themselves in moments of unpremeditated confidence, as being more intense than that of the Irishman and Englishman combined. To their poets they are greatly indebted for much of the material that feeds this "pure lambent flame." From the days of Walter Scott and Robert Burns onwards, every Scottish tongue that "lisp'd in numbers" has sung the praises of the bonnie land, and none perhaps more warmly than dear old Professor Blackie. Not many years before he passed away for ever from the busy scenes of a full-lived life, he expressed the thoughts of every Scottish exile when he wrote—

I've wandered East, I've wandered West,
In gypsy wise a random roamer.
Of men and maids I've known the best,
Like the far-travelled king in Homer.
I've fed my eyes by land and sea
With sights of grandeur streaming o'er me,
But still my heart remains with thee,
Dear Scottish land, that stoutly bore me!

Another, and perhaps equally potent force that assists the Scotsman abroad to grip closer the links that bind him to his native land is the anniversary of St. Andrew—Scotland's patron saint. All over the world wherever one or two "brither Scots" are gathered together, whether in the lonely northlands of Canada, or the sparsely peopled countries over which the Southern Cross doth nightly gleam in India, the South Americas, east and west throughout the temperate or the torrid zones, there will a St. Andrew's Society be found; and within the immediate neighbourhood of its habitat and through its instrumentality the good Saint's holy-day will be observed with feast or dance, or other form of decorous revel. Here in Yokohama the custom for many years past has been for Scotsmen to give a public ball on the 30th November, and once again we chronicle a joyous Caledonian Ball. The invitation list, large as it was last year, was again extended and the number of acceptances topped the record. It is a very great pity that the Public Hall is not equally as expansive as the generosity and hospitality of the Scottish hosts. On Monday night, despite the damp and chilly weather, the place was filled to overflowing. Yet the tact of the Committee and the good humour of hosts and guests prevented the crush from becoming unbearable. The guests included a large contingent from the British warships in harbour; and several of the *Corps Diplomatique*, including Sir Ernest Satow, K.C.M.G., the Hon. G. Lowther, Baron and Baroness D'Aethan, and others.

The decorations were again exceedingly pretty and were arranged under the superintendence of Mrs. J. D. Hutchison. The stage was roofed with rustic trellis work over which and through which straggled the flowers of the morning glory in wild profusion. Here and there cosy arbours were arranged, the whole width of the stage being utilised. A very effective floral centre piece bearing the motto "For Auld Lang Syne," was suspended in the proscenium arch and this was wreathed with white and blue ribbons. On the walls were hung the heraldic shields of many of the old Scottish families, heads of deer, and festoons of hunting—the latter supplied by Capt. Pope. The ladies' cloak-rooms were behind the stage; the card-room upstairs, the arrangements being the same as in previous years. Shortly before twelve o'clock the royal haggis—"great chieftain of the pudding race"—was borne in and the large company sat down to a well served supper supplied by Mr. W. N. Wright of Wright's Hotel. Several hours later, when the ladies had gone, a second supper party congregated in the smaller hall, and the fun waxed fast and furious till the dawn drove the last stragglers home. Two gentlemen appeared in kilts,—with the tartans of Clan Fraser

and Clan Stewart—thus increasing, in conjunction with the very handsome dresses worn by several of the ladies, the picturesqueness of the scene. We have only to add that the floor was in perfect condition: the Town Band kept excellent time, and the programme given below had to be supplemented by several "extras" ere the fairer portion of the dancers would cry content.

"Auld Lang Syne."

The Committee were:—Mr. W. Ross, President; Mr. J. A. Fraser, Vice-President; Messrs. J. Dodds, J. Stewart, N. G. Munro, F. J. Cruikshank; J. MacArthur, Treasurer; H. W. Fraser, Secretary; and a host of stewards.

THE INDEPENDENCE ARCH.

(FROM OUR OWN CORRESPONDENT.)

Sŏul, Nov. 21.

Korea seems to be beginning to appreciate the importance and benefits of the Independence of the country secured her by Japan. The Independence Club is an organisation formed last spring, having for its avowed object the propagation and dissemination of sentiments of independence among the people. As long as Korea relied on China she had no thought of independence, but when Japan removed that prop, Korea did not fall, as was perhaps not unnaturally thought she would, into her neighbour's arms; and she likewise seems determined to put forth and effect an escape from the great Northern Power. The Editor of *The Independent* was active in the formation of this Club, and to his enthusiasm is due to a large extent, at least, the successful efforts of the organization.

On the site where the king and his courtiers met to welcome the ambassadors from China was a gate called "The Gate of Welcome and Blessing." In the beginning of 1895 this gate was torn down as having outlived its usefulness. In its place, and its seems to me very properly, is to be erected the Arch of Independence, the corner stone of which was laid to-day with appropriate ceremonies. The following programme was carried out:—

Song	"Korea"	Student Chorus.
	The deposition of the box into and laying of the Cornerstone.	
Prayer		Rev. H. C. Appenzeller.
Address by the President,		Gen. An Kyen-su.
Address	"How to Perpetuate our Independence"	Hon. Ye Cho-yun.
Song	"Independence"	Student Chorus.
Address	"The Future of Our Country,"	Hon. Ye Wan-yong.
Address	"Foreigners in Korea"	Dr. Philip Jaisohn.
Song	"March"	Student Chorus.
	Drill by the Students of the Royal English School.	
	Refreshments.	

The day was perfect, the crowd very large and estimated any where from 5,000 to 7,000 people; the feeling excellent, the singing hearty, the addresses eloquent. Everything was new and showed the hand of foreign training. Did students ever before sing in commemoration of the independence of the country? Did any Governor of Sŏul ever before get up thousands of his fellow citizens and tell them how to "perpetuate" their independence? Did any Foreign Minister ever seriously discuss the future of his country? "Foreigners in Korea" have been discussed by Koreans ever since their arrival, and not always in a way complimentary to them perhaps.

The President in a few well chosen and simple words told of the Club and the significance of the Arch; the Governor of the Capital spoke in a manner suggesting the earnestness of a Fourth of July orator, and he showed that the perpetuation of independence lay in every man discharging his duty in whatever sphere he is labouring. The Foreign Minister affirmed that Korea must stand alone; that dependence on China was a thing of the past; that Japan though a near neighbour, and Russia a great Power, should not be leaned upon, but "we must stand alone"—an utterance which it required considerable courage to make when all the peculiar circumstances in which Korea finds herself are taken into consideration. But the sooner the force of their words are fully realized the better it will be for this land. Dr. Jaisohn spoke in English first and then in Korean. He said the "Righteous Army" did not enter Sŏul because of the presence of foreigners, and paid a well deserved tribute to

the labours of the advisers in the Finance and Law Departments, teachers, and the Missionaries.

After the formal exercises were over the foreign guests and Korean officers repaired to the pavilion near by, where a collation was served. The building has been repaired and made into a beautiful hall where large gatherings of this kind can be held. After partaking of the excellent refreshments furnished, speeches were called for from the several foreign representatives. The secretary of the United States Legation told of his residence in the country and faith in the people, and referred to the oratory displayed by the speakers of the afternoon as indicating that it was in the people. The Russian Representative was not present, but a doctor from a man-of-war said a few words. The English and German Representatives went home direct from the arch. The Acting Japanese Minister Kato was called on and in a few well selected words—so I infer from the deliberation with which he spoke—reciprocated the kindly feelings, and concluded by calling for cheers for Korean independence, which was responded to by his nationals with vigour and enthusiasm, showing that they are still for Korean independence as much as ever.

The last speaker was Dr. J. McLeavy Brown, who spoke of the excellent spirit prevailing between the foreign community and Koreans.

This must be regarded as a memorable day. It cannot but be a great and good object lesson to the Korean people. It gives new thoughts, new ideals. The Independent Club must be congratulated on the good work it has already accomplished.

The several schools under foreign and native supervision attended in a body. Some of them carried the Korean flag, the sight of which is not as rare as it was before the war. The expressions of loyalty to their King were frequent and always received with enthusiasm. May the Arch be speedily completed and stand as a silent witness of Korea's independence.

ON THE SANITARY CONDITION OF NORTH FORMOSA.

The following report, compiled by Professor Burton for the Department of Education, in Japan, has been handed to us for publication:—

Early in the summer, I received instructions from the Civil Governor of Formosa, Mr. Mizuno, to proceed to North Formosa to report on the sanitary condition of that part of the island, especially on that of the towns of Kelung, Tai-hoku, Tamsui, or Hube, and Tai-chu, formerly called Tai-wan. I was accompanied by Mr. Hamano, C.E., and received direct instructions from Mr. M. Kato, Chief of the Sanitary Section of the Civil Department of Formosa, of the Sanitary Bureau, Home Department.

As Formosa is now a part of the Japanese Empire, and as many Japanese are immigrating there, it may be of interest to you to know some of the sanitary condition of even one-half of the country, so as to be able to judge to what extent it is fitted to be a home for people of your own nationality.

It is barely necessary to state that the sanitary condition of North Formosa is inferior to that of Japan proper of the present day, for in Japan proper many sanitary works have been carried out within the last quarter of a century, on modern principles, which have vastly improved the condition of the country in general, and especially of the large towns. I may go further, however, and state that the sanitary condition of Formosa is at present worse than that of Japan proper has been within historic times, for there are wanting two things that have undoubtedly conducted greatly to the health of the Japanese people in spite of most imperfect water-supply and sewerage arrangements, namely general cleanliness, and the general use of a style of dwelling which, being constructed above the ground, with space for ventilation under the lowest floor, protects the occupants from many of the evils that otherwise arise from imperfect sewerage. Of the want of cleanliness, and the very unhealthy nature of the houses at present common in Formosa, I will have more to say hereafter.

GENERAL ASPECT OF THE COUNTRY.—As I am neither a geologist nor a botanist, I cannot enter into a long and learned description of geological formations, or into the question of the fauna and flora, but I can give a general description of the aspect of the country; and indeed this may pretty well be summed up in the statement that I was agreeably surprised to find it so like that of Japan proper. The land consists of rich alluvial plains surrounded by mountains of moderate height, whilst in the distance, towards the east, there tower the enormous peaks of the great range of mountains inhabited by the savages. Of these at least one is higher than Fuji-san, probably two, and possibly three. Tra-

velling through the plain in the centre of which is Tai-hoku, the Capital, one could quite imagine oneself in any of the many large rich alluvial plains of Japan proper. The most notable differences on looking a little more closely are the absence of pine trees (which, however, I am told, grow on the mountains), the great luxuriance of bamboo growth, the plants being quite commonly 60 and 70 feet high, and the presence of occasional stunted palms, cacti, banyan, and camphor trees. The vegetation could not be described as tropical. The cultivation is, as in Japan, principally rice, though much tea is grown and pine-apples of the most delicious flavour are to be had in great quantities.

CLIMATE.—This is a matter of great importance, and needs to be treated at some length. I can speak, from experience, only of the summer climate, but I took every opportunity of questioning old residents concerning the climate at other times of the year, and think that I can give a fair idea of it.

As to the summer climate, first, as I can speak of that from experience:—Briefly, its nature may be described as fine and clear, but oppressively hot. It is distinctly very oppressively hot, yet the thermometer did not rise, during my stay in the country, to any very remarkable height. The highest that I observed was 97.5 Fahr. in true shade. Before going further let me explain what I mean by "true shade." I consider that a thermometer is placed in true shade when it is shaded not only from the direct rays of the sun, but from any surface of at all considerable area (such as a wall or a roof) on which the sun is beating; also when it is in a position at least several feet from any spot on which the sun is shining. Reflection from a wall or roof, even many feet away, may raise a thermometer as much as 5° Fahr.

The temperature in the houses was generally, in the day time, about two degrees lower than that of true shade out of doors; several degrees higher at night; the houses being pretty massive, and absorbing heat during the day time, which they gave out at night.

I have mentioned 97.5° Fahr. as the maximum observed out of doors in true shade. A more common maximum for the day was 93° to 95° Fahr. I understand, however, that hotter weather than any experienced by me is not uncommon in North Formosa. The oppressiveness of the heat must, I presume, be due to dampness.

The heat in the sun is intense, particularly during the afternoon. This is because the ground, especially such as is of the nature of street pavement, gets highly heated by the nearly vertical sun. It gets so hot that the hand cannot be kept in contact with it, and thus, in the open air one is between two sources of heat, the heat from the sun beating downwards, and that from the ground reverberating upwards. No relief comes during the afternoon, till the sun actually sets.

"Temperature in the sun" is an item that is not of much use to know, as it is quite indefinite, the height to which a thermometer rises being a fraction of the difference between the amount of heat received by radiation, and that carried off by convection. The amount absorbed by radiation varies with the nature, form, &c., of the receiving surface, and that carried away by convection varies with position, amount of wind, &c. Yet, though it cannot be taken as conveying any precise information, it may, perhaps, be of interest to know that, when I placed my thermometer, which is contained in the metal case of an aneroid barometer, and which is scaled up to 135° Fahr., in full sunshine on a tile roof, the mercury rose so quickly towards the top of the scaling that I removed the barometer, lest the thermometer in it should be burst. An engineer to a railway contractor told me that Japanese workmen could not stand severe labour in this excessive heat, and that he had to employ Chinese. One thus saw the rather curious sight of Japanese labourers employed in tunnelling, Chinese in excavating and embanking.

One peculiarly oppressive kind of heat I observed more than once. This occurred when, early in the afternoon, the sky became overclouded with a film of thin clouds, but yet sufficient to obscure the sun. In such a case the earth has already become intensely hot and the thin film of clouds prevent free radiation, whilst they do not altogether prevent the penetration of heat from the sun. On one occasion the thermometer, placed out of doors under such a sky—in what might be called shade, inasmuch as no shadows were cast—rose to 112° Fahr.

Some time during September heavy rains or "freshets" begin, and from that time on, the weather is, I was told, comparatively cool. The rain that falls during these freshets must be terrific, to judge by what I was told of the rising of the rivers, and by the appearance of the river beds.

We crossed one river to find it a mere trickle of water through stones, yet the bed is over two miles wide, and there was ample evidence that, during

floods of a recent date, the greater part of this bed had been running full.

On one occasion, during what was considered by residents of the place a mere "shower," we gauged just a fraction less than 3 inches of fall in 30 minutes. The "shower" lasted for about 4 hours. The gauging was done when it was at its height, but there can be no doubt that at least 10 inches of rain fell altogether, yet this was considered a mere trifle. The terrific rainfalls that the country is subject to, will present a great difficulty in the way of carrying out many engineering works. One of the things now most wanted is the establishment of meteorological Bureaus at different parts of the country. Till this is done, and some idea of the rainfall that has to be dealt with is obtained, it is almost impossible to design some kinds of works, especially water-works.

The weather during November and December is, I was told, cool, fine, and pleasant. January and February are rainy, after which there is fine weather gradually getting hotter and hotter.

WATER SUPPLY.—From what I have already said, it will be gathered that there is no lack of water in North Formosa, yet up to the time when the island became a part of the Japanese Empire, no systematic water supply had been provided for any town, unless the few artesian wells in the richer portion of Taihoku can be dignified by such a title. Of these wells I shall have more to say hereafter. For the most part water from shallow wells of, to put it mildly, doubtful quality, or that from streams passing through towns, and generally much contaminated, has been used. The Chinese seem quite indifferent to what kind of water they use for drinking and other purposes, but I was told that they generally boil water before drinking it. I have, however, no means of substantiating this statement.

There is plenty of water, as I have said, and indeed the difficulty in designing suitable water-works will not be on account of want of water, but on account of the evidently destructive nature of the floods that occur. To give a single example: it seems to me—though it is not possible to say with certainty till there is some record of rainfalls during flood times—that earthwork dams for impounding reservoirs cannot be used, as it would be impracticable to provide waste weirs large enough to carry away the overflow during flood times. The only forms of impounding reservoir dams that appear to be practicable are those of the expensive masonry construction, which can act as waste weirs throughout the whole of their length.

The following are brief details of the possibility of water supply for the several towns mentioned at the beginning of this paper:—

KELUNG.—This is the town in connection with which there is likely to be the greatest amount of difficulty, because it is surrounded so closely with a range of hills which cast the rain-water away from the town. It is certain, however, that a good supply can be got either by the construction of an impounding reservoir, with a masonry dam at "the water-fall," or by leading water from the higher reaches of the Tamsui river by a main, through the new railway tunnel. In either case the expense will be somewhat great, and it seems most advisable that as a temporary expedient a quantity equal to the dry-weather flow of the water-fall should be led to the town by a small main. This will by no means give an adequate supply, but it will give a vastly better one than there is at present. Indeed, it may be said that there is scarcely any supply at present, and that the town suffers from a water famine during dry weather.

TAMSUI OR HOBE.—A plentiful supply can be got from a spring at a suitable elevation, and temporary works to make use of this are being established.

TAIHOKU.—This is a particularly interesting case. The valley or plain in which the town is situated displays a wonderfully typical artesian well formation. The area of the plain is about 60 square miles, and the outlet from it is narrow. The plain is surrounded by mountains of moderate height. The formation, as explained to us by well-borers and others is, from below upwards, as follows:—

- (1) "Bed rock."
- (2) Shingle.
- (3) Gravel.
- (4) Sand.
- (5) Sandy clay.
- (6) Tenacious clay.

On boring down as far as the sandy clay, water is obtained which rises to the surface, and indeed to a height of several feet above the surface, if piping be supplied, but this water has a decidedly sulphurous smell and taste, the sulphur compound being apparently hydrosulphuric acid (H₂S), but

as the wells are made deeper the sulphur becomes less, and water that has the appearance of great purity and that, in fact, cannot contain any substance to render it unfit for drinking purposes, is found at a level between the sand and the gravel, at about 100 feet below the surface of the land.

There appears to be no limit to the quantity of water that can thus be obtained, and all that is necessary to give a supply sufficient in every way, is to increase the present number of Artesian wells, and to provide each with a tank so that the greater quantity of water is not run to waste as at present, but that flowing in the night time is stored, to be used in the day time. A very large number of draw-offs must be added, so that there shall no longer be the crowding that there is at present at every place where water can be drawn.

The system at present proposed is a low-pressure one. High pressure can eventually be obtained by pumping, but it seems premature to establish expensive pumping machinery, till a little more can be gathered as to the future of the city. It may increase in size vastly within the next few years, in which case machinery erected at present would prove insufficient. On the other hand, it may remain stationary, in which case, were provision made for considerable extension, it would simply be money thrown away. One great advantage of the system proposed at present is that it is capable of extension with any extension of the city that may take place.

TAICHU.—In this town there are several shallow wells that give water of wonderful clearness and, according to analysis, of great purity. I believe that these wells tap a subterranean river, which disappears, sinking into the porous ground, at the foot of the mountains some seven or eight miles distant. If this be the case, the supply will be excellent, but further investigation is necessary.

SEWERAGE.—There is practically no sewerage in towns in North Formosa. There are, in many places, roughly constructed drains or gutters along the sides, or in the middle of the streets, but these are nearly always stagnant in dry weather, and the sewage soaks into the ground. There are also filthy stagnant canals through many parts of the towns.

To construct sewers to carry away the sewage will be no difficult task, but the question of carrying away storm water is a very different matter, and there can be no doubt it will be a difficult one, although in this matter, as in many others, it is not possible to say anything definite till rain water gaugings have been taken for some time.

DISPOSAL OF RUBBISH AND GARBAGE.—One of the things that needs most to be reformed is the method of disposal of rubbish and garbage in the towns of North Formosa. At present there simply is no system. Rubbish, including a large proportion of garbage, is simply thrown anywhere. It is to be found all about the towns, lying on any piece of spare ground, heaped in corners, or on the banks of canals and rivers. The stench that comes from these heaps of garbage is sometimes almost intolerable. I noticed with particular disgust that a large kind of iridescent fly—known in England the "blue bottle"—infested these garbage heaps in myriads, and that the same kind of fly—double the size of the common house fly—entered the houses and settled on any food that was left unprotected.

After this it is scarcely necessary to say that one of the reforms most urgently needed is one that will secure the removal and destruction of this garbage, and that will make provision to prevent its accumulation in the future.

THE DWELLING HOUSES OF THE CHINESE RESIDENTS OF FORMOSA.—The dwelling houses of such of the wealthier Chinese as I entered were well built, and had every appearance of cleanliness and of being healthy residences, but it must be understood that I entered such houses only to investigate the water supply, and did not inspect the buildings thoroughly, but merely observed what I casually could, and therefore speak with no certainty.

I speak with certainty enough, however, about the condition of the houses of the poorer Chinese, for everything is visible from the door. These are the most miserable hovels conceivable, often of only one room, built of brick, sun-dried mud blocks, or walled bamboo smeared with mud. The floor is commonly merely the earth of the ground.

This brings me to what I consider the most important part of this paper, namely:—

The probable effect on the health of the Japanese in Formosa of the manner in which the Chinese live in the poorer quarters of the cities. To describe this method of life would be impossible. Until I saw it I did not believe that human beings could live in such a state of absolute and beastly filth. The houses are small and terribly overcrowded, the streets are narrow—so narrow that in some

places the broad eaves of the houses meet over their middles. The public latrines are literally sickening on account of the stench that comes from them. Garbage and filth of every kind is simply thrown into the wretchedly narrow streets, or is left to rot in the houses. It has been my unpleasant duty, whilst in practice in London, to crawl, on hands and knees, through a quarter of a mile of sewer, about 20 feet below the level of the road, and I would do that again, just as soon as walk through a mile of the streets of (say) Banka, the poorer quarter of the Chinese town of Taihoku.

Such a spot must simply be a hot-bed of disease. I hope the Japanese will not argue that, as Chinese only are concerned, the matter is of no consequence. This would be a wide departure from the enlightened policy which the Japanese generally follow, but it should be distinctly understood that it is not the Chinese only who are concerned. I have no hesitation in stating that so long as such a place as Banka forms a part of a city in Formosa, no part of that city can be healthy as a residence for Japanese. The Chinese, through hundreds of generations have become inured to filthy living. It would probably be more scientifically correct to say that by natural selection—by the survival of the fittest (to withstand the results of filthy living)—the Chinese have acquired a comparative immunity from the ill effects of such living. It is not so with the Japanese, and they are likely to be particularly sensitive to what may be called, for want of a better name, "filth diseases." Indeed, if what I have been told is true, this has already been proved. I have been told that the "pest" (rather an indefinite expression, but one I feel sure indicating a "filth disease") has broken out in one of the cities of Formosa, and that many Japanese have been smitten with it, for one Chinese who has suffered. This is exactly what I should have expected.

I can see no cure for the state of affairs described, except the total doing-away-with—the annihilation of—quarters such as Banka. All "improvement" except that of "improving them off the face of the earth" seems to me to be useless. Not only, if the island is to be made habitable for Japanese, must they be done away with, but steps must be taken to prevent the like wretched state of living from coming into existence again. It is not at all for me to say how this most difficult work is to be carried out, without oppressing the poorer classes of Chinese in a way that I am sure the Japanese Government would not consent to. It is only for me to point out what I consider the absolute necessity for the reform.

W. K. BURTON.

THE "HIMEJI MARU."

MORE TROUBLE WITH THE JAPANESE.

The *China Mail* has been able to gather some further details as to the position of the Nippon Yusen Kaisha's steamer *Himeji Maru*, and the successful efforts to rescue the crew: The German steamer *Siegfried* left Hongkong on the 8th November, with a salvage party from the Docks and a number of coolies employed by the Company to remove the cargo from the distressed steamer. The *Siegfried* reached the Parcels reef about mid-day on the 10th Nov., and found the *Himeji Maru* lying broadside on the north-west side of Bombay reef with a list of about fourteen degrees to starboard. When the *Siegfried* appeared in sight the rigging of the disabled steamer was manned by the Japanese who cheered loudly as the ship approached. It was found impossible to approach near the vessel owing to the rough seas. Mr. J. Gilchrist and Mr. G. White, who were in charge of the salvage party from the Docks, pulled off to the *Himeji Maru* in a small boat, and when nearing the ship the boat was capsized and they were left struggling in the water, but they were both thrown on the reef by the heavy breakers and escaped with their clothes torn to shreds. On boarding the steamer it was found that all the life boats were lost, with the exception of one which was smashed into a shapeless mass. The fore and mizzen topmasts had been taken down, and all the binnies cut away to make rafts, which lay alongside the vessel. The engine room, stoke-hole, and fore-hold were full of water which rose and fell with the tide. They were compelled to remain all night on board the stranded steamer, and next morning the *Siegfried* was not to be seen but about four o'clock she was sighted and the *Himeji Maru* signalled to her to be ready early in the morning to launch the life boats. Thursday forenoon and afternoon were occupied in transferring the Japanese and their baggage to the *Siegfried*. Considerable difficulty was experienced in this work as there was a heavy sea on. On the second voyage of the life-boat, with the chief officer

of the *Siegfried*, the boat was badly smashed on the reef, but she was temporarily repaired in a few hours, and was again in use about four o'clock in the afternoon. Two boats were requisitioned to take off the crew—a large life-boat and an iron boat, the former capable of holding about twenty persons and the latter about eight. Great annoyance was caused by the Japanese who refused to leave the ship without dragging large boxes and other baggage with them into the boats. The Captain reported that he had great trouble with the crew when she went on shore. On Friday morning, however, the crew, with the exception of the Captain, the purser, second engineer, a steward, a boy, and a cook, were transferred to the *Siegfried*, and she steamed off to Hongkong. Great credit is due to the chief and second officers of the *Siegfried* for the way in which they worked to rescue the crew from the *Himeji Maru*. On the voyage up from the reef some trouble arose amongst the Japanese about the water on board the steamer. The second engineer had reason to interfere in the dispute, when a mob set upon him and he had to seek refuge in the chart house. The mob swarmed around the chart house and several were noticed with revolvers, knives, sticks, etc., in their hands. It was with considerable difficulty the enraged Japanese were quieted down and persuaded to remove to their own quarters. In the position the *Himeji Maru* lies at present she is exposed to the full force of the North-east monsoon, and any attempt at rescuing the ship will have to be delayed until more favourable weather. To remove the cargo at present would be a dangerous proceeding both to the ship and those employed in the work. She is said to have over 200 tons of copper on board, worth about a lakh of dollars.

The *Siegfried* returned for the second time to Hongkong from the stranded *Himeji Maru* on the 22nd ult. Captain Tipple, the Purser, the Second Engineer, and the four sailors who had stood by the steamer were brought back on this trip. The *Himeji Maru* is now advertised for sale in the Hongkong papers. The *China Mail* of the 23rd says:—The German steamer *Ingraben* also arrived this morning with Chief Officer Harrison and Second Officer McGarrity of the *Himeji Maru*, the two European passengers, and a number of Japanese from Touron. After the ship struck, the chief and second officers in two boats went off to Touron to telegraph for assistance. They became separated, and the chief officer returned to the ship thinking the second officer with his boat's crew were drowned. He made another attempt and reached Touron two days after the second officer. The Captain, officers, and men will proceed to Japan to-morrow by the *Belgie*.

30—Q takes B
31—Q takes P ch.
32—Q to B 7 ch.
33—Kt to Q 7
34—R to R 5

(a) This move makes Black's position rickety on the king's side. Casting is the ordinary move, though even then Black would have to play with very great care, and experience shows that in the majority of cases White obtains the better game in this variation. We really think that the move of K to B sq. played at Hastings by Bird against Gunsberg at this stage deserves to be further tested in actual play.

(b) The position is not much unlike the game between Pillsbury and Lasker at Nuremberg, in which it will be remembered Pillsbury won by exceedingly fine play, beginning with P to K B 5. In that game Lasker (Black) also played Kt to Q 5 without deriving any benefit from doing so.

(c) We prefer B to K 5.
(d) It was fortunate for Black that White, through the advance of his knight's pawn, gave him an opportunity for a counter-attack, which Albin at once seized and follows up with good judgment.

(e) This move looks much stronger than it really is; for after the knight gets to Q 6, Black will obtain considerable leverage on White's centre position by P to K B 3, or else by following up his queen's side attack.

(f) The artful way in which Black has executed a retreat with his king, and the attack he is now directing against White, shows him to be a player full of resource and natural ability for the game.

(g) Black threatened B to R 3 (ch), &c. It is difficult to point out any other way by which White might have hoped to escape the attack. Kt takes Kt is not possible, as Black could reply with Q to B 5 (ch); K to Kt sq. P takes Kt, and the rook cannot be saved. B to Kt 3 might have been tried.

(h) Excellent play. There is no further resistance to be made. The whole of White's disaster arose through his incautious move of P to Q Kt 4.

HONGKONG.

We take the following two games from the *China Mail* and are glad to note that our friend the "Ebony ecclesiastic" keeps up a lively discourse in the Cathedral city:—

GAME NO. 615.

EVANS GAMBIT DECLINED.

WHITE.
W. H. Pollock.
1—P to K 4
2—Kt to K B 3
3—B to B 4
4—P to Q Kt 4
5—P to Q B 3
6—P to Q R 4
7—P to R 5
8—P to Kt 5
9—B takes Kt P
10—P to R 6 (c)
11—P to Q 3

BLACK.
E. Lasker.
1—P to K 4
2—Kt to Q B 3
3—B to B 4
4—B to K 3 (a)
5—P to Q 3
6—P to Q R 3
7—B to R 2
8—P takes P
9—Kt to B 3 (h)
10—Castles (d)
11—Kt to K 2

12—P takes P
13—Kt to R 3 (e)
14—Castles
15—P takes P
16—Q to K sq. (g)
17—B to Kt 5 (h)
18—Kt to B 2
19—R takes B (k)
20—Kt to K 3 (l)
21—R takes R
22—Q takes Kt
23—R to R sq.
White resigns.

12—B takes P
13—P to Q 4 (f)
14—Kt to Kt 3
15—Kt takes P
16—Q to B 3
17—Q to B 4
18—Kt takes P
19—B takes Kt
20—Q takes B
21—R takes R
22—Kt to B 5
23—Kt to K 7 ch.

NOTES BY DR. TARRASCH.

(a) It is noteworthy that Lasker usually declines the Evans Gambit, although he has declared that he knows a winning defence.

(b) Kt to K 5 seems preferable.
(c) Instead of developing, White makes premature attempts at attack, which finally only facilitate and hasten the development of his opponent.

(d) Kt takes P would be bad, on account of 21—Q to R 4. Kt to B 4; 22—P takes P.

(e) B takes P ch was threatened.

(f) Black is so far advanced in development that he can at once begin the attack.

(g) All of White's pieces are in bad positions, with the exception of the King's Knight at B 3. White's game is thus no longer capable of defence.

(h) With this and the mistake immediately following the Bishop was also exposed. It would have been better to interrupt the file of the adverse Queen's Bishop with Kt to Kt 5 and K 4.

(i) He may well despair.

(j) After B to K 3 Q to Kt 5 wins.

GAME NO. 616.

QUEEN'S GAMBIT DECLINED.

WHITE.

23—K to Kt sq. (h)
24—P takes R
25—R to B 2
26—R to B 2
27—Resigns.

(a) We prefer B to K 5.
(b) White was threatening B takes P (ch), followed by Kt to Kt 5 (ch), &c., but with the next move he rather exposes his game especially considering that he has no minor pieces on the king's side, and that White has a white Bishop, while White can also play Kt to Kt 5. In fact, the play that followed may almost be foretold instinctively on Black's playing P to K B 4. Kt to Q 5 was preferable, for that knight could assist the defence by playing either to K B 3 or K B sq. later on.

(c) Intended to prevent 25—R to Kt 3 (ch), followed by 26—R to K 6.
(d) Very well played. It gets the rook into the hostile camp and leaves the opponent without a single minor piece developed. White further threatened mischief after the bishop has been removed by Kt to K 5 in conjunction with B to Kt 3 (ch).

(e) On mating intent Nothing definite would result from Kt to K 7 (ch), K to Kt sq.
(f) Of course, if Q takes R, K to Kt 6 (ch), mate, if P to Kt 3, Q takes P, mate. Black was without any resource.
(g) Black's idea was to cut off the mating demand of White's bishop from the diagonal. We should have been inclined to connect both rooks by B to R 3, even though that should lose the exchange.
(h) White handled the black very cleverly, there is nothing left to do. For if R takes R, 24—Kt takes R (ch), K to Kt sq. 25—R to K 8, mate.

MAIL STEAMERS.

THE NEXT MAIL IN DUE

From Hongkong	per P. M. Co.	Sunday, Nov. 23th.*
From America	per P. M. Co.	Friday, Dec. 12th.

REPORTS.

The British steamer *Braemar*, from Hongkong to Tacoma, via Chinese and Japanese ports, had strong N.E. monsoons up, and fair weather.

The American steamer *City of Rio de Janeiro*, Captain Wm. Ward, reports:—Left San Francisco the 12th November at 2.10 p.m., via Honolulu the 21st at 1.21 a.m. Arrived at Yokohama the 4th December at 1.55 a.m. Had heavy southerly and

head sea most of the passage to Honolulu; from Honolulu the prevailing winds have been westerly with head sea; November 25th lat. 26° 07', long. 179° 31' W. met a steamship steering east. Passage from Honolulu, 12 days, 4 hours, 44 min.

LATEST COMMERCIAL.

IMPORTS.

A small revival in the demand for Yarns, and some business is doing in Doubles, 42 Plain and 60 Gassed. All other sorts quiet. Shirts quite lifeless, while Fancies and Woollens remain very dull indeed.

THE GREATEST WONDERS OF MODERN TIME

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the dragoman Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I agreed out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN.

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammation.

Mrs. J. T. COOPER, in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas—and the demand became so great that I was obliged to lock up the small remaining 'stock'."

Sold by all Chemists and Medicine Vendors the throughout World.

May 1st, 1896.

MILKMAID BRAND CONDENSED MILK

The "Milkmaid" Brand is guaranteed to contain all the cream of the original milk. In the process of manufacture nothing but water is removed, nothing but the best refined sugar added.

Avoid low-priced brands from which the cream has been abstracted, and ask for the "Milkmaid" Brand, the best for all purposes.

June 14th, 1896.

YOKOHAMA: SATURDAY, DEC. 12TH, 1896.

DEATH.

On the 8th December, in Paris, ALBERT DUBUFFET, a former resident in Japan.

SUMMARY OF NEWS.

THE strike of dock hands at Bremen has terminated.

The Times Paris correspondent states that President Faure will visit Russia next year.

SMALL-POX cases in Tokyo from January this year up to the 6th inst. totalled twelve hundred and seventy-six.

NEW Meteorological Observatories have been opened at Mayebashi, Gumma Ken; and at Kobe, Hyogo Ken.

Two small fires occurred in Yokohama this

week: one at No. 130 (H. B. Collins), the other at No. 93 (J. Witkowski and Co.). Little damage was done.

THE Navy easily defeated the shore at Rugby football on Saturday, the score being 13 points to nil.

MR. GREATHOUSE, the American Adviser to the Korean Government, is reported to have left Seoul for Tokyo.

THE Italians are sending a force to Magadoxo, Somaliland, to punish the Somalis for the recent massacre of Italian officers.

THE conflagration at Shingu-machi, Wakayama Ken, resulted in a loss to the Meiji Fire Insurance Company of yen 18,000.

SOME capitalists of Odawara, Kanagawa Ken, will publish a journal named the *Takai Nichi Nichi Shimbun* from the 15th instant.

AN agreement between France and Russia has been concluded for the representation of Russia on the council of the Ottoman Debt.

"SOME Devonshire Worthies," was the title of an interesting paper read by Mr. W. D. Cox before the Yokohama Literary Society on Friday.

A PORTION of the National Unionists have resolved to oppose the abolition of the regulations providing for the suspension and suppression of newspapers.

MR. KURINO, Minister to Italy, will return home at an early date. It is stated that he will be transferred to another country as Minister after his return.

THE *Mutsu Maru*, of the Nippon Yusen Kaisha, that left Yokohama for Hakodate on the 4th inst., having damaged her engines, returned to the port for repairs.

NOMURA ICHIRYO, Editor of the *Twenty-sixth Century*, was brought up in the Osaka Court of Appeal on the 3rd inst and sent to Horikawa goal the same day.

H.I.H. THE PRINCE IMPERIAL left the Akasaka Palace on Monday at half-past eight o'clock for Yokosuka, where he inspected the captured war-vessel *Chinyen*.

THE mining regulations, now under the consideration of the Agricultural and Commercial Department, will be submitted to the Legislative Bureau in a few days.

WOR. COMPANION RETZ was installed as the M.E.Z. in the Yokohama Chapter H.R.A., on Thursday evening in the presence of a large number of the Brethren.

MR. N. W. McIVOR, Consul-General of the United States at Yokohama, has decided that his Court can entertain a suit brought to obtain alimony from a husband.

THE Venezuelan Government has accepted the agreement arrived at by the United States and Great Britain to arbitrate the dispute between Great Britain and Venezuela.

ON the occasion of the Empress's visit to Yokosuka all the naval prisoners on the ships in the port, including the British flagship *Grafton*, were released at Her Majesty's request.

THE Yokohama Japanese Chamber of Commerce having passed a resolution for abolishing export duties, on the 4th inst., Mr. Hara, the President will present a petition in that sense to the Cabinet.

MR. JUSTICE MOWAT has decreed the enforcement of a promise to provide a competency for Miss

May Oastler Burdis, that was stipulated for in an agreement of adoption entered into by her father with the late Mr. G. S. Burdis, in 1891.

THE Japanese man-of-war *Maya*, that stuck in the mud of the Peiho for many months, recently floated off owing to the overflow of the river. We hear that she will remain at Tientsin.

THE people in the neighbourhood of Bakan are eagerly engaged in preparing a petition to the Authorities to induce them to make Bakan a special port for imports and exports.

THE Nippon Race Club held its annual general meeting on Friday afternoon. The report spoke of a most successful year of racing, and the balance-sheet showed a handsome surplus.

THE crew that will bring home the *Fuji Kan* from England left Shimbashi Station on Saturday at eight o'clock for Yokohama, and sailed for England at noon by the *Yamaguchi Maru*.

THE Mosquito Yacht Club have re-elected their old officers and Committee for the ensuing year, with the addition of Mr. Middleton as Vice-Commodore. The Club has over \$500 in cash and property.

THE Iron-pipe scandal case was concluded in the Tokyo Court of Appeal on Tuesday. Kazama Nobukichi was sentenced to five months' imprisonment and fined yen 20. Yamanaka Rinnosuke was acquitted.

THE funeral of the late Rear-Admiral Fukushima took place on Sunday last. An Imperial Chamberlain, Captain Hirohata, was dispatched on Saturday to the late residence of the deceased with a present from the Court.

THE Turks that were arrested and exiled, without trial, to Anatolia, are believed to be connected with the Liberal Party, whose numbers are strengthening. The Party has sent a manifesto to the Embassies demanding political liberties and concluding with the words "Down with the Tyrant."

PRESIDENT CLEVELAND, in a message to Congress, strongly urges Spain to grant autonomy to Cuba, which would at once terminate the war. America, he declares, is always ready to mediate, and it is hinted she might eventually intervene if Spain proves powerless to restore order. The message merely defends the existing tariff.

THE improvement noted last week has not continued, enquiries for Yarns "petering-out" in a very little time. A few desultory transactions are reported in Shirts, and trifling sales have taken place in Fancies. In Woollens the outlook is still gloomy in view of the piled-up stocks now in godowns. There has been rather more doing in Metals, without any quotable change in prices, though values in England and on the Continent are going up—holders, in fact, would be glad to clear some of their present stock at easy quotations. The tone of the Kerosene trade is weak, and the reported discovery of fresh fields in Sumatra lead to the expectation of a plentiful supply of Langkat next year. In Sugar, sales exceed arrivals, but prices are sagging downward both for Brown and White sorts. Holders of Raw Silk have accepted the inevitable, this inducing a considerable trade. For the time of year the stock still on hand is excessive, 21,000 piculs, and native merchants are anxious to lighten the load ere the new year. Europe has caught on to a fancy for Japanese Waste this year, and consequently a good trade has resulted of late, the stock being now down to 13,000 piculs. The Tea season is almost over, very little leaf being now in the country. Exchange closes steady at the advance.

THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.

Journalistic discussion has been unusually rapid during the week. The question of amending the Press Law continues to receive attention at the hands of several papers, but as much has been reproduced on the subject in these columns we need not trouble our readers with lengthy reference to the articles now before us.

The *Tokyo Shimbun* is surprised to hear a rumour that the Government have decided not to introduce the Press Regulations amendment as an official Bill, but, on the contrary, to make the *Shimpo-to* take up the matter. While expressing bitter regret that the fate of newspaper emancipation, one of the Liberals' cherished ideas, should be entrusted to dubious hands, the organ of the Liberal Party desires to know whether the *Shimpo-to* persevere in their intention of supporting the Government in the face of such repeated breaches of faith on the part of the latter.

The *Chuo* is constrained to support the preservation of the suppression and suspension clauses even though its own interests would be injured by their continued existence. The organ of the National Unionists does not think that the tone of political discussion has reached such a level as to warrant dispensing with the restraints placed on newspaper utterances. It adduces the Household Minister's affair as a good illustration of its contention. Incidentally the *Chuo* throws doubt on an assertion repeatedly advanced by pro-Government partisans and papers, namely, that greater freedom of public speech and discussion has been enjoyed since the present Ministry came into power. Our contemporary's doubt is based on the criminal suit recently instituted by the Cabinet against the *Tokyo Shimbun* on the charge of *Kwanri-bujyoku*, a method of procedure to which, according to the *Chuo's* defective memory, the last Cabinet never resorted. The principle underlying charges of *Kwanri-bujyoku*, or bringing officials into contempt, must be considered as a remnant of the old custom of *Kwanron Minji* (official supremacy and popular insignificance). No such principle can coexist with freedom of political discussion. Altogether the *Chuo* is inclined to believe that the scope of free speech has been practically narrowed since the advent of the Matsukata Cabinet.

As a proof of the uselessness of placing checks on journalistic utterances, the *Nippon* draws the attention of the Authorities and of the people to the official report of the proceedings of the Imperial Diet. Statements are found there far more violent and unreserved in tone than any of the journalistic articles that have incurred the displeasure of Press Censors from time to time.

The *Yiji* devotes several articles to discussing the question of officers and men for the Navy. Our contemporary learns that the Authorities contemplate completing the First and Second period expansion programmes within the space of 10 years, and estimates that by the eve of that time, some 20,000 officers and men will be required to man the additional vessels of the Navy. Briefly stated, the *Yiji's* contention is that steps must be taken to curtail the time devoted to acquiring technical knowledge by officers, and that more attention must be given to practical training, so as, if possible, to shorten the time before graduation.

The *Tokyo Shimbun*, which, by the way, has lately begun to take a very active part in political discussions, protests against the judgment of the Tokyo Local Court pronounced against its editor and publisher. Its complaint is based chiefly on the point raised by Mr. Isobe, one of the counsel for the Defendants in the Local Court, namely, the unlawfulness of convicting a man of bringing contempt on Government officials in a case where the sufferers do not exist as individuals but as a body corporate. If the arguments advanced by the Public Pro-

curator who conducted the prosecution be admitted, and if the verdict given by the Local Court be strictly legal, then a criminal suit might wear a ridiculous aspect. Suppose, for example, that a Department of State preferred a similar charge against an individual. In that case, according to the judgment of the Tokyo Local Court just pronounced against the *Tokyo Shimbun*, all the officials and employes, from the head of the Department to a mere servant, must be set down as complainants, and the Court would have to decide that as the defendant had brought all those personages into public contempt, he must be convicted of the offence of *bujyoku* against that particular Department.

One of the problems that have been upon the *tapis* ever since the installation of the Matsukata Cabinet, namely, the creation of new officials called *Saimu Ji-kwan* (Executive Vice-Ministers), as distinguished from the present Administrative Vice-Ministers, furnishes a theme to the *Nichi Nichi* and the *Kokumin*. The latter argues that in evolving a democratic Government out of the old Clan Government, there must be a ladder to bridge the chasm; that the proposed new officers, whether designated Executive Vice-Ministers or Chief Councillors, constitute such a ladder; that the creation of these posts would furnish a means of testing the ability of leading publicists outside the ranks of officialdom, and that one of the objects outlined in the Cabinet's policy would thus be attained.

The *Nichi Nichi* can not perceive any necessity for appointing special Vice-Ministers, who would move with the Cabinet of the day, inasmuch as Party Cabinets are still unknown in Japan, and are, moreover, not at present feasible. For, apart from the vast differences between England and Japan in respect of national characteristics, no Japanese political party can at present command a majority within the walls of the Diet, and consequently no party could undertake to form a Cabinet of its own. The *Nichi Nichi* concludes that the idea of creating a new post of the kind contemplated must have originated with the *Shimpo-to* wire-pullers of the Cabinet, who, by taking advantage of the weakness of the Ministry, seek to gratify their own craving for office. The *Yomiuri* and the *Kokumin* offer some advice to the Government in connection with its attitude towards the Diet. The *Kokumin* cautions the Cabinet against stooping to win supporters in the House, as previous Cabinets frequently did, but only with temporary success. The wisest plan is to proceed in an honest and direct manner towards the realization of genuine convictions.

The *Yomiuri* warns the Ministry not to imitate the unsympathetic bearing that the Ito Ministry used to adopt towards the Diet, for that cool attitude undoubtedly constituted one of the causes that led the public to regard that Ministry with disfavour. Our contemporary advises the Ministers of State to be present in the Houses whenever any important discussion is going on, not to make their subordinates represent them, and to reply orally, as far as possible, to questions put by members.

The *Yiji* writes about the necessity of despatching a Japanese Representative as quickly as possible to Korea. Our contemporary compares Korea to a sick man suffering from incurable malady, who may die at any moment, though his symptoms do not suggest immediate danger of demise. The Japanese Representative being an important consulting physician must not leave the bed-side of the patient even for a short while. With regard to the selection of a Minister, the *Yiji* warns the Government not to appoint a statesman of the old school, for such a man would be entirely out of place and even dangerous—witness the disasters that overtook Japan in connection with the affair of the Queen's assassination.

The *Kokumin* has something to say on the subject of Korea, especially with reference to

the proceedings of the Koreans whom that paper designated "patriots." These "patriots" hailed with joy the nomination of Count Okuma to the portfolio of Foreign Affairs, hastily concluding that Japan would back their efforts and enable them to drive the Russian faction out of power. Labouring under that serious misconception, they are in danger of making thoughtless attempts, the result of which must be to entangle them in the snare set by their rivals. Let them clearly understand the notions and policy of Japan towards Korea, and, abstaining from any such proceeding, wait until fitting opportunities are matured.

The *Chuo* stigmatizes the policy of the present Ministry more especially, of Count Okuma, as a "banquet policy." Since Count Okuma's installation at the Foreign Office, he has proved himself very tardy in dealing with practical problems, but has displayed eminent aptitude in parlour politics, notably in the matter of speeches and banquets. He has already delivered five or six speeches, while the almost uninterrupted series of entertainments given by him have procured for him the epithet of "Garden-Party Count," even from newspapers friendly to him. The *Chuo* asks whether such frequent invitations are reconcilable with the spirit of a self-assertive foreign policy, and whether they contribute to the maintenance of official discipline, to both of which objects the Count has pledged himself.

The *Yiji* can not understand why Moji and Shimonoseki are excluded from the list of special commercial ports. If the authorities made the exclusion owing to considerations of military strategy, nothing could be more unreasonable. In fact, they are open to the charge of a complete misconception, for they do not seem to bear in mind the fact that the object of military defences is to guarantee the safety of commercial transactions and to promote the prosperity of trade. The step they have taken with regard to the two ports amounts to sacrificing commercial interests on the altar of military defence. Shimonoseki now occupies a very important position with regard to Japan's commerce, for its foreign trade aggregated over 22 million *yen* last year, being thus inferior to Yokohama and Kobe only. The inconvenience to which the port is subjected seriously impairs its prosperity. Sugar, for instance, destined for Shimonoseki, must be first carried to Kobe, and thence shipped back to Shimonoseki, with the result of materially increased expenses. The *Yiji* points to Vladivostok as a good example how commercial transactions and military defences can be combined, and urges the Authorities to remove the serious inconvenience now suffered by the people of Moji and Shimonoseki.

To promote the independence of the Philippines is one of the objects to which the *Kokumin* pledged itself when it published its platform on the occasion of its two thousandth issue. Germany is vigilantly watching for something to turn up in the Far East, or the South Seas, so that she may avail herself of it to obtain a base of operations in these regions. The rebellion in Manila has attracted her attention, and she is thinking of rendering assistance to the rebels. Her idea is purely selfish, but still Japan might cooperate with her. Indeed, Japan must abandon her chivalrous efforts in Korea and divert them to the South. She might combine with Germany and England in liberating the Philippines from the fetters of bondage. Such are the *Kokumin's* views.

The *Tokyo Shimbun* is evidently determined not to omit any opportunity for discrediting the Minister of Foreign Affairs in the eyes of the public. It criticizes in strong language the speech that His Excellency delivered a few days ago before the Japan-Korea Commercial Association. It charges him with having publicly and in broad daylight disgraced his country and insulted its people. The basis of this intemperate assault is that Count Okuma justified the outrageous bearing of the Koreans towards the

Japanese, that he set forth the evil doings of the Japanese living in Korea, and that he condemned his nationals there as altogether in the wrong. It demands an explanation how the Japan of 40 years ago can be comparable with the Korea of to-day, inasmuch as the Japan of that time had stepped out of her ordinary routine, whereas the Korea of to-day is practically moving in her usual groove. The only point of analogy is the abandonment of a policy of seclusion. In striking contrast to Japan, Korea has made no reformation nor any serious change in her internal administration, as Japan did on the occasion of the advent of the new regimen. In short, the *Tokyo Shimbun* holds Count Okuma up to public condemnation as the only Foreign Minister that has solemnly and publicly cast obloquy on his country.

EDITORIAL NOTES.

YOKOHAMA SKATING CLUB.

THE annual general meeting of the Yokohama Skating Club was held in Keil's Building on Thursday, under the Presidency of Mr. J. O. Averill, the Honorary Secretary and Treasurer. The accounts presented showed an income of \$363.08, and a balance, after paying all expenses, of \$160.75. There were 66 members on the roll. The accounts, on the proposition of Mr. W. W. Campbell, seconded by Mr. W. Sutter, were adopted. Mr. Campbell wished to spend some of the surplus in "experiments"—which he explained meant searching for a more suitable ground than that used at present. He thought that a more central site should be selected. Mr. Sutter pointed out the impossibility of securing a suitable piece of ground in the Settlement, and suggested that even if the lower tennis ground of the Bluff-gardens proved suitable, it could not be obtained for such a purpose as a skating rink. But even that would require an enormous area of roofing, and special preparation for keeping in the water. A long discussion ensued, but nothing definite was come to, it being generally understood that in the past every endeavour possible had been made to obtain a better rink, but only to meet with failure, while the paucity of members present at the meeting precluded the possibility of obtaining consent on that occasion for using up the surplus in "experiments." It was also pointed out that the surplus would easily be exhausted should a mild winter come along and prevent any skating from taking place at all; then the members would naturally fall away.—The old Committee were re-elected, Mr. A. H. Dare taking Mr. Campbell's place.—The chairman was empowered to make all suitable arrangements for early skating.

A NEW JAPANESE CRUISER.

THE San Francisco papers announce that the Union Iron Works at that city have obtained a contract to build a cruiser for the Japanese Navy. The *Chronicle* says:—The vessel to be built at the Union Iron Works for the Japanese Government will be what is termed a second class unarmoured protected cruiser, and will be of high speed. Her extreme length over all will be 405 feet 2 inches, length on load water line, 396 feet; breadth, moulded, 49 feet; normal draft of water, 47 feet 7½ inches, and displacement, in tons at normal draft, about 4,760. The cruiser's engines are to be triple expansion twin screw propelling with the usual auxiliary machinery. There will be a high-pressure cylinder of 40 inches diameter, one of intermediate pressure of 60 inches diameter, and two low-pressure cylinders of 66 inches diameter, the stroke of all the pistons being 36 inches. The collective indicated horse-power for the propelling engines will be 15,500, and they are to make 150 revolutions. There will be four double-ended and four single ended boilers of the Scotch type of 14 feet 3 inches diameter. The double-ended boilers will be 17 feet 6 inches long, and the single-ended boilers 9 feet 3 inches long. They will be placed in four water-tight compartments, and will have 22,440 square feet of heating surface and 800 square of grate surface. The armament

will consist of two 8-inch 45-calibre quick-firing guns and twelve 12-centimetre guns, these being practically the same as the American 5-inch quick-firing guns, twelve 12-pound guns, and six 47-millimetre quick-firing guns. In addition there are to be five torpedo launching tubes, one 14-inch fixed and four 14-inch training. The speed of the vessel is to be 20½ knots an hour under normal draft and 22½ knots under forced draft. Every effort will be made by the Union Iron Works to bring the vessel a little beyond the requirements, as success probably will mean the Japanese Government placing other and more important orders at San Francisco.

THE "ALCIDES."

THE British ship *Alcides*, from Yokohama, arrived at San Francisco on Nov. 6th. The *Call* says:—The British ship *Alcides* that arrived here yesterday after a smart run of thirty days from Yokohama, had an exciting experience last month. When the master saw that a storm was brewing, he at once began to shorten sail, but before all the canvas was in a typhoon struck the ship and she was thrown on her beam ends. The few sails that were on the yards were blown out of the bolt ropes and for eight hours it was nip and tuck whether the stout vessel would right or go down. To make matters worse the ballast shifted, but, when hope seemed gone, the *Alcides* passed out of the revolving storm and the danger was over. "We had fair weather after leaving Yokohama up to October 15 last," reported Captain Dart. "Then we were in latitude 43 north, longitude 165 east. A heavy typhoon from the south-south-west and west came up, and we were at its mercy for several hours. Many of our sails were blown away, the ship was thrown on her beam ends and our ballast shifted. That was our worst experience, and we had no more trouble in reaching San Francisco." Judging from the looks of the *Alcides* she must also have lost some of her boats, and the chances are that some repairs will have to be made before she will begin loading wheat for Europe. This is the third trip Captain Dart has made to this port, but it is the first time he has ever reported a typhoon.

BAZAAR AT THE PUBLIC HALL.

THE Japanese bazaar given at the Public Hall, Bluff, on Saturday was very successful, for though the attendance of foreigners was small, the number of Japanese present all through the day and evening was very large, and a good trade was done. The Hall was prettily decorated with red lanterns and the ever-effective bamboo, while the numerous stalls were daintily set out. Upon entering the lesser Hall, one found a dancing booth erected, and here three little Japanese children at intervals went through an interesting series of national dances. Opposite stood a large stall at which some very well executed water-colours, by Japanese artists, and *kakemono*, were on sale. In the vestibule were other stalls crowded with a bewildering stock of bead ornaments. Then passing into the Hall itself one encountered stalls at which were sold drawn-work on silk, *kandashi*, porcelains, plants, bronzes, cloisonné vases, lacquer cabinets, trays, etc. In the centre was pitched a stall at which fancy goods and artificial flowers could be obtained at remarkably cheap prices. At the stage end of the Hall was a fish-pond, and near to a shooting gallery; while on the stage itself refreshments were served. Here also was stationed a band that played many pleasing selections during the day. All the stall-holders were Japanese ladies speaking the English tongue, and their efforts met with the success they deserved. In the evening an amusing mock auction took place that evoked plenty of laughter and fun.

THE DEATH OF A HONGKONG SCHOOL-BOY.

THE inquiry into the death of the Diocesan School-boy Frank Butler (Tong Wing), was resumed at the Magistracy, Hongkong, on the 26th November. The Jury returned, a verdict of "Accidental death, the result of a fall." It will be remembered that in the course of the enquiry some questions were put to witnesses

regarding a statement made by the deceased reflecting on one of the Masters of the School, Mr. Ralphs, in reference to his using a ruler upon the lad. The Coroner in summing up said that with the exception of the statement made by the deceased there was absolutely no evidence whatever against Mr. Ralphs. Not one of the witnesses called had said that Mr. Ralphs struck Tong Wing or them on the head. Of course if the jury thought that Mr. Ralphs had inflicted the blow, with the pointer, then they must return a verdict of manslaughter against him, as the pointer was an unlawful and unauthorised weapon to use, the cane being the legal weapon in the school.

THE CHORAL SOCIETY'S CONCERT.

NEXT Wednesday the Yokohama Choral Society give their first concert for the present season, and they have selected a very pretty cantata to begin with—Cowen's "Sleeping Beauty." The practices have been very well-attended, and everything promises a successful rendering of the work. We notice that the soloists will be Miss Webb, Miss Thomas, Mr. Fleet, and Mr. den Arend. The Philharmonic Society will assist in the concert, and it is anticipated that they will completely outshine their performance of last season, having thoroughly learned the pieces they now intend to give.

YOKOHAMA LITERARY SOCIETY.

NOTWITHSTANDING the heavy downpour of rain on Friday evening, the fortnightly meeting of the Yokohama Literary Society was fairly well attended. Mr. J. T. Griffin presided. The paper of the evening "Some Devonshire Worthies," by Mr. W. D. Cox, was an excellent composition and received much commendation. The musical programme included, pianoforte solo, "Polish Dance" (Scharwenka), Miss Thorpe; song, "My Happiness" (Bohm), Mr. J. G. Crane; Song, "Das Feusterin" (Helmund), Mrs. Herb; song, "Thursday" (Molloy), Mr. R. C. K. Johnson.

SLATE PENCILS.

WE read in the *Tokyo Shimbun* that a difficulty long experienced in Japanese schools, namely, the brittleness of slate pencils manufactured from home material, has been overcome by a graduate of the Industrial College. After much search, this Mr. Matsumura Kichijiro has succeeded in finding a stone that answers the desired purpose even better than the stone imported from France. Mr. Matsumura's factory is in Nagoya. He has obtained a patent for fifteen years.

THE "KOBE MARU."

THE Shanghai mail-liner *Kobe Maru*, of the Nippon Yusen Kaisha, left Yokohama on Tuesday under command of Captain Nunome, the old Commander, Capt. Ekstrand, having, we understand, to remain on shore, in consequence of the Tokyo Marine Court of Inquiry having suspended his certificate for two months for having grazed a rock near Shimonoseki some three months ago, while in command of one of the Company's vessels.

RULES FOR BICYCLISTS.

A KOBE contemporary calls attention to the following bicycle regulations issued by the Japanese authorities a few months ago:—

XXIV.—Persons who use the streets for riding on bicycles must conform to all the following rules:—

- (a) More than two bicycles are not allowed to go abreast; racing is not allowed.
- (b) Travelling at high speed after dark is forbidden.
- (c) Riding for pleasure after dark is prohibited.
- (d) Lights must be carried after dark.

POST OFFICE VAGARIUS.

UNDER this heading the *Higo News* writes:—A country Postman returned a letter to the Office and affixed his report: "Addressee hanged himself last night; present address unknown." A telegram was delayed 24 hours at the receiving office for disinfection, because the message originated in an infected area. We could not possibly find it in our hearts to condemn the Post-Office employees in either of these cases; the humours of the situations are too fine.

CABINET MINISTERS' OPINIONS ON LIBERTY OF SPEECH.

TWO Cabinet Ministers are reported to have expressed opinions with regard to the question now agitating the political world, namely, the removal of all restraints upon freedom of speech. The view attributed to Count KABAYAMA, by no less an authority than the *Fiji Shimpō*, is that nothing could have been more regrettable than the Government's recent necessity of suspending and suppressing publications in the face of its previously announced resolve to extend the freedom of speech and pen. One reason of the unfortunate occurrence was that the laws now in force provide no resource except Administrative interference under circumstances such as those that confronted the Ministry. None the less the Cabinet adheres to its original purpose of removing all restrictions upon personal rights. The *Fiji Shimpō* interprets this to mean that the Minister of Home Affairs would gladly be relieved of the responsibility of enforcing the present law, and would advocate the excision of the suspension and suppression clauses.

Mr. KIOURA, Minister of Justice, is the other official whose views are quoted, but in his case the authority—the *Yomiuri Shimbun*—is less trustworthy. He, too, is represented as being in favour of abolishing Administrative interference with the newspaper press, but he reserves three contingencies, namely, writings that constitute disrespect towards the Imperial Court; writings calculated to injure the country's foreign relations, and writings subversive of good morals.

It appears to be assumed by the Cabinet's opponents and apprehended by its supporters that the recent suspensions and suppressions of publications constitute a fatal obstacle to any parliamentary action on the part of the Government in favour of complete freedom of speech. We do not agree with such a contention. Certainly hostile politicians may urge, with considerable semblance of reason, that a Cabinet coming before the Diet red-handed from acts of suspension and suppression, can not, with any semblance of consistency, declare itself convinced that the necessity for Administrative orders of suspension and suppression may now be dismissed as beyond the range of practical eventualities. But that is a delusive method of stating the case. When the Government of a country finds itself confronted by circumstances that demand the exercise of some control, it must needs have recourse to the form of control provided by law, even though it entertains the conviction that some other kind of control would be far preferable. The question to be determined on the occasion of the recent journalistic commotion may have seemed, in the eyes of the Cabinet, to be this:—Will the public interests be better served by leaving the agitation wholly unchecked, or by checking it through the agency of a law which, however unsuited to the spirit of the time, is nevertheless the only law available for the purpose? We do not pretend to interpret the actual ideas of the Cabinet, but it appears to us that the Ministers of State may have argued in the sense here set down. If they did, they will not invite any accusation of inconsistency even though they introduce a Bill for depriving the Administration of power to suspend or suppress newspapers and other publications, provided that they simulta-

neously propose some more constitutional mechanism for press control. Their recent action has not, by any means, committed them to the principle of Administrative interference. It has committed them to nothing more than the principle that competence to interfere in some fashion or other must not be abrogated, since the need of interference is still a visible contingency. They are precluded by their own doings from asserting that the day has come when all checks upon the liberty of the press may be safely removed, but they are not precluded from advocating a system of checks less arbitrary and more tolerable than those now available. Can such a system be devised? It is a difficult question. At present Japanese Courts of Law have no competence to suspend or suppress a publication. Competence could, of course, be vested in them. But its exercise would not meet the theory entertained by advocates of Administrative interference, namely, that suspension is not a punitive so much as a preventive measure: in other words, that the public interests may often demand the suspension of a journal when its writings threaten to imperil, though they have not yet actually imperilled, good order. Recourse to the inevitably cumbersome machinery of the law would plainly be too slow to constitute a remedy from that point of view, unless it were provided—and in this the solution seems to lie—that so soon as the Public Prosecutor lodged notice of legal action against a journal in connection with a certain subject of discussion, all further reference to the subject by the same journal, pending the conclusion of the suit, should constitute the crime of contempt of Court. In that way the incriminated utterances would be interrupted until a legal tribunal either pronounced them harmless or interdicted them altogether. What the advocates of free speech ask for is that the Administration should be stripped of its power of arbitrary interference, and they would be perfectly content could they secure the privilege of responsibility to the Law Courts only. The Cabinet may effect that reform without convicting itself of the least inconsistency.

THE TREATY REVISION COM- MITTEE.

The Committee for investigating the steps that should be taken preparatory to the operation of the Revised Treaties, is divided into two sections, writes the *Asahi*. One of them consists of men selected from the ten Departments of State, and is entrusted with the duty of considering matters that fall within the province of the Departments. The other is composed of officials from the Cabinet and the Privy Council—Messrs. Hirata, Komuchi, Takahashi, Tsuzuki, and Doke—and has for its chief function the task of collating and unifying the results of the other section's researches. Whenever consultation between the two sections is necessary, an extraordinary meeting is called. Of course the duty of collating the work of the whole Committee will ultimately fall on the Cabinet itself.

The silk sold at Yokohama on Wednesday included:—37 boxes to Robison & Co., No. 3; 34 boxes to P. Dourille, No. 164; 15 boxes to Cornes & Co., No. 221; 38 boxes to Sieber Breunwald & Co., No. 9-A; 13 boxes to Siber & Co., No. 90-B; 121 boxes to the Kiito Kaisha.

CURRENT POLITICS.

The recent meetings of Marquises Ito and Yamagata and Count Inouye are attracting much attention among pro-Government parties. The first two statesmen met at Nara, while Marquis Ito and Count Inouye met at Onomichi. To add to the perturbation of the pro-Government Party, Count Kuroda, the President of the Privy Council, is reported to have secretly left the capital for Kyoto. It is believed that something will eventuate from these movements on the part of the *Genkun*; and even the *Yomiuri* admits the truth of such a probability. It writes on the strength of information obtained from unnamed quarters, that certain senior statesmen are contemplating making friendly advances towards the Premier, and that the recent meetings of the *Genkun* in the Kansai districts may be a preliminary to this step.

The *Fiji's* account of Messrs. Matsuoka's and Onoda's resignation is worth quoting, as it throws much light on the Household Department affair. When the Osaka periodical published its notorious article, Mr. Onoda showed it to Mr. Matsuoka, the Vice-Minister of the day, and to the Minister of the Household, not with a view to taking Administrative steps against the periodical—for he well understood the policy of the present Cabinet in the matter of the freedom of speech—but simply to call attention to the writing. The Household Minister sent a messenger to the Home Office and asked Mr. Onoda to take Administrative measures against the periodical, but the latter refused to comply with the request and said that the better scheme would be to order the withdrawal of the offending matter. Mr. Onoda was subsequently thanked for giving this advice. But when the article was reproduced in the *Nippon* and discussion arose on the subject, the Household Minister personally called on the Home Minister and urged that Administrative measures should be taken against the offending journals. This resulted in the repeated convoking of Cabinet Councils. In the meantime, the attitude of the Vice-Minister underwent a complete change, for whereas he had at first ignored the article, he now suddenly urged, when the *Nippon* reproduced it, that the Home Minister should take decided steps against the journals. Mr. Matsuoka is understood to have actually agitated to have this step carried out, hence his conduct was considered as amounting to a breach of official discipline, while Mr. Onoda laid himself open to the charge of having been remiss in the discharge of his duties; not having shown the last article to the Home Minister. Hence both were ordered to send in their resignations.

CURRENT NEWS.

The visit of the Empress to the *Chinyen* on the 2nd inst. was marked by a gracious act. Her Majesty ordered Admiral Aiura, the Commander of the Yokosuka Admiralty, and Admiral Tsuboi, the Commander-in-Chief of the Squadron, to release in her name, all marines then undergoing disciplinary punishment at Yokosuka. The Commanders of warships lying in the port were at once signalled to come to the flagship, and the command of Her Majesty was communicated to them by the two Admirals. Capt. Kurooka, of the *Naniwa*, conveyed the news to the Captain of the British flagship *Grafton*, at that time

in the Yokosuka Yard, and the latter declared that he would at once take steps to extend the benevolence of the Empress to such of his men as were under punishment. Thus it resulted Her Majesty's benevolent intention took effect in the case of both Japanese and foreign warships.

The National Unionists have decided to oppose the total abolition of the suspension and suppression provisions in the Press Law. They are of opinion that more or less amendment of the existing Law may be advisable, but they can not approve the total expunging of the much discussed clauses. This decision was reached at a meeting in the Central Office, held on the 7th inst.

Undoubtedly school troubles may be classed among the constitutional ills of Japan, for not a month passes without news of an outbreak of disturbance in this or that Upper or Normal School. Apart from the temporary closing of the college and high schools under the control of the Higashi Hongwan Temple—for those institutions are now shut up in consequence of the extraordinary agitation that recently broke out among the staff of the Temple itself—we now read of a commotion in the Nagoya High School and the Tochigi Normal School. The students of the former, who had been for some while chafing under the somewhat strict control to which they were subjected after a change of Director, struck work by way of protest, and when the faculty dismissed the ringleaders, the rest broke out into open rebellion against the Director and principal teachers, so that these latter were obliged to seek the protection of the Police, and to provide against bodily peril by other extraordinary means. The umbrage of the boys—more than seven hundred in all—has spread to their sureties, who declare themselves dissatisfied with the School Authorities on account of the latter's having dismissed several boys without any notice whatever to their sureties. Consequently, hundreds of citizens of Nagoya have taken up the cause of the school-boys, and are endeavouring to bring about the resignation of the director and of the principal teachers. The trouble at the Tochigi Normal School is ascribable to friction among the staff of the school, and consequent agitation among the students, several of whom have been dismissed.

The Tokyo Local Court, engaged in trying the suit in connection with the alleged suppression of four cardinal tenets of the Nichiren Sect from the general creed of the United Sects, gave judgment on the 5th inst. in favour of the defendants. The plaintiffs have given notice of appeal.

The Tokyo City Assembly has approved two motions, one with reference to harbour construction in Tokyo, and the other with reference to hastening street improvement. The former proposal was made by Mr. Sakuma Teiichi. He pointed out that a scheme of harbour improvement was originated in 1880, and four designs were prepared by four different experts. But subsequently the matter was left in abeyance, with the result that the capital of the Empire is likely to fall behind Osaka, Hakodate, and other less important places in the matter of harbour improvement. The proposer was of opinion that the sale of the land reclaimed in the process of constructing the harbour would repay the

cost of the work, and that the harbour dues would subsequently suffice for purposes of maintenance. Mr. Hasegawa Tai moved the second proposal. He urged that the improvement of the main streets must be effected as quickly as possible, and that work on the subsidiary streets must also be hastened. The two proposals were placed in the hands of a special committee.

The Nippon Yusen Kaisha has carried out its long cherished idea of placing a Japanese captain in command of its ocean steamers. Mr. Shimadzu Gosaburo had charge of the *Hiroshima Maru*, which cleared at Kobe on the 9th inst. for Bombay. This is the first time that the Company has appointed a Japanese captain to a steamer bound for foreign waters.

The Emperor seems to be a very prolific poet, for we are told by the *Chuo* that, during the last ten years, Baron Takasaki, who may be considered to occupy the position of Poet Laureate in Japan, has seen more than 25,000 couplets composed by the Sovereign. His Majesty has penned 4,200 couplets in the course of this year.

The idea of appointing Vice-Ministers who shall act as Government Delegates in the Diet, and move with the Cabinet, has been revived in another guise. The original proposal failed to obtain the approval of a majority of the Administrative Reform Committee, and it has now taken the form of a scheme for appointing Chief Councillors of Departments. Count Okuma, the President of the Committee, explained that the functions of a Chief Councillor would be to draft Government measures, to control subordinate Councillors, and to act as Government Delegates while the Diet is in session. The measure has been entrusted to a Committee of six.

COUNT OKUMA'S SPEECH AT THE MEETING OF THE ORIENTAL SOCIETY.

Count Okuma's speech at the recent meeting of the Oriental Society has evidently attracted considerable attention, and as the vernacular newspapers' reports have been either unsatisfactorily rendered or greatly abbreviated in process of translation for the foreign local journals, we hope soon to lay before our readers a full and accurate re-production. The *Kokumin Shimbum* says that, on the 3rd instant, when Count Okuma held his usual weekly diplomatic reception, several questions were propounded to him by the Foreign Representatives as to the exact meaning of the terms used in the speech. Only one of these perplexing examples is given by the *Kokumin*, namely, the word *hasha* as distinguished from *osha*. Both words are strange to us. The term *hasai* is not uncommonly used, however, with reference to the military administration of the Shogunate, and *osei* with reference to the Imperial administration that replaced the former. By that analogy the sense of *hasha* becomes apparent, namely, military government in contradistinction to *osha*, monarchical government—though the latter term seems to have been intended by Count Okuma to include the significance of popular government. This is an instance of the great difficulties with which foreign translators often have to contend when confronted by words that have their origin in conditions for which no exact

modern analogies suggest themselves, though they are employed by Japanese writers and speakers to convey familiar ideas.

VISIT OF THE EMPEROR TO H.I.H. PRINCE FUSHIMI.

The Emperor to-day visits His Imperial Highness Prince Fushimi, whose residence is at No. 4, Kioicho, Kojimachi, Tokyo. His Majesty leaves the Palace at 1.30 p.m., and after a short rest at his host's house, will view a performance of *No kyogen*, and then hear a lecture (*Kôdan*) by Momogawa Iyoen. After dinner, the hour of which is not mentioned, His Majesty will return to the Palace. On the following day the Empress will visit the Prince, the programme of entertainments being the same as on the 8th, except that Japanese music will be substituted for the *No kyogen*. His Imperial Highness Prince Fushimi is a Major-General and commands the Fourth Brigade.

BRICK BUILDINGS IN TOKYO.

The two houses that were burned in Ginza, Tokyo, on the night of the 8th instant, offer a very plain object lesson. Nothing was demolished except the wood-work. The shells stand intact, and already carpenters are engaged re-roofing and re-fitting. Probably in a week or ten days the houses will be as serviceable as ever. The record would have been very different in the case of Japanese buildings: nothing would now remain except some charred fragments of wood and heaps of broken tiles. It is twenty-four years since Ginza was built and not half-a-dozen of its houses have been destroyed by fire in all that time, whereas every street in its vicinity has been levelled with the ground, some more than once. The loss, if reduced to money, would amount to a huge figure. Tokyo can never become a rich city until it is protected against perpetual devastation.

THE ST. HILDA'S BAZAAR.

The Bazaar at the Shorei-Kai, Tokyo, in aid of the St. Hilda Mission's Free Dispensaries and District Nursing, proved pecuniarily successful, the net takings being over seven hundred *yen*. It was a well organized affair, the stalls being tastefully arranged, and the articles offered for sale, not merely attractive but also useful, so that many provident visitors carried away a store of pretty Christmas presents. A little more space would have been advantageous, but, after all, any defect on that score was very slightly felt. The holders of stalls were: (1) Baroness Sannomiya and Miss Hayes; (2) Mrs. Squire and the Misses Squire; (3) Mrs. Bickersteth and Mrs. Gubbins; (4) Mrs. F. S. James; Mrs. W. B. Walter, Mrs. J. Fraser, Mrs. Dunlop, Miss Nelson, and Miss Fraser; (5) Mrs. Brinkley, Mrs. Conder, and Mrs. Duer; (6) the children's stall, Miss Brinkley, Miss Conder, and Miss Duer; (7) the tea stall, Mrs. Sonoda, Miss Mair, Miss Dun, Miss Howe, Miss Münster, Miss Gibson, Miss Hunt, and Miss Nishikawa; (8) flowers, Miss Dening. It will be observed that the ladies presiding at No. 4 stall were from Yokohama. Their kind co-operation contributed materially to the success of the Bazaar.

BREAKING CUSTOMS SEALS.

On the 7th inst., the mate of the British ship *Sumbawa*, was arraigned in H.B.M.'s Consular Court at Yokohama, on a charge of violating the Trade Regulations of the port by breaking Customs seals. The facts were simple. At 6 a.m. on the 28th November, the mate set men to open the hatches which had been sealed on the previous evening by a tide-waiter. Before ordering this operation to be commenced, the mate did not take the trouble either to examine the seals, for the purpose of seeing whether they had been already broken by the Customs officials, or to inquire whether any official had come on board to break them, though information on that point must have easily been procurable from the watchman. He simply assumed that the seals had been broken. It does not appear that he had any intention whatever of violating the Regulations, for when he discovered, by the evidence of a lock, that the officials had not yet removed the closure from the hatches, he at once knocked off work. By that time, however, two of the seals had been broken. A few minutes later, a tide-waiter arrived to break the seals. Finding two of them broken, he addressed himself to the mate for an explanation, whereupon the latter endeavoured to elude responsibility by a falsehood. He said, according to the tide-waiter's evidence, that the seals had been broken by the wind; according to his own evidence, that they might have been broken by the wind. There is no moral difference: both assertions were deliberate falsehoods. Asked to reduce his statement to writing, the mate abandoned his untruth and related the facts. Now there cannot be the least doubt that had he, in the first instance, offered a frank explanation to the tide-waiter, and expressed regret for an act which, if not supplemented by a lie, would have amounted merely to carelessness, the matter would have rested there. But, under the circumstances, the Customs Authorities deemed it expedient to prosecute him—a course that we cannot but endorse—and he was fined the sum prescribed by the Regulations, \$60. Thus far the matter is scarcely worthy of notice, but the defence set up by the mate and a statement attributed by the reporters to H.B.M.'s Consul, imply a reading of the Regulations that is to us unintelligible. The mate complained that the Customs officials go on board ships to break the seals "sometimes before two o'clock in the morning and always before five," and complained that by doing so they violate the Regulations, which he quoted to the effect that such visits should be made "between sunrise and sunset." H.B.M.'s Consul endorsed this complaint, and asserted that the officials "certainly should not come at that time in the morning." Now the Regulations do not say "between sunrise and sunset;" they say "between sunset and sunrise." There is a vital difference. The Regulations provide that the operation of affixing the seals and presumably that of removing them must take place while the sun is not above the horizon: that is to say, during the night. Obviously the intention is that no obstacle shall be offered to the handling of cargo during daylight; in other words, during working hours. It would seem that the Custom House officials, on their side, knowing that the rapid discharge of cargo is generally an object, endeavour to facili-

itate matters by going on board to remove the seals from the hatchways at an hour so early that the taking out of the cargo may be commenced whenever the crew are ready to work. In Summer that means visiting some of the ships at two or three o'clock in the morning, and all of them before half-past four. If the officials of the Custom House take that trouble, they deserve thanks, instead of being accused of violating the Regulations. Evidently the mate of the *Sumbawa* spoke under a misapprehension, but we are unable to understand why H.B.M.'s Consul should have condemned the tide-waiters for the timeliness of their procedure, since he had the Regulations before him, and knew, as was subsequently shown, that the words of the Article are, not "between sunrise and sunset," but "between sunset and sunrise." As a matter of fact, the mate of the *Sumbawa* violated the Regulations not only by breaking the seals, but also by commencing to discharge cargo before sunrise. It is laid down that "no goods shall be unladen from any ship between sunset and sunrise, except by special permission of the Custom-house Authorities," and as the sun does not rise until past six o'clock at this time of year, to open the hatches and take out cargo at six is evidently illegal. What we infer from the mate's conduct is, not that any ground exists for complaining of the action of the Custom-house folks, but rather that officers of merchant vessels, being accustomed to encounter no obstacles whatever, take it for granted that they can begin to handle cargo at any convenient hour. In short, the mate assumed, as a matter of course, that the hatchways had been unsealed, and did not take the trouble to verify his assumption. Had he himself complied with the Regulations, waited for the sun to rise before handling the cargo, and then found the hatches still sealed, he would have been ready enough, we suspect, to complain of the tardiness of the Customs officials. In short, the defence set up as to the tide-waiters' breaking seals in the small hours of the morning was entirely irrelevant, and instead of endorsing it, the British Consul, we venture to think, should have explained their error to the mate and the master. If, in the face of what has occurred, the tide-waiters should receive instructions to insist henceforth upon the presence of an officer when they remove the seals in any ship, an irksome addition would be made to the duties of men already worked quite hard enough, and no really useful purpose could be served, for it is evidently quite sufficient that the man on watch when tide-waiters visit a ship, should have cognisance of the breaking of the seals, and should duly report the fact to the mate at an hour convenient to the latter.

ECONOMIC NEWS.

On the 3rd inst., Mr. Tanaka Fujita, a manager and expert of the Tokiwa Spinning Company, which was established by Osaka capitalists with the view of carrying on spinning industry in Shanghai, presented a report, showing the state of affairs in the latter place and the progress of the Company's undertaking. He stated that as the site for the Company's mill enjoys great facilities of transport, five mills are already in operation in the vicinity, their spindles aggregating about 200,000. Besides these, five other mills have either

been constructed or are in course of construction, two, of 40,000 spindles each, being English; one, of 30,000 spindles, American; and one, also of 30,000 spindles, German. Machinery is about to be erected in all these buildings. A Chinese mill of 15,000 spindles is also in process of construction. The mills in Shanghai turn out yarns of 14 and 16 counts, and also shirtings, their products being, for the most part, sold in neighbouring markets, though a portion is exported to Tientsin and Newchwang. In short, the prospects of the spinning industry in Shanghai are very bright. The preparation of the site for the Company's mill was commenced last January, but, owing to the nature of the ground, the work proved tedious, and it was not until September that the erection of the buildings commenced. Building materials being tolerably accessible, and wages not particularly high, the mill will probably be ready for work by June next. At first, it was proposed to build a factory with 75,000 spindles, but subsequently the plan was reduced to 25,000 spindles, with the intention of gradual additions, until the originally contemplated dimensions were reached. The mill is to manufacture yarns of 14 and 16 counts, and also shirtings. As to the question of taxation, the Chinese Authorities are said to have decided on an *ad valorem* duty of 10 per cent. The Company has 15 Chinese artisans serving as apprentices in its spinning mills in Osaka, and when the Shanghai mill is opened, these will be appointed master-spinners, and will give instruction to others engaged subsequently. The fifteen Chinese will complete their training by June next.

It does not seem positively certain whether the mill will be opened for work, the prospective imposition of a ten per cent. tax constituting a deterrent feature. The projectors think that if a tax of 10 per cent. be really levied, there will be much difficulty in competing with goods imported from abroad. On the other hand, they are naturally reluctant to abandon the enterprise, after having spent so much money in buying and preparing ground, and after having concluded a contract for the purchase of building materials. They have decided that the manager, who lately returned from Shanghai, shall proceed to Tokyo for the purpose of ascertaining the views that the Authorities entertain on the subject. Another general meeting will be held on the 10th inst. to discuss what steps the Company should take at the juncture.

The Nippon Weaving Company, reference to whose financial difficulties has been made several times in these columns, is resolved to continue its business on a new footing. On the 4th inst., 146 shareholders of the Company met at the Nihonbashi Club, to hear the report of the Adjusting Committee. The Committee stated that against assets amounting to 750,000 yen, the Company's liabilities totalled 1,000,000 yen, an excess of 250,000 yen on the debit side, and that the following proposal had been drafted for the approval of the shareholders:—

- (1) That a loan not exceeding 250,000 yen be raised, should the continuation of the business be deemed advisable.
- (2) That the assets, trade-marks, good-will, and liabilities be transferred to the projectors of the new Japan Joint Stock Weaving Company, at 300,000 yen.
- (3) That a share of the existing Company be exchangeable for a thirty-yen share of the new Company.

Mr. Tsunoda Shimpei, a temporary adviser of the Company, explained that out of the sum of 250,000 yen to be raised by loan, 150,000 yen will be paid to the Yasuda Bank, and that the remaining 100,000 yen will be available for the current expenses of the new Company. This loan of 250,000 yen will be redeemed by cutting down the face value of the shares of the Company from 50 yen to 30 yen, each share thus showing a loss of 20 yen. A shareholder moved that as the Directors and the Auditor were responsible for the loss incurred by the Company they must be required to make it good, but the proposal was overruled by a large majority. The draft submitted by the Adjusting Committee having been adopted by the shareholders, Mr. Watanabe Koki, who occupied the chair, appointed the following gentlemen as Directors and Auditors of the new Company:—

Directors:—Messrs. Watanabe Koki, Omura Hikotaro, Abe Kosuke.

Auditors:—Messrs. Kikuchi Jyoshiro, Ishizaki Masao, Nanjyo Shinrokuro.

The *Oriental Economist* publishes an interesting table showing the rise in the market prices of commodities during the five months ended October last. The figures are obtained by taking the ruling prices in January, 1894, as the standard (i.e. 100):—

	June.	July.	Aug.	Sept.	Oct.
Rice	118	122	122	131	131
Barley	101	94	107	112	118
Table salt.....	180	196	217	237	278
Soy.....	100	86	110	110	111
Sugar	90	94	92	92	94
Dried Bonito	163	—	157	167	167
Kerosine	119	119	115	117	123
Coal	105	107	105	106	110
Copper	123	121	123	123	123
Iron	100	98	102	117	117
Ginned Cotton	116	115	120	121	124
Cotton Yarn	107	108	109	111	110
Shirtings	105	104	104	104	105
Charcoal	157	157	157	163	171
Fuel	out of stock.	out of stock.	out of stock.	out of stock.	out of stock.
Averages	120	117	124	129	134

Table salt shows the highest rise, the average quotation in the month of October being 278, as against 100 in January, 1894. On the other hand, sugar has fallen considerably, namely, from 6 to 10 per cent. Considering the period from January, 1894, to the end of last year, it appears that the market reached its highest point in December, 1895, the average quotation for all the above staples standing at 122. In January of this year the average figure fell to 117, but rose to 124 in August and to 134 in October.

A steady appreciation of the market prices of commodities must naturally be followed by a rise in the rates of wages. Concerning that point, some idea may be gathered from the following table, in which the figures for 1894 are taken from the 11th Annual Report of the Department of Agriculture and Commerce, and those for May 1895 and 1896 from the *Tokyo Asahi*:—

	1894.	May 1895.	May 1896.
Carpenter	50.0	55.0	58.0
Stone Masons.....	65.0	68.0	72.0
Tobacco Cutters.....	30.0	30.0	33.0
Smiths	40.0	48.0	55.0
Printers	35.0	55.0	55.0
Ship Carpenters.....	55.0	54.0	60.0
Cotton-ginners	25.0	22.5	25.0

On the whole, the rise of wages is seen to have been less than the appreciation of commodities, which is in accord with the experience of other countries.

THE NEW PRESIDENT OF THE HOUSE OF REPRESENTATIVES.

The President of the House of Representatives having been raised to the peerage under the title of Baron Kusumoto, the question of his successor is beginning to be anxiously talked of, now that the opening of the Diet's Session is so close. In the early days of the Diet, there was a tendency to regard the balloting for the President of the Lower House as a test of party strength, each political party putting forward a candidate, and marshalling all its forces to compass his election. But a departure from that groove was made at the last election. The Liberals (*Jiyu-to*) and their supporters, having a clear majority in the House, could easily have secured the presidency for their candidate, had they been so minded. But considerations, as to the nature of which we have no knowledge, induced them to hold their hand, and Mr. Kusumoto, their opponents' candidate, came off victorious. No one, that is to say, no outsider, seems to be certain whether the Liberals will show similar abstention in connection with the election of Baron Kusumoto's successor. We read in the vernacular press, however, that they intend to put forward Mr. Kono Hironaka, and if that be true, we may take it for granted that no effort will be spared to secure his election, for Mr. Kono is much too great a man in political circles to be lightly treated. The *Shimpo-to*'s candidates are said to be Mr. Shimada Saburo, now Vice-President, and parliamentary leader of the Party, Mr. Hatoyama Kazuo, and Mr. Ohigashi Gitetsu. The National Unionists are credited with the intention of nominating Mr. Sassa Tomofusa. Of course, to put forward three candidates is an imprudent division of strength on the part of the *Shimpo-to*. But doubtless the object is to test the sentiments of the other parties. The necessary plurality of votes (one half of the whole House) has never hitherto been obtained at the first ballot, but the temper of the House, can generally be observed, and at the second ballot readjustments can be made so as to secure the desired election.

RAILWAYS IN JAPAN.

So many statements are published by vernacular newspapers from time to time about the total number of railway companies in Japan and their capital, that a very confused notion probably emerges from their perusal. The clearest and most readily grasped account we have yet seen is given by the *Tokyo Shimbu*. We read there that the aggregate mileage of the lines, State and private, already built and in operation, is something over two thousand; that the length of the lines now in process of construction by the Government is 700 miles, approximately, and that the length of those for which provisional charters have been granted to private companies is over 2,500 miles. Assuming the cost of construction to be fifty thousand yen per mile, the capital embarked in these new lines is 160 million yen. Whence does it come? The Japanese people certainly manage to turn over the few hundred millions of yen in their possession so often that the operation becomes bewildering.

COUNT OKUMA'S SPEECH AT THE ORIENTAL ASSOCIATION.

The following is an accurate translation of the speech delivered by the Minister of State for Foreign Affairs at the recent meeting of the Oriental Association:—

Your Excellency and Gentlemen—I am here this evening as the guest of the Oriental Association. His Excellency, the President of the Association, has just expressed a desire to hear my views respecting the foreign relations of the Empire, since I am in charge of the Foreign Office, and he spoke in undeservedly high terms of my experience in that branch of the public service. In fact, when Mr. Inagaki Manjiro, who has laboured incessantly to promote the interests of the Oriental Association, called on me the other day and casually suggested that I should make a speech this evening, I did not pay much heed to his remark, and I was therefore extremely surprised to learn that the invitations issued by you contained an intimation that I would make a speech on this occasion. Such was not really my intention. I thought it would only be necessary for me to make a few remarks at the table during dinner. Now that it is to be an address, I confess I am very much perplexed. As His Excellency, the President, has told us that the Oriental Association attaches the greatest importance to diplomatic affairs, I am inclined to believe that the position in which I have been unwittingly placed was a piece of diplomacy on the part of Mr. Inagaki Manjiro. But in the presence of your great hospitality and His Excellency, the President's wish, I cannot well refuse the invitation to address you, and though it is difficult for me, being without eloquence and a rustic, to dilate on diplomatic matters, I cannot but accede to what I believe to be your special wish.

His Excellency the President referred just now to diplomatic secrets. It is true such things do exist, but they are not numerous. Before speaking of our foreign relations at the present time, I propose to touch on the intimate connection foreign intercourse has had with the reform and progress in the national life of Japan.

Our country, as you are all aware, enjoyed for about 250 years a peace unparalleled in the history of the world. I do not know of any other State that for two centuries and a half has not appealed to the arbitrament of the sword. Ours was such a peace as the highly imaginative pen of the Chinese would have to confess was not equalled even in the reigns of Yao and Shun. Setting aside the tribulations of the people, there was no appeal to arms. It was indeed an unique country where there was no war at home or with any foreign power. But what was the consequent state of the country? It remained in a most piteous condition, and the nation, being stationary, had fallen into extraordinary decay. At this time foreign intercourse suddenly took its rise. There had certainly been premonitions. In the Bunkwa and Bunsei periods there were indications which, however, the nation, being still asleep, failed to apprehend. In 1854 and 1855, that is during the Kayei and Ansei eras, Perry arrived at Uraga, with an American Squadron. The nation was greatly amazed, and its patriotism was aroused to an exalted pitch. This then was the beginning of

our relations with the outside world. Because of foreign intercourse, the nation for the first time was induced to take account of the state of the country, but the examination was not reassuring, for the condition of the Empire was deplorable. The relation between foreign intercourse and domestic concerns, the influence of foreign intercourse upon national reform and progress, and the changes wrought for the first time by foreign intercourse, among the lords of the three hundred clans, who under the despotic rule of the Feudal Government presented themselves in turn for service at Yedo, were questions that dismayed the Feudal Government. It was paralyzed by the occurrence of an event that was without precedent since the days of Iyeyasu, and for the first time it realized that it must deal with this new factor. In its extremity the Bakufu bethought itself of the Sovereign who stood above its head, and it sought temporary release from its difficulties in the existence of the Emperor. Then the light of the sacred Imperial line of Japan, which had, since the Kamakura régime, been withdrawn from sight, began to brighten. Then arose the cry of loyalty to the Imperial Throne. This cry had indeed long before come into existence. Its hidden currents had already influenced society, as our senior, Count Soyeshima, and others are all aware. Even in the Bunkwa and Bunsei periods it was known, but it was only the impulse of foreign intercourse that caused this shibboleth to develop a social reform movement. Simultaneously the cry for the expulsion of barbarians arose. But as the agitation respecting the Imperial cause and the demand for the expulsion of barbarians were ineffectual, it was proposed to amalgamate the Kuge and military classes, and that proposal in turn gave rise to a demand for the abolition of the feudal régime. And what was actually taking place in the mean time? As the inutility of the old swords and bows, when face-to-face with foreign powers, was recognized, a reform on an extensive scale in the matter of military weapons was inaugurated before the Restoration, and everywhere swords and bows were being replaced by firearms, while rifle companies were at the same time organized. Again, with a view to the construction of steamships and men-of-war, the Feudal Government established the arsenal at Yokosuka, now one of the most important naval stations and dockyards in Japan, and then began the manufacture of ammunition. The army and navy were, imperfectly it is true, reorganized on European models. These various changes were nothing more than consequences of the national attitude towards foreign powers. Then also was aroused the spirit of national patriotism. Patriotism remains quiescent so long as the State is in repose. Japanese patriotism was called into activity at the time of the Mongol invasion, but with the disappearance of the inciting cause it again became dormant. Immediately, however, upon the establishment of foreign intercourse, patriotism once more became a vital force, and as the final result of devotion to the country, Prince Tokugawa Keiki, the late Shogun, whose family had exercised supreme power for two hundred and fifty years, surrendered the sovereignty to the Imperial Court, while, at the instance of a few persons, all the other territorial lords, influenced by the same sentiment—nationalism—returned their daimiates to His Majesty. It is a most astonishing

history, unparalleled in the world. In Europe, feudalism was destroyed only by the loss of innumerable lives and after a struggle lasting for centuries, but in Japan, the lords gave up, without bloodshed, and in consequence of an appeal to national patriotism, their territories which some of them had held as long as six or seven centuries. All this had its origin in foreign intercourse. From consideration of the nation's external relations, the Japanese had been influenced by their unrivalled love of country. This loyalty became all absorbing, and was carried to such an astonishing pitch that the nation was ready to sacrifice for the State personal interests, power, and property. All this was, as I have said, the result of foreign intercourse. What happened immediately upon the downfall of the Feudal Government and the abolition of feudalism? Upon a calm survey of the world, it was found that foreigners were not in the least savages as had been supposed when the expulsion of barbarians was being advocated, but were far superior to Japanese in civilization, and that this country must, in order to compete in the world as an independent Power, be on a level with the advanced nations of the world. Indeed, in the Imperial Edict regarding the Restoration, it was declared that Japan must keep pace with the Powers and advance along all the lines of human progress. Consequently, reforms were commenced in every department, in educational institutions, culture, commerce, industry and agriculture. About the same time the compilation of the civil law was undertaken. Again, as Japan was still in her infancy in arts and sciences, European arts and sciences had to be introduced, and therefore, the University was established; hospitals were built to encourage medical studies, and other sciences were fostered. But this was not all. As men of learning were in demand, students were sent abroad in large numbers; at one time thousands were thus despatched to foreign countries. Still this was not sufficient. It was thought necessary to secure the services of foreigners and thousands were thus employed. All of these activities owed their inspiration to foreign intercourse. The object was to put Japan on a level with the most advanced foreign countries in respect of arts, and science, and knowledge, and wealth, and power. At first bigoted views prevailed, and it was supposed that foreigners came to Japan as spies, and consequently that they should be kept at arm's length; but it was discovered that they were not barbarians, and then, spurred on by the laudable desire to be on a level with Western States, various laws were compiled, telegraphs, posts, railways, and lighthouses on the coasts were established, and arsenals were erected. Now I count Japan the most fortunate country in the world. Possessing myself but little learning, and not being well acquainted with the world's history, I do not know for certain if there is another country so highly favoured and so successful in accomplishing and surmounting difficulties, but my researches have not enabled me to discover that happy country. We have already in operation a representative system, that is, a constitutional government, which the world had pronounced to be impracticable in the Orient. Formerly convictions were entertained and freely expressed that Japan's civilization was merely superficial, and it was questioned whether she had really made any

progress. It was, moreover, doubted whether the Japanese forces, although skilful on parade, at reviews, and field manoeuvres, would be effective when actually confronted by an enemy. Under such circumstances, then, whether fortunately or unfortunately I cannot pretend to say, the unhappy war between Japan and China broke out. Japan had no wish to wage war merely from love of fighting; neither, I am sure, had His Imperial Majesty any such desire. From unavoidable causes, then, an irreconcilable antagonism of intentions between China and Japan led to the deplorable conflict, and it was of such great importance that, for the first time, the attention of the world was riveted on all the movements of the Japanese forces. In connection with this affair, Europeans made grave mistakes in their estimates of Japan. They thought that a poor country like Japan could not mobilise great forces and continue the struggle for more than a year. But such was the loyalty and devotion of the people that we were determined to carry on the war at the cost not only of lives but also of the wealth of the nation. Undoubtedly, Japan is a comparatively poor country, but the abounding patriotism of her subjects, in spite of her poverty, is unique. Foreigners were, therefore, astonished at the love of country shown by the people, and at the vast sums of money placed at the disposition of the Government, which permitted the prosecution of the war to a successful conclusion, without having recourse to foreign capital. That war also taught them that besides completing many reforms and undertakings, Japan had really advanced and still was advancing in civilization, and that this civilization is deep-seated and enduring. In some quarters there are grave apprehensions, owing to exaggerated reports regarding Japan's rapid industrial and commercial development, that Japanese commerce is to dominate Asia and that it will eventually attack the markets of Europe. But Japan has not yet progressed to that extent. It would be most satisfactory if she had, but I regret to say that she has not. Japan's manufactures and commerce have still a long and uphill fight before them. We could not even dream of influencing European markets, and it will indeed be long before we can fully control the markets of Asia. But the indomitable courage of the Japanese, once applied, never ceases. It has been said that the Japanese are impetuous and that, although energetic, they are lacking in perseverance. Individually there may be such cases, but when once in contact with a national movement, that is to say, with a movement quickened by foreign intercourse, their energy is as constant as the revolution of the planets around the sun. Nationalistic movements in Japan therefore possess the quality of never-ceasing progression. There may be individuals who are impulsive and easily diverted; taken collectively, however, they are constant and true to their aspirations. But the influence of foreign intercourse upon movements affecting the entire body politic, cannot be denied. How would it have been with us without the stimulus of foreign intercourse? Turn for an answer, to the history of China or of Europe. Indeed European civilization was not the creation of a day. It had its origin in India, Babylon, Egypt, Greece, and Rome. The civilization and wealth and power of Europe are not the growth of

a night, but that civilization has developed and advanced amid the vast rivalries and conflicting ambitions of competing Powers. China had, also, developed to a surprising degree during the "Age of the Wars of Shunju," and her progress in civilization was almost unrivalled in the history of the world, but, for her, the last two thousand years have been a period of retrogression, while the rivalry among the European Powers is indeed a matter of surprise. Compared with China or Europe, Japan has, I must confess with great regret, but little to show.

Though it is natural for men to be proud of their own country, we have unhappily nothing to boast of. I do not know the reason, but it is a fact that although the University of Japan is anxious to occupy a high place before the world, nevertheless the world declines to recognize a graduate of the Japanese University as a learned man. He must first study further in the universities of Berlin, or London, or Paris for not less than three years. Thus it is proved by facts that our University stands on a lower level than those of Europe. Administrative legislation, diplomacy, and all other kindred activities are based on science. Science rules the universe and is the parent of all things. The basis of morality, religion, and all other social institutions is science. Compare for instance our common education—that taught in the middle and higher schools and in our University—with that of Europe. Reluctant as we are to confess our inferiority, we cannot conceal the unwelcome fact. We must therefore endeavour to produce men of great learning, men who will be able to compete with those of Europe; and also we must be enterprising enough to become great inventors conferring immeasurable benefits on mankind.

There is also a vast difference in the comparative degrees of wealth. Japan has only a fiftieth, it may be, one-hundredth, but I shall be so far partial as to put it at one-fiftieth—the wealth of England. In foreign trade she stands in a similar position. It will be extremely difficult to increase Japan's present wealth and trade fifty-fold. In area, Japan and England, stands to each other in the ratio of 6 to 4, and the same is true in regard to population. Japan is a large country having a very large population. In population, although not in measurement, it is larger than France. It is, of course, larger than Austria-Hungary or Italy. Consequently it is numbered among the great countries of the world. Italy is said to be a poor country for Europe, but Japan is still behind that country, for she has only one-tenth of Italy's wealth. Japan is therefore in a very inferior position as regards wealth.

Then in regard to social questions there may be some points in her manners, customs, or morality, in which Japan is far advanced, but a careful comparison will reveal many defects. The conduct of the Japanese who reside in Formosa, in Korea, or on the Pacific coasts is often reprehensible. I wonder if their conduct is not such as the lowest labouring classes of America would be ashamed of? One moralist cannot make a whole nation moral; but as forty million persons constitute the Japanese nation, they must one and all be moral. It is charged against Japan that her civilization is in a backward state and her morality at a low standard. While Japanese generally boast that they are in these respects ahead of the rest of the

world, it is possible an impartial observer might not arrive at the same conclusion. Steadily progressing as are Japan's industries, commerce, navigation, army, and navy, she cannot yet claim to be on a level in these respects with other nations. We should endeavour first to overtake those Powers and keep pace with them, and next to go ahead of them, for international emulation and rivalry conduce to national progress and achievement. From ancient times, nations without foreign enemies or danger from without, have fallen. There must be rivalry, for where strong competition exists, there will activity and power to thrive, and when we have reached the zenith of our aspirations, then we can look down on Europeans. Japan is not small, she will soon become great, and the result will be the outcome of foreign intercourse. She must persevere in the never-ceasing struggle. Men are endowed with wonderful energy, which, if misapplied, frequently gives rise to quarrels and disputes, but which, if, with increasing knowledge, it is rightly directed, will keep in accord with conscience. Excessive energy engenders pugnacity and love of strife, and a country so developed may attain temporary greatness, but the days of such a nation are surely numbered. The Mongols who invaded Europe were great, but now they need not be considered. The Turks, four centuries ago, caused Europe to tremble, when they unfurled their crescent standard in Constantinople, but they are to day a nation in its dotage. We do not envy such nations. We must endeavour to contribute our share towards the happiness of mankind. As learning is necessary for that, old men like me are useless. It is the advice I give young men of the coming generation. It is my duty to do so. Up to this time, Japan, stimulated by foreign intercourse, has undertaken and carried to a successful conclusion reforms in many directions. Japan, I think, is truly a favourite of fortune, I do not know why. I cannot clearly give the reason, but I can only offer the vague suggestion that Japan occupies in the world's economy a unique position. Since the foundation of the Empire her shores have remained inviolate to foreign foe and the State has continued for three thousand years since its origin. During that time the Imperial dynastic line has been unbroken. This is all due to guidance by the Spirits of the Imperial Ancestors for these three thousand years in the path of happiness. The explanation is vague, but at any rate the facts are undeniable. In our history we stand alone in the universe, and I think that the same progress and happiness that have been manifest in the past, will be continued in the future.

I would here strongly recommend to the Oriental Association the earnest study of diplomacy. The word "diplomacy" has been variously interpreted. Formerly it was taken to mean craft and stratagem, but this is an antiquated definition, which is now, like stocks and shares, at a discount, and which, it seems to me, is distinctly erroneous. We have among us aged men of experience, promising young diplomats, and learned scholars who are versed in these matters; but, in my opinion, diplomacy is justice. It may perhaps be well sometimes in diplomacy to be entrenched within fortifications, but I do not intend so to shield myself. I shall, on the contrary, be guided by a spirit of perfect frankness. Adhesion to this policy has, I think, been the secret

of Japan's success. Of course, there have been many slight failures in diplomacy and reforms, but the general result has always been satisfactory. Many observers attribute the success of civilization or reforms in Japan to this or that person,—to a single individual. That is a great mistake, for it is never in an individual's power to effect such reforms. They can be effected only by the general progressive spirit of the nation. Such, for instance, was the case with the Restoration. Count Soyemima once said that it is a gross error to attribute the Restoration to the efforts of one or two loyalists. Though it was unquestionably effected by the efforts of the loyalists, the speedy accomplishment of the necessary reforms was, I think, brought about by the help of the Sacred Spirits of the Imperial Ancestors of these three thousand years. Notwithstanding more or less failures and mistakes, success in general was obtained. I do not think there will be need of craft and stratagem in future any more than in the past. If our good fortune continues, we have no call for intrigue. Intrigue requires craft and stratagem; and if Japan were specially bent on territorial aggrandizement, or if, relying on her strength, she were anxious for war, intrigue might then be necessary. But I do not see the least necessity for it, nor has His Imperial Majesty the least inclination in that direction. The slightest expression of such an intent has not been detected from the beginning of the Meiji Era up to the present day, neither did the Imperial Edict declaring war against China contain such a suggestion. The war owed its origin entirely to His Majesty's benevolent wish to aid a weak and defenceless neighbour. Therefore, our diplomacy, in obedience to the Imperial Will, should be founded on justice; but in this we are not alone, for all other nations have justice as the basis of their international relations. Among the gentlemen here present there are many scholars versed in International Law, and for me to address them is like preaching to the wise; but International Law, it seems to me, is based on justice, and without justice it is useless. As peace gradually becomes more enduring in the world, International Law also will gain influence; and as justice is beginning in consequence to acquire wider sway, we must make justice the corner-stone of our diplomacy. The relations between Japan and the Treaty Powers are happily very friendly, and there is no country scheming against us or attempting to injure our interests or rights. That is very fortunate for Japan, and also for me in my official capacity. Thus our present foreign relations are very amicable and undisturbed.

My efforts at the present time will therefore be directed to the encouragement of commerce. It is my earnest desire to do the utmost to promote our foreign trade. How powerful is foreign trade! As trade grows prosperous in the world, so will the world's peace also become more assured. Trade relations are truly wonderful. Commerce almost disregards territorial boundaries. As henceforth the relations among the Powers will grow closer and peace become firmer, a war will inflict still more incalculable evils, and therefore even if a few great Powers should desire a war, they will be deterred by trade considerations. I do not think that if we always observe justice in our diplomatic and commercial relations, Japan's foreign policy will ever go wrong. But diplomacy

is not a monopoly of any single country. There are always other countries to be taken into account. If, however, those countries should injure Japan's prestige, rights, or interests, I need hardly affirm that the patriotism of the forty million Japanese would, as I have already said, burst out like a volcanic eruption. Fortunately, however, Japan has few enemies. Her geographical position has raised up against her but few foes, and that is one of her blessings.

I must thank the Oriental Association for its diligent study of diplomacy and also for its publication of useful reports on the subject, which is a matter of great satisfaction to me. I feel, therefore, especially closely connected with you, members of the Association. Diplomacy, however, is not a simple matter, but is very complex. It cannot be explained in an after dinner speech. I would suggest for study to the Oriental Association this diplomacy—diplomacy by which the national interests may be promoted and the peace and balance of power in the Orient may be maintained. There is, moreover, a nation possessing nearly a third of the population of the whole world whose present condition is indeed pitiable. To rescue that nation from its sufferings is a labour which Japan, in deference to sentiments of justice, should undertake. Such undertakings can only be carried out by the united power of the nation. I would therefore earnestly recommend to the Oriental Association, which enjoys great influence, that it should take upon itself to deliver from its distress that great but unfortunate nation in order to maintain the peace of the world, or speaking in a more limited sense, the peace of the Far East.—(Loud applause and cheers.)

THE "TOKYO SHIMBUN" IN COURT.

The trial of the editor and publisher of the *Tokyo Shimbun* took place on the 2nd inst. in the Tokyo Local Court, the accused being defended by Messrs. Isobe Shiro, Suzuki Jyubi, Yamada Taizo, Toshimitsu Tsurumatsu, and three others, all of them members of the Tokyo Bar. The charge was *Kwanri bufyoku* (bringing officials into contempt) and the object of the alleged contempt was, not Mr. Takahashi Kenzo, chief secretary of the Cabinet, as had been at first supposed, but the Cabinet *en masse*. Mr. Fujikawa, a Public Prosecutor of the Court, opened the prosecution. He said that, in its issue of Nov. 15th, the *Tokyo Shimbun* published a leading article headed "The three iniquities of the Matsukata Cabinet," containing the following passage:—"We have narrowly watched the doings of the Matsukata Cabinet since its organization and have discovered three offences, outraging the public sense of justice and reason. In the first place, it has regarded with indifference the inviolability of the Emperor, has suffered others to impair with impunity the dignity of the Court and to subject the Sovereign to gross disrespect, so that we are left to wonder wherein exist the sanctity and augustness of the Emperor. In the second place, the Matsukata Cabinet has allied itself with business men, thus disturbing the sphere of economy, and perverting the central monetary mechanism into a tool for serving its own interests. Lastly, it has won over members of Parliament by bribery, and has corrupted the Legislature of the Empire. The Matsukata Cabinet may be said, on the one hand,

to have trampled the Constitution under foot and impaired the August dignity of the Emperor, and on the other, to have undermined the laws of the land by leaguering itself with monied men. Those that are inclined to uphold the cause of justice must assault the Cabinet in ordered phalanx, while those that are subservient to it must be denounced as traitors to the public good and to the interests of humanity." "These passages," continued the Public Prosecutor, "are intended to throw contempt on Count Matsukata, the Premier, and the other Ministers of State whose functions are to render assistance and tender advice to the Emperor in affairs of State. The language employed constitutes ample proof of the offence."

The presiding Judge next put questions to the two defendants, who replied that they had written and published the article without the least intention of bringing the Matsukata Cabinet into contempt, but simply to criticize its public doings, because they perceived that facts justified the utterance of such criticisms, it being the duty of newspaper writers to comment on the merits or demerits of the Administration, and to state the opinions deduced by them from the results of actual observation.

Counsel for the defence then submitted six documents, which, they argued, substantiated the statements in the incriminated article. The documents were a copy of the census register of Count Matsukata's family, showing the matrimonial relations subsisting between the family and Baron Iwasaki and Mr. Matsumoto Jyutaro; a copy of the list of shareholders of the Nippon Yusen Kaisha, in which the names of Counts Matsukata and Okuma and Viscount Takashima appear as large holders of stock; a copy of the *Fortnightly Proceedings of the Liberal Party*, containing an article headed "the Matsukata Cabinet's Offences" (this article was epitomized in our Weekly Summary some weeks ago); No. 4 of the *Sekai-no-Nippon*, containing an article of import more or less similar to that in the *Proceedings of the Liberal Party*; a copy of the *Nippon*, re-producing the notorious articles that originally appeared in the *Twenty-sixth Century*; and, lastly, another copy of the *Sekai-no-Nippon*.

The defendants' barristers next demanded that the editor and the publisher of the *Twenty-sixth Century* be summoned, as also Count Matsukata, Viscount Takashima, Mr. Arai Shogo, M.P., Baron Iwasaki, Mr. Takahashi Kenzo, and a certain stock-jobber, Count Okuma's Steward, and Countess Okuma's elder brother. The attendance of the editor and publisher of the *Twenty-sixth Century* and of Mr. Takahashi Kenzo was for the purpose of inquiring whether the Osaka magazine was in receipt of pecuniary aid from Mr. Takahashi; whether it had been secretly instructed by Mr. Takahashi to publish the article about the Household Minister; and lastly, what relations existed between the *Twenty-sixth Century*, the *Nippon*, and Mr. Takahashi. As for the two Ministers and the member of Parliament, their presence was required for the purpose of determining whether or not members of Parliament had been bribed; Baron Iwasaki's evidence was needed to substantiate the fact that Count Matsukata had obstructed the raising of the last installment of the War Loan while the Ito Cabinet was in power; and the testimony of the stock-jobber, Count Okuma's Steward and Countess Okuma's brother would establish the fact that Counts Okuma and Matsukata

were in league with monied men and had disturbed the money market.

The Public Prosecutor opposed the application of Counsel for the defence. He contended that no necessity existed to summon the above personages, since it was manifest that the criticisms penned by the defendants against the Cabinet were based not on facts but merely on conjectures.

The Presiding Judge then left the Court with his two Associates to consider the question of summoning witnesses, and on resuming their seats on the bench, the Judges rejected the application of the barristers, on the ground that the Court saw no necessity for the production of such evidence.

The Public Prosecutor then addressed the Court. He said that had the suit been one for libel, and had the plea of justification been set up, it might have been necessary to inquire whether any basis of fact existed. But the offence of *Kwanri bufyoku* (bringing officials into contempt) was quite distinct from libel, and was constituted by the mere attempt to impair the dignity of Government officials in connection with the discharge of their official functions. The attempt might be by abusive language or gesture in the presence of the officials, or by public writing, and the offence was established by the mere act. The passages quoted from the defendants' writings were undoubtedly designed to publicly discredit the officials in question, and constituted a crime, punishable, according to the Penal Code, with major confinement for not less than a month or more than a year, together with a fine of from 5 to 50 yen.

Mr. Toshimitsu and his brother barristers traversed the arguments of the Public Prosecutor. The first named gentleman spoke at great length. He discussed the mission of a political newspaper; contended that the three points raised against the Matsukata Cabinet were based on facts and not on mere conjecture; declared that the defendants were compelled by the duty they owed to the public to write the incriminated article; denied that they entertained any malice towards the Cabinet Ministers, and was constrained to differ from the Public Prosecutor as to the necessity of inquiring into the actual facts on which the charges were based, for, though the establishment of facts might not entirely absolve the defendants, it might at any rate prove the absence of malice, and even though the absence of malice could not be demonstrated, a knowledge of the full truth must be useful in determining the gravity of the offence and the nature of the penalty. He further argued that the failure of the Cabinet to take prompt and efficient measures for the control of the *Twenty-sixth Century* and the *Nippon*, which publications had contained articles amounting to gross disrespect towards the Court, might fairly be construed as an evidence of the Ministry's having trampled upon the Constitution by compounding a crime of *lese-majesty*, and shirking a responsibility that primarily rested on the Administration. A political paper must have a tolerably free hand to discuss such occurrences. Indeed, expressions of an extraordinary character were daily employed by the public press with reference to Ministers of State. For example, the term *Banshoku Daijin*, though grossly disrespectful towards the Ministers to whom it referred, was suffered to be constantly used by newspapers. He saw no reason

whatever why the incriminated article of the *Tokyo Shimbun*, which stated facts as they existed and appended only a brief criticism, should constitute the offence of contempt to Government officials. Passing to the second count, he spoke at length about the close relations alleged to exist between the Mitsubishi Company and Counts Okuma and Matsukata; about the matrimonial ties that bound Count Matsukata's family with certain millionaires; and about the fact that Count Matsukata, while out of power, had unfavourably criticized the financial policy and measures of the Cabinet of the day, tried to ingratiate himself with business men, and finally contrived to overthrow the last Cabinet.

Mr. Suzuki Jyubi, M.P., addressed the Court after his colleague. His argument, also, was protracted, but we find in his speech nothing particularly noteworthy, except, perhaps, the following statement:—In their issues on the Emperor's Birthday, several papers, including the *Tokyo Shimbun*, published a note that a certain personage had received from Count Okuma a sum of money, but as no contradiction of the statement subsequently appeared, the persons concerned must be held to have tacitly admitted the fact, and consequently, to charge Government officials with corruption was not an attempt to bring them into contempt but merely a statement of facts.

Mr. Isobe Shiro followed Mr. Suzuki. He argued that the charge brought against the defendants could not constitute the offence of *Kwanri-bufyoku*, inasmuch as the Cabinet was an artificial person, and being consequently without eyes, must be incapable of suffering insult from any act committed in its presence. The crime of *Kwanri-bufyoku* could not be perpetrated except against individuals. He was unable to understand why the charge that the Matsukata Cabinet had leagued itself with the monied classes could constitute the offence of *Kwanri-bufyoku*, for combination was necessary under certain circumstances and was not in itself culpable. Believing, as they did, that Count Matsukata possessed many friends among business men, the defendants wrote that the Count, by allying himself with capitalists, tried to increase his influence, and to make his monied friends serve his interests, just as politicians tried to employ newspapers as their own tools. Further, in connection with the Household Minister affair, the Ministry had dismissed the Vice-Minister and the Chief of the Peace Preservation Bureau, of the Home Office. If the matter really belonged to the sphere of the Cabinet's official functions, the Ministers ought to have resigned in a body. But they had simply dismissed two officials on the ground of neglecting their official duties. Hence the Cabinet's responsibility must be considered indirect, and presumably from that point of view no necessity for general resignation had been recognised. In other words, the question did not belong to the functions of the Cabinet, and it followed that the charges preferred in connection with the Household trouble, or any comments on those charges, could not constitute the offence of throwing contempt on the Cabinet.

Mr. Yamada Taizo, M.P., could not understand why, while violent language was almost daily employed by various newspapers, the Metropolitan Police had singled out the *Tokyo Shimbun* alone as an object for prosecution.

The Public Procurator spoke in rebuttal of the above arguments. He contended

that, so long as the printed passages bore the plain interpretation of contumely and malice, there was no necessity to inquire whether the writers really harboured malice and intended disrespect; and that so long as the passages were plainly calculated to throw contempt on Government officials in the discharge of their duties, the writers must be convicted of the crime of *Kwanri-bufyoku*, irrespective of whether their comments were borne out by facts or not. As to the allegation that the Cabinet was an artificial person and therefore could not suffer from contempt, it might be set aside as extravagant and ridiculous. Counsel for the defence had repeatedly referred to the disrespect shown by certain articles towards the Imperial Court, but he, the Public Procurator, could not recognise the existence of such offence. Counsel had simply stated their own opinion, or propounded the idea for the purpose of compassing a certain end, but it might be confidently asserted that any act amounting to want of respect towards the Imperial Court was absolutely out of the question in Japan.

The Presiding Judge declared the Court adjourned, and said that judgment would be given on the 7th inst.

On the 7th instant, judgment was delivered. The accused, namely, the editor and publisher, were pronounced guilty of the charge preferred against them, and were sentenced to two months' major confinement together with a fine of 5 yen. Notice of appeal was given.

We may notice here that the editor of the suppressed *Twenty-sixth Century*, whose appeal to the Court of Cassation from the judgment of the Osaka Court of Appeal, was rejected a few days ago, has been incarcerated in the Osaka prison.

PATENTS AND TRADE MARKS.

The *Shogyo Shimpō*, a journal usually well informed on all subjects connected with trade, avers that the officials of the Patents Bureau in the Department of Agriculture and Commerce, after long consultation, have decided to adopt the following course with respect to granting patents and registering trade marks or designs, in accordance with the provisions of the Revised Treaty with Germany:—(1) Patents will not be granted, even though applied for, in the case of any article that has already been imitated and used in Japan. (2) Even in the case of articles newly patented abroad, the patent will not be recognised in Japan if it has already been brought within public cognizance by the agency of newspapers or books. (3) After Japan has joined the union of States for the mutual protection of industrial rights, if an application made to the Government of one of the States does not elicit an application in response to the Japanese Government within seven months, Japanese manufacturers will be free to produce the article in question.

We have translated the third of the above resolutions as it stands. Presumably the meaning is that if a Japanese manufacturer applies, through the proper channel, for permission to manufacture an article patented abroad, and if the foreign patentee does not apply for the registration of his patent in Japan within seven months from the time of the Japanese application, then the patent will not be respected by Japanese manufacturers.

These statements are given on the authority of the *Shogyo Shimpō* only. Our contemporary adds that they have received the approval of Count Matsukata, the Premier; Count Okuma, Minister of State for Foreign Affairs; and Viscount Enomoto, Minister of State for Agriculture and Commerce.

JAPAN AT THE PARIS EXHIBITION OF 1900.

On the 5th instant the Council for Exhibitions was convened in special session at the Department of Agriculture and Commerce. The Minister of the Department addressed the Council. He explained that the object of convening it was to concert measures for the proper representation of Japan's industrial and artistic products at the Paris International Exhibition of 1900, in which this country had promised to participate. Japan had already taken part in many exhibitions in Western countries. At the Columbian Exposition in 1893, she had been enabled, owing to the progress of her industries, to make a fair show in competition with Occidental nations, and the reputation attained by her in the war with China made it more than ever incumbent that she should seek to develop her resources. Moreover, 1900 would be the year following that in which the Revised Treaties were to go into operation, with the almost certain result of placing the country's commercial relations with foreign states on a wider basis. No effort should then be spared to familiarize foreign nations with the true state of Japanese progress and civilization, and what better opportunity could offer than an international exposition held in Paris, the centre of refinement and civilization? In the matter of art products the object kept in view should be not merely to reproduce the beauties of traditional canons but also to show new and special excellence; and in the field of industrial productions, not only should the present needs of foreign consumers be consulted, but also the future tendency of their requirements should be carefully gauged. Such were the uses to which the Exposition might be made to serve, and he begged the Council to lend its best energies to the furtherance of these aims.

NEW PEERS.

The Matsukata Cabinet has marked its accession to power by advising His Majesty to grant patents of nobility to five gentlemen, the rank in each case being that of Baron. The fortunate recipients of the honour are Messrs. Shimadzu Jukiu, Iwakura Michitane, and Kuroda Minetaro, fourth sons Prince Shimadzu, Prince Iwakura, and Marquis Kuroda, respectively, who owe the distinction to the services of their fathers; Mr. Hosokawa Moriaki, younger brother of Marquis Hosokawa, who also is rewarded for the sake of his brother; and Major-General Sano Nobukatsu, a *shizoku* of Choshu, whose elevation is referred to his own merit.

The Minato-za, Ichome, Sumiyoshi-cho, Yokohama, has been sold for yen 325 to the Yokohama Yushitsu Kabutsu-bako Seisaku Kabushiki Kaisha (Yokohama Export-Cargo-Case-Making Joint-stock Company), which was given a license recently.

TREATIES AND OWNERSHIP OF
LAND BY FOREIGNERS.

THE *Hochi* and the *Nippon* invite attention to a so-called conflict between the Revised Treaties and the Laws relating to the ownership of land by foreigners, the articles of both papers being based on the opinions of anonymous authorities:—

The Revised Treaty with Germany beyond that with any other Power, distinctly invests foreigners with the right of lending money on land. But the practice of borrowing money from foreigners on the security of land is emphatically forbidden by a notification issued on April 14th, 1872. The Notification runs as follows:—"Japanese subjects are forbidden to sell their land to foreigners or to mortgage land or title-deeds for purposes of monetary transactions with foreigners." Therefore the law does not recognize the right of foreigners to advance money to Japanese on the hypothecation of land, and if the law can be set at naught by a Treaty concluded with any foreign Power, then the sovereignty of Japan must be regarded as extremely insecure. If, indeed, a law issued previously can be nullified by a Treaty subsequently concluded with any foreign country, and if a law that has been put into force with the consent of the Diet can be freely modified or totally invalidated in the same manner, even the Imperial Constitution can not be safe. We are thus brought face to face with the great question whether it is right and justifiable to conclude a Treaty that conflicts with the laws of the realm. At another point, also, the laws and the Revised Treaty come into collision, that is to say, with regard to perpetual lease of land. Though no express veto exists in the text, the Amended Civil Code does not recognize the right of perpetual lease, therefore any transaction of the kind must be declared illegal in Japan. But, according to the Revised Treaty, the right of perpetual lease in the settlements now existing is recognised, and the right is vested in foreigners. Is not that a distinct collision between the Code and the Treaty? Suppose that a foreigner concedes the rights of perpetual lease to a Japanese subject or to another foreigner, and suppose that the Civil Code steps in and rules that, perpetual lease being illegal, a limit of time must be definitely fixed, such interference would be disregarded in virtue of the provisions set forth in the Revised Treaty, and the Civil Code would be reduced to a dead letter. The difficulty might be avoided by modifying the provisions of the Code, but any such step would considerably impair the sovereignty of the country. In short, this is another question worthy of the serious considerations of publicists and lawyers.

The *Nippon* says that as the acquisition and enjoyment of the right of advancing money on immovable property, a right distinctly set forth in the Treaty between Japan and Germany, is calculated in practice to enable foreigners to become land-owners, a contingency that has an important bearing on Japanese interests, the Department of Finance is determined to conduct minute investigations into this point. The right of perpetual lease is a matter about which the Authorities are very much perplexed, and it is said that they are compiling special provisions to solve the problem. Another difficulty in connection with the exercise of the same right is predicted by the *Nippon*. A creditor has two modes of dealing with mortgaged property, namely, a compulsory sale by public auction, and compulsory control. When a debtor fails to discharge his obligation to a creditor, the latter can have the mortgaged property sold by auction; but should he see reason to apprehend that the sum accruing from a public sale would be insufficient to meet the liability, then he is entitled to have the property placed under his control, until he succeeds in finding a purchaser willing to pay a satisfactory price. Pending that event, he has the right to transfer the use of the property to a third party and to receive remuneration from him. Suppose that a Japanese subject tempted by a low rate of interest, borrowed money from a foreigner on the security of his land, and suppose that the debtor failed to discharge the debt, in that event the foreign creditor would get the land under his control and might lease it to a Japanese tenant. The only safeguard against such a contingency would be the establishment of mechanisms like Industrial and Agricultural Banks at various important places in the country, which would compete with foreign capitalists in making advances to land-owners and farmers. This contention is not endorsed by others. They hold that the Revised Treaty provides the right of leasing

or using land for dwelling purposes or for the prosecution of business, and that this restriction was agreed upon in deference to the already existing laws of Japan which forbid the owning of land by foreigners. Therefore, the possession of land by foreigners being solely for the purpose of dwelling, or for the prosecution of business, does not extend to fishing or farming, and therefore the placing of land under the control of foreign creditors for any agricultural purpose would be opposed to the spirit of this particular provision. The acquisition and enjoyment of the right of advancing money on immovable property is intended to facilitate the circulation of money between Japanese and foreigners.

In our opinion, the only claim the above comments possess to serious treatment is the fact that they are seriously advanced. Even though it were true that a treaty had been concluded conferring on foreigners privileges contrary to the laws of the realm, the sovereignty of the State would be in no wise impaired, since it is the SOVEREIGN that makes the treaty. But it is not true. Taking the points advanced by our Japanese contemporaries seriatim, we find it contended, in the first place, that a notification issued in 1872 with special reference to the then partially opened condition of Japan, must remain in force after the country is completely opened in 1899. That is manifestly extravagant. So long as foreigners were prohibited by treaty from renting, or otherwise occupying, land outside the limits of the Settlements, it was consistent and proper that the law should interdict all transactions calculated to place foreigners in possession of extra-settlement land. But when a new international arrangement is made, abolishing the Settlement limits and entitling foreigners to reside and trade wherever they please throughout the length and breadth of the realm, then the old law, also, must obviously be modified to meet the altered conditions. Yet even in claiming this we are overstating the case. For the Revised Treaties neither conflict with the spirit of the old law, nor involve any alteration of laws since enacted. What they provide is, simply, that certain privileges granted to Japanese subjects by the Civil Code of Japan shall be extended to the subjects for citizens of the Treaty Powers. If indeed, it could be shown that the privileges in question conflicted with laws for which the new Civil Code was not specifically substituted—that is to say, conflicted with laws remaining in force side by side with the Civil Code—then, possibly, some ground might exist for the arguments of our contemporaries. But the right of mortgage contemplated in the new Civil Code distinctly excludes the right of possession of the thing mortgaged. Thus the spirit of the Notification of 1872, quoted by the vernacular newspapers, is in no respect violated by permitting foreigners to acquire mortgages on land. The sole object of the Notification was to prevent foreign ownership of land, and a mortgagee, according to the Civil Code, acquires no right of ownership. His redress against the mortgagor is not at all of the kind described

by the *Nippon*. He can not get the land into his possession or under his control. A court of law determines the manner of dealing with the mortgaged property, whether by public sale, or by placing it in the hands of a receiver. Hence the *Nippon's* elaborate apprehensions as to the alienation of Japanese land by the agency of mortgages and cheap foreign money, and its suggestion that the only practical remedy is to establish banks which shall accommodate Japanese land-owners on easier terms than those granted by foreign capitalists, are absolutely meaningless. Indeed, neither of the journals from which we have quoted seems to have taken the ordinary precaution of studying the Revised Treaties and the Civil Code before commenting on them. With regard, finally, to perpetual leases of land within the Settlements, we would remind our Japanese contemporaries that these leases represent a privilege created by treaty thirty-eight years ago, and that, so long as the treaty stands, the privileges conferred by it can not be lessened or abolished by domestic legislation. If the *Hochi Shimbun* is solicitous lest a newly concluded treaty should conflict with existing laws, it should be equally solicitous lest a newly enacted law should conflict with an existing treaty.

THE JAPANESE CIVIL CODE AND
FOREIGN CIVIL LAW.

AN article on the above topic from the pen of Professor UME KENJIRO appears in the *Sekai-no-Nihon*. Dr. UME is well versed in the subject on which he writes, and as a member of the revising committee, his observations cannot but be of interest at a time when the character of the new civil code is so much discussed. Professor UME first treats of the sources from which the laws now constituting the Civil Code were derived. Speaking generally, the object of the compilers was to combine foreign law with Japanese traditional law and custom in as far as this is compatible. A careful examination was made of the laws of the following twelve countries, France, Austria, Holland, Italy, Portugal, Switzerland, Montenegro, Spain, Belgium, Germany, England, and America. The extent to which each of the different systems was utilised by the compilers of the Japanese revised code may be thus summarised:—

France.—Notwithstanding certain well known imperfections that characterise the French Code, the fact that it constitutes the basis of so many other codes led the compilers of the first Civil Code of Japan to make an extensive use of it, in fact to employ it as a standard, but the compilers of the revised Code, which has now become law, decided, on the ground of the defective arrangement of many parts of the French Code, to no longer use it as a standard to the exclusion of other Codes.

Austria.—Austrian Law is much simpler than the French or Prussian systems, but many of its provisions are imperfect or

unnecessary, regarded from the Japanese standpoint, and hence very little resort was had to this system in the compilation of our revised Code.

Holland, Italy, and Portugal.—The laws of these countries are all based on the French Code with slight modifications, and seem to contain nothing specially adapted to the needs of Japan.

Switzerland.—The case of Switzerland is different. Though in Switzerland each canton has its own laws, and unification has not taken place, the reputation of the Swiss as legislators is deservedly high and hence the revisers of the Code found in the Swiss systems some excellent models.

Montenegro.—The Montenegrin system of laws is founded on the German, but contains elements which were found useful for purposes of comparison.

Spain.—Spanish Law is founded on the French Code, and, though extremely minute, possesses a simplicity that proved of no small value in deciding on the course to be pursued in revising the Japanese Code.

Belgium.—The Belgian system is founded on the French, but contains many improvements on the French Code. In 1851 the laws of registration, mortgage, and the like were revised, and these laws have since furnished models to not a few countries. In 1885 was finished a proposed revision of the whole Belgic Civil Law, and a bill has been presented to the National Assembly, but has not passed. The revised code is of great length, but supplies many of the defects of the French Code.

Germany.—German Law has not yet been codified. For more than 20 years a Committee has been engaged on a draft of codified law, which was presented to the Diet at the beginning of this year and which is now about to pass the second reading. Though the new code is of great length, it differs from the French code in containing no superfluous matter, no useless repetition. The labour spent on it and the ingenuity displayed in providing for every conceivable situation are alike marvellous. Its form and general arrangement leave nothing to be desired, and Professor UME ventures to think that when this Code is promulgated experts will agree that nothing equal to it exists in the world.

England.—England is still without a code and has little written civil law that could be embodied in the Japanese Code. The study of English books on Law and the reports of trials, however, proved of some assistance to the Revising Committee, and in the system of Law administered in India they found a great deal that was most valuable.

America.—Like England, America not only has no national code, but has few written laws. In some States codes have been drawn up and some of these have taken the French Code or other European systems as models. What proved of most use to the revising Committee for purposes of reference were the Californian and New York Civil Codes, but since the laws which constitute these codes are of English origin they were for the most part only useful for comparison, and could not serve as models.

In the compilation of the Japanese new Civil Code the greatest use has been made both of pre-existing Japanese laws and of foreign codes, but it is absolutely incorrect to say that the new Civil Code is modelled on, or slavishly follows, any single code.

There are parts of it which are borrowed from the German Civil Law system; parts, for instance, the Law of Obligation, which come from Switzerland; parts are derived from the French Code, and parts for which the Japanese have to thank Italy or Spain. But no foreign model has been followed so closely as to warrant its being alleged that the new Civil Code is a mere modification of the system of Law in use in any foreign State. Persons who hold this opinion in reference to the revised Japanese Civil Code can never have read it through. The principles followed by the compilers aimed at giving to the code what the Germans call a *pandekten* character. Though hitherto-existing Japanese Civil Law is the basis of the new draft, the revisers took into consideration the cases in which European laws and customs are contrary to Japanese laws and customs, and in all such instances they endeavoured to make a thoroughly impartial choice. Of course there were differences of opinion among the members of the Committee as to what should be rejected and what taken, and there were times when Professor UME could not agree with the views of the majority of the members. But this was unavoidable. It is well to mention that the revisers aimed at using simple language as far as possible, and avoiding the tedious length which has been reached by some foreign codes. It has been said that the terms used in the revised code are too simple, that is, that they lack definiteness. But it is better to err on the side of simplicity than on that of excessive technicality.

Though the new Civil Code has been compiled and revised by Japanese, concludes Dr. UME, yet it must never be forgotten that the compilers are indebted to foreigners for their models. Law, like other things, must keep pace with the progress of the age in which we live, and Japan should not rest content with what has been attained, but aim at keeping herself abreast of the foremost nations of the West.

SÖUL-FUSAN AND SÖUL-NINSEN RAILWAYS.

The *Yomiuri* states that the concession of the Söul-Fusan Railways is covered by the Provisional Treaty concluded between Japan and Korea in 1894, and that Japan therefore enjoys the prescriptive right to construct this railway despite any breach Korea may make in the Treaty. Therefore, when the Korean Government lately asked Japan to defer the enforcement of the Treaty for the period of one year, the latter refused peremptorily, and is now reopening negotiations with the Korean Government on a stronger basis than ever. As to the Söul-Ninsen Railway, that matter is entirely another affair. It is true that the concession of this line was secured to Japan by the same Treaty of 1894, but the Korean Court, with unpardonable discourtesy, broke the Treaty and gave the concession to Mr. Morse, of the United States. When Count Okuma re-entered the Foreign Office, Korea expressed

sorrow for her errors and offered an apology to Japan, but the Count refused to accept it and contemplates demanding reparation for the violation of the Treaty.

Fortunately for Japan, the lessee of the concession has not achieved success in raising funds, to say nothing of the engineering difficulties to be encountered, and he will therefore have to apply for help from Japan. In short, the lessee is said to be at a loss what to do with his concession. This has naturally attracted the attention of the projectors of the Fusan-Söul Railway. This particular line is never expected to yield any satisfactory returns, and the project is put forward not so much from a desire to reap material profit as from a wish to promote the national interests of Japan. The projectors have conceived the idea that if they could undertake the Söul-Ninsen Railway as well as the unprofitable Soul-Fusan line, the two projects might eventuate in profit to the Company. The projectors waited on the Foreign Minister, and asked his help in furthering their scheme. Considering the idea proper and reasonable, the Foreign Office, while on the one hand demanding reparation for the breach of the Treaty from the Korean Court, has decided to take steps, on the other, to apply pressure so as to further the scheme of the Japanese projectors in recovering their prescriptive right to the construction of the Söul-Ninsen Railway.

INTEREST PAID OUT BY THE TREASURY DURING DECEMBER.

The sums of interest to be paid out by the Treasury during the present month are as follow:—

	Yen.
Five-per-cent. Railway Bonds...	150,000.
Five per Cent. Consolidated Bonds	4,261,821.25
Five per Cent. War Bonds	2,805,672.125

Total 7,217,493.375

The *Shogyo Shimpö*, from which we take the above figures, says that the addition of so considerable a sum to the floating capital of the country within the course of a month, must ease the money market perceptibly.

CHINESE ARTIZANS.

We are surprised to find in the *Kobe Chronicle* a statement that "in the matter of facile touch and artistic taste the Chinese have never distinguished themselves, according to the standards of the world." Why surely it is precisely in these respects that the Chinese have distinguished themselves. What is to be said about their wonderful egg-shell porcelains, thin as a leaf and of perfect technique? What of their jewelled, reticulated, and engraved ceramic productions that connoisseurs, the world over, have always valued so highly? What of their delicious monochromes, never equalled by any other potters? What of their extraordinarily delicate ivory carvings, miracles of patient and deft manipulation? What of their embroideries? What of their bronzes, chiselled so as to satisfy the most exacting critic? What of their cameo glass? What of their pictures, that had reached a high level of artistic excellence while Japanese pictorial art was still in its infancy? It is true that the spirit to which these remarkable productions were due seems to be no longer active among the Chinese. Even the faculty of imitation has not taken its place. Nothing remains beyond a certain measure of mechanical ability. But the race has shown wonderful capacities in the past, and to say that it has never distinguished itself in the matter of facile touch and artistic taste is surely a most unjustly inappreciative assertion.

KOREAN NEWS.

The latest batch of letters received by the metropolitan papers from their Seoul correspondents do not contain any trustworthy information as to the cause of the sudden arrest of military officers and others, between the afternoon of the 21st, and the forenoon of the 23rd ult. Beyond a broad explanation that the trouble originated in the conflicting interests of those that advocated the return of the King to his own palace and those that desired his continued residence in the Russian Legation, nothing can be gathered from the correspondence. One letter says that the arrests totalled 13, while another puts the number at 23. It seems certain that the persons hitherto apprehended are not men of very high position. Two were majors of the Guards, two others captains, and all the rest were either subordinates or previous occupants of inferior military or civil posts. By whom the plot was concocted is not yet clear, but there is a vague conjecture that the new War Minister had more or less connection with the affair. This suspicion is based on the fact that An Hwan, who filled the position of police-inspector at the time of the overthrow of the Kim Cabinet, and who with others assassinated the then Premier and the Minister of Agriculture, Commerce, and Industry, was again appointed to a high post in the Police Board only a few hours before the recent arrests commenced. As illustrating the absence of even a semblance of order and discipline in the Korean Administration, it is mentioned that so soon as An entered the precincts of the Police Board, he summoned a number of detectives and gave orders for the seizure of this or that Korean, and that when the Chief of the Board asked how he ventured to arrogate such authority, An produced an official document nominating him inspector, and, at the same time, arrogantly stated that he had been directed by the King to arrest traitors. Now An is a *persona grata* in the eyes of Min Yong-hwan, the new War Minister, and it is confidently believed that he owes to the latter's influence his rehabilitation as an official of the Police Board. Hence the suspicion that Min must have ordered the arrests. The Chief of the Board was replaced soon afterwards by a man between whom and the War Minister a good understanding is supposed to exist. When the arrests commenced, the Korean soldiers and police that were guarding the King's apartments in the Russian Legation, were relieved by a band of Russian blue-jackets, and were directed to mount guard outside the gate. Early in the morning of the 22nd of November, 80 Russian blue-jackets under three officers entered the capital, drawing with them a piece of artillery and leading 30 pack-horses and 18 waggons. The party had come from Chemulpo during the night. Its arrival intensified the consternation that the arrests had occasioned in the Korean capital, but in point of fact, these marines seem to have been destined simply to relieve those hitherto on duty at the Russian Legation. The two Majors who were apprehended have been deprived of their commissions and replaced by men enjoying the confidence of the new War Minister. The correspondents agree in reporting that relatives and friends of the War Minister are arriving in Seoul in large numbers, and it is confidently inferred that Min Yong-hwan will soon become the repository of the principal power in the State.

Vague as the above is, it goes far to confirm the conjecture recently advanced in these columns, namely, that the so-called plot to carry the King away from the Russian Legation was in reality a plot to keep him there. The middle of this month (December) had been practically fixed as the latest date for His Majesty's return to the palace, an event that would have signified loss of political influence, if not something worse, to a good many persons now very fortunately situated. The best way to prevent the King from quitting the shelter of the Legation was to persuade him that danger threatened if he left its precincts, and the discovery of a plot to obtain possession of his person and remove him by force, may have

seemed the readiest device for rousing his apprehension in that sense. Considering that by sitting quiet and making no extraordinary essay of any kind, the advocates of His Majesty's return to the palace could count on seeing their object attained within three weeks at latest, and considering that they had already waited inactively for many months, it is difficult to conceive why a sudden access of impatience should have driven them to conspiracy and lawlessness.

CHINA NEWS.

The Shanghai Municipal Council have decided to abandon their project of issuing notes. They are said to have been influenced by two considerations; first, that the Chartered Bank being about to make an issue of dollar notes, the present scarcity will be remedied; secondly, that it is unwise for a municipality to enter into competition with banks in matters belonging primarily to the functions of a bank. Either of these reasons would be good in the absence of the other. Advanced in company, they make an incongruous couple.

A singular custom with the people in the vicinity of Kiukiang is to migrate in multitudes for the purpose of begging when hard times overtake them. They put their summer clothes in pawn, leave a few persons to look after each group of their houses with the poultry, pigs, and furniture, and then go off by boat to the big cities along the river, where, by begging from house to house, they manage not only to live, but also to accumulate small sums which they carry home with them in the spring. An exodus of the kind has just taken place owing to the unsatisfactory harvest this year.

In spite of strong opposition offered by the Chinese Authorities, the Japanese have succeeded in obtaining an office for a steam-tug company in the part of Soochow originally selected by them for the purpose, namely, the business quarter of the city. When they first hired a house there, the landlord was arrested by the officials, the middleman was beaten, and the carpenters that repaired the house were punished. But the Japanese persevered, and have now gained their end.

Chang, Taotai of the Eastern Marches—that is to say, Fenghuang, the Yalu Valley, &c.—was recently denounced to the Throne by the Tartar General of Mukden, the celebrated E-ko-tang-a, for obstructing a colleague in the performance of his duties. The colleague was an expectant Taotai, despatched by the General to "assist" Chang in collecting the taxes. But Chang did not want any assistance. It appears that when the Intendency of the Eastern Marches was first established twenty years ago, special permission was given from Peking that the local taxes should be entirely devoted to defraying the expenses of the Taotai'ship. Since then, the revenue from taxation has largely increased, but naturally no Taotai reported to the Throne that too much money was coming into his hands. Each officer quietly pocketed the surplus and kept silence. Probably, if Chang had shared the plunder with the expectant Taotai sent to aid him, he too, might have remained undisturbed. But he rebelled against all interference, was denounced and deposed. Then a commission was despatched to investigate, and it transpired that in six months Chang had collected 240,000 Tls. and paid out 5,000. The process of making him disgorge the plunder is now going on.

THE RAILWAY CORPS.

Our readers are aware that the organization of a Railway Corps forms part of the scheme of military expansion elaborated by the Ito Cabinet and approved by the Diet. It is stated that the men required for the Corps will be obtained during the present month by taking an additional number of conscripts, and that the lines in the vicinity of Tokyo will be either bought up or hired in order to appropriate them, as well as the Ofuna-Yokosuka road, for the training of the troops. Every post on these lines, from that of station-master to stoker and track-man, will be filled by soldiers of the Corps.

INCREASE OF INCOME.

The *Fiji Shimpō* furnishes interesting information illustrating, to a certain extent, how the wealth of the people has increased since last year. Income returns sent in from 34 Local Offices show that the income tax yields 226,739 yen more this year than last. The total increase of income in those districts, exclusive of Hokkaido, Kanagawa, Kagawa, and Kagoshima, is 13,725,516 yen. The following are the localities where this increase is specially noteworthy:—

	Increased Income. yen.	Increase of Tax. yen.
Tokyo	4,993,186	87,873
Hyogo	1,002,391	15,517
Shiga	991,996	5,344
Okayama	777,942	10,891
Aichi	764,800	11,553
Fukuoka	631,702	7,897
Kyoto	614,665	9,105
Hiroshima	105,344	7,851

There being in all 47 Local Offices, we may reckon the total increment of income throughout Japan at about 20 million yen, judging from the rate of increase in the 34 districts from which returns have already reached the Department of Finance. Turning to the latest annual statistics compiled by the Government, we find the rate of increase of income during the past few years to be as follows:—

	Total Income.	Income Tax.	No. of Tax payers.	Average amount of tax paid by each person.
1890.....	81,047,372	1,088,476	115,833	9.39
1891.....	82,059,320	1,113,068	115,945	9.59
1892.....	83,453,130	1,129,047	117,094	9.64
1893.....	91,313,444	1,237,954	124,077	9.97
1894.....	99,470,716	1,359,152	129,327	10.50

Judging from the above figures, an increase of income to the extent of more than 20 million yen since 1895 seems somewhat sudden, but we quote what we find stated.

SMALL-POX IN JAPAN.

Small-pox is now widely prevalent in Japan. It rages with more or less virulence in Kyushū, Shikoku, the Kei-Han districts, the vicinity of Tokyo, and spreads even as far north as Miyagi. In the Kei-Han districts, Hyogo Ken is the centre; in Kyushū, Fukuoka; and in the Kwantō, Tokyo. During the month of November as many as 630 patients were reported in Hyogo Ken; 500 in Tokyo *fu*; 157 in Fukuoka prefecture; and in other places the new patients aggregated from 30 to 70. Between January and September, the cases reported from all parts of Japan were 3,880, of which 1,234 ended fatally, but after September the disease so suddenly assumed an epidemic character that whereas, during September only 14 persons were attacked in Tokyo, the number swelled to 80 in October, and to 500 in November. As similar increases occurred in the other afflicted districts, the total throughout Japan must have reached 5,000 by the end of November. In the spring of this year a few sporadic cases occurred in Tokyo, but the disease had virtually disappeared by June, and did not break out again until September. From January 1st to December 6th, 1,276 patients were reported in Tokyo, distributed as follows, according to urban sections:—

Kojimachi	85	Kanda	175	Nihonbashi	86
Kyobashi	95	Shiba	56	Azabu	7
Akasaka	2	Yotsuya	21	Ushijima	45
Kojimachi	8	Hongo	36	Shitaya	148
Akasaka	32	Honjo	210	Fukagawa	79

The epidemic does not yet show any signs of abating: 17 or 18 fresh cases are daily reported. In the vicinity of Tokyo, Kanagawa has the worst record: there were 39 patients there last month. Then came Chiba and Saitama.

An epidemic of small-pox in Japan is generally localized: its universal prevalence is very rare. For instance, the disease prevailed during 1886 and 1887 in Chugoku, Kyushū, and Shikoku; while during 1892 and 1893 it spread through the north-eastern portion of the main island, the Hokuriku districts, and also through Hokkaido. But the march of the malady is very irregular this year, for while Kyushū, in the South, is

afflicted, a portion of the north-eastern section of the main island is also attacked. According to the opinion of the authorities, the epidemic must have been imported from either China or Formosa, the germs having been brought over by military coolies returning from a sojourn of more or less duration in those places. The prevalence of the disease in Hyogo and Fukuoka, which are in close touch with China and Formosa, seems to support that hypothesis; while its appearance in Tokyo may be accounted for by the fact that people throng thither from all quarters. Miyagi being a place where a military division is quartered, the military coolies may have carried the disease there. It should be noted here that during November the mortality in Tokyo was 114 out of 500. The mortality is far greater in Okinawa, where out of 255 patients reported up to the 8th inst. no less than 129 died.

THE "MUCH" ABUSED "LIKIN."

It has been alleged that after the triumvirate of allies had "persuaded" Japan to restore the Liaotung Peninsula without making the restoration contingent upon China's concluding a new commercial treaty with her conqueror, the Tokyo Government would have been well advised had they made no haste about the treaty, but waited quietly until the evacuation of Wei-hai-wei came upon the *tapis*, since they would then have possessed a lever to obtain concessions from Peking. Perhaps that would have been an astute policy, but it need not be now discussed. Among the things "wanted" was some conclusive arrangement about *likin*, but truly it is difficult to see what conclusive arrangement could be made other than the complete abolition of the much abused impost. It is all very well to obtain for foreign goods transit passes that nominally free them from any further payments *en route* to the consumer, but how can that freedom be guaranteed? Who is to safeguard the goods from the time that they pass beyond the immediate ken of foreign consuls? So soon as they reach the interior, the Chinese local authorities have them in their power, and can tax them to their heart's content by processes in which every Chinese official is an adept. On the other hand, would the abolition of *likin* be an unmixed blessing? A correspondent of the *North-China Daily News* makes some interesting remarks on the subject. It appears that the transport of goods along the Yangtze is effected chiefly by junks, and that the *likin* paid for short distances is about one-twentieth of the import duty. Now if *likin* were abolished, and if all goods for the interport trade had to be passed through the Imperial Customs at present rates, they would be taxed to the extent of one-half of the import duty in transit from one customs station to another; and inasmuch as there will soon be customs stations at intervals of every 50 miles along the river, the last state of the goods would evidently be worse than the first. Local trade would be strangled by such a system, and the only alternative would be to leave junk traffic free of all tax, which would mean, of course, that no work would offer for steamers.

FIGHT AT THE MOUTH OF THE RIVER TAMA.

On the 5th inst., a severe fight took place at the mouth of the river Tama, resulting in the wounding of about 40 persons, of whom 30 were police constables. The quarrel had its origin in competition between the Okura-gumi on the one hand, and the Takashima-gumi and the Wakizawa-gumi on the other, about the supply of stone, to the extent of over 52,000 *yen*, for the construction of the third fort in the vicinity of Yokosuka. The last two firms had succeeded in obtaining the contract, and their success roused the ire of their rivals, who proceeded to hire all the sampans and junks in the vicinity of Yokosuka, Yokohama, and Tokyo, with the object of preventing the contractors from carrying out the work. Hence the quarrel.

So soon as their tender had been accepted, the contractors proceeded to hire some 90 boats, but that number being insufficient, they chartered 10 more from fishermen in the vicinity of Yokosuka. Their rivals, hearing of this transaction, prevailed upon the owners of the boats to hand them over temporarily, and then had the craft secretly removed to the mouth of the Tamagawa, where about a hundred other boats, collected from the vicinity of Yokohama and Tokyo, were also kept under the guard of more than a hundred fishermen of the vicinity. When the news of these doings reached the contractors, they sent fifteen or sixteen men to the mouth of the river to get back the boats, to which they had a prior right. These men, who were ex *soshi*, preferred their demand for the ten boats in such strong language that the fishermen posted to guard the craft, seized their oars and gave the ex *soshi* a sound thumping by way of reply. The latter fought desperately, but as the odds were so much against them, they were soon worsted, some being thrown overboard, and struck with oars as they sought to swim ashore. The news reached the Kawasaki Police Office, and was thence conveyed to the Kanagawa Police Office and also to Omori and Shinagawa. Some fifty or sixty constables hastened to the scene, and at last succeeded in quelling the disturbance, and arresting several of the ringleaders on both sides. The scuffle lasted from 1 to 4 p.m., and 40 men carried away ugly records of the prowess exhibited by both parties.

THE EWO COTTON MILL.

At the first ordinary general meeting of the Ewo Cotton Spinning and Weaving Company, the Chairman, Mr. Alford, spoke in very confident terms about the question that has attracted so much attention since the probability was pointed out in these columns that the Chinese Authorities would endeavour to strangle foreign manufacturing enterprise at its birth by taxing either raw cotton on its way to the mills or cotton yarns when about to issue from the factories. Mr. Alford said:—

The danger of this excise question I do not underate, nor must you; it is a serious matter, but apart from the rights and obligations of Treaties and such like points, which it can serve no useful purpose to here discuss, I have confidence that the common sense of the advisers of the Chinese Government will prevail, and whilst we have already made representations on the subject, we are still taking steps to impress our views: meantime do not let us aggravate the difficulties we have to encounter by crying before we are hurt.

It is difficult to endorse this sanguine tone, however we may admire the speaker's courage. Treaty obligations can no longer be invoked. Whatever security the Shimonoeki Treaty conferred has been annulled by Japan's consent to waive the privileges that the document contained in this particular respect. As to "the common sense of the advisers of the Chinese Government," the obstinacy shown by China in prolonging the negotiations for the commercial treaty with Japan until the latter consented to waive the free-manufacturing clause of the Shimonoeki agreement, and the fact that China was willing to purchase Japan's complacency in this matter at the cost of sites for four independent settlements, show pretty clearly how much trust can be placed in Peking's forbearance, and what intentions are entertained by the Chinese Government in the matter of taxing the products of foreign manufacturing enterprise. Finally, can it be reasonably expected that the British Government will exert itself strenuously to further the prospects of cotton mills in China which will compete directly and at great advantage with Manchester and Bombay? The broad view may be taken that China's prosperity, by whatever means accomplished, can not fail to generally benefit the countries trading with her, and ought to be promoted by England without regard to the disadvantages entailed upon particular branches of trade or particular individuals by the process. But we doubt whether Her Majesty's Government will be induced to adopt that view very vigorously in the present instance.

"YOKOHAMA" CHAPTER H.R.A. INSTALLATION.

On Thursday evening the annual installation of Principals and investiture of officers of the "Yokohama" Chapter of the Royal Arch, No. 1092, E.C., took place at the Masonic Temple, Main Street. A goodly number of Companions were present. The Installation ceremony was impressively carried out by M. E. Companion Geo. Hodges, P.Z., who placed M. E. Comp. F. Retz in the Grand Orient as Z. with becoming ceremony; and afterwards Ex. Comp. L. Stornebrink as H., and Ex. Comp. T. E. Beatty as J. The full list of officers follows:—

M. E. Comp. F. Retz Z.
Ex. Comp. L. Stornebrink H.
Ex. Comp. T. E. Beatty J.
M. Ex. Comp. Geo. Hodges, P.Z. S.E.
Ex. Comp. R. N. St. John S.N.
M. Ex. Comp. H. Moss, P. Z. Treas.
Comp. S. E. Unite P.S.
Comp. Thos. W. McIlraith 1st A.S.
Comp. E. P. Pallister 2nd A.S.
Comp. Rev. A. R. Morgan Chap.
Comp. H. Ivison Janitor.

After the closing of the Chapter, some twenty of the Companions sat down to a *recherché* repast provided by Mr. C. B. Clausen, of Clausen's Hotel, the M.E.Z. Retz presiding. The toast of "The Queen and the Craft" was given from the chair; as was also "The Grand Principals and Officers of the S.G.C. of R.A.M. of Eng." M. Ex. Comp. W. Barrie toasted the "newly installed Principals and Officers," to which the M.E.Z. suitably responded. The chairman then gave "The retiring Principals and Officers," to which M. Ex. Comp. H. J. Sharp responded. In doing so he referred briefly to the work of the past twelve months, and to the assistance afforded him by the Scribe E., assistance that proved invaluable. He wished the newly-installed officers a prosperous year. The Chairman next gave "Our sister Chapter at Kobe," for which Comp. E. C. Fox responded in cordial terms of appreciation. Next came "The youngest Companion," to which Comp. H. W. Lea responded; then "The installing Principal," proposed by M. Ex. Comp. Barrie, and feelingly replied to by M. Ex. Comp. Hodges. "The Visitors," responded to by a visiting Companion from the United States; and "The Tyler's Toast," concluded the list.

IMPORTANT TO EXPORTERS.

The following notification is of interest to shippers of goods to the United States:—

NOTICE TO SHIPPERS.

1. No oath shall be required for the verification of invoices of merchandise on the free list or subject to specific duty only.

2. The verification by oath of invoices of merchandise subject, expressly or in effect, to *ad valorem* duty may be required when the consular officer to whom the invoices are presented has reasonable ground to suspect fraudulent undervaluation or other willful misstatement therein, but shall not be required in any other case.

Any oath required pursuant to this regulation may be taken before any commissioner or other officer of good character and standing who is legally qualified to administer an oath to which the local law attaches a penalty for false swearing.

3. Consular officers are prohibited from receiving the whole or any part of the fees charged by a Commissioner or other officer for administering oaths to invoices; from receiving anything as a gratuity or otherwise on account of the administration of such oaths; and from being in any way either directly or indirectly pecuniarily interested in such fees.

RICHARD OLNEY,
Secretary of State.

Department of State,
Washington, D.C., Oct. 21st, 1896.

I would call the attention of shippers to the fact that while, under the order of the Hon. the Secretary of State, above notified, the necessity for verifying, by oath, invoices covering merchandise on the free list or subject to specific duty only, is dispensed with, it is clear from instructions received by me, that the presentation at this office of the copies of the invoice with the customary declaration is still required.

N. W. McIVOR,
Consul General.

PATENTS, TRADE MARKS, ETC. PATENT LAW.

Imperial Ordinance No. 84 of 18th day of the 12th month of the 21st Year of Meiji (A.D. 1888), to be in force from 1st day of the 2nd Year of Meiji (A.D. 1889).

Art. I.—Any person who has invented any new and useful technical process, machine, manufacture, or compound, or any new and useful improvement thereof may obtain a patent in accordance with the provisions of this law.

By the term patent is meant a document by which are secured to the inventor, or inventors, the exclusive right to manufacture, and all the benefits arising from the sale or use of a particular article.

Art. II.—The following are not patentable:—

1. Articles of food, drink, or fashion.
2. Medicines, or methods of compounding them.
2. Articles which have been in public use before the application for a patent.

This does not exclude articles which have been on public trial for a term of not more than two years.

Art. III.—Any person who desires to obtain a patent shall make application to the Minister of State for Agriculture and Commerce annexing the specification and necessary drawings for each invention.

Such application, specification, and drawings shall be filed at the Patent Bureau.

Art. IV.—On application for patent, the Director of the Patent Bureau shall direct the examiner of the Patent Bureau to examine the invention and if the latter decides in favour thereof shall register it in the Register of Patents and proceed to deliver Letters Patent with the approval of the Minister of State for Agriculture and Commerce.

Art. V.—Letters Patent shall be signed by the Minister of State for Agriculture and Commerce and countersigned by the Director of the Patent Bureau, and delivered to the applicant together with the specification and necessary drawings.

Art. VI.—The periods for which patents shall be granted are three viz., 5, 10, and 15 years and shall be reckoned from the day of registration.

Art. VII.—When it is considered that the general use of an invention is desirable for the public interest, or, that the invention should be kept secret for military purposes, the Minister of State for Agriculture and Commerce may grant a conditional patent, or may refuse to grant a patent, or may fix conditions to, or cancel a patent already granted.

In such cases the Minister of State for Agriculture and Commerce must give the inventor, or owner of the patent, such compensation as he thinks adequate to the case.

Art. VIII.—Any person who has invented an improvement upon a patented invention of another, and desires to obtain a patent for such improvement, shall first confer with the original patentee, and send in his application, in compliance with the provisions of Art. III., after having obtained from him a license to use the original invention together with the improvement.

In case the owner of the original patent does not agree, the inventor of the improvement may send in his application stating the circumstances, and the Minister of State for Agriculture and Commerce may grant him a patent to use the original invention together with his improvement.

The inventor of the improvement having obtained a patent by virtue of the last paragraph must give such compensation as the Minister of State for Agriculture and Commerce may think adequate.

Art. IX.—When a person who has obtained or has applied for a patent dies, his rights devolve on his heirs or assigns.

Art. X.—Patents granted to the following classes of inventions are to be annulled:—

1. Inventions which have been proved to be either not new or not useful.
2. Inventions which have been found to come under Article II.
3. Inventions of which it has been found

that facts important for working the inventions have been intentionally omitted from the specification.

4. Inventions of which it has been found that particulars irrelevant to working the invention have been intentionally inserted in the specification.

Art. XI.—When the examiner of the Patent Bureau decides that a patent should not be granted, the Director shall send a written statement of the decision to the applicant.

Art. XII.—Any person who is not satisfied with the Director's decision may file a written statement of grounds of dissatisfaction and demand a re-examination.

Upon demand for re-examination the Director shall instruct the examiner of the Bureau to re-examine the application, and if the latter decides that the grounds for dissatisfaction are unreasonable a written statement to that effect shall be sent to the applicant.

Art. XIII.—When the examiner decides that the invention for which a patent is applied interferes with one under consideration or patented, the Director shall inform the parties of the points of interference and direct them to send in further particulars of their inventions.

On the parties filing these particulars, the Director shall refer them to the examiner, and direct him to decide the question of priority, and send a written statement of the decision to the applicants.

Art. XIV.—When under the previous Article an existing patent is revoked, and another granted, the latter shall date from the registration of the former, and cannot extend beyond the date of expiry of the former.

Art. XV.—Any persons who is not satisfied with the re-examination under Article XII., and the decision under Art. XIII., may demand trial before the Patent Bureau.

Art. XVI.—When one patentee finds that his right interferes with that of another patentee he may demand trial before the Bureau for the determination of their respective rights.

Art. XVII.—Any person finding that an invention for which a patent has been granted falls under Article X, may demand trial before the Bureau in order to annul the patent.

Art. XVIII.—When a trial is demanded the Director, as presiding judge, shall hear the case with two or more assistants.

Art. XIX.—There shall be no appeal against the judgment of the Patent Bureau to any court whatever.

Art. XX.—When the parties concerned require evidence as regards the examination under Article XII., or trial before the Bureau, the Director may at their request require a Civil Court to collect the same.

Art. XXI.—Costs incurred under Article XV. and XVII. shall be borne in accordance with the practice in civil suits.

Art. XXII.—A patent may be sold, or transferred, with or without conditions, or may be hypothecated; but, in such cases, application must be made to the Bureau, and the contract shall be registered, and shall be invalid unless registered.

Art. XXIII.—No official of the Patent Bureau shall, during his employment in the Bureau, apply for a patent, or become the owner of a patent except by succession.

Art. XXIV.—In the following cases patent shall be forfeited:—

1. When the patentee without sufficient reason has not worked, and exploited his invention after the expiration of three years from the date of his patent.
2. When the patentee without sufficient reason discontinues working and exploiting the invention for three years.
3. When the patentee imports and sells an article for which he has obtained a patent, or knowing that some other person is importing and selling an article which infringes his rights acquiesces therein.

Art. XXV.—When a patent is damaged or lost, the patentee may, stating the cause, apply for its re-issue.

Art. XXVI.—When a patentee finds his specification or drawings insufficient, or not

sufficiently detailed, he may, in order to secure the efficiency of the patent, make application for amendment of the patent, annexing the amended specification, and/or, drawings, but he may not introduce changes in the essential particulars of the invention.

Art. XXVII.—When a patentee finds that he has inserted by mistake some particulars not of his own invention as his invention in his specification, he must apply to have the same corrected.

Art. XXVIII.—When any person makes application in accordance with Articles XXVI. and XXVII. the Director shall refer the application to the examiner, and direct him to examine the application.

In the foregoing case an applicant who is not satisfied with the decision of the examiner may demand a re-examination.

Art. XXIX.—Patentees shall affix to their articles such marks as may be determined by the Minister of State for Agriculture and Commerce.

Art. XXX.—When applications or requests are made in respect of patents, the following fees shall be paid on application:—

1. On application for a patent for each inventionyen 5
2. On request for registration of sale, transfer, or partnership in a patent, for each invention " 10
3. On application for re-issue of letters patent for each invention " 1
4. On application for amendment of a patent, or for the correction of a specification for each invention ... " 5
5. On application for a trial for each invention " 7
6. On application for registration of hypothecation " 6

Art. XXXI.—The following fees shall be paid for Letters Patent:—

1. A patent for 5 yearsyen 20
 2. A patent for 10 years " 30
 3. A patent for 15 years " 40
- For revised Letters Patent:—
1. A patent for 5 yearsyen 10
 2. A patent for 10 years " 15
 3. A patent for 15 years " 20

Art. XXXII.—The Patent Bureau shall periodically print and sell at a reasonable price an *Official Journal* of patented specifications and matters relating to patents.

Art. XXXIII.—Any person wishing to have copies of documents, or of drawings relating to patents, may obtain them on application to the Patent Bureau by paying a reasonable fee for making the same.

Art. XXXIV.—Any person infringing the patent rights of another shall be liable for damages to the patentee.

Art. XXXV.—As to the liability for damages under the preceding Article the limitation shall be three years.

Art. XXXVI.—Any person counterfeiting a patented article, or process belonging to another, and using or selling it, or who knowingly uses himself, or sells on behalf of another a counterfeited article, or who pirates the patented article or process belonging to another, shall be punished with Major Confinement for not less than one month and not more than one year, or a fine of not less than yen 20 and no more than yen 200.

Any person who knowingly imports and uses or sells an article infringing the rights of a patentee, or who knowingly uses himself or sells on behalf of another such article, shall be liable to the same punishment.

Art. XXXVII.—In the foregoing cases the article in question shall be forfeited and handed over to the patentee; and as to articles which have been sold, the offender shall be compelled to pay the amount for which they have been sold to the injured party.

Art. XXXVIII.—Any person obtaining a patent by fraudulent means, or who shall sell unpatented articles with patent marks, or marks being colourable imitations of them, or who knowingly sells such articles on behalf of another, shall be punished with major confinement for not less than fifteen days and not more than

six months, or a fine of not less than yen 10; and not more than yen 100.

Art. XXXIX.—Offences under Article XXXVI. shall be tried only at the instigation of the injured party or parties. In such case a judge may, upon demand of the injured party or parties, provisionally suspend the use of articles which are the subject of litigation.

Art. XL.—A patentee who neglects to affix the patent marks above mentioned in Article XXIX. to his patented article or articles, cannot sue for damages for infringing on his rights.

Art. XLI.—When a defendant in his answer to the suit states that the patent is void he shall file his defence before the Court, and demand trial within thirty days after that date under Article XVII.

In such case the Court shall adjourn the proceedings until the trial before the Bureau shall have been concluded.

Art. XLII.—The provisions of the Penal Code as to the concurrence of several offences shall not apply to offences under this Law.

Art. XLIII.—The rules for the carrying out of this Law shall be made by the Minister of State for Agriculture and Commerce.

Art. XLIV.—This Law shall come into force on the first day of the second month of the 22nd year of Meiji (A.D. 1889).

Art. XLV.—The Patent Law Notification No. 7 of the 18th year of Meiji (April A.D. 1885) shall cease to be in force. Provided that patents secured under this last mentioned Law shall have the same force as those secured under the present Law.

Any application for patent which may not have been decided on the date on which this Law comes into operation shall be determined according to the provisions of this Law.

CABINET ORDINANCE No. 23.

Published 25th day of the 12th month of the 21st year of Meiji (A.D. 1888), and to be in force from the 1st day of the 2nd month of the 22nd Year of Meiji (A.D. 1889).

Fees for grants and registration under the provisions of the Patent Law, the Law of Designs, the Law of Trade Marks, as well as fees under Articles XXX. and XXXI. of the Patent Law, Article XVIII. of the Law of Designs, and Article XVII. of the Law relating to Trade Marks shall be paid in registration stamps.

THE DEPARTMENT OF AGRICULTURE AND COMMERCE, ORDINANCE No. 17.

Rules for carrying out the Patent Law, Published 18th day of the 11th month of the 25th year of Meiji (A.D. 1892) to be in force from the 1st day of the 12th month of the same year.

CHAPTER I.—GENERAL PROVISIONS.

Art. I.—All documents filed at the Patent Bureau shall be made out separately for each subject, have the date of filing and the name, status, occupation, and residence of the depositor, and the specification and drawings shall bear only the name of the depositor, and, be sealed. Demand for trial, statement of particulars, reply relating to interference, or, trial, and amendment shall be made in such number of copies as the number of the adverse party, besides the original documents.

Art. II.—All documents must be clearly written, and no alterations or erasures must be made, and, when words are inserted, are to be omitted, or, are written in the margin, they must be stamped with the party's seal. Words to be omitted shall not be erased, but they shall be noted in the margin.

Art. III.—When documents, drawings, models, &c., are imperfect or of doubtful meaning, or require explanation, the Director of the Patent Bureau (or the presiding judge), shall inform the applicant thereof and direct him to amend, reconstruct, or answer within sixty days from the date of notice in writing.

Art. IV.—When an applicant finds anything imperfect or obscure in his documents, drawings, or models, he may ask to be allowed to amend or reconstruct them.

When the foregoing application introduces changes in essential parts, or the Director or

the presiding judge does not recognise the necessity for the application, it shall be rejected.

Art. V.—When demand for trial, statement of particulars, reply relating to interference, or trial, have been amended, the Director, or presiding judge shall send the amended documents to the adverse party.

Art. VI.—When from an unavoidable cause it is impossible to take the ordinary or designated course within the term prescribed by these Rules, the party shall state the reasons and as far as oral trial is concerned, with the consent of the other party file an application for postponement.

When the Director, or presiding judge considers such a request reasonable he shall fix a further term not exceeding sixty days, and give notice thereof to the parties concerned.

Art. VII.—When an applicant does not take the ordinary or designated course within the prescribed term as fixed by the Rules or by the Director, or presiding judge, the application shall be refused.

Demand for trial, particulars, demand for postponement of trial, reply relating to interference or trial, and amendment, shall not be received unless filed within the term stated in the preceding paragraph.

Art. VIII.—Demand for trial, particulars, reply relating to interference, or trial, shall be accompanied by evidence necessary to prove the alleged facts.

Art. IX.—Documents, drawings, models and specimens shall not be returned except those deposited as evidence.

Art. X.—When the plaintiff, or defendant appears by attorney notice shall be given thereof, and the power of attorney shall be exhibited. When the Director or presiding judge, considers the attorney or attorneys unfit, he may, with the approval of the Minister of State for Agriculture and Commerce, direct the appointment of a new attorney or attorneys.

Art. XI.—The term of a Patent cannot be altered after it has been once granted.

Art. XII.—The Director shall, with the approval of the Minister of State for Agriculture and Commerce, publish the registration, amendment, revocation, annulment, or cancellation of Patents and other important matters relating to the same in the *Official Gazette* and the *Official Gazette of Patents*.

CHAPTER II.—APPLICATION FOR PATENTS.

Art. XIII.—Application for Patents shall be made in accordance with forms Nos. 1, 2, and 3, and registration stamps shall be affixed of such value as corresponds with the fee under Article XXX. Section 1 of the Patent Law.

Art. XIV.—When an applicant wishes to obtain a Patent on joint account with, or in the name of, another, he shall so state in his application, and if it concerns patent of improvement under Article VIII. of the Patent Law, shall annex a written statement of license from the patentee and the reason for not doing so when he cannot obtain it.

Art. XV.—When an applicant cannot file the specification or drawings at the time of application, he may first file the application only, and subsequently file the specification and drawings within thirty days from the date of filing the application. In the latter case, a document is needed stating that the drawings and, or, specification are to accompany an application for a certain invention filed on such and such a date.

Art. XVI.—When application, specification, and drawings are complete, the Director shall put a serial number upon the application and give notice thereof to the applicant. All documents referring thereto must, after receiving the above notice, bear the serial number of the application.

Art. XVII.—When after the filing of the application for patent a person wishes to obtain a patent on joint account with, or in the name of another, he shall make application therefor before the registration in the Registrar of Patents. After the registration no such application can be received.

CHAPTER III.—SPECIFICATIONS, DRAWINGS, MODELS, AND SPECIMENS.

Art. XVIII.—Specifications shall be made under the following heads:—

1. Title of invention. Every invention shall have a name sufficiently describing its nature.
2. Abstract of the nature and purposes of the invention. The structure, functions, and operation of the invention shall be briefly described.
3. Short explanation of drawings if any. The position, views, and parts shall be indicated by figures.
4. Detailed explanation of the invention:—The invention shall be fully explained with all details necessary for its working (reference to be made to drawings if any) so that any person of ordinary ability will not experience any difficulty in working the invention; and the meaning of words in the extent of claim must be defined.
5. Relation to the original invention of an improvement of an invention:—The difference between the original invention, and the improvement, the essential points of combination and results obtainable by co-operation must be pointed out.
6. Extent of claim for a Patent:—Those particulars which alone are indispensable for constituting an invention shall be pointed out.

Art. XIX.—In the following cases, and the following cases only, the extent of claim in the specification should be separated:—

1. When, in order to make plain the scope of the Patent right the parts new and constituting an invention are stated in several ways.
2. When, in order to ascertain the Patent right, the invention or parts new and constituting an invention are separately stated.

Art. XX.—Drawings must show the parts necessary to make an invention clear. If it refers to improvement, the relation between it and the original invention must be shown.

Art. XXI.—As to models and specimens only those parts which are essential to the invention need be strongly constructed in metal or wood, their length, breadth, and height not to exceed one *shaku* (Japanese foot) and if it be an object liable to be broken or of a perishable nature the depositor shall take proper precaution. When, however, the subject matter of application for patent is of some special material or the Director approves or specially orders, this rule shall not apply.

Art. XXII.—The patentee shall by order of the Director deposit the model or specimen of his invention for exhibition.

Art. XXIII.—When a model or specimen becomes unnecessary the Director shall notify the depositor to take it away, and, in the event of his not doing so within ninety days from the date of notice in writing the Director shall dispose of it at his discretion. The Director will not be liable for damage or loss of models or specimens.

CHAPTER IV.—EXAMINATION.

Art. XXIV.—Inventions shall be examined into according to the serial number of the application, except in the following cases:—

1. Applications for Patent falling under Article VII. of the Patent Law.
2. Applications for amendment under Article XXVI. of the same Law.
3. Applications for correction under Article XXVII. of the same Law.

Art. XXV.—The following inventions must not be considered as new and useful inventions:

1. Inventions publicly known before.
2. Inventions publicly used before application for Patent is made; provided that public use by Patent* shall not be held to prejudice their novelty.
3. Inventions from which no good result can be expected.

Art. XXVI.—For the following applications, though the inventions are new and useful, Patents are not to be granted:—

* Note.—This is only in case of interference.

1. Applications considered fall to under Sections 1 or 2 of Article II. of the Patent Law.
2. Applications in which it is considered that there are certain circumstances coming under Sections 3 or 4 of Article X. of the same Law.

Art. XXVII.—Grant of Patent for improvement shall be confined to such improvements as, adopting the extent of claim of a Patented invention and, adding an improvement upon it, a good result towards the same purpose is attained.

Art. XXVIII.—When a model, or specimen of an invention is required in the proceedings of examination, the Director shall give notice thereof to the applicant and direct him to deposit it within ninety days from the date of notice in writing being given.

Art. XXIX.—When it is necessary to make experiments during the examination of an invention, the Director may appoint a time for it and direct the applicant to make the experiments.

Art. XXX.—A written statement of refusal to grant a Patent shall be made as follows:—

1. Serial number of the application.
2. Title of the invention.
3. Name, status, occupation, and residence of the applicant or his attorney.
4. Abstract of application for the Patent, or, in case of re-examination, the grounds of refusal.
5. Grounds of refusal shall be exactly and accurately explained by reference to the specification, and on what evidence; when, however, in accordance with Article XIX. the extent of claim is separately stated in two or more items, reasons shall be given for each item separately.

In case of re-examination, the grounds of appeal shall be refuted and the reasons of the decision on the first examination explained and demonstrated.

6. Text of judgment.

7. Date of decision.

Art. XXXI.—Any person demanding re-examination shall make a written statement of grounds for appeal under the following heads and file it within thirty days from the date of the decision:—

1. Serial number of application.
2. Title of invention.
3. Name, status, occupation, and residence of the applicant, or his attorney.
4. Chief points of appeal.
5. Arguments referring to the specification and only those contesting the grounds of refusal.
6. Alleged proofs in support of appeal.
7. Signature and seal of the applicant or his Attorney.
8. Date of appeal.

Art. XXXII.—When in the written statement of appeal the grounds of refusal are not refuted or dissatisfaction only is expressed in the refusal to grant a Patent on the ground of the matter not being described in the specification, the written statement of appeal shall be treated as though it had not been filed. The Director shall explain the reason to the applicant.

Art. XXXIII.—When an adverse decision is given against the written statement of grounds for appeal, not on the grounds indicated in the written statement in the first decision, but on new grounds, this decision shall take the place of the first decision and that decision shall be revoked. The Director shall give notice thereof to the applicant.

Art. XXXIV.—In the case of trial being demanded according to Article XV. when it is decided that the grounds of refusal were unfounded, the Director shall proceed to hold a new examination.

When the new examination is held the grant of Patent cannot be refused on the same grounds as before.

CHAPTER V.—CONFLICTING APPLICATIONS.

Art. XXXV.—An interference of inventions takes place only when there are the same items in the extent of claim for a patent made by two or more persons with the following distinctions.

Provided that of the parts not separately

stated in the specification as prescribed in Article XIX., or parts to be considered as abandonment of rights, as provided by Article LX. no interference takes place.

1. Between two or more inventions under application.
2. Between an invention under application and inventions patented or under amendment.
3. Between two or more patented inventions under amendment.
4. Between patented inventions and those under amendment.

Art. XXXVI.—Examination of interference shall be held after an invention interfering with another has been decided as patentable. When the examiner finds the invention does not interfere before examination of interference is concluded, the examination shall be closed.

Art. XXXVII.—When the extent of claim of an invention which has been applied for does not interfere with the extent of claim of another invention for which application has been made for Patent only by reason of being not separately stated in accordance with Article XIX., the Director shall inform the applicant thereof and enquire whether he will amend the specification or not.

Art. XXXVIII.—Notice of interference, together with written statement of grounds indicating the interference, shall be sent to the party concerned. When the party concerned has received the foregoing notice and written statement of grounds, he shall file particulars relating to his invention within sixty days and if he fails to do so within that term he cannot claim priority on the grounds that he had completed his invention before the date of his application for Patent.

Art. XXXIX.—When the party has filed particulars, the Director shall send them to the other party, and direct him to file his reply within thirty days. After the parties concerned have filed particulars, if the Director thinks it necessary to direct either or both parties to reply, he shall again take the foregoing course.

Art. XL.—Any person wishing to dissolve proceedings in an interference of invention shall, before the final decision of interference, demand the revocation of his Patent, or application interfering, or the cancellation of the interfering parts of the invention. When such a claim comes before him the Director shall dissolve the application and give notice thereof to the parties concerned.

Art. XLI.—Particulars shall be stated under the following heads:—

1. Serial number of interference.
2. Title of interfering invention.
3. Name, status, occupation, and residence of the parties concerned or their attorneys.
4. Statement of facts. These shall be accurately stated, with dates of invention, when designed and when completed, when and how the invention was taken either in drawings, models, or specimens.
5. Alleged proof of facts.
6. Signature and seal of depositor or his attorney.

Art. XLII.—Reply relating to interference shall be made according to the following heads:

1. Serial number of interference.
2. Title of interfering invention.
3. Name, status, occupation, and residence of the party concerned or his attorney.
4. Chief points of reply.
5. Arguments.
6. Alleged proof of facts, or statement against the mode of taking evidence proposed by the adverse party.
7. Signature and seal of the depositor or his attorney.
8. Date.

Art. XLIII.—Written statement of decision of interference shall be made in the following order:—

1. Serial number.
2. Titles of the conflicting inventions.
3. Name, status, occupation, and residence of the parties concerned or their attorneys.
4. Abstracts from the statements of the parties.
5. Grounds of decision. These shall be based

on sound evidence and stated exactly and accurately.

6. Text of judgment.

7. Date of judgment.

CHAPTER VI.—TRIAL.

Art. XLIV.—Any person demanding trial shall make request to be heard according to the following headings, and file it with registration stamps affixed of such value as corresponds with the fee under Article XXX., Section 5, of the Patent Law within sixty days from the date of the written decision in re-examination, or of the written statement of decision in interference.

1. Name, status, occupation, and residence of plaintiff and defendant or their attorneys.
2. Explanation of the case.
3. Chief points of the demand.
4. Arguments of fact or in law.
5. Alleged proofs.
6. Signature and seal of the plaintiff or his attorney.
7. Date of petition.

Provided that the examiner of the Patent Bureau shall not be cited as defendant.

Art. XLV.—On receipt of a petition the presiding judge shall send it to the defendant and direct him to file a reply within thirty days.

After the defendant has filed a reply if the presiding judge still thinks it necessary to direct either, or both the parties to produce further argument or evidence, he shall again take the above course.

Art. XLVI.—The reply shall be made in the following order:—

1. Serial number of trial.
2. Name, status, occupation, and residence of plaintiff and defendant or their attorneys.
3. Explanation of the case.
4. Chief points of the reply.
5. Arguments of fact or in law.
6. Alleged proofs of facts, or statement against method of taking evidence proposed by the adverse party.
7. Signatures and seals of the plaintiff and defendant or their attorneys.
8. Date of reply.

Provided that the examiner of the Patent Bureau shall not be cited as defendant.

Art. XLVII.—When any person who has demanded trial wishes to withdraw the case, he shall make application before it is concluded or decided, and on receipt of the application the presiding judge shall give notice thereof to the defendant.

Art. XLVIII.—The party withdrawing from a case after he has filed his reply, shall bear the costs of the case, not, however, if he withdraws with the consent of the other party.

Art. XLIX.—Trials shall be of two kinds viz., in writing or oral.

Art. L.—When both parties demand or the presiding judge considers it right, trial shall be heard publicly.

Art. LI.—In case of oral trial the presiding judge shall appoint the day and give notice thereof to the plaintiff and defendant.

Art. LII.—When the defendant does not file a reply within the time designated the arguments shall be considered closed, and when either plaintiff or defendant does not appear as provided in Article LI., the trial may be concluded in his absence.

Art. LIII.—After the trial the presiding judge shall cause to be given to both plaintiff and defendant copies of the judgment sealed with the seal of the Patent Bureau, and in the case of oral trial he shall pronounce judgment.

Art. LIV.—The written judgment shall be given in the following order:—

1. Serial number of trial.
2. Name, status, occupation, and residence of plaintiff and defendant or their attorney.
3. Abstracts of petition and reply.
4. Grounds of judgment. Reference shall be made to the specification, and in the case of petition against the decision, to the statements of the latter, and be stated concisely and accurately.
5. Text of judgment.
6. Official title and name of the judges.
7. Date of judgment.

Provided always that the examiner of the Patent Bureau shall not be made the defendant.

CHAPTER VII.—GRANT OF PATENT.

Art. LV.—When it is decided to grant a Patent in accordance with Article XLIX. of the Patent Law, the Director shall, with the approval of the Minister of State for Agriculture and Commerce, send notice in writing thereof together with a memorandum for the payment of the fee to the applicant. On receipt of the foregoing notice the applicant shall file the memorandum for payment with stamps of the value corresponding with the fee prescribed under Article XXXI. affixed, together with two copies of both specification and drawings, within sixty days from the date of the notice in writing.

Art. LVI.—When the applicant has paid the fee for grant of Patent the Director shall register the invention in the Register of Patents under the date on which it was paid, give notice thereof to the applicant, and send him Letters Patent within thirty days. When the fee is paid during or after the last office hour, or on a holiday, it shall be treated as paid on the next office day.

Art. LVII.—In cases under the second paragraph of Article VIII. of the Patent Law, when a patent, being an improvement on a patent already granted, has been issued to an applicant who has failed to obtain the consent of the owner of the original patent, the Director shall give notice to the latter to confer with the applicant with regard to compensation. If such conference does not result in an agreement the Director shall notify the parties the amount, &c., of compensation which the Minister of State for Agriculture and Commerce shall think proper, informing the applicant at the time of notifying of the grant of Letters Patent, and also giving notice to the original patentee at the same time as the improvement is registered.

Art. LVIII.—Letters patent shall be made out in accordance with form No. 4, and the day of registration shall be the date.

Art. LIX.—All patented articles shall be marked, either on the article itself or the envelope, with the word "Patented," date of Patent, and duration of Patent, in accordance with Article XXIX. of the Patent Law.

Art. LX.—When a patentee sells separately those parts which belong to the division of claim under Article XIX. of these Rules it shall be considered an abandonment of right concerning that division.

Art. LXI.—When a person succeeds to a patent or a patentee changes his name, residence, or seal, the heir or patentee, as the case may be, shall at once give notice thereof to the Patent Bureau.

CHAPTER VIII.—SALE, TRANSFER, PARTNERSHIP, AND HYPOTHECATION.

Art. LXII.—A person wishing to have the sale, transfer, partnership, or hypothecation of a Patent registered in accordance with Article XXII. of the Patent Law shall make application in form Nos. 5 or 6 and file it with registration stamps affixed of such value as corresponds with the fee fixed by Article XXX., Section 2, of the Patent Law, together with the original and a copy of the deed as well as the Letters Patent.

Art. LXIII.—When any person has had the sale, transfer, partnership, or hypothecation registered and subsequently discharges the contract, he shall file notice in writing thereof, countersigned by the parties concerned, together with the letters patent.

On the filing of the above documents the Director shall note the matter in the Register of Changes and send back the Letters Patent to the patentee, endorsing the matter thereon.

Art. LXIV.—When partners wish to sell, transfer, obtain new partners, or hypothecate a patent, the consent of all the partners must be obtained, otherwise it cannot be registered.

CHAPTER IX.—APPLICATION FOR RE-ISSUE.

Art. LXV.—Application for re-issue under Article XXV. of the Patent Law shall be made in accordance with form No. 7, and have affixed registration stamps of the value prescribed by Article XXX., Section 3, of the Patent Law.

Art. LXVI.—On receipt of application under

the foregoing Article, the Director shall issue Letters Patent on which are endorsed the subject and date of delivery.

CHAPTER X.—APPLICATION FOR AMENDMENT AND CORRECTION.

Art. LXVII.—Application for Amendment of a Patent in pursuance of Article XXVI. of the Patent Law may be made in the following cases:—

1. When it is found that there are statements irrelevant to the patent right or errors in the drawings.
2. When it is found necessary to make the extent of claim clear and concise without changing its meaning.
3. When a patentee finds that he claimed by mistake a sphere for the patent right of his invention beyond its scope.
4. When a patentee finds it necessary to divide a patent without extending the sphere of his patent right.

Art. LXVII.—Application for amendment shall be made in accordance with form No. 8 and shall have registration stamps affixed of such value as corresponds with the fee prescribed by Article XXX., Section 4, of the Patent Law and be filed, together with the amended specification or drawings, and the original Letters Patent and dependant specification and drawings. Upon the granting of the foregoing application, the Director shall note the same in the Register of Patents and send the certificate of the amended letters patent to the applicant in accordance with the provisions of Articles LV. and LVI.

Art. LXIX.—The certificate of amended letters patent shall be made in accordance with form No. 9, and the day on which it is granted shall be its date.

Art. LXX.—Application for disclaim of specification under Article XXVII. of the Patent Law may be made in the case of it having been found necessary to omit some items of the extent of claim separately mentioned according to Article XIX. and thereby to abandon part of the sphere of the patent rights.

Art. LXXI.—Application for disclaim shall be made in accordance with form No. 10, and shall have registration stamps affixed of such value as corresponds with the fee prescribed by Article XXX., Section 4 of the Patent Law, and be filed together with the Letters Patent.

On grant of the foregoing application, the Director shall note the same in the Register of Patents and send back the Letters Patent after endorsement.

FORMS.

To be written on Mino paper; thirteen lines per page and twenty-five characters per line.

FORM 1.

Petition for Grant of Patent. Registration stamp and seal.

Title of invention.

The above is an art, machine, manufacture, or composition set forth in the annexed specification and an invention which I (or we) completed (date) and I (or we) firmly believe that it does not in any way conflict with the provisions of the Patent Law, I (or we) therefore pray that a patent for years may be granted to me (or us).

Domicile, and present place of residence, status, occupation.
Date, Inventor's name and seal.

(When two or more persons apply for the same Patent each one shall sign and seal. And the same regulation shall apply to all these forms.)

To Mr. (or rank of nobility) Minister of State for Agriculture and Commerce.

FORM 2.

Application for Patent for the improvement of an invention already patented by another person. Petition for grant of Patent.

An improvement on (title of original invention).

The above is as set forth in the annexed specification, an improvement which I (or we) have made upon (title of original invention) patented under Letters Patent No. — belonging

to (name) which I (or we) completed (date) and I (or we) firmly believe that it does not in any way conflict with the provisions of the Patent Law, I (or we) hereby annex the license of the patentee (or statement of reasons why I (or we) cannot obtain the license of the patentee); praying that letters patent may be granted to me (or us).

Domicile and present place of residence.

Status.

Occupation.

Date.

Inventor's name.

Seal.

To Mr. (or rank of nobility) Minister of State for Agriculture and Commerce.

FORM 3.

Application for Patent by heirs.

Petition for Patent.

Title of invention.

Registration stamp and seal.

The above is an invention completed by the late (name of inventor) which I have succeeded to and (is an art, machine, manufacture, or composition of material) set forth in the annexed specification; and I (or we) firmly believing that it does not in any way conflict with the provisions of the Patent Law pray that a Patent for years may be granted to me (or us).

Domicile and present place of residence.

Inventor's name.

Name of heir.

Status.

Occupation.

Date.

Petition for Patent.

Name and seal.

To Mr. (or the rank of nobility) Minister of State for Agriculture and Commerce.

FORM 4.

Form of Letters Patent.

No. of Patent.

Letters Patent.

Domicile and present place of residence.

Status.

Occupation.

Name.

Title of Invention.

In pursuance of powers granted us under the Patent Law we hereby grant to the above mentioned a patent for years with reference to the extent of claim in the annexed specification.

Date.

Name, seal (with rank of nobility if any) Minister of State for Agriculture and Commerce.

Name, seal Director of the Patent Bureau, Department of Agriculture and Commerce.

FORM 5.

Request for registration of sale, transfer, partnership, or hypothecation.

Letters Patent No.

Title of Invention.

Name of Invention.

Registration stamp and seal.

I (or we) having sold, transferred, entered into partnership, or hypothecated my (or our) Patent as set forth in the annexed deed to which are attached copy of the said deed and original of the Letters Patent, I (or we) request that the same may be registered.

Domicile and present place of residence.

Status.

Occupation.

Date.

Patentee.

Name-seal.

To Mr. Director of the Patent Bureau Department of Agriculture and Commerce.

FORM 6.

Request for registration of the sale, transfer, partnership, or hypothecation of a Patent already hypothecated.

Letters Patent No.

Title of Invention.

Name of Invention.

Registration stamp and seal.

I (or we) having sold, transferred, entered into partnership, or hypothecated the above mentioned Patent belonging to me (or us) which was hypothecated to by a deed dated, Name and domicile, and present place of residence.

I (or we) annexing the original and a copy

of the deed and the Letters Patent request that it may be registered.

Domicile and present place of residence.

Status.

Occupation.

Date.

Patentee.

Name, seal.

Domicile and present place of residence.

Status.

Occupation.

Purchaser transferee, partner or assignee.

Name, seal.

To Mr. Director of the Patent Bureau,
Department of Agriculture and Commerce.

FORM 7.

Application for re-issue of Patent.

Petition for re-issue of Patent.

Letters patent No.

Title of Invention.

Name of Inventor.

The Letters Patent belonging to me (or us) having become damaged or lost, &c., (state the cause) I (or we) pray that Letters Patent may be re-issued.

Domicile and present place of residence.

Status.

Occupation.

Date.

Patentee.

Name, seal.

To Mr. (or rank of nobility) Minister
of State for Agriculture and Commerce.

FORM 8.

Application for amendment of letters patent.
Petition for amendment of letters patent.

Letters patent No.

Title of Invention.

Name of Inventor.

Inasmuch as the above mentioned Letters Patent belonging to me (or us) do not secure the efficacy of the patent (state the reasons) I (or we) desire to amend them as in the annexed specification. There will not be introduced changes in the essentials of the invention thereby. I (or we) annex the accompanying amended specification, and/or, drawings and the existing letters patent and dependant specification and/or drawings and pray that amended letters patent may be issued.

FORM 9.

Form of Certificate of amended Letters Patent.
No. (number of amended letters patent).

Certificate of amendment of Letters Patent.

Domicile and present place of residence.

Status.

Occupation.

Name.

In pursuance of powers given us under the Patent Law, we hereby grant to the amendment set forth in the specification and/or drawings attached to these Letters Patent No. (number of amendment of Letters Patent, in the case of re-amendment of amended specification, or, drawing).

Amended for (period) granted (date)

Name, seal (with rank of nobility) Minister of State for Agriculture.

Name, seal, Director of Patent Bureau, Department of Agriculture and Commerce.

FORM 10.

Application for Disclaim

of Specification.

Petition for correction.

Letters Patent No.

Title of Invention.

I (or we) having found that I (or we) mentioned by mistake, in the specification annexed to Letters Patent belonging to me (or us) within the extent of claim certain matter, or matters not of my (or our i.e. the above mentioned Inventor or Inventors) invention I (or we) wish to omit the words from to the word of line page I (or we) pray that they may be cancelled.

Domicile and present place of residence.

Status.

Occupation.

Patentee.

Name, seal.

To Mr. (or rank of nobility) Minister of State for Agriculture and Commerce.

THE LAW OF TRADE MARKS.

Imperial Ordinance No. 86 of the 18th day of the 12th month of the 21st year of Meiji (A.D. 1889), to be in force from the 1st day of the 2nd month of the 22nd year of Meiji (A.D. 1890).

Art. I.—Any person wishing to use a Trade Mark to indicate his own special goods shall have the exclusive right of using it upon registration according to the provisions of this law. Essential parts of Trade Marks shall be figures, characters, or combinations thereof, which shall be special and distinctive.

Art. II.—The following cannot be registered as Trade Marks:—

1. Such Trade Marks as may be of an immoral nature.
2. Trade Marks the essential parts of which consist of the common names of goods, or, native, or foreign emblems.
3. Such as are identical with, or similar to Trade Marks already registered, or such as have been used by others before the application was made, and which are intended to be applied to similar goods.

Art. III.—Any person wishing to have his Trade Mark registered, shall make application, annexing specification and specimen for each trade mark, to the Minister of State for Agriculture and Commerce, provided that such application, specification, and specimen shall be filed at the Patent Bureau.

Art. IV.—On application for registration of Trade Mark the Director of the Patent Bureau shall instruct the examiner of the Bureau to examine the trade mark, and if the latter decides in favour thereof, shall register it in the Register of Trade Marks and, proceed to deliver the Certificate of Registration of Trade Mark, with the approval of the Minister of State for Agriculture and Commerce.

Art. V.—The Certificate of Registration of Trade Mark shall be signed by the Minister of State for Agriculture and Commerce and countersigned by the Director of the Patent Bureau and be delivered to the applicant together with the specification and specimen.

Art. VI.—The longest term for the exclusive use of a Trade Mark shall be twenty years, and, shall be reckoned from the day of registration.

Art. VII.—The application of Trade Marks is exclusively confined to the goods designated by the applicant in the classification of goods fixed by the Minister of State for Agriculture and Commerce.

Art. VIII.—When there are two, or more applications for registration of the same, or similar Trade Marks for the same goods, that application having the prior date shall be registered, but if they are of the same date, none shall be registered; provided that when it happens that an application, or applications are revoked, there remains only one application, that may be registered.

Art. IX.—When any person who has had, or intends to have, his Trade Mark registered dies, his rights devolve upon his heirs.

Art. X.—When Trade Marks already registered are found to come under the provisions of Article II., or to have been registered in contravention of Article VIII. they shall be annulled.

Art. XI.—As to matters relating to examination, decision, and trial the Patent Law shall apply.

Art. XII.—When the owner of a Certificate of Trade Mark wishes to sell, or transfer his business, or takes a partner, or partners, into his business, he may sell, transfer, or use on joint account with another, or others, the right to his Trade Mark after application to the Bureau of Patents, and registration of the contract; but without such registration, no recourse can be had against a third party for infringement of rights.

Art. XIII.—In the following cases registered Trade Marks shall be forfeited:—

1. When the owner of a Trade Mark has not used it, without adequate reason, after six months from the date of registration.
2. When the owner of a Trade Mark discon-

tinues its use without adequate reason, for the period of one year.

3.—When the owner of a Trade Mark discontinues the business in which the Trade Mark is used.

4. When the owner of a Trade Mark makes a false declaration with regard to the quantity, place of origin, quality, &c., of his goods.

5. When the owner of a Trade Mark uses a defaced or broken Trade Mark.

Art. XIV.—When the owner of a Trade Mark wishes to continue the use of his Trade Mark after the expiration of the original term of its exclusive use he may again apply for its registration.

Art. XV.—When the certificate of registration of Trade Mark is damaged, or lost, the owner may apply for re-issue stating the reason.

Art. XVI.—When the owner of a Trade Mark finds his specification, or specimen imperfect, he may, in order to secure efficient registration, make application for amendment of the Certificate of Registration of Trade Mark, annexing amended specification, and/or specimen, but he must not introduce essential changes in the Trade Mark.

Art. XVII.—When application is made with regard to Trade Mark, the following fees shall be paid:—

1. On application for registration of Trade Mark, for each Trade Mark and each class of goods ... yen 1.00
2. On application for registration of sale, transfer, or joint ownership, for each Trade Mark and each class of goods „ 10.00
3. On application for re-issue of Certificate of Trade Mark, for each Trade Mark „ 1.00
4. On application for amendment of Certificate of Registration of Trade Mark, for each Trade Mark and each class of goods ... „ 2.00
5. On demand for trial of a case ... „ 7.00

Art. XVIII.—On obtaining Certificate of Registration of Trade Mark, Certificate of amendment of Registration, or Certificate for a further term of use of Trade Mark, for each class of goods the fee shall be yen 20.

Art. XIX.—The Patent Bureau shall from time to time publish an *Official Journal* of Trade Marks, and, keep it open to inspection, and may sell it at a reasonable price.

Art. XX.—Any person wishing for copies of documents relating to Trade Marks may apply to the Patent Bureau, and a reasonable fee shall be paid for the same.

Art. XXI.—Any person infringing the right to a Trade Mark shall be liable for damages to the owner.

Art. XXII.—The limitation for damages under the preceding article is three years.

Art. XXIII.—Any person who knowingly uses the same Trade Mark, or one similar to one registered for the same class of goods, and sells them with that mark, or who knowingly sells them on behalf of another, shall be punished with major confinement for not less than fifteen days and, not more than six months, or a fine of not less than 10 yen and not more than yen 100.

Any person obtaining a Certificate of Registration of Trade Mark by fraud, or who applies the word "Registered" to a Trade Mark not registered, or who knowingly sells such goods on behalf of another shall be liable to the same punishment.

Art. XXIV.—In the foregoing cases the unlawful Trade Mark shall be confiscated, and when it is inseparable from the goods they shall be destroyed.

Art. XXV.—Offences under the first paragraph of Article XXIII. shall be tried only at the instigation of the injured party. In such case the judge may, on demand of the plaintiff, grant an injunction suspending the sale of the goods in question while the trial is pending.

Art. XXVI.—The provisions of the Penal Code as to the concurrence of several offences shall not apply to offences under this Law.

Art. XXVII.—The Minister of State for Agriculture and Commerce shall make rules for the enforcement of this Law.

Art. XXVIII.—This Law shall come into force from the first day of the second month of the twenty-second year of Meiji (A.D. 1889).

Department of Agriculture and Commerce, Ordinance No. 19, Rules for enforcing the Law of Trade Marks. Published the 18th day of the 11th month of the 25th year of Meiji (A.D. 1892), and to be in force from the 1st day of the 25th, month of the same year.

CHAPTER I.—GENERAL PROVISIONS.

Art. I.—Articles from I. to X., inclusive of the Rules for enforcing the Patent Law, shall apply to these Rules.

Art. II.—The Director of the Patent Bureau shall, with the approval of the Minister of State for Agriculture and Commerce, publish in the *Official Gazette* and *Journal of Trade Marks*, the registration, amendment, revocation, or amendment of rights of Trade Marks, and other important matters relating to the same.

CHAPTER II.—APPLICATION FOR REGISTRATION.

Art. III.—Application for registration of Trade Mark shall be made in accordance with Form No. 1 for one class of goods only, according to the classification under Article XXXIV., with registration stamps of such value as corresponds with the fees prescribed under Article XVII. of the Law of Trade Marks affixed thereto.

Art. IV.—When two or more persons wish to be registered as partners in a Trade Mark, a written statement of having business in common shall be annexed to the application.

Art. V.—On receipt of the application for registration accompanied by specification and specimen, the Director shall put the serial number upon the application and give notice thereof to the applicant.

All documents filed with reference to the application after receipt of the foregoing notice shall be marked with this serial number.

Art. VI.—When, after the filing of the application for registration of Trade Mark, any person wishes to have his Trade Mark registered on joint account with another, he shall make application therefor accompanied by a written statement setting forth the facts before the registration in the Register of Trade Marks. After registration no application therefor shall be received.

CHAPTER III.—SPECIFICATION, SPECIMEN, AND PLATE.

Art. VII.—Specifications shall be made out in the order of the following heads, and be accompanied by two specimens of the Trade Mark, one of which shall be affixed to the specification, and be stamped with the applicant's seal at top and bottom so that the seal shall be partly on the specimen and partly on the paper to which the specimen is affixed.

1. The explanation of the Trade Mark shall set forth the entire construction of the Trade Mark and explain the form, position, style, direction, ornaments, remarks, &c., of diagrams and letters.
2. Essential parts of a Trade Mark.—In referring to the specimen of the Trade Mark, mention shall be made only of parts which have special and distinctive forms.
3. Class and name of goods to which a Trade Mark is applied. The name of the goods shall be mentioned in accordance with the classification of goods under Art. XXXIV.
4. Application of a Trade Mark.—The way of actually using the Trade Mark shall be explained.

Art. VIII.—The specimen of the Trade Mark must be one actually to be used.

When however, for some reason it cannot be so, a facsimile, or reduced facsimile, may be used.

Art. IX.—The block of a Trade Mark must not exceed *sun* (Japanese inch) 1.8 in length by *sun* .76 in breadth and shall be made of wood or type metal.

When, however the above mentioned dimensions cannot be adhered to the plate must not exceed *sun* 7 by *sun* 5

Art. X.—The block of a Trade Mark shall have the entire design cut on the surface of one block and not be divided into parts for the

purpose of colouring, &c. The depositor shall take adequate precautions against the block being defaced by lapse of time.

Art. XI.—When a block ceases to be required, the Director shall notify the depositor to receive it back, and, if he does not take it within ninety days from the date of written notice, the Director may dispose of it at his discretion.

The Director will not be responsible for damage to, or loss of, blocks deposited.

CHAPTER IV.—EXAMINATION.

Art. XII.—Examination shall, with the exception of application for amendment of Trade Mark, coming under Article XVI. of the Trade Mark Law be held according to the order of application, or if of the same date to the serial number after thirty days from the date of application.

Art. XIII.—The following figures, characters, or combinations thereof are not considered to have sufficiently distinctive forms to be used as the essential parts of Trade Marks:—

1. Trade Marks consisting of signs, or figures merely indicating the quality, nature, or utility of goods.
2. Trade Marks which consist of signs, or figures merely indicating the name, form, or material of goods.
3. Trade Marks in which only a geographical name, commercial name, or firm name, in common use is written in the ordinary style.
4. Trade Marks which consist of patterns of goods.
5. Trade Marks which consist of symbolic signs, such as are already in common use among fellow traders, or in habitual use in commerce.

Art. XIV.—Though containing essential particulars special and distinctive, the following are not to be registered as Trade Marks:—

1. Trade Marks which are identical with, or similar to, the Imperial crest.
2. Trade Marks which come under sections 1, 2, or 3 of Article II. of the Law of Trade Marks.
3. Trade Marks the applications for which come under Article VIII. of the Law of Trade Marks, and which are of the same, or, posterior date.

Art. XV.—When two or more Trade Marks to be used for the same goods fall under one of the following headings they are to be considered as similar:—

1. When there is no obvious difference.
2. When the names which naturally arise from the Trade Marks are identical or liable to confusion.

Art. XVI.—Written decision of refusal of registration shall be made under the following head:—

1. Serial number of application.
2. Class and name of goods for which the Trade Mark is required
3. Name, status, occupation, and residence of the applicant or his attorney.
4. General description of the Trade Mark, or, in case of re-examination, abstract of grounds for refusal.
5. Grounds of refusal shall refer to the specimen and specification, be stated exactly and concisely, and in the case of re-examination rebut the grounds of appeal, and explain and demonstrate the grounds of decision on first examination.
6. Text of the decision.
7. Date.

Art. XVII.—A person who applies for re-examination shall make a written statement of the grounds of dissatisfaction in the following order and file it within thirty days from the date of the written statement of the decision:—

1. Serial number of application.
2. Class and name of goods for which the Trade Mark is to be used.
3. Name, status, occupation, and residence of the applicant or his attorney.
4. Chief points of appeal.
5. Arguments referring to the specification and specimen, but only such as are in support of the appeal.

6. Alleged proofs.

7. Signature and seal of the applicant, or his attorney.

8. Date.

Art. XVIII.—Articles from XXXII. to XXXIV. inclusive of the Rules for enforcing the Patent Law shall apply to these Rules.

CHAPTER V.—TRIAL.

Art. XIX.—Articles from XLIV. to LIV. inclusive of the Rules for enforcing the Patent Law shall apply to these Rules.

Provided that to the petition to be heard shall be affixed registration stamps of such value as corresponds with the fee under Article XVII., section 5, of Law of Trade Marks.

CHAPTER VI.—REGISTRATION.

Art. XX.—When it is decided that registration shall be granted in accordance with Article IV. of the Law of Trade Marks, the Director shall, with the approval of the Minister of State for Agriculture and Commerce, give written notice thereof to the applicant, together with a debit note for the payment of registration fee.

On receipt of the foregoing notice the applicant shall file the debit note for registration fee with registration stamps affixed of such value as corresponds with the registration fee under Article XVIII. of the Law of Trade Marks, together with the two copies of the specification, and plate of the Trade Mark within sixty days from date of notice in writing.

Art. XXI.—On payment of registration fee the Director shall on the same day register the application in the Register of Trade Marks and give notice thereof to the applicant, and send him the Certificate of Registration of the Trade Mark within fifteen days.

When the above mentioned payment of registration fee has been made during or after the last office hour, or on a holiday, it shall be considered as paid on the next office day.

Art. XXII.—Certificate of registration of Trade Mark is to be made according to Form No. 2, and the day of entry in the Register of Trade Marks shall be its date.

Art. XXIII.—When any person succeeds to the exclusive right to a Trade Mark, or, when the owner of a registered Trade Mark abandons its use, or changes his name, residence, or seal, the heir, or owner, as the case may be, shall immediately give notice thereof to the Patent Bureau.

(TO BE CONTINUED.)

CORRESPONDENCE.

[Our readers must distinctly understand that we are in no sense responsible for that sentiments or opinions of our correspondents, for the accuracy of their assertions, or for the deductions they may choose to draw therefrom.]

COUNT HIJIKATA AND POPULAR OPINION.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In view of the fact that several foreign-edited journals have not hesitated to give some degree of credence to the adverse rumours concerning Count Hijikata, based on the absurd vagaries of the *Twenty-sixth Century* and the other journals which followed that obscure print's lead, it is perhaps as well, from a wholly disinterested standpoint, to emphasize the fact that the charges preferred against this old and faithful servant of the Imperial Crown, have never been for a moment credited by the better class of Japanese. My occupation bringing me into frequent contact not only with Japanese of good society but also those who have won name and fame in the world of letters, I have been at once gratified and pleased with the esteem with which the Minister of the Imperial Household is regarded by the best and wisest citizens. It is affirmed that he is no inactive official, but ever alive to the interests of his Imperial Master and anxious to increase in every way that reverent regard for the Throne which is so characteristic of the Japanese. In writing the above I have simply endeavoured to express the result of honest conviction, as obtained not from the columns of the Opposition organs but from those of the independent and unbiased class. And it certainly seems well that, just as this juncture, foreigners should learn that adverse opinions are confined to the ignorant few, while those best acquainted with the real state of affairs or

who can write and think unaffected by partisan considerations, unhesitatingly give the maligned Minister that credit which is so eminently his due. I have not the honour of Count Hijikata's acquaintance, yet this has not deterred me from addressing you on this subject.

Yours, etc.,
Tokyo, Dec. 6th, 1896.

A CORRECTION.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—The letter of Mr. Kawamura, appearing in your columns, Nov. 30th, calls for correction in one particular. He says "Again, when two deputies of the students met Mr. Page, of Osaka, in order to petition him to retain my services and those of the other teachers, Mr. Page told them that Mr. Kawamura was very cool in furthering the object for which the American Board (Mr. K. means the American Episcopal Mission) maintained the school, namely, the propagation of the Christian creed, and that, therefore, he must be made to resign. Mr. Patton was present when the two deputies saw Mr. Page." The passage quoted contains two (of course, unintentional) mis-statements of fact.

The first mis-statement is that Messrs. Page and Patton (for we both took part in the interview) acknowledged to the Deputies that the Trustees of the School had resolved to get rid of Mr. Kawamura, and had had the intention of forcing him to resign. No such acknowledgement was made, either at the interview referred to, or at any other time, or to any other parties whatsoever. It is true that circumstances had arisen which made the retention of Mr. Kawamura in his position a matter of some difficulty; but, so far from taking any action to secure his resignation, we were hoping that all misunderstandings would be cleared up and difficulties removed. We can assure Mr. Kawamura that if the Board of Trustees had found that his resignation was inevitable, we should have approached the matter in the spirit of a friendly conference; taking it for granted that both he and we had the best interests of the School at heart, and that if differences of opinion on questions of policy and management made a separation necessary, we both alike—he on his part and the Trustees on theirs—wished to part with mutual esteem and undiminished good-will. We should have assumed in our dealings with him that one who had for several years laboured as zealously in behalf of the School as Mr. Kawamura had done, would, in taking his departure from it, take it in such a way as to inflict upon it the least possible injury. Had the Trustees been seeking Mr. Kawamura's resignation, such is the way, and such is the spirit in which they would, without injury either to Mr. Kawamura's reputation and influence, or injury to the School, have sought to bring it about. Of the six teachers who, appealing to the students, sent in their resignations and retired at once from the discharge of any duties in the School, Mr. Kawamura was the only one whose resignation had been considered by the Trustees as an event that might become inevitable; but not even his resignation had been determined upon. As to the remaining five teachers, no complaint respecting them had been laid before us, and until they took action with Mr. Kawamura in appealing to the students, we were not aware that any grounds for dissatisfaction existed between us and them.

The first statement being thus entirely incorrect, the second statement, founded upon the first, is equally so. Since the Trustees deny that they had determined to bring about Mr. Kawamura's resignation, they, of course, deny that they brought it about because of his lack of Christian zeal. And if the Trustees refused to give a favourable answer to the petition of the students asking that Mr. Kawamura and the other five Teachers be reinstated, they did not assign as a ground of their refusal Mr. Kawamura's coolness in the propagation of the Christian Creed. The fact is that we gave no reason whatever to the deputies for our refusal. During two long interviews which we had with the deputies we took the ground that we were not yet ready to say that we could receive the six offenders into the School again. Being earnestly pressed by the deputies to give our reasons for not at once acceding to their petition, we were finally compelled to reply that we must refuse to give our reasons. The final reply was made two days later in the form of a short note to the deputies, in which, saying that the matter had gone beyond our power to alter, Mr. Page asked them to withdraw their petition. Our delay in answering the deputies was due to the faint hope which we entertained that some intercessors in behalf of Mr. Kawamura and the others would appear with some better claim to be heard than had a body of riot-

ous students engaged in smashing the School windows and breaking up valuable chemical apparatus. But no such intercessors appeared. Why did no one of any weight and influence come forward to plead in behalf of Mr. Kawamura? We were his friends. We are still his friends. And he doubtless had friends of weight and influence in Nara and elsewhere. Why did they not appear in his behalf? The entirely patent explanation is that Mr. Kawamura had, in appealing to the students and resigning in the way that he did, taken a course which even his best friends could not justify. He had himself rendered it impossible for them to do anything for him. Apart from our grief at the injury which he has inflicted upon the School, we sincerely lament that a friend of ours should have been betrayed into such a mistake, and should do himself such harm. Believing that he already sees and regrets his mistake, we offer him our sympathy for the pain which he undoubtedly feels.

And asking, Mr. Editor, your kind insertion of this correction, we are, respectfully yours,

H. D. PAGE,
J. LINDSAY PATTON.

And I will thank you also, Mr. Editor, to insert in my behalf

AN ADDITIONAL CORRECTION.

The Trustees of the School had the supervision of the finances, and it was their duty to have kept a control over Mr. Kawamura's financial management so strict that his expenditure of any considerable sums without their knowledge would have been impossible.

Since they failed to do this, the Trustees have from the first acknowledged their fault: and I acknowledged as much to Mr. Kawamura.

But I certainly never, to my knowledge, admitted that we were pleased with Mr. Kawamura's conduct in the matter, or acquitted him of all blame. Far from it. We indeed accepted the whole official responsibility: and, therefore, had not made his financial management a ground for seeking his resignation. But none the less, he had seriously embarrassed the Trustees, and made it more difficult for them to retain him in his place.

Respectfully yours,
J. LINDSAY PATTON.
December 7th, 1896.

THE FUR SEAL.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—So many erroneous statements have lately appeared in the local press in regard to Fur Seals and their extermination, that I think a little truth about the matter would be quite acceptable to the public. These statements are mostly taken from American papers, and as I wish to show their source and object you will, I am sure, excuse me from writing at some length. Up to 1892, the Alaska Fur Company had the lease of the Pribilof Islands and paid the United States Government \$7.50 gold for each skin taken by them on the Islands. In the spring of that year the lease expired and they were outbid by the North American Fur Co., who were awarded the lease for twenty-five years, paying the U.S. Government \$10.00 gold a skin. The parties composing the North American Fur Co. are some of the most wealthy and influential men in the United States, one of the principal shareholders being an Ex-president's son, and many other are high Government Officials. In 1892, pelagic sealing was, generally speaking, in a bad way; the grounds off the Japan Coast were hardly known, and on the American coast sealing had received severe checks by the seizures of the sealing schooners in the Behring Sea; and as the North American Fur Co. had also made arrangements to take the skins from the Russian Company on Copper and Robben Islands, they had virtually a monopoly of the seal skin market, as the political members of the Company brought powerful pressure to bear on the Government to secure further favourable legislation—which finally ended in the present *modus vivendi* prohibiting pelagic sealing from the 30th of April to the 1st day of August, from 35° deg. North lat., and from the American Coast to the 180th meridian, and also prohibiting the use of fire-arms in the Behring Sea. In 1892, the North American Fur Co. bought the catch of the Victoria sealing fleet, paying \$22.00 gold a skin, and managed to obtain \$19.00 a skin for the whole of their catch in London, as they held all the skins in the market, but in 1893 quite a number of vessels came over to the Japan Coast and a large catch was made, and these when thrown on the market sent the price down to \$11.00 a skin; and the North American Fur Co. instead of making money as fondly expected was considerably out. Certainly things could not go on like this, and from that day there has been a

howl from these poor would-be monopolists that the pelagic sealers were exterminating the seals.

In 1894, the first year of the *modus vivendi* by closing up the eastern part of the Pacific drove a fleet of seventy-six sealing schooners to the grounds off the Japan Coast. Before these vessels left, the agents of the North American Fur Co. approached the owners of the United States and British sealing vessels and offered to buy the whole catch right through at \$10.00 a skin. But a part of the owners would not agree to this and the proposal fell through. Had this arrangement been perfected and kept up, I doubt very much whether anything further would have been heard of fur seal extermination; as it was, the abnormal large catch in 1894 sent the price of skins down to \$8.30, making a still greater loss for the Company, and since then everything that is possible has been done to enact further legislation altogether prohibiting pelagic sealing. The owners of the U.S. schooners have been harassed in various ways, with the result that of the some forty odd sealing vessels under the American flag in 1894, barely half a dozen remain; the rest having been taken out of the business or transferred to the British flag. The seals taken off the Japan Coast are the Copper and Robben Island seals, which leave the rookeries late in the fall, and slowly proceed to the southward to lat. 35° N., and are generally from one to four hundred miles offshore. About the middle of March the herd turns to the northward. The males usually reaching the rookeries in June and the females a little later. It is while the seals are off the coast that the pelagic sealers make their catch out on the high seas, and that certainly is not poaching, as the *San Francisco Chronicle* claims in its issue of the 29th of October.

"The Japanese Government stands really to join the United States in any plan of seal protection, and is desirous of including sea otters, which are now being exterminated. The co-operation of Japan is said to be of much importance to the United States, as the seal poachers have fitted out mainly at Japanese ports, and a large trade has been built up at Yokohama and Nagasaki. Notwithstanding this, Japan feels it to her interest to suppress the pirating. Many of the Canadian poachers go to the Japanese ports and either ship under the Japanese flag or take out sealing permits from the British Consuls there."

Now I need hardly say that no British Consul ever issued a permit to a sealer to raid the seal islands and poach seals; neither do I think it possible for a Canadian to sail his vessel under the Japanese flag. The fact of the matter is, the United States in its efforts to protect, not the fur seal, but the North American Fur Co., needs the co-operation of some Government on this side of the Pacific. The United States cannot very well claim to be the owner of the seals on this side, as they come from the Russian rookeries; and as the Russian Government seems to be perfectly satisfied with the way things are at present, Japan's assistance is required. Whether Japan will be foolish enough to go into any arrangement for having a close season on this coast simply to oblige the United States (the North American Fur Co.), remains to be seen. At present she has everything to gain and nothing to lose under the existing arrangement, as her fleet from two vessels in 1894 has increased to nine in 1896, and will probably be fifteen vessels in 1897. All the vessels have made handsome returns to their owners, as they can sail them for one-half of what it costs to run a foreign schooner, while the foreign schooners have left over a 1,000,000 yen in the country since 1893.

Now I presume no one will claim that it is out of pure philanthropy that the United States Government is sending out commissions and men-of-war to investigate the sealing question on this side of the Pacific?

Seals, the U.S. claimed before the Paris Tribunal, were domestic animals. This, however, was not allowed by the arbitrators, but in this case we will allow they are, why then do the United States concern themselves about seals which belong to the Russian Government. If the seals were really being exterminated it would enhance the price of the skins taken on the Pribilof Islands, but the fact is that extermination is a long way off, if it is coming at all, and in the meantime a lot of would-be monopolists in the United States are kicking themselves for bidding \$10.00 a skin for the privilege of killing seals which they can only sell for \$8.00. And that is not all, for the great body of the American public is gradually beginning to understand the situation, and one of these days they will arise and smite this monopolistic corporation that already, on two occasions, has brought the country to the verge of war, and after that the oceans will be free to all men to seal for ever and aye.

Yours truly,
December 7th, 1896.

FUR SEAL.

ASIATIC SOCIETY OF JAPAN.

At the November meeting of the Asiatic Society of Japan, held in Tokyo, a paper on the "Influence of the Aryan Race upon Japanese Art," was read by Rev. Isaac Doorman. The paper was too long to be read entirely at the meeting and the author made only brief extracts with comments. The substance of his remarks is summed up in the following abstract:—

On the progress of intercourse between the different continents and nations we find new sciences for the comparative study of their thoughts and actions springing up. The study of comparative philology, and for a certain extent that of comparative religions, for example, are very recent productions of this happy international intercourse. Why, then, should we not inaugurate a new science for the comparative study of art in all countries and all ages?

Chap. II.—The dominant Spirit in the Ancient Art of Japan.—The student of early Japanese Art, especially that of the Yamato period, is so completely surrounded by a vast multitude of art objects of the highest merit and so radically different in form and conception from the native as developed during the Tokugawa's domination, that he is compelled to look elsewhere for their ante-natal circumstances and birth. Considering the colossalness of the volume, the facial features, anatomical characteristics, and finally the grouping of manifold ideas together, we are constrained to come to the conclusion that Japan got its early art from an Aryan race, undoubtedly from India. This Aryan influence upon Japanese art we can see in feeble traces even to-day, although after the decadence of the Yamato civilization we find its vigour getting weaker and weaker daily. At the beginning of the Tokugawa era and the ascendancy of the native art, we observe this above-mentioned colossalness of the Aryan art superseded by the diminutiveness of the Japanese art: it is the transition from sculpture to carving. Even in architecture, where we find a wholesome continuity maintained to the present day, still that sublimity, though very austere, or grandeur, is usurped by an excessive and effeminate ornamentation; contrast for example the Nara Todaiji with the Nikko and Shiba temples.

Both in sculpture and architecture the Japanese artist has one great disadvantage, namely, the absence of good marble from the strata of these islands; if Japan possessed as good marble as that of Italy or Greece, it would not be presumptuous to say that the artists who from wood brought into existence such wonderful works of art like the two Todaiji Ni-O, would have been the worthy rivals of a Phidias or a Praxiteles.

Chap. III.—The Influence of Buddhism upon Japanese Art.—The greatest and most potent factor which has created these art idols and their objects in Japan, is that great, in fact, the only great religion which the genius of the Aryan race has been able to produce, namely, Buddhism. But if Buddhism awakened the dormant intellect of the Japanese Artist, he also on his part has transformed it from a religion of despair and pessimism into that of mirth and joy; more, he has introduced the comic and caricatural element into his social art, a phenomenon nowhere seen, as far as we know, in the religious history of any other nation. Observe for example, the seven-gods of prosperity, especially when shown by the facile brush of Hokusai, who in the comic art stands as unique in the history of humanity as Shakespeare is in that of tragedy.

The caricatural element is altogether alien to the Buddhist religion, and no traces of it can be seen in the early Buddhist art of Japan. With all probability this element, also like that of diminutiveness, was developed after the communication with the continent had ceased, and the art ideals of pure Buddhism through lapse of time had grown dim, if not totally effaced, and the native taste, a love of humour, began asserting itself.

In Greece also, we find attempts made, especially by its poets, to introduce the humorous into the world of gods; but this comic instinct was completely checked by the universal intellect, and sober citizens of its philosophers men like Plato and Aristotle. In Japan, however, until the recent Revolution, we find the artist everywhere, and the philosopher nowhere. Is it wonder that the artist after reading Hirata's or Motowai's definition of the deity thought such a god a fit object for the play of his erratic humour?

A general discussion followed the reading of the paper. Mr. Tyng questioned whether the later art of Japan was merely a degenerate form of the earlier art. In the later art we find landscape, with man figuring in it in a subordinate way, while this was not so in the earlier art. We might say that one was different from the other, though not necessarily degenerate.

Mr. Droppers thought the writer of the paper laid too much stress upon climate as a factor in influencing religious ideas. He believed that it was a relatively feeble and unimportant element. Witness the contrary and entirely inconsistent beliefs held in the same country, of which it could not be said that the climate had varied. Religion was much more a matter of race than climate. He thought that Herbert Spencer, Buckle, Taine, and others had vastly overrated the effect of climate on race and religion.

Mr. Lloyd remarked that an interesting comparison might be made of the development of art in Japan with that in Greece. Both countries had received their first artistic impulses from without. This impulse came in the one case through India, in the other case through Egypt, but it was evidently the same in origin. Both in India and in Egypt art was colossal, and the great end of art seemed to be to represent the body at rest. Both countries then set themselves to work first to surpass their teachers and then in process of time to discard them. The transition was from the representation of the body at rest to the representation of the body in active life. This might be illustrated by a reference to Greek literature:—Æschylus, who was colossal in his thoughts and style, represented men as they could not be; Sophocles came a step lower and represented men as they ought to be; Euripides came down still further and painted men as they are. Greek tragedy gained in interest as it came nearer to real life. The reader of the paper had said something about the diminutiveness of the later Japanese art. It must have been the same with the Greek painters. The well-known story preserved by Cicero, of the contest between two artists, one of whom produced a picture of a bunch of grapes so clever that it deceived some birds, while the other deceived men by a fly painted on a curtain, shows that they must have painted small subjects with great attention paid to minutiae. The element of humour was also to be found in the Greek and Roman art as in the Japanese. Even the gods were caricatured, as can be seen from Horace and from the early Christian apologists.

Mr. Doorman made brief replies to his critics, whereupon the meeting adjourned.

MOSQUITO YACHT CLUB.

The first annual meeting of members of the Mosquito Yacht Club, took place on Tuesday afternoon in Keil's Building. There were present, Mr. W. W. Campbell (Commodore), in the chair; Messrs. G. W. Bramhall, S. Warming, K. Wilson, M. Schellenberg, F. McWilliams, P. S. Bent, F. S. Morse, F. J. Hall, F. H. Tanner, and F. W. Balden.

The CHAIRMAN first called to order the extraordinary general meeting, which had been called to make various necessary alterations in the bye-laws, to authorise the incoming Committee to draw-up and publish a corrected scale of ratings, time-scale, etc.

The revised rules having read by the Hon. Secretary, Mr. K. Wilson,

Mr. P. S. BENT moved the adoption of the revised rules. Mr. BRAMHALL seconded. The motion was carried unanimously.

The CHAIRMAN then declared the extraordinary meeting closed, and called the ordinary general meeting to order.

Mr. WILSON read the minutes of the first meeting, which were approved, on the motion of Mr. F. J. HALL seconded by Mr. McWILLIAMS.

The CHAIRMAN, in introducing the report and accounts, said that all must agree that their first year's work as a Club had been crowned with success. They had now over 60 members, and although they had not as many boats as they could wish in their fleet, still more boats were on the way. He strongly advised those who proposed building boats to do so this winter as the price of lumber and the rate of wages were rising; while the winter season was the best time when this kind of work could be done; it was then done more slowly and supervision could be carried out more thoroughly. The Temple-house at Tomioka had also been a successful part of their summer programme, the place being used every Saturday and Sunday by a large number of members. As for the *Aborigines*, the scheme had worked out the most successful of all; only on one Sunday did she remain at her moorings during the season. The possession of this 42-footer was a great thing for the Club in inculcating the rudimentary principles of seamanship and navigation. Many a man who went aboard her at the beginning of a voyage with the crudest notion of the handling of a boat, now knew—and boasted of the fact—which end went first and which rope was called the main-sheet.—(Laughter.) They had a

small ice-chest on board, that was fitted up with the usual accessories, and he thought it spoke well for the high morality of the members that the profits from this chest came to only \$1.90.—(Laughter.) And this brought him to the question of a Club House. The Club was in urgent need of a Club House wherein to store gear, and where the *sandoes* could dry sails and mend things generally. They had approached the Governor of the Ken—who treated them with all courtesy—about a site behind the English hatoba. But unfortunately this place could not be spared by the Customs authorities. They had no wish to build a place on the Bund; the members of the Mosquito Yacht Club would be the last people to obstruct the view from there, and as no suitable place offered, they had to fall back on the suggestion of building a floating Club House. This should be 2-storied high, have a verandah running all round, and be suitably fitted-up inside. But how were they going to build such a desirable place? He could only hope that the Club would fall across some folk with well-lined pockets who would build the house for them. Then the Club would rent the place, and at \$25, or \$40 a month rent, he was confident the speculation would pay. This was a matter, however, that they would know more about next year. In reference to racing, the Chairman said that the Club were to be congratulated on the innovations they had made, especially, as besides the fun of the racing itself, owing to the conditions under which some races took place, the members were taught how to handle their boats entirely by themselves, even to the lowering of sails and mooring. He trusted that in the coming season they would be even more successful in this line, and advised all members to study the racing rules and sailing conditions, and, if possible, keep up to time in getting the races started. And now gentlemen, he continued, I will read one of the concluding paragraphs of our first report:—"It is with very great sorrow that the Committee have to record the loss sustained by the Club in the death of Mr. W. R. H. Carew, the late Vice-Commodore. He was one who always took a keen interest in the welfare of the Club, having been one of its promoters. He was an ardent and fearless yachtsman and an energetic Committee-man and will be deeply missed by the members of the Mosquito Yacht Club." I have little more to add, save that the Committee in retiring, offer their best wishes for the future success of the Mosquito Yacht Club.

No one having any questions to put or objections to urge, Mr. BRAMHALL moved that the report and accounts as presented be accepted.

Mr. McWILLIAMS seconded.—Carried.

REPORT FOR 1896.

We have pleasure in handing you this, our first annual report. We feel that success has crowned our efforts and that our Club has prospered in this, the first year, of its existence.

There are already more than sixty members on our Club Register, and several new boats have been added to the fleet since the opening of the season.

A temple at Tomioka was rented for the Summer months and was greatly appreciated by the many who used it. On Sundays, especially, it was the resort of a good portion of the Club. No doubt when more of the members possess boats of their own the country Club House will be repaired to more frequently on week days.

Early in June your Committee decided to purchase the yacht *Aborigines*, and we feel sure that much satisfaction has been given by the decision. During the cruising season she only lay at her moorings upon one Sunday, and very seldom on week days. She answered the purpose of Flag Ship, Training Ship, and Bathing Barge. Eight debentures of \$50 each were issued to cover her cost, and it is with no small feeling of pleasure that the Committee saw themselves enabled at the close of the season to pay off one of these.

Several letters have passed between the Governor of this Ken and the Honorary Secretary with a view to obtaining a site for a Club House. The places asked for were all to the northwest of the English Hatoba. So far, we regret to say, in the Committee has not met with success, and, in view of the limited space available, the probability is that it will be necessary to construct a floating Club House.

In the matter of Racing, some interesting innovations were introduced. We had two single-handed races and two without *sandoes*, starting from moorings with all sail down.

The Committee would like to see a larger number of boats enter, and hope that they will have that pleasure next year.

Several very handsome cups were presented and are as follow:—The Nandeska Cup, won by *Cocktail*; Daimyo Cup, won by *Nandeska*; Cocktail Cup, won by *Isabel*; Mountain Dew Cup, won by *Sodesha*, and Sodeska Cup won by *Sayonara*.

A prize fund was voluntarily started at the suggestion of Captain Gordon, of the *Sunda*, and was handsomely added to by Mr. G. W. Bramhall. A clock, looking-glasses, and several useful articles were pre-

sented to the *Aborigine*, and a measuring appliance to the Club.

It is with great sorrow that the Committee have to record the loss sustained by the Club in the death of Mr. W. R. H. Carew, the late Vice-Commodore. He was one who always took a keen interest in the welfare of the Club, having been one of its promoters. He was an ardent and fearless yachtsman and an energetic Committee man, and will be deeply missed by members of the Mosquito Yacht Club.

With very sincere wishes for the future success of the Club, the Committee beg herewith to tender their resignation.

W. W. CAMPBELL, Commodore; K. WILSON, Honorary Secretary; S. WARMING, Honorary Treasurer. F. J. HALL, P. S. BENT.

STATEMENT OF WORKING ACCOUNT OF THE "MOSQUITO YACHT CLUB" FOR THE YEAR ENDING NOV. 30TH, 1896.

S. WARMING, Honorary Treasurer.
Examined with vouchers and found correct,
Yokohama, December 1st, 1896. A. COUTTS.

Mr. BRAMHALL said that in regard to the next business—the election of officers and committee—the Club were so satisfied with the working of the old committee that he thought they should be given a chance of distinguishing themselves again.

The CHAIRMAN thanked Mr. Bramhall for his kind expressions, but said the election must go by ballot.

The result of the ballot was as follows.—Commodore, W. W. Campbell; Vice Commodore, G. Middleton; Hon. Treasurer, T. Warming; Hon. Sec., K. Wilson; P. S. Bent and F. J. Hall. Votes of thanks were passed to the following:—Dr. Todd, for lending the Club a godown at the R.N. Depot, in which to stow sails, etc.—Dr. Todd's election as an honorary member was also confirmed; Mr. J. F. Lowder, for kindly volunteering to act as honorary Counsel to the Club; Mr. Keil, for the use of the room for the meeting; Capt. Gordon for voluntarily starting the prize-fund; and Mr. G. W. Bramhall for materially helping the same along; and to the Chairman for presiding.

H.B.M. COURT FOR JAPAN.

Before JAMES TROUP, Esq., Assistant Judge.
MONDAY, December 7th, 1896.

BREACH OF THE CUSTOMS REGULATIONS.

This morning Fritz C. E. Lütze, chief mate of the British ship *Sumbawa*, was charged by the Japanese Customs Authorities with a breach of the Regulations, in breaking the Customs seals affixed to a hatch of that vessel on the 28th ult.

Defendant pleaded that he accidentally broke the seals; but did not open the hatches.

Mr. L. Akiba, appeared to prosecute on behalf of the Customs.

Arakawa Matsumoro, a tide-waiter in the employ of the Imperial Japanese Customs, deposed—On the 28th ult., at 6.30 o'clock in the morning, I went off to the *Sumbawa*. I examined the four hatches. Two seals of No. 4 hatch were broken. On the previous evening this hatch had been sealed in four places by one of the tide-waiters. I asked the mate why he had broken them. The mate is sitting in Court now. Next I asked him when they were broken; and whether he had seen them broken or not. The mate answered that the seals had been broken by the wind about six o'clock that morning and he had seen them broken. I then asked him to give me a written statement to that effect. When I asked him to do that the mate trembled; his lip quivered. Then he said, "I ordered the men to set to work at 6 o'clock and then noticed that a lock was on the main hatch; I became frightened and told the men to stop work." At that time he added, two seals had already been broken. He said that he was very sorry and regretted that he had ordered the sailors to commence work at six o'clock. The mate's two statements therefore did not tally, and he is thus guilty of incivility to me. The mate then promised to write his second statement on paper. This statement I afterwards received from him.

The defendant—I did not say that the seals were broken by the wind, but that they could easily have been broken by the wind; that is what I said, and I should like to ask the witness whether those are not the words I used?

His Honour had the question put through the interpreter.

Witness—The mate said, "You see like that (motioning his arms) they were broken by the wind." He did not say "might have been broken by the wind."

The defendant—In the summons it says that I opened the hatches. I did not do that, it would have been impossible to open them under the circumstances.

His Honour pointed out that this arose through the wording of the summons and was merely the phrase used in the regulations; "break the seals and or open the hatches."

Defendant—I only broke the seals accidentally.

His Honour—That is what we are inquiring into now. Have you any other questions to put?

Defendant—No.

Onoki Michisuke, another Customs official, sworn, deposed—A report was brought to the Customs House by the last witness, that this affair had happened, and I went off at once in a steam launch to the *Sumbawa*. I examined the broken seals and found that two were split across at No. 4 hatch, at the corners of the hatch. I spoke to Arakawa, and he said that a statement had been written by the mate in reference to the affair. I gathered from the statement that the mate had broken the seals. The mate was present at this time. I further asked the mate how the seals were broken. He said that as the Customs officials always came aboard early to break the seals, he therefore told the crew to set to at six o'clock, thinking the seals had been undone. The mate further said that when he saw the lock on the second hatch, he came to the conclusion that the Customs House officers had not been aboard, and he gave orders for the men to stop work; but by time two seals had been broken, I feel sure that the two seals were broken in consequence of the mate giving orders to the men to get to work.

His Honour—Well, well, I want facts, not opinions.

Witness, continuing—I told the mate to come to the Custom House and I left.

The defendant—The Customs officials often come aboard as early as 5 o'clock to break seals, and do so very often without calling the mate at all. Sometimes they come aboard and leave without breaking all the seals; at other times they just hit them with a hammer, and go away without cutting the strings.

The Customs official who visited the *Sumbawa* at sunset on the 27th ult., deposed to placing the seals on all the hatches. Owing to the impossibility of affixing locks to Nos. 3 and 4, threads were passed

through the tarpaulin at the four corners, and these were sealed. The tarpaulin was further fastened down with nails to prevent it flapping in the wind.

To the defendant—The tarpaulin was certainly nailed down by me that night. It was my duty to do that, and I drove the nails in.

His Honour—Are you sure, Mr. Wileman (the interpreter) that witness did not say string instead of tarpaulin? I have string in my notes, but on your twice repeating the word tarpaulin I altered the word to string.

The Interpreter put the question again and then said—The string was fixed down by nails to prevent it from shrinking in case of rain.

His Honour—Yes, I thought he said string at first.

Defendant—I should like to call evidence that the hatches were not opened.

His Honour—I am quite prepared to accept your word for it, that the hatches were not opened. I have no proof before me further than that the seals were broken, so it is not necessary to call evidence as to the hatches being open.

Defendant—I could also say how easy it was to break the seals. I have men who can say that the seals were broken only five minutes before the Customs officials came aboard.

His Honour—I am afraid that would not help you much.

Defendant—I could call the Captain.

His Honour—Well, he can go into the box if you wish to have him examined. What question do you wish to put him?

Carl Rehberg, Master of the *Sumbawa*, entered the box and was sworn.

The defendant—I wish to ask him whether some seals did not remain unbroken all day.

His Honour—I do not see your point.

Captain Rehberg—Sometimes the Customs House officers come aboard early in the morning and break seals without calling the mate's attention or any man's attention except the watchman. Consequently when the mate went on deck that day he thought the seals were broken. Sometimes the Customs officers merely chip the seal with a hammer, not removing the string, and so it is very hard to see whether the seal has been broken or not.

His Honour (to defendant)—Have you anything further?

Defendant—Yes; I can prove that they just touch the seals with a hammer and leave the string.

His Honour—I can't see how that can help you. You are charged with breaking the seals. If the Customs officers had broken the seals that would relieve you of the responsibility and then you could bring evidence to prove that was so. As it is, you acknowledge that you broke the seals.

Defendant—Sometimes the Customs officers will break the seals between 2 and 3 o'clock in the morning, but most times before 5 o'clock. They should observe the regulations if they wish others to keep them. I would not have broken the seals if I had known it. I thought that the officers had been, and when I found they had not I told the men to knock off work.

His Honour—Have you any evidence to lead that would prove that the Customs officers have broken the seals at 2 o'clock?

Defendant—Yes.

His Honour—Who is the man?

Defendant—The watchman.

His Honour—Where is he?

Defendant—Aboard the ship, but I can fetch him.

His Honour—You have had full warning about the case. The summons was served on Friday. Have you anything else to say?

Defendant—No, sir.

His Honour then read the regulation applying to the case, wherein it is laid down that any breach of the regulation must be punished by the infliction of a fine of \$60. Continuing, he said—I dare say you did not think about it at the time when you ordered the crew to open the hatches, and from that point of view it may seem a little hard. But then it was your duty to think about it. There is no doubt that you have violated the regulation, and it being so I must convict you of the offence as charged; and as the fine is provided for and laid down in the Treaty, I have no option but to inflict the fine of \$60. You will also have to pay the costs of the Court—2½ yen. The fine is payable in the Court.

Before R. A. MOWAT, Esq., Judge.

TUESDAY, November 8th, 1896.

MAY OASTLER BURDIS V. JAMES JOHNSTONE.

This was a case brought by Miss May Oastler Burdis, who moved the Court for "Specific performance," the defendant being Mr. James Johnstone, Executor of the estate of the late Mr. George Sanders Burdis.

Mr. Lowder—I appear for the plaintiff.

His Honour—This is an action for specific performance?

Mr. Lowder—Yes.

His Honour—It has been entered as one for judicial relief. You appear for the defendant, Mr. Litchfield?

Mr. Litchfield—Yes.

Plaintiff's petition was as follows:—

1.—The plaintiff, who is a spinster, was born at Yokohama in the year 1873. Her mother was a native of Japan and her putative father was William Oastler, a British subject.

2.—The mother of the plaintiff died in the year 1886, whereupon the said William Oastler became entitled to and did assume the sole guardianship and care of the plaintiff, and undertook to act towards her in all respects *in loco parentis*, until the making of the agreement hereinafter mentioned.

3.—On the 26th day of January, 1891, the said William Oastler, with the knowledge and consent of the plaintiff, entered into an agreement on behalf of the plaintiff with George Sanders Burdis, a British subject, whereby it was agreed that from the date of the said agreement, the plaintiff should in addition to the names Mary Oastler theretofore borne by her, assume the surname of Burdis, and relinquish all claims upon the said William Oastler for maintenance, and otherwise should thenceforth live and abide with the said George Sanders Burdis as his adopted child and should during their joint lives render to him such faithful, dutiful, and filial obedience and service as are due from a daughter to her parent, and should not, during the life time of the said George Sanders Burdis, be married without his approval and sanction first had and obtained, and in consideration of the premises the said George Sanders Burdis agreed that he would adopt, maintain, and support the plaintiff and would secure to her for her sole and separate use a competency sufficient to maintain her in comfort after his death.

4.—Immediately on the execution of the said agreement the plaintiff in pursuance of the terms thereof went to live with the said George Sanders Burdis as his adopted daughter and assumed the surname of Burdis and thereafter until the death of the said George Sanders Burdis did not cease to reside with him nor to render to him such faithful, dutiful, and filial obedience and service as are due from a daughter to her parent.

5.—William Oastler died on the 22nd day of September, 1891, without having made any provision for the plaintiff other than the agreement aforesaid.

6.—George Sanders Burdis died on the 13th day of March, 1895, without having fulfilled that part of his agreement by which he undertook to make provision for the maintenance and comfort of the plaintiff after his decease, but leaving property within the jurisdiction of this honourable Court sufficient for the fulfilment of her said agreement.

7.—The defendant is the executor, in Japan, of the will of the said George Sanders Burdis.

The plaintiff prays:—

1.—That the defendant be restrained from parting with any of the estate, or with any of the rents and profits of the estate of George Sanders Burdis deceased, which may now be in or hereinafter come into the possession of the defendant until the further Order of the Court.

2.—That out of the estate of the late George Sanders Burdis within the jurisdiction of this Court, the defendant be ordered to make provision for giving effect to that part of the agreement of the said George Sanders Burdis which is set out in paragraph 3 of the petition and which was not carried out in his life-time.

3.—That the plaintiff's costs may be paid out of the said estate.

4.—That the plaintiff may have such further and other relief as the nature of the case may require, and as to the Court may seem fit.

The defendant's answer was as follows:—

1.—The defendant admits that he is executor of the late George Sanders Burdis, but does not admit that he has assets of and belonging to the estate of the said testator sufficient for the purpose claimed in the said petition.

2.—The defendant submits to the first prayer of the said petition and says that he will not part with any assets of the said testator which now are or which may hereafter come into his hands until judgment has been rendered in this cause.

3.—The defendant says that the allegations contained in the paragraphs 1, 2, and 4, of the said petition are matters of which he, the said defendant, has no personal knowledge.

4.—The defendant says that the said George Sanders Burdis did not promise as in the 3rd paragraph in the said petition alleged and further says:—

(a.) The said alleged agreement was void for want of consideration—there was no duty on the part of William Oastler to provide for the plaintiff, and assuming that the said George Sanders Burdis did promise as alleged, there was no obligation on his part to make provision for the said plaintiff.

(b.) That the terms of the said agreement are so indefinite and uncertain that they could not be performed by the said George Sanders Burdis or by the defendant.

(c.) That the said plaintiff was not in any way prejudiced by relinquishment of any claim she might be supposed to have upon the benevolence of William Oastler.

5.—The said William Oastler died on the 22nd September, 1891, having previously made his will dated 26th September 1891, by which he appointed the said G. S. Burdis, his executor, by whom the said will was proved and the value of the estate sworn upon £600, but the defendant believes that the assets were only sufficient to pay the debts and testamentary expenses of the said William Oastler.

6.—The defendant believes that the said George Sanders Burdis during his life-time spent considerable sums of money in completing the education of the plaintiff, and he admits that the said George Sanders Burdis died on 13th March, 1895, without having altered his will made by him previously to the 26th January, 1891, or making any provision for the plaintiff other than herein mentioned.

Mr. Lowder—May it please the Court; this is an action brought by the plaintiff for the purpose of compelling the defendant to carry out as the

executor of the will of the late George Sanders Burdis deceased, the promise made in an agreement entered into between the putative father of plaintiff and the said George Sanders Burdis, during the life time of Burdis and Oastler, wherein Burdis undertook to provide for her comfort and maintenance for the rest of their lives. The agreement is set out shortly on the third paragraph of the petition. The petition, after setting forth the terms of the agreement goes on to allege that the plaintiff did carry out the agreement, but Burdis through some mistake, I suggest, failed during his life time to take such steps as would enable him to fulfil the latter part of the agreement. This action is therefore brought to ascertain your Honour's opinion whether she is right in her opinion, and can maintain her claim upon the estate. The first, second, and fourth paragraphs of the petition are not admitted by the defendant on the ground that he has no knowledge of the facts alleged. The whole argument, will, I presume, centre on the third paragraph, the answer to which is contained in the fourth paragraph of the answer.

His Honour—There is an agreement, you say? Mr. Lowder—Yes, a written agreement. But the answer alleges that there has been want of consideration.

His Honour—I have read the answer.

Mr. Lowder—Perhaps it will be as well if I read the agreement first, and then your Honour can see whether the terms have been correctly set out in the petition.

The agreement—is as follows:—"It is hereby mutually agreed between William Oastler, of Takahama, Kobe, on the first part, and George Sanders Burdis, of Kobe on the second part, that I, William Oastler, Father of May Oastler, do herewith agree and sanction, without let or hindrance and with the full approval of my daughter May, that she becomes from this date the adopted child of the said G. S. Burdis and that she is to live with and abide with G. S. Burdis as his adopted child and daughter from this date forth. And that G. S. Burdis on the second part, agrees to receive said May Oastler as his adopted child from this date, and that G. S. Burdis agrees to give to May his own name and that she will henceforward be known as May Oastler Burdis, and that G. S. Burdis will maintain and support in sickness or in health and with all the privileges and endowments due to her as though she were his own naturally born child, and that a competency will be secured upon herself only sufficient to maintain her in comfort after the demise of said G. S. Burdis. Should May O. Burdis at any time during the life-time of G. S. Burdis wish to marry, it must only be with the full approval and sanction of said G. S. Burdis, and we hereby subscribe our names on this 26th day of January, 1891."

Mr. Lowder—I shall prove that this agreement is in the hand-writing of George Sanders Burdis.

His Honour—The plaintiff at that time was 18, apparently?

Mr. Lowder—She was born in 1873. I shall consider it my duty to call your Honour's attention to Stephen's Blackstone, and to Keats' Commentaries, page 337, vol. 2., where the law is laid down with regard to similar cases.

His Honour—If the defendant—the late testator—undertakes to provide for plaintiff does it make it necessary for the putative father to maintain her?

Mr. Lowder—In quoting the case just now, I was merely meeting the allegation set out in the answer.

His Honour—At present it seems that Oastler does not enter into the case.

Mr. Lowder—That is what it seems to me. I will leave it until I hear what my learned friend has to advance on the point. The next point in the answer is that the agreement is void for want of consideration. On that point I shall refer you, sir, to Pollock on "Contracts," page 158, where the adequacy of consideration was not enquired into.

His Honour—It is quite clear that Mr. Litchfield does not say adequate consideration: he says there was no consideration.

Mr. Litchfield—There is no question of adequacy.

His Honour—I have said, Mr. Litchfield, that I do not see where Oastler comes into it at present. Mr. Lowder—I submit that a consideration has been set out.

His Honour—I think so too, if the agreement holds.

Mr. Lowder—If I am to define a legal term for it, I should say that there was mutual consideration. I will refer you, sir, to Leake on "Consideration."

His Honour—The man practically said: If you come to me and live with me as my daughter, I will do certain things for you on that condition.

Mr. Lowder—Yes.

His Honour—If she performs it.

Mr. Lowder—Yes, if she performs it. The next point, that the deceased had no obligation to perform the promise set out in the agreement, is difficult to meet.

His Honour—Outside of the agreement there was not any obligation.

Mr. Lowder—Quite so. Perhaps it will be urged that as the agreement extended beyond a life-time, it was not legal, but our old Equity maxim will meet that. I will refer you to a case in 1829—*Bryan v. Flyte*; to 5, *Meason and Wellsby*, where it was left to the Jury to determine what was a reasonable amount of compensation.

His Honour—In that case one of the judges dissented.

Mr. Lowder—Yes.

His Honour—I think you will find a later case, *Roberts v. Smith*—twenty years later.

Mr. Lowder—The fifth point is that the plaintiff was not prejudiced—

His Honour—I don't see how that bears on the case.

Mr. Lowder—The next point is that Oastler made a will before his death. As to that I have no knowledge. I submit, sir, that in the absence of any very strong arguments to the contrary, I have made out a case on behalf of the plaintiff which your Honour will see is properly made effective. I will now call evidence.

May Oastler Burdis, the plaintiff, was then sworn. She deposed—I was born on March 22nd, 1873—I was told this by my father. He also told me that I was born in Yokohama. My mother was a Japanese, and my father's name was William Oastler, who was a Scotsman. My mother died in 1886, in Kobe, where she had been residing with my father for seven or eight years. I lived with my father and mother until her death. After she died I continued to live with my father until the end of January, 1891, when I went to live with Mr. Geo. S. Burdis, and took his name.

Mr. Lowder—Do you recognise this paper? (Agreement shown)—Yes.

In whose handwriting is this paper?—That of my adopted father, Mr. Geo. S. Burdis.

Is it signed by him and also by Oastler?—Yes.

You know their handwriting?—Yes.

Did he give you that document, or one similar to it, some months before his death?—Yes.

His Honour—You are speaking of Mr. Burdis? Mr. Lowder—Yes.

Witness—I gave the document to Mr. Johnstone, to keep for me: this was after the death of Mr. Burdis. Mr. Johnstone was then searching for a will. I subsequently, asked Mr. Crosse, who was acting for defendant, for this document and received it back. Mr. Johnstone at that time told me that he had found an identical document in the office of Mr. Burdis. Mr. Burdis died in March, 1895. I continued to live in the house for three months, with my brother, until defendant told me he must let the house and I must make other arrangements. My brother never took the name of Burdis; he is still known as Oastler. I took the name of May Oastler Burdis when I went to live with Mr. Burdis, and I have kept that name ever since. On the death of my father, Mr. Oastler, my brother came to reside in the same house with Mr. Burdis. Mr. Oastler died on the 22nd Sept., 1892. From January 1891 till Sept. 1892, Oastler made no provision for me, nor did he pay any of my expenses—that is, from the date of the agreement he ceased to support me, either with money or clothing. Burdis solely supported me, and I lived with him. I kept house for Mr. Burdis, ordered his meals, looked after his comfort generally, paid the servants wages and the monthly bills as they came in, and served him faithfully and filially until the end of his life.

To His Honour—As a daughter would?

Witness—Yes, like a daughter would.

His Honour—You understand the expression filially?—Yes. Like his own daughter.

Cross-examined by Mr. Litchfield—When my father, Mr. Oastler, died, he left me in his will a legacy of \$100 to buy a ring. That \$100 Mr. Burdis gave to me.

His Honour—You got it from your father's executor, that is, Mr. Burdis?—Yes.

He gave you that amount?—Yes.

Mr. James Johnstone, the defendant, was then sworn. He deposed—I am the defendant in this case, and executor of the late G. S. Burdis. I was a great friend of the deceased during his lifetime. I was aware that the plaintiff was living with him as his adopted daughter. He adopted her about the time she went to Kobe—some years prior to his death. She sat at his table and entertained his guests; and when I have been

at Kobe and have had tiffin with him, she was always at the table.

Mr. Lowder—And, so far as the law allows, you would have no objection to carrying out the performance of the promise made in the agreement?—Yes, but I am administering other people's money in this case.

Mr. Lowder—That is, you have no objection to the prayer of the petition being granted if the law allows?—Yes.

Witness continuing—Burdis left property within the jurisdiction of this Court. There are four houses in Kobe, all let; but the leases are short, some falling in next year.

His Honour—I don't propose to go into that until an amount is fixed.

Mr. Lowder—I only wish to prove that there is property.

His Honour—I should not fix an amount, sitting here.

Mr. Lowder—Sitting as a jury?

His Honour—Precisely.

Mr. Lowder—I have very little doubt whatever that should the principal point be given in my favour than an arrangement can be come to between the parties. That is my case.

His Honour—Have you any questions to put, Mr. Litchfield, to this witness?

Mr. Litchfield—No.

His Honour—Then I will hear your case.

Mr. Litchfield—The case for the plaintiff is founded on an agreement made by two persons, one the assumed father of the plaintiff and the other George Sanders Burdis, now deceased. The Court is now asked to decree a performance of the agreement come to between those parties. I submit first, that before the plaintiff can recover, there must be some valuable consideration moving from the plaintiff to the deceased Burdis to support the promise which he had made. The consideration, so far as the agreement states, and so far as the evidence given this morning carries it, is one of agreement of adoption. That is to say, Oastler, upon whom there was no obligation to provide for plaintiff after his death, makes an agreement with Burdis that Burdis should assume his position towards plaintiff, and put him (Burdís) in the position of father by adoption towards plaintiff. If no obligation was upon Oastler to make provision for plaintiff after his death, there cannot be any greater obligation on Burdis than there was on Oastler. This agreement was not an agreement of service; it was an agreement of adoption, and therefore plaintiff obtains the same position relative to Burdis and his estate as if she was in fact the natural daughter of Burdis. I contend that no—

His Honour—The actual daughter, not natural—there is a difference between the two.

Mr. Litchfield—Whether actual or illegitimate, there is no obligation on an English father to leave by will any money, or to promise to leave any money or legacy—there is no obligation whether she is a natural or an illegitimate daughter. Further, I shall submit, that the proper consideration necessary to cause the deceased to give effect to the promise must be that of mutual obligation. There is no agreement between Oastler or the plaintiff to give service to the deceased Burdis beyond service for a specific time. The agreement was to terminate on her part at will, as is only natural in the case of father and daughter. There was no obligation on the part of plaintiff to render service to the deceased Burdis. If she had chosen to leave his home, no power on earth or any Court could have restrained her: there was no obligation on her to give continual service to Burdis. I presume that it will be said that the plaintiff after the agreement changed her status: that that is sufficient consideration. I submit there must be change of status detrimental to herself before she has sufficient grounds to pray for the performance of the promise. Then another point is raised: what did Burdis promise the plaintiff by this agreement? [Counsel here read the contract.] Continuing, he said—That is a promise not to bequeath any property to the plaintiff by will, but to secure to her in some way, which is not mentioned, a competency, a competency of an indefinite amount—an amount which, I submit, this Court can not ascertain and fix with any certainty or with sufficient certainty, to enable it to decree the performance thereof after the death of Burdis. When the Courts of Equity are appealed to to decree performance of an agreement it is first essential that the agreement should be a specific one—one that can be enforced without importing into its terms further stipulations and obligations than are contained in the agreement sought to be enforced. In the case of *Holloway and Hedington* (6 L.J.C. page 199)—in that case the Court was appealed to to decree performance of an agreement to bequeath some money after death, and the Vice-Chancellor held that the wording of the agreement was so vague—

His Honour—What were the words of the agreement?

Mr. Litchfield—I have not got the case with me. His Honour—All depends on the wording of the agreement. I will send for the volume named from the Court Library. [After the volume had been brought in and the case consulted, His Honour said—The wording of the agreement in that case is so vague that it could not be enforced.]

Mr. Litchfield—I will now refer your Honour to *Kimberley v. Fennings* (5 L.J.C. p. 115)—that is an agreement in trade.

His Honour—You may be able to find me a closer or more similar case than that.

Mr. Litchfield—I don't think there ever has been such a case like this before.

His Honour—Well, perhaps, you can find a case more akin to this than the one you have just cited. You were about to say something on competency, I believe?

Mr. Litchfield—I don't see that the Court has competency here: the agreement in this case is just as vague as that of the case just cited. But what is a competency? It is a phrase, or word, that is very indefinite, very vague. It has been defined as being double what one has got at present. If you have got nothing, by doubling it you have nothing.

His Honour—But why do you suggest such a ridiculous definition. This is not a definition at all.

Mr. Litchfield—Then assuming that the Court is competent to decide—what will be the measure by which it will decree a competency? I presume of course, that in coming to an agreement, something must be inferred, and if your Honour finds that the Court can make a decree in this case, then it will have to decide what sum of money for plaintiff's support will be deemed suitable. I was trying by suggestion to assist the Court in coming to a decision in the matter.

His Honour—By a process of exclusion, a certain sum, or certain sums, will be found not to be a competency: certain other sums would be a competency. There are two limits for you to work on: it is for this reason that I say that the case you cited does not apply at all.

Mr. Litchfield—Then we have the case of *Hill v. Gore*, reported in 8 L.J.C., page 350, and on appeal to the House of Lords, 9 L.J. page 54. That was a case of adoption, or assumed to be adoption, of a child eight years old, by a labourer, in consideration of £100, and doubts were expressed in both Courts whether the £100 ever passed.—[Case quoted.] I submit that, taking all these points into consideration, this agreement is of such a nature that it makes the promise one that the Court of Chancery could not enforce.

His Honour—Have I got down your point aright: that there must be a valuable consideration moving from the plaintiff to the deceased in order to make valid the grounds of this action to enforce performance of the promise?

Mr. Litchfield—Yes.

His Honour—Were not her services valuable consideration?

Mr. Litchfield—Not as coming from a daughter; coming from a servant, yes.

His Honour—You say that because he adopted her as a daughter that her services were not a valuable consideration moving from her to the deceased; but that, had he not adopted her, then her services as a servant would have been a valuable consideration?

Mr. Litchfield—Yes.

His Honour—Then this is how you put it—the adoption destroys the service?

Mr. Litchfield—Yes. She did not, as a daughter, render valuable consideration.

His Honour—But she rendered services?

Mr. Litchfield—She came into a position as if she had been Burdis' own child.

His Honour—Could not a man promise his own daughter that he would leave her some money in his will?

Mr. Litchfield—He could, but he could afterwards legally change his mind.

His Honour—No doubt: but what is there to prevent the plaintiff from not receiving a competency from the estate?

Mr. Litchfield—If there had been an agreement of service, it would have come under the case of *Alderson v. Madeson* 7 Q.B.D., and before the House of Lords, 8 A.C., p. 467.

His Honour—My next note is that you say that Burdis was not more bound than Oastler was to provide a competency for plaintiff—I don't yet see how that applies.

Mr. Litchfield—There was no obligation.

His Honour—You deny service?

Mr. Litchfield—I take it that what service was given was compensated for during his lifetime.

His Honour—Yet you say there was no service.

Mr. Litchfield—The agreement only covers Burdis' life.

His Honour—There you are going into adequacy of consideration—an entirely different question.

Mr. Litchfield—I go further.

His Honour—He may have thought that he would like to provide a competency for her.

Mr. Litchfield—I submit that there was no service sufficient to secure a competency. That is what the agreement is founded on.

His Honour—He has agreed to provide her for life with comfort and maintenance, and a competency after his death. I understand you to say now that there was no consideration at all because the services rendered by plaintiff were those of a daughter and therefore he is not bound to provide for her after his death.

Mr. Litchfield—Yes.

His Honour—If he agreed to do a certain thing why should he not be held to it?

Mr. Litchfield—The agreement was not of such a nature as to enable plaintiff to come into this Court and ask for an enforcement of the promise contained in the agreement. That is all I have to say.

His Honour—Mr. Lowder, when would you like to make your reply?

Mr. Lowder—It is past twelve o'clock, sir, and I should like to consult the cases cited and the one handed down from the Bench.

His Honour—Will to-morrow at 10.30 suit you?

Mr. Lowder—Yes, sir.

His Honour—Then we will adjourn till to-morrow.

MONDAY, December 9th, 1896.

On the Court resuming this morning,

Mr. Litchfield said—I wish to put in the probate of the will of the late Burdis, and probate of the will of the late Oastler.

His Honour—Have you evidence to lead?

Mr. Litchfield—No, sir.

His Honour—Have these documents any bearing on the case?

Mr. Litchfield—I don't think so. I did not think yesterday that it would be worth while putting them in, but on reflection I thought that, as I had them in my possession, I had better put them in.

His Honour—I thought you had closed your case.

Mr. Lowder—I have no objection to make.

His Honour—Do you wish to see the wills?

Mr. Lowder—No, sir.

His Honour—Very well, then I will hear you Mr. Lowder.

Mr. Lowder—I will not trouble your Honour with the authorities that I had prepared in answer to the argument that the defendant's counsel used when he said that the putative father of the plaintiff was under no obligation to provide for the maintenance of his daughter after his death, and therefore that her adopted father was not bound to support her after his life-time, because we have had it in evidence that Oastler in this particular case did assume that obligation after the death of her mother, whether that duty was legally binding upon him not. And also or we have it in evidence that has not been traversed that he entered on behalf of the plaintiff into an agreement with Burdis the provisions of which agreement were carried out faithfully by the plaintiff on her part, until they ceased naturally by the death of Burdis. Now the first point advanced by the defence is that there was no consideration moving from the plaintiff to Burdis that can render valid the enforcement of the promise contained in the agreement. In my opinion, sir, the mere change of name was sufficient consideration even if no other service had been rendered. It is no uncommon thing for a legacy to be left to A. in the will of A.B., on the condition that A. shall take the name of A.B., and supposing that the executor of the will should afterwards refuse to pay this legacy to A., the law can be moved to enforce the payment. Now surely if this can be done by will it can be done by deed and contract. But not only was the change of name not the whole of the consideration moving from the plaintiff to Burdis, but she went and lived at his house and rendered such services as a daughter would render to a father. The next point raised by my learned friend is that there was no mutuality—that had the plaintiff declined to carry out the agreement and chosen to leave the house of her adopted father, then there was no law and no power to compel her to return. I do not think that such a proposition can be supported. If the contract was a good one, I do not see why it can not be enforced against the defendant. It may be said that the plaintiff at the time of the making of the agreement was an infant: but it can not, I contend, be void after she had accepted it on coming of age. It may be implied that as it would not be enforced against an infant—

His Honour—An infant, of course, cannot apply for specific enforcement.

Mr. Lowder—She is no longer an infant. Then, as to remedy. I contend that mutuality in the remedy is not really essential to the contract. I think that my learned friend was mistaken in putting that argument forward. I shall now refer your Honour to a note on page 19, in Leake on the "Law of Contracts," with reference to mutual promises. There it is laid down that mutuality of remedy is not essential. Then we have *Laythorp v. Bryan* in 2 Bingham, p. 743. Turning to another point in the argument of the previous day, Mr. Lowder said that his learned friend had urged that the agreement was not one of service but one of adoption. I understood him then to say that by and through this adoption plaintiff was compelled to gratuitously render those services, that as a servant she might have been paid for doing. But adoption in the sense used by my learned friend is unknown by the law of England. Perhaps a better illustration would be that although it is competent for an Englishman to become a Japanese by adoption because the laws of Japan allow of that form of naturalization, it would not be competent for a Japanese to become an English subject by adoption by the Englishman Burdis. Her nationality is not changed thereby. She was a Japanese, whatever the terms of the contract, and she is a Japanese to this day. I think that the mere fact of Burdis adopting her as he did does not take away the right she had conferred on her by the agreement. Then the other side urged that no time was specified in the agreement. It is true that the agreement does not specify any particular limit of time, but then it could hardly have done so. Burdis adopted her once and for all, and from that day forth she lived with him and rendered to him the services of a daughter, and the contract ran that it was to continue so during the joint lives of Burdis and the plaintiff. I do not know if any necessity existed for the setting forth in the agreement of a specified time other than that. It ended with the life of Burdis, I should think, not before. I refer your Honour now to *Wales v. Day*, reported in Meason and Welsby, p. 273, where it was decided that a certain covenant ran for life, and was lawful. Your Honour was good enough yesterday to point out that some confirmation of a promise might be necessary. I submit—

His Honour—When a written agreement is put in and accepted, no corroboration is required. When such a document is put in, what more is needed?

Mr. Lowder—Then I need not discuss that point. His Honour also pointed out that Counsel need not argue the point raised by *Roberts and Smith*, as the point had been made sufficiently clear during the proceedings.

Mr. Lowder then referred to Mr. Litchfield's contention that the wording of the agreement was vague, but His Honour said that he need not discuss the point.

Mr. Lowder—Then we come to the question, what is a competency?

His Honour—If I should grant the decree asked for, I should not arrange that, not at this stage of the proceedings, but should appoint some proper officer of the Court to fix it.

Mr. Lowder—I merely wished to answer the point raised by the other side.

His Honour—It is not so vague and indefinite of itself that a proper officer could not fix it. It is not what Burdis might have considered a proper competency that now arises, but what would be considered a proper competency under the circumstances.

Mr. Lowder—I think so too.

His Honour—The point is quite clear, I think.

Mr. Lowder—Then that is all that I have to say.

His Honour thought that the case was sufficiently clear to enable him to deliver his finding at once without calling Counsel to the Court again to hear a written finding. Practically there were only two points raised: one was that the agreement was void for want of consideration; the other that it was too vague and indefinite. As to the first, he was of opinion that the agreement was not void for want of consideration. It had not been disputed by defendant that the agreement was made by Oastler on behalf of his child, the child then being under age. That being so, it was open to her, on coming of age, either to adhere to it or repudiate it. What she did was to adhere to it, thereby ratifying and confirming it. The consideration that Burdis had under the agreement, and for which he agreed to make provision for her maintenance and support, was that she should live with him as a daughter. Burdis could not have all the advantages under the agreement, and he promised to provide for plaintiff as if she were his own child, and further to provide for her after his demise.

There was thus amply sufficient consideration. Defendant enjoyed all the advantages of the promise, plaintiff lived with him as a daughter and rendered him the services that a daughter would render, and this state of things continued after she came of age, and then she continued to do what had been stipulated for until the day of his death. If this action had been brought as by a minor she could not have demanded specific performance of the agreement, and it would have been given against her. A passage in a work of the late Justice Pollock carried the law even further than he (the learned Judge) had supposed. But that was an opinion of the learned author alone, and he cited no cases in support of it. He could only say if that was the law, supposing the action had been brought by plaintiff—after attaining her majority—against Burdis while he was alive, he could not see how Burdis' executor could now be excused from fulfilling the agreement, for this reason, the plaintiff had done all she had to do during Burdis' life and there was nothing more for her to do. The executor could not say, you cannot force this agreement against me—against my testator's estate—because she had completed all her performance, and because she had carried out her part of the agreement. So much for the agreement not being void for want of consideration. He, the learned judge, thought that it would have been a matter for regret if he had been forced to another conclusion in the affair. It was hard to think that the testator would have wished to take such a position, or wished to convey the impression that the plaintiff had got all she was to have during his lifetime. He could not think that such was the case, nor that plaintiff could be put off with part of the promise made to her—that she should be cast adrift without consideration. It had been given in evidence that shortly before his death Burdis had handed to her the document of agreement. Why did he do so? Was it not to prove to her that he intended to provide for her. If not, he (the learned Judge) could not imagine anything more cruel than to give the agreement to the girl at such a time if nothing was to come of it. For that reason he should have felt regret had he been forced to an opposite conclusion. The other point in the defence was the question of the terms of the agreement—that they were too indefinite and uncertain. Well, the words of the agreement were "a competency will be secured upon herself only sufficient to maintain her in comfort after the demise of said G. S. Burdis." He had yesterday asked for a definition of what was a competency. No one was prepared to say what a competency was in the abstract. The meaning of the word in the abstract might be totally different in the opinion of any two persons. At the same time there were limits within which a definition could be formed—they were from what was absolute want on the one hand, to what was superfluity on the other—the mean would be found between the two. A great deal depended on that circumstances, the position in life, education, and previous mode of life. A person brought up in a wealthy family might consider his wants to be larger than one used to narrower circumstances. But even if it was not easy to define what a competency was, still, in his mind, that was not a reason for not doing it if the authorities allowed. He thought the law on the subject was clearly set out in *Moorhouse v. Colvin*, 1852, 21 L. J. Chan., in which the Master of the Rolls said:—"Suppose a testator said, 'I will give to my child a fit and sufficient provision,' the Court would ascertain that by means of a reference to the Master to ascertain what was a fit and proper provision. But supposing the testator had said, 'I will give to my child such a provision, and such only as I choose,' would it be proper then for the Court, if he gave nothing, to refer it to the Master to say what he ought to have given. It is manifest the Court could not have ascertained such an amount." These words, His Honour thought, seemed very nearly equivalent to the words raised in the agreement in the present case—"a competency only sufficient to maintain in comfort." That would be, a fit and sufficient provision having regard to her position in life and expectations. In conclusion, His Honour said—I have come to the conclusion that the agreement is not too indefinite and uncertain, and in case Counsel in this suit can not agree as to some sum—and I hope they will agree, and so avoid further expense—I shall make a decree ordering the Chief Clerk to ascertain what, under the circumstances, is a fit and proper provision for the plaintiff; the costs of course are to come out of the estate.

U.S. CONSULAR-GENERAL COURT.

Before N. W. McIVOR, Esq., Judge.
THURSDAY, December 10th.

IDA MAY SMITH v. ALURED GILLMORE SMITH.

This case, in which Mrs. Ida May Smith brings an action against her husband, Mr. Alured Gillmore Smith, for permanent alimony and judicial separation, was again called on this morning, from adjournment on the 25th November, for the purpose of hearing the ruling of the Court on the demurrer lodged by the defendant, in which he urged that the court had no jurisdiction.

Mr. J. F. Lowder appeared for the plaintiff, Mr. G. H. Scidmore for the defendant.

His Honour, on taking his seat, regretted that there had been such a long interval between the closing of the arguments on the demurrer and the delivery of the ruling of the Court, but it was the result of certain matters of immediate importance, and demanding immediate attention, that had occurred in another department of his office. He would now proceed to deliver his ruling:—The demurrer upon which a ruling is asked raises a question as to the jurisdiction of this Court in the case at bar. That jurisdiction rests upon the following provision, included in an Act of the Congress of the United States of the 22nd June, 1860, which reads as follows:—

"Section 4086.—Jurisdiction in both criminal and civil matters shall in all cases be exercised and enforced in conformity with the laws of the United States, which are hereby, so far as is necessary to execute such Treaties respectively and so far as they are suitable to carry the same into effect, extended over all citizens of the United States in those countries, and over all others to the extent that the terms of the Treaties respectively justify or require, but in all cases where such laws are not adapted to the object or are deficient in the provisions necessary to furnish suitable remedies, the Common Law and the Law of Equity and Admiralty shall be extended in like manner over such citizens and others in those countries, and if neither the Common Law nor the Law of Equity or Admiralty, nor the Statutes of the United States, furnish appropriate and sufficient remedies, the Minister in those countries respectively shall, by decrees and regulations, which shall have the force of law, supply such defects and deficiencies."

It is possible that the phrase "the Common Law," used in the Statute might be taken to include all those principles and applications of law which are recognised in common by Anglo-Saxon jurisdictions; but giving to the phrase its narrower meaning, namely, those principles and applications enforced by the law Courts of England anterior to the 4th July, 1776, the question is presented in the argument of Counsel, as to whether or not jurisdiction in matters of marriage and questions arising upon the enforcement of such contracts, was exercised by the Common Law Courts or, in other words, whether that body of law known as ecclesiastical law, and which dealt with such cases, was a part of the Common Law. Bouvier, under the title "Equity," subdivision 6, says:—"Still that Common Law (Roman Law which was administered by the Ecclesiastical Courts) cannot be said to be authority even in Equity proceedings." "The Commons were jealous of its introduction." "In the reign of Richard II. the barons protested that they would never suffer the kingdom to be governed by Roman Law, and the Judges prohibited it from being any longer cited in the Common Law tribunals." In a valuable preface to the "Judges of England" (Foss), in which the author gives a classification of the Courts of England, with a summary of the history of each, Ecclesiastical Courts are not mentioned. The same fact is to be noticed in the reading of a chapter under the title, "The Courts of Common Law," in the "History of the English Constitution" (Quest); see also Reeve's "History of the English Law."

From these authorities and others that might be cited, I think that it is safe to conclude that the principles and practice of the Ecclesiastical Courts did not form a part of the body of Common Law which was in force in and taken over by the American colonies when they declared their independence.

But the Statute conferring jurisdiction upon this Court does not limit its application of principles to those found in the Common Law as distinguished from Equity, since the phrase, and the law of equity occurs immediately after the phrase last discussed. The history of the rise of the Equity jurisdiction in England and its subsequent recognition in the United States, is so well known that it is only necessary to summarise that history by noting that it had its being to mitigate the rigours of the rigid rules of practise in the Common Law Courts, and give effect to those broader principles of natural

justice for the enforcement of which the rules and forms of the Common Law made no provision, or no adequate provision, or in cases as to which no forum was provided for giving effect to claims founded on moral and admitted right not contrary to law.

Amongst the principle functions of Equity, were the decreeing of the specific performance of contracts and the avoidance of the multiplicity of actions.

In an early case in the United States, the Court says: "It is clear that strong moral obligations must lie on the husband who has abandoned his wife to support her. The marriage contract and every principle binds him to this; if he fails to do it, it is a wrong acknowledged by Common Law, though the law knows no remedy because the wife cannot sue the husband, and it is the province of the Court of Equity to afford the remedy where conscience and law acknowledge the right but know no remedy. (*Butler v. Butler*, 4 Little, 202.) Judge Storey, in his well-known work on Equity Jurisprudence, says:—"It has been held that if a husband abandons his wife and separate himself from her without any reasonable support, a Court of Equity may in all cases decree her a suitable maintenance and support out of his estate, upon the very ground that there is no adequate or sufficient remedy at law in such a case." (Quoted in *Il. Nelson on "Divorce and Separation,"* 963.)

In the case at bar the petition is addressed to the Court sitting as a Court of Equity; neither a divorce *a vinculo* nor a divorce *a mensa et thoro* (one being a complete and the other a partial judicial annulment of the marriage contract), is prayed for.

While Counsel for Plaintiff may have been unfortunate in using, in the prayer of the petition, the words "judicial separation"—a phrase which occurs, I believe, for the first time in 20 and 21 Vic., c. 85, section 7, and is technically unknown to our law—I gather from the petition, as explained by the argument, that the prayer is for a decree providing for *separate maintenance*: this is not then a prayer for divorce or the annulment of a marriage contract, but for the specific performance of one of the implied and admitted covenants of that contract.

In many States of the United States, Courts sitting as Courts of Equity have refused jurisdiction on the ground that by statutory enactment full remedies had been provided for at law, or on the ground that since the legislative authority had seen fit to provide for the entertaining of suits for maintenance or alimony with divorce, it amounted to an exclusion of the right of a Court of either Law or Equity to act in cases other than those specified in the Statute, and that it was unnecessary to invoke the aid of Courts of Equity in actions brought in conformity with the Statute since by Statute an adequate remedy was provided for at law. In England, I take it, that the aid of a Court of Equity has never been invoked because at all times another Court has existed in which an adequate remedy could be obtained, or to which such jurisdiction was combined.

It would seem that this Court, uninfluenced as it is by any of these considerations, resting on controlling Statute must recognise its duty to give effect to those broader principles of Equity which formed the historic substructure of the jurisdiction before Statutes intervened to limit and control the exercise of its remedial functions.

However much I may regret the necessity for hearing and determining an action of this kind, I believe that the Court would be open to the charge of shirking the duty and one of the functions of its Equity power if it refused to take jurisdiction of this case.

The demurrer is overruled, and the defendant is required, failing the allowance of an appeal from this ruling, to answer the petition filed within five days.

The Court then rose.

White to play and mate in two moves.

Moscow.

Our expected telegram did not arrive last week but we hope for one yet in time to publish it herein. Meanwhile we take an interesting clipping from the columns of the *San Francisco Chronicle*, published November 8th, two days after the match began.

The long-talked-of encounter between Emanuel Lasker and William Steinitz for the world's chess championship did not take place on the date originally arranged, for some reason at present unknown. Hostilities were, however, commenced on Friday (6th Nov.) at Moscow, Russia, in the presence of a fairly large assemblage of visitors. The ex-champion was successful in winning the toss and selected the Giuoco piano for the opening attack. Lasker, who appeared to be in first-class condition and played with great coolness and deliberation, succeeded before the game had progressed very far in obtaining a very superior position. This advantage he was not slow to follow up and by the time the forty-sixth move had been reached he compelled his opponent to resign. Steinitz evinced considerable chagrin at his defeat, but he expressed himself as being confident of wresting the laurels from his redoubtable, though youthful, antagonist.

The match is ten games up, and a purse of 3,000 roubles hangs upon the result. The next game is scheduled to begin on Monday (9th Nov.). The previous struggle, which wrested the chess championship from the Bohemian veteran, who had

held it for upward of a quarter of a century, required nineteen games to settle, the final score being: Lasker 10, Steinitz 5, drawn 4. The match was finished May 26th, 1894.

Senor Quirós has translated the annotations of a game played between a couple of Spanish gentlemen, both expert chess players, at the Casino in Madrid. The game originally appeared in the *Barcelona Monthly*. The score follows:—

GAME No. 618.

22—R takes P	22—B to K 3

Resigns.

NOTES BY DR. TOLERA CARRARA.
(a) This gambit used to be played in the sixteenth century as proved by several manuscripts from Polerio, so Salvioli and other compilers who did not know of those manuscripts are mistaken in giving Muzio as the inventor of the gambit. Having the intention to sacrifice the Kt casting is much more attacking than the moves: 5—P to Q 4, 5—Kt to Q B 3 and 5—B takes P ch, which are called the "Muzio-Donop, Muzio-MacDonnell and Muzio-Lolli" extensively analysed in several works. Taenisch's advice to the beginner is to practice the opening so as to obtain some knowledge of the art of attacking and defending. He might have added that black must play very correctly to be able to stand the rapid development that gives to white the bold sacrifice of the Kt.

(b) Some players prefer 7—P to Q 3, which is also weak, as the following variation will prove.
7—Kt to Q B 3; 8—Q B takes P, B to Q B 4 ch; 9—K to R sq. P to Q 3; 10—Kt to Q B 3; 11—Q to K Kt 3; 12—Q to K Kt 3, Kt to Q sq.; 13—B to K Kt 5, Q to K Kt 3; 14—B takes Kt, Q takes Q; 15—P takes Q, B takes B; 16—R takes P, Kt to K 5; 17—Q to K B sq.; 18—K to K 5; 19—R to K B sq. ch, K to Q 5, must win.

(c) Much better then 8—B takes P ch, a move adopted by MacDonnell and Morphy, Black may play in that case K to Q sq with some advantage.

(d) A favourite move of Labourdonnais played nowadays in preference to the old move P to Q 3, which used to be considered best to stop Kt to Q 3 and thereafter P to Q 4.

(e) Paulsen was the inventor of that defensive move of the queen. He played it first against Kolisch; since then the old defense Q to Q B 4 ch has been discarded.

(f) In place of the text move the Hirschfeld attack was considered for a long time the best. It is to bring R to K 4 attacking the gambit P and double R on the K file. The attack, however is unsound, as Zukertort proved with the following variation: 12—R to K 4, castles; 13—B takes P, B to Kt 5; 14—Q to K 5, P to Q 4; 15—B takes H P, Q to K Kt 4; 16—P to K R 4, Q to K Kt 3 and Black must win as the hand-book says it:—

First—17—B takes P, B takes Kt; 18—B takes Kt, B takes Kt P; 19—B takes Kt P, P to K B 4, etc.

Second—17—Kt takes P, Kt takes Kt; 18—B takes Kt, B to K B 4; 19—R from K 4 to K B 4, B to K 3; 20—B takes B, P takes B; 21—R to K 4, R takes R ch; 22—Q takes R, R to Q sq. ch; 23—K to Kt 3, Kt to Q 5; 24—Q to Q sq, R to Q B sq; 25—P to Q B 3, R takes B; 26—P takes Q, Q to K Kt 6 etc.

(g) The best is 12—R to K sq and if 14—Kt to H 6, R to B sq; 15—P to K Kt 4, Q to K Kt 3; 16—P to K R 4, P to Q 4, etc., if 14—B to K B 6, B to K 4; 15—B takes B, Q takes B; 16—Kt takes P at K B 3, Kt to K 4; 17—Q to K 3, P to K B 3 etc.

(h) If it would be best—14—R takes Kt, Kt takes R; 15—B to B 6, R to K sq; 16—B takes Kt, Q to K Kt 3; 17—Q to K 2, B to K B sq; 18—P to K 5, etc.

(i) The few last moves of White were made in the attempt to obtain a drawing position.

(j) If 19, B takes Q; 20—B to H 6 perpetual check.

OPENINGS AT BUDAPEST.

Twenty openings were used in the Budapest Tournament, and 78 games were played. White won 35 games, equal to 44.8 per cent.; Black won 25 games, equal to 32.3 per cent.; 18 games were drawn. The record follows:—

Openings.	Total	White won.	White lost.	draw.

STEINITZ VS. PILLSBURY.

One of the most interesting games played in the Nuremberg Tourney was the one between the veteran master and the young American. It will be remembered that, in the St. Petersburg Tourney, while Pillsbury defeated Lasker and Tschigorin, he could not win a game from Steinitz. The meeting of these two experts in Nuremberg was watched with great interest, and as both played remarkably well the game is a fine specimen of high grade Chess.

61—Resigns.	

NOTES BY THE REV. C. E. RANKEN, IN THE "BRITISH CHESS MAGAZINE."

(a) A novelty, threatening to win a Pawn by B takes Kt, etc., and forcing Black either to exchange Pawns or to support his Q P.

(b) The Chess-editor of *The Standard* eulogizes this move, and says that it should always be made as soon as possible in all variations of this opening, where the opponent has played B to K Kt 5.

(c) This leaves a hole for the Black Kt which he quickly proceeds to occupy.

(d) The weakness of P at B 5 now became evident, for, if White exchange Pawns, he gives Black an open file for his R, etc.

(e) If Q takes P then R to Q sq; and White could not Castle.

(f) He has nothing better.

(g) Was this necessary? B to B looks good enough to ward off present danger.

CHAROUSEK.

Rudolph Charousek, who has suddenly leaped to the front among Chess-players, was born at Prague, Bohemia, on September 10, 1873, and is, therefore, 23 years old. When 5 years old his parents emigrated to Hungary, and he learned Chess at college at Kaschen in 1891. At the Nuremberg tournament he scored 5½ games against the prize-winners, being only one point below Lasker, whose score was 6½.

The Budapest Tournament is his first record, he having won against Pillsbury, Tschigorin, Winawer, Maroczy, Nona, Poniel, and Albin, and drawn with Tarrasch, Walbrodt and Schlechter, and lost to Janowski and Marco.

REPORTS.

Per Japanese steamer *Yokohama Maru*, Captain Swain, reports:—Left Shanghai the 5th December at 11.15 a.m.; had moderate N.W. breeze and fine, clear weather. After clearing North Saddle the light wind increased to a fresh N.W. gale and high sea, which continued up to arrival at Nagasaki the 7th at 5.15 a.m. While in Nagasaki had light N.W. winds, clear weather and continued squalls. Left Nagasaki the same day at 5.30 p.m.; after clearing Iwo-shima light experienced strong north-westerly gale accompanied with blinding rain squalls, which continued up towards midnight; thence to arrival at Shimonoseki the 8th at 6.35 a.m., had moderate to fresh N.W. winds and sea. Left Shimonoseki the same day at noon; had moderate to fresh N.W. gale and squally, with clear weather, through whole of Inland Sea, arriving at Kobe the 9th at 7.40 a.m. Left Kobe the 10th at noon; had light easterly and south-east winds attended with fine, clear weather; passed Oshima Light at 8.10 p.m.; thence to Rock Island, which was passed on the 11th at 9.20 a.m., had light to moderate south-easterly winds and fine, clear weather; thence to arrival at Yokohama at 3.15 p.m., had moderate N.E. winds and cloudy, but fair weather. Saw nothing of importance during the passage.

LATEST COMMERCIAL.

IMPORTS.

Not much improvement. Yarns—After a few purchases at quotations, buyers have shut up again and there is nothing doing. Shirts—A few desultory enquiries, which have so far led to no trade. Fancies—Trifling sales which do not count for much. Woollens—Very gloomy market with nothing doing.

COTTON PIECE GOODS.

ITCHING SKIN DISEASES

Instantly
Relieved by
CUTICURA

A warm bath with CUTICURA SOAP, and a single application of CUTICURA, the great skin cure, followed by mild doses of CUTICURA RESOLVENT (the new blood purifier), will afford instant relief, permit rest and sleep, and point to a speedy, economical, and permanent cure of the most distressing of itching, burning, bleeding, scaly, and crusted skin and scalp diseases, after physicians, hospitals, and all other methods fail.

Sold throughout the world. British depot: F. NEWBURY & SONS, 1, King Edward-st., London, E.C. POTTER DRUG AND CHEMICAL CORPORATION, Sole Proprietors, Boston, U. S. A.

Women and Women Only

Are most competent to fully appreciate the purity, sweetness, and delicacy of CUTICURA SOAP, and to discover new uses for it daily. In the preparation of curative washes, solutions, etc., for annoying irritations, chafings, and excoriations of the skin and mucous membrane, or too free or offensive perspiration, it has proved most grateful and comforting. Like all others of the CUTICURA REMEDIES, the CUTICURA SOAP appeals to the refined and cultivated everywhere, and is beyond all comparison the most effective skin purifying and beautifying soap in the world.

"A CHARMING SCENT."

H.R.H. The Duchess of York.

ATKINSON'S WHITE ROSE.

"The Sweetest of Sweet Odours."

Delightfully and delicately fragrant. BEWARE OF IMITATIONS.

ATKINSON'S ONLY GENUINE. Perfume, Toilet Powder, Soap, Tooth Powder, Sachets, & all other specialties with this "charming" odour, of all Dealers throughout the World & of the Manufacturers—J. & E. ATKINSON, 24, Old Bond St., London.

May 4th, 1895.

THE GREATEST WONDERS OF MODERN TIME

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

Sir Samuel Baker, in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the dragoman Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN.

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

Ms. J. T. Cooper, in his account of his extraordinary travels in China, published in 1891, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining 'stock.'"

Sold by all Chemists and Medicine Vendors the throughout World. May 1st, 1895.

MILKMAID BRAND CONDENSED MILK

The "Milkmaid" Brand is guaranteed to contain all the cream of the original milk. In the process of manufacture nothing but water is removed, nothing but the best refined sugar added.

Avoid low-priced brands from which the cream has been abstracted, and ask for the "Milkmaid" Brand, the best for all purposes.

June 14th, 1896.

A. SAVY & CO., ENGINEERS.

162, Rue de Charenton, Paris.

THE OLD G. HERMANN DEBATISTE WORKS.

ESTABLISHED 1830.

The Oldest and Largest Makers in the World of Chocolate, Cocoa, and Confectionery Plants.

Over 2,500 Chocolate Factories fitted up to January 1st, 1896.

GRINDING MACHINERY for all kinds of dry or wet substances, colours, printing inks, toilet soap, perfumery, and chemicals.

MIXING, CRUSHING, AND PULVERISING MACHINES FOR ALL MATERIALS.

Address: Messrs. BOYES & Co., YOKOHAMA.

November 21st, 1896.

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL" must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on business be addressed to the MANAGER, and (cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, DEC. 19TH, 1896.

BIRTH.

On December 14th, 1896, at No 57, Bluff, the wife of E. B. STUART EDWARDS of a daughter.

SUMMARY OF NEWS.

THE Carew trial is fixed for the 4th proximo.

THE formal opening of the Tenth Imperial Diet has been fixed for the 24th inst.

THE French Chamber, by 295 votes to 85, has demanded the immediate liberation of Deputy

Chauvin, who was arrested in the socialist disturbances at Carmaux. The Cabinet acquiesced.

THE insurgent leader Maceo has been killed in the province of Havana.

THE Government intends to devote two million yen towards encouraging navigation in the thirtieth fiscal year.

THE Yokohama Choral and Philharmonic Societies gave their first concert this season on Wednesday evening.

THE appointment of Mr. Arthur Hyde Lay to the British Acting Vice-Consulate in Tokyo was notified on the 10th inst.

THE beds of smokeless coal discovered in the vicinity of Ono-mura, Hida-gun, Oita Ken, are reported to be of excellent quality.

A NAVAL regatta was held on the Sumida-gawa yesterday, the Emperor and a large number of officers of both services being present.

IT is reported that King Menelik of Abyssinia has ceded to Russia a strip of land on the coast near Obok, to be used as a coaling station.

THE silk traders of Yokohama, foreign and Japanese, are making preparations to hold a friendly dinner party in January next year.

THE French Senate has adopted the measure promoted to prevent the introduction and circulation of counterfeit Indo-China coins into France.

THERE is strong popular opposition in Venezuela to the agreement with Great Britain for arbitration, but the President and the Government approve the arrangement.

THE railway between Kyoto and Saga having been completed and an engine run over the line, it will be opened for traffic on or about the 3rd of January next.

THE French Ministry intend proposing an immediate reform and increase of the Navy, involving an expenditure of two hundred millions of francs (£3,000,000 sterling).

THE Marine Court of Tokyo was occupied on Thursday and Friday with an enquiry into the loss of the N.Y.K. steamer *Himeji Maru* on the Bombay Shoal of the Paracels.

THE President of the United States in his Message to Congress says he cannot believe that the present sombre prospect in Turkey will be long permitted to offend the sight of Christendom.

GREAT indignation is felt in America owing to a rumour that General Maceo, the leader of the Cuban insurgents, has fallen through Spanish treachery. The Spaniards repudiate the charge.

H.I.H. PRINCE ARISUGAWA I'AKKHITO and Marquis Saigo, Minister of the Navy, went to Yokosuka on the Wednesday and attended the graduation ceremony of the Naval Engineering College.

THE North German Lloyd mail steamer *Salier*, bound from Bremen to Buenos Ayres, has been totally wrecked near Corunna, and all on board, numbering 275 souls, perished. There were no English passengers.

A PETITION has been presented to Count Matsukata, Premier, and other Ministers of State, asking for the abolition of export duties, a step that the Yokohama Japanese Chamber of Commerce proposed the other day.

A TELEGRAM published in Berlin states that the Dutch Consul at Lorenzo Marquez has been

assaulted and wounded, the German Consulate attacked, and the British flag torn to pieces. No details are given, but it is added that Germany has demanded reparation from the authorities at Lisbon.

REVISED newspaper regulations, as embodied in a bill to be submitted to the next session of the Diet, have been completed by the Home Department, and will be laid before the Legislative Bureau in a few days.

A TELEGRAM received at the Specie Bank, Yokohama, on the 15th inst., states that Mr. Sonoda Kokichi, President of the Specie Bank, and Mr. Yamamoto, President of Business of Bureau of the Nippon Ginko, arrived at Bombay on the 13th inst. from London.

A TELEGRAM from Batoum, received by Messrs. Jardine, Matheson & Co., No. 1, Settlement, Yokohama, reports that a steamer conveying one hundred and ten thousand cases of petroleum (Anchor brand), will leave Batoum for the East during December.

A FRENCH syndicate has offered to advance to the Egyptian Government half a million sterling, but the offer previously made by Great Britain has rendered needless the acceptance of this later offer. England advances £200,000 this month, and further amounts as they may be required.

The *Times*' Athens correspondent states that a revolutionary movement is projected in Macedonia for next spring. The leaders of the movement propose, in order to create a diversion, to foment the revolt in Crete. Large quantities of munitions of war have already been sent to Crete.

THE U.S. Republican party is about to frame a new Tariff Bill which will be submitted at an extraordinary session of Congress after March 4th. Reciprocity will be a feature of the new tariff, and it is understood that the average rates will be lower than the McKinley tariff but considerably above the present rates.

THE thirteenth anniversary of the late Emperor Komei will be celebrated in Kyoto on the 30th of January next year. T.I.M. the Emperor, Empress, and Empress Dowager will leave Tokyo on the 18th January, arriving at Kyoto on the 20th, after staying a night at Nagoya. It is said that Their Majesties will spend three weeks in Kyoto.

COMMERCIAL prospects in the Import line are very gloomy now-a-days, week after week going by with hardly any business to chronicle. This week the record runs:—Yarns—No business; Shirts—Nothing doing; Fancies—Dead, with the exception of a few sales of Turkey Red; Woollens dormant, in spite of the cold weather. Cheerful reading in very sooth. Some houses declare that they see no prospect of any amelioration until March at soonest. A better feeling prevails in the Metal market, with prospect of some good orders in the near future, especially in railway material, for which Belgian iron is most in demand. Kerosene is dull, with all in favour of buyers, who are still coy at filling up obviously empty store-houses. In Sugars, a fair business has been done in Browns, though Formosa sorts are, comparatively speaking, much in the shade. In White Sugars there is a fair trade doing for the time of year. A considerable business has been done in Raw Silk at irregular prices, dealers trying to unload all they can before the new year's settling. In Waste, transactions have slackened, though prices are unchanged. The Tea trade is lifeless, nothing of any quality being left to buy. Exchange continues steady.

THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.

The opening of the 10th session of the Diet being now only a few days distant, political circles have naturally begun to show signs of excitement. The Liberal Party held a general meeting two or three days ago, and resolved to assume an attitude of opposition to the Government, though, as some pro-Government papers observe, the Party does not enunciate any definite reasons why the ministry should be condemned. It is worthy of note that the Party has not come to any final decision with regard to the nomination of a leader, but has tacitly resolved to dispense with an acknowledged head for the present. Papers not favourable to the Liberals explain that this apparent removal of Count Itagaki from the presidential chair is due to the umbrage entertained by the Kwanto and Tohoku sections of the Party towards their Tosa associates.

Nothing conclusive is yet known as to who will be chosen candidates for the Presidency of the House of Representatives. The Liberals were believed to contemplate the election of Mr. Sassa Tomofusa, Parliamentary leader of the National Unionists, their idea being to win the alliance of the Unionists. But Mr. Sassa having resolved to make a tour to Europe and America soon after the Diet opens, is not eligible for nomination. At present the Liberals seem to have no alternative except to put forward Mr. Kono Hironaka. Nor are the Progressionists (*Shimpo-to*) better prepared in this respect, they do not seem to have made to any definite arrangement. The Tokyo press believes that their choice of a candidate will lie between Messrs. Ohigashi, Hatoyama, and Shimada.

The problem of freedom of speech continues to agitate the press. It has, in truth, been the chief topic of discussion during the week. The controversy is led by the pro-Government papers, from which fact it may, perhaps, be inferred that the Cabinet has not yet decided to give satisfaction to the *Shimpo-to* in this matter. When Deputies of the Press League waited on the Home Minister on the 14th inst., and stated the views held by the League, the Minister replied that the Authorities were conducting investigations with the object of introducing certain amendments of the Regulations in the approaching session of the Diet; that the desires of the League might not be fully satisfied, but that the Authorities would endeavour to make the amendments as liberal as possible. The draft is still in the hands of the Home Office and has not been forwarded to the Legislative Bureau. How the discussion stands at present may be gathered from the following summaries of leading journals' articles. The *Yomiuri* is astonished to learn that though the suppression and suspension clauses, as applied to political discussion, will be struck out, the power of suppression will continue to be vested in the Administration with regard to matters that concern the Imperial Court, military and international affairs, and public morals. Now, argues the *Yomiuri*, if any difference exists between suppression and suspension, it is only a difference of degree. The two being essentially one and the same thing, if suspension is unreasonable and illegitimate, suppression must be equally so. If suppression be maintained and suspension abolished, a case formerly dealt with by suspension will now evoke the more rigorous measure of suppression, and freedom of speech will be subjected to severer control than ever. In point of fact, there is no necessity whatever to maintain the power of suppression for safeguarding the interests of the Court and of public morals, for express provisions exist in the criminal code to deal with acts amounting to lese majesty or offences *contra bonos mores*; and to suppress journals for having divulged military or diplomatic secrets would have an even more mischievous effect.

The *Kokumin* avers that a failure on the part of the Cabinet to effect thorough amendment of

the Press Regulations must produce a split in the ranks of the *Shimpo-to* and the downfall of the Matsukata Cabinet. The Government, frankly observes the *Kokumin*, while failing to carry into practice any one of the promises included in the Premier's declaration of policy, have been discomfited in the matter of the Household Minister's trouble; in the matter of eliminating the foreign element from their midst, and in the matter of creating the office of Chief Councillors of Departments. Already, therefore, the members of the *Shimpo-to* are far from being firmly and cordially united. But as the party would be placed in a very difficult and humiliating position were its relations with the Cabinet severed, and as it is hampered by that infirmity, it will endeavour to exercise as much patience as possible, and to induce the Ministry to act up to their public announcements. But if the Cabinet fail to view the problem of personal right in a proper light, and to abolish the suppression and suspension clauses of the Press Law, a split disastrous to the *Shimpo-to* may prove inevitable. Rumour says that if the Cabinet does not introduce a Bill satisfactorily amending the Press Law, the Liberals will do so, and the Progressionists will then find themselves in the painful dilemma of having either to support a defective measure in obedience to the dictates of friendship, or to range themselves by the side of their enemies in obedience to the dictates of conscience. The *Kokumin* asks whether the Matsukata Cabinet can not yet rouse itself from its state of torpor.

The *Nichi Nichi* writes at great length against the total abolition of the suspension and suppression clauses. The gist of its arguments is virtually the same as that reproduced in our last Summary. One point worthy of note in our contemporary's latest utterance has reference to the contention that, as Japanese subjects are most unlikely to be betrayed into acts amounting to lese majesty, and as, in the event of their committing that most un-Japanese crime, the punitive clauses of the Criminal Code fully suffice to meet the case, no necessity exists to preserve the Administration's special power of interference. The *Nichi Nichi* finds that contention entirely irrelevant. If the unlikelihood of the people's being betrayed into disloyal acts is an argument making for the abolition of the suspension and suppression clauses, it is an argument equally making for the rescission of the punitive provisions in the Criminal Code. The provisions in the Code and the clauses in the Press Law must be viewed in the same light, especially as freedom of speech is far-reaching and requires prompt control.

The *Yomiuri* contends that the Government's intention of guarding official secrecy by subjecting the press to special control is putting the saddle on the wrong horse, for the betrayal of official secrets is really due to laxity of official discipline and to the presence of treacherous men in the ranks of the Administration.

The *Mainichi* also wishes to call the attention of the Government to the above point, and observes that the publication, by the *Nichi Nichi*, of news relating to the creation of new officials called Administrative Vice-Ministers or Department Councillors, and, by the *Chuo*, of intelligence as to the reception given to the proposal by the Administrative Reform Council, are facts illustrating the urgent necessity of enforcing discipline in the ranks of officialdom.

Another important topic of discussion during the week was the procedure of the Government with reference to private railway enterprise. The three Tokyo papers opposed to the Government, namely the *Chuo*, the *Nichi Nichi*, and the *Tokyo Shimbum*, or rather four, if we include the *Meiji Shimbum*, which appeared on the 5th inst. as successor to the *Fuyu*—and also the *Fiji*, strongly criticize the Government's want of fixed views in this matter. It will be remembered that for the

purpose of determining the policy to be pursued, the Government specially appointed a number of prominent business men, as Mr. Shibuzawa and others, to be extraordinary members of the Railway Council, and invited them to discuss these questions:—"First, does the present economic condition of the country warrant the construction of new railways, and should the work of construction be considered necessary, what effect would its carrying out produce on that condition? Secondly, if it appears that to permit the construction of new railways would disturb the national economy, should the Government forbid construction? Commenting on these questions, the *Chuo* and the *Tokyo Shimbum* infer that the Government do not possess any fixed policy with regard either to the construction of railways or to the present features of the national economy. The questions furnish a true gauge of the financial ability of the Matsukata Cabinet, whose strength is believed to be in finance.

The *Nichi Nichi* condemns the Government for having obliged the Railway Council to discuss affairs evidently outside its functions, for any question relating to the general economy of the country and the policy to be taken with reference to it, must be determined by the Administration itself. The *Fiji* assumes a similarly unfavourable attitude, maintaining that the idea of deducing from the economic condition of the country an indiscriminate answer as to whether or no the construction of new private railways should be permitted, is not only open to the charge of vagueness, but must also be condemned as needless and futile official meddling. The questions simply show a lack of fixed views on the part of the Government with reference to the important subject of railways. Moreover, if the Authorities intend to refuse permission to all applications for laying lines in districts where railways are already open for traffic, their idea is entirely wrong, for the absence of competition is a fundamental cause of the absence of improvement in Japanese railways. The *Fiji* points to the Sanyo and the Nippon Railways as good illustrations of its contention, the competition produced by coasting steamers in the case of the former having tended to improve it in many respects, while the absence of any such incentive in the case of the latter has resulted in many defects. We note that the pro-Government papers have nothing to say on this subject.

The *Nippon* writes that an agitation is secretly on foot to resuscitate the alliance between the Satsuma and the Choshu statesmen. The object of the persons seeking to bring about that end is to place Marquis Yamagata at the head of the administration, to make Count Matsukata devote himself to finance, and to replace Count Okuma by Marquis Ito at the Foreign Office. The alliance of the Sat-Cho statesmen restored, the co-operation of the Liberals and the National Unionists would follow as a matter of course, according to these persons, and a majority could thus be easily commanded within the Diet. Needless to say that the *Nippon* has no language strong enough to denounce this scheme.

Months have elapsed since Count Okuma assumed the portfolio of Foreign Affairs, writes the *Nichi Nichi*, but nothing has been effected in the matter of Korean policy. Whenever any difficulty turns up for solution, the Count merely speaks of it as a result of the previous Cabinet's faults, and bestows no attention on it, while even matters of his own initiation he abandons to fate when any obstacle presents itself. Whatever be the cause of this inertness on the part of Count Okuma, his negligence about Korean affairs must be strongly blamed, concludes the *Nichi Nichi*, since it impairs the interests of the Far East in general and of Japan in particular.

The *Yomiuri* and the *Chuo* invite public attention to the question of reconstructing Tokyo harbour, a question that was again brought up for discussion at the last meeting of the Tokyo City Assembly, and entrusted to a Committee specially elected for the purpose.

The suggestions that the *Yomuri* wishes to make in connection with this problem are that the citizens of Tokyo be licensed to reclaim land from the sea at their own volition as far as the forts off Shinagawa, and that certain privileges be extended to them, in view of the risk and outlay involved in the undertaking, as, for instance, that persons fixing their abodes in the reclaimed streets be relieved from paying various public burdens and from the restraints generally imposed on the prosecution of business. A project to reclaim that portion of the shore was rejected a few years ago by the City Assembly on the ground that such a work would deprive of their means of livelihood many persons engaged in fishing and gathering sea-weed and shell-fish. But no such consideration should be suffered to obstruct a scheme that would confer immense benefit on the city at large. Immediately after reconstructing the harbour, Tokyo should be included in the list of special commercial ports, so that various inconveniences now arising from the absence of that privilege might be removed.

The *Chuo* reminds the public that serious opposition has to be encountered in this matter of harbour improvement, namely opposition in military quarters where uneasiness is felt even about leaving Yokohama open to foreign commerce. In fact, the idea of substituting some harbour in Izu or Sagami for Yokohama, so that foreign ships might be kept as far away from the capital as possible, is gaining strength in military and naval circles, especially since the termination of the Japan-China War. Vehement opposition will therefore be encountered by the scheme now in the hands of the Committee of the City Assembly, and unless some means of surmounting that difficulty be in sight, the City Assembly will have only its trouble for its pains.

EDITORIAL NOTES.

FINDINGS OF MARINE COURTS OF INQUIRY.

As mentioned by us a week ago, the Tokyo Marine Court of Inquiry have found Captain Eckstrand to blame for the accident that happened to the *Kobe Maru* in Nagato Straits on 4th July last. The accident occurred shortly before 7 o'clock in the morning, the vessel touching the reef. She, however, reached Nagasaki safely the same day the damage to the vessel's bottom being slight. The Court found that Capt. Eckstrand was to blame for not ascertaining the position of the steamer in spite of the fact that she had been drifted to the right by the current. His certificate is suspended for one month.—Two days before delivering this finding, that is on the fifth instant, the same Marine Court found that Capt. F. L. Sommer was responsible for a breach of the maritime regulations in taking the *Satsuma Maru* out of Yokohama harbour, on the 3rd February, before the safety valve of that vessel had been closed by the properly appointed official. The Court suspended Captain Sommer's certificate for one month, and cautioned Mr. P. Staffa, the chief officer.—Both of the above named vessels belong to the fleet of the Nippon Yusen Kaisha.

OUT FOR AN AIRING.

HARRIS and the musing spider that stepped upon a red hot shovel, and having exhibited a brief but wild surprise, shrivelled up, might be comforted could they come to Shanghai in the flesh, and hobnob with the reporter of that settlement's leading journal, who, describing the Caledonian Ball, says that "the *cor Scotorum*, as *perferendum* as their *ingenium*, had extended their invitations as widely as the community itself has expanded." "Bopple," "schuawp," "bolwoogylo," and "dingblatter" might be recommended for the consideration of that reporter could one be sure that his *cor Scotorum* and its etcetera were soberly intended. But we suspect that his idea was not so much to air his Latin as to pourtray the spirit of magnificent frolic that marked the St. Andrew's Ball in Shanghai. It was evidently a noble affair. Twenty-four dances, exclusive of the Highland Fling and a

Sword Dance, bag-pipes and kilts galore, and at daylight a procession homeward headed by the pipers.

THE KOREAN POWER-SHOVEL.

In the *Korean Repository* a new section has been inaugurated under the heading "Things in General." We take the following humorous note from it:—

This interesting invention occupies a front rank among the labour-saving machines of Korea, for it saves from three to five men a vast deal of work. It consists of a long wooden shovel armed with an iron shoe to cut into the earth properly. The handle is about five feet long and is worked (to a certain extent) by the captain of the crew. Two ropes, one on each side, are attached to the bowl of the shovel, and these are managed by the men who seek to save their labour.

When in operation the captain inserts the iron-shod point of the shovel as deep into the earth sometimes as three inches, and then the crew of two or four men give a lusty pull and a shout and away will go a table-spoonful of dirt full six feet, if not more into the distance. This operation is repeated three or four times and then the weary crew take a recess and refresh themselves with a pipe. It is a beautiful sight to watch a crew working these power shovels, everything is executed with such clock-like regularity, especially the recess. Then the crew sometimes sing in a minor strain, for the Korean day labourer can always be depended on, when putting in time, to do it in as pleasant a manner as possible.

That this implement belongs to the class called labour-saving machines there can be no doubt. It takes five men to do one man's work, but entails no reduction in pay. In fact the number of its crew can be extended to the limits of the shovel's ropes without risk of a strike among the labourers. Many interesting stories might be told to illustrate its name of the power shovel, one of which I will tell. We had a small patch of garden we wanted turned over, so we hired a coolie and put in his hand a beautiful new spade from America. He attached two straw ropes to it, hired four other coolies, at our expense of course, and did the job in triumph. Such is the power of this instrument over the Korean mind!

JAPANESE RESIDENT IN KOREA

The Rev. D. S. Spencer, writing his "First Impressions of Chosen" in the *Korean Repository*, says:—

I had not been in Korea a week before I became convinced that, with certain manifest exceptions, the Japanese who are there are not at all fairly representative of their people. A dozen years among the latter should give one a right to an opinion. The Korean Japanese are, to far too great a degree for the good of either Korea or Japan, mere adventurers, who have found their way to Korea in the hope of making financial gain out of the present and recent-past state of affairs in the peninsula. Without definite aim, without financial or moral standing, many of them professing to be irreligious, and more of them feeling none of the restraints of moral obligation, and lacking business qualifications, they form an element rather dangerous than otherwise under present social conditions in Korea. Through them Japan is badly represented to the world. If they are to remain in Korea, and on no principles of justice can they be easily excluded, the opening of distinctive Christian work among them is a matter of the highest importance.

THE REBELLION IN THE PHILIPPINES.

The following extract from a private letter, dated Manila, the 25th of November, throws some doubt on the recently reported successes of the Spanish troops, says the *N.-C. Daily News*. The movement referred to below was the general forward movement attempted by the Government troops:—"The situation has not improved. The movement I mentioned in my last utterly failed, and the Government troops are now awaiting still further reinforcements. The reverse they have suffered has probably had the effect of largely increasing the rebel ranks, but I do not think the latter will venture to leave their strong positions at Cavite, but will await further attacks."

THE "NEWCHWANG"—"ONWO" COLLISION.

SIR NICHOLAS HANNEN has found that both vessels were to blame in the *Newchwang-Onwo* collision, thus reversing the finding of the Naval Court of Inquiry that found that the master of the *Newchwang* "was solely in error in that he did not observe at first Rules 15 and 21, and afterwards Rule 16 of the *Regulations for Preventing Collisions at Sea*, that he starboarded his helm in place of porting it when he could have done so without in any way endangering his ship; and that

he improperly starboarded his helm to the *Onwo's* red light and went half-speed ahead, attempting to cross the *Onwo's* bows." The collision occurred on the Huang-poo River, near Woosung, on April 30th, and some hundreds of lives were lost through the sinking of the *Onwo*. Sir Nicholas found that the *Onwo* had herself violated Regulation 18.

ROYAL MARINE GARRISONS.

THE naval correspondent of a London paper writes as follows on a proposal, not a new one, concerning the garrisoning of coaling stations abroad:—"It is believed that the Admiralty and War Office Authorities are considering the question of substituting Royal Marine garrisons for the military garrisons of places like Aden, Halifax, Hongkong, and St. Helena. I believe such a scheme would be very popular in the corps, but it will necessitate a considerable increase in their present strength. At present the total number of Marines is, I believe, 16,000, of which number about half are serving afloat. It would have one very great advantage, inasmuch as it would probably give some congenial employment to the senior officers, who at present are like hunters in a frost, eating their heads off in the stable."

THE "KANAGAWA MARU."

On October 22nd, Messrs. D. & W. Henderson & Co., Partick, launched the twin-screw steamer *Kanagawa Maru*, built for the Nippon Yusen Kaisha. This vessel is the first of ten being built in England for that Company. Eight are being built on the Clyde and two in Belfast, and they represent an aggregate tonnage of about 60,000 tons gross. The *Kanagawa Maru* is 463 ft. by 49 ft. 2 in. by 33 ft. 6 in., about 6,000 tons gross, and classed in Lloyd's 100 A1 three deck rule. She will carry a large deadweight, and is expected to attain an average speed of fully 12 knots on a moderate consumption. She has accommodation for first-class passengers and 150 steerage passengers.

THE STRANDING OF THE "NENMUIR."

At the Osaka Marine Court of Inquiry, on the 10th inst., an enquiry was held into the circumstances attending the stranding of the British steamer *Nenmuir* in the Inland Sea in the spring of this year. The vessel was on a voyage from Kobe bound for Hongkong, and left the former port on the 30th of April last. The pilot in charge was Mr. Frank Bishop, a German subject. At two o'clock on the morning of the 1st of May the vessel struck a shoal near Imajimachi, Iyo Province, Inland Sea. The pilot was sleeping in his chair on the bridge at the time of the occurrence. After hearing several witnesses, the Court found that Frank Bishop was to blame for having neglected his duty, and suspended his Inland Sea pilot's certificate for two months.

DACOITY.

TELEGRAPHIC news had reached Haiphong of the burning by dacoits of half the town of Coclieou in the Laokai district. A French firm had workshops in the town and three of their men were severely injured and the terrified remainder are threatening to desert.

A RUSSIAN FETE-DAY.

A SALUTE was fired at noon yesterday by the war-ships in harbour in honour of the first anniversary of the nomination of the Czar of Russia. In the evening the *Dimitri Donskoi* was beautifully decorated with innumerable clusters and festoons of electric lights.

THE DELAY OF THE "SAGHALIEN."

THE *North China Daily News* learns that the cause of the detention of the *Saghalien* was the bursting of one of her boilers. One of the engineers and ten firemen were killed.

GIRLS' HIGH SCHOOL.

THE prize-distribution and breaking up of the Girls' High School (Mrs. Cahusac), takes place at 4.30 o'clock this afternoon at the Van Schaick Hall.

MR. H. S. WILKINSON.

MR. HIRAM SHAW WILKINSON, Crown Advocate in H.B.M.'s Courts in China and Japan, is a passenger by the incoming French mail.

WHEN THE REVISED TREATIES GO INTO OPERATION.

Mr. Taguchi Ukichi, the well known economist, says, according to the *Mainichi Shimbun*, that he sees no reason to make any special preparations for the time when the Revised Treaties will go into operation, for the number of foreigners attracted to Japan will not be anything like the estimate of certain publicists. He would himself be charmed to anticipate a large influx of foreigners, but the prospect seems very uncertain. The interior of the country is practically open already for any one that likes to visit it, and the mere fact of not requiring a passport will not make any material difference; certainly not at first. As to the prediction that cheap foreign capital will be embarked in various enterprises, Mr. Taguchi attaches little faith to it. On the contrary, he fears that nothing so fortunate can be hoped for. Just as the Japanese themselves hesitate to embark capital in Hokkaido or Formosa, though the profits obtainable there are said to be large, so foreigners will be doubtful about risking their money in Japan. The editor of the *Keisai Zasshi*, if he be correctly reported by the *Mainichi Shimbun*, seems to hold the foreign merchants of Yokohama and Kobe in light esteem, for he applies to them generically the epithet "*materosu*," which describes seafaring individuals of low class. He thinks that though the opening of the country may bring some additional foreigners, they will not be men of standing but rather persons of the "*materosu*" genus, just as the Japanese that go to Hawaii or New Guinea are questionable characters. It is evident that Mr. Taguchi knows very little about the spirit of British enterprise, but as experience alone can teach him, we need not essay the task. He is usually a man of remarkably broad and liberal views, so that closer contact with foreigners after the new Treaties go into operation, may mend his mistakes. Meanwhile, he has discovered one cause of apprehension, namely, that although the ownership of land by foreigners will be interdicted, there will be nothing to prevent their acquiring shares in railways, and if they get all the stock of a railway company into their hands, then they become, *de facto*, proprietors of the land on which the line is built. Mr. Taguchi forgets that no railway company has a perpetual charter.

FOREIGN CAPITAL FOR JAPAN.

It is rumoured that Japan may have recourse to the foreign market for funds instead of floating the proposed Public Undertakings Loan at home. In her programme of finance for the decade commencing with the present fiscal year, a public undertakings loan, amounting to 135 million *yen*, is included among her revenues. The programme excludes any consideration of the sum—225½ million *yen*—due on account of the Chinese Indemnity at the time that the programme was drawn up. It was the object of the financiers that compiled the scheme to provide means for meeting the expenditures of the State without relying on the recovery of a debt not absolutely free from all elements of uncertainty. Hence, should the Indemnity payments be made with regularity, there will be no

occasion to have recourse to the loan; or, to speak more correctly, the repayment of any portions already raised, and the abandonment of any further issues will presumably follow. Meanwhile, the Diet consented, last session, that 8½ million *yen* of the loan should be floated during the current fiscal year (ending March 31st, 1896), and 61½ millions during next fiscal year (April 1st, 1897, to March 31st, 1898). It is, doubtless, with reference to these portions that the talk of recourse to foreign capital is now heard, the home market being no longer in a favourable condition for such borrowings. Indeed, we have often wondered that the home market did not long ago become incapable of further exploitation, for its comparatively trifling store of floating capital—perhaps 400 million *yen* in all—has already been made to perform the functions of a fund twice as large. It supported the immense drafts made upon it for the purposes of the war, and it has since supported even larger drafts at the behest of the spirit of enterprise created by the war. Hence, that a five-per-cent. loan of 135 millions should overtax its hardworked energies, is not surprising. In the *Miyako Shimbun* we read that an idea is entertained of dividing the loan into three parts, one to be placed abroad, one to be floated at home, and one to be taken up by the Bank of Japan. Nothing is as yet settled, but in view of the demand arising in London for Japanese consols, the proposal to draw upon foreign capital is said to be gaining favour.

FOREIGN MISSIONARIES IN KOREA AND POLITICS.

Some time ago, in commenting on a statement contained in the *Söul Independent* to the effect that foreign missionaries stand entirely aloof from politics in the Korean capital, we expressed doubts as to the complete accuracy of such an assertion; called attention to the fact that Bishop Corfe has been, for some years, a journalistic or magazine critic of Korean political affairs, invariably writing in a manner very hostile to Japan; alleged that there undoubtedly exists in Söul a social coterie, led by the Russian Representative, certain American missionaries, the Secretary of the United States Legation, and the editor of the *Independent*, and added that we believed this coterie to have a common political platform. To these observations of ours the editor of the *Korean Repository* replies:—"A negative proposition is sometimes very 'difficult to establish.' This is readily admitted, and the missionaries whose conduct, quite naturally and properly, is so closely watched, would have no difficulty in accounting for their conduct; but, of course, might find great difficulty in attempting to prove the opposite of all the charges preferred against them by newspaper correspondents. We missionaries were outraged last year when the Queen was hounded murdered. We showed sympathy with the King by promptly complying with his request to be near him while he was surrounded by those whose hands were red with the blood of his Queen. We should have done as much for the lowest coolie under the circumstances; why not for the afflicted Royal Family? If this is 'being drawn into the vortex of politics,' make the most of it. To us it was only showing the

ordinary instincts of humanity to those in suffering. As to the 'social coterie,' that is very funny. We are still waiting to see it proved that social amenities necessarily imply meddling in politics. Everybody is mentioned specifically except 'certain American missionaries,' and as they are presumably the only ones moving in a doubtful sphere, it would be interesting to know who they are and of what political gossip or sins they are guilty."

THE ACCUSATIONS AGAINST FRENCH PRIESTS IN MANCHURIA.

The story of the accusations preferred by Dr. John Ross against the Roman Catholic Bishop of Mukden in particular, and the French Priests in Manchuria in general, has entered a curious phase. Already an emphatic contradiction of Dr. Ross' assertions has been published by one of the French Missionaries, but Dr. Ross has declined to attach any importance to the denial unless it comes direct from Monseigneur Guillon. It will be remembered that he charged the Bishop with having in his compound a pillar to which Chinamen were tied up by their queues and beaten unmercifully, and with having practised that form of torture to a most aggravated extent in the case of a man who had abandoned the Roman Catholic faith and become a Protestant. Another defender of the Bishop has now entered the field, namely, the Rev. H. Lemassee, *Missionnaire Apostolique*. M. Lemassee proposes that a jury be formed of respectable residents of Shanghai—he is willing that the *personnel* should be four or six English merchants—and that Dr. Ross lay before it any proofs he can produce of the truth of his allegations. He further offers to put up two thousand dollars if Dr. Ross' will do the same, on condition that if the majority of the jury decide in Dr. Ross' favour, that is to say, decide that his accusations are correct, then, Mr. Lemassee says:—

- 1.—The sum of \$2,000 will be yours.
 - 2.—Further I bind myself, without any reciprocal obligation on your part, to pay you a sum of \$500 for every Chinese, Catholic, Protestant, Pagan, or Mahomedan of Manchuria, whom you can prove, before the same jury, to have been tortured by Monseigneur Guillon or any one of his missionaries.
 - 3.—It will be lawful for you to publish this verdict of the jury in any paper you like.
- But if you are unable to get evidence and if the verdict is against you, thus:—
- a.—The deposit of \$2,000 will be handed to me and laid out for some good work, tending to promote the diffusion of Christianity in Manchuria.
 - b.—I will require all the papers which published your accusation, to publish also your inability to prove it.
- Lastly, if you refuse to accept what I propose, I leave it to public opinion to pronounce upon what you are worth.
- In all this, of course, I engage but my own personal responsibility, without any prejudice whatever to the judicial proceedings that Monseigneur Guillon and his missionaries may reserve to themselves the right to bring against you, for since in your report you defamed the Bishop and all the French missionaries in Manchuria, it is plain that they are each and all qualified to ask satisfaction from you in the way they may deem proper. As for my own way, I think it is sufficiently frank.

It is possible, of course, that Dr. Ross may not be able to produce his witnesses in Shanghai, but his position has certainly become very difficult, and unless he has grounds for knowing that Monseigneur Guillon intends to arraign him before a law court on a charge of libel, the public will judge him harshly if he declines M. Lemassee's challenge, so far, at any rate, as its essentials are concerned.

RAILWAYS AND OTHER UNDERTAKINGS.

The Railway Council, we read in the *Yomiuri*, resolved to sanction at its last meeting some 1,500 miles of private railways. In connection with these projects the *Yomiuri* asserts that a good many have no hope of being started at all, or, if started, will not pay; while there are others that have a good chance of success and yet failed to obtain the sanction of the Council. This news has evoked some indignation among business men connected with railway enterprise, and it is asserted that while the less scrupulous do not hesitate to approach the Authorities in an underhand manner with a view to compassing their ends; others of a more honourable turn of mind demand of the Authorities in strong language the reasons for displaying such partiality. Beset with such difficulties, the Chief of the Railway Bureau was at a loss what to do, and resolved to seek the opinion of the Premier. The Premier declared that he was not satisfied with the steps that the Council proposed taking, and averred that he was inclined to contract the scope of railway enterprise. In the matter of selection also, the Premier thought that the Council was lacking in discretion. It is said, therefore, that the Railway Authorities are secretly reconsidering the subject. The same paper reports that Viscount Nomura, Minister of Communications, and Count Okuma, Minister of Foreign Affairs, entertain quite different opinions to those of the Premier in the matter of railway enterprise, and both are alleged to have told certain railway projectors that they did not think it advisable to contract the scope of railway enterprise.

Captain Kimotsuki, Chief of the Hydrographical Bureau of the Navy, inspected, a few days ago, the site that Paymaster Ishihara selected at Tanikawa, Izumi, for the construction of dockyards. He spoke of the result of his inspection to the representative of the *Osaka Asahi*, observing that the site was excellent for the purpose in view. He dwelt much on the absolute necessity for increasing the dockyards of Japan, and recommended the Pay-master's scheme to the favour of Osaka pitilists.

The Government, we read in the *Nichi Nichi*, intends that the iron foundry shall be capable of turning out 60,000 tons of steel yearly. A sum of a little over four million *yen*, spread over four years, was approved by the last session of the Diet for this enterprise. The scheme has been steadily pushed forward, and while experts have been sent to investigate foundry affairs in the West and to engage two foreign experts as managers, other experts staying at home have succeeded in selecting a suitable site for the buildings. It was originally designed to establish Foundries in two different places, but prudence dictated starting one at first. The site selected, is situated in the village of Yedamitsu, Oga District, Fukuoka, and covers more than 200,000 *tsubo*. It slopes from south to north, and rests on a firm substratum of granite. In one direction it terminates on the coast; and is only a few miles distant from the port of Wakamatsu. The result of the last two years' meteorological observations shows that the district enjoys exceptionally fair weather throughout the year, no less than 233 days having been clear and only 53 days cloudy.

The citizens of Shimonoseki and Moji

are highly displeased at finding their towns excluded from the list of ports opened for special commerce, a notification having been issued in October depriving them of the privilege that they had previously enjoyed in regard to the export of certain special commodities. The idea of the Authorities in excluding these two places from the list of special ports, is said to be based on military considerations. The Shimonoseki and Moji people reply that, if military considerations have so much weight, they can not understand why foreigners should be allowed to live in Yokohama, which is so close to Tokyo and Yokosuka; moreover, what difficulty would there be in preventing both ports' being temporarily closed in time of emergency? The Government's action is highly inconsistent and thoughtless, they urge. It opened the two places for the purpose of special exports and encouraged their prosperity, yet now, people having invested money in improving the harbour basins, the Government turns round and suddenly deprives them of their privileges. The indignation of the residents is said to be so strong that unless proper steps are taken they may break out into riot. A glance at the Customs returns will be useful in this context. In 1895, exports from Shimonoseki aggregated over four million *yen* and the place ranked next to Yokohama and Kobe as an export outlet. The Local Assembly of Yamaguchi has decided to unanimously memorialize the Cabinet on the subject.

A LESSON FROM THE "NEW CHWANG"-"ONWO" COLLISION.

When the collision between the P. & O. steamer *Ravenna* and the I.J.S. *Chishima* became the subject of inquiry in a British Naval Court, with the result that the former vessel was acquitted of all blame, we ventured to suggest that the finding of a Naval Court and the finding of a Law Court were two distinct and often very different things, and that the verdict of the Naval Court could not be considered to have absolved the *Ravenna* of all legal responsibility. Readers of the foreign local press in Japan probably remember what a storm of invective was directed against us in consequence of these remarks, and how roundly the Japanese Authorities were abused for not accepting as final the judgment of the British Naval Court. For the sake of our assailants at that time, we may now refer to the case of the *Newchwang-Onwo*. A Naval Court of Inquiry, sitting in Shanghai, found that the *Newchwang* was solely to blame, but the owners of the vessel did not accept that ruling. They carried the matter into a Court of Law, and Chief Justice Hannen has now reversed the finding of the Naval Court and declared that both vessels were in error. Whether a British Law Court would have reversed the Judgment of a British Naval Court in the case of the *Chishima* and *Ravenna*, we do not pretend to say, but assuredly no conceivable blame attached to the Japanese for appealing to British law.

The railway between Kyoto and Saga having been completed and an engine run over the line, it will be opened for traffic on or about the 3rd of January next.

Count Okuma, Foreign Minister, proceeded to the Imperial Palace on Wednesday and was received in audience.

RAILWAY ITEMS.

The *Jiji* publishes an interesting comparison between Western and Japanese railways in respect of efficiency and convenience, basing its views on information supplied by a Japanese expert who lately returned home after a prolonged visit of inspection through Europe and America. In the first place, a striking contrast is observed between the two systems with respect to the style of rolling stock, for whereas a western railway uses 6 to 8 wheeled cars—it is only quite recently that the bogie style was introduced in America—the majority of cars or waggons used on Japanese lines are 4-wheeled, and of a style entirely out of date in the West. The locomotives used in Japan are similarly old-fashioned. The average speed of locomotives between Ueno and Aomori is only 18 miles per hour, while that between Shimbashi and Yokohama is 20 miles. But the speed could easily be increased to 40 if only locomotives of the latest style were used. Another striking difference between Japanese railways and those of the West is in frequency of the train service. The defective and insufficient service in Japan is due to her railways being yet on single tracks, and the doubling of the lines—at least those running through important districts—must be undertaken as quickly as possible. Another contrast is furnished by the volume of goods service and the charges, for whereas in England the majority of goods belong to such subterranean products as coal, iron, and forth, Japanese railways carry in their waggons principally agricultural products, though this is not the case with the Hokkaido and Kyushu Railways. Then the difference between the various classes of fares is not so wide in the West as in Japan, the second class fare being only twenty per cent. higher than that of the third class. This is of course due to the beneficial result of competition.

The growing activity in the parcels post service and the increasing number of parcel post-bags that private railways are obliged to convey without remuneration, are beginning to attract the attention of railway companies in Japan. It is said that in England 25 per cent. of the receipts from the parcels service goes to the Treasury and the remaining 75 per cent. to railways that carry parcels. Certain private railway companies in Japan have asked the Post Authorities to modify the present arrangement, but the latter have refused to comply. Another grievance that the private railway companies of Japan entertain against the Government is connected with the telegraph service. Railway stations situated in localities where the Government has not yet established a service, are obliged to permit the public to use their lines. Yet the Postal Authorities appropriate two-thirds of the receipts. Such a partition is, in itself, open to the charge of being unfair, but there is an even more serious cause of complaint. When the Postal Authorities compel private railway companies to allow the public the use of their telegraphs, the Authorities watch the pecuniary result of the service, and when they are satisfied that the service pays, they forthwith proceed to establish Governments line along the route and so ruin the private lines.

FASHIONS OF GAMBLING.

The conservatism and at the same time the progress of the Chinese have just been testified to by an incident in which the Shanghai police took a part. Gambling was in question. Forty-one persons were arrested for pitting crickets against each other. The affair is thus described by the *China Gazette* :—

The *modus operandi* partakes somewhat of the nature of cock-fighting, but the combatants are beetles, a kind of third cousin to the common or domestic cricket. These insects are imprisoned in jars, well fed and kept warm by a small hot-water tin, the whole being contained in a box similar to those carried by pigeon fanciers in the Old Country. Two male crickets are placed in a miniature bamboo cage, while separated by a thin partition is a female cricket. The males, inspired by the presence of the other sex, commence fighting, and the stakes are placed upon each of them, the owner of the victor being declared the winner. The crickets are most pugnacious, and are said to cost from one to two dollars each, while pedigrees and performances are given when sales are effected. All the paraphernalia were confiscated by the Court on 30th ult., and it will be interesting to know what will become of them. The gamblers were fined \$10 each, but some, who had been bailed out for \$20, had their bail estreated. The owner of the house was fined \$25, the master of ceremonies \$25, and a native newspaper reporter, who said he went there to "look see" for the *Sin Wan Pao*, was let off with \$5.

We call this a testimony at once to the conservatism and to the progress of the Chinese, for the habit of pitting one mantis against another is centuries old in China, while the idea of subjecting the amusement to police interference is comparatively modern. We suspect that what our Shanghai contemporary calls "a kind of third cousin to the common or domestic cricket" is in reality the praying mantis. Every one familiar with Chinese porcelains knows that when enamel decoration over the glaze began to command the admiration of Chinese connoisseurs in the *Ch'eng-hwaera* (1465-88), one of the most favourite decorative subjects was a mantis fight, and it is related that the pastime of making these insects do battle with each other was all the vogue in those times among the higher classes of the people. Now-a-days it is apparently regarded as a criminal offence. So is cock-fighting in England, but who could compare cock-fighting with mantis-fighting, except on the ground that each is a fashion of gambling? It is impossible to feel sorry for a mantis under any circumstances. There exists no such fiendish cannibal in the universe. A cat is cruel enough to its prey, in all conscience, but its frisky methods impart an artistic character to its doings as a torturer. But the mantis is the grimmest of savages. He will crook a near relative in one of his long fore legs, and bite into him bit by bit, just as a greedy child, with lingering deliberation, consumes a gingerbread. To see that mantis pause over the writhing remnants of his first cousin, and lick out with his long tongue any crumbs of the repast that many have lodged in the channels of his claw, the while his diamond-shaped pin-points of eyes scintillate with the coldest glitter, is to witness one of the most devilish incidents in the struggle for life that disgraces this world of ours. The mantis is beyond the pale of pity, and to set him fighting against one of his kind seems a justifiable act. It is a petty amusement, in truth, but we have seen a pettier, namely, races between mites taken from a cheese and deposited upon hot plates. Each man chose a mite, and, at a given signal, laid it, as nearly as possible, in the centre of a plate heated just suffi-

ciently to be a most unpleasant resting place for a tender footed insect. The mite invariably started in a bee line towards the edge of the plate, by what instinct guided the father of entomologists alone knows. Of course the mite first to tumble off his plate won the stakes of all the other vermin owners. But never were races so uncertain. Often within an inch of the rim that constituted the winning post, a mite, hitherto squirming along well within himself, would shrivel up, and take no further interest in the proceedings. After all, the Chinese mantis-fights seem the more intellectual pastime of the two.

THE LAST OF AN UNSIGHTLY RECORD.

Every foreign visitor to Tientsin has been shocked by a ruin that looms obtrusively apparent on the bank of the Peiho. It is in the form of a great gate with flanking walls. The space behind is vacant, but on it once stood a large cathedral, the most imposing evidence of Roman Catholic propagandism that then existed in China. The cathedral was burned to the ground, in 1870, by a mob of Chinese rioters, who, at the same time, slaughtered a number of Sisters of Mercy after the brutal fashions of mobs everywhere, and especially of Chinese mobs when foreigners are the objects of their fury. France's hands were too full of other work at the time to permit her to exact ample compensation for the cruel outrage, and it seemed that the ruins of the cathedral bore perpetual testimony to the insufficiency of China's punishment. At last the unpleasant reminder is to be removed. The French Representative in Peking has prevailed on the Chinese Government to rebuild the Cathedral. It is to be a handsome edifice, with a roof of yellow tiles, a colour that carries with it special distinction in the Middle Kingdom.

OWNERSHIP OF LAND BY FOREIGNERS IN JAPAN.

It is wonderful what effects can be produced by an appeal to sentiment. There has been so much talk about the ownership of land by foreigners in Japan that the contingency now assumes the dimensions of a veritable bugbear among the giddy section of the population. We actually find a journal like the *Mainichi* speculating on the necessity of devising some means for preventing foreigners' getting land into their possession through the medium of Japanese subjects. What possible matter could it make to Japan though they did so? The land would not really belong to them. They might have the use of it for practical purposes, but it would be registered in the name of a Japanese subject, and could never be legally transferred to any one except a Japanese subject. This talk about *tochi shoyu-ken* is extremely silly. Land can not be carried away. It remains a perennially inalienable asset of the country whether foreigners or Japanese happen to have the use of it. There are, it is true, many reasons, easily conceivable, why the Japanese people might object to the presence of a large number of aliens in the capacity of land-owners, but not one of those reasons applies to the case of land occupied by a foreigner and registered in the name of a Japanese. We are glad to

perceive, however, that while referring to this chimera, the *Mainichi* quotes an expression of opinion attributed to the Committee appointed to make preparations for the operation of the Treaties. The view said to be taken by the Committee is that a foreigner, purchasing land in the name of a Japanese, places himself entirely beyond the pale of the law in respect of all matters relating to the land, and has no legal recourse against the Japanese owner though the latter mortgage the land or even sell it. No record of the foreigner's connection with the land appears in the public registers. It might be sold and duly transferred to another Japanese without the foreigner's having the smallest suspicion of the event, and the law courts could not take cognizance of any appeal from the latter for redress. Foreigners willing to take such risks must be few and far between, especially since they know that any Japanese subject joining them to whip the devil round the post in such a fashion could scarcely be worthy of implicit confidence.

"MUDA-NA" AND A TOKYO CORRESPONDENT OF "THE TIMES."

Our old friend, with his chronic malady of *cacoethes scribendi*, has got himself into a horrible mess. Strange that the Japanese railways, with which he is so familiar, have not taught him the trick of going slow. A few days ago he accused the Tokyo correspondent of *The Times* of having described the streets of Tokyo as "broad and beautifully kept," and as the scene of competition between electric tramcars and humble *jinrikisha*. The Tokyo correspondent of *The Times* thereupon publicly denied that he had ever written anything of the kind, but "Muda-na" retorted that if the Tokyo correspondent had not written it, a Tokyo correspondent certainly had. But it now turns out that the words contained in *The Times* were, "humble jinrikisha may yet be seen competing with the electric tramcars for the traffic in the broad and beautifully kept streets of Tokyo." So *The Times* correspondent did not write about actualities but about possibilities. He talked of what might yet be the case, not of what is the case. It must not be imagined that "Muda-na" has acknowledged his gross blunder. Not a bit of it. Under the plea of correcting a wholly immaterial omission from his quotation, he inadvertently slips in the tell-tale "yet." Delightfully ingenuous "Muda-na"! He knows how much better it is to tell one and stick to it, than to essay the abominable inconsistency of confessing the truth.

RAILWAY PROJECTS.

We read in the *Yiji Shimpō* that the Railway Council, which has been in session since the 14th of November, found on its table some two hundred applications for charters, and that it has decided to sanction not more than a fourth of the number. On a question of general principle the Council's opinions were divided, one section maintaining that no new line should be sanctioned if it competed with one already in existence; the other section holding that injurious competition only should be regarded as a bar. The former view obtained a majority, with the result that, as nearly all the applications for lines in and about Tokyo and Osaka are of a competitive character, not more than one or two will obtain charters.

GENERAL MEETING OF THE LIBERAL PARTY.

The Liberal Party held a general meeting on the 15th instant at the Central Office of the Party situated in Shiba Park, Tokyo. The meeting was attended by some 350 members, about a third of whom consisted of present and past members of the Diet identified with the Party. Mr. Kataoka Kenkichi occupied the chair.

Mr. Kono Hironaka, on behalf of the General Committee of the Party, addressed the meeting as follows:—At last year's general meeting, the Party came to the determination to effect an *entente* with the Cabinet of the day, and this resolution was carried out in the 9th session of the Diet. In that session various *post-bellum* measures of prime importance came up for discussion. That they were carried through and enacted and that the foundation of the greater Japan was laid on a suitable structure, was mainly due to the efforts of the Party. Subsequently, Count Itagaki, the leader of the Party, obtained a seat in the Cabinet, and considerable progress was attained in the representative system of the country. The occurrence of successive natural calamities after Count Itagaki's entry considerably diverted his attention, and thus the realization of many cherished ideas of the Party was unavoidably interfered with. The resignation of the then Minister of Finance in August of this year eventuated in the resignation of nearly all the Members of the Cabinet, and it is to be regretted that the *entente* could not be brought to a satisfactory issue. Three weeks later, the so-called Matsukata-Okuma Cabinet came into existence, but though fully four months have elapsed since that time, nothing particularly noteworthy has been effected by the new Cabinet, and this in spite of the fact that, while the two leaders occupied the position of "outs," they spoke loudly about the necessity for administrative reform, the reduction of the scope of the military expansion programme, the adjustment of finance, and so forth. Nor does the much quoted policy announced by the Cabinet before the Assembly of Local Governors contain anything noteworthy, for it was shrouded in vague terms and was in short nothing more than a meaningless speech. It is true that an Administrative Reform Committee was appointed, but nothing has as yet been effected; whereas repeated administrative steps taken against journals in connection with the Household Minister's affair invited strong criticism from the public at large. Taking all things into consideration, the doings of the Ministry in power have simply resulted in impressing the public with an unfavourable opinion of the present Government. With such materials to judge from, it would be no difficult task for anybody to estimate the true capacity of the Government and to guess how long its tenure of office will last. Confronted by such an unstable Cabinet, the future of our Party must be considered full of hope. At the same time, the responsibility that the Party owes to the State has been considerably increased, and extreme care must be exercised before it decides to take any step. Indeed, if the Party regulates its affairs in such a manner as to be consonant with circumstances, it may attain, even in the coming session, satisfactory results. Mr. Kono concluded his speech by asking his fellow members

to use their united and cordial exertions for the good of the Party and of the country at large.

The platform adopted by the Party is as follows:—The Party considers the Ministry in power as opposed to it, and will leave the steps to be taken in accordance with circumstances to the care of the members of the Diet in the Council of the Party. In completing the *post-bellum* measures, the policy adopted by the Party in the 9th session of the Diet shall be pursued. The extension of personal freedom and rights shall be upheld in pursuance of the original policy of the Party. In the event of amending the Law of Election for the House of Representatives, the Party will advocate the increase of the number of members to not less than 500 and not more than 600.

Count Itagaki could not attend the meeting owing to the death of one of his relatives.

MR. A. S. ALDRICH'S AMENITIES.

In our issue of the 15th inst. we published a précis of an article in the *Fiji Shimpō*. It was an article embodying information furnished to the *Fiji* by a Japanese expert who recently paid a visit to the West. From first to last the précis did not contain a single expression of our own opinion or a single statement emanating from ourselves. Everything was taken from the *Fiji Shimpō* and was distinctly credited to that journal. Mr. A. S. Aldrich, a secretary of the Railway Bureau, considered it necessary to record his dissent from the views embodied in the *Fiji Shimpō's* article. He therefore addressed to this journal two letters, couched in his own inimitable style, wherein he was kind enough to say that one paragraph in our précis, "as it stands, is in itself nonsense," and that "neither the Japanese expert, nor the *Fiji*, nor (shall I say?) yourself, know anything whatever about the subject upon which you affect to throw light." We are familiar with the beauties of Mr. Aldrich's diction. His graceful pen has charmed the Yokohama public scores and scores of times over anonymous signatures about miscellaneous subjects which, as they stood, were in themselves flashes of genius. We have often admired his facility in inventing Japanese pseudonyms to conceal his identity, and in the silence of our editorial sanctum have applauded the courtesy evinced in his choice of epithets, the politeness shown in his strict avoidance of personalities, and the courage that drove him to deliver anonymous dicta upon innumerable topics—courage which that silly person Tennyson would have described as "blind and naked ignorance, delivering brawling judgments all day long on all things, unabashed," but which we, in our humble line of life, deemed as magnificent as the audacity of that other Aldrich who submitted his domestic arrangements to the scrutiny of a Law Court. Mr. A. S. Aldrich can not have appreciated our silent admiration of his tactful doings, lovely syntax, and mischief-aborring reticence, or he would never have been so cruelly ungrateful as to charge us with "knowing nothing whatever about a subject upon which we had affected to throw light," when, in point of fact, we had not written so much as one word on the subject, nor affected to throw upon it any light other than that reflected by the *Fiji Shimpō*.

MR. OMIWA.

Mr. Omiwa, one of the chief projectors of the Sōul-Fusan Railway, who stayed in the Korean capital after Baron Ozaki had left Korea, returned home a few days ago. Interviewed by a representative of the *Osaka Asahi*, Mr. Omiwa observed that the pro-Russian and anti-Japanese sentiment was not so deeply rooted among Koreans as the public believed. Both officials and people dread the ambition of Russia, and, with the exception of two or three of their number who are open to pecuniary persuasion, are all eager for the return of the King to his own palace. As to the progress of the Sōul-Fusan Railway, Mr. Omiwa observed that Mr. Kato, *Chargé d'Affaires* in Korea, has sent in a fourth official note to the Korean Government regarding the notification issued over the King's signature on the 21st ult., and has asked the Government for a definite reply. Mr. Omiwa cannot, of course, make a distinct statement, but he believes a favourable result will, in the end, be obtained. A certain amount of agitation and palm-oiling is always required in Korea to get most things done, and Mr. Morse, who secured the concession for the Sōul-Ninsen Railway well understood this. However, the projectors of the Sōul-Fusan Railway, whether deterred by the tradal depression in the interior or from other considerations, hesitated to follow this example in the way of distributing gifts. The Sōul-Fusan railway is, however, a national question and its projectors cannot be swayed by any consideration of filthy lucre. If they look solely for a speedy return of profits on their investment the privilege secured by Japan will come to nothing. The attitude of Koreans towards the Sōul-Ninsen undertaking has undergone a considerable change. At first the projectors understood that they were to obtain land gratis for the track, but now they are asked to expend large sums in removing the King's Botanical Garden, situated outside the gate of the Capital through which the line is to pass. Again, the land in the vicinity of Ninsen being owned by foreigners can not be obtained except by paying high prices. Consequently, the projectors have been obliged to defer by one year the work of construction, and are now trying to get the construction of the Sōul-Fusan Railway also into their hands. This is the reason why Mr. Omiwa has returned home, to ascertain the attitude of his co-projectors towards the scheme.

LEASING OF LAND TO FOREIGNERS IN KOBE.

With reference to the tenure of land by foreigners in Kobe, and the alleged conflict between the terms of the Revised Treaties and the provisions of the new Civil Code, the *Osaka Asahi* says that from the 1st to the 21st year of *Meiji*, the lands rented to foreigners by Japanese subjects comprised ten hill lots and three town lots on perpetual leases; fourteen lots on leases having no fixed term; one lot on a twenty-years' lease; two on twenty-five-years' leases; three on five-years' leases, and one on a ten-years' lease. Our contemporary adds that out of these thirty-four leases, five only have been allowed to lapse. The ten perpetual leases of hill lots are given in the following list:—

Lessee.	Extent.	Yearly Rent.
No. 1, American	518.6 <i>tsubo</i>	24.87 <i>yen</i> .
No. 5, British	672.8 "	29.29 " "
No. 6, American	458. "	23.96 " "
No. 7, American	404. "	8.776 <i>toku</i> of rice.
No. 11, German	1,008. "	90.87 <i>yen</i> .
No. 15, Chinese	423.88 "	4.29 " "
No. 20, American	372 "	10.63 " "
No. 21, American	770.2 "	16.35 " "
No. 23, American	518.82 "	16.35 " "

JAPANESE FINANCE.

WE shall soon have to consider the Budget for the approaching fiscal year, and in view of that fact, it may not be uninteresting to set down some figures conveying a tolerably clear idea of the financial programme evolved by the last Cabinet, and communicated to the Budget Committee, though not, of course, brought before the House itself. We do not vouch for the absolute accuracy of these figures, but believe them to be a very close approximation to the truth, if, indeed, they differ from it at all.

It has already been pretty generally understood that the plan of Army and Navy Expansion extends over two periods, commencing with the current fiscal year (April 1st, 1896, to March 31st, 1897). We can not indicate the exact duration of these periods, that information being kept secret.

The estimated expenditures on account of the two Services are these:—

ARMY EXPANSION.		Yen.
First Period	43,329,409	81,679,409
Second Period ...	38,350,000	
NAVY EXPANSION.		Yen.
First Period	94,979,681	187,579,681
Second Period ...	92,600,000	

Grand Total..... 269,259,090

As to the manner of meeting these outlays, it has hitherto been roughly stated that the indemnity received from China would be devoted to the purpose. The total indemnity is 345 million yen, out of which 119,050,000 yen have been paid and drafted into the Budget, 78,950,000 yen being applied to the purposes of the Extraordinary War Fund, to cover outlays already made, and 40,100,000 yen being included in the Revenue for the current fiscal year. It has further been assumed that the latter sum (40 millions) was appropriated on account of Army and Navy Expansion, so that, out of the grand total (269,259,090 yen) to be expended on the two Services, 229,259,090 yen only would remain to be defrayed out of the still unpaid portion (225,950,000 yen) of the indemnity. On those hypotheses, the Army and Navy expenditures would exceed the funds appropriated from the indemnity to meet them, the excess being 3,309,090 yen, a comparatively trifling amount which would be more than covered by the interest on the outstanding portions of the indemnity.

But the indemnity is not a certain asset, and to base a large programme of expenditure on an income that may never be realized—remote as the negative contingency is—would be bad finance. The ITO Cabinet consequently adopted measures to provide for an increase of available funds independently of the indemnity, the two principal sources being taxation and the floating of a Public Undertakings Loan (135 million yen). It was also estimated that the normal growth of the Ordinary Revenue, year by year, would result in a considerable surplus. Hence

from three directions money would flow into the Treasury. For the sake of clearness we shall deal with each of these separately. First, as to the Ordinary Revenue and Expenditure, we have the following figures:—

	Ordinary Revenue Yen.	Ordinary Expenditure Yen.	Surplus Yen.
29th fiscal year (1896-7)	97,227,222	92,186,835	4,840,412
30th fiscal year (1897-8)	100,615,615	93,449,134	7,166,481
31st fiscal year (1898-9)	101,993,900	89,894,053	14,099,847
32nd fiscal year (1899-1900)	100,139,884	91,152,960	14,986,924
33rd fiscal year (1900-1)	110,515,535	93,849,230	17,677,305
34th fiscal year (1901-2)	111,181,585	94,519,425	16,662,160
35th fiscal year (1902-3)	111,608,366	94,210,165	17,398,201
36th fiscal year (1903-4)	112,308,454	94,433,849	17,874,605
37th fiscal year (1904-5)	110,751,139	94,605,967	18,145,172
38th fiscal year (1905-6)	113,444,418	94,841,334	18,603,084
Total Surplus			146,718,977

With regard to the revenue from additional or increased taxation, and the proceeds of the Public Undertakings Loan, we have the following:—

	Instalment of Increase of Revenue for Taxation. Yen.	Public Undertakings Loan (Net amounts.) Yen.
29th fiscal year (1896-7) ..	3,107,222	8,211,414
30th fiscal year (1897-8) ..	17,073,016	61,309,498
31st fiscal year (1898-9) ..	24,565,268	40,146,151
32nd fiscal year (1899-1900) ..	30,517,729	10,217,933
33rd fiscal year (1900-1) ..	30,848,625	6,519,043
34th fiscal year (1901-2) ..	31,160,044	5,730,269
35th fiscal year (1902-3) ..	31,598,310	1,514,581
36th fiscal year (1903-4) ..	31,655,956	—
37th fiscal year (1904-5) ..	31,655,956	—
38th fiscal year (1905-6) ..	31,655,956	—
Total.....	261,838,082	133,648,889

To these amounts have to be added the sum appropriated from the indemnity during the current fiscal year, together with the annual payments made by China on account of the maintenance of the Weihaiwei garrison, up to 1902. We thus arrive at the total assets—independently of the portion of the indemnity still due—that will be available for defraying extraordinary expenditure during the decade under review, according to the programme of the Ito Cabinet; namely:—

	Yen.
Total of surpluses of Ordinary Revenue	146,718,977
Total income derived from additional taxes	261,838,082
Public Undertakings Loan	133,648,889
Appropriation from Indemnity (in 1896)	40,100,000
Payments from China on account of Weihaiwei	5,250,000
Grand Total	589,555,948

Turning now to the expenditures, we have this table:—

EXTRAORDINARY EXPENDITURE.		Yen.
29th fiscal year..... (1896-7)	yen	68,361,060
30th fiscal year..... (1897-8)	„	89,498,214
31st fiscal year..... (1898-9)	„	75,822,954
32nd fiscal year..... (1899-0)	„	57,269,962
33rd fiscal year..... (1900-1)	„	51,535,330
34th fiscal year..... (1901-2)	„	54,152,871
35th fiscal year..... (1902-3)	„	42,926,269
36th fiscal year..... (1903-4)	„	40,577,369
37th fiscal year..... (1904-5)	„	40,152,248
38th fiscal year..... (1905-6)	„	40,069,273
Total	yen	560,365,550

It thus appears that this programme yields a surplus of incomings over outgoings, amounting to 29,190,398 yen, independently of the unpaid portion of the Indemnity, namely, 225,950,000 yen. Of course, in the event of regular payment of the instalments of the Indemnity, no necessity would exist to float the Public Undertakings Loan. On this latter hypothesis—namely, the receipt of 225,950,000 yen from the Indemnity and the excision of the Public Undertakings Loan item

(133,648,889 yen)—the surplus in the treasury at the close of the 38th fiscal year would be 121,491,509 yen, which would more than suffice to meet all payments during the second period of Army and Navy Expansion. With regard to this question of Army and Navy Expansion, we may note that expenditures on account of the second period, to the amount of 21,623,518 yen, are to be made by the end of the 38th fiscal year (March 31st, 1906), and as the whole outlay for the second period is 130,950,000 yen, there will remain 109,326,482 yen to be defrayed subsequently to March 31st, 1906. Hence we have the following two contingencies:—

(a) Leaving aside the remaining portion of the Indemnity, and following the ITO Cabinet's financial programme as above outlined, the Government, at the close of the 38th fiscal year, would find itself with, on the one hand, an accumulated surplus of 29 million yen, and an annual income exceeding the annual expenditure by some 10 millions yen; and with, on the other, a programme of second-period Army and Navy expansion involving a total outlay of 109,326,482 yen; and Public Undertakings Loan Bonds, to the total amount of 135 million yen would have been issued. (b) Assuming that the Indemnity is paid in full, the situation at the ending of the 38th fiscal year will be that the Treasury will have a surplus of 121,491,509 yen in its vaults; an annual income exceeding outlays by 10 million yen, approximately, and the same liability as before with regard to the second period of Army and Navy Expansion. Moreover, the domestic loan of 135 million yen would not have been issued.

We have finally to note that the only extraordinary expenditures included in the above estimates, apart from the outlays on account of the Expansion of the Army and Navy, are:—

	Yen.
Iron Foundry.....	4,095,793
Hokkaido Railway	1,178,330
Tobacco Monopoly (capital invested)	12,213,550
Telephone Service Expansion, &c.	12,804,102
Improvement of Government Railways.....	26,553,000
Subsidy to Industrial Bank.....	3,750,000
Supplement to Capital of Agricultural and Industrial Bank	10,000,000
Total	70,592,775

FOREIGNERS IN JAPANESE COURTS.

A CATALOGUE of the agitations periodically started to terrify ill-starred Occidentals on the eve of submission to Japanese jurisdiction, would be a curious document. Some one with leisure and an appetite for the pop-guns of parochial politics will, perhaps, compile the record before the last page in the chapter of Settlement history is finally turned over. Of late, we have had quite a puff-puff of this Liliputian artillery. A stoker subjected to the cruel torture of having his tender fingers squeezed against a pen-

handle; a law court over-ridden by the administrative suspension of a newspaper for an offence with which law courts have nothing to do; a *fille de joie* singled with a lucifer match; a stone thrown by a school-boy at a cyclist, and so forth and so on, have supplied ammunition for the salvos. In truth, of all the paltry trivialities that ever filled journalistic columns, some of the local foreign journals in this country can fairly claim a monopoly of the paltriest. So greatly has their sense of proportion been distorted by chimeras of their own construction that they tremble at a shadow and hear the thunder of catastrophe in every whisper of tittle-tattle. Yet sometimes seemingly solid grounds of alarm are indicated. Prominent among these is an allegation that foreigners can not entertain any reasonable hope of obtaining justice in Japanese law courts. Experience has shown, it is alleged, that such a hope would be quite fallacious. Now that is certainly a serious outlook, and nothing could be more explicit than the terms in which it has been stated. For example:—

It is a well known fact that the Japanese have had in force for a considerable period a very excellent system of laws, yet foreigners very rarely have recourse to the Courts, and when they have done so and the case has been carried to the Court of Cassation, they have invariably lost.—*Japan Gazette*, October 3rd, 1896.

When such an accusation has to be considered we can leave the realm of wordy controversy and have recourse to authentic records. Is it a fact, then, that when cases brought by foreigners in Japanese courts have been carried to the Court of Cassation, the foreigner "has invariably lost?" Is it a fact, as the same authority alleges, that in consequence of these repeated failures to obtain justice, "a deep distrust of Japanese law prevails in the breasts of foreigners?" It has seemed to us worth while to seek an answer to these questions by reference to the archives of the Yokohama Court. We have not carried the investigation farther back than November, 1890, since it was at that time that the Yokohama tribunal underwent reorganization, in accordance with the provisions of the "Law of Organization of Law Courts." But a period of nearly six years is amply sufficient for the purpose in view. The list of cases taken from the Court's archives is printed elsewhere in our columns. It contains 106 suits in all, omitting one which was transferred to Tokyo. Analysing these 106 suits, we obtain the following record:—

Given in favour of the Foreign Plaintiff	36
Given in favour of the Japanese Defendant ..	20
Given partly in favour of the Foreign Plaintiff and partly in favour of the Japanese Defendant	8
Compromised	2
Non-suited	1
Withdrawn (presumably settled out of Court) ..	34
Not yet settled	5

106

It is further to be noted that among the 20 suits given against foreign plaintiffs, 5

were brought by Chinese subjects and 2 were practically identical, the plaintiff and the matter in dispute being the same, though the defendants were different. Hence it may be stated that whereas 36 cases were given in favour of Occidental plaintiffs, only 14 were given against them. Turning, finally, to the question of appeals, we find that in two cases only out of the whole record did a superior tribunal disturb the judgment of an inferior. In one of those cases the appellant was a foreigner who had lost his suit in the Local Court. He obtained a partial reversal of the lower tribunal's finding. In the other case, the foreign appellant had already failed in the lower court. Thus, in the space of nearly six years, there did not occur so much as one solitary instance of a foreign plaintiff's success in the Local Court being converted into defeat by the Court of Cassation, or by the Court of Appeal. Is it possible to find in facts a more flagrant contradiction of any statement than this record furnishes of the allegation quoted above?

"Foreigners very rarely have recourse to the Courts, and when they have done so and the case has been carried to the Court of Cassation, they have invariably lost." Instead of "invariably lost," the official archives show that the truth would have been "never lost in one single case."

It is not to be assumed that any intention exists of deceiving the public when newspapers circulate statements so singularly false as the above; but certainly the foreign residents have a right to expect that before advancing assertions calculated to create grave alarm about the probable consequences of submission to Japanese jurisdiction, and, above all, before advancing them in the guise of indisputable facts, an editor will take the trouble to refer to easily accessible sources of conclusive information. In the present instance, we suspect that some confusion has occurred between the results of lawsuits previous to the promulgation of the Code of Civil Procedure, and the state of affairs since then. Prior to 1890, that is to say, prior to the time when the law enabled a suitor to attach the property of a defendant at an early stage of the legal proceedings, it happened not infrequently that although a foreign plaintiff won his case against a Japanese subject in all the Courts of hearing, he found himself without material redress in the end, the debtor having made away with all his available assets in the interval between the delivery of judgment by a tribunal of First Instance and the final decision of the Court of Cassation. The trouble did not lie with the law courts. So far as we know, their verdicts were generally favourable to the foreign suitor, or, at any rate, showed no trace of prejudice against him. But the law was faulty. It provided no mechanism for securing suitors against what was practically a failure of justice, namely,

such a disposal of the defeated litigant's property that nothing remained at the close to satisfy his creditor. Several experiences of that character naturally engendered a serious want of confidence in the relief procurable by recourse to Japanese Law Courts, and it became a common saying that the issue of a foreigner's appeal to the Japanese Judiciary was usually a heavy bill of costs on one side, and a battered brazier supplemented by a tattered *futon* on the other. Small wonder that people did not pause to discriminate very carefully between the defects of the law and the incompetence or unfairness of its administrators. Enough for them that to go into Japanese Courts usually meant to have nothing in the sequel but one's trouble for one's pains, and thus the public's empirical conclusion was that, some how or other, Japanese Law Courts were bruised reeds, not to be leaned on under any circumstances. Since the Code of Civil Procedure went into application, however, the main obstacle to justice has been completely removed. A suitor can now obtain an order from the Court to attach the property of a debtor against whom he has instituted proceedings, and the days of the *hidachi* and the *futon* are past. It would be manifestly extravagant to look for a standard of judicial excellence in Japan such as some Occidental countries are sufficiently fortunate to possess. But, on the whole, the records show that Japanese judges have discharged their functions conscientiously and with average intelligence, and that no solid grounds exist for the apprehensions so sedulously fostered in certain quarters about submission to their jurisdiction.

PROFESSOR BURTON AND THE TOKYO CITY COUNCIL.

THE *Yomiuri Shimbun* has a paragraph professing to explain the facts connected with Professor BURTON'S claim against the Tokyo City Council for services rendered in preparing plans and estimates of the Tokyo Water-Works. Our contemporary astutely commences its paragraph by calling Mr. BURTON "one of the compilers of the water-works plan," and then goes on to declare emphatically that the plan actually used for the works is not Professor BURTON'S plan by any means. "In his capacity of an *employé* of the Home Department," continues the *Yomiuri*, "Professor BURTON, probably in connection with the scheme of City Improvement, drew up a water-works plan, and this, having been amended by Professors FURUICHI and NAGAYO, was handed to the Chairman of the City Improvements Committee, who, in turn, transmitted it to the City Council. At that time Professor BURTON was not under any engagement to the City Council, but was merely treated as an adviser and received an honorarium of eight hundred

yen per annum. There is consequently no reason whatever to make any compensation to him now. Nay more, it is said that subsequently to the amendment of his design by Professor FURUICHI, it was still further amended by Mr. NAKAJIMA. Under all these circumstances, Professor BURTON does not appear to contemplate any recourse to the law courts." Unwilling as we are to conclude that any injustice has been wittingly done to Mr. BURTON, or that he has been the victim of unprofessional treatment at the hands of the Japanese, we find it impossible to accept the *Yomiuri's* explanation. Our contemporary's story amounts to this:—That Professor BURTON, while serving as a salaried official of the Home Department, was asked to report upon the general question of Tokyo City Improvements, and, *inter alia*, to prepare a plan for water works; that his plan was handed, without his knowledge or consent, to Professor FURUICHI, chief engineer of the Department, who, having amended or altered it in some respects, passed it on to the President of the City Improvements Committee, an unofficial body having no connection with the Department of Home Affairs; that by the President it was submitted to the City Council; and that, after some further changes, it was used by the Council for purposes of water-works construction. Thus the upshot of the affair is that Professor BURTON'S plan, modified by two Japanese engineers, without reference to him, or consultation with him, is now being used for the water-works by the authority of the City Council, with which, confessedly, Mr. BURTON had no connection other than that of adviser at a salary of 800 yen annually. It does not greatly matter how much or how little the plan was altered by Mr. FURUICHI and Mr. NAKAJIMA; it is still Professor BURTON'S plan. Thus the problem for solution resolves itself simply into this—according to the *Yomiuri's* statements:—did Professor BURTON'S duties as a salaried *employé* of the Home Department extend to preparing plans of works required by any municipality or local government throughout the empire? If they did, the Home Department is to be congratulated on having secured the services of an eminent engineer on terms so low as to be scarcely credible and totally unprecedented. Evidently Professor BURTON himself imagines that, as an *employé* of the Home Department, his functions were limited to the business of the Department, and were not of the peculiarly elastic character indicated by the *Yomiuri*. Did he not entertain such a belief, he would never have preferred any claim. The conduct of the Japanese Government towards its foreign *employés* has invariably been liberal and upright. We are precluded from imagining that the Home Department deviated from this honorable record in Professor BURTON'S case. But municipal govern-

ments, hampered by the not always temperate views of city assemblies, fall sometimes within the range of criticism, and it is just possible that the Tokyo City Council has failed to appreciate its responsibilities in this matter. It is to be hoped that substantial justice will be done, and that there will be no ultimate disposition to take refuge in pleas such as those advanced by the *Yomiuri Shimbun*.

ADMISSION OF OFFICERS TO THE ARMY IN JAPAN.

THE Government has issued an Ordinance making an important change in the manner of admitting candidates to the Army Officers' College. Hitherto, admission has been by examination, and though the standard of education has not been very high, competition rendered success more or less difficult. But, according to the new regulations, all graduates of Ordinary Middle Schools, or other educational institutions duly invested with Middle School status, will be eligible for admission to the College without examination. The system of examination is not abolished; it will be resorted to in the case of youths that desire to enter the College, but have not graduated from any of the designated schools. Evidently this change amounts to something very like the abolition of the competitive system. Graduation at a Middle School is merely an affair of qualification. Certain tests have to be satisfied, but differences of ability or erudition are recognised only in the graduation list, and will receive no recognition whatever, so far as we can perceive, for purposes of admission to the Officers' College. It must be presumed that a step of such radical import has not been taken without due consideration and for sufficient reasons. The need of a large body of officers, in connection with Army expansion, is supposed to have partly prompted the measure; yet, inasmuch as the same end might have been attained without alteration of the existing system but simply by announcing that an increased number of vacancies would be open for competition at the several examinations, it seems evident that the Authorities must have obeyed some motive apart from the mere question of arithmetic, and we are driven to conjecture that the competitive system not having been found altogether advantageous from a military point of view, has been replaced in the main by the method of qualification. On the other hand, nothing has occurred within general cognisance to indicate that the officers now serving in the Army have fallen short of a high standard. They are smart, zealous, frugal, eminently brave, and thoroughly addicted to soldiering—this last being a characteristic well worth noting, for it is not everywhere the habit of army officers to regard their pro-

fession as a calling that demands the fullest exercise of industry and intelligent application. Possibly a more stalwart physique is desired, but certainly, from a moral point of view, the new system ought to involve the admission of inferior men. It is true that one safeguard is provided in the form of a regulation that each candidate must be furnished with certificates of recommendation not only from a competent guarantor, but also from the commanding officer of the army corps that he desires to serve with. Certificates, however, are not difficult to procure: they are generally granted in obedience to considerations quite distinct from the object that they are originally intended to compass. We can not, therefore, regard that precaution as likely to be very effective, and, on the whole, there is no avoiding the conclusion that a system has now been introduced which will tend to lower the standard of education in the upper ranks of the Japanese Army. Had the old method of competitive examination been suffered to continue in operation, and had provision been made for filling any remaining vacancies by direct drafts from graduates of the Middle Schools, there would have been nothing to provoke public curiosity. But when that order is reversed, the competitive examination being lowered to the rank of a mere supplementary device, we are justified in saying that the competitive system has been practically abolished in favour of the qualificatory. It is not within our knowledge to pronounce any confident opinion on the advisability of this large change from the point of view of Japanese conditions. But under a correlated aspect we greatly regret it. Another stunning blow is dealt to private enterprise in the field of education. Already the graduates of schools controlled and aided by the State possessed large advantages over the graduates of private schools, however well equipped the latter might be, and however high their tests of scholarship. Now another important item is added to the list of discriminations, and hundreds, nay thousands, of lads whose parents have incurred heavy expense to provide for them an education much better and more comprehensive than the stereotyped curriculum of the Middle Schools, find them proscribed, and perhaps suddenly and unexpectedly excluded from the very career for which they had been preparing.

THE INDEMNITY AND THE ITO PROGRAMME OF FINANCE.

In answer to a correspondent, we have to explain that when we spoke of the already-paid amount of the Chinese indemnity as 119,950,000 yen; we referred to the sum handed over at the time when the financial estimates of the Ito Cabinet were compiled. The amount received by Japan up to the present is 130 million *taels*, but only 80 million *taels* had been received at the period in question. For the purposes of the financial programme, the sum actually realized was alone to be considered.

UNITED CHAMBERS OF COMMERCE.

Brief reference has been made in these columns to a resolution that was recently carried by the United Chambers of Commerce. It runs as follows:—The Business Tax Law regards the rental of a building as a gauge of the rateable value, and proposes to impose duty at the rate of 4 per cent. of the rental. But as the size of the building and the relative rental paid can not be considered as an indication of the profit derived, and as the rental itself can not so be fairly determined, no fair estimate can be arrived at by this method. Another condition by which the tax is gauged consists in the number of servants employed in a shop. But the United Chambers are of opinion that to include mere shop-boys or apprentices in the list of employés, and to estimate the tax accordingly, is not only unfair, but will ultimately tend to retard the progress of trade and industry. For merchants and manufacturers will naturally be induced to cut-down the number of boys and apprentices in their employ. The amount of capital can not be considered commensurate with the amount of profit, while it must be well-nigh impossible to ascertain the capital invested by an individual in any enterprise. Then, as to the amount of money capitalized in the form of buildings and so forth, it is difficult and well nigh impossible to estimate the capital invested by merely appraising the value of buildings and appendages. A tax based on the volume of business done will show a wide difference between wholesale and retail businesses, the rate for the first being *rototo* of the sales, and that for the second *rototo*. But such a demarkation can not be established in any strict sense, and the difference of 1 and 3 in the rates levied on the two kinds of business must be considered unfair. These points the United Chambers desire to have amended. The Chambers have concluded that for individual businesses men the rate should be determined by the following standard:—For sale of commodities:—Irrespective of wholesale or retail business, the amount of sales must be used as a standard in determining the rate. For banking business:—The amount of gross profits (from which current expenses are not deducted) must be used as a standard. For money lending:—The rate must be determined on the full amount of loans. For insurance, lending of articles, manufactures, printing, &c., the amount of income must be used as a standard, while the rate itself ought to be modified according to the nature of the business. For public works, contracts, and labour contracts:—The amount of the contract to be used as a standard and the rate suitably modified. For public agency, middlemen, and so forth:—The amount of commission should be taken as a standard and the rate suitably modified. For businesses undertaken by companies, the profits should be taken as a standard, for from the nature of the organization of such mercantile establishments it is easy to arrive at the amount of profits made, though it is difficult to do so in the case of businesses undertaken by individuals. Lastly, the United Chambers are of opinion that the tax has been too suddenly proposed, for whereas the Treasury's receipts on account of the business tax have not hitherto exceeded 2,090,000 *yen* approximately, the Government contemplates raising them at one bound to 7½ million *yen*.

THE TOKYO DRAMATIC AND MUSICAL ASSOCIATION.

The next performance by the members of the Tokyo Dramatic and Musical Association is to take place in January. The caste will be entirely new, we learn, and the plays will be two, a French and an English. With regard to the former, we hear that it has already been performed privately, with remarkable success, and with regard to the latter, the present intention is to give the old favourite "Ici on parle français," in which the immortal Toole distinguished himself thirty and odd years ago.

OLD CLOTHES AND COTTON MILLS.

An interesting example of interactions that occur during industrial developments such as are now taking place in Japan is furnished by the effect that paper making has had upon cotton spinning. In former days, while the paper of Japan was manufactured chiefly from mulberry bark, straw, and other vegetable material, a large trade existed between Tokyo and the northern parts of the island, the metropolis sending its old clothes to the provincials, whose financial circumstances made them welcome these discarded garments of the big city. But gradually the making of paper according to foreign methods came into vogue, and the old clothes and rag merchants of Tokyo, Osaka, and Kyoto found profitable and growing markets for their wares close at hand, the natural consequence being that the O-U districts received, each year, smaller consignments of second-hand garments and fragments of apparel. Meanwhile, the provincials themselves found their circumstances steadily improving, as the development of railways and other means of communication opened to their agricultural products markets hitherto entirely out of reach. Hence to be cut off from their traditional supply of old clothes did not greatly matter to them. They could afford to buy new garments at a pinch, and that meant, of course, that a new demand sprang up for cotton manufactures, with a corresponding spur to the spinning and weaving industries. Even the wearer of woollen garments finds his purchasing power improved by the industrial development of the era, for he can obtain an appreciable sum for his worn-out suits now readily bought up by purveyors for the shoddy mills. There is, in truth, no selfishness about industry. Development in one direction does not take place at the expense of other interests.

VOLUNTEER FLEET FOR JAPAN.

The vernacular press continues to speak of the project of a volunteer fleet as likely to be realized. The projector is a Major-General on the Reserve List, and his idea is to form a joint stock company with a capital of twenty million *yen*. The ships spoken of are nine cruisers of from 3,000 to 6,000 tons each; and fourteen iron steamers of from 500 to 3,000 tons each, and the lines on which the ships would be placed are, (1) Kobe, Moji, Kelung, Hong-kong and Amoy; (2) Amoy, Foochow, Shanghai; (3) Kobe, Moji, Fusan, Chemulpo; (4) Shanghai, Chefoo, Taku; (5) Shanghai, Hankow; (6) Taku, Tientsin; (7) Australia; (8) America. The projectors are said to expect that, in addition to the aids procurable under the Law for the Encouragement of Navigation, the Government will be induced to grant special assistance. We can not regard the programme as very hopeful.

THE CHRISTMAS NUMBER OF THE "GRAPHIC."

The art of coloured illustration has now been carried to a degree of excellence that can be best appreciated when such a publication as the Christmas number of the *Graphic* is before us. Its pictures are really charming. As for the letterpress, we need only say that the stories are by Rudyard Kipling, Bret Harte, "Q.", Norris, Stanley Weyman, and C. M. White. Excellent stories they are, one and all, but Rudyard Kipling's "Bread upon the Waters" stands head and shoulders above the rest: It is another instance of his extraordinary powers of observation. He has actually ventured to make a Scotch nautical engineer tell a tale of the sea, full of technicalities and engine room lore, and so perfect is the fidelity of the thing that Mc-Phee becomes a reality never to be forgotten by any reader of his strange experiences. It is certainly a triumph of journalistic enterprise that the combined work of such authors and such artists should be offered to the English-speaking public for one shilling.

REVISION OF THE PRESS LAW.

Never did so much interest centre on the question of press law revision as at the present time. It is the *mondai* of the day. There is always a *mondai* of one kind or another upon the *tapis*. The Japanese seem to feel lonely if they have not some problem to discuss, and certainly if we undertook to draw up a catalogue of all the *mondai* that have exercised the nation's thinking powers since pigs, rabbits, roses, and orchids ceased to be absorbing topics, we could cover a long slip of paper. On the eve of each session of the Diet newspaper men have set themselves to agitate for full freedom of pen, and though it may be doubted whether the people at large originally cared much about the matter one way or the other, they have been forced to care, so importunately have their ears been assailed by the subject. Every one is now agreed that some modification of the suspension and suppression clauses is necessary. Indeed every one has long been agreed to that extent. The only difference of opinion has been as to the scope of the modification. Hitherto, the *Shimpo-to* have insisted on the whole loaf: they were determined to have nothing less than unconditional rescission of the objectionable clauses. And it seemed, a month ago, that their claims would receive legislative recognition in the approaching session of the Diet, since their leaders had not only come into power, but also practically pledged themselves to do what the Party wanted. Now, however, the *Shimpo-to* are said to have modified their views. In consideration of recent occurrences, they are disposed to be reconciled to the introduction of reservations, namely, that while the Administration's power to suppress any publication be abrogated altogether, its power of suspension should be left intact so far as concerns matter relating to the Imperial Family, to military affairs, and to foreign affairs; the incriminated journal being entitled, however, to bring suit for damages against the Government should it feel dissatisfied with the action of the Administration. A Bill in that sense ought to pass both Houses without much difficulty, we think. It may be noticed, *en passant*, that the agitators of this question have very cleverly raised it above the level of mere journalistic interests by calling it *Jinken-mondai*, or the "question of personal rights." The Minister President, in his speech to the Local Governors, used that term, evidently because, by dealing in generalities rather than specialities, he sought to avoid riveting upon the Cabinet too tight fetters of promise. Politicians have been quick to appreciate the unintentional suggestion. *Jinken-mondai* is a fine legend for their banner: much more artistic and better calculated to appeal to wide sympathies than the comparatively clumsy and hacknied cry of *Shimbu-forei-kaisei-mondai*.

In connection with the above, we note that the parliamentary members of the National Unionists held a meeting on the 7th instant, in order to prepare resolutions for submission to the general meeting of the Party, which is fixed for the 20th instant. The subject of the recent suspensions and suppressions of publications came up for discussion, and elicited strong denunciations of the *Nippon*, the *Kokumin Shimbu*, and so forth, it being agreed that those journals had been guilty of gross disrespect to the Throne. The meeting voted that the Government had been perfectly right in its action toward the offending publications.

ARMY ACCOUNTS.

A very eulogistic notice is published by the *Tokyo Asahi* with reference to the work of the accountants that have been engaged compiling accounts of the expenditures incurred for the Army during the war. It appears that there are over twelve hundred of these officials. Many of them having been engaged at a moment's notice during the war, were men without and experience of the especial duties they had to perform. Nevertheless, they are said to have succeeded admirably, avoiding mistakes and getting through their tasks with celerity, so that receipts

and disbursements were made with uniform regularity. They had to deal not only with the funds handed over by the Treasury, but also with the monies voluntarily contributed by more than four hundred and fifty thousand persons and aggregating over 5½ million yen. Commencing the compilation of final accounts in May, 1895, the total sum of their figures up to the last day of November of the current year was 163,000,080, approximately, and the amount still remaining to be entered up was only some 400,000 yen. Adding to these totals a sum of 6½ million yen brought over from the previous account, it appears that the total expenditures shown in the Army's ledgers are 171 million yen, approximately.

KOREAN NEWS.

The latest letter received by the *Kelsai Zasshi* from its Sōul correspondent states that the Japanese merchants in Korea are highly indignant with Count Okuma on account of His Excellency's outspoken criticism of their doings, in his address to the Japan-Korea Commercial Association. The letter says that the news of Count Okuma's appointment to the Foreign Office was hailed with joy by the Japanese in Korea, for they believed that he would adopt a strong policy. But their sentiment has been entirely altered by his utterances before the above Association. The charge that the Count has laid at the door of the Japanese in Korea is a grave one, continues the correspondent, inasmuch as it amounts to accusing them of disobedience to the Emperor's will in failing to uphold the independence of Korea and in impairing the dignity of Japan. In other words, the Count has stigmatized the Japanese in Korea as disloyal subjects of no ordinary type, so that they are naturally excited about the speech and contemplate demanding a full explanation. Had the Count confined himself to instructing the Japanese in Korea, nobody would have found fault with him; but he went beyond the limits of instruction and entered the field of abuse. His ill-advised speech may produce grave consequences in Japan's Korean policy, for suppose that the Tokyo Government should open negotiations on some subject with Korea, and suppose that the latter make this reply:—"The hostility shown by Koreans towards Japanese is attributable to the fault of the latter. Did not Count Okuma, the Minister of Foreign Affairs, publicly confess that the dislike and contempt entertained by the Koreans towards the Japanese were a punishment brought by the Japanese upon their own heads?" How could Japan meet such a contention? Many persons are no longer inclined to expect much from the Korean policy of Count Okuma, since they have read the report of this speech, for they argue that his motive in attributing the failure made by Japan in Korea to the fault of the Japanese residing there, must be a desire to avoid risking his reputation in the field of Korean politics and to provide some plausible excuse for shuffling out of the responsibility of putting into practice the strong foreign policy to which he has committed himself. The Count seems to have obtained the materials for his speech from a certain report, but he ought not to forget that no community is entirely free from defects, the world over, and that blemishes can be abundantly discovered if sought for with the eyes of a detective.

This correspondent seems to forget altogether that what Count Okuma said about the conduct of the Japanese in Korea had been said previously by Count Inouye in terms quite as strong, and it can not be pretended that Count Inouye lacked sufficient materials for forming a conclusive opinion. But in truth, the thing is notorious. Over and over again we ourselves have received similar information from Englishmen or Americans who spoke on the strength of things actually witnessed by themselves, or described by persons of unquestionable veracity, and who desired, in making such reports, not to injure Japan or impair her prospects in Korea, but to warn her against proceedings that must ultimately inflict irreparable harm on her interests. There is no manner of doubt

about the truth of what Count Okuma said, and we do not admire his courage in saying it more than we applaud the wise statesmanship of laying bare the root of the evil, and seeking to recover that without which no policy directed from Tokyo can be successful, namely, the beneficial coöperation of Japanese subjects in Korea. At present, many of the Japanese living in the peninsula are doing their best to defeat the ends pursued by their country at an immense outlay of blood and treasure.

The same correspondent reviews the change that has taken place in the distribution of power in Korea since the affair of Feb. 11th. He subdivides the time into three periods, and give the following analyses:—First period—Remnants of the Queen's Party, 4; English Language Faction, 4; conservatives and neutrals with no fixed ideas, 2=Korean Court. Second Period—Remnants of the Queen's Party, 0; English Language Faction, 4; Conservatives 4; Neutrals 2=Korean Court. Third Period—Russian Faction, 8; Conservatives and Neutrals, 2; English Language Faction, 0=Korean Court. The numerals in this table do not represent the number of heads, but the relative proportion of power enjoyed by each section.

To give a brief explanation of the three changes. In the first period, the power was in the hands of Li Pōm-chin, who represented the remains of the late Queen's Faction, and the two Li's, the representatives of the English Language Faction. In the second period, the influence of Li Pōm-chin disappeared, and that of the Ministers of Justice and of Finance and their fellow conservatives came into prominence. In the third period, the thoughtless action of the ex-Minister of Education, who published, or caused to be published, an anti-Christian pamphlet, has estranged the feelings of foreigners in Sōul from the Conservatives, and their influence is gradually waning. Indeed, the agitation to make the king return to his own palace threatens to complete the downfall of the Conservative Faction, as may be seen from the removal of the last Chief of Police, a Conservative, to an unimportant post. The English Language Faction managed to maintain its ground, backed as it was by a section of the foreign residents, till the end of the second period; but in the third period it has been completely overshadowed by the Russian Faction, so that its power is now *nil*. Two things are worthy of special notice in the present politics of Korea, namely, the impossibility of any Korean acquiring influence unless he is a *persona grata* with Russia; and the supremacy of the Court over the Cabinet.

Apparently Korean law courts recognise the legality of office buying. We read in *The Independent* that Pak, of Chulla province, having paid \$480 to Kim on condition that the latter procured for him the post of Royal Grave-keeper, and finding that Kim had appropriated \$250 of the money without obtaining the post, intends to sue the latter. It is to be hoped that *The Independent* will keep its readers informed as to the progress of this suit.

Fifteen paupers died in the streets of Sōul during the four months from August to November. The Government of the city has applied for a special allowance to defray the cost the burying people that make the streets their death-bed.

It would seem that even at this early stage of journalistic development in Korea, the newspaper is a power in the land. Some time ago, *The Independent* denounced the conduct of the Governor of South Chōung-chōng as illegal, and now the people of the province write to say that in consequence of the critical article, the Governor has radically changed for the better.

The so-called conspiracy to remove the King from the Russian Legation is beginning to be regarded as a mare's nest. *The Independent* says that the affair is alleged to have been nothing more than an attempt on the part of some office-hunters, who hoped to obtain rewards for reporting the imaginary danger. Meanwhile, some of the unfortunate persons denounced are understood to have been put to the torture.

The surveys for the Sōul-Chemulpo railway are nearly completed.

The Korean Home Department has issued a notification inviting the people throughout the country to report any acts of oppression on the part of local officials, or attempts to impose illegal taxes.

The Korean people seem to be now, for the first time, laying the foundations of their nationalism. They have hitherto had cliques of all kinds for the purpose of promoting individual or family interests, but they now have a club organized with the view of strengthening Korean independence. The club was started five months ago. It then had a membership of half a dozen, but over two thousand names are now borne on its roll. These patriots, as our readers know, held a grand meeting on the 21st of November, to lay the corner stone of an arch in honour of the country's independence. Thousands thronged to witness, or take active part in the celebration, and the orthodox features of orating and banquetting were not absent. The most curious incident of the affair was the action of Korean women who have embraced the Christian faith. After the termination of the ceremony proper, some fifty of these ladies assembled at the "Independence Club" buildings and asked to have the use of the principal hall for a brief interval. Their request was granted, and they speedily organized a celebration on their own account, several of them delivering speeches to the effect that they wanted to assist the patriotic work undertaken by their brother-nationals, and that they desired to be understood as taking not less interest in national affairs than the stern sex do. The modern woman has made her *début* very early upon the Korean stage.

At the collation in connexion with the celebration of Korean independence officials of the United States, Russia, and Japan delivered congratulatory speeches. The Representatives of the United States and Russia were not themselves present, but the Secretary of Legation spoke in the former's place, and a military surgeon in the latter's. It was noticeable, however, that the British Consul-General and the German Consul took their departure in time to avoid any speechifying. When they were called upon to address the meeting, their places were found vacant. An opinion gathers ground that the new British Consul-General, Mr. Jordan, will not consent to play the secondary part followed by his predecessor, Mr. Hillier. Great Britain has been virtually effaced in Sōul up to the present; the Russian shadow has obscured her. Perhaps she may now begin to emerge once more into the light.

The district of Chungsan in Korea is in the anomalous condition of having two magistrates, neither of whom knows whether he is the right man. Both are named Pak Hangyang; both were in expectation of an official appointment when the *Official Gazette* announced that "Pak Hangyang" had been nominated Magistrate of Chungsan, and both hurried off to assume the duties of the post without taking care to establish their identity.

The exact facts about the plot said to have been recently discovered in Korea for murdering the pro-Russian Cabinet Ministers and carrying off the King from the Russian Legation to his own palace, have not yet been made public. As time goes by, the general impression gains ground that the plot was devised by pro-Russian Koreans in order to prevent the King's removal from the Legation. It is not pretended that the Russians themselves were implicated in the matter; they are beginning to wish that the King's residence in their Legation should be brought to the speediest possible termination. The prime movers were probably Korean politicians who believe that their tenure of power depends upon the King's remaining where he is.

There are only 52 Europeans and Americans residing in Chemulpo; namely, 38 men and 14 women. But the Japanese residents number 4,053; namely, 2,458 men and 1,595 women.

The Korean correspondents of the Tokyo papers inform us that Ku Sōu Chhang, an ex-

Police Inspector of the Court, arrested some days ago with several other Koreans, was hanged on the 4th inst. at the instance of the Police Bureau. Doubts were at first entertained as to the authenticity of the news, but it appears no longer to admit of any doubt. He was hanged within the precincts of the Left Prison situated inside the Eastern Gate of the city. Five or six others are said to have met a similar fate on the same day, but this story requires confirmation. The cruelty of the Korean Court, in utter defiance of justice and humanity, shows how complete is its relapse into its old lawless ways. The new chief of the Police Board is reported to be a man of moderate views and he is assisted in the discharge of his duties by an English adviser. The above executions must have been perpetrated by An Hwan, who seems to be a bloody ruffian, taking a delight in the horrible business of murdering his fellow countrymen. Indeed An is reported to have been much disappointed at finding no more victims to be dispatched, for, monster as he is, he failed to extort incriminating evidence from other prisoners. The Government takes care not to inform the public of the number of arrests made and the names of the prisoners, and though more than two weeks have elapsed since the seizures took place, the correspondents can not yet get at the number and names of the prisoners with anything like accuracy. They simply write that the arrests must have reached 18 at least.

KOBE'S SEASON.

Kobe seems to be bent on enjoying itself this winter. We read in its local press that the number of contemplated balls will average one a week, and on January 8th there is to be a Fancy Dress Carnival, concerning which great things are predicted. Stalls for the sale of all kinds of pretty articles, a performance, musical and terpsichorean, by the best amateurs of the settlement, and dancing in the interludes of listening, looking, or buying—such is the programme. Fancy dress will not be compulsory, but as prizes are to be given for the best costumes in character, there will surely be many competitors. There is talk, too, of establishing a mixed club; or, more accurately speaking, a ladies club with gentlemen-accessories. Ladies certainly ought to have clubs of their own in the East. Their wholesome amusements are few and far between. Good reading-rooms, billiard tables, and frequent reunions, without the formality of invitations, would materially brighten their lives. Gentlemen might be admitted on fixed days, and we see no reason why whist and chess should not be added to the list of amusements.

CHINESE NEWS.

The recent catastrophe in the forts outside Nanking appears to have been due to a singular display of ignorance on the part of some Chinese gunners. Unacquainted with the slow-burning properties of the powder used for the heavy artillery in the forts, they opened the breach of one of the guns to see why it did not go off. The explosion followed almost immediately, and fourteen men were killed.

Sites for German and Japanese settlements have been appropriated in Shanghai, by order of the Tsung-li Yamén. The German settlement is bounded on the east by Defence Creek; on the West by the Bubbling Well; on the north by the Shanghai-Paoshan district, and on the south by the New Cemetery. The Japanese Settlement commences at the Yangking-pang Creek and extends westward to Chingtang Bridge. Its depth inwards is 1,200 *chang*, or 12,000 Chinese feet.

It is stated that the Pekin-Hankow railway will be commenced at four points simultaneously, and that the whole line will be completed in five years, but nothing seems to be exactly known as to the source whence funds are to be obtained.

The Reform Society in Pekin are reported to have obtained the Emperor's permission to establish a college for training diplomatic officials.

The projected Imperial Bank of China has been favourably reported on by the Board of Revenue and the Tsung-li Yamén, and will probably be soon established. It is stated that American capital is at the back of the concern.

FORMOSAN NEWS.

Lieut.-General Baron Nogi, the new Governor-General of Formosa, delivered a speech on the 2nd inst., to the Local Governors of that island. He observed that as regular connection between Local Officers and the Governor-General's Office was now fairly established, it seemed proper that matters not directly bearing on the general administration of the island should be left to the care of Local Governors, the Governor-General devoting his attention chiefly to Administrative superintendence. He thought that subordinate administrative offices should be established under each Local Governor, and that influential natives should be appointed to serve in such offices. Investigations for the purpose had been completed, and if the consent of the Diet were obtained for the necessary expenses, he hoped to see the system in operation from next fiscal year. He drew the attention of Local Governors to the necessity of tempering rigour with sauvity, and expressed regret that rigour seemed to have hitherto predominated despite the absence of any sufficient cause. He had learned, indeed, that civil and military functionaries in Formosa acted, not infrequently, with overweening arrogance and even injustice towards the natives, imprisoning and flogging them on trivial grounds. Such things might have been unavoidable when the island was still disturbed, but to continue arbitrary practices of the kind would simply tend to estrange the feeling of the natives and must be checked now that peace had begun to reign. Any violent conduct towards the natives should be summarily dealt with. Old usages and customs ought not to be hastily disturbed, unless they interfered with the due preservation of good order. People should be left to their own free-will in such matters as hair-dressing, foot-binding, costume, and so forth. Opium smoking alone should be subjected to control, with the view of gradually eliminating the evil practice. The Governor-General emphasized also the necessity of paying greater attention to the policing of the island, as well as to the completion of measures for promoting industry, communications, sanitation, and education.

A party recently despatched to explore the hitherto unvisited interior of the island, ascended, on the 22nd ult., Mount Morrison, now the highest peak in the whole of Japan. The party was specially organized for purposes of exploration, its personnel being carefully chosen, and a sufficient escort of soldiers attached to it. The summit of the big mountain was reached at noon on the day of the ascent and was found to be so sharply serrated that standing on it even for a short time was not possible. The altitude was measured to be 13,800 Japanese feet—which is considerably higher than Fuji—and the thermometer stood 40° F. The formation is not volcanic. Cedars (*sugi*) and fir trees (*hinoki*), more than twenty feet high, were found growing at a point 6,000 ft. above the sea level. It seemed that the Peak had never been visited before. Another party is said to have been despatched towards the eastern coast of the island.

In connection with the above measurement of Mount Morrison, we may mention that the altitude of the mountain is marked as 12,850 feet, on the Rev. D. Campbell's map. We do not think that the Japanese have been the first to ascend it.

Mr. Furusho, Chief of the Administration Bureau, is reported to have rendered remarkable service in quelling the insurrection that broke out in the Hunlin district some time ago. His merit will be publicly recognized by the Government.

TEA.

Here is a very clever advertisement, culled by a Shanghai contemporary from the *American Grocer of New York* :—

INDIAN AND CEYLON TEAS.
The Cultivation and Manufacture of these Teas explains their extraordinary quality.

MARK THE CONTRAST!
INDIA AND CEYLON.

Lands.—New and Fertile.

Gardens.—Large, well planted, central modern factories, daily manufacture of leaf.

Manufacture.—Modern, up-to-date, specially devised machines for twisting and drying leaf untouched by hand.

Purity.—Full standard; never rejected from any port.

CHINA AND JAPAN.

Lands.—Exhausted centuries ago, fed with poisonous fertilisers.

Gardens.—Small, scattered; leaf kept in family dwelling houses, with pigs and poultry till marketed.

Manufacture.—Ancient; barbarous; leaf twisted by the hands of semi-nude moist Mongolians, amidst the sordid surroundings of a Chinese dwelling. No factory inspection and much sweating.

Impurity.—Adulterated, coloured, faced "Lie Tea." Rejected on these grounds daily. A shipment recently rejected at New York was admitted through a Western Port of Entry. See daily papers, and Importers' Confessions in Petition to Congress.

If the state of commercial morality in the Occident were to be gauged by the advertisements appearing in the public press, the verdict must be very humiliating. Think of the innumerable lies concocted daily, and published at great cost, with the deliberate object of deceiving the public and obtaining money under false pretences! In this particular branch of the art of chicanery the Occidental trader can give many points to his Oriental confrère, against whose crooked ways and untruthful tendencies he never tires of declaiming. The advertisement quoted above is full of falsehood. But what of that? It is smart, and more than that few critics will care to say of it. It seems to us that the genuinely straightforward, conscientious merchant, who is above all such trickery, must be placed at a disadvantage in these peculiar times. Many specimens of that fine class of men are to be found in Far Eastern settlements; men that guard the traditions of their house name as jealously as they preserve their personal honour, and are practically incapable of taking an unfair advantage, however small, of a client, or of employing deception in any form to defeat a rival. Do they fare better than, or even as well as, their less scrupulous rivals? There is not room in Yokohama for the discussion of such a question. But one may think of it.

SOWING AND REAPING.

The *Shanghai Times* says :—

There has been another, small this time, tragedy in Yokohama, a man trying to kill his wife who was the daughter of a late well-known livery stable proprietor, M. Pequinot. There is undoubtedly some extraordinary influence at work when so many crimes are committed in such a small place. We should not be surprised if the existence for some years of the most scurilous sheet ever printed in the Far East has not some share in such a lamentable moral tone as that port appears to possess, for no newspaper in any part of the world can indulge in low, vicious personalities with the direct intention of damaging that credit and respect which is every citizen's due, so long as he behaves himself, without vitiating the air around him with a putrescent poison. The malaria of an ill-conditioned paper, which either inspires or reproduces calumnious sentiments is contagious and deadly, and we hope that Shanghai is not going to be cursed with any introduction of the plague from the port across the water.

It is quite worth while to place, side by side with the above, the following extract from the very journal to which our Shanghai contemporary alludes :—

The press is the mirror of society, and the latter's condition may be judged by the newspapers it supports, wherever a low tone prevails, the press is sure to reflect it in its columns, and the converse is true. What society is, the newspapers sufficiently indicate, and what society thinks about them is measured by its acts towards them.

Of course this latter attack is intended for the Japanese press, but it is not always easy to manage one's guns so that the shooter suffers nothing from the recoil.

PATENTS, TRADE MARKS, ETC.

(CONCLUDED FROM SATURDAY.)

CHAPTER VII.—SALE, TRANSFER, PARTNERSHIP.

Art. XXIV.—Any person wishing to have the sale, transfer, or partnership in a Trade Mark registered in accordance with Article XII. of the Law of Trade Marks shall make application in accordance with Form No. 3 and file it with registration stamps affixed of such value as corresponds with the fee under Article XVII. Section 2 of the Law, together with the original and copy of the deed as well as the Certificate of Registration of the Trade Mark.

On the above mentioned demand, the Director shall enter it in the Register, stamp the deed as registered, and after endorsing the Certificate of Registration of the Trade Mark, send it back together with the deed to the applicant.

Art. XXV.—When it is desired to dissolve a registered partnership, the partners shall file a written statement thereof signed by the parties, together with the Certificate of Registration of the Trade Mark.

On filing as above, the Director shall enter the matter in the Register, and shall, after endorsement of the Certificate of Registration of Trade Mark, send it back to the owner.

Art. XXVI.—When one or more persons of the partnership wish to sell or transfer their share in the exclusive right to a Trade Mark to others, they may do so in compliance with the requirements of the first paragraph of Article XXV.

On receipt of the above demand, the Director shall act in compliance with the provisions of the second paragraph of Article XXV.

CHAPTER VIII.—APPLICATION FOR REGISTRATION OF RENEWAL AND RE-ISSUE.

Art. XXVII.—Application for registration of renewal in pursuance of Article XIV. of the Law of Trade Marks shall be made in accordance with Form No. 4 and have registration stamps affixed of such value as corresponds with Article XVII., Section 1 of the same Law, and shall file it before expiry of the original registration.

Art. XXVIII.—Application for re-issue in pursuance of Article XV. of the Law of Trade Marks shall be made in accordance with Form No. 5 and have registration stamps affixed of such value as corresponds with Article XVII. Section 3 of the same Law.

Art. XXIX.—On receipt of the above application, the Director shall deliver to the applicant a Certificate of registration of Trade Mark, on which is endorsed the subject and date of delivery.

CHAPTER IX.—APPLICATION FOR AMENDMENT.

Art. XXX.—Application for amendment of the Certificate of registration of Trade Mark in pursuance of Article XVI. of the Law of Trade Marks may be made in the following cases:—

1. When it is found that there is disagreement between the specification and the specimen of the Trade Mark.
2. When it is found that there is necessity for extending or contracting the scope of the essential particulars of the Trade Mark, or exchanging them with other parts, without altering the construction of the specimen Trade Mark set forth in the specification.
3. When it is found that the designation of the goods is not in conformity with the classification of goods under Article XXXIV.

Art. XXXI.—Application for amendment shall be made in accordance with Form No. 6 and have registration stamps affixed of such value as corresponds with Article XVII. Section 4 of the Law of Trade Marks, and be filed together with a copy of the amended specification and/or two amended specimens as well as with the original Certificate of registration of Trade Mark and dependent specification.

On the above application being granted, the Director shall enter the same in the Register of Trade Marks, and issue the certificate of registration of amended Trade Mark in accordance with the provisions of Articles XXI. and XXII.

Art. XXXII.—The certificate of amendment

of registration of Trade Mark, shall be made in accordance with Form No. 7 and the date of registration shall be its date.

CHAPTER X.—CLASSIFICATION OF GOODS.

Art. XXXIII.—The classification of goods under the Law of Trade Marks is fixed by Article VII. as follows:—

- Class 1.—Chemicals and medicines.
Acids, salts, alkalies, bleaching powder, gums, glue, phosphorus, spirits, glycerine, quinine, morphine, tinctures, syrups, extracts, pills, plasters, medical oils, musk, cloves, common salt, lime, moxa, &c.
- Class 2.—Dyestuffs and pigments.
Indigo balls, indigo, purple roots, beni (cantharine), vermilion, red lead, mineral green, ultramarine, prussian blue, white lead, gamboge, &c.
- Class 3.—Lacquer, varnishes, paints, shibu, shoe-black, &c.
- Class 4.—Perfumes and incense.
Perfumed oils, pomades, scent bags, perfumed waters, incenses, incense sticks, soft incenses, &c.
- Class 5.—Metals in the first stage of manufacture.
Pig iron, wrought iron, steel, bar copper, sheet tin, sheet iron, iron wire, copper, copper plate, copper wire, lead, sheet lead, zinc, sheet zinc, tin, alloys, &c.
- Class 6.—Manufactured metal goods.
Castings, forgings, engravings, network, &c.
- Class 7.—Edged tools and sharp pointed tools.
Sickles, saws, carpenter's chisels, drills, chipping chisels, needles, nails, scissors, knives, razors, cooking utensils, fire hooks, &c.
- Class 8.—Precious metals and goods manufactured of them (including aluminium, gold, nickel, and silver ware).
Gold, silver, shibuichi, shakudo, and other alloys of precious metals, and plated and engraved goods made of them.
- Class 9.—Precious stones, carved and engraved.
Corals, pearl, agate, quartz, topaz, emerald, and their imitations.
- Class 10.—Minerals (excepting coal which belongs to class 51).
- Class 11.—Stones, and when manufactured, carved, or engraved.
Slate, marble, whetstone, stone ware, and imitations of them.
- Class 12.—Mortars.
Mortars, cement, gypsum, &c.
- Class 13.—Porcelain and earthenware.
Porcelain, faience, earthenware, crucibles, tiles, bricks, &c.
- Class 14.—Cloisonné ware.
- Class 15.—Glass and glassware.
Glass bottles, glass tubing, coloured glass, &c.
- Class 16.—Machinery.
Spinning machinery, sewing machinery, sugar manufacturing machinery, printing machines, all other manufacturing machines, steam engines, boilers, &c.
- Class 17.—Agricultural and industrial implements.
Ploughs, spades, hoes, grain cleaning fans, harrows, pincers, hammers, lines and ink used by carpenters, &c.
- Class 18.—Scientific instruments.
Instruments used in physics, chemistry, medicine, surveying, &c.
- Class 19.—Instruments for determining measures and weights.
- Class 20.—Vehicles for transportation.
Wagons, coaches, jinrikisha, bicycles, &c.
- Class 21.—Musical instruments.
Koto, samisen, fiddles, flutes, &c.
- Class 22.—Watches and clocks, and articles pertaining to them.
- Class 23.—Guns, shot, gun-powder, fireworks, &c.
- Class 24.—Silk, silkworms, egg-paper, and cocoons.
- Class 25.—Floss silk and raw cotton.
- Class 26.—Raw silk, silk-thread, wild silk thread, including koto strings, and gold and silk thread.

- Class 27.—Cotton yarn.
- Class 28.—Woollen yarn.
- Class 29.—Hemp yarn.
- Class 30.—Silk cloth.
- Class 31.—Cotton cloth.
- Class 32.—Woollen cloth.
- Class 33.—Hemp cloth.
- Class 34.—All other cloth except silk, cotton hemp, and woollen cloths, and cloths of mixed materials.
- Class 35.—Net work and knitted fabrics, lace, braids, net, &c.
- Class 36.—Clothing.
Clothing, woven hats, gloves, stockings, woven rain-coats, hakama, knitted goods, &c.
- Class 37.—Fermented products and drink.
Saké, vinegar, shoyu, orange syrups, soda-water, ice, &c.
- Class 38.—Sugars.
Sugar, syrups, honey, &c.
- Class 39.—Cakes and bread.
Dry cakes, soft cakes, confectionery, European cakes, wheat gluten, sugared articles, &c.
- Class 40.—Tea and coffee.
- Class 41.—Tobacco.
- Class 42.—Grains, vegetables, seeds and fruits in grain, vegetables, mushrooms, fruits, seeds, roots, yeast, malt, &c.
- Class 43.—Flour, starch, and their manufactures and products.
Flour, starch, vermicelli, yuba, konnyaku, frozen tofu, frozen konnyaku, &c.
- Class 44.—Miso, namemono, and salt vegetables.
- Class 45.—Preserved Provisions.
Katsubushi, dried cuttle fish, dried awabi, nori, sea weed, tsukudani, tinned provisions, uni, salt provisions, &c.
- Class 46.—Dairy products.
Condensed milk, butter, cheese, desiccated milk, &c.
- Class 47.—Articles for smoking purposes, and pipes, pipes, tobacco pouches, pipe cases, &c.
- Class 48.—Paper and articles manufactured thereof.
Paper, tinted paper, tanjaku paper, imitation leather wall paper, oil-paper, shibu paper, envelopes, cases, ikkambari, motoyui, &c.
- Class 49.—Pens and ink.
Writing brushes, Indian ink, vermilion ink, sticks, printing ink, ink, slates, pencils, lead pencils, pens, &c.
- Class 50.—Leather and leather goods.
Saddles, bags, letter cases, leather belts, straps, shoes, shoe strings, &c.
- Class 51.—Combustibles.
Charcoal, matches, lucifers, lamp wicks, &c.
- Class 52.—Oil and wax.
Oil, wax, candles, fats, &c.
- Class 53.—Manures.
Fish manure, bean cake and other oil refuse, ground bones, &c.
- Class 54.—Wood and bamboo.
- Class 55.—Wooden goods, bamboo goods, rattan goods, including lacquered and varnished makiye goods, cabinets, turned goods, round boxes, cooper's ware, &c.
- Class 56.—Goods manufactured from horns tortoise shell, tusks, &c.
- Class 57.—Goods manufactured from straw and grass.
Matting, mats, hats, rope, straw work, &c.
- Class 58.—Umbrellas, canes and foot-gear.
Umbrellas, canes, gets, zori, hanawo, &c.
- Class 59.—Fans of various kinds.
- Class 60.—Lanterns and lamps.
- Class 61.—Tooth-powder and washing-powder.
- Class 62.—Brushes and false hair.
- Class 63.—Toys.
Flower hair-pins, balls, go, chess, dolls, tops, small bows, oshie, artificial flowers, playing cards, &c.
- Class 64.—Coloured wood cuts and photographs.
- Class 65.—Books, newspapers, and magazines.
- Class 66.—All articles or goods not enumerated under any of the foregoing headings.

FORMS.

To be written on Mino paper 13 lines per page and 25 characters per line.

FORM 1.

Application for Trade Mark. Registration stamp and seal.

Application for Registration of Trade Mark. Inasmuch as I (or we) firmly believe that the Trade Mark set forth in the accompanying specification does not conflict in any way with the provisions of the Law of Trade Marks, I (or we) pray that it may be registered.

Domicile and present place of residence. (Description of business for which the Trade Mark will be used, and so on throughout these forms).

Status.

Date.

Applicant's Name and Seal.

Name of Applicant's Firm and of the Manager or Director.

Seal of the Firm and Manager or Director.

To Mr. (or rank of nobility) Minister of State for Agriculture and Commerce.

FORM 2.

Certificate of Registration of Trade Mark.

Domicile and present place of residence of Applicant.

Status of Applicant.

Name of Applicant.

In compliance with the provisions of the Law of Trade Marks, we hereby register the Trade Mark set forth in the specification attached to this Certificate and grant to the above mentioned Petitioner the right of its exclusive use for twenty years.

Date.

Name and seal (with rank of nobility if any), Minister of State for Agriculture and Commerce.

Name and seal of the Director of the Patent Bureau.

FORM 3.

Application for Registration of Sale, Transfer, or Partnership in a Trade Mark.

Application for Registration of the Sale, Transfer, or Partnership in a Trade Mark.

Registration stamps and seal.

Certificate of Registration of Trade Mark No. I (or we) having sold, transferred, or entered into partnership in the above mentioned Trade Mark apply to have the accompanying deed (of sale, transfer or partnership) registered. I (or we) annex hereto the Certificate of Registration of Trade Mark and also a copy of the above mentioned deed.

Domicile and present place of residence.

Date.

Name and seal of owner of Trade Mark.

Domicile and present place of residence.

Status and Occupation of the Purchaser, Transfer, or Partner.

To Mr. Director of the Patent Bureau, Department of Agriculture and Commerce.

FORM 4.

Application for Renewal of Registration of Trade Mark.

Application for Renewal of Registration of Trade Mark. Registration stamps and seal.

Trade Mark registered under Certificate No. The term of the above mentioned Trade Mark belonging to me (or us) expiring on (date), I (or we) wishing to use the Trade Mark for a further term apply for renewal of registration.

Domicile and present place of residence.

Status, Occupation.

Date.

Owner's name and seal.

To Mr. (or rank of nobility) Minister of State for Agriculture and Commerce.

FORM 5.

Application for Re-issue of Certificate of Trade Mark.

Application for Re-issue of Certificate of Registration of Trade Mark.

Certificate of Registration of Trade Mark No.

The Certificate of Registration of Trade Mark belonging to me (or us) having been damaged or lost (state the cause) I (or we) pray that the Certificate of Registration may be re-issued.

Domicile and present place of residence.

Status, Occupation.

Date.

To Mr. (or rank of nobility) Minister of State for Agriculture and Commerce.

FORM 6.

Application for Amendment of Certificate of Registration of Trade Mark.

Application for Amendment of Certificate of Registration. Registration stamps and seal.

Certificate of resignation of Trade Mark No.

As the efficacy of registration cannot be secured (state the cause) in the specification and/or specimen attached to the Certificate of registration of Trade Mark belonging to me, I wish to amend it as in the accompanying documents. There will not be introduced any changes in the essentials thereby. The amended specification and/or specimen is attached together with existing Certificate of registration and original specification and drawing. I pray that the amended Certificate of registration may be granted.

Domicile and present place of residence.

Status, Occupation.

Date.

Owner's name and seal.

To Mr. (or rank of nobility) Minister of Agriculture and Commerce.

FORM 7.

Certificate of Amendment of Registration of Trade Mark.

Domicile and present place of residence.

Nature of business.

Status and name.

In compliance with the provisions of the Law of Trade Marks, we hereby grant to (name) Certificate of amendment as set forth in the specification and specimen of Certificate of Registration No. which Certificate was granted (date).

Date.

Name and seal (with rank of nobility if any), Minister of State for Agriculture and Commerce.

Name and Seal of the Director of the Patent Bureau.

THE LAW OF DESIGNS.

Imperial Ordinance No. 85 of the 18th day of the 12th Month of the 21st year of Meiji (A.D. 1888), to be in force from the 1st day of the 2nd month of the 22nd year of Meiji (A.D. 1889).

Art. I.—Any person devising a new design relating to form, pattern, or colours applicable to the industrial arts, may have it registered and have exclusive right to use it in accordance with the provisions of this Law.

Art. II.—The following designs cannot be registered:—

1. Those which are injurious to public morals.
2. Those which have been publicly known or used before the application for registration was made.

Art. III.—Any person wishing to have a design registered, shall make application, annexing specification and drawing for such design, to the Minister of State for Agriculture and Commerce; and such application, specification, and drawing shall be filed at the Patent Bureau.

Art. IV.—On application for registration of design, the Director of the Patent Bureau shall order the examiner of the Patent Bureau to examine the design, and, if the latter decides in favour thereof, shall, with the approval of the Minister of State for Agriculture and Commerce, register it in the Register of Designs and proceed to deliver the Certificate of Registration of Design.

Art. V.—The Certificate of Registration of Design shall be signed by the Minister of State for Agriculture and Commerce, and countersigned by the Director of the Patent Bureau, and be delivered to the applicant, together with specification and drawing.

Art. VI.—The terms of exclusive use of design are four, namely, three years, five years, seven years, and ten years, and shall date from the day of registration.

Art. VII.—The exclusive use of a design is confined to the purposes designated by the applicant in the classification of goods to be fixed by the Minister of State for Agriculture and Commerce.

Art. VIII.—When there are two or more similar designs, that application bearing the prior date shall be preferred; but, if the applications are of the same date neither shall be registered.

Provided that if the parties after conference jointly apply, or the applications are all revoked except one, that one may be registered.

Art. IX.—When a person who has had a design registered, or has applied for registration, dies, his rights devolve on his heirs.

Art. X.—When an inventor of a design employs another to make the design for him the right remains with the inventor, and, when the application is made at the expense of another the right belongs to the person at whose expense the application is made unless a special contract exists between the parties.

Art. XI.—When registered designs are found to come under Article II., or, to have been registered in contravention of Articles VIII., and X., the registration shall be annulled.

Art. XII.—As to examination, decision, and trial of design, the Patent Law shall apply.

Art. XIII.—The right of exclusive use of a design may, with or without conditions, be sold, or transferred, or used in partnership, or be hypothecated, in which case application must be made to the Patent Bureau and the contract shall be registered. In case of non-registration of the contract no recourse can be had against a party infringing the design.

Art. XIV.—No official of the Patent Bureau shall, during his term of service, apply for registration of a design, nor may he become the owner of exclusive use of a design except by succession.

Art. XV.—When a Certificate of Registration of design is damaged or lost, the owner may, upon stating the circumstances, apply for re-issue thereof.

Art. XVI.—When the owner of a registered design finds the specification and/or drawing insufficient, he may, to secure the efficiency of registration, make application annexing the amended specification and/or drawing for amendment of Certificate of Registration of design, but not if changes in the design be introduced.

Art. XVII.—The owner of the Certificate of Registration of design shall place on the goods to which the design is applied such marks as shall be determined by the Minister of State for Agriculture and Commerce.

Art. XVIII.—When applications are made with regard to designs, the following fees shall be paid:—

1. On application for registration of design for each design in one class of goods yen 50
2. On application for registration of sale, transfer, partnership, for each design in one class of goods " 2.00
3. On application for hypothecation. " 1.00
4. On application for re-issue of Certificate of Registration of Design for each certificate " 1.00
5. On application for amendment of Certificate of Registration of Design for each design in one class of goods " 2.00
6. On demand for trial, for one cause " 7.00

Art. XIX.—On obtaining Certificate of Registration of Design, the following fees shall be paid for each class of goods to which the design is applied.

1. For exclusive use for three years...yen 3.00
 2. For exclusive use for five years... " 5.00
 3. For exclusive use for seven years... " 7.00
 4. For exclusive use for ten years... " 10.00
- On obtaining Certificate of Amendment of Registration, the following fees shall be paid for

each class of goods to which the design is applied.

1. For exclusive use for three years...yen 1.00
2. For exclusive use for five years... " 2.00
3. For exclusive use for seven years... " 6.00
4. For exclusive use for ten years... " 8.00

Art. XX.—Any person requiring copies of documents relating to registered designs, or wishing to make drawings, may apply to the Patent Bureau for them and in such case reasonable fees shall be paid.

Art. XXI.—Any person infringing the exclusive right to a registered design shall be liable for damages to the owner.

Art. XXII.—As to liability for the above mentioned damages, the term of limitation is three years.

Art. XXIII.—Any person who knowingly applies the registered design of another to the same class of goods and sells them, or who knowingly sells them on behalf of another, shall be punished with major confinement for not less than fifteen days and not more than six months, or a fine of not less than yen 10 and not more than yen 100.

Any person who knowingly imports from abroad goods of the registered design of another and sells them, or who knowingly sells such goods on behalf of another, shall be liable to the same punishment.

Any person obtaining a Certificate of Registration of Design by fraud, or who sells goods to which are applied unregistered designs, affixing thereto registration marks, or marks resembling them, or who knowingly sells the goods on behalf of another, shall be liable to the punishment as set forth in the first paragraph of this Article.

Art. XXIV.—In case of the first and second paragraphs of the above Article the goods with which an offence has been committed shall be confiscated and handed over to the owner of the registered design; and, as to those which have been sold, the offender shall pay the proceeds to the injured party.

Art. XXV.—Offences under the first and second paragraphs of Article XXIII. shall be tried only on the application of the injured party.

In such case, the judge may, on demand of the injured party, provisionally suspend the sale of the goods, on which the action is based.

Art. XXVI.—An owner of a registered design who has neglected to affix the registration marks under Article XVII. cannot bring an action or sue for damages for infringement.

Art. XXVII.—The provisions of the Penal Code as to the concurrence of several offences shall not apply to offences under this Law.

Art. XXVIII.—The rules for enforcing this Law shall be made by the Minister of State for Agriculture and Commerce.

Art. XXIX.—This Law shall come into force on the first day of the second month of the 22nd year of *Meiji* (A.D. 1889).

ORDINANCE No. 18.

DEPARTMENT OF AGRICULTURE AND COMMERCE.

Rules for enforcing the Law of Design. Published 18th day of the 11th month of the 25th year of *Meiji*, to come into force from the 1st day of the 12th month of the same year (A.D. 1892).

CHAPTER I.—GENERAL PROVISIONS.

Art. I.—Articles from I. to X. of the Rules for enforcing the Patent Law shall apply to these Rules.

Art. II.—The term for the exclusive use of a design cannot be altered after registration in the Register of Designs.

Art. III.—The Director of the Patent Bureau shall, with the approval of the Minister of State for Agriculture and Commerce, publish the registration, amendment, revocation, and annulment of Designs and other important matters relating to Designs in the *Official Gazette* and *Official Journal of Patents*.

CHAPTER II.—APPLICATION FOR REGISTRATION.

Art. IV.—Application for registration of Design shall be made in the Forms Nos. 1 to 3, one application for each class of goods in the classification under Article XXXVI. of these

Rules and shall have registration stamps affixed of such value as corresponds with the fees under Article XVIII., Section 1, of the Law of Design.

Art. V.—When an applicant wishes to have his Design registered in partnership with another, or in another's name, he shall note the same on the application for registration.

Art. VI.—On receipt of application for registration, specification, drawing, and specimen, the Director shall put a serial number upon the application and give notice thereof to the applicant. And thereafter all documents relating to the application shall refer to that number.

Art. VII.—When any person after filing application for registration of Design wishes to use his Design in partnership with another, or, to have it registered in the name of another, he shall make application before registration therefor in the Register of Designs after which no such application shall be entertained.

CHAPTER III.—SPECIFICATIONS, DRAWINGS, MODELS, SPECIMENS.

Art. VIII.—Specifications shall be made out in the order of the following headings and be accompanied by two copies of the drawings:—

1. Title of design.
The title shall be in conformity with the nature of the Design and the goods to which is to be applied.
2. Class and name of goods to which the Design is to be applied.
The name of the goods shall be stated according to the classification under Article XXXVI.
3. Detailed explanation of the Design.
The details shall be explained, referring to the drawings severally: if a design of form, the forms of the whole and parts shall be described; if of pattern the figures and position of the whole and parts shall be described, if of colouring the forms of the colouring shall be described: the meaning shall be explained; and if it refers to historical events these shall be set forth, and, the significance of words to be used in the extent of claim shall be defined.
4. Extent of claim of exclusive right.
Only those particulars which are indispensable to the constitution of the Design shall be set forth.

Art. IX.—The extent of claim in the specification may be separately mentioned only when in order to indicate the sphere of exclusive right of Design, certain parts constituting the Design must be separately mentioned for the sake of clearness.

Art. X.—In drawings, parts necessary to make clear a Design shall be shown distinctly.

When a design is shown by photographs, unmounted photographs only may be substituted for drawings.

Art. XI.—Models and specimens shall be made in those parts only which are necessary to the design: their length, breadth, and height shall not exceed one *shaku* (Japanese foot) and in case of fragile or perishable articles the depositors shall take proper precaution for their safety.

Provided that, when the Director approves or demands, this rule shall not apply.

Art. XII.—The owner of a registered Design shall, by order of the Director, deposit the model or specimen for exhibition.

Art. XIII.—When a model or specimen ceases to be required, the Director shall notify the depositor to take it away, and, in case he does not do so within ninety days from the date of notice in writing, the Director may dispose of it at his discretion. The Director is not to be held liable for damage or loss of models or specimens deposited.

CHAPTER IV.—EXAMINATION.

Art. XIV.—Examination shall, with the exception of application for amendment under Article XVI. of the Law of Design, be held according to the date of application, or if there are two or more of the same date, according to the serial number of application, after the expiration of thirty days from the date of application.

Art. XV.—The following shall not be held to be new Designs:—

1. Designs which come under Article II., Section 2, of the Law of Design, or, resemble them.

2. Designs which, though not publicly known or used, are identical with or similar to designs for which registration has been applied and afterwards abandoned by others.

Art. XVI.—The following Designs, although they may be new, cannot be registered:—

1. Designs being figures identical with or resembling the Imperial crest.
2. Designs which come under Article II. section 1 of the Law of Design.
3. Designs which come under Article VIII. of the Law of Design and have the same date of application or those having a posterior date.
4. Designs not applied for to industrial purposes.
5. Designs in which forms, patterns, or colours form no essential part.
6. Designs which are merely representations of goods.

Art. XVII.—Written statement of decision of refusal of registration shall be made in the order of the following headings:—

1. Serial number of application.
2. Name of Design.
3. Class and name of the goods to which the design is to be applied.
4. Name, status, occupation, and residence of the applicant, or his attorney.
5. Abstract of the application for registration, or, in case of re-examination, abstract of grounds for rejection in the first instance.
9. Grounds for rejection.—Reference shall be made to the specification, model, and specimen, the reasons shall be stated exactly and accurately, and when extent of claim is in accordance with Article IX. separately stated under two or more divisions the reasons shall be separately stated.

In case of re-examination the reasons for appeal shall be answered and the grounds for the rejection in the first instance shall be explained and fully upheld.

7. Text of decision.
8. Date.

Art. XVIII.—Any person applying for re-examination shall make written statement of grounds of appeal in the order of the following headings and file it within thirty days from the date of the written decision:—

1. Serial number of application.
2. Title of Design.
3. Class and name of goods to which the Design is to be applied.
4. Name, status, occupation, and residence of the applicant, or his attorney.
5. Chief points of appeal.
6. Argument.—Referring to the specification, only the grounds of refusal shall be replied to.
7. Proof of facts.
8. Signature and seal of applicant, or his attorney.
9. Date.

Art. XIX.—When the decision of refusal is given against an application for registration of Design identical with, or similar to a Design which is under consideration for registration, the decision with regard to the latter shall be held over until the decision in the case of the former is arrived at.

Articles XXVIII. and XXXII. to XXXIV. of the Rules for enforcing the Patent Law shall apply to the examination of Designs.

CHAPTER V.—TRIAL.

Art. XX.—Articles XLIV. to LIV. of the Rules for enforcing the Patent Law shall apply to trial in respect of Designs.

Provided that, to the application to be heard shall be affixed registration stamps of such value as corresponds with the fee under Article XVIII., section 5, of the Law of Design.

CHAPTER VI.—REGISTRATIONS.

Art. XXI.—When it is decided to register a design in accordance with the provisions of Article IV. of the Law of Designs, the Director shall, with the approval of the Minister of State for Agriculture and Commerce, send notice in

writing thereof to the applicant together with a note for payment of registration fees.

On receipt of notice, the applicant shall, within sixty days from the date of the said notice, file the note for payment of fees with registration stamps affixed of such value as corresponds with the fee determined by Article XIX. of the Law of Design together with two copies of both the specification and drawing.

Art. XXII.—On payment of the registration fee, the Director shall, on the same day, enter the Design in the Register of Designs, and give notice thereof to the applicant and send the Certificate of Registration of Design within fifteen days.

When the above mentioned payment of registration fee is made during or after the last office hour of any day, or on a holiday, it shall be treated as paid on the next office day.

Art. XXIII.—Certificate of Registration of Design shall be made in accordance with Form No. 4, and the day of registration in the Register of Designs shall be its date.

Art. XXIV.—The owner of a registered Design shall, in accordance with Article XVII. of the Law of Design, mark on the goods to which the Design is applied or the wrappers etc., the words "registered design," the date of the Certificate of Registration and, the term of its exclusive use.

Art. XXV.—When the owner of a registered Design sells goods to which the parts described in accordance with Article IX. are separately applied, he shall be held to have abandoned the rights belonging to those parts.

Art. XXVI.—When a person succeeds to the exclusive right to a Design, or when the owner of the Certificate of Registration of a Design changes his name, residence, or seal, the heir or owner, as the case may be, shall at once give notice thereof to the Patent Bureau.

CHAPTER VII.—SALE, TRANSFER, PARTNERSHIP, AND HYPOTHECATION.

Art. XXVII.—Any person wishing to have the sale, transfer, partnership, or hypothecation of a Design registered in accordance with Article XIII. of the Law of Design shall make application in accordance with Forms 5 or 6, and file it, with registration stamps of such value as corresponds with the fee under Article XVIII., Section 2 of the same Law affixed together with the original and a copy of the deed as well as the Certificate of Registration of Design.

On receipt of the foregoing demand, the Director shall register it in the Register of Changes, mark the deed "registered," and shall, after endorsing the Certificate, send it back together with the deed to the applicant.

Art. XXVIII.—When it is wished to have a sale, transfer, partnership, or hypothecation cancelled, a notice shall be filed by the parties together with the Certificate of registration of Design.

On filing as above the Director shall note the matter in the Register of Changes and shall, after endorsing the Certificate, send it back to the applicant.

Art. XXIX.—When one or more partners wish to sell, transfer, or hypothecate the exclusive right of a Design, or to obtain more partners, registration shall only be effected with the consent of the other partners.

CHAPTER VIII.—APPLICATION FOR RE-ISSUE.

Art. XXX.—Application for re-issue under Article XV. of the Law of Design shall be made in accordance with Form No. 7 and have registration stamps of such value as corresponds with the fee under Article XVIII., Section 3, of the same Law affixed.

Art. XXXI.—On receipt of application under the foregoing Article, the Director shall deliver the Certificate of Registration of Design with the subject and date of delivery endorsed thereon.

CHAPTER IX.—APPLICATION FOR AMENDMENT.

Art. XXXII.—Application for Amendment of Certificate of Registration of Design under Article XVI. of the Law of Design may be made in the following cases:—

1. When it is found that there is disagreement between the specification and the drawing.

2. When it is found necessary to ascertain the extent of claim without altering it.

3. When the owner of the Certificate of Registration of Design finds that he claimed by mistake a range of exclusive right for his Design beyond the scope of his device.

Art. XXXIII.—Application for amendment shall be made in accordance with Form No. 8 and have registration stamps of such value as corresponds with Article XVIII., Section 4, of the Law of Design affixed, and be filed together with a copy of the amended specification and drawing as well as with the existing Certificate of Registration of Design, and dependant specification and drawings.

On grant of the foregoing application the Director shall note the same in the Register of Design and send to the applicant the Certificate of amended Registration in accordance with the provisions of Articles XXII. and XXIII.

Art. XXXIV.—The Certificate of amended Registration shall be made in accordance with form No. 9, and the day of registration shall be its date.

CHAPTER X.—CLASSIFICATION OF GOODS.

Art. XXXV.—The Classification of Goods under Article VII. of the Law of Design is fixed as follows:—

Class 1.—Clothing.

Boots, lower garments, overcoats, shirts, girdles, neck cloths, neck ties neckerchiefs, shawls, &c.

Class 2.—Head wear.

Ornaments, and hats, combs,kanzashi, nezaka, breast ornaments, bracelets, rings, buttons, hats, &c.

Class 3.—Time-pieces and their accessories.

Watches, clocks, wall clocks, watch chains, &c.

Class 4.—Umbrellas, Canes and Foot-wear.

Umbrellas, canes, geta zori, boots and shoes.

Class 5.—Articles of personal use.

Smoking accessories, fans, purses, hand-bags, &c.

Class 6.—Furniture.

Side-boards, chests of drawers, tables, chairs, bedsteads, &c.

Class 7.—Floor-coverings.

Cotton carpets, oil-paper floor covers, ornamental mats, and all other descriptions of floor coverings.

Class 8.—Stoves and accessories.

Braziers, stoves, smoking braziers, charcoal baskets, coal boxes, fire sticks, &c.

Class 9.—Lamps.

Andon, candlesticks, hand candlesticks, toro, foreign lamps, gas light globes, electric light bulbs, &c.

Class 10.—Fittings for Buildings.

Sashes, doors, sliding doors, ramma, balustrades, &c.

Class 11.—Cloths and woven goods not included in other classes.

Silk, cotton, hemp, woollen cloth, wraps, handkerchiefs, window curtains, table cloths, &c.

Class 12.—Network and knitted work not included in other classes.

Laces, braids, fringes, &c.

Class 13.—Lacquer work not included in other classes (including varnish, paints, &c.).

Eating and drinking vessels, boxes, incense boxes, &c.

Class 14.—Porcelain and earthenware articles not included in other classes (including bricks, tiles and such like).

Eating & drinking vessels, vases, censor, &c.

Class 15.—Glass ware not included in other classes.

Eating and drinking vessels, cut or engraved glass, &c.

Class 16.—Shippo ware not included in other classes.

Vases, incense burners, boxes, incense boxes, &c.

Class 17.—Metal goods not included in other classes.

Articles made of the precious metals, other metals, and alloys.

Class 18.—Stone goods not included in other classes.

Articles made of precious or other stones.
Class 19.—Articles made of wood, bamboo, tusks, and horn.

Trays, boxes, flower stands, baskets, bamboo curtains, stands, chop-sticks, stationary goods, &c.

Class 20.—Paper and Goods manufactured of Paper not included in other classes.

Stamped paper, paper in imitation of leather, paper for sliding doors, wall paper, wrapping paper, shikishi, tanzaku, writing paper, envelopes, letter boxes, saddles, &c.

Classes 22.—Goods not included in other classes.

FORMS.

To be written on Mino paper, thirteen lines on a page and twenty-five letters in a line.

FORM 1.

Application for Registration of Design.

Registration stamp and seal.

Application for Registration of Design.

Title of Design. This is a design particulars of which are set forth in the accompanying specification and drawing (or photograph) and of my invention, and as I (or we) firmly believe that it does not in any way conflict with the provisions of the Law of Design, I (or we) pray that it may be registered for my (or our) exclusive use for years.

Domicile and present residence.

Inventor, status, occupation.

Date.

Name and seal. (In case of more than one applicant each one must sign and seal and this rule applies to all the following forms.)

To Mr. (or rank of nobility.)

Minister of State for Agriculture and Commerce.

FORM 2.

Application for Registration of Design by an heir.

Application for Registration of Design.

Registration stamp and seal.

Title of Design. This is a design which the late inventor and which I succeed to and is as set forth. I firmly believe that it does not in any way conflict with the provisions of the Law of Design, I therefore pray that it may be registered for my exclusive use for years.

Domicile and present residence.

Heir of the late inventor.

Status, occupation,

Date.

Applicant's name and seal.

To Mr. (or rank of nobility) Minister of State for Agriculture and Commerce.

FORM 3.

Application for Registration of a Design invented by another.

Application for Registration of Design.

Registration stamp and seal.

Description of Design. This is a design set forth in the accompanying specification and drawing (or photograph) which design I (or we the present firm or present partnership) have intrusted to (name, domicile, and present residence) to be carried out, and I (or we the present firm or the present partnership) firmly believe that it does not in any way conflict with the provisions of the Law of Design (or we the present firm or the present partnership) pray that it may be registered for the exclusive use of for years.

Domicile and present residence

Date.

Applicant's name and seal.

or

Domicile and present residence.

Name of firm or partnership and seal.

Manager or Director.

(All documents filed by a firm or partnership shall be written as above.)

To Mr. (or rank of nobility)

Minister of State for Agriculture and Commerce.

FORM 4.

Form of Certificate of registration of Design No.

Certificate of registration of Design.

Title of Design.
Domicile and present residence.
Status, occupation.
Name.

In accordance with the Law of Design, we hereby register the above mentioned Design, and we grant to the above named for the extent of claim set forth in the accompanying specification the right of its exclusive use for _____ years.

Date.

Name and seal (or rank of nobility)

Minister of State for Agriculture and Commerce.

Director of Patent Bureau, Department of Agriculture and Commerce.

FORM 5.

Application for Registration of sale, transfer, partnership, or hypothecation of registered Design.

Application for Registration of sale, partnership, or hypothecation, of a Registered Design.

Certificate of Registration, No. _____

Title of Registered Design.

Name of inventor.

Registration stamp and seal.

I (or we) having sold, transferred, entered into partnership in, or hypothecated a certain Registered Design belonging to me (or us) as in the accompanying deed, I (or we) annexing the original and a copy of the deed as well as the Certificate of Registration of the Design, request that the deed may be registered.

Domicile and present residence.

Status, occupation.

Date.

Owner, Name and Seal.

Domicile and present residence.

Status, occupation.

Purchaser, &c., Name and Seal.

To Mr. (or rank of nobility) Minister of State for Agriculture and Commerce.

FORM 6.

Application for Registration of Sale, transfer, partnership, or hypothecation of a Registered Design already hypothecated. Application for Registration of Sale, transfer, partnership, or hypothecation of a Registered design.

Certificate of Registration No. _____

Title of Registered Design.

Name of inventor.

Registration stamp and seal.

I (or we) having sold, transferred, entered into partnership in, or hypothecated, as in the accompanying deed, the above mentioned Registered Design belonging to me (or us) hypothecated to (name, domicile and present residence) by a deed dated _____ I (or we) annexing the original and a copy of the deed as well as the Certificate of Registration of Design, request that the deed may be registered.

Domicile and present residence

Status, occupation.

Date.

Owner, Name and seal

Domicile and present residence of

Status, occupation.

Purchaser &c., Name and seal

To Mr.

Director of the Patent Bureau, Department of Agriculture and Commerce.

FORM 7.

Application for Re-issue of Certificate of Registration of Design.

Registration stamp and seal.

Certificate of Registration of Design No. _____

Description of Registered Design.

Name of Inventor.

Certificate of Registration of Design No. _____ belonging to me (or us) being damaged or lost, I (or we) pray that a new one may be issued.

Domicile and present residence,

Status, occupation,

Date.

Owner Name and seal

To Mr. (or rank of nobility) Minister of State for Agriculture and Commerce.

FORM 8.

Application for Amendment of Certificate of Registration of Design.

Application for Amendment of Certificate of Registration of Design

Registration stamp and seal.

Certificate of Registration of Design No. _____

Title of Registered Design.

Name of inventor.

As the specification, drawing, or photograph, appertaining to the above mentioned Certificate belonging to me (or us) is insufficient to secure the efficacy of Registration (here state the reason) I (or we) wish to amend it as in the accompanying document into which has not been introduced any change in the essential parts of the design. I (or we) annexing the accompanying specification, drawing, or photograph, as well as the existing Certificate of Registration of Design and specification, drawing, or photograph appertaining thereto, request that Certificate of amendment of Registration of Design be granted.

Domicile and present residence

Status, occupation

Date

Owner Name and seal

To Mr. (or, rank of nobility) Minister of State for Agriculture and Commerce.

FORM 9.

Form of Certificate of Amendment of Registration of Design.

No. (of Certificate of Amendment of Registration of Design).

Certificate of Amendment of Registration of Design.

Description of Design

Domicile and present residence

Status, occupation

Name

In accordance with the provisions of the Law of Designs we hereby grant to

amendment as set forth in the Specification, drawing, or photograph attached to this Certificate of Registration of Design No. _____ (or

Certificate of Amendment of Registration of Design No. _____ amended from) by which was granted to _____ the exclusive of the _____ years.

Date

Name and seal (with rank of nobility if any) Minister of State for Agriculture and Commerce.

Name and seal of Director of Patent Bureau, Department of Agriculture and Commerce.

The Department of Agriculture and Commerce has issued the following:—

DEPARTMENTAL ORDINANCE No. 9.

Art. I.—If any person residing abroad desire to apply for a patent of any invention, or registration of a trade mark or design, or to prefer a claim in connection with the same, he must appoint a deputy, duly furnished with power of attorney, residing in Japan.

Art. II.—A foreigner forwarding an application or claim in connection with patents, trade marks, or designs, must append a certificate of nationality.

Art. III.—Applications, specifications, claims, or any other documents or communications addressed to the Patents Office, must be written in Japanese.

Art. IV.—Whenever a power of attorney, certificate of nationality, or any other document is written in a foreign language, a translation must be appended.

(Signed) Viscount ENOMOTO,

Minister of State for Agriculture and Commerce.

(Dated) Nov. 20th, 1896.

NOTIFICATION No. 17.

DEPARTMENT OF AGRICULTURE AND COMMERCE,
Issued 1st. day, 12th month, 25 year of Meiji (A.D. 1892).

Specifications and drawings to be annexed to application for Patent, Registration of Design, and for Registration of Trade Marks filed after the 1st day of the 12th month of the 25th year of Meiji, shall be made in accordance with the following rules:—

1. The Specification shall be written in the *kai* or *gyo* style 13 lines and 25 characters on a page, on Mino paper folded into two, top margin 1 *sun* (Japanese inch), $\frac{3}{10}$ *sun* at bottom, $\frac{3}{10}$ *sun* for outer margin and 1 *sun* for binding.

2. In the Specification the several items as set forth in Art. XVIII. of the Rules for carrying out the Patent Law, Art. VIII. of the Rules for carrying out the Law of Design, and Art. VII. of the Rules for carrying out the Law of Trade Marks, shall be placed in the order laid down in those Rules.

3. When in the Specification there is something explained referring to the drawings, it shall not have the portion pointed out with signs only, but shall be fully and explicitly described.

4. In the Specification to be annexed to the application for Registration of Trade Mark no explanation in respect of the colouring of the Trade Mark is required.

5. Drawings shall be made on sized white Mino-paper or *usuyō* with a space of 7.2 *sun* by 4.6 *sun*, keeping margins of 1 *sun* at the top .8 *sun* at the bottom, .3 *sun* to the left and 1.5 *sun* to the right, and shall be clearly drawn with black Indian ink, so that it may be suitable for lithographic printing.

Provided that, in case the drawings for the Design are very large and if reduced cannot show the Design correctly and plainly, this provision need not be adhered to.

6. In making drawings there is no objection to using sides as top and bottom, but the same paper shall not be used both ways.

7. Drawings shall be made as far as possible on one sheet of paper and shall not exceed this except in case of necessity.

8. The title of an Invention or Design shall not be mentioned in the drawings.

9. Drawings, except those relating to colouring, are not required to be coloured.

10. Separate figures shall have a number for each, as figure No. 1, No. 2, &c., but figures severally showing portions of one design shall be marked with the same sign, provided that number and sign shall be clearly described with dark Indian ink so as not to spoil the figure.

11. When signs cannot be placed close to the figure, they shall be put a little on one side and be connected with the parts they are intended to indicate by the thinnest possible straight line; signs should never be put upon shades, but when they are put upon those by necessity, that part where the sign is shall have an unshaded space around it.

12. To show a cross-section, parallel lines about $\frac{1}{16}$ *sun* apart from one another shall be diagonally drawn; and for different parts in a cross section diagonal lines of different direction shall be used.

13. When in order to indicate raised or depressed parts clearly, it is necessary that they should be shaded, the shading shall be put in simply and clearly, and in depressed parts shades shall be used as little as possible.

14. For the preparation of drawings of a Design relating to letters and signs to be applied to printing, the following heads shall be observed:—

1. When it is a Design composed of letters limited in number such as *atakana*, *hiragana*, figures, or Roman letters, the whole shall be shown in every case.

2. When it is a Design composed of letters unlimited in number such as Chinese characters it need not show the whole of each, but parts of the Design, such as *hen*, *tsukuri*, *kannuri*, *kamaye*, &c., shall be given.

When it is a Design relating to the whole character, which cannot be shown in a part only such as *hen*, *tsukuri*, &c., samples by which the whole can be appreciated shall be given.

3. When it is a Design not containing the whole of a letter, a character, or *hen*, *tsukuri*, or the like, but only relating to the form belonging to the points of a letter, character, &c., the form of each point as well as the whole of the character constituting it if a few in number shall be given.

NOTIFICATION No. 1.

DEPARTMENT OF AGRICULTURE AND COMMERCE,
Published 4th day of the 1st month of the
22nd year of *Meiji* (A.D. 1889), to be in force
from the 1st day of the 2nd month of the same
year.

In pursuance of the Patent Law, the Law of
Designs, and the Law of Trade Marks, fees for
specifications of inventions, *Official Journal of
Patents*, *Official Journal of Trade Marks*, for
copies of documents and preparation of draw-
ings, are fixed as follows:—

Art. I.—As to printed matter, specification per
copy is *sen* 2½, the *Official Journal of Patents*
per number *sen* 15; and the *Official Journal
of Trade Marks* per number *sen* 2.

Art. II.—Fee for duplicates of documents per
sheet 13 lines per page and 25 characters per
line *sen* 10, but although the number of char-
acters may be less than 25 it shall be reckoned
as one sheet.

Art. III.—Fees for the preparation of draw-
ings are to be fixed from *sen* 25 to *yen* 5 per
sheet by the Director, according to the labour
required in their preparation.

Art. IV.—Printed matters can be purchased.

Art. V.—Persons requiring documents or
drawings, &c., under Art. XXXIII. of the Patent
Law, may make application, explaining what is
necessary for the preparation of drawings,
models, and specimens, or sketches of their
inventions, together with the specifications, but
when those are already deposited for the purpose
of examination they will not be required.

Art. VI.—Persons requiring the preparation
of drawings under Art. XX. of the Patent Law
shall make application stating the serial number
and date of the Certificate of Registration of
Design.

Art. VII.—On notice from the Director of the
Patent Bureau, fees shall be paid with registra-
tion stamps affixed to the notice and obliterated
with the parties' seal.

NOTIFICATION No. 10.

DEPARTMENT OF AGRICULTURE AND COMMERCE,
Published 11th day of the 9th month of the
26th year of *Meiji* (A.D. 1893).

1.—When changes are made in the circum-
stances under which a Trade Mark is held, either
because it has devolved, has been sold, trans-
mitted, or is held in partnership, five specimens
of the Trade Mark, the conditions of which are
changed, shall be deposited at the Patent Bureau.

A similar course shall be taken in case of
change of name, place of residence, or of the
partners in a Trade Mark.

2.—When a Company or Partnership having
the exclusive right to a Trade Mark changes its
address or name, or when the manager of a Com-
pany or head of a Partnership is changed or his
seal is changed, notice shall be given in Com-
pliance with Art. XXIV. of the Rules for the
carrying out of the Law of Trade Marks, and
a specimen of the new seal shall accompany the
application.

CABINET ORDINANCE No. 32,

Published the 25th day of the 12th month of
the 21st year of *Meiji* (A.D. 1888), and to be
in force from 1st day of the 2nd month of the
22nd year of *Meiji* (A.D. 1889).

The fees for Letters Patent, Registration of
Trade Marks and Designs, as set forth in Art.
XXX. of the Patent Law, Art. XVIII. of the
Law of Design, and Art. XVII. of the Law of
Trade Marks, must be paid in registration
stamps.

Signed Count MATSUKATA,
Minister President of the Cabinet.

H.I.H. Prince Arisugawa Takehito and
Marquis Saigo, Minister of the Navy, went to
Yokosuka on the Wednesday and attended the
graduation ceremony of the Naval Engineering
College.

A petition has been presented to Count
Matsukata, Premier, and other Ministers of
State, asking for the abolition of export duties,
a step that the Yokohama Japanese Chamber of
Commerce proposed the other day.

SUPPLEMENTING MILITARY
OFFICERS.

An Imperial Ordinance was issued on the 2nd
inst. over the signature of Viscount Takashima,
Minister of War, in connection with the supple-
menting of military officers. The Ordinance is of
great length and is divided into 10 Chapters, re-
lating to the supplementing of commissioned
officers and non-combatants of equivalent rank
serving with the Colours; commissioned officers
and non-combatants of equivalent rank on the
reserve list, and non-commissioned officers and
non-combatants of equivalent rank either with the
Colours or on the reserve list; fuzilemen, and so
forth. Chapter II., relating to the supplementing
of officers serving with the Colours, runs as fol-
lows:—

Art. VI.—Officers of infantry, cavalry, artillery,
engineers, and commissariat corps serving with
the Colours shall be supplemented by cadets
qualified to become sub-lieutenants. Officers of
gendarmerie shall be supplemented by officers of
other corps.

Art. VII.—The following may be appointed as
cadets:—

1. Students of the Central Military Prepara-
tory School (Chuo Yonen Gakko) who have
successfully passed through the graduation
examination.
2. Graduates of Government or Local Ordina-
ry Middle Schools, or of Ordinary Middle
Schools specified by the Ministry of Educa-
tion, who possess certificates of scholar-
ship from the Directors of the respective
Schools, and who have obtained the permis-
sion of commanders of regiments, independent
battalions, or insular troops to be enrolled.
3. Those that possess scholarship of similar
standing to that of the graduates of the
Ordinary Middle Schools mentioned in the
preceding clause, and who, with the per-
mission of commanders to be enrolled, have
passed the examination with success.

Art. VIII.—The number of cadets to be appoint-
ed each year shall be determined by the Minister
of War.

Art. IX.—The mode of enlisting cadets shall be
determined between the Minister of War and the
Chief of the Military Board of Inspection.

Art. X.—The Chief of the Board of Inspection
shall nominate aspirants to be appointed cadets,
and shall duly distribute cadets thus appointed to
regiments and so forth, after the cadets have ob-
tained the permission of commanders to be enrol-
led. Prior to sending cadets to the military college,
the Chief of the Board of Inspection shall cause
them to undergo service (miscellaneous services
excluded) as non-commissioned officers and pri-
vates, and to study military science, for the space
of one year (about 6 months for graduates of the
Central Military Preparatory School).

Art. XI.—When one year volunteers are ap-
pointed cadets they shall rejoin their regiments
from the day of such appointment.

Art. XII.—In distributing the cadets of the
Central Military Preparatory School, the following
points shall be taken into consideration:—

1. Desire of cadets.
2. Requirement of troops.
3. Equal distribution of cadets of superior
scholarship.
4. Cadets who excel in mathematics shall be
enrolled in artillery, engineers, and railway
corps.

Art. XIII.—On a cadet being appointed to a
regiment, the Commander shall specify which
company he shall join, and shall cause the captain
of that company to take charge of the instruction
and training of the cadet.

Art. XIV.—The instruction of the cadet in
military science shall be undertaken by a captain
or lieutenant by order of the officer immediately
placed over him.

Art. XV.—The Commander shall be held re-
sponsible for the instruction of the cadet.

Art. XVI.—Cadets of the Central Military Pre-
paratory School may be given, immediately after
admission into a corps, the rank of fuzileman and
be promoted to lance-sergeant after two months
and to full sergeant after six months; while those
of other schools may enter as first class privates
and be promoted to fuzilemen after six months,
to lance-sergeant after eight months, and to full
sergeant after one year.

Art. XVII.—When a cadet has become effi-
cient, the captain of the company shall give a
certificate to that effect to the Commander of the
regiment; the officer who has taken charge of the
cadet's instruction in military science shall make a

report in writing to the Commander of the regi-
ment. The latter, after perusing the certificate and
the report, shall confirm the completion of the
education of the cadet, and shall send the docu-
ments to the Commander of the Division, so that
the latter may compile a list of the cadets of
various arms and forward the same, with the said
documents, to the Chief of the Board of Inspection.

Art. XVIII.—Upon receipt of the documents
mentioned in the preceding article, the chief of the
Board of Inspection will determine who shall be
sent to the Military College, and will issue orders
to them through the medium of the respective Com-
manders of Divisions.

Art. XIX.—A cadet that has finished the course
of study in the Military College shall rejoin his
regiment, and the Commander of his corps shall
promote him to the rank of sergeant-major, and
assign him to the duties of a company officer for a
period of not less than six months. A cadet shall
be called a probationer during this period.

Art. XX.—The Commander shall hold himself
responsible for the education of a probationer
placed under his control, and shall make him at-
tend to company duty conscientiously and dili-
gently, as well as to the practical application of his
scientific knowledge.

Art. XXI.—Before appointing a probationer to
an office, the Commander shall obtain from the
captain of the company to which the probationer is
assigned a certificate guaranteeing the completion
of his education and his qualification for the office,
and after the Commander himself has approved the
recommendation, he shall submit the appointment
for approval by the Officers' Council.

Art. XXII.—The Officers' Council, shall decide
whether or not the probationer shall be confirmed
in such appointment, and each officer of the
Council present shall enter an affirmative or nega-
tive and also sign his name, but the captain of
the Company submitting the certificate referred to
in the preceding article shall not have a voice in
the decision.

Art. XXIII.—When all the Officers of the Coun-
cil have given an affirmative answer, the Com-
mander shall draw up the elective list, appending
to the officers' names in due order, and shall then
report to the Commander-in-Chief of the Division
that the probationer has qualified for a commission.
The Commander-in-Chief shall then transmit the
documents to the Chief of the Inspection Board,
and the latter shall forward the same to the Min-
ister of War. When a minority give an unfavour-
able answer, the same process shall be gone
through, inserting, in addition, the reasons for the
unfavourable answer in the election list. When a
majority give an unfavourable answer, the reason
for that verdict shall be submitted, together with
the election list. In this case the process speci-
fied in Art. XXVI. shall be followed.

Art. XXIV.—A cadet who has failed in training
or who, on account of illness, could not be sent
to the Military College, or who while in the College
had no chance to graduate, or who failed to
matriculate, and has left the College and rejoined
his original regiment, but whose chance is still re-
garded as hopeful, may be allowed to remain in the
regiment until the next date arrives for entering
the Military College. In such a case the Com-
mander of the regiment shall make a specified re-
port to the Commander of the Division, and the
latter to the Chief of the Board of Inspection who
shall transmit the same to the Minister of War.

Art. XXV.—For a cadet coming under the fore-
going article the process specified in Arts. XVII.
and XVIII. shall be followed.

Art. XXVI.—In case a cadet comes under one
of the following clauses, the Commander of the
regiment shall make a specific report to the Com-
mander of the Division, and the latter to the
Chief of the Board of Inspection, who shall give
judgment on the case:—

1. When military discipline is violated or
laws and regulations are repeatedly violated,
or when deportment is not strict, and there
is no hope of amendment.
2. When deficient in scholarship and not
qualified for a cadet.
3. When deficient in ability for an officer.
4. When the acquirement of cadetship is
not acknowledged.
5. When a satisfactory result has not been
attained in training; when owing to illness
the cadet could not attend the Military Col-
lege (excepting those that come under Art.
XXIV.); or when for a time training can-
not be undertaken owing to illness or
wounds.
6. When in accordance with the regulations
of the Military College, the candidate had to
leave the institution to rejoin his original
regiment, with no hope of passing through
the College subsequently.

7. When a negative vote has been entered by the Officers' Council.
8. When owing to illness or wounds the cadet is unable to undergo training with the Colours or with the 1st Reserve, or when he is unable permanently to undergo military service.

Art. XXVII.—Those that come under clauses 1 to 7 shall be relieved from cadetship, and shall, according to rank, be made non-commissioned officers or privates, and be enrolled in the 1st Reserve. Those that come under clause 8 shall also be relieved from cadetship.

MILITARY ACCOUNTANTS.

Officers of the Military Accounts Board shall be supplemented by captains or 1st lieutenants of different corps serving with the Colours, or accountants of 1st and 2nd grade that possess the diploma of the Military Accounts School.

OFFICERS OF THE MILITARY SANITARY BOARD.

Officers of the Military Sanitary Board shall be supplemented by probationer surgeons and pharmacists who possess qualifications to become surgeons or pharmacists of 3rd grade.

The following may be appointed-probationer surgeons or pharmacists:—

1. Students of the College of Medicine of the Imperial University who aspire to military service, and who, on being judged competent, are appointed to the College, and who have finished the course of the College.
2. Student surgeons or student pharmacists in the one-year volunteers who possess licences to practise medicine or to act as dispensers, and who desire to become officers of the Sanitary Board serving with the Colours.
3. Students of the College of Military Medicine who have passed the matriculation examination with success.

Probationer surgeons or pharmacists shall enjoy the treatment accorded to sergeant-majors.

OFFICERS OF THE MILITARY VETERINARY BOARD.

Military veterinaries shall be supplemented by probationers. Graduates of the military Veterinary College shall be appointed probationers, and shall enjoy the treatment accorded to sergeant-majors.

OFFICERS OR NON-COMBATANTS OF EQUIVALENT STANDING IN 1ST AND 2ND RESERVES.

Officers or non-combatants of equivalent standing in the 1st and 2nd Reserves shall be supplemented by the following:—

1. One-year volunteers who after successfully passing the final examination have been placed on the 1st Reserve list.
2. Officers and non-combatants who have left the service with the Colours before the age-limit in the service with the Colours was reached and have been placed on the 1st Reserve list.
3. Non-commissioned officers on the 1st Reserve list enjoying treatment accorded to officers and who have received commissions.

In order to appoint those coming under Clause 1 as officers for the 1st Reserve, after they have undergone service with the Colours, they shall in the next year undergo for at least three months training with their original regiments.

SUPPLEMENTING OF NON-COMMISSIONED OFFICERS ON SERVICE WITH THE COLOURS.

Supplementing of non-commissioned officers of gendarmie shall be made by fuglemen of gendarmie who have served for at least two years, and are of strict deportment and of reliable character.

Besides the above, non commissioned officers of infantry, artillery, and so forth, either serving with the Colours or in the 1st and 2nd Reserves, who have undergone service with the Colours for at least two years, are strict in deportment, and of reliable character, and who have successfully passed the examination for supplementing, may be appointed, provided they are under 38 years of age.

Non-commissioned officers of different corps shall be supplemented by fuglemen who have served with the Colours for at least two years, and who have been allowed to re-engage, or are graduates of the Non-Commissioned Officers' School (Kyododan), and of the Gunnery School for gunners of fortresses at important places.

In case the officers of the commissariat serving with the Colours cannot be supplemented with cadets of commissariat, officers of other corps serving with the Colours may be appointed.

For the present, non-commissioned officers and privates (one-year volunteers excepted) and students at various military schools may apply for cadetship.

Besides the above, there are special lengthy pro-

visions for supplementing military artisans ranking with non-commissioned officers, junior military accountants, bandmen, fuglemen of gendarmie, infantry, artillery, and so forth, but these are of no special importance and are therefore omitted here.

CORRESPONDENCE.

[Our readers must distinctly understand that we are in no sense responsible for that sentiments or opinion of our correspondents, for the accuracy of their assertions, or for the deductions they may choose to draw therefrom.]

"THE STREETS OF TOKYO."

SIR,—A correspondent of one of your local contemporaries attributes to *The Times* Tokyo correspondent this sentence:—"In the broad and beautifully kept streets of Tokyo, while great arc lights constellate the sky." *The Times* correspondent is credited with having used these remarkable words "a few months ago," and with having alluded to the Electric Tram cars competing with the humble Jirikishia in Tokyo. Concerning these things I have three comments to offer:—First, there are no electric tram cars in Tokyo. Secondly, the streets are not beautifully kept, the method of repairing them being about as unscientific as it could well be. Thirdly, I have never made the most remote allusion to the streets of Tokyo in any letter to *The Times*. It seems to me that somebody writing to *The Times* from Osaka described the streets in the terms quoted, but my recollection of the matter is indistinct. At all events, the streets of Tokyo have never been described as "broad and beautifully kept," nor have imaginary electric tram cars even been placed there, by

Your obedient servant,

THE TOKYO CORRESPONDENT OF
"THE TIMES."

Tokyo, Dec. 13th, 1896.

RAILWAY ITEMS.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Referring to the article in the *Japan Mail* of this morning, in which it is stated as the result of the information acquired by a "Japanese Expert" during a prolonged visit of inspection through Europe and America, that the bogie styles of cars was only introduced in America quite recently; and that the locomotives in use in Japan are old-fashioned and only capable of running 30 miles an hour, I beg to state that, the bogie style of cars has been in use in America (where it was first introduced) for the past forty years at least; and that the locomotives in use in Japan are not old-fashioned, and the majority of them are quite capable of running from thirty to forty miles an hour. It is not the locomotive, it is the man behind the locomotive who is in fault.

If the above is a sample of what the "Japanese Expert" has learned during a prolonged visit abroad, he might have saved money by staying at home.

I am, Sir, yours obediently,

A. S. ALDRICH.

Yokohama, December 15th, 1896.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Since addressing you this morning, the following paragraph from your article in this day's issue, has also struck me as requiring correction:—

The growing activity in the parcels post service and the increasing number of parcels post-bags that private railways are obliged to convey without remuneration, are beginning to attract the attention of railway companies in Japan. It is said that in England 25 per cent. of the receipts from the parcels service goes to the Treasury and the remaining 75 per cent. to railways that carry parcels.

The above paragraph as it stands, is in itself nonsense. Railways in England convey nothing without remuneration; and if the Post Office does take 25 per cent. of the receipts, it is a very moderate proportion for the cost of collection, packing, and delivery. All railways carry parcels. It is quite evident that the "Japanese Expert" has made a sorry use of his opportunities; and neither he, nor the *Jiji*, nor (shall I say?) yourself, know anything whatever upon the subject about which you affect to throw light.

I am, Sir, yours obediently,

A. S. ALDRICH.

Yokohama, December 15th 1896.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I beg to express my best thanks for your courtesy in publishing my letters of 15th instant, this morning; but regret to observe that some errors have crept in during the "setting up;"

and as I find it quite sufficient to bear the odium of my own mistakes, I shall be further greatly obliged if you will be so good as to note, that in the original manuscript of my former letter, the words, "bogie styles of cars was introduced," read "bogie style, &c., was &c.," and, "only capable of running 30 miles an hour," was written, "20 miles an hour."

In the second letter, also, the words, "upon" and "about," have been transposed in the last but one line. Thanking you for inserting this correction.

I am, Sir, yours obediently,

A. S. ALDRICH.

Yokohama, December, 16th, 1896.

SUCCESS IN RACING.—A WORD FOR THE COUNTRYBRED.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—At the meeting of the Nippon Race Club on Friday, the report, taken as read, commenced with these words:—"In presenting the report and accounts for the year 1896, the Executive Committee have to congratulate the members of the Club on a very successful season." What in the main constitutes success in a racing institution? Most people would undoubtedly answer, good racing; and this answer may be taken to be indisputable. What constitutes good racing? Before answering that question I will refer to the report of the late meeting. In it I find that the sport provided by 16 country-bred horses was 13 races, and that the sport provided by 27 China ponies was 13 races. I find also in the Committee's report that the mile was covered by a country-bred (Tatsuta, 10st. 11lb.) in 1 min. 55 sec., and that the China record in Yokohama for that distance is 2 min. 11 sec.—a difference of 16 seconds, and consequently so much better time made by the countrybred than by the China pony. As to what constitutes good racing, the answer is plain—the principal element is fast time; and on this showing one would naturally conclude that the Committee congratulated the members on the possession of 16 horses that provided so much better sport than 27 Chinese ponies running in an equal number of races. Not a bit of it. Here is what the Committee say:—"The Club during the past year have taken up no less than four lots of Subscription Griffiths, but the Committee still think that the subscription country-breds are an inferior class, and can hardly be considered a success." What is success? The Committee apparently do not know! Is it the China pony's 2.11 for a mile against the country-bred's 1.55? Is it pony racing versus horse-racing?—for the country-bred is fully entitled to be classed as a horse. I congratulate the members who show sport by racing the countrybreds which the Committee choose to designate an "inferior class."

In the natural order of things one would expect to find that the "inferior class" costs much less money than the "superior" Mongolian. That this is so, is evident by the following figures taken from the Committee's report:—

Cost of 11 China Ponies, Spring, 1896	\$2,394.30
Cost of 10 Country-Breds, Autumn, 1895 ..	1,513.00
Cost of 12 China Ponies, Autumn, 1896	2,491.56
Cost of 16 Country-Breds, Spring, 1897	2,080.00

The Committee do not appear to know to what extent they have approached success now that so many races are given to the "inferior class," and it would be interesting therefore to compare Tatsuta's performance with that of something on the English turf, say at head-quarters (Newmarket). It is difficult to obtain precisely similar conditions, but let me take the One Thousand Guineas, one mile (straight) across the flat. Galliotia won that race last year in a field of 15, carrying 8st. 12lb., in 1 min. 47½ sec., and Tatsuta won the Prix des Haras, with 10st. 11lb. up, a difference of 17lb., in 1 min. 55 sec. No comparison can be made between the two courses, one being flat and straight, and the other hilly and and oval; and in favour of the English thoroughbred are blood and training. Things are superior or inferior by comparison, and success is relative. What logic or reason there may be in the Committee's report, so far as I have referred to it, has yet to be discovered.

Young Australia belonged to the "inferior class," but he ran a mile and a half in 2.56 (Derby time), carrying 10st. 11lb., that is to say 25lb. more than the Derby impost, while such a crack as the Flying Dutchman took 3 min., and Daniel O'Rourke 3 min. 2 sec. to win the Derby.

Under favourable conditions, it may come to pass that the mile at Negishi will be done in the autumn next year (weight for age) in 1.53—there is more than one in the new lot obtained by Mr. Durand for the low figure of \$130 a head that

looks capable of lowering Tatsuta's record next Autumn.

Yours, &c.,

OLD MEMBER.

December 13th, 1896.

[We have never been able to understand the principle on which China ponies are admitted to the Nippon Club's races. What is the prime object of racing? To improve the breed of horses. Have folks in Japan any interest in improving the breed of Chinese ponies? If not, why on earth do they import ponies from China at heavy expense, and fritter away one half of the prize money on races that have no conceivable bearing on the chief purpose of racing? It is, for all the world, like sending to China for silver-smith's work when incomparably better can be had in Japan at smaller cost—*Ed. J. A.*]

"THE DEATH-STONE OF NASU."

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In your report of the last meeting of the Asiatic Society occurs a small misstatement regarding the "Death-Stone of Nasu." It is not a matter of any importance, but to save possible disappointment to any who may be tempted to go to see the famed *Sesshō-seki*, perhaps you will kindly afford space for the following correction. What I said at the meeting was to the effect that the "Death-Stone" no longer existed, but that the spot on which it was supposed to stand, is still pointed out by the villagers. Oddly enough, only some few days before my visit there, a fox and a pheasant, both dead, were found within a few yards of the place. The legend says that not men only, but even birds and beasts perish if they do but touch it. All that is now remarkable about the spot are strong sulphurous fumes which seem to attract and prove fatal to the land-crab, lepidoptera, and other kinds of insects.

Yours truly,

W. B. MASON.

Tokyo, December 14th, 1896.

NIPPON RACE CLUB.

The annual general meeting of the members of the Nippon Race Club was held in Keil's Building on Friday afternoon. There were present, Sir Ernest Satow, K.C.M.G., President, in the Chair; Dr. Wheeler, Messrs. W. W. Till, Tom. Thomas, V. Blad, J. Dodds, E. Knaff, G. Campredon, L. Longin, S. Isaacs, B. Hyde Pearson, F. H. Abel, K. Kingdon, R. M. Stirling, C. Buchanan Dunlop, H. Smith, R. Abenheim, C. Abenheim, de Cuers, de Cogolin, and H. Tennant (Secretary).

The CHAIRMAN said that the first item of business before the meeting that day was to approve the minutes of the last general meeting held on the 22nd January. By rule 18 it was provided that these minutes might be taken as read. They had appeared in the newspapers at the time, and doubtless all present were aware of what took place, and he thought that they could be taken as read, for being rather voluminous they would take some time to read.

Mr. B. HYDE PEARSON proposed and Mr. KINGDON seconded, that the minutes of the last general meeting be taken as read.—Carried.

The CHAIRMAN—The next business, gentlemen, is to consider the report that has been drawn up by your Executive Committee. Every member has been supplied with a copy; and besides it has also appeared in the newspapers. It has doubtless afforded you all satisfaction to see what a large balance we now have in hand. We have increased it by some \$1,200 during the year; and this in addition to very heavy expenditure—expenditure that will not be likely to occur again. So they could now say that they were really better off this year by something like \$3,000. I think the Club is to be congratulated upon the valuable result of the labours of the Executive Committee. I shall be glad if any gentleman present will be kind enough to move the adoption of the report and accounts.

Mr. R. M. STIRLING proposed, and Mr. L. LONGIN seconded, the adoption of the report and accounts.—Carried unanimously.

The statement of accounts this year are prefaced by a report of considerable length giving the chief points of interest in the year's work and a résumé of the two races meetings held this year, names of winners, times, and donated prizes; besides some suggestions for the incoming Committee. One paragraph read:—A comparison of the accounts for 1896 with those of last year shows in all respects a gratifying result. There has been a satisfactory increase in the amount of members' subscriptions. The entries for the Spring Meeting amounted to \$3,285 as compared with \$2,425 for the corresponding meeting of last year, and those for the October meeting to \$3,110 as compared with \$2,810 at the Autumn Meeting 1895, the total increase being \$1,160. The receipts

for Gate Money, Tickets, Sale of Books, &c., amount to \$2,886 as compared with \$1,826.40 in 1895, while the Pari-Mutuel realized \$1,285.10 as against \$507.25 last year. A new source of income was furnished by a re-arrangement of the conditions of the Lotteries, the amount obtained being in all \$671.22. In consequence of these various increases, your Committee were enabled to offer \$9,805 in prizes as compared with \$8,905 given last year, and after expending \$1,540.44 in improvements and alterations, the accounts show a balance in hand of \$4,721.52 as against \$3,368.57 at the end of 1895.

The CHAIRMAN then announced that the accounts were open to discussion. Nobody present having any questions to ask, the Chairman said that he had only one observation to make. The Committee had incurred the obligation of asking authority from the members of the Club to purchase a piece of ground extending to the front of the Grand Stand. It was mentioned in a paragraph of the report; "In addition to the land already acquired by the Club, your Committee think it advisable to purchase the piece of ground which extends to the front of the Grand Stand, on which the southern stables 1 to 16 are built, its acquisition being necessary for the welfare of the Club. The sum required is \$2,150, which will leave the Club \$2,570 towards the \$3,500, the purchase price of the ground mentioned above." But while this matter was under discussion he proposed that the ballot for the new Executive Committee be taken. He believed that there was no rule against their being re-elected.

Dr. WHEELER, for the information of the members, read out the names of the retiring executive Committee. They were, Mr. Till, Mr. Arakawa, Mr. Knaff, Mr. Thomas, Mr. Blad, and Mr. Isaacs. Mr. Mitchell had retired from the Committee in the early part of the year, and the speaker said that he might perhaps be allowed to suggest the name of Mr. Babington to take the place; he was a likely man, and one capable of filling it well in every way.

Mr. DODDS—In reference to the powers asked for in the report relating to the purchase of land, I think everyone present will agree with me upon the advantage that that land will be to the Club, and I now beg formally to propose that the suggestion in the report be acted upon, and the Committee be given the power to purchase that piece of land.

Mr. B. HYDE PEARSON—I have much pleasure in seconding Mr. Dodds' proposal.

The CHAIRMAN—Has anyone any remarks to offer on the proposal?

Mr. KINGDON—I should like to ask how many *tsubo* there are?

Mr. TILL—Three hundred.

The CHAIRMAN—If no one has any desire to ask any further questions, I will read the motion before putting it finally to the meeting. Mr. Dodds proposes, "That in addition to the land already acquired by the Club, the Committee be empowered to purchase for \$2,150 the piece of ground which extends to the front of the Grand Stand on which the southern stables 1 to 6 are built." This proposal has been seconded, and I put it to the meeting.—Carried *nem. dis.*

Dr. Wheeler and Mr. Hyde Pearson, having been appointed scrutineers of the ballot, now presented their report.

The CHAIRMAN—The result of the ballot gentlemen, is—Messrs. Till, Arakawa, Knaff, Thomas, Blad, Isaacs, and Babington—these gentlemen, if they will serve, will form your Executive Committee for the ensuing year.—(Hear, hear.)

Mr. BUCHANAN DUNLOP—I have been requested to ask the members present to accord a vote of thanks to the retiring committee. Their labours have been somewhat arduous. I do not want to make any invidious distinctions, but I think that their Chairman (Mr. Till) is leaving us for a short time, and I think I am expressing the hope of all, when I say that I hope to see him back again soon.—(Hear, hear.)

Mr. H. SMITH—I have pleasure in seconding your proposal.

The CHAIRMAN—I think I may say, gentlemen, that that proposition is carried by acclamation.—(Hear, hear.) I think that concludes the business of the meeting. It has been said that the best meetings are always the shortest, and I have heard of a limit of 10 minutes being set, but although we have not been able to get through our business within that space of time, still we are well within the half hour.—(Laughter.) Perhaps, when we take the very large balance that we have at our bankers into account, we can fairly say that this has been the most successful meeting we have ever had.—(Hear, hear.) The meeting stands adjourned.

Mr. DODDS—I think before we part, that we

should pass a vote of thanks to our President for coming down to-day to preside at our meeting.—(Hear, hear.)

Mr. BLAD—I second that.—Carried.

The CHAIRMAN—I am only too pleased to be of the slightest service to you, for really it has been slight to day.

The meeting then separated.

CONCERT AT THE PUBLIC HALL.

Owing in very great degree to the damp, chilly, cheerless weather—a murky, tearful sky above, and sloppy, ice-cold mud under foot—the Public Hall on Wednesday night was not filled with so large an audience as we have seen foregather at the opening Concert of the Yokohama Choral and Philharmonic Societies. To the same cause may be ascribed the curious lack of enthusiasm that prevailed during most of the evening; for the Hall was cold to the body. Later, and especially in the second part, the audience warmed up, and Mrs. Mollison's lovely song received a full measure of well deserved applause. The new system under which the Choral Society has worked this autumn in regard to practises has resulted in the selection of a thoroughly well-balanced chorus, a chorus that, even though smaller than in some years, knows its parts and is capable of doing the best with the music in hand. The Society is to be congratulated upon this factor; for quality must always be preferred to numbers, especially where music is concerned. Cowen's Romantic Cantata "Sleeping Beauty" is not very ambitious, but it is pleasing in its tunefulness, and when rendered as it was last evening can prove very acceptable to a connoisseur who has wearied somewhat of higher-class music indifferently rendered. The pity is that "the book" is so feeble, the verse at no time rising above jingling-bathos of the baldest description. The soloists, who acquitted themselves well, were Miss Lloyd-Thomas as the *Princess*; Miss Webb as the *Wicked Fay*; Mr. Fleet as the *Prince*; and Mr. Den Arend as the *King*. The latter is a new-comer and practically made his *début* at this Concert. His work reflects credit on his enthusiasm and his talent, giving promise of better things in the future. Miss Lloyd-Thomas was heard to great advantage in "Whither away, my heart?" and again "I hear your call;" while in the concluding passages with the *Prince* she surpassed herself, having gained the confidence that she appeared to lack in the earlier portion of the Cantata. Miss Webb, as the *Wicked Fay*, was very successful, especially when the music demanded the use of notes in her lower register; then her declamation was fine and cleverly expressed. She received a lovely bouquet in the course of the evening. Mr. Fleet, when he allowed his voice its full way, was most pleasing, and deserved the applause he received. But the vocal gem of the evening was Mrs. Mollison's song in the second half, "For all eternity" (Mascleioni). The charming singer was recalled, and then she graciously gave "Sigh no more Ladies," with a dainty archness all her own.

The work of the Philharmonic Society in the three pieces set down on the programme is deserving of much praise. Indeed, the progress made since the Society's last appearance is astonishing. Perhaps it would be more correct to say that, ashamed at the lapse displayed in the spring, the members have returned to their old ideals of conscientious thoroughness; and now having regained the high standard of the earlier performances we hope they will never again desert it. The pieces given on Wednesday were the Overture from "Il Barbiere di Siviglia" (Rossini); a Transcription "Andante in A flat" (Bastide Fraser); and the Overture from "Joseph" (Méhul). It would be hard to discriminate between the three pieces, each went so well; but if anything, the first had more swing and thorough accord than the others. During the performance, Mr. Griffin, who conducted with this accustomed ability, was presented with a harp of flowers; and Mrs. Doering, who accompanied, received two lovely baskets of flowers.

Baron Nishi, Minister to Russia; Baron Haya-shi, Minister to China; and Mr. Hara, Minister to Korea, who recently returned, will not resume their posts. As soon as the Budget for the thirtieth fiscal year has been completed, they will, we hear, be transferred to other posts.

Mr. Takabashi and others, of Shana, Etoro, have set on foot the Chishima Kisen Kabushiki Kaisha (Chishima Joint-stock Steamship Company), with the object of opening regular steam communication between Chishima and Etoro-jima.

LIST OF SUITS BROUGHT BY FOREIGNERS AGAINST JAPANESE SUBJECTS IN THE YOKOHAMA LOCAL COURT
FROM NOVEMBER, 1890, TO SEPTEMBER, 1896.

Date.	Nature of Suit.	Result in Local Court.	Result in Appeal Court.	Result in Court of Cassation.	Plaintiff.	Defendant.
Nov., 1890	Repayment of loan.	Removed to Tokyo.	F. Retz.	Iwata Michinosuke.
do	Demand relating to Exchange.	Messrs. Cornes & Co.	Ito Rikimatsu.
do	Implementing of contract.	In favour of Plaintiff.	Partly rejected.	...	B. Rose.	M. Sato.
Dec., 1890	Payment for goods sold.	Withdrawn.	Samuel Samuel & Co.	F. Takagi.
do	ditto.	ditto.	Yung Chang-hwa.	...
do	Implementing of contract.	ditto.	F. Retz.	S. Uchiyama.
do	ditto.	ditto.	Robinson.	Hosoi and another.
Jan., 1891	Repayment of loan.	Stein.	T. Fujishima.
do	Payment of cheque.	In favour of Plaintiff.	Confirmed.	Confirmed.	Lucini.	H. Mato.
do	Payment of loan.	ditto.	Shand.	I. Imura.
Feb., 1891	Implementing of contract.	Withdrawn.	More.	R. Tokuda.
do	Fulfilment of bargain.	ditto.	Reiff.	T. Nishikawa.
Mar., 1891	Recovery of silk.	In favour of Plaintiff.	Vivanti Bros.	Inouye Nobu.
do	Repayment of monthly installment.	Withdrawn.	Robinson.	S. Ono.
April, 1891	Damages for goods ordered.	In favour of Plaintiff.	Reynell.	F. Shimoyama.
do	Payment of cheques.	ditto.	Reiff.	Y. Uyeno.
May, 1891	Payment of promissory notes.	Withdrawn.	Strachan.	...
do	Repayment of loan.	In favour of Plaintiff.	Yung Changhwa.	S. Takahashi.
do	Payment of promissory notes.	Withdrawn.	Kaulmann.	Y. Uyeno.
do	ditto.	ditto.	Platt.	I. Tachikawa & 2 others.
June, 1891	Damages.	In favour of Defendant.	Confirmed.	Confirmed.	Sale.	N. Tsunooka.
do	Payment of remainder of transaction money.	In favour of Plaintiff.	Sale.	S. Ono.
do	Protest against distraint.	Withdrawn.	S. Akiguchi.	Reiff.
do	Demand for rent.	Partially in favour of Plaintiff.	Austin.	K. Kobayashi.
July, 1891	Damages.	In favour of Defendant.	Confirmed.	Confirmed.	Montrie.	H. Kawase and 1 other.
do	Implementing of contract.	In favour of Plaintiff.	...	Confirmed.	Favre-Brandt.	I. Nishimura.
do	Repayment of loan.	Partially in favour of Plaintiff.	Kuoff.	I. Iwata.
Aug., 1891	ditto.	In favour of Plaintiff.	E. Whittall.	J. Hayashi.
do	ditto.	Withdrawn.	Coye.	J. Kageyama.
do	Recognition of creditor's claim.	In favour of Defendant.	...	Confirmed.	W. Denning.	H. Tanaka and another.
Sept., 1891	Payment of goods sold.	Compromise.	Kaufmann.	J. Fujino.
do	ditto.	In favour of Plaintiff.	Stanley.	S. Ito.
Oct., 1891	Repayment of security.	Withdrawn.	Quincey.	Apcar.
do	Recovery of goods held in trust.	ditto.	McShane.	T. Nagase and 8 others.
do	Repayment of loan.	Partially in favour of Plaintiff.	Confirmed.	Confirmed.	Teppin.	S. Yamaguchi.
do	Payment for house sold.	Withdrawn.	Curtis.	I. Kuramoto.
Nov., 1891	Payment for goods sold.	In favour of Plaintiff.	Reynell.	K. Miyamatsu.
Dec., 1891	Recovery of deposit.	Compromise.	Chang.	K. Yozawa.
Jan., 1892	Damages.	In favour of Defendant.	Confirmed.	Confirmed.	Groom.	Governor of Kawagawa.
do	Recovery of property.	In favour of Plaintiff.	Gilien.	Kayama Kimi.
Feb., 1892	Recovery of pledges.	ditto.	Confirmed.	Confirmed.	Ricoli.	K. Kadokura.
Mar., 1892	Acceptance of rails and payment of price.	Withdrawn.	Mollendorf.	Y. Sugihara.
do	Payment for land sold.	In favour of Defendant.	Deveze.	T. Fukushima.
April, 1892	Fulfilment of contract.	Withdrawn.	Favre-Brandt.	I. Nishimura.
June, 1892	Payment of cheque.	In favour of Plaintiff.	Kingdon Lamb.	U. Kurozawa.
July, 1892	Payment of loan.	Withdrawn.	Middleton.	Y. Muramatsu.
do	Payment for goods sold.	ditto.	Luccan.	Apcar.
Nov., 1892	Payment of loan.	In favour of Plaintiff.	Confirmed.	Withdrawn.	Bremner.	Apcar.
Dec., 1892	Payment of rent.	ditto.	Kidoley.	Apcar.
Jan., 1893	Damages.	Withdrawn.	Hartley.	Chief of Yokohama Customs.
do	Fulfilment of contract.	In favour of Defendant.	Partially rejected.	...	Kwang Waitai.	K. Iizuka.
do	Payment for goods sold.	ditto.	Graust.	Y. Shindo.
Feb., 1893	Protest against distraint.	ditto.	Nonsuited.	...	Bremner.	Kosaka.
do	ditto.	ditto.	Aikawa.
do	Payment of wages.	ditto.	Lewis.	S. Kobayashi.
do	Recovery of child.	Partially in favour of Plaintiff.	Chang Yutsz.	Konine Roku.
do	Recovery of deposit.	ditto.	Caralit.	G. Kawakami.
do	Damages.	In favour of Plaintiff.	Booth.	S. Kawaguchi.
Mar., 1893	Protest against distraint.	ditto.	T. Masunaga.	Brennan.
do	Damages.	ditto.	Bing.	Y. Fukuzawa.
April, 1893	Payment for goods sold.	In favour of Defendant.	Fan Ztszan.	T. Haruyama.
July, 1893	Implementing of contract.	ditto.	Burnside.	K. Inouye.
do	ditto.	ditto.	I. Shimizu.
do	Payment for goods sold.	Withdrawn.	Camperdon.	S. Suzuki.
Sept., 1893	Payment of wages.	In favour of Defendant.	Confirmed.	Confirmed.	Lewis.	K. Suda.
Oct., 1893	Implementing of contract.	In favour of Plaintiff.	Dinsdale.	Y. Murata.
Nov., 1893	Damages.	Partially in favour of Plaintiff.	Singleton.	S. Yokonizo.
do	Payment for goods sold.	In favour of Plaintiff.	Pang-Tsusan.	M. Nikaido.
do	Recovery of child.	In favour of Defendant.	Ching ting.	Konuma Toyo.
Dec., 1893	Implementing of contract.	Withdrawn.	Carl Rohde.	Y. Higashiro.
April, 1894	Payment for goods sold.	In favour of Defendant.	Wang-i-Hwui.	I. Yamashiro.
do	Payment of arrears.	In favour of Plaintiff.	Y. Yuasa.

N.B.—It is to be noted that where no entry occurs under the heading of "Result in Appeal Court," or "Result in Court of Cassation," the case was not carried to either of those tribunals.

ASIATIC SOCIETY OF JAPAN.

A general meeting of the Asiatic Society was held on Wednesday, December 9th, at 4 p.m., in the Parish Building, 54, Tsukiji, Tokyo.

The President, Sir Ernest M. Satow, occupied the chair. As this meeting was the regular annual meeting for the election of officers and the presentation of reports from the Council to the members, the preliminary business occupied the first attention of the Society. After the minutes of the preceding meeting were read and approved, the Chairman called upon the Secretary to read the annual report submitted by the Council. The Secretary read the following report:—

"There is nothing of special importance to record in the annual report of the present session of the Asiatic Society. There is neither extraordinary progress, or any striking failure to note. In point of membership the Society has gained thirteen ordinary members and three life members. An old and esteemed member, Mr. J. J. Enslie, H.B.M. Consul at Kobe, died last June. One member returning to America has resigned.

"The average number of contributions have been made to the Transactions of the Society. In all, five papers were read and will soon be printed in a new volume of the Society's Transactions. One lecture was given to the members in March.

"Considerable progress has been made, in spite of many difficulties in the work of arranging and classifying the library of the Society. The precise number of Transactions in stock is known and the work of cataloguing the books is progressing steadily. It will not be long before the library is in working order. The Librarian reports a total number of 10,187 copies of the Transactions in stock, besides 1,682 copies of the Index.

"The finances of the Society, while showing no increase, at the same time are not running backward. The Treasurer's account shows a final balance of yen 2,144.645 for the present year.

"As several papers of interest are promised for the coming year, there is good reason for believing that the work of the Society will show no falling off either in the number or character of its publications."

After this report was adopted the election of officers and a new Council for the coming year was held. The outgoing Council submitted a list of names for election, which was adopted by the members. The names are as follows:—

President—Sir Ernest M. Satow, K.C.M.G.
Vice-Presidents—Rev. D. C. Greene, D.D., and James Troup, Esq.

Corresponding Secretary—Garrett Drovers, Esq.

Recording Secretaries—Garrett Drovers, Esq. (Tokyo), and W. J. S. Shand, Esq. (Yokohama).

Treasurer—J. McD. Gardiner, Esq.

Librarian—E. W. Clement, Esq.

Councillors—Dr. E. Divers, F.R.S., B. H. Chamberlain, Esq., W. B. Mason, Esq., R. Masujima, Esq., Clay MacCauley, Esq., M. Michel Revon, J. H. Gubbins, Esq., Rev. T. S. Tyng, Rev. W. J. White, and Rev. A. Lloyd.

This completed the business of the annual meeting. The President then called upon the Rev. Arthur Lloyd for his paper on Nasu-no-Yumoto.

The paper was a description of the village of Nasu-no-Yumoto, on the borders of Shimotsuke and Aizu. The hot-springs were discovered about 630 A.D. during the reign of Jomei Tenno, the 34th Emperor, by a hunter who tracked a wounded stag to its lair. The volcano above the village became active in 1398; then followed a long period of quiescence, and another eruption in 1846, since which time it has always been active; thought not dangerously so. Amongst other events of interest connected with the village, the reader of the paper referred to a great landslide which occurred in 1858, and a battle between the Royalist and Tokugawa troops in 1868.

Referring to the system of taxation, the paper

continued:—Perched up high on the mountain side, surrounded by woods and rocks and far-stretching moorland, the community which clustered around the springs of Mount Nasu was possessed of no property upon which a tax could be levied, except its hot water. I have been able to find no traces of any system of direct taxation prior to the establishment of the feudal régime of the Tokugawas. If there were any taxes levied on the villagers, they must have been very slight; for during the Tokugawa régime the whole village, according to information supplied by the Komatsuya, only paid one *bu* (25 cents) per annum to the feudal lord. Even this small sum seems to have been collected with difficulty, for there was a discount of 24 *mon* (say 2½ cents) made for prompt payment. There were no payments of taxes made in kind, for there was apparently nothing with which to pay such taxes. But in lieu of taxes, the lord claimed as his own all the money paid by the visitors for the use of the hot baths, and officials were regularly sent to inspect the hotel accounts and collect the bath dues."

With regard to the charges made by the hotels, the paper continued:—"The Nasu hotels do not seem to have undertaken to cater for their guests. The visitors, who, then even more than now, came from neighbouring districts, brought with them their own rice, *shoyu*, *miso*, &c., and bought their vegetables and eggs from the villagers; while the hotel made a small charge for rooms and *futon*, for cooking utensils and lamps. . . . for a sum varying from 320 to 420 *mon* a month, that is to say, a little more than 1 *bu* and a half, a visitor could meet all his hotel charges. The cost of food would, of course, have to be added."

The latter part of the paper was taken up with a description of some of the local customs connected with the village. These are the prohibition of looms in the village, owing either to the proximity of the volcano which made it advisable to keep no heavy articles of furniture in the houses, or else to the sacredness of the local shrine; the former prohibition against confinements taking place in the village itself; and the custom of not keeping fowls, in memory of a disaster which in former times overwhelmed the family of the feudal lord. This family (*Sutō-gou-no-Kami*) became involved in war with Yoritomo, who shut them up in their castle. After a long siege the officer commanding Yoritomo's forces succeeded in destroying the castle by driving into it a number of domestic fowls with ignited straws tied to their tails.

The President, in behalf of the members, expressed his thanks to Mr. Lloyd for the paper. He pointed out that the battle mentioned in the paper had taken place not in 1867 but in 1868, as those who were in Japan at that time could well remember. One of the chief points of interest in Nasuno he related was the ghost-stone or death-stone, which, however since the Meiji era seemed to have lost its efficacy.

Mr. Mason made further interesting remarks about this stone. Three years ago, he said, the stone still possessed certain fatal properties according to the opinion of the tea-house keeper of the place.

A general discussion arose as to ancient and modern charges made at tea-houses. The prices mentioned in the paper seemed absurdly low according to modern standards. Mr. Tyng and Mr. Doonan gave instances of how very low certain charges for lodging and food at a tea-house might be, and again how sometimes foreigners might be overcharged. It was pointed out that these instances were not to be depended on for purposes of comparison, since they omitted the *chadai*, which was often, if not generally in certain cases larger than the charge itself. It was remarked that Japanese officials commonly paid a *chadai* of a dollar for a night's stay, while very wealthy men or Ministers of State were often presented with no account at all, but paid as they thought proper.

Some further discussion as to the meaning of

the watchmen who go about at night, especially in the vicinity of tea-houses, arose, after which the President, again thanking the reader of the paper, called upon the Secretary to read certain changes which the Council wished to introduce into the Constitution of the Society.

The Secretary stated that the Council proposed the following alterations:—

Constitution, Art. VI., par. 1, 2nd sentence: Omit words "or a life composition of sixteen dollars gold or three guineas." In place of par. 3, substitute the following paragraph:—

Ordinary members resident in Japan may become life members:—

- On election by paying the entrance fee and the sum of fifty silver yen (dollars);
- At any time afterwards within a period of twenty years by paying the sum of fifty silver yen (dollars), less yen 2.50 for each year of membership;
- After the expiration of twenty years on application to the Treasurer without further payment.

Ordinary members not resident in Japan may become life members:—

- On election by paying the entrance fee and the sum of thirty silver yen (dollars);
- At any time afterwards within a period of twenty years by paying the sum of thirty yen (dollars), less yen 1.50 for each year of membership;
- After the expiration of twenty years on application to the Treasurer without further payment.

Insert after Par. 3 the following additional paragraph:—

"Members hitherto resident in Japan who leave it with the intention of residing permanently abroad shall for the purpose of their subsequent subscriptions, or life-membership, be regarded as members not resident in Japan, provided the Treasurer is notified of their change of residence."

As, according to the Constitution, all amendments or proposed changes to the Constitution must lie over for one meeting, the Secretary gave notice that these alterations would be introduced at the next general meeting.

The President declared the meeting adjourned at 5.30.

REVIEW.

The A. Y. Z. Telegram Code. By Geo. Ager, LL.D. It is an exceedingly difficult matter to form a just estimate of the relative merits of two telegram codes. Each is a dictionary in itself, but there are no groups of phrases universally acknowledged as possessing a title to appear in any code. The experiences of different men in different lines of business, or even in the same line, will necessarily vary as to the usefulness of any selection of sentences. We have before us a new Code entitled the "A.Y.Z." and our task is to discover whether it so far excels the "A.B.C." Code, hitherto largely employed, as to justify its substitution for the latter. So far as the system is concerned, the two codes are virtually the same. The original phrases and the corresponding code words are arranged alphabetically. But the "A.Y.Z." here offers an improvement over its rival, namely, that whereas in the latter the subjects—i.e. the original phrases—are not disposed according to any logical system, in the former they are uniformly divided into interrogatives, affirmative replies, and negative replies. Greater facility of reference is certainly attained by that method, for, as Dr. Ager justly says:—"Of the errors that creep in, and the great inconvenience of employing a code that is merely a miscellaneous medley of phrases on each subject, questions and answers, affirmatives and negatives, being mixed up in glorious confusion, I have heard much—such mistakes as sending an affirmative for a negative, or passing over a

phrase in the code in the hurry of making up a telegram." Coming to the question of comprehensiveness, we have the arithmetical fact that whereas the "A.B.C. Code" has only 24,600 phrases and numbers, the "A.Y.Z." has nearly 30,000. It does not follow, however, that in every case the latter is of wider scope than the former. Opening the two at random, we find that the "A.Y.Z." has only 7 phrases under "Diver" against 16 in the "A.B.C." Again, while each contains to phrases under "Dispute," the "A.Y.Z." gives the phrases "A dispute has arisen between," "Settle the dispute at any cost," "Don't wait to settle dispute," "Let there be no dispute," and "There is no dispute," none of which appear in the "A.B.C." *Per contra* the "A.B.C." has, and the "A.Y.Z." has not, the phrases, "In event of dispute," "In event of dispute, to be referred to two competent persons," "Shall vessel wait until dispute is settled," "Dispute is now settled," and "Dispute shall be settled before vessel leaves." It must not be assumed, however, that these phrases omitted from the "A.Y.Z." under the heading of "Dispute" can not be coded with sufficient accuracy by recourse to another heading. Thus, under the heading "Settled," we find "Has been satisfactorily settled," which will serve well enough for "Dispute is now settled," and so forth. Sometimes the difference in the number of phrases is very marked. For example, under "Document" the "A.B.C. Code" has only 29 phrases against 78 in the "A.Y.Z." Further, the cursory examination that we have been able to make seems to indicate that there is less repetition in Dr. Ager's Code than in Mr. Clauson-Thue's. For example, take the group of phrases that we have just been considering. In the "A.B.C. Code," we have "Singularly" for "It is settled," "Dissidence" for "Dispute is now settled," and "Sinister" for "The matter has been settled," which three phrases are virtually interchangeable. Nothing of the kind, so far as we can see, occurs in the "A.Y.Z.," and we are therefore constrained to conclude that the difference between the latter's thirty thousand phrases and the former's twenty-five thousand is more significant than its mere arithmetical expression would imply. After all, the 4th edition of the "A.B.C. Code" dates from 1883, whereas the "A.Y.Z." was compiled in 1895. Twelve years' experience, especially in the case of an author already so distinguished in this special field as Mr. Ager is, could scarcely fail to be perceptible in the new cryptogram.

AUSTRALIA AND JAPAN.

By JOHN PLUMMER, M.J.S.

Sydney, November 5th.

The *Yamashiro Maru*, the pioneer steamer of the Nippon Yusen Kaisha line, has just arrived at Sydney several hours in advance of her appointed time, having made the trip from Moreton Bay with remarkable expedition. Captain J. Jones, who is in charge of the steamer, reports that she left Yokohama on the 3rd of October, and proceeded to Hongkong via Kobe and Nagasaki. At Hongkong a small quantity of additional cargo was shipped, and the vessel resumed her voyage on the 17th. After a splendid passage, Thursday Island was reached on the 27th. On her way down the coast, the steamer called in at Townsville, for which place a portion of her cargo was manifested. To Sandy Cape most favourable weather conditions prevailed, but thence to arrival in Moreton Bay heavy south-east seas were encountered. From Moreton Bay to Sydney the weather was excellent, enabling a quick run to be effected. In Moreton Bay, Mr. J. T. Thompson, the company's representative in Sydney, who had travelled overland to Brisbane, joined the vessel, returning in her to Port Jackson. He has an office in the building occupied by Messrs. Burns, Philip, and Co., and is in every way eminently qualified for the position occupied by him. He has been for about 23 years connected with the Australian Steam Navigation Company, and bears a high reputation in the colonial shipping and mercantile world.

The New South Wales Government have not yet succeeded in passing the Alien Restriction Bill, but an effort will be made to secure its passage through the Legislative Council before the session closes. Meanwhile, its provisions are giving rise to considerable discussion, especially in connection with the opening of first steam communication between Japan and Australia. Recently a meeting in favour of the Bill was held in one of the Sydney suburbs, which Mr. McMillan, M.P., ex-Colonial Treasurer, who is the parliamentary representative for the districts, was invited to attend. In replying to the invitation Mr. McMillan wrote:—

"Without expressing any opinion on the question,

I don't see what purpose can be gained by the meeting, on what you call the anti-Asiatic question, seeing that a bill, which I presume fully embodies the views of yourself and friends, has been passed through the Legislative Assembly; as regards its treatment in the Legislative Council, it will be very premature and very improper to take any action in anticipation of proceedings in that House. I fear there would be very considerable divergence of views between your friends and myself under any circumstances. The question is too large to be considered in a letter. I must decline to attend the meeting." In the absence of Mr. McMillan the meeting adopted the following resolution,—"That this meeting views with alarm the rapid increase of Asiatics throughout the country, and pledges itself to support the league in its endeavours to eradicate the evil from our midst." No other meetings of the same character have, however, been held.

So far the tone of the letters appearing in the Sydney papers is opposed to the proposed legislation, at any rate so far as Japan is concerned. Thus one correspondent, a well known Sydney man, writes:—"As regards the policy of the bill, I look upon it as one calculated to do incalculable mischief to the colony. Here we have a huge territory practically unoccupied and containing in the whole continent about five millions, but capable of sustaining 500 millions, and, like the dog in the manger, we would shut out others from utilizing land which is useless to us, though the trade and revenue they would bring to our railways and ports would be of immense value to the country. The Japanese, a most progressive and highly cultured nation, with 40 millions of inhabitants, offer to trade with us, and would inevitably become a large consumer of our products; a country with which Great Britain has entered into commercial relations, and invited us to do the same, and our answer is a bill to prevent the Japanese coming here. What I should like to know is, whether Australians think themselves any better than the Japanese, for they certainly are not as far advanced in the arts of peace, or of war, though the Japanese are far behind the Australians in self-esteem and braggadocio." This is plain-speaking, but, after some more language of the same kind, the writer says:—"May I ask what right we have, a handful of Europeans, to talk of excluding any body, seeing that our title to Australia was only acquired by shooting down a few harmless natives. This vast territory was made by God for God's creatures, and as long as peaceful and inoffensive people come, they have no right to be excluded. And now for a word of warning. The Australian threat, that if the parent country will not allow the Alien Restriction Bill to become law they will cut the painter, is all bombast, and withal senseless bombast, for were it not for the ægis of Great Britain the Japanese would not stay to inquire if they might come here, but would probably take possession of Australia for themselves. How far it is desirable to count the enmity of the people of India, Syria, Japan, Persia, Afghanistan, and China is worth considering, and if these countries broke off their commercial relations with Australia, and refused to allow Australians to put their foot on their soil, we should then find out to our cost that 'what is sauce for the goose is sauce for the gander.'"

Another correspondent, who also gives his name, says that a strong feature of the anti-alien legislation, so far as the New South Wales parliament is concerned, "is the unanimity on the matter between the free-traders and protectionists. The one member who had the courage to question the wisdom of the measure was well howled at for his temerity. With the yellow and the black between them the punting for a time will be at the same object instead of each other—a object, doubtless, that will soon be on the statute books, but that is no reason why it should not be placed on record that solid objections may be advanced against the passage of a bill that the future may discover to us to have been practically abortive. The Premier and all who followed him agreed as to its vast importance to the future of these colonies, but how significantly important none save Mr. McMillan seemed to care to point out even if they knew. It does not seem to be considered that the dreaded conflict might be provoked by a drastic measure excluding them from our shores. The bill proposes to restrict the movements of 400,000,000 Chinese, nearly 300,000,000 of Indians, about 40,000,000 of Japanese, and natives of the Pacific Islands, aggregating a stupendous number of people, who are to be dealt with by a population, spread over the whole Australasian group, numbering less than 5,000,000. A big order, but given rather late in the day, and it might be so considered. For prior to the middle of the present century, Europe had a civilisation all its own, and 'Anglo-Saxon' was a name to conjure with; it

is no longer so to the same extent, and the reason should be obvious save only to those either too ignorant or too blind to see. Western civilisation is no longer a monopoly, as by the enterprise of Anglo-Saxon races it has penetrated to the very hearts of the continents of Asia and Africa. The native races have acquired a taste for it, and the taste is rapidly extending. It is significant of coloured races that while we do not conform to their habits and customs, they very readily do to ours. The sons of the well-to-do are trained in the educational establishments of Europe, while they travel and acquire all the knowledge that is gathered by intelligent observation, for which they have gone with a set purpose; nor is that all, in their own countries they have availed themselves of the service of highly-skilled engineers, scientific men, and clever artificers to instruct their own people in all the skilled trades and callings at one time peculiar to the Western part of the world. The result of all this is witnessed in railways and manufactories with steam power, all after the European pattern. This new departure has been followed up by perfect warfare equipment and European methods of use. All the world knows that China and Japan have spent millions of money, and are still spending it, on first-class fighting ships. At present these are mostly officered by European men, who are gradually being replaced by native trained officers. The question that naturally arises in connection with the Coloured Races Restriction Bill is this: Will these despised people, having advanced so far, now remain stationary? The common-sense answer is, No! they certainly will not. The desire to go further will grow with what it feeds on. If any considerable number of people think otherwise, then it does not say much for their high understanding. Turning now to the mercantile marine. Your readers know that at present the ocean-carrying trade is monopolised by Europe and America—the great bulk is British. Here it is not unwise to inquire how soon Chinese and Japanese merchant steamers, officered and manned by native crews, may desire to discharge and take in cargo at Circular Quay. What would be our position then? It is manifest that, Sydney being a free-trade port, they would have a perfect right to do so and to compete with any "ocean tramp;" but under the proposed bill neither officers nor crew would be permitted to step on to the wharf without first paying the poll tax. Would a great Power like Japan submit for long to that sort of thing without retaliating in kind? The Imperial Government in such a case could afford no assistance. The time will come when the policy of "Take we will, but give we won't," will require to be modified, but, apart from these contradictions, the bill in its present form is a mistake, and has only had its birth out of panic."

Yet another correspondent, "Commerce," writes:—"Whilst I admit that the necessity may arise for special measures to prevent Australia from becoming overrun by the coloured hordes of Asia and elsewhere, I contend that the absolute and indiscriminate exclusion of Asiatics from the colony at this stage is not only unwarranted by the conditions by which we now find ourselves surrounded, but may involve us in serious complications, injurious alike to our national status and to our commerce. The Asiatic coloured races may be a mean lot—though I hold that they are far from meriting any such description—but they are not likely to submit to being so branded by us, and shut out from our midst as intolerable, without showing their resentment against us and the stock whence we sprung, in every possible way. It may further be taken for granted that any national prejudice thus created will be fostered by our trade rivals, and it does not require the exercise of any high statesmanlike qualities to foresee what immense injury must result, not only to ourselves, but to the mother country, with which, commercially at any rate, we have so much in common."

The case in point which most appeals to me is that of Japan. That sturdy and enterprising people, lying not too far to the north of us to prevent us from competing successfully for a share of their patronage, have shown themselves desirous of cultivating with us that interchange of products which is the very essence of commerce, and they are actually providing us with the regular shipping communication necessary to carry our products to their own front door. They have sent their ships to our port (the freest in the world, we are told), and have spent their money in the hundred and one ways that go to make up the importance and wealth of a great seaport, and in the natural course of things would doubtless do more and more as time went on. It is true that their motives are not disinterested. They have their own ends to serve, and legitimate ones too; but if it is not also distinctly to our advantage to encourage such enterprise, and thus

to increase the facilities for trade, and open up markets for our exports, then what becomes of the benefits of that glorious freetrade which some fiscal fanatics tell us is the panacea for all ills? I contend, Sir, that we cannot afford to ignore the friendly advances of such a people as the Japanese. Even less should we wantonly excite their national enmity; and those whose first concern should be to find the best and nearest markets for our wool and other staple products, should pause before they disdainfully thrust aside the hand held out to them, and consider whether the contemptuous indifference of to-day may not be the subject of unavailing regret in the near future."

Although these utterances fairly represent the views of the educated and intelligent classes in Australia, they will have little or no influence on public opinion generally, which is in favour of the Bill, so far as the Chinese residents of British India are concerned. There is no unfavourable feeling against the Japanese, those resident in Australia being much esteemed and respected by all who know them. The leading colonial papers are somewhat dubious respecting the policy of the new legislation. Thus the *Rockhampton (Queensland) Morning Bulletin* says of the New South Wales Bill:—"It is a far-reaching measure, the most momentous measure ever presented to an Australian Parliament according to Mr. Reid. It practically shuts the door of this continent in the face of the vast majority of the people of this earth. Mr. Reid's case was simply that this continent was for the Anglo-Saxon race, or the Celtic-Saxon race, as our own Attorney-General has expressed a preference to call it. He argued that it was the supreme duty of the Governments and Parliaments of this colony, that the race which now inhabits it should not only remain supreme here, but should be continued pure. He would have no intermingling of any kind; neither does he wish to see colonies of people of coloured blood established here and there throughout the continent, even if they are in insignificant numbers. It is infinitely easier, in his opinion, to prevent the incursion of these races than to expel them once they are here. Of that there can be no doubt. With all her vast power and resources the United States is unequal to the gigantic task of expelling the eight millions of negroes who now live within her territories. The great danger before the United States arises from this race problem. It is now evident that the war did not settle the negro question. Indeed, it may be said to have accentuated it. It settled slavery, and now that the negroes are free they are increasing at a rate far beyond the increase of the slavery days. In four states they are already a majority of the population, and in other four they will soon outnumber the whites. At present it is only by deliberate violation of the law that they are kept from exercising full authority in the first four states, and a very wide authority in the other four. But this cannot continue for ever. Some day, when the negroes form the majority, in not only four but in eight or ten states, there will come a demand for administration of the law. When that happens the negro problem will confront the United States in a far more terrible form than was ever presented by the slavery question. The representatives of the various Governments, who met in Sydney, believed that it was wise to take time by the forelock. When the meagre number of coloured people in Australia at present is compared with the tremendous weapon of this proposed legislation, the old charge of breaking a butterfly on a wheel may be heard. But to that the representatives would reply that they are legislating not so much for the present as for the future. The present measure brings up the ticklish question of curtailing the rights of British citizenship. It excludes all coloured races, consequently it excludes about 200 millions of the Queen's subjects from a portion of the Queen's dominions. This objection was urged in the New South Wales Assembly, but Mr. Reid pointed out that it was much more formidable in appearance than in reality. The Dominion of Canada passed an Act prohibiting all Chinese, whether subjects of the Queen or not, from entering Canada, and the Imperial Government did not demur from it. Then the Chinese Restriction Act of South Australia applies to subjects of the Queen as well as to aliens, and it was not even reserved for the Royal Assent. With these precedents, Mr. Reid did not anticipate any difficulty with the Imperial Government. But there was force in the contention of Mr. McMillan, that it was because Australia formed part of the British Empire that she could thus treat the coloured races of the earth. If she stood alone it would be an exceedingly hazardous thing to pass such an Act against powers like Japan or China, not to mention the protest which might then be made by the British Government itself on behalf of its Indian subject."

Curiously enough, while the Bill is thus dis-

cussed, attention is being directed to various industries which are capable of successful introduction into Australia if the employment of Japanese labour be permitted. Thus, in the New South Wales Legislative Assembly, the other evening, Mr. Clarke, who represents the northern districts of the colony, asked the Minister for Mines and Agriculture to offer a prize for the best specimen of cotton grown in New South Wales. A sample of cotton from the Macleay district was recently sent to Japan through Mr. F. Kanematsu. Mr. Clarke has received a letter from the head office of the firm in Kobe, Japan, dated September 1. In this letter it is stated that the quality is very good and superior to that obtained from countries accustomed to grow cotton. It is further pointed out that the cotton-spinning industry in Japan has progressed very greatly during the last few years, and that at present there are about one million spindles spinning a large quantity of cotton yarn, most of which is sold in Japan, but some 60,000 bales are exported every year. It is therefore, considered that it would be beneficial to Australia. A hope is expressed that the Japanese labourers have had much experience in cotton-growing, and are well known as excellent labourers. Hence it is considered that it would be economical to employ Japanese labourers in Australia in order to increase the production. This latter point is emphasised.

LETTER FROM FORMOSA.

Taipeifu, Formosa, December 3rd, 1896.

The plague still continues to claim occasional victims. The Sanitary Commission is at work more vigorously than ever, and it is almost safe to say that there is scarcely a spot left untouched. To such an extreme are precautions taken that, a few days since, I observed several sanitary coolies spreading lime over every spot that appeared even the least damp, in a stone-paved street which could scarcely be called dirty. Those that have always considered cleanliness a safeguard against the plague, will be disappointed to hear that it is not in the dirty places that the disease breaks out. Here in Twatulia, where foreigners live, there is in the Chinese part of the town, most certainly, sufficient filth to support innumerable bacilli in ease and luxuriance; yet the only cases that have appeared have been in houses not only clean in themselves, but standing on a paved street which for cleanliness will compare favourably with those at home.

The Chinese, as was to be expected, are complaining. They are unwilling not only to clean up for themselves, but also to allow any one else to perform the task for them. The Japanese hospital, to which during the first few days of the outbreak, they were taken for treatment, appeared to them a most dangerous institution, and no sacrifice was considered too great to save their sick relatives from falling into the clutches of the Japanese "medicine maker."

As an example of how atrocity tales are fabricated, the following blood-curdling account was freely believed by the Chinese masses. When Chinese were found weakened by sickness so that they could not escape, they were carried to the "medicine house," there stripped of all clothing, and a big white cloth saturated with the most deadly of poisons was wrapped about them, causing sure death. The hearts of the dead were then cut out to make medicine for the Japanese, fifty being required to give the strength essential for efficacy. Soon after the arrival of the Governor-General, a special hospital for the Chinese was established by his orders and placed in charge of a Japanese physician with a trained Chinese as assistant, and with Chinese to act as attendants, but of course under the control of skilled Japanese. Since the opening of this institution, Chinese have shown less opposition, and in several cases have voluntarily brought the plague-stricken for treatment. The measure has also had the effect, no less valuable, of discrediting the tales about murderously inclined Japanese doctors.

The Governor-General has shown further consideration for the sufferers by visiting the hospital, and speaking a kind word to all, which act is said to have produced a most cheering effect on the patients. That His Excellency Baron Nogi is obtaining the love and respect of all classes with whom he comes in contact, is very evident, and it is to be hoped that politics will not interfere with his tenure of the office of Governor-General for such a length of time as will suffice to place Formosan affairs on a comparatively firm and prosperous basis, a task to which his ability is believed to be quite equal.

The cases of plague from November 22nd up until the 2nd instant were as follow;—

Month, Day.	Japan- Chi-		Deaths.	
	esc.	nese.	Japan- Chi-	Totals.
November 22.....	1.....	1.....	2.....	3.....
November 23.....	1.....	1.....	2.....	2.....
November 24.....	1.....	1.....	1.....	1.....
November 25.....	1.....	1.....	1.....	1.....
November 26.....	1.....	1.....	1.....	1.....
November 27.....	1.....	1.....	1.....	1.....
November 28.....	1.....	1.....	1.....	1.....
November 29.....	1.....	1.....	1.....	1.....
November 30.....	1.....	1.....	1.....	1.....
December 1.....	1.....	1.....	1.....	1.....

According to weeks, there were, during the first week, 54 cases; the second 18; the third 21; fourth 15, and the fifth 5. Considering this marked decrease, it seems as though we may expect to see the plague completely stamped out in a few days.

It may be added that, altogether there have been sixteen cases among the Chinese and twelve deaths, while among the Japanese there have been ninety-six cases and forty-eight deaths. The difference in the rate of mortality is accounted for by the great care the Chinese took in hiding their patients, so that the latter were generally past hope before receiving treatment.

It has been generally thought that the present outbreak and the few cases in April at Anping and Takow, were the first appearance of plague in Formosa. But the Chinese in Taipei now say that for several years a similar disease has broken out in North Formosa. It has been known among them as the sickness "when the rats die." That this rat-dying disease was true plague cannot, of course, be ascertained, but mention is made by foreigners of plague breaking out formerly in Formosa.

In consequence of the host of workers employed by the Sanitary Bureau, the city of Taipei, a small place with a population of only 2,580, was soon cleaned and disinfected in a thorough manner, but new cases still continue to appear, which fact suggests that some special source of disease exists. Possibly the explanation is to be found in the great amount of earth turning that has been in progress in and about the city. Immense amounts of fresh earth have been thrown up from a canal that is partially completed, leading from the river up to and along one side of the city wall. In this context it may be noted that during the digging of a railway cutting of considerable size near Kelung, an epidemic broke out among the labourers so severe that it was necessary to abandon the work in that particular district, and to carry the road to its objective point by a detour. As the nature of the disease was not specially investigated by the foreigners at the time, there is no certainty that it was not the plague. Against such a hypothesis, however, must be set the fact that the Japanese, in rebuilding the same line in the same district, made new and greater excavations without suffering from any disease.

It is interesting here to recall the words of Professor Burton after his inspection of the north. Speaking of Taipei city and surroundings he says:—"Sewerage, with the exception of a few stagnant or nearly stagnant canals, does not exist, and the foreshore of the river is in a positively pestilential condition on account of the emptying of garbage upon it!" and again regarding Hoho:—"Much of the usual foul matter is all over the town! This must be abolished and be prevented from accumulating again! The public latrines are without exception the most foul and filthy I have ever seen! They must be reformed. The most part of the whole plain is in a dreadful state, and of the Chinese town near the river, up stream, (Banka) reformation is impossible, the place ought to be destroyed!" The canal now under construction, as mentioned above, is a part of Professor Burton's plan for sewerage in Taipei.

The outbreak of plague is unfortunate just at this period, and will no doubt have the effect of deterring the better class of Japanese from emigrating to the island.

I think the Government itself is somewhat to blame for the fact that so many of its employes are among the afflicted. Proper living accommodation was not provided for those resident here. Surely the first and most essential work should have been the construction of suitable quarters, quarters built with due regard to health and comfort, and placed at the disposal of all government employes. In Formosa, especially Taipei and its suburbs, a man's only pleasure is to be sought at home. One step outside brings him into contact with the filthiest kind of Chinese life. Comfortable houses are absolutely essential for the Japanese, whereas at present they are installed in dark ill-ventilated Chinese huts with walls of mud, located in malodorous, disease-breeding crowded Chinese streets. Under such circumstances it is not strange that terrible sickness finds nourishment among them. The foreigners live in the second storeys of well

ventilated structures, and serious sickness is rare among them.

Mr. Arao, who established the Commercial School in Shanghai for Japanese, and who, after a few weeks in Formosa, met death by the plague, was engaged in a most worthy project here, the only aim of which was to foster a feeling of friendship between Japanese and Chinese in Formosa. His first work was the organization of a club. The affair would undoubtedly have proved a success but for his untimely death.—*N.-C. Daily News.*

MARINE COURT OF INQUIRY.

TEISHINSHO, TOKYO, DEC. 17TH, 1896.

THE STRANDING OF THE "HIMEJI MARU."

This morning an inquiry was held by command of the Minister of Communications, at the Marine Office of the Teishinsho, Tokyo, into the circumstances attending the stranding of the Nippon Yusen Kaisha steamer *Himeji Maru*, Captain Tittle, Commander, that took place on the Bombay Reef of the Paracels Islands, on the 1st November. The inquiry was held in accordance with the provisions of Section 10 of the Regulations for granting certificates to Masters, Mates and Engineers.

The Court was composed as follows:—Mr K. Morimoto, President; Messrs. N. Nagata and S. Ito, assessors; with Mr. J. M. James.

Captain Rennie Tittle, a British subject, cautioned, deposed—I hold a Japanese certificate of master of the first grade, No. 262. I was commander of the *Himeji Maru* and in charge at the time of the above said stranding. I left Yokohama on the 17th of October, bound for Kobe; we were ultimately bound for Europe, via usual ports. After leaving Yokohama we called at Kobe, Moji, and Hongkong. We left Hongkong about 1 p.m. on the 30th October, bound for the port of Singapore. After leaving Hongkong we steered various courses to Gap Rock, coming out by Green Island Pass. Gap Rock was brought abeam to port E.S.E., distance $1\frac{1}{2}$ miles—magnetic bearing. The patent-log was then strung and course set S. 8 degrees W., true, to take the *Himeji Maru* 30 miles East of the Bombay Shoal. The wind was E.N.E. of varying force from 2 to 5, with moderate to high N.E. swell. The weather was dull and overcast, with passing rain. At noon on Saturday, the 31st October, the course was altered to South, true, and between 8 p.m. and midnight of the same day the course was altered as per log-book, so as to take the *Himeji Maru* 50 miles east of Bombay Shoal. At midnight the course was again altered to S. and written orders were posted in the night order book that at 4 a.m. it should be again altered to S. 30° W.—that would be by standard compass. The error of this compass on S. 30° W. would be $1\frac{1}{2}$ Easterly, I think. At 4:35 a.m. on November the 1st, the *Himeji Maru* grounded on the coral of the Bombay Reef. The position of the grounding is four miles to the westward of the eastern end of the Bombay Shoal, and on the northern side, in lat. $16^{\circ} 6' N.$, long $112^{\circ} 34' E.$ The wind, weather, and sea remained as before, dull, cloudy, and overcast throughout.

Mr. James—Have you anything else to add to your oral report?—No, sir.

Then the next question is your letter to the President of the Nippon Yusen Kaisha, in which you give practically the same particulars as you have just given orally; do you accept that as a true report?—Yes.

Mr. James—You accept that as corroborative evidence—Yes, sir.

[Letter read—in identical terms almost to the statement just made.]

Witness, continuing—I got the distance from Gap Rock by four-point bearing.

Mr. James then asked witness to state the weather, force of wind, etc., when off Gap Rock.

Witness—May have I the log-book to refer to? Mr. James—Certainly; we do not expect you to remember all these things?—Thank you, sir.

Witness—Off Gap Rock the wind was E.S.E. force 2, cloudy; not overcast; blue sky and clouds. On October 31st at noon, the wind was N.N.E., and the force 5; rainy weather. At the time of stranding the wind was E. by S., force 5, dull weather, dark and overcast. I set a course S. 7° W., by compass (true course S. 8° W.), to clear the Reef by 30 miles. I did not, so far as I was aware of, experience any current while running on this course, but I had no observations. Up to noon on the 31st October, I made no allowance for current. The monsoon had set in; that is, the regular monsoon was blowing. I had the experience of two former voyages to go by in regard to the north-easterly drift of the monsoon; one voyage was made during the

N.E. monsoon, the other just at the change of the monsoon—in other words at the latter end of December, 1893, and in the early part of May, 1896. I also had the sailing directions of the China Sea Directory that advised me of the drift. I ascertained the ship's position at noon on the 31st October by dead reckoning, but made no allowance for wind and current at that time.

Mr. James—I notice you altered your courses frequently; why did you alter the course at noon on the 31st and at 8 p.m. on the 31st; why did you do this instead of taking one straight course more to the eastward?—The course was altered at noon on the 31st October to make allowance for the current, and in hope of getting a sight of the sun in the afternoon; but not getting the sun I altered it at 8 p.m. to steer 50 miles east of the Bombay Reef.

But the time was so short that you might have laid out a course for 100 miles eastward and it would have made no difference. You say you steered for the eastward of the Bombay shoal?—Yes.

But why did you do so? I have been up and down the China Seas a hundred times and never knew of any shipmaster taking such a course in the N.E. monsoon?—It is the track taken by the mail steamers, sir.

It is by taking such courses that these shoals have been lighted upon. The proper course is to keep the land of Hainan in sight and go down to Indo China?—The China Sea Directory advises ship-masters to steer 30 miles eastward of the Paracels Shoal.

Mr. James—I have never heard of such a course being taken in the N.E. monsoon; coming up in the S.W. monsoon, yes, because then you can clear the Maclesfield Bank and get soundings there?—There are places there of only five or six fathoms, and I should have been in an awkward position then.

What were your courses that day?—Not having had any observations I set the course at noon on the 31st October S.; at 8 p.m. it was altered to S. $\frac{1}{2}$ E.; at 9:30 p.m. to S. by E. $\frac{1}{2}$ E. At midnight it was set at S. 2° W. true.

Why did you not take the inward track, that is to the westward of the Paracels?—Because I took the track advised by the China Sea Directory.

Did you ever go that course before?—Yes, always.

When, in this monsoon?—In December 1893.

Where were you going then?—From Hongkong to Singapore.

Steamer?—Yes, the *Miike Maru*.

Did you experience much south-westerly drift then?—I have the record, and will read it—22 miles in 24 hours on the second day's run.

You had then a drift of about a mile an hour?—My experience is that there is no drift, no adverse current, for quite 200 miles after leaving Hongkong.

In a North-east monsoon you must allow a knot an hour?—That is your experience, sir, but I have not your experience to go by when I am navigating a ship. I have to go by the sailing directions and the advice of the China Sea Directory, and from all I can learn, I find that there is a varying current; sometimes it is non-existent.

What was the speed, the uniform speed, of the *Himeji Maru* during this time?—Ten knots by patent log.

That is from time of departure till the time of stranding?—Yes.

Witness, continuing—I have hitherto found that my patent-log has been generally correct; but I expected at this time, from my revolutions and the quarterly sea, that we were doing about $10\frac{1}{2}$ knots. It was an ordinary Cherub taffrail log. I worked the dead reckoning by the log, so in my calculations did not allow for the extra half-knot.

When you last altered your course S. 30° W. was that magnetic?—No, by compass—I expected it to make S. 32° W. true.

By calculation, what was your supposed distance from the eastern end of the Bombay Shoal then; you thought you had cleared the shoal and shaped your course accordingly?—Fifty-one miles due E. This position was assuming that we had had no south-westerly current whatever between Gap Rock and the supposed position. At 4 a.m. on the 31st, when the course was altered, I was not on the bridge. I was very unwell at the time, suffering from influenza, and I have the doctor's certificate who treated me for influenza while in Hongkong. I had been on the bridge till midnight, when thinking that I had got the ship into a safe place, I went below, and so did not get up when the course was not altered. I was not awake and the course was not reported to me. The chief officer changed the course at 4 a.m. without reporting to me, in accordance with the instructions written by me in the night order-book.

Were breakers not seen before striking?—Yes, just before the ship took the coral. They were

seen on the port bow—that was when the officer of the watch saw them, just before the ship struck.

That was the second officer?—No, the chief officer.

Did he report this to you at once, or attempt to stop the ship?—The helm was put hard-a-port and the engines were put full speed astern.

Those were the measures taken to avoid stranding?—Yes.

Any sails set at the time?—Yes, the fore and aft sails. The interval between putting helm hard-a-port, reversing the engines, and taking the coral was brief. The signal "full speed astern" was immediately followed by a slight shock.

What was the interval, a few minutes?—No, almost immediately.

Did you cast the lead at all?—Yes. The casts, directly she had struck, gave 4 fathoms just amidships; this was on the starboard side, just under the bridge. Soundings were taken several times during the day. The vessel took the reef in such a fashion that the bottom grazed the coral from the foremast aft, but with the bow hardly touching at all. There was no shock or concussion, the coral seeming to crumble away as the ship passed. She grazed the coral fair on both bilges. When the engines were stopped the apprentice officer came and called me. I was called after, or at the same time as, the ship struck. The engines kept going full speed astern up till 5:45 a.m., and a small boat was at once lowered to lay out a keedge. All hands had been called on deck at once. Day was just about breaking. A portion of the crew were employed in stowing sails, and the boat that was lowered took out a keedge and line from the starboard quarter—it was a 7 or 8 inch hawser. The depth of water into which the keedge was dropped I did not know at the time, but from soundings I obtained afterwards, I should say that it was from 5 to 6 fathoms. The keedge came home on heaving the hawser taut. The ship was quite steady on the reef then, but her stem was gradually inclined to swing round; there was no rolling or bumping.

How far was the ship then from the higher part of the reef, where the lagoon is?—A ship's length; it was visible at low water. The breakers were not very high the first day, no water coming on board. The ship made no water the first day. At daylight we swung out the life-boats and lowered the starboard life-boat. We swung out a spare bower anchor with a derrick, but as we attempted to get it into the boat a big roller came in and capsized the boat and her crew: these were subsequently picked up. After breakfast two life-boats were lowered on the port side and spars placed across them to carry the anchor out. All these operations were greatly hampered by the crew refusing to go into the boats; this was after the first life-boat had been capsized.

They actually refused to go?—Yes.

Did this stop operations?—No, I and the officers proceeded to get out the boats and anchor.

Capt. Tittle further said—What happened was this. The second officer had been hurt when the first life boat was capsized, so when the crew refused to lower the other boats the chief officer and myself, with the assistance of another officer, lowered the two port life-boats. Then we placed spars across them, on which to support the bower anchor. Then I got the small boat afloat to tow out the two life-boats, but there was not enough power in the boat to do this. I had by this time got some of the men into this boat, but they only pulled the boat under the ship's counter. Then a couple of rollers came along and capsized the two life-boats and the anchor was lost.

Mr. James—We will leave this, I think, till after lunch. The Court is adjourned till 1.30 o'clock.

Upon resuming,

Captain Tittle said—I did not succeed in running out the bower anchor owing to the men at first refusing to enter the boats and afterwards, when they did go down, they remained under the counter until the boats were overturned. Nothing could then be done. I had lost all the boats that could be used. I looked at the chart and then decided to send a boat—the life-boat—to Tourane Bay, on the mainland of Cochinchina. This I placed in charge of the second officer, instructing him to wire to the Company's agent in Hongkong, to ask for assistance. The boat arrived in safety, and on Tuesday, the 10th November, the German steamer *Siegfried* arrived; she had a salvage party on board. At the time of her arrival there was too much swell to allow of anything being done, and I asked the *Siegfried's* captain to come the following morning; there was too much sea to allow of the crew being taken off with safety. He stood off, as there was no place where he could anchor. There was no anchorage near us under the lee of the shore; no anchorage at all near the Bombay Shoal. The crew were taken off from Thursday morning, 12th November. We then had a smooth

sea, and at daylight the *Siegfried* sent her boats in to take the crew off: the transfer of the crew took from this time till 10 a.m. on the 13th November. We had a double crew, the *Himeji Maru's*, and a crew for a new ship building in England, and their transfer necessarily took some time. The *Siegfried* left at 10.30 on the 13th for Hongkong. The persons left on board now numbered seven—myself, second engineer, purser, chief steward, chief cook, one quartermaster, and a saloon-boy. I remained on board until the final abandonment of the ship. This took place on the 20th November at 3.30 p.m. I left in the *Siegfried* for Hongkong.

Mr. James—Now you said that the men refused to enter the boats and obey orders. Did they continue to refuse, from then on, to obey your lawful orders until they finally left the ship?—They did.

On what plea—was there any particular spokesman among them?—They refused after the first boat capsized, that was their plea.

They refused because it was dangerous, I suppose?—I do not know, they were all good swimmers. I don't suppose they cared to be ducked in the China Sea in cold weather?—They refused because one boat was capsized and the crew thrown into the water.

Was that crew picked up?—Yes.

Were they much exhausted?—No, not at all.

Did they refuse to do any duty on deck?—Yes, they refused to do any duty except just what they pleased: my orders were not carried out.

I want to know this, because it has an important bearing, and I want to bring them to their bearings later on?—They did not obey my orders, but simply did as they liked.

Was the life-boat's crew a volunteer crew, that which went to Tournay; or were they picked by yourself?—There was the Second Officer; two European steamer passengers who volunteered, and four Japanese whom I did not pick but whom I understood volunteered. There were seven men altogether.

It was a volunteer crew really?—Well, I told the Second Officer I wanted him to go, and he consented; I asked the two European passengers if they would go, and they consented, and then I said I wanted four Japanese, and they were forthcoming.

The Officers did not refuse duty, did they?—No.

What was the Purser doing all this time, did he assist you, or work against you?—He assisted by interpreting my orders.

Did he assist you in your difficulty or not?—He interpreted my orders.

Which were not obeyed?—Which were not obeyed.

Then he did not assist you?—He did not seem to have any control over the men.

But he pays the men?—Yes.

And he has authority over the men?—Not on the deck; he has charge of the steward's department, etc., and generally, as the senior Japanese officer on board, he has authority with the men. In this case he seemed to have no authority at all.

Neither, it seems, had you; they seemed to do what they liked?—Yes. The purser had no control.

They did as they liked?—Yes.

They listened to no one?—The purser's instructions to the men had no effect upon them; they listened to no one.

What was the condition of the ship when you left her?—There was water in all the holds, and in the engine-room stoke-hold. The water was as high inside as out, but it had free egress in the engine-room stoke hold alone. There was water in all compartments with the exception of the fore and aft peaks.

You had given up all hopes of saving the ship?—By the crew, yes.

The crew would not have saved the ship. I suppose you had given up all hopes of saving the ship when you left her?—Yes.

What were your reasons for thinking you were not effected by a current?—I allowed for a current by steering 50 miles east of the Shoal.

But you did not make any allowance for it on the first day?—No, sir. I was simply going by my experience in former voyages.

When you were in the *Miike Maru*, going down in December, 1893, do you remember the weather you had?—Yes. The wind was E.N.E., force 3, that was the first day. On the second it was N.E., force 3.

What current did you experience then, do you remember?—Yes, the first day's run of 173 miles, no current whatever. On the second day's run 255 miles, current S. 72° W., 22 miles.

Up to the time you left the bridge at midnight, on October 31st, how far, in your opinion, was the horizon visible?—I should certainly say, about two miles.

It is a very difficult thing to judge?—Yes, it is, sir. At times that night it might be less, during rain.

When you came on deck after the stranding, how far could you see?—The conditions of the weather, so far as I could judge, were just about the same as when I turned in at twelve; the horizon being about two miles distant.

Had you full confidence in the Chief Officer and Second Officer keeping a good watch?—Yes. I had only just joined the *Himeji Maru*, but from what I had seen of them they were both steady men, and I had full confidence in them. The usual men were on the look-out forward that night.

Were these men properly placed and relieved that night?—Yes.

Were they relieved at four, or was it just taking place when she struck?—They were relieved precisely at four o'clock.

How far did you consider, according to reckoning, that you had passed the Dido Shoal—did you see any breakers?—No, nothing was sighted.

No broken water was seen during the passage?—No, sir, none at all previous to the stranding.

Did you pass any vessels between Gap Rock and the time of stranding?—No, sir.

When were your compasses last adjusted?—The ship was last swung for deviation on 2nd June, 1896.

Who was the captain then?—Capt. K. Iwanaga.

Did you find anything wrong in the compasses coming down from Yokohama?—No, the deviation table worked out all right.

How often do they adjust compasses in the N.Y.K.—what is the regulation?—I do not know whether there is any special time; but about once a year, if the ship is employed on one special trade.

Had you any iron cargo on board, or anything likely to specially attract the compasses?—None.

You had copper on board, I think?—Yes.

How did you know?—By external appearance.

Are you sure it was copper?—Yes.

Where was it shipped?—In Yokohama.

You do not know who the shippers were, do you?—No, sir, I do not. It was stowed in the fore part of No. 4 hold.

On the night of your running down, was the smoke ahead of the ship?—The smoke would in no way have obstructed the view from the bridge.

The wind was on the quarter, then?—Yes, sir. On the port quarter.

You do not think, then, that although the sails were set and the wind on the port quarter, that the smoke would not prevent the officer of the watch from seeing the breakers before he did?—As far as I saw, up till midnight, the smoke did not obstruct the view in any way.

Mr. Nagaura—Considering, from your experience on the voyage from Hongkong to Singapore when in command of the *Miike Maru*, the *Himeji Maru* should not have drifted to the place where she stranded, whilst the force of the wind with the *Miike Maru* was 3, with a current of 22 knots on the second day, making a drift to the south-west, whilst with the *Himeji Maru* the wind was 5 with no current, how do you account for her drifting a distance of fifty miles?—By reason of an exceptional current.

Mr. James—These currents in the China Seas are not true currents, but are wind and wave drift?—Not always, sir, as I can prove by observations I have made. I have a report of a steamer also, which I could read.

You say an exceptional current, but you did not allow for it?—I did, by steering 50 miles off the Bombay Shoal. It may not appear in the working, but I did make the allowance by steering such a wide distance off the Shoal. The sailing directions go to show that this current is not a steady factor in the China Sea, as at times it is not encountered.

Mr. James—You may read what you have there but it won't be taken as evidence?—It may have a moral effect.

It depends upon whom the person is?—Quite so. The China Sea Directory that you speak of, what date was that, was it an old one?—1884 or 1885, Vol. III.

That is not a very modern one—the latest is 1890?—I could not find a latter one.

Have you it with you?—No.

Will you bring it with you next time, that is if it was not lost in the ship?—Very good, I did save same books, but whether this was among them I do not know.

What was your drift?—The actual drift was 54 miles; I steered 50 miles, and struck 4 miles inside the shoal.

Mr. James—This closes your evidence this day, but you may be called upon again, perhaps, to give evidence on some other points.

Capt. Tipple—But may I not give some evidence in regard to these exceptional currents? I have advanced the plea of an exceptional current, but

have given you no instances in support of it, there is nothing at present beside my word to bear me out.

Mr. James—You may read your cases if you like; what are they?

Capt. Tipple—Upon my arrival at Hongkong I made enquiries at the Harbour Master's to see if I could gain any information of exceptional currents being experienced. I could gain no official information, as no official reports had been made, but I heard that the steamer *Germania*, Capt. Ben Dickson, from Singapore to Hoihow, had been in the vicinity, that is of the Paracels, on the 1st November, and had experienced a most exceptional current of 50 miles in 12 hours.

Mr. James—Was he coming up or going down?

Capt. Tipple—Coming up.

Mr. James—Ah, well, you always experience a more severe current going against the wind and sea.

Capt. Tipple—Well, I heard that the captain had experienced this exceptional current at that date.

Mr. James—I don't credit it.

Capt. Tipple—I also found out that the P. & O. steamer *Ravenna* passed the Paracels on November 1st, and I beg to lay before you the Captain's report signed by the 1st and 2nd officers showing that she experienced a most exceptional current—N. 11° E. 45 miles in 24 hours.

Mr. James—There is no such current there.

Captain Tipple—Well, I ask you to read the Captain's report.

Mr. James—I see he has appended a note, "very unusual at this time of the year." Very unusual, I should think it is. They ought to write to the China Directory at once. I would not take it, however, as an authority.

Capt. Tipple—Very well, then, I can carry on. I have also heard on reliable authority that the steamer *Argyle* sailed from Hongkong to Singapore within a few hours of myself, and that she experienced a most abnormal current. I regret that I cannot lay the log report before you to-day, but I have written to Capt. Ward, who is now on a voyage to Calcutta, to furnish me with a copy of the report of the current that he experienced. I now put these letters for your perusal, including the report of the steamer *Palawan*.

Mr. James—That concludes your case, then. I will read over your depositions.

The depositions were signed by Capt. Tipple, and the Court rose, adjourning till 10 o'clock next morning.

H.M. SUPREME COURT, SHANGHAI.

(IN ADMIRALTY.)

Shanghai, 8th December.

(Before Sir NICHOLAS J. HANNEN, Chief Justice; Commander GRAFTON, of H.M.S. *Redpole*, and Mr. JAMES MOAR, Master of the steamer *Strathleven*, Assessors.)

THE OWNERS OF THE STEAMSHIP "ONWO," AND THE OWNERS OF THE STEAMSHIP "NEUCHWANG."

His Lordship, in giving judgment said:—This suit arises out of a collision which occurred on the 30th of April, 1896, at Woosung, at a point somewhere about half-way between the Feima lightship and the *Kwaching*. The *Onwo* was proceeding down the river on a voyage from Shanghai to Hankow and the *Neuchwang* was coming up the river on a voyage from Amoy to Shanghai.

The *Onwo* crossed the Woosung Inner Bar about 2.25 a.m. by the Feima Channel. When she came abreast of the Feima lightship, or a little before, she ported her helm to round it and a little while after she again ported. The cross-examination of the Plaintiffs' witnesses indicated that the *Neuchwang's* contention was that after passing the Feima lightship the *Onwo* went over to the Woosung side. We had no direct evidence in support of this contention, and I find as a fact, and the assessors agree with me, that the *Onwo* never was on the Woosung (i.e. the *Onwo's* port) side of mid-channel. As she came over the bar she was bound to show her green light to any ship down by the mouth of the Woosung Creek, but if she was, as alleged by the witnesses on the *Neuchwang*, green to green, this must have been owing to the direction of the bow of the *Neuchwang* and not on account of the *Onwo* being far over on the Woosung side of the river.

The *Onwo* proceeded after rounding the Feima Light on the usual and proper course, namely, on the starboard side of mid-channel. She saw the masthead and red lights of the *Neuchwang* off the mouth of the Woosung creek, and shortly after her red light was shut in and the green appeared. The *Neuchwang* came on and when close to the

Onwo blew two blasts on her whistle, starboarded her helm, and ran into the *Onwo* from 15 to 20 feet from the *Onwo's* stern. Just before the collision the *Onwo* hard-a-ported and blew one blast of her whistle. We have no evidence that any whistling on one ship was heard on the other, except the two blasts blown by the *Newchwang* just before the collision.

The point of collision was well over on the Pootung side of the channel.

The *Newchwang* came up the river and when she was a little below the mouth of Woosung Creek she saw the lights of a steamer crossing the bar. She stopped her engines and drifted on until, as her witnesses say, the approaching vessel showed her green light on the *Newchwang's* starboard bow. If the *Onwo's* green light ever was on the starboard bow of the *Newchwang* it must have been because the head of the *Newchwang* had swung round toward the Pootung side of the river. But, whatever was the reason, the master of the *Newchwang* then determined to come up the Pootung side of the channel. He came on, passing the *Kwashing* (which is well over on the Pootung side) within 60 feet;—when nearing the *Onwo* he blew two blasts of his whistle, starboarded, and reversed his engines. The collision followed; both vessels were injured and the *Onwo* sank causing a most lamentable loss of life both of Chinese and of foreigners.

Now it is plain that the *Newchwang* did not comply with Regulation 22. Her explanation is that the *Onwo* so acted as to make her believe that she was going down the Woosung side of the river. With regard to this I would adopt the words used in the case of the *Highgate*.—"It is only where a clear case of necessity is made out that a captain can excuse himself for not following the rule." (The *Highgate*—62 L. J. N. S. 841), and again in "The Test" it is said: "The principle of law that you are not to adhere to the strict rules of navigation but avoid an accident if possible, is a doctrine to be very carefully watched." "The Test" 5 N. of C. 278). With regard to the case of the *Commerce*, 3, William Robinson, 287, cited by Mr. Platt in support of his argument that the *Onwo* ought to have given way, it is to be observed that the Privy Council remarked that "though the principle involved in that case may be in itself a sound one it is one which should be applied very cautiously, and only where the circumstances are clearly exceptional. They conceive that to leave to masters of vessels a discretion as to observing or departing from the sailing rules, is dangerous to the public, and that, to require them to exercise such discretion except in a very clear case of necessity, is hard upon the masters themselves." (The *William Frederick* 4 App. Cas. 669.)

I put the following question to the Assessors:—Was the course of the *Onwo* after passing the Feima light such as to justify the *Newchwang* in concluding that the *Onwo* was going to take the Woosung side of the River? They answered this in the negative, and I must therefore hold the *Newchwang* to blame.

But the *Newchwang* alleges that Regulation 18 applied, and that the *Onwo* did not comply with it. I do not think it is denied by the owner of the *Onwo*, but anyway I find as a fact that the *Onwo* did not slacken speed, stop, or reverse; in fact her engines were going full speed ahead at the time of and after the collision. That being so it is for the *Onwo* to show why she did not comply with Article 18. So far as I can gather, her contention is that there never was risk of collision until the *Newchwang* had starboarded and that after that she had not an opportunity to stop and reverse. As to this, let us see what Mr. Cooper said:—"He was asked (p. 3) "When did you first see anything of the steamer which afterwards proved to be the *Newchwang*?"—Just about abeam of the Feima lightboat."

"What did you see?—I saw her red light and masthead light slightly on our port bow."

"In what part of the river was the vessel you saw then approaching?—I should say a little above Woosung Creek and well over on the Woosung side."

Was there any change in the lights of the approaching steamer?—Yes, she shut in her red light and showed her green.

Soon after, or a considerable time?—Shortly after I first sighted her.

The result of this evidence and an examination of the chart is that those on the *Onwo* must have known shortly after they sighted the *Newchwang* that she was coming up the wrong side of the channel.

In the case of *The Memnon*, 59, *Law Times*, at page 201, Lord Esher makes these remarks:—"Is a sailor justified when he sees another man navigating his ship in a hazardous manner and though not illegally" (the *Newchwang* was acting illegally) "yet in an unsafe way,—is he

justified in supposing that the man will only go to the extent he is then going in doing what is risky and hazardous."

The gentlemen who assist us agree that an officer is not justified in supposing that.

So here I think that when those on the *Onwo* saw that the *Newchwang* was coming within 60 feet of the *Kwashing* and was showing them her green light they ought to have realized that there was risk of collision.

Mr. Drummond relied greatly on the case of *Wilson, Sons & Co. v. Currie*, App. Cases 1894, p. 116, but that case is materially different from the present. There the *Thorsa*, which it was sought to hold jointly to blame with the *Otto*, stopped and reversed. But it was said that she ought to have stopped and reversed sooner. The Court held that she was not to blame for not having stopped and reversed sooner; and Lord Halsbury, at p. 121, says "when at last it was apparent to the master of the *Thorsa* that the master of the *Otto* was going to manœuvre as he ought not to have done, he stopped and reversed."

In the present case when ought it to have been apparent to the master of the *Onwo* that the master of the *Newchwang* was going to manœuvre as he ought not to have done? Mr. Cooper says they sighted the *Newchwang's* masthead and red light just about abeam of the Feima lightship and that shortly after she shut in her red and showed her green. The *Newchwang* came within 60 feet of the *Kwashing* still showing her green light. If any one looks at the chart he cannot help seeing that the *Newchwang* was not then on her proper side of the channel, and if she was showing her green light it must have been apparent to those on the *Onwo* that the *Newchwang* was manœuvring in an improper manner, and I think that that ought to have been apparent some time before the *Newchwang* was abreast of the *Kwashing*.

The question I put to the assessors was—When should those on board the *Onwo* have reasonably concluded that there was risk of collision? To this they replied "As soon as the *Newchwang* had passed the *Kwashing*."

Then in order to see if the *Onwo* could excuse herself in accordance with the maxims derived from the *Kedive* (5 App. cases 876, 902) and the *Benares* (9 P. D. 16) I asked the assessors the following question:—

"After that, had they the opportunity to stop and reverse?—Answer: "Yes, to stop and reverse the engines, but not the ship."

"Could they have stopped and reversed:—Answer. "Yes."

"Was the continuing to go full speed ahead the only chance of avoiding the collision?"—Answer, "No."

I must therefore hold the *Onwo* to blame for not complying with Regulation 18. Whether the collision could have been entirely avoided had she stopped and reversed when risk of collision arose may be doubted, but I have no doubt that the disastrous effects of the collision could have been greatly mitigated. I wish also once more to impress upon masters of vessels the absolute necessity of adhering to the Regulations. If those Regulations are carefully adhered to there need not be any great danger in navigating this river, but if they are not adhered to such collisions as that between the *Onwo* and the *Newchwang* will occur.

The judgment of the Court is that both ships were to blame and the usual decree will follow.—*N.-C. Daily News*

LATEST TELEGRAMS.

(REUTER'S "JAPAN MAIL" SPECIAL SERVICE.)

London, December 12.

The North German Lloyd mail steamer *Salier*, bound from Bremen to Buenos Ayres, has been totally wrecked near Corunna, and all on board, numbering 275 souls, perished. There were no English passengers.

London, December 16.

Great indignation is felt in America owing to a rumour that General Maceo, the leader of the Cuban insurgents, has fallen through Spanish treachery. The Spaniards repudiate the charge.

The *Times* Athens correspondent states that a revolutionary movement is projected in Macedonia for next spring. The leaders of the movement propose, in order to create a diversion, to foment the revolt in Crete. Large quantities of munitions of war have already been sent to Crete.

(Reuter's Service of Telegrams supplied to the "Japan Herald," the "Japan Gazette," and other Subscribers in Tokyo and Yokohama.)

London, December 11.

A telegram published in Berlin states that the Dutch Consul at Lorenzo Marquez has been assaulted and wounded, the German Consulate attacked, and the British flag torn to pieces. No details are given, but it is added that Germany has demanded reparation from the authorities at Lisbon.

London, December 12.

The U.S. Republican party is about to frame a new Tariff Bill which will be submitted at an extraordinary session of Congress after March 4th. Reciprocity will be a feature of the new tariff, and it is understood that the average rates will be lower than the McKinley tariff but considerably above the present rates.

ARTIFICIAL PERFUMES.

CAUTION!

Messrs. J. & E. ATKINSON warn their customers against the Artificial Chemical Perfumes at present so extensively offered. Though strong they are nasty, and from a hygienic point of view their use is to be strongly deprecated.

ATKINSON'S "NATURAL" PERFUMES are made from flowers, and possess all their natural fragrant sweetness. They cannot be surpassed either in delicacy or strength.

ATKINSON'S "WHITE ROSE."
"A charming Scent."—H.R.H. The Duchess of York.

J. & E. ATKINSON, 24, Old Bond Street, London.

May 4th, 1895.

THE GREATEST WONDERS OF MODERN TIME

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the dragoman Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN. HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammation. Mr. J. T. Coates, in his account of his extraordinary travels in China, published in 1891, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a ten, spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining 'stock.'"

Sold by all Chemists and Medicine Vendors throughout the World.
May 1st, 1892.

MILKMAID BRAND CONDENSED MILK

The "Milkmaid" Brand is guaranteed to contain all the cream of the original milk. In the process of manufacture nothing but water is removed, nothing but the best refined sugar added.

Avoid low-priced brands from which the cream has been abstracted, and ask for the "Milkmaid" Brand, the best for all purposes.

June 14th, 1896.

A. SAVY & CO., ENGINEERS.

162, Rue de Charenton, Paris.

THE OLD G. HERMANN DEBATISTE WORKS.

ESTABLISHED 1830.

The Oldest and Largest Makers in the World of Chocolate, Cocoa, and Confectionery Plants.

Over 2,500 Chocolate Factories fitted up to January 1st, 1896.

GRINDING MACHINERY for all kinds of dry or wet substances, colours, printing inks, toilet soap, perfumery, and chemicals.

MIXING, CRUSHING, AND PULVERISING MACHINES FOR ALL MATERIALS.

Address MESSRS. BOYES & Co., YOKOHAMA.

November 21st, 1896.

"FAIS CE QUE DOIS: ADVIENNE QUE POURRA!"

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL" must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, DEC. 26TH, 1896.

BIRTH.

At 60, Main Street, Yokohama, on Dec. 21st, the wife of H. J. SHARP of a daughter.

MARRIAGE.

On the 19th inst., by the Rev. G. M. Meacham, MAY OASTLER BURDIE, of Yokohama, to LOUIS MARTIN WILLIAMS, of Yokohama.

SUMMARY OF NEWS.

RINDERPEST broke out in a herd at Nara Ken on the 16th inst.

RINDERPEST is very rife at Yayeyama-gun, Okinawa Ken.

Snow fell in Yokohama on Tuesday—an unusually early date.

HIS MAJESTY formally opened the tenth session of the Imperial Diet yesterday.

THE new fortifications in Naruto Straits will be commenced at an early date, the land required

having already been purchased by the Authorities.

HENCEFORTH the Yokohama Sailing Club will be known as the Yokohama Yacht Club.

WAR Loan Bonds and Redemption Loan Bonds are at present without purchasers in Japan.

THE South of England has beaten the Northern Counties, under Rugby rules, by one try to nil.

H.M.S. *Grafton* defeated the home team at Association football on Saturday by two goals to one.

THE date of the Carew trial has been altered to the 5th prox., to suit the convenience of jurymen.

THE Spanish Minister of Marine has issued orders to hasten the completion of the warships now building.

MR. HATUYAMA KAZUO is the new President of the House of Representatives. He belongs to the *Shimpo-to*.

FOR the third time Wor. Bro. R. N. St. John has been installed Worshipful Master of the Yokohama Lodge.

TWO Meteorological Observatories are to be established at Dainan and Koshun, Formosa, during January next.

IT is reported that Mr. Hara Yoro will be appointed Superintendent Engineer of the Formosan Railway Company.

THERE have been several fires in the Japanese parts of Yokohama this week. A theatre and some thirty houses have been destroyed.

IMPERIAL Ordinance No. 204, relating to Japanese who crossed to Korea without permission from the authorities, has been abolished.

ON the 17th inst., at three a.m., a fire took place at Miyako, Rikuchu Province, and about two hundred and thirty houses were destroyed.

THE trouble of the cotton-spinners of the Hyogo district, in regard to the decoying of women-operatives, is rapidly coming to a head.

H.I.H. PRINCE ARISUGAWA TAKEHITO, Commandant of the Japanese Standing Squadron, hoisted his flag on the *Chinyen* on the 20th inst.

MR. PEYTON JAUDON, to the deep regret of his many friends in Japan, passed away in this sixty-sixth year, at his residence in Tokyo, on Wednesday.

THE District Grand Wardens of the District Grand Lodge of Japan for the ensuing year are Wor. Bros. E. P. Fallister, of Tokyo, and A. Kirby, of Kobe.

THE *Kanagawa Maru*, the *Kamakura Maru*, and the *Hakata Maru*, of the Nippon Yusen Kaisha, built in England, will arrive in Yokohama about February next.

IT is stated that the Korean Government will borrow from the Ro-Shin Ginko (Russia-China Bank) yen 3,000,000 with which the Government intends to pay off her debts to Japan.

BARON DE COURCEL, French Ambassador to Great Britain, resigns the Embassy in London, being discouraged by the difficulty of a solution of the existing Anglo-French differences.

DON ANTONIO CANOVAS, the Spanish Prime Minister, in an interview with Reuter's representative at Madrid, said he relied on the statesmanship of President Cleveland and Mr. Olney and the good sense of the more sober citizens

of America, to prevent war between the two countries, but Spain, he declared, was determined to uphold her dignity and was preparing against all eventualities.

THE crew appointed to bring home the *Yashima Kan* from England left Yokohama on Thursday for England by the *Kagoshima Maru* of the N.Y.K.

THE officers and cadets of the *Fuso Kan* who were so victorious at the regatta held on the Sumida River on the 18th inst., came up to Tokyo from Yokosuka in a small boat, rowing all the way.

MR. YAMADA YOSABURO, a wealthy farmer at Otsu-gun, Yamaguchi Ken, died some time ago at the age of sixty-six. Before he died he contributed yen ten thousand to three Primary Schools in the district.

DURING the week the Girl's High School, and Winton House School, Yokohama, have held their prize-distributions. Miss Hilda Watson is the head pupil of the former; Bowden mi. head of the latter institution.

THE Senate of the United States of America have taken up a strong position in regard to Cuba, and in consequence the Governors of several American States declare they are ready to raise volunteers to fight Spain if necessary.

THE Norwegian steamer *Tamarind* was towed into port on Thursday morning with her tail-shaft broken. The vessel was towed into Yokohama by one of the Tateyama passenger-boats, which received \$5,000 for the job.

THE Spanish Government has purchased the steamer *Alaska*, of the Guion line, and will convert her into a transport for service in connection with the rebellions in Cuba and the Philippines. The *Alaska* is a steamship of 5,500 tons gross.

A SHARP earthquake was experienced on Dec. 17th in the Central, Southern, and Western counties of England and also in the suburbs of London. The most serious shock was felt at Hereford, where the Cathedral, the station, and a number of houses were damaged.

IT is stated that at a Council Cabinet held on Tuesday, a dispute arose between the Premier, Count Matsukata, and the Home Minister, Count Kabayama, regarding the revision of the newspaper regulations. The result is at present kept secret, but will be laid before the Diet.

SILK sold in Yokohama on Wednesday included:—30 cases to Siber, Breunwald & Co., No. 90A; 64 cases to F. Herb, No. 76; 41 cases to Walsh, Hall & Co., No. 2; 8 cases to Varenne & Co., No. 206; and 9 cases to Hutchison & Co., No. 179.

THE Import trade is best described as in a general state of stagnation—Manchester goods, Metals, Kerosene, Sugar, &c., &c., all being absolutely lifeless. There are enquiries certainly, but these lead to little or no actual business. But there are also people who believe in a revival so soon as the New Year is fairly launched and the holidays are over. On the other hand, there are many that are not so sanguine of an early resumption of business on a liberal scale. As to Exports, the two principal articles, Silk and Tea, are about as quiet as it is possible for them to be. In regard to the former, the settlements have been next to nil, and the season for the latter is over, there being no more leaf to come in and the few piculs on this market are mainly poor and common stuff. Exchange, which weakened slightly during the week, closes firm.

THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.

After long throes of parturition the Bill for amending the Press Law is said to have been definitely carried through the Cabinet, but not in a sense satisfactory to the *Shimpo-to*. The *Yomiuri* and the *Mainichi* have been informed from trustworthy sources that the Cabinet has decided to retain the suspension clause in matters relating to the Imperial Court, to military and diplomatic secrets, to public morals, and to the preservation of social order. But the power of suspending a journal is no longer to be arbitrarily exercised. In the event of newspapers offending within the above limits the Home Minister or the Minister of Colonization—the latter in the case of journals published in Formosa—will be competent to suspend the publication of the offending sheet, but must prosecute it before a Court of Law and obtain the latter's judgment within a week from the issue of the order of suspension. As for the power of suppression, it is to be entirely taken away from the Administration and vested in the Judiciary.

Needless to say, the above two papers do not hesitate to accuse the Cabinet of want of courage and resolution to effect satisfactory amendments. They stigmatize the Ministers of State as chicken-hearted and invertebrate. If conclusive indications are furnished by the tone of these *Shimpo-to* organs, the plain inference is that the members of the Party are divided in opinion on this crucial topic. The Parliamentary representatives of the *Shimpo-to* have held repeated conferences as to whether they ought to frame and introduce a Bill of their own, totally excising the obnoxious clauses, but they have not arrived at any decision. It is alleged that about 12 members, representing north-eastern constituencies, have made up their minds to stand for the total rescission. They met on the 19th inst., and resolved that, in the event of the Government's failing to introduce a thoroughly satisfactory measure of amendment, they must sever their connection with the *Shimpo-to*.

The Liberals are not less troubled by internal dissensions. Some sixteen members, who entertain a feeling of umbrage against the Tosa section, are believed to have been won over by certain Cabinet Ministers, and rumour attributes to the existence of a secret understanding in that sense, the fact that these members declined to vote for Mr. Kono Hironaka, although his election to the presidency of the Lower House was desired by the Party at large. This news would appear to rest on more or less trustworthy foundation, if we may judge from articles published in the *Kokumin* and the *Meiji*, the latter a journal friendly to the Liberals. The *Kokumin* argues that though a rupture among the Liberals would be conducive to the interests of the Cabinet, the latter ought not to adopt any unworthy method of compassing such an end. It adds that the pro-Government section in the ranks of the Liberals could easily be induced to sever connection with the party, or to hoist their own standard, and it concludes that the Liberals are in imminent danger of a split. The *Meiji* can not easily believe such a rumour, but thinks that the mere fact of its circulation must seriously impair the credit of the Party. The Liberal leaders should adopt resolute steps to drive out "the worms that are secretly eating at the Party's core." In another article the same paper grieves to see members perverting their honourable position into a means for furthering their own sordid purposes.

The *Nippon* is highly satisfied with the withdrawal of the Imperial Ordinance issued last May for controlling the passage of Japanese to Korea. Our chauvinist contemporary denounces the ordinance as a relic of the weak foreign policy of the Ito Cabinet, and declares it to have been not only useless but even positively injurious, inasmuch as local officials, under whose

control the granting of passages was placed, failed to discriminate between persons that ought to be freely allowed to go to Korea and persons that ought to be kept at home, the result being that affairs in Korea went from bad to worse. The *Nippon* does not wish to have Korean matters hastily meddled with at this juncture. It advises Japan not to be easily stirred from the even tenour of her way, but, on the other hand, to spare no means calculated to promote the prosperity and improve the relations of the two neighbouring peoples. The operation of the now-rescinded Ordinance interfered with the consummation of these important ends.

The *Nichi Nichi* and the *Tokyo Shimbun* are entirely opposed to the rescinding of the above Ordinance. They criticize the action of the Government in this matter as irreconcilable with the spirit of the Constitution. Everybody knows, argues the *Nichi Nichi*, that when a Cabinet had issued an ordinance as a matter of urgency, the *post-facto* consent of the Diet must be sought as soon as the latter comes into session. The duty of following that procedure devolved on the Ministry now in power, for they inherited the Regulations in question from their predecessors. But after having enforced the Regulations for several months, the Cabinet has suddenly rescinded them on the very eve of the opening of the Diet, thus depriving the latter of the opportunity to exercise its right of retrospective assent or dissent. Such irresponsible action on the part of the Government is open to severe condemnation, as well as to the charge of inconsistency, especially when it is remembered how Count Okuma recently stigmatized the Japanese in Korea as a gang of lawless adventurers whose doings seriously impaired the interests and dignity of the Empire.

Referring to the High Educational Council, which is to be organized from the beginning of the next fiscal year, the *Mainichi* doubts whether the primary object contemplated by the two Houses of the Legislature when they repeatedly advised the Government to establish the Council, can be successfully attained by a body of men such as those recently appointed by the Authorities, seeing that an overwhelming majority of them are officials, whereas the original purpose of the projectors of the scheme was to establish an educational mechanism independent of the Department of Education and holding views of its own.

The *Yiji*, in two articles, give a warning to political parties and to statesmen either in or out of office. In one article, it asks the two rival political parties what ground of disagreement they possess beyond a merely sentimental one, namely, that the Liberals supported the Ito Cabinet while the *Shimpo-to* have been more or less instrumental in consummating the organization of the present Ministry. They have no essential cause for waging political warfare, and so long as they persist in playing their present rôle of factitious antipathy, the *Yiji* does not hesitate to condemn them both for seeking to pursue their own selfish ends at the expense of national interests, and for practically following the clan policy that they are in the habit of denouncing so loudly. In the second article, the same journal expresses surprise at the apparent want of amity between on the one hand, Marquis Ito and those prepared to range themselves beside him, and, on the other, Count Okuma and the statesmen now occupying seats in the Cabinet. In the eyes of the *Yiji*, they all hold similarly liberal and progressive views, so that there exists no genuine basis of contention between them, nor anything to prevent them from cementing cordial friendship. They ought to move together and to exert themselves for the weal of the nation at large.

The *Nippon* and the *Tokyo Asahi* offer advice to the Cabinet as to the attitude it should assume towards the Diet now in session. These two pro-Government papers concur in warning the Cabinet against temporizing measures,

adopted with the view of conciliating the members the House of Representatives and thus obtaining a majority. The best plan is to pursue vigorously the duty primarily devolving on the Government, namely, the mission of consummating the *post-bellum* measures, and going about the work with strong conviction and unswerving directness. Every course savouring of artifice or stratagem should be eschewed, and the sincerity that distinguishes Counts Matsukata and Kabayama should be steadily adhered to.

The *Osaka Asahi* does not attach so much importance to the problem of emancipating the press. Reform of the Household Department and of the Administration and freedom of the Press are doubtless questions of moment, but not of such paramount importance as to involve the fate of the Cabinet. The Ministry have not been called into power to deal with such questions, but rather to complete the *post-bellum* measures left in an imperfect condition by their predecessors.

Attaching minor importance to the result of the Presidential Election in the Lower House, and explaining that a little previous arrangement should have sufficed to secure the post for either party's candidate, the *Tokyo Shimbun* and the *Chuo* agree in thinking that the future situation of politics in the Diet depends upon the nature of the procedure that the Cabinet adopts towards the Diet, as well as on the possibility of an *entente* being established between the two great parties, a contingency that the Liberal organ is inclined to regard with much hope. Political rivalry does not prevent the *Chuo* from expressing a favourable opinion of the new President, whom it regards as endowed with a cool head and an unbiased judgment, and seems likely to prove the best President that the House has thus far had.

As might have been expected, the manifesto of the National Unionists has evoked diametrically different comments from the pro-official papers and the organs of the Opposition. The *Nichi Nichi* observes that the issue of a manifesto plainly at variance with the policy of the Government redounds to the credit and public spirit of the Unionists, for personally they have somewhat amicable relations with the members of the present Cabinet. Moreover, their resolution not to endorse the rescinding of the suppression and suspension clauses of the Press Law shows that their discernment is not obscured either by prejudice or business interests.

The *Yomiuri* hurls severe invectives against the Unionists on the very grounds that have won the above encomiums from the *Nichi Nichi*. It rails at them as having acted in complete contradiction to their original notion about the freedom of the press, and charges them with having yielded to a selfish hankering after political influence, and with being entirely devoid of any fixed political views. In short, it scornfully praises them for faithfully acting the part of "political bastards," and with being simply an "emergency party."

The *Kokumin* does not scruple to apply to the whole of the Cabinet Ministers the scurrilous epithet of *Banshoku daijin*. It avers that the real power appears to have passed into the hands of subordinates, and that the term "mess-together Ministers" must be applied not only to Viscounts Enomoto and Nomura, Marquis Hachisuka, and Mr. Kiyoura, but also to the Premier, and his three leading associates.

H.I.H. the Crown Prince left Shimbashi for Numadzu on Thursday morning. He will stay at Numadzu during the cold season.

On Tuesday morning, a Japanese junk conveying dynamite and cartridges, towed by the *Kanyo Maru*, while on her way to Tokyo from Yokohama, capsized near Haneda Light-house. The crew, three in number, were saved by the steamer but the cargo was lost.—*Yorodsu Choko*.

EDITORIAL NOTES.

ANDRÉE'S BALLOON FAILURE.

In a recent number of *Peterman's Mittheilungen* the Editor, Dr. A. Supan, in reviewing the latest North Pole expeditions, also speaks of Andrée's attempt with his great balloon. We translate the following:—Into the general rejoicing over the safe return of Nansen and Sverdrup there fell one disturbing note: Andrée had disappointed both hopes and fears alike. The balloon had been filled, but did not ascend and the expedition has returned without success. Of course, no intelligent person will conclude from this that all balloon projects are therefore conducted *ad absurdum*, but it has demonstrated how extremely difficult it is to base one's calculation as to the wind and weather in the Polar regions, which are of so great importance, upon a brief trip of observation. This is all the more so because there are no telegraphic connections at Spitzbergen by means of which one could ascertain the general condition of the weather. Perhaps Andrée would have succeeded had there been more time at his disposal. This, however, would have greatly increased the expenses, and yet this item will have to be taken into account if the subject is not to be abandoned altogether. Andrée, we hear, intends to make the venture once more, early next summer, and he can not be blamed if, in a sense, he feels in honour bound to do so. It is, of course, another question, whether Nansen's return has not in a great measure stripped the balloon project of its scientific importance. To us it seems questionable, whether it would be of important scientific consequence hereafter. Let us consider, for a moment, the situation as it obtained, a little more than a year ago, when the Andrée balloon enterprise first came up for consideration. The means heretofore employed, boats and sleds, had failed to penetrate into the inner Polar regions, and there were very few that expected to see it accomplished by these means. Nansen had not been heard from and perhaps there were not many that still felt confident of his return. Under these circumstances Andrée's plan was heartily welcomed, though one could not conceal that, "balloon travel in the Polar world can be only of a pioneer character," as I said, in my address at the London Congress. Now the situation is somewhat changed. The problem of building a ship that will withstand the pressure, may now be regarded as solved. True, the ship is not free to move about, it does not move, it is driven. Now the *Fram* did not exactly drift as Nansen had calculated, and therefore did not reach Greenland across the Pole, but went east of the Pole to Spitzbergen. There may have been reasons for this. It is possible that the *Fram* got into the outer rim of the Polar current, and it is a question whether he would not have gotten into the inner current, had Nansen carried out his original plan, to start in from the Behring Strait. At the same time it is doubtful whether another effort will soon be made again on this line. We must, in this connection, bear in mind that the sled has now also proven itself of practical service. Besides the ship and the sled, the balloon may be regarded as a third means of travel in the Polar world—provided its nautical capacity will answer Andrée's expectations: With regard to this we can advance no opinion. The balloon has the advantage of great mobility, but is far more dependant on favourable conditions. Ship and sled, even if they do not reach their goal, usually furnish some scientific results, while the balloon, on the other hand, in case of unfavourable wind may not as much as start. Even under the most favourable circumstances it can be only of very limited scientific utility. All that can be determined from a balloon is the division of water and land. That, of course, is important, and so long as it was supposed that the Polar region was dotted with islands, even the balloon could have made important discoveries. But now even this expectation has been modified. There is no doubt now that the area

around the North Pole is a deep ocean basin. The depths proved by the *Fram*, show that the great depression west of Spitzbergen is not a basin surrounded by shallow sea, but is widely open to the North, where it spreads over the Polar area. The depth of this ocean renders it improbable that many islands will be found in it. Another error from which Nansen has relieved us is that the whole of the central Arctic Sea is full of ice of immense thickness and great age. He found that, except for local heaps and hummocks, it is only about thirty feet thick. After this discovery, geology will no longer be burdened with the incubus of recent Polar ice-caps. Another interesting geological contribution is Nansen's collection of Jurassic fossils in northern Franz-Josef Land. And now consider how meagre the results would have been had Nansen passed over this region in a balloon!

CHRISTMAS DAY.

PROVERBIAL Christmas weather prevailed yesterday in Yokohama, the morning opening with a sharp frost and white-blue mist and developing later into a bright sunshiny day with the roadways ringing hard and frosty beneath the feet. Though some one hundred and fifty people left on Thursday afternoon for Miyanoshiba, and another large contingent went to other places in the country, the services at Christ Church attracted crowded congregations, particularly at the 11 o'clock matins. The Church was lavishly decorated with a wealth of scarlet berries, white immortelles, and greenery, reflecting credit on the artistic taste of the ladies of the congregation who undertook this labour of love. The Rev. E. C. Irwine officiated, assisted by the Rev. W. T. Austen; Mr. Griffin was at the organ. The choir, that was considerably augmented, especially in men's voices, carried through splendidly the special choral portions of the service, Mr. Fleet, the soloist, being heard to advantage in the Introit.

Union Church was very prettily decorated, but the congregation was not large. The Anthem was "Behold, I bring you good tidings" (Goss); while the following selections from "The Messiah" were sung:—"Comfort ye," "Every Valley," and "The Glory of the Lord," Mr. Lewis taking the solos.

At one o'clock a hot dinner of roast beef and plum-pudding with nuts, apples, oranges, and cigars was provided in the Seamen's Free Reading Room for all the men in need of it, covers being laid for 16. At 6 o'clock the room was filled with merchant seamen from the ships in port, who thoroughly enjoyed the Christmas dinner provided by the Mission, a large number of those present having recently come into port after long voyages of five and six months. After dinner a capital programme of local and instrumental music was rendered, at the close of which the Christmas Ship was illuminated by coloured lights, and her cargo of Christmas presents distributed. Three cheers for the Chaplain, proposed by Mr. Schurr, and seconded by Mr. Millar, chief engineer of the steamer *Furbo*, were heartily given and responded to. The Chaplain having explained that he was but the medium through whom the Christmas gifts of the ladies of Yokohama and other friends had been distributed, three hearty cheers were given for the ladies of Yokohama, which closed the proceedings. The Mission launch carried the sailors from and to their ships.

JAPANESE MILITARY MISSION.

THE *China Mail* says that on the 27th November, the Japanese military mission, consisting of Major General Kawakami, Chief of the Japanese Staff, Colonels Idichi and Murata, and Captains Akashi and Sekya, arrived at Haiphong by the steamer *Hanoi*. They were accompanied by Count de Pimodan, French military attaché at Tokyo. The Japanese officers, were cordially welcomed by the French officers, and then journeyed to Hanoi. Here a salute of eleven guns was fired in their honour, and the military band played the national anthems

of Japan and France. Accompanied by the Governor-General, M. Rousseau, and General Richot, the visitors were shown over the city, the hospitals, citadel, and principal places of interest. At Haiphong, they had previously visited the principal hongs, including that of Messrs Marty and d'Abbadie, and docks, &c. The visitors critically inspected the Militia, and for their edification the native troops performed some evolutions. During their stay, they were entertained at dinner, and replying to the toast of the health of the Emperor and Empress of Japan, General Kawakami (whose speech was interpreted by Colonel Murata) said:—"I am very highly honoured and very deeply touched by the welcome accorded me by the French. I hold a great admiration for your country, for if we were victorious in our campaign against China, we owed our victory in part to you. It was in France that a great many of our officers were instructed, the officers who directed active operations during the war. I drink to the health of the Governor-General, Madame Rousseau, and all present on this occasion." The mission is making an extended tour in Tonkin, and will also visit Cochinchina and Cambodia, going on to Singapore, where they will re-embark for Japan.

DISTRICT GRAND LODGE OF JAPAN.

THE annual communication of the District Grand Lodge of Japan was held in the Masonic Temple, Yokohama, on Tuesday evening. The Rt. Wor. District Grand Master of Japan, Wor. Bro. W. H. Stone presided, and after the customary business was concluded, appointed his Grand Lodge Officers as follows:—

Wor. Bro. Dr. T. C. Thornicraft.....	D.D.G.M.
Wor. Bro. E. P. Pallister.....	D.G.S.W.
Wor. Bro. Alf. Kirby.....	D.G.J.W.
Bro. A. R. Morgan.....	D.G. Chap.
Wor. Bro. G. Hodges.....	D.G. Treas.
Wor. Bro. S. E. Unite.....	D.G. Reg.
Wor. Bro. H. Moss.....	Pres. D.B. of G.P.
Wor. Bro. C. D. Moss.....	V. Pres. D.B. of G.P.

After the Lodge a banquet was held at which some forty brethren sat down; Rt. Wor. Bro. Stone, who presided, being supported in the Vice-Chairs by Wor. Bros. C. D. Moss and H. J. Sharp. A most entertaining evening was spent with toast and song.

A PROPOSED FAREWELL SUBSCRIPTION.

THE *Daily Telegraph*, of London, has been endeavouring to raise a farewell subscription fund, the proceeds of which were to be devoted to purchasing a gift to be presented to Mr. Bayard, the U.S. Ambassador to Great Britain, upon his departure from the Court of St. James. The American press seems to have taken umbrage at the project, declaring that the *Daily Telegraph* merely wishes to secure a big advertisement for itself, while at the same time it lowers the dignity of the U.S. Ambassador, placing him on a level with "the champion cricketer" or a "distressed Balacava hero." It is highly improbable that the scheme will eventuate successfully, but the Lord Mayor of London, in coöperation with Lord Salisbury, will no doubt tender the departing Ambassador a public dinner at the Mansion House. This would be a far more satisfactory way of bidding him farewell, besides being in better taste.

A CURIOUS MISTAKE.

"KOYO-SANJIN" is the pseudonym of one of the better known Japanese novel-writers of the day, and his latest work, *Do Budoshu*, "Blue Wine," has enjoyed quite a large sale, to the gratification of the publishers, the Shinyodo, firm of Nihonbashi, Tokyo. To this establishment

recently came a postal-card containing a most curious misapprehension. "Dear Sirs—We are vintners in one of the most prosperous cities in Shikoku. There are many other wine-stores here, but one and all sell only Japanese *sake* imported from Osaka. To our regret, there is not one house dealing in foreign wines. It is for this reason that we pay special heed to the sale of Kozan claret, and the Asahi and Yebisu beers. An advertisement of yours, relating to a blue wine manufactured by Mr. Koyosanjin, has recently been brought to our attention, and we now write to ask your terms and what discount you will allow on purchases of twenty dozen bottles each. Awaiting your reply, we are, etc., Yegawa & Co." Roars of laughter greeted the perusal of this artless missive and the story was thought too good to keep. The Japanese journals of Tokyo have all related the incident, with comments of a most amusing nature.

MEIDI-YA.

MEIDI-YA, the well-known store in Honcho-dori, Yokohama, has made capital provision for the wants of the foreign public during the festive season now almost upon us. A visit there discloses the fact that the store is decorated in the traditional fashion of stores in the home lands at this time of year; bright-red berries, white ever-lasting flowers, and greenery galore—bringing vividly to mind the displays made in many High Streets in old-fashioned English towns, and in many a new town, for the matter of that, in Canada and the United States. Meidi-ya has laid in a special stock of crackers, the ever-fresh delight of young and old at Christmas and New Year time; while there are stacks of those pretty enamelled biscuit-boxes that English manufacturers—Huntley and Palmer, Peek, Frean & Co., and others—have made such a speciality of for the Christmas trade at home. Another strong line is found in preserved and candied fruits, sweetmeats of all kinds; and some choice vintages in moselle, champagne, hock, and claret. Some very tempting breakfast hams are also in stock, and plenty of choice Chicago bacon.

ENTERTAINMENT AT THE PUBLIC HALL.

Mr. P. Bozakowski gave an entertainment in the Public Hall on Saturday evening, before a very slim house, but this notwithstanding some genuine amusement was obtained. Perhaps the most startling trick of all was that which brought the entertainment to a close. The Professor was placed in a trunk that was locked and afterward corded; then a curtain was drawn across the stage and when this was removed the box was opened and out stepped a little girl, while the Professor walked into the hall from the back of the audience.

THE Y. C. AND A. C.

THE cricket averages of the Yokohama Cricket and Athletic Club are being published, from which we gather that Mr. G. C. Murray heads the batting list with 31.75; Mr. K. F. Crawford being second with 27.75; and Mr. F. E. White third with 26.42. White made the greatest number of runs, 502. Mr. A. Kingdon played in the greatest number of matches 22, Mr. A. B. Walford coming next with 20. In bowling, Mr. R. C. K. Johnson has an average of 6.40—his record being 230 b., 96 r., 11 m., 15 wickets. Mr. E. J. Libeaud comes next, 8.20—180 b., 82 r., 9 m., 10 wickets; Mr. H. S. Goddard next 8.60—1,063 b., 430 r., 51 m., 50 wickets, and 13 wides.

THE NEW MANCHESTER RAILWAY.

THE London correspondent of a Melbourne paper telegraphed on Nov. 6th that Earl Portman, who owns 14 acres of land in Marylebone, required for the terminus of the new trunk railway line from Manchester to London, demanded £400,000 as compensation. The claim was submitted to arbitration, and the Court awarded Earl Portman £21,000.

NOTICE TO SHIPMASTERS.

THE following circular from the Department of State, Washington, dated October 29, 1896, is issued to the Consular Officers of the United States at seaports in Asia, Australia, Hawaii,

and on the West Coast of Mexico, Central America, and South America. It reads:—Gentlemen:—At the request of the Secretary of the Treasury, dated the 24th instant, you are instructed, when issuing bills of health to vessels bound for Puget Sound, to inform the master of such vessels that they are required to stop at the National Quarantine Station at Port Townsend, for inspection.—W. W. Rookhill, Assistant Secretary.

MARINE ENGINEERING FEATS.

"BROWNIE" of the *China Mail*, in the course of some remarks on the piece of engineering recently accomplished in mid-ocean by the engine-room staff of the *Hermann Vede Jarlsberg*, says:—That, without disparaging the achievement referred to, it may be worth mentioning that a piece of work was done over thirty-seven years ago, on board the P. & O. steamer *Malabar*, on her voyage from Singapore to Hongkong. That for eight or nine days the good old *Malabar* was turned into a blacksmith's shop, and with the detention caused by the repairs the mail and passengers were seventeen days in getting from Singapore to this port. That the ship was given up as lost, and services had been held over the foundering of the good ship, when she came quietly into harbour one day, fired her mail gun about 2 a.m., and was boarded by nearly every British resident in the place. That two of our oldest residents were on board of the *Malabar* on that memorable occasion. That in those days engineering appliances were not what they are now, but British pluck is always much the same.

A NEW REEF.

A CORAL reef has just been discovered in the north of Luzon. The following are the details published by the *Comercio*:—The Captain of the steamer *Herminia*, on a voyage from Bauva to Nagulandian, off the island of Dalupiri, N. of Luzon, encountered an unknown reef situate to the 19.1.30 N. lat. and 0.10.45 E. long of Manila meridian. The danger lies to the S.W. of the island, and about three miles from its coast, and to the 53°W. of the islet of Iras and about four miles from it.

RETIREMENT OF LORD ESHER.

It was authoritatively stated in London on the 10th of November that Lord Esher, Master of the Rolls, was about to retire from the bench. Lord Esher was appointed a Judge of Appeals in 1876, and in 1883 he succeeded Sir George Jessel as Master of the Rolls. He was created a Baron in 1885. Lord Esher is in his 81st year.

HONGKONG REGATTA.

HONGKONG held its fortieth regatta on the 10th and 11th inst. in glorious weather. In the International Fours the Germans won, the Scotch being second and the English third—and last. There were ten well-contested rowing events each day, in addition to several interesting sailing races. The pretty appearance of the large fleet of yachts was much commented on.

A ST. GEORGE'S BALL.

ENGLISHMEN in Hongkong have decided to give a St. George's Ball in that Colony on January 22nd, 1897. This news will doubtless suggest the old question, when will the English of Yokohama make up their minds to return St. Andrew's profuse hospitalities?

UNHAPPY MACAO.

ALTHOUGH Timor is to be separated from Macao politically, the latter is called upon to make an annual contribution of \$60,000 to the cost of the administration of the former dependency.

CHESS.

OUR Chess Editor advises us of a correction in the diagram of Problem No. 272, published in our Chess Column of 19th inst. The White Knight, in the centre of the board, should be a Black Knight; and the problem is then in order.

THE SALVATION ARMY IN JAPAN.

ON Wednesday afternoon the new bar, reading, refreshment, and recreation rooms of the Salvation Army, in Honmura-road, Yokohama, were

formally opened and dedicated to their work. The institution should prove successful.

GREENWICH MERIDIAN ADOPTED BY FRANCE.

ACCORDING to a telegram appearing in the Australian papers, a committee of the French Chamber of Deputies has approved of the adoption of Greenwich meridian and the abolition of that of Paris.

SILK.

SILK sold at Yokohama on Monday included 26 boxes to Varenne & Co., No. 236; 16 boxes to Siber, Brenwald & Co., No. 90a.; 28 to F. Herb, No. 76; and 20 boxes to Robison & Co., No. 3.

LADY BULLER.

LADY BULLER arrived at Singapore by the P. & O. steamer *Ganges* at the beginning of December, and was met on her arrival by Admiral Sir Alexander Buller, K.C.B.

THE VOLUNTEER FLEET.

Positive statements are again published by the vernacular press with reference to the volunteer fleet, the building of which is projected by a number of staff officers on the Reserve List. The fleet is to consist of two cruisers of six thousand tons displacement each; six of three thousand tons; fourteen strongly constructed iron steamers, and eight steam-launches. In times of peace, these vessels are to be employed on the American, Australian, Chinese, Korean, and Formosan lines, and in time of war they would be available, gratis, for protecting Japanese merchantmen, or attacking the mercantile marine of the enemy. The capital of the company organized for the purposes of this fleet is to be twenty million yen in four thousand shares of 50 yen each, and steps are to be taken at once to procure subscribers. The head office is to be in Kobe, with branches in Osaka, Tokyo, and Yokohama. It will be observed that the projectors estimate the average cost of their ships at about £35 per ton, which seems very small for vessels of the type contemplated.

OPENING OF THE DIET.

Yesterday (25th instant) the official opening of the Diet took place. The ceremony followed the accustomed routine, with which our readers are already familiar. The Emperor attended in person; was received within the enclosure of the Diet by the Presidents and Vice-Presidents of the two Houses, the Ministers of State, and other high dignitaries; rested for a brief period in the Imperial waiting-room, and then proceeding to the Throne in the House of Peers, read the following speech:—

We hereby perform in person this opening ceremony of the Imperial Diet.

We inform the members of the House of Peers and of the House of Representatives that the relations between Our Empire and the Treaty Powers are more amicable than ever, and that the work of revising the Treaties is about to be consummated.

National defences being the safeguards of peace, We look to see them perfected gradually, with due regard to the adjustment of the national finances.

The condition of Our subjects in Formosa being a matter that greatly concerns us, it is essential that good order should be established there to the full, and that the welfare and prosperity of the island should be promoted.

We have instructed Our Ministers of State to prepare and present the Budget for the 30th fiscal year of *Meiji* and other important projects of law, and We expect that in the discharge of your important duties of State, you will exercise your functions of consent and careful deliberation in such a manner as to satisfy Our desires.

THE NAVAL REGATTA.

The Naval Regatta that took place on the Sumida River on Friday week was a novelty, in the sense that an interval of four years separated it from the last affair of the same kind, and that the whole thing was on an unprecedented scale. Under any circumstances, the present temper of the nation would invest a naval demonstration with importance and interest, but when we add that the Emperor was present and that three Imperial Princes steered in the officers' race, it will be understood that the citizens of Tokyo made a veritable fête of the event. From early dawn they began to throng towards the river, and by nine o'clock the crowds were so dense that the police deemed it wise to prohibit further passage in the direction of the banks, except in the case of persons provided with tickets. The first part of the programme included thirteen races of four boats each, pulled by blue-jackets from men-of-war, from the Gunnery School at Yokosuka, &c. It was arranged that out of the thirteen winners in these races eight—those that had made the best times—should be chosen to row two final races for the championship. This programme was commenced at 8.30 a.m., and by 1 p.m. the last of the thirteen races had been rowed over a course of 2,000 metres, the boats starting opposite the celebrated Yaomatsu restaurant, pulling as far as the Ueyhan restaurant, and thence turning for the return journey. The men rowed well and with the greatest possible pluck, and the enthusiasm of the spectators knew no bounds. The results of these thirteen races were as follow:—

	First.	Second.	Third.	Fourth.
1.—Cutters, Tatsuta.	Takachihō.	Fuso.	Tsukushi.	Kongo.
2.—Giga. Takachihō.	Banjo.	Yokosuka.	Torpedo.	Seamen.
3.—Cutters, Gunnery School.	Banjo.	Musashi.	Tatsuta.	
4.—Giga. Isumi.	Fuso.	Musashi.	Matsushima.	
5.—Cutters, Amaki.	Kongo.	Isumi.	Chiyoda.	
6.—Cutters, Tsukuba.	Yokosuka.	Yayeyama.	Matsushima.	
7.—Giga. Itakushima.	Seamen.	Hashidate.	Saiy-n.	
8.—Cutters, Soma.	Hashidate.	Yokosuka.	Matsushima.	
9.—Giga. Amaki.	Yayeyama.	Seamen.	Heiyen.	
10.—Cutters, Saiy-n.	Yokosuka.	Fuso.	Tsukushi.	
11.—Giga. Chiyoda.	Soma.	Torpedo.	—	
12.—Cutters, Chinyen.	Itakushima.	Fuso.	—	
13.—Cutters, Naniwa.	Takachihō.	Heiyen.	Chinyen.	

At about three-quarters past nine o'clock the Imperial cortège arrived at the residence of Marquis Tokugawa, and after a short rest, the Emperor was conducted by Admiral Marquis Saigō to the temporary stand, especially constructed for the purpose, in front of the Marquis' house. His Majesty was attended by the Minister and the Vice-Minister of the Household, by Marquis Tokudaiji, the Lord Chamberlain, General Okazawa and Major Saito, Military Chamberlains, and other dignitaries of the Household, all of whom had formed part of the cortège. Admiral Marquis Saigō, Minister of the Navy; Vice-Admiral Viscount Ito, Chief of the Naval Board of Command; Rear-Admiral Baron Ito, Vice-Minister of the Navy, and many naval officers had arrived previously to receive the Emperor. Their Imperial Highnesses Princes Komatsu, senior and junior, Arisugawa, Fushimi, Kanin, and Yamashina were also present. The races in the afternoon attracted most interest. At half past 1 p.m. the officers' race began, Prince Yamashina steering the *Chiyoda's* boat, and Princes Kwachō and Komatsu (jun.), in the *Matsushima's* and the *Fuso's* respectively. For about half of the distance the three boats kept close toge-

ther, the *Fuso's* leading by a few feet, and the *Matsushima's*, steered by Prince Kwachō, being last. But as the winning line was approached, the *Matsushima's* crew, responding to a strong appeal from the coxswain, spurred splendidly, and quickly overhauled the *Chiyoda's* amid deafening cheers from the spectators, who watched the progress of the three boats with the greatest excitement. The *Fuso's* officers were not to be denied. They answered Prince Komatsu's call with equal spirit, and despite the powerful efforts of their competitors, drew ahead inch by inch, winning finally by about a length, the *Matsushima's* boat being second with only a slight advantage over the *Chiyoda's*. Donning their uniform, the triumphant crew proceeded to the presence of the Emperor and received from the hands of Commander Nishi a silver wine cup, on which was chiselled a sixteen-petalled chrysanthemum, the Imperial badge. They then had the honour of being congratulated by the Emperor, and at His Majesty's command Lieut. Prince Niijō, who sat at the Sovereign's side, handed a glass of champagne to each of the victors. When they left the Imperial presence and reappeared on the bank of the river, Admiral Marquis Saigō and other Naval dignitaries shouldered Prince Komatsu and carried him round amid loud cheering.

Then followed the two champion races. In the first, the competitors were the Gunnery School's crew, who had won the third of the thirteen forenoon races in 11' 57.5"; the *Chinyen's* crew, whose time in the twelfth race had been 12' 3"; the *Naniwa's*, who had won the thirteenth event in 12' 11.7", and the *Saiy-n's*, who had won the tenth in 12' 3". The *Saiy-n's* crew (originally the Chinese *Chiyuen*) started at a slow stroke, and seemed at first to be out of the race. But it turned out that they were only saving themselves, for when the home reach was commenced they quickened up, and rowing with sustained vigour, passed their competitors, one after another. The race ended in a sharp tussle between the *Saiy-n's* and the Gunnery School's boats, the former winning by less than two feet. Of course such a close fight excited immense enthusiasm. For the second champion race the crews of the *Takachihō*, the *Chiyoda*, the *Itakushima*, and the *Isumi* were chosen on account of their previous performances, and the last won the flag. Each of the champion crews received handsome prizes from the Committee, as well as silver cups from the *Fiji Shimpō*. Various displays of imitation torpedo practice and fights between ships and forts brought the regatta to a successful conclusion at 3.15 p.m., the whole affair having been well organized, and carried through with unflagging vim. His Majesty Emperor contributed a thousand *yen* to the funds.

POLITICAL ITEMS.

The members of the Jiyū Club, a coterie of politicians not included in the ranks of the Liberals but always working with them, are said to have proposed that a vote of want of confidence in the Government should be introduced by the Liberals in the approaching session of the Diet. The proposal was advanced at the recent general meeting of the Liberal Party, but met with strong opposition, mainly—if we

may credit the report of the *Yorodan Choho*—on the ground that no necessity exists to attack the present Cabinet from without, since its disruption by the action of internal forces is inevitable.

It is stated that the documents compiled by the various Local Governors, at the request of the Minister of State for Home Affairs, embodying their views with regard to local administrative reform, have now been received, for the most part, and that they agree in recommending three points:—First, that the powers of local officials should be more clearly defined and the limits of their authority extended, with a view to facilitating the discharge of business. Secondly, that as there will certainly be a large increase of local duties after the Revised Treaties go into operation, the number of officials competent to discharge these duties should be increased. Thirdly, that since the marked rise in the prices of commodities during the past two or three years seriously cripples junior officials, some augmentation of salary should be granted to them.

There is an expectation that the Diet will be asked next session to address the Throne on the subject of the ten-per-cent. deduction to which the salaries of all public servants are subjected for the purpose of Naval expansion. The loss of such a sum presses very hardly on junior officials, whose pay, even if received in full, would barely suffice to cover the cost of very frugal living. The recalcitrant spirit shown by the House of Representatives three years ago, when invited to vote the first considerable appropriation on account of naval expansion, was responsible for the Imperial Rescript ordering that the above amount should be set aside from the salaries of officials, and it therefore devolves upon the Lower House to spare no effort towards remedying the hardship. For a hardship it undoubtedly is. If every Japanese subject were required to contribute ten per cent. of his income for purposes of military expansion, there would be a national uproar of no small dimensions.

DEATH OF MR. PEYTON JAUDON.

With deep regret we announce the death of Mr. Peyton Jaudon, which took place at 9.20 p.m. on Wednesday at his residence, Yamato-yashiki, Tokyo. Mr. Jaudon was in his sixty-sixth year. He had been ailing for a long time, but his illness did not suggest any immediate danger, and when the end came, it was exceedingly sudden, and happily painless. He came to Japan twenty-eight years ago, and after serving for a time with Messrs. Walsh, Hall and Co., accepted from the Japanese Government an appointment which he held until the close of 1895, when he retired on a pension. Few men have worn the white flower of a blameless life more consistently or won more universal respect and regard. The United States Government, at the instance of His Excellency Mr. E. Dun, recently created for Mr. Jaudon's benefit the post of Clerk of the Legation Chancery. He had been decorated by the Emperor of Japan, and he leaves behind him the highest attainable reputation for faithfulness and assiduity. We need scarcely add that the deepest sympathy is felt with his widow and daughter in their bereavement. The funeral services took place at 10.30 a.m. on Saturday, at Trinity Cathedral, Tsukiji, Tokyo.

THE NATIONAL UNIONISTS.

The standing committee of the National Unionists held a meeting on the 17th inst. with closed doors, at which the draft of a manifesto shortly to be issued, was discussed. Mr. Motoda took the principal part in the debate, urging the adoption of the following points:—

- 1.—That the Party should maintain the position it adopted in the 9th session in regard to *post bellum* measures.
- 2.—That the Party pursue a diametrically opposite policy to that of the *Shimpo-to* in regard to the question of the three personal rights.
- 3.—That the Party should consult with the Liberals in the matter of selecting a candidate for the post of President of the Lower House.
- 4.—That the Party meet in secret council to decide upon what policy it should adopt in the event of the Liberals introducing a motion of want of confidence in the Cabinet; and that such policy should be one of support to the Liberal party.
- 5.—That the Party should not blindly support all Government measures, but should exercise discrimination and support or oppose Government Bills according to their nature.

The first and second propositions were carried unanimously; and the third was also decided in the affirmative, though some present urged that Members of Parliament should be left free to exercise their own choice in the matter of electing a President of the Lower House. The fourth proposition was reserved for future deliberation and the fifth was carried without debate. Mr. Yumoto and two others proposed that the Party should open negotiations with the Liberals with a view to introducing the question of lese-majesty in any debate that should arise over the Household Minister's Affair; while other proposed that questions be put to the Government in regard to the matter of the public pledges given by the Cabinet on the morrow of its installation. No definite conclusion was arrived at with reference to either proposal. Mr. Arai Go reported upon the circumstances and reasons for Count Kabayama's call on Viscount Shinagawa; and then Mr. Shirane Senichi, ex-Minister of Communications, advised the Party not to advocate the rescission of the suppression and suspension clauses of the Press Law.

On Sunday the Party held a general meeting at which Viscount Shinagawa and Messrs. Sassa and Motoda delivered speeches. The Viscount observed that the essential principles of the party were based neither on personal rights nor on the English system of politics, by which the Sovereign enjoys no actual power. The National Unionists were in all particulars in accord with the national characteristics of the Japanese political system. Some folks pretended that politics belonged by right to two parties only—the Liberals and the Progressionists—and wondered at the Nationalists springing into existence and keeping aloof from either. The Viscount warned his adherents not to be duped by smooth words and flattering promises, but to be on the alert against being drawn into the dangerous vortex of internecine politics. Yet they must ever keep in view the watch-words of the party "the tri-partition of politics," fearing no one, but boldly advancing without having to turn to anybody for assistance by the way.

Mr. Sassa observed that the Unionists must ever preserve a cordial union—that was the distinguishing characteristic of the Party. Mr. Motoda's address was to the effect that the Party should endeavour to promote the true interests of the coun-

try and never allow itself to be dragged into petty party squabbles.

The following is the manifesto passed in general meeting by the Party:—In accordance with the principles of nationalism, the Party has maintained a positive and constructive policy while other parties have identified themselves with a negative or destructive line of conduct. When the War broke out between Japan and China, the National Unionists took the lead in bringing about firm coalition between the people and the Government, thereby enabling the latter to conduct its warlike operations unchecked by fear of domestic disturbances. The result was an unprecedented and glorious triumph for Japan. That the complete building of the mound of that grand achievement could not be consummated because of the lack of a cart-load of earth, owing to the defective measures drawn up by the Government of the day, is to be extremely regretted; and impelled by the alarming developments at home and abroad, the Party now devotes its undivided attention to perfecting the *post-bellum* measures. These it earnestly supported in the 9th session of the Diet. The policy outlined by the present Cabinet does not apparently differ materially from that entertained by the National Unionists; yet, on second thoughts, it will be found that the Cabinet's terms are vague and slippery, while some of its practices cannot be reconciled with the policy of the Unionists. This remark is specially applicable to the Government's attitude in regard to the expansion of national armaments and national industry, the present scope of which it apparently considers to be too extensive. The Party, however, will not lay down any hard and fast course with regard to these affairs, but will exercise a nice discrimination in deciding which measures ought to be supported and which opposed. In conclusion, the Manifesto dwells on the dangers menacing the country from outside, and declares that the Party will boldly urge on the realization of the schemes it has just dictated.

The above report is taken from the columns of the *Nippon* and the *Yomiuri*. But the *Chuo*, which is the organ of a section of the National Unionists, declares that the standing Committee of the Party did not hold any secret meeting on the 17th instant, and that the proposals alleged to have been made by Mr. Motoda on that occasion exist only in the imagination of the *Yomiuri* and the *Nippon*, which journals the *Chuo* roundly accuses of having wilfully fabricated the story.

ENFORCEMENT OF THE REVISED TREATIES.

The *Nippon* raises 34 doubtful points in connection with the practical operation of the Revised Treaties. We note only those more or less pertinent. The first and second questions relate to naturalization and the rights of naturalized persons. The *Nippon* asks whether the Government intend to put into operation the Naturalization Law that was drafted and submitted to the second session of the Diet, or whether they contemplate drafting a new law. In the former Bill, naturalized persons were not allowed to become Ministers of State, Field-Marsals, or Privy Councillors, but might be elected members of the Diet after ten years' resi-

dence in the Empire. Are no other restrictions to be put upon them with regard to other public functions? Many questions arise in regard to landed property also. In the first place, in Yokohama, Kobe, and other Treaty Ports, municipal expenses will be considerably augmented owing to the incorporation of the existing concessions into the Japanese communes; but the brunt of the increased burdens will have to be borne by Japanese subjects, inasmuch as the lands to be incorporated belong to the Government and are let by the Government at rates very much lower than the rates at which land in the Japanese communes are assessed. The matter of rent constitutes another difficult problem, for whereas the market price of land is steadily rising at all tradal centres, the leases of land held by foreigners in the settlements are unalterable, and as time goes by, the discrepancy between the terms embodied in these leases and the terms demanded for adjacent land in the Japanese communes, must grow more and more marked. The right of holding or leasing land for business purposes is clearly acknowledged in Art. III. of the Anglo-Japanese Treaty. Is this privilege applicable to such places as Hokkaido or Formosa, where natural resources are not yet fully developed; or are such places to be specially reserved for Japanese subjects?

Then, in recognizing the right of foreigners to lease land for business purposes, no special provision is enacted as to the limit of time or area. Again has the Government inquired into the amount of the funds held by the municipalities in the settlements, and has it obtained any trustworthy information as to the sums to be transferred on the eve of carrying the Revised Treaties into operation? Subsequently to the operation of the new Treaty, British Colonies, so long as they do not accept the Treaty, must be treated as subjects of non-Treaty Powers. But will it be possible to rigidly discriminate between them and subjects of Great Britain proper, when the former come to Japan simply as Englishmen? Are the relative positions that British Colonists and Japanese subjects in the matter of Customs duties duly recognised? As to the right and freedom of prosecuting business, the Treaty provides only for wholesale business and retail business, whereas Art. II., of the Chapter of Persons in the Amended Code provides that foreigners are to enjoy all individual rights not prohibited by law or Treaty. Does not the existing law prohibit the conduct of several kinds of business by foreigners? Are foreigners entitled, for instance, to carry on banking affairs? Is it not necessary to appoint interpreters in Courts of law and other central or local offices to deal with questions relating to foreigners, and are charges to be levied on foreigners to defray the cost of such interpreters? Or is the Government about to provide facilities to enable foreigners to acquire the Japanese tongue without inconvenience? Or are the Japanese rather to be encouraged to study English? Suppose that a foreigner living in Japan and possessing property at home is declared bankrupt by a Japanese Court, are his Japanese creditors entitled to extend the judgment to his property outside Japan? On the other hand, is a decree of bankruptcy pronounced by a home court against a foreigner living in this country to be held valid by a Japanese Court? If so, are not Japanese creditors liable to incur

heavy loss? Is a branch office established in Japan by a foreigner who has his head office at home to be acknowledged only after it has undergone registration in conformity with Japanese law? In Yokohama alone there are five or six journals edited by foreigners: are these to continue to be published after the enforcement of the Revised Treaties? As the law of the land permits the publication of papers by Japanese subjects alone, may not these foreign papers be prohibited? Or is their publication to be left untrammelled if Japanese are registered as their publishers? Is a distinction to be made in prisons between Japanese and foreign prisoners? Are the Japanese police to deal with foreigners exactly in the same way as they deal with Japanese, or are the police regulations to be more or less amended? Matters relating to Christian Churches, funeral services, and so forth, are now subjected to no kind of restraint. Buddhist and Shinto priests have their rights restricted in the matter of election and so forth, but no such treatment is extended to Christian priests. Are such things to be left in their present state? Schools established or maintained by Christian missions or foreigners receive only nominal recognition from the Government at present. Is it not necessary to place them under more strict control, for the sake of unifying national education and for the sake of drawing a line of demarcation between religion and education? Such are the chief questions propounded by the *Nippon*. We give them as they stand, with comment or reply of our own.

THE PRESIDENT OF THE HOUSE OF REPRESENTATIVES.

On the 22nd instant the House of Representatives assembled for the purpose of choosing three names for submission to the Emperor in order that His Majesty might nominate one of the three to the post of President, *vice* Baron Kusumoto, whose elevation to the peerage makes it impossible for him to officiate any longer in the Lower House. The result of the first ballot was:—

	Votes.
Mr. Hatoyama Kazuo (formerly of the <i>Kaishin-to</i>)	138
Mr. Kono Hironaka (<i>Fiyu-to</i>)	125
Mr. Suzuki Shigeto (formerly of the <i>Kakushin-to</i>)	124
Mr. Sassa Tomofusa (National Unionists)	52
Mr. Motoda Hajime (do do)	16
Mr. Shimada Saburo (formerly of the <i>Kaishin-to</i>)	6
Mr. Ohgashi Giteisu (formerly of the <i>Kakushin-to</i>)	5

The number of members present and voting being 287, none of the above candidates had a plurality. A second ballot had therefore to be taken. It resulted as follows:—

	Votes.
Mr. Hatoyama	140
Mr. Kono	128
Mr. Suzuki	44
Mr. Sassa	40
Mr. Motoda	23
Mr. Shimada	18

The first three names were sent up to the Emperor, and it may be taken for granted that Mr. Hatoyama will be nominated. The House has certainly made a most excellent choice. Mr. Hatoyama is a man of high attainments and proved ability. We had occasion to criticize his parliamentary action with regard to the *Chishima-Ravenna* case, but party feeling probably influenced his judgment in that

matter. Mr. Hatoyama is a native of Tokyo, and a prominent member of the Bar. He is also President of the Waseda College. In 1875, he was sent by the Department of Education to study in America; and in 1877 he took his degree as Bachelor of Law in Columbia College, and in the following year he obtained the diploma of Doctor of Civil Law. Returning to Japan, he served as a teacher in various schools, and became a lecturer on law in the Imperial University. Subsequently he qualified as a barrister, and in 1885, he received the appointment of Assistant Chief Secretary in the Foreign Office, and, at a later date, that of Director of the Translation Bureau. He abandoned official life on Count Okuma's retirement in 1889, and devoted himself to legal practice, as well as to his duties as President of the Waseda College, to which position he was nominated in 1890. Two years later he stood for one of the districts of Tokyo and was duly returned, after one defeat, to the House of Representatives, where he has showed himself a powerful debater and a skilful tactician.

Recent experience has shown that the result of the presidential election in the Lower House can not be taken as an indication of the House's political colour. Baron Kusumoto stood at the head of the poll when the Liberals, his opponents, commanded a distinct majority. The individuality of the candidate seems to have a good deal to do with the House's choice. We judge from the voting recorded above that the National Unionists did not support either the candidate of the Liberals, Mr. Kono Hironaka, or the candidate of the Progressionists (*Shimpo-to*), Mr. Hatoyama Kazuo. No indication is furnished, therefore, as to the attitude of the Unionists in the session now about to open.

GOVERNMENT DELEGATES.

The following Government Delegates have been Gazetted:—Mr. Komuchi Tomotsune, Chief of the Legislative Bureau; Mr. Komura Jyutaro, Vice-Minister of Foreign Affairs; Mr. Kawasaki Hiroyoshi, Secretary of the Foreign Office; Mr. Matsudaira Seichoku Vice-Minister of Home Affairs; Mr. Furuichi Koi, Chief of the Civil Works Bureau; Mr. Misaki Kame-nosuke, Chief of the Local Administration Bureau; Mr. Terahara Nagateru, Chief of the Peace Preservation Bureau; Baron Tajiri Inajiro, Vice-Minister of Finance; Mr. Matsuo Shiujen, Chief of the Accounts Bureau; Mr. Megata Tanetaro, Chief of the Taxation Bureau; Mr. Komai Jyukaku, Chief of the National Debts Bureau; Mr. Soyeda Juichi, Secretary of the Department of Finance; Baron Kodama Gentaro, Vice-Minister of War; Baron Noda Itsu, Chief of the Supply Bureau; Capt. Nakamura Yujiro, Chief of No. 1 Military Affairs Section; Mr. Yagu Kazuyoshi, Councillor of the Department of War; Baron Ito Shunkichi, Vice-Minister of the Navy; Baron Kawaguchi Takesada, Chief of the Supply Bureau; Mr. Yokota Kuniomi, Vice-Minister of Justice; Mr. Iwahara Seichi, Secretary of the Department of Justice; Mr. Makino Shinken, Vice-Minister of Education; Mr. Koba Teicho, Chief of the Primary Education Bureau; Mr. Nagai Kyuichiro, Secretary of the Department of Education; Mr. Kaneko Kentaro, Vice-Minister of Agriculture and Commerce; Mr. Fujita Shiro, Chief of the Agricultural Bureau; Mr. Takahashi Takuya, Chief of

the Dendrological Bureau; Mr. Ando Taro, Chief of the Commerce and Industry Bureau; Baron Suzuki Taizo, Vice-Minister of Communications; Mr. Matsumoto Soichiro, Chief of the Railway Bureau; Mr. Nakahashi Tokugoro, Secretary of the Department of Communications; Baron Kitagaki Kunimichi, Vice-Minister of Colonization; Mr. Nomura Seimei, Chief of the Southern Bureau; Mr. Sone Shizuo, Chief of the Northern Bureau.

THE INVENTOR OF THE *JIN-RIKISHA*.

There has always been uncertainty about the inventor of the *jinrikisha*. Some claim the honour for a foreigner, others, for a Japanese. The foreigner in question was a man in holy orders, whose life reflected no great lustre on his cloth, at all events when he ministered to sick souls in the East, but who nevertheless possessed shrewdness and the art of self-assertion. The author of "Young Japan" very confidently ascribes the "man-pull-cart" to this practical missionary, and we are not prepared to deny the assertion, though we can clearly remember that no mention of any such exercise of foreign ingenuity was heard until long after the success of the *jinrikisha* had been assured. The Japanese have always maintained that one of their nationals hit upon the happy idea. His name is Izumi Yosuke, and he is now again brought into prominence by the fact that a project is on foot to obtain a pension for him. It appears that whether Izumi Yosuke invented the machine, or whether he merely worked out an idea furnished by an American missionary, the application for official permission to commence the trade of *jinrikisha* drawing was made in his name, and in the names of two associates, Kozuke and Tokujiro. In those days, laws for the patenting and protecting of inventions did not exist, and in a very brief period thousands of persons were earning a livelihood by means of Izumi's device. When the Patents Law was promulgated, Izumi applied for the registration of his invention, but by that time the *jinrikisha* had passed into public use not only in Japan but also abroad, and the provisions of the new Law did not sanction the recognition of patent rights under such circumstances. Izumi does not appear to have profited much by his ingenuity. He is now in very straitened circumstances, and the idea is that as a public benefactor the nation should do something for him.

PARTY STRENGTH IN THE DIET.

The *Nippon's* estimate of the division of parties in the Lower House of the Diet this session, is as follows:—

<i>Shimpo-to</i> (Progressionists)	99
<i>Gin Club</i> (Parliamentary Club)	25
Business Men	13
Independents	10
Total	147
Liberals (<i>Fiyu-to</i>)	100
National Unionists	30
Kishu Section	8
Independents	5
Total	143
Unclassed Independents	7
Grand Total	297

Government supporters.

Government opponents.

ECONOMIC TOPICS.

The Railway Council has arrived at a definite conclusion as to the policy that it ought to pursue with respect to the granting of charters to private railway companies. Mr. Shibuzawa Eiichi, who was chairman of the Committee specially appointed to investigate the subject, reported the result of the Committee's investigations. The report states that an undertaking can be projected only when the necessary funds are forthcoming, and no undertaking that is not so circumstanced can be carried into practice; that capitalists who start an undertaking have their own views on the matter, and therefore it is injurious to fix an arbitrary standard and to make them conform with it; that there is no occasion at present on the part of the Government to raise a big loan and thus put a check on the people's enterprises; therefore, the Committee decides that charters should be granted for private railway projects in strict accordance with the Railway Regulations. This report was endorsed by the Council, and the Council has decided to keep to the original liberal policy in the matter, issuing charters for all projects that are not at variance with the Railway Regulations.

In Yokohama there are about 40,000 bales of silk awaiting purchasers, while at the same time stocks of miscellaneous commodities are also far greater than in ordinary years. Again, imported goods fail to find purchasers and are stored away in godowns. The only parties that are enjoying any profit are insurance companies and owners of godowns.

A panic is reported to have overtaken the weavers of Nishijin, Kyoto, as a result of having dabbled thoughtlessly in business enterprises or having speculated in silk. More than twenty weavers are on the verge of ruin, and a few have already gone under, unable to keep their heads above water any longer. Bankers refuse to advance money to them.

AGITATION FOR THE FREEDOM OF THE PRESS.

The Cabinet has repeatedly held conferences about the amendment of the Press Law, but has not yet, it is said, come to any definite conclusion. Tokyo papers report that Ministerial opinions are divided on the subject, the Premier, Marquis Saigo, Count Okuma, and Viscount Takashima being in favour of totally abolishing the obnoxious clauses relating to suppression and suspension, whereas Count Kabayama, Marquis Hachisuka, Viscounts Enomoto and Nomura, and Mr. Kiyoura declare that the clauses must be retained so far as concerns matters connected with the Imperial Court, diplomatic and military secrets, and public morals.

If the Cabinet's opinions are divided on the subject, lack of cordial unity is betrayed by the Press League also, though it has been organized expressly for the purpose of agitating for the total abolition of the clauses in question. Moreover, a diametrically opposing position is assumed by the *Nichi Nichi* and the *Chuo*. The *Yomiuri*, always a most earnest advocate of press emancipation, invites attention to the existence of dissensions among the League. It professes its belief that the *Tokyo Asahi* and the *Nippon* are acting

in opposition to the spirit of the League, and have shown signs of playing the rôle of trimmers. So excited is the *Yomiuri* about what it considers treachery on the part of these two papers—which, by the way, are understood to be more or less open to persuasion by Mr. Takahashi, Chief Secretary of the Cabinet, that it loudly denounces them and even urges the League to strike their names off the list. The cause of this indignation on the part of the *Yomiuri* is to be found in leading articles published by them since our last weekly summary was printed. The *Nippon* argues that a problem originally belonging to the region of theory, must undergo more or less modification when carried into the field of practice; that the procedure of the present Cabinet, though not absolutely satisfactory, is gradually approaching the ideal of perfection; that the intention of the Ministry to comply, at least in form, with the demand of public opinion in the matter of amending the Press Law, is worthy of all praise, quite apart from the questions whether the proposed amendments are full or defective, whether the new system is of a wholesome or unwholesome character, and whether the Authorities can succeed in their attempt.

We thought it strange, observes the *Yomiuri*, criticizing the above article, that the tone of the usually uncompromising *Nippon*, should have lately become moderate all of a sudden. Our surprise is deepened when we find the *Nippon* now declaring, in effect, that the amendment Bill framed by the Government, whether defective or unwholesome, should be welcomed and endorsed provided only that it shows an improvement, however small, over the existing Law. No words can convey the astonishment that such utterances evoke. Like the writings of the *Nichi Nichi* and *Chuo*, they are calculated to impair the extension of the rights and liberty of the subject, and are moreover entirely at variance with the position that the *Nippon* assumed only a few days previously. As to the academical distinction between ideal and practical problems, the *Yomiuri* has nothing to offer but scorn and scoffing. It advises the Press League to strike the name of the *Nippon* from their list. With equal vehemence the *Yomiuri* traverses an article published by the *Tokyo Asahi* on Saturday last. It declares the *Asahi's* writing to be deficient in strength and perverse in tone, for according to the captious *Yomiuri*, that journal's arguments may be construed in the sense that since the advent of the present Ministry was welcomed primarily because of the hope that it would arrange the *post bellum* measures in a suitable manner, therefore the question of amending the Press Law is subordinate and need not be viewed as crucial.

This division of the house against itself does not augur well for the immediate success of the press-emancipation movement. But we confess that, for our own part, we have never anticipated immediate success. Frankly speaking, we can not think that Japanese journals have qualified for the privilege they demand. The best among them do not themselves think that the suspension and suppression clauses can be safely abolished as yet. After all, it is not a question so much of the existence of such a law as of the manner of its application and the conduct of those that suffer by it. Take the case of a journal like the *Yiji Shimpō*. It says, everything that it wants to say. Its

writings do not show a shadow of restraint, and it commands more influence than any journal in Japan. But it is never suspended. That it takes an independent line, no one can deny. Sometimes its criticisms of the Cabinet in power are most trenchant. Yet the Administration does not interfere. Why should not all Japanese journals try to follow the *Yiji Shimpō's* example? Do they imagine that public opinion is swayed more effectively by violent intemperance than by well marshalled arguments couched in quiet, reasonable language? We can discover no great hardship in a law under which really creditable and responsible journals like the *Yiji Shimpō* pursue the even tenor of their way, neither harrassed by censors not disturbed by the police. The *Yiji's* history proves that not the law is in fault but the newspapers.

EDUCATIONAL ITEMS.

The establishment of the High Educational Council has been proclaimed at last by an Imperial Ordinance issued on the 18th instant. The chief function of the Council is to formulate its views on educational matters, either in obedience to a request from the Minister of Education or of its own motion. The Council is to be composed of the following personages:—The President of the Imperial University, Presiding Professors of the Colleges of the University, Chiefs of Bureaux in the Department of Education, Directors of the Higher Normal Schools, of the Higher Commercial School, of the Tokyo Technical School, and of the Tokyo Fine Arts School, one principal of a Higher School, and scholars and educationists whose number shall not exceed seven. In all, therefore, there will be about 21 members. The proceedings of the Council are to be conducted with closed doors; the term of membership is to be three years; the Chairman is to be nominated from among the members by the Minister of Education subject to the approval of the Emperor, and each member is to receive an allowance not exceeding 300 yen per annum. The Ordinance goes into effect from April 1st, 1897.

The trouble at the Nagoya High School has been settled. A representative of the students apologized to the Director and the staff for the insubordinate acts into which the students had been betrayed, and the lads, including those that were dismissed at the beginning of the complication, were allowed to return. On the other hand, the Faculty agreed to dismiss the teachers with whom the students were dissatisfied, so that the victory seems to have rested entirely with the students.

Mr. Inouye Enryo, a graduate of the Imperial University, an eminent philosopher and a prominent figure in the Hongwanji Reform Agitation, published, a few days ago, an article denouncing as utterly contemptible the fundamental theory of Japanese geomancers that the *kimon*—literally "devil's gate," but used in the sense of "north-east"—is a most inauspicious quarter, and that people must never make their houses face in that direction, or commence a journey towards it, and so forth. The idea is that an evil spirit has its abode in the north-east, and that the demon's wrath is to be apprehended by any one venturing to confront him. It is a very old superstition in Japan, and still retains a deep hold on the minds of ordinary folks. Mr.

Inouye demonstrates the absurdity of the idea, and alleges that he has had his houses built specially fronting the tabooed quarter, and that he has purposely neglected the warning whenever undertaking a journey, yet nothing unlucky has happened to his buildings or to his person. On the very next night after the publication of his article, fire broke out in one of the rooms of the Philosophical Institution presided over by Mr. Inouye, and burnt it down, as well as a school in close proximity. The cause of the disaster is unknown, but some suspect that the fire was kindled by one of the geomancers whose means of livelihood were jeopardized by Mr. Inouye's attacks.

Hitherto the educationists of Japan have been divided into two camps, namely, the Japan Educational Society and the National Educational Society, and the relations between the two have not been very cordial. The leading members of the Societies have long perceived the advisability of amalgamating them into one body and as the idea is generally approved, the principal members recently met at the residence of Prince Konoye, President of the Japan Educational Society, and decided to convocate an extraordinary general meeting of the Society on the 20th inst. to discuss the question.

The relation between the Peers' School for Boys and the Peers' Club has been modified. Hitherto the latter had been in the habit of contributing a considerable sum every year to the School Fund, but the managers of the Club, as well as prominent peers like Princes Konoye, Shimazu, and Niijo thought that since the system of the institution had been changed in the sense of admitting the sons of untitled persons, there was no reason to extend annual financial aid. In lieu of such aid, however, they proposed that the Club should give one half of its accumulated fund (now amounting to 700,000 yen) to the school, and thenceforth sever all pecuniary connection with the latter. This change having been submitted to the Peers' meeting held on the 13th inst., was adopted.

TOKYO THEATRES IN TROUBLE.

Tokyo theatres never seen to be able to free themselves from troubles, of a pecuniary description. The Kabukiza was turned into a joint stock concern with a view to guaranteeing its financial stability, but already it has incurred a loss amounting to several thousand yen, and internal dissensions among its Directors have culminated in the resignation of Mr. Minagawa, the President of the Company. Mr. Inouye, a relative of Countess Goto, and Mr. Miyake, a steward of Count Goto, were the originators of the scheme, and Mr. Minagawa subsequently joined them. They at first intended to buy the theatre from Mr. Chiba, who owned it, but as they lacked funds to carry out this project they decided take advantage of a mania that afflicted the public at the time and to turn it into a joint stock concern. This plan succeeded and subscribers were forthcoming. The original proprietor consented to transfer it for 55,000 yen, but Messrs. Minagawa and Inouye defrauded the shareholders and entered the price at 75,000 yen, pocketing the balance between them. Before the Company had been duly sanctioned by the Authorities, the two undertook one theatrical representation with the

funds that the projectors had raised from the intending shareholders by way of security. The performance brought in a profit of 5,000 yen, and this also was pocketed by the two persons named. But trouble came and a split took place, their apparent cordiality being brought to an end on the nomination of Mr. Minagawa as President, for Mr. Inouye was under the belief that he, who had taken considerable trouble for the consummation of the enterprise before Mr. Minagawa joined it, was much more entitled to the chair. Mr. Inouye was simply appointed a Director, but he resolved to disagree with the President on every possible occasion and to make the seat too hot for him. The selection of pieces presented since the establishment of the Company was carried through by Mr. Inouye in the teeth of the President, who declared that the pieces selected would fail to draw good houses. This prediction proved correct, and the Company incurred a loss of some 5,000 yen. Mr. Minagawa intended to avail himself of the knowledge he possessed to "bear" the shares, but in this his rival thwarted him and managed to rule the quotations, so that the shares Mr. Minagawa had booked in the Company's ledger dwindled to small value. Fearing, then, that if his rival and the latter's followers demanded and convoked an extraordinary meeting, a vote of want of confidence in the President might be expected to follow, Mr. Minagawa, rather than be placed in a humiliating position, resolved to resign, and has now been succeeded by one of his rival's friends. But Mr. Minagawa possesses a sharp weapon with which to wreak revenge on the Company. While he was President he received from Mr. Chiba a note transferring to his control the ground on which the theatre stands. Therefore, if he buys the ground and charges an exorbitant rent to the Company, the latter will find it difficult to continue its business.

Other theatres in trouble are the Ichimura-za, the Haruki-za, and the Kawakami-za. The proprietors of the first were not punctual in the payment of their ground rent and fell several months in arrear. The result was that the landowner prosecuted them in a law court and proceeded to tear down the theatre for removal elsewhere while a performance was actually going on. The same trouble has overtaken the Kawakami-za: it too, is in danger of being demolished, though it was built only this summer. The proprietor of the Hongo theatre also is in pecuniary distress and is flying hither and thither, pursued by his creditors. Other theatres of less note are no better off financially, and thus all the theatres in the capital may be said to be tottering towards bankruptcy. It is high time that some resolute steps be taken with regard to theatres in Tokyo, so that people may have entertainments uninterruptedly and at a fair charge. The charge now imposed at the principal theatres is too high, considering the scale of living in Japan.

THE PRESIDENT OF THE HOUSE OF REPRESENTATIVES.

His Majesty the Emperor has been pleased to nominate Mr. Hatoyama Kazuo to the post of President of the House of Representatives. Mr. Hatoyama proceeded yesterday to the Palace, and was nominated direct by the Emperor.

OBJECT LESSONS.

One bubble railway company has burst, bringing its principal promoter within the purview of the law. The story of this company-swindle is well worth the telling. Tashiro Tanshi, a native of Fukuoka, conceived the idea of turning the railway-mania to his own account, and laid plans accordingly. He drew up a scheme of a railway some three miles in length, that should run between Hakodate and Shimonnokawa, and fixed the capital of the undertaking at yen 250,000. This he proposed to raise in 5,000 shares of yen 50 each. The scheme, when published in Hakodate, failed to attract investors, and Tashiro accordingly came up to Tokyo where he expected the monied public to be more credulous. In this he was not mistaken, and very soon he managed to get 1,500 shares applied for; the other 3,500 he placed to his own account. Then a temporary charter was obtained from the authorities, in October, 1895, and by April following he had the satisfaction of seeing this made permanent. Accordingly, in the next few months he called up 18 yen on every registered share, thus obtaining a sum of 95,000. Months passed away and yet nothing was done towards constructing the proposed railway. Eventually the shareholders grew suspicious and demanded the calling of an extraordinary meeting. Tashiro flatly declined to listen to their request, and as he nominally held an overwhelming majority of the shares he could always have outvoted them had the meeting come off. Meanwhile, the wronged and deluded shareholders formed themselves into the "Hakodate Railway Tashiro Enquiry Company," and set *Soshi* to watch the movements of Tashiro. When they had collected enough evidence to suit their purpose, the shareholders brought a suit, in the Tokyo Local Court, against Tashiro, charging him with embezzlement. Tashiro has since been arrested and now awaits trial.

Another instructive story relates to the now notorious Seiwa Railway Company. This Company was established at Matsusaka, Ise, with a capital of yen 3,600,000. Dissensions broke out among the Directors soon after the affair was floated, and eventuated in two distinct boards of Directors being elected by the shareholders who ranged on either side. The *personnel* of the Boards were changed three times without any appreciable calming of the disturbance, and then one board prosecuted the other for illegal proceedings. The case was heard in the Local Court at Ise, a verdict being given in favour of the plaintiffs. What will become of the Company nobody ventures to predict.

THE BILL FOR AMENDING THE PRESS LAW.

The *Mainichi Shimbun* says that a hot altercation took place at the Cabinet Council on the 21st instant between Count Okuma and Count Kabayama, the subject of discussion being the amendment of the Press Law. A decision was finally reached, but our contemporary says that the Government have decided not to reveal it until the Bill embodying the proposed amendments is actually submitted to the Diet. If that be the case, the obvious inference, as the *Mainichi* justly observes, is that the liberal members of the Cabinet have not been able to effect everything that they desire.

THE SPINNING INDUSTRY AND ITS OPERATIVES.

Trouble has arisen between the Hyogo Branch of the Kanagafuchi Spinning Mill and other factories in the Kei-Han districts, in connection with the alleged decoying of operatives by the Hyogo factory. Twenty-five mills have decided to boycott the latter. The mills that complain of suffering from foul play at the hands of the Hyogo Branch allege that, from about May of this year, they became aware of the treacherous practice, and found that the Hyogo Mill was in the habit of sending, hither and thither, agents who, under various disguises, contrived to get at girls employed in other mills and decoy them away. These secret agents succeeded so well with their work that one mill lost 10 girls in a night. The agents pursued the business with zeal, as may be inferred from the fact that their employers promised them a reward of from 3 to 5 yen for each girl brought to the Kanagafuchi mill. The other factories became alarmed, and decided to place guards on the highways leading to Hyogo, so that operatives might be intercepted *en route* for the Hyogo Mill. The latter, however, was equal to the occasion. It caused its agents to conduct the girls by circuitous routes, and the efforts made by the other mills to intercept them proved fruitless. On the 25th ult., the Osaka mills convoked a special meeting to consider the question of dealing with their unscrupulous competitor, and at the same time they decided to despatch men to the mills in Okayama, Nagoya, Miye, and Wakayama to inquire whether they also were not suffering by the proceedings of the Hyogo factory. It was ascertained that these mills had fared no better, and that already they had received 30 letters of apology from the Hyogo mills asking forgiveness for having decoyed operatives. At last the mills that found themselves inconvenienced by the practices of the Hyogo factory, decided to place the matter formally before the Spinners' Union. In a written communication addressed by them to the Office of the Union, they averred their belief that out of some 3,000 girls now working in the Hyogo factory, the great majority had been procured from other mills by unfair practices. The commissioners and advising barristers of the Union held a council on the 18th inst., and considered what measures should be adopted towards the offending mill, which we may mention, has never belonged to the Union. They decided that the 25 mills robbed of their girls by the Hyogo factory must warn the merchants with whom they were accustomed to transact business that all relations with them would be severed if they dealt with the Kanagafuchi Mill, and they resolved, further, to demand from the Hyogo Mill the surrender of the girls decoyed. It is said that in order to provide against the escape of the girls, the Hyogo Mill has stopped them from leaving the premises, and is organizing various amusements for them within the precincts of the factory.

These singular proceedings form an interesting chapter in the history of Japanese industrial development. Perhaps the most striking feature of the story is the apparent absence of any independent initiative on the part of the female operatives. They are decoyed from one factory to another; conducted to their destina-

tion by circuitous routes, guards being posted by other factories to intercept their passage along the main roads; confined within the precincts of their new place of work, and treated, altogether, like inanimate chattels rather than sentient beings. Still more singular to the ordinary mercantile mind will appear the defensive measure adopted by the suffering mills. They inform their clients, the purchasers of their products, that no more sales will be made to them unless they refrain from all dealings with the offending factory. In some countries such an announcement would have the effect of driving purchasers to the Kanagafuchi mill. But it will not be so in Japan. If the Kanagafuchi folks have transgressed the peculiar and comprehensive canon of conduct known in this country as *giri*, not merely those that have suffered directly by the transgression, but also those that can help to correct it, will feel bound to unite for that purpose. According to the ethics of trade in the West, the managers of the Kanagafuchi mill have not been so greatly to blame. To entice the servant of another to enter one's own employ is an act to which few respectable merchants or manufacturers in Great Britain, at all events, are willing to have recourse. But the conditions in the West are somewhat different from those existing in Japan. The middle-man plays a much more important rôle in this country than he does in either Europe or America. Without any close scrutiny into his methods, large use is made of his services, the results alone being considered. Just as there are agents elsewhere who procure a supply of emigrant labour for some foreign country, and whose emigrants are employed in that country without any query as to the means by which they were originally induced to go abroad, or the duties they abandoned for the purpose, so there are middle-men in Japan who undertake to find servants or work-people for every form of employment, and if the manager of a spinning factory simply announces to these middle-men his willingness to pay a certain premium for every skilled operative brought to his mill, leaving all details of contrivance to the middle-man, other factories, less enterprising, are not unlikely to find their employes leaving them at the instance of the middle-man. The facts of the present case seem to be that the mills belonging to the Spinners' Union rely on the force of combination to avert competition, and to retain their supply of operatives without increasing the latter's emoluments in proportion to the development of the industry's prosperity; whereas, the Kanagafuchi factory having declined from the outset to join the Union, is fighting for its operatives with whatever weapons it can command. Combination among employers means, of course, combination, by and by, among employes also. Japan has her industrial troubles before her. They are coming very close.

A REMEDY FOR CONSUMPTION.

The *Hochi Shimbun* recently published a note lauding in high terms an alleged new remedy for consumption. It stated that Dr. Hori Gentoku, a graduate of the College of Medicine of the Imperial University, and President of the Consumption Hospital, Yagenbôri, Nihonbashi, had succeeded in discovering a cure for consumption; a remedy, which, if properly ap-

plied, would restore to health even patients whose cases had been given up as beyond cure. The *Hochi Shimbun* alleges that the Doctor is a native of Oshima, Kagoshima Prefecture, and has for a long time been investigating the history and pathology of leprosy and consumption. He was employed in the Okinawa Hospital from 1882 to August of this year, when he came up to Tokyo and began to practise. While in the Riukiu Islands, Dr. Hori prosecuted his favourite investigations, and more especially possible remedies for leprosy. In Miyako-jima he found a leper village and at once assumed charge of more than 300 lepers. On these poor people he experimented with various medicines, and at last succeeded in discovering a certain combination that was specially efficacious in curing the dread disease. He then tried it with lepers outside the village and found it equally efficacious. We are not told whether the doctor succeeded in restoring all the 300 lepers to normal health. The results of his investigations were printed in a pamphlet published in 1886. It was while conducting investigations in leprosy that he was accidentally led to discover a remedy for consumption. In 1889, while working on the pathology of consumption, he himself was taken ill with the disease. Then the doctor determined to sacrifice his body for the benefit of humanity and tried experiments upon himself. It seems that he was successful, for we are told that the experiments were completed by May of this year. Nothing is said as to the nature of the medicine beyond the conjecture that it is a vegetable substance. Mr. Hori told the representative of the *Hochi* that the materials used in obtaining his medical compound are very abundant in Riukiu and Formosa, and while searching for them he explored extensively the woods of Okinawa. The doctor further said that up to the present 95 persons, out of one hundred subjected to the cure, had been restored to complete health. Slight cases can be cured in three weeks; those of a more serious nature in about three months. The remedy is efficacious even when six-tenths of the lungs have been lost, but a graver case than that would be beyond the reach of the medicine. The *Hochi* gives the names of several patients that have been saved by Dr. Hori. We quote this notice for what it is worth, and do not vouch for its authenticity.

SHIPBUILDING PROSPECTS IN JAPAN.

The *Oriental Economist* writes in a pessimistic strain about the employment of foreign-built vessels by Japanese companies and the prospects of shipbuilding in Japan. Commendable as is the enterprise of the Nippon Yusen Kaisha, observes this tri-monthly journal, in opening regular services to Europe, America, and Australia, it is exceedingly doubtful, as things stand, whether the Company's efforts will succeed. This doubt is based on the striking contrast afforded as to speed, comfort, and general accommodation by the Company's steamers and those of other steamship lines trading on the same routes. In the first place, the steamers of the Yusen Kaisha now used for ocean service are cargo boats with speed and so forth not capable of being compared with the mail steamers of other companies. Nor are the steamers that the same company has

ordered from Japanese and foreign dock-yards much superior in these respects, as they are mainly designed for cargo work; passenger accommodation receiving only secondary attention. The *Oriental Economist* therefore apprehends that, even after the new steamers, now in course of building at home and abroad, are put on the lines, they will not succeed in attracting the attention of the public to any marked degree. The only way to obviate this serious disadvantage, is to induce the Nippon Yusen Kaisha to use nothing but mail steamers on its new routes. But such a project would not be feasible unless the Government is willing to distinguish between mail and ordinary steamers in the way of subsidies, and consents to pay a higher rate on the former class.

The Ship-building Regulations, observes the same journal, that were issued some time ago in conformity with the Ship-building Encouragement Law, were based on Lloyds' bye-laws of two or three years ago. They are therefore more or less out of date as compared with the bye-laws of this same English Corporation compiled last year. But the Japanese Authorities can not refuse bounties to steamers that Japanese shippers have had built for them abroad in conformity with the latest bye-laws of Lloyds' Register; and the latter will consequently find it more to their advantage to give orders to foreign dock-yards rather than to a home dock, as in the latter case they would have to go through the tedious process of asking the Authorities whether a steamer built on the lines of the newest fashion may receive a bounty, seeing that the new Lloyds' specifications do not exactly conform with the particulars laid down in the Ship-building Regulations. Hence Japanese dock-yards will fail in obtaining orders and ship-building will not be developed in Japan.

THE INDEMNITY.

Mr. Taguchi, M.P., is continually urging the Government not to keep the Chinese Indemnity in London. In the latest issue of the *Tokyo Economist*, he argues that the course now taken by the Treasury involves Japan in a loss of no less than 4½ million yen a year. His argument is based on three hypotheses. In the first place, he says, this policy has resulted in a superfluity of circulating. The Government borrowed 50 million yen from the Nippon Ginko during the war, and against that loan the Treasury lent to the Bank of Japan £5,900,000 that is held in trust at the London Branch of the Specie Bank. This transaction is called "mutual depositing" (*asuke-ai*) by the Treasury, but whatever its designation, it is nothing but the borrowing of money from the Nippon Ginko on a mortgage. Therefore it results that 50 million yen of convertible notes over and above the ordinary note issuing limits of the Nippon Ginko are now on the market. The presence of this superfluous supply of notes has resulted in the appreciation of the market price of commodities, a diminution in exports, the dwindling of the specie reserves in the Bank of Japan, and so forth. The foregoing contention, Mr. Taguchi alleges, is borne out by the following tables:—

TABLE 1.
Government and Convertible Bank Notes.

	Notes.	Total.
At end of Nov., 1891.....	53,607,166.50	84,400,221.38
At end of Nov., 1892.....	45,300,421.50	66,008,807.14
At end of Nov., 1893.....	39,385,282.75	51,437,431.15
At end of Nov., 1894.....	35,337,807.75	48,148,359.10
At end of Nov., 1895.....	38,001,490.25	50,148,385.18
At end of Oct., 1896.....	38,466,715.25	50,613,643.19

TABLE 2.—SECURITY RESERVES.

	Government Bills and Commercial Notes.	Total.
At end of Nov., 1891.....	35,976,455.00	45,781,128.40
At end of Nov., 1892.....	36,301,150.00	40,066,631.40
At end of Nov., 1893.....	37,780,330.00	51,016,151.40
At end of Nov., 1894.....	35,074,751.00	52,218,519.40
At end of Nov., 1895.....	67,818,421.00	94,489,005.40
At end of Oct., 1896.....	39,900,740.00	61,781,053.40

TABLE 3.—SPECIE RESERVES.

	Gold Coins and Bullion.	Silver coins and Bullion.	Total.
1891.....	27,334,092.00	33,728,156.00	61,062,248.00
1892.....	21,800,100.00	28,030,191.00	49,830,291.00
1893.....	21,816,100.00	23,123,005.00	44,939,105.00
1894.....	22,316,800.00	21,841,410.00	44,158,210.00
1895.....	31,120,800.00	32,777,280.00	63,898,080.00
1896.....	71,931,000.00	28,848,077.00	100,779,077.00

The increase in the volume of currency during 1891-'92-'93 was due to the appreciation of the silver price of gold, the consequent activity of the export trade, and an immense import of silver. In 1894, in consequence of the Japan-China war, the volume of the specie reserves was diminished by 10 million yen, while convertible notes were increased by six million yen in round numbers. From May, 1895, the Bank of Japan issued convertible notes over and above the ordinary limit and loaned them to the Government which paid them out to the people. In 1896, the money lent to the Government shows a considerable diminution, but this is due to the operation of the "mutual depositing" transaction, though in reality the sum in which the Treasury is indebted to the Bank must be greater by 50 million yen than that given in Table 2. Again, according to Table 3, the gold reserves show an increase of over 50 million yen in 1896, but this factor is also due to the same cause, and therefore a sum of 50 millions must be deducted from the figures in reckoning the gold reserves actually in the Bank. The true state of affairs in round numbers and in units of a million is as follows:—

	Currency in circulation.	Specie Reserve.	Security Reserve.
At end of Nov. 1891.....	138.....	45.....	61
At end of Nov. 1892.....	141.....	40.....	74
At end of Nov. 1893.....	154.....	51.....	84
At end of Nov. 1894.....	161.....	62.....	74
At end of Nov. 1895.....	182.....	94.....	64
At end of Oct. 1896.....	197.....	115.....	60

In short, more than 197 million yen of paper notes now in circulation in Japan are backed by only 60 million yen of specie, and even this is gradually dwindling. Such is Mr. Taguchi's contention, but our readers, in common with ourselves, will probably fail to see why gold actually held by the Bank of Japan in London is not as good as gold held in Japan, for the purposes of a reserve against note issues.

In the second place, the Government's present financial policy seriously impairs the circulation of money. Some argue that if the Indemnity be brought to Japan, it might still further augment the volume of currency and thus aggravate the evils incidental to the present superfluity of notes. Mr. Taguchi, though he has frequently pointed out the fallacy of this contention, takes the trouble to explain the situation once again. Suppose that the London Agent of the Nippon Ginko purchases bills payable in Yokohama to the extent of 10 million yen; and suppose that the Bank receives that sum in convertible notes in Yokohama and withdraws them from circulation. Would that not mean a transmission of the Indemnity; and is not the volume of convertible notes diminished by 10 million yen? The same thinkers may reply that if the volume of currency is diminished to that extent, the money market may suffer from over tightness, interest on money may be raised, and business enterprises droop. The Editor

of the *Tokyo Economist* condemns that contention as an utter fallacy, for diminution in the volume of currency would be followed by a fall of interest and a fall in the market price of commodities, while there would be still enough money in circulation to carry on all business transactions. To explain his theory, he falls back on the history of Japanese finance. Subsequently to 1877, owing to the vast disbursements of money occasioned by the Satsuma Civil War, and also as a result of the amendment of the National Banks Regulations, over 60 million yen of extra paper notes were issued. From 1882, the Government steadily withdrew this superfluous money, reducing the fiat currency from over 160 million yen to 120 million yen, approximately, by 1885. But what was the actual result as felt in the market? Interest, that stood as high as 15 to 20 per cent. in 1881, fell to 7 in 1885; rice fell from 12 yen to 5; and whereas a 7 per cent. Pension Bond of yen 100, face value stood as low as 60 yen, or even lower, in 1881, its value appreciated till it reached 120 yen in 1885. How are these things to be explained? When the price of rice rose from six to twelve yen, and 100 koku of rice that could be purchased at first for 600 yen required 1,200 yen, deposits in the Banks were lessened on the one hand and loans increased on the other. But when, on the contrary, the purchasing power of money increased, the deposits increased and loans diminished. Hence, where currency is excessive, the money market suffers from tightness, while, when it diminishes, the market conducts its transactions smoothly.

In the third place, the presence of the Indemnity in London inflicts a heavy loss on the country. Through the "mutual depositing" transaction the Government pays interest at the rate of 2 per cent. to the Nippon Ginko and the latter pays to the Government only 1 per cent. and hence the Treasury incurs a loss of half a million yen as follows:—

Interest paid by Government on "mutual depositing" of 50 million yen.....	1,000,000
Interest paid by the Bank on issue of 50 million yen of convertible notes.....	500,000
Loss to the Treasury.....	500,000

But if the Treasury paid off its loan of 50 million yen and imposed a five per cent. duty on the 50 million yen worth of notes issued by the Bank over and above the ordinary limit, it would obtain 2½ million yen. In other words, the Treasury loses a sum of 3 million yen at present. The Treasury elaborated this complicated process on the ground of the alleged difficulty that would be experienced in bringing the Indemnity to Japan. Mr. Taguchi fails to see any difficulty. The Indemnity can be dealt with by selling bills in Yokohama payable in London, as the India Office sells Council bills; or bills sold in London and payable in Yokohama may be purchased. In point of fact, the Treasury managed to bring from London in July a sum of six million pounds sterling without any difficulty, while even as early as 1873 the Government brought over from England a sum equivalent to 24 million yen in one year.

Mr. Taguchi does not pretend to know with anything like accuracy the sum now held, or ultimately to be held, in London, but a tolerable idea may be arrived at from the following schedule compiled by the Government:—

	Government expenses abroad estimated by Treasury. Yen.	Amount of Indemnity received from China. Yen.
28th fiscal year.....	—	76,890,000
29th fiscal year.....	34,186,929	76,820,000
30th fiscal year.....	41,432,535	46,134,000
31st fiscal year.....	22,733,673	25,630,000
32nd fiscal year.....	10,160,744	25,630,000
33rd fiscal year.....	6,420,888	25,630,000
34th fiscal year.....	5,726,423	25,630,000
35th fiscal year.....	3,746,751	25,630,000
36th fiscal year.....	2,994,236	—
37th fiscal year.....	2,713,074	—
38th fiscal year.....	1,126,518	—

Total131,241,771 351,694,000

The above excludes interest and payments on account of stationing troops at Wei-hai-wei, both of which are to be received from China.

Mr. Taguchi estimates that as a sum of 50 million *yen* or so is believed to have been already brought to Japan, there must now be in London about 120 million *yen* with which the Treasury ought to do the same. A trifling sum in all verity, when it is remembered that the India Office sells Council bills to the extent of 170 million *yen* every year. Were a sum amounting to over 100 million *yen* brought into Japan, the Treasury could pay off its loan of 50 million *yen* to the Nippon Ginko, and the remainder should be used in redeeming public loans and purchasing Bonds; for to return borrowed money to its original source is the best method of finance that can be devised. Mr. Taguchi does not expect to have 50 million *yen* entirely withdrawn from the market. He thinks, judging from the increased activity of business as compared with 1894, and other considerations, that the withdrawal of 20 million *yen* only would be required. Therefore the Nippon Ginko might be allowed to leave in circulation 30 million *yen* over and above its ordinary limit. One half of the remaining 70 millions brought over from London should be used in discounting commercial bills, and the other half in buying bonds and so forth, so that quotations on the stock market would be raised, interest on money would fall, and enterprise would be encouraged. Such steps would inure to the advantage of the Treasury thus:—

Five per cent. duty on extra issue of 30 million <i>yen</i>	Yen. 1,500,000
Interest on 70 million <i>yen</i> worth of Bonds redeemed or purchased, or discount on bills purchased (estimated at 4½ per cent.)	3,150,000

Total 4,650,000

An income of 4,650,000 *yen* a year to the Treasury at the present juncture would be no trifling thing. Why should financiers hesitate to bring home the Indemnity merely because the process requires an outlay of 88 *yen* in transmission expenses per 10,000 *yen*? In effecting this, the excess of imports might reach a large figure—perhaps as much as 100 million *yen*—next year, but that need not prove a deterrent factor, for, as Count Okuma observes, exports alone do not constitute commerce: imports must be similarly encouraged.

COUNTESS OKUMA'S RECEPTIONS.

We are asked to say that Countess Okuma will not hold her usual reception on Friday, the 8th of January next.

JAPANESE PEERS AND THEIR WEALTH.

The Peers of Japan are generally classified in rank under two broad subdivisions—Feudal and Court Peers—and the same method may be pursued when comparing their wealth; for as a rule the former far surpass the latter in worldly possessions. It would be erroneous to suppose, however, that, other things being equal, a feudal Peer who formerly ruled over a wide fief is now wealthier than a peer who possessed a small fief, for it is often found that a small Peer, especially if he was a *fudai daimyo* (an hereditary retainer of the House of Tokugawa), is considerably richer than a Peer of *tosama* extraction (a *daimyo* who regarded the Shogun simply as his suzerain). That is due to the fact that the Shogunate, with a view to centralizing its power as much as possible, contrived to bestow fertile districts on Daimyo that were its immediate retainers, and thus drew closer the bond that bound them. Hence *fudai* Peers whose fiefs did not ostensibly exceed 100,000 *koku*, were really more wealthy than many of the *tosama* Peers, owing to the partiality of the House of Tokugawa. The Matsuura of Hirado (60,000 *koku*), the Matsudaira of Takamatsu (120,000 *koku*), the Omura of Hizen (57,000 *koku*), the Soma of Nakamura (60,000 *koku*), and others are good illustrations of Peers of this class. We give below a list of feudal Peers who received Bonds valued above 100,000 *yen* at the time of the abolition of feudalism, and we append the amount of their present incomes as reported to the Taxation Office in the 27th fiscal year (1894-1895):—

	Bonds. Yen.	Income. Yen.
Prince Mori	1,100,000...	204,000
Prince Shimadzu (main house)	1,320,000...	136,000
Marquis Mayeda	1,190,000...	147,000
Marquis Hosokawa	780,000...	125,000
Marquis Tokugawa (Kii)	700,000...	109,000
Marquis Ikeda (Bizen)	490,000...	101,000
Marquis Tokugawa (Owari)	730,000...	95,000
Marquis Asano	630,000...	95,000
Marquis Kuroda	510,000...	65,000
Count Matsudaira (Takamatsu)	300,000...	60,000
Marquis Nabeshima	600,000...	59,000
Count Matsuura	162,000...	59,000
Marquis Yamanouchi	668,000...	57,000
Marquis Hachisuka	508,000...	51,000
Count Arima	215,000...	52,000
Count Toda	410,000...	51,000
Count Ii	310,000...	44,000
Marquis Ikeda (Inaba)	430,000...	42,000
Marquis Date (Uwajima)	160,000...	42,000
Marquis Tokugawa (Mito)	180,000...	36,000
Prince Tokugawa (main house)	560,000...	35,000
Count Hisamatsu	300,000...	35,000
Viscount Ogasawara	236,000...	35,000
Count Sakai (Himeji)	240,000...	29,000
Count Abe	170,000...	29,000
Count Omura	270,000...	29,000
Marquis Shō (Riukiu)	—	24,000
Viscount Sakai (Tsuruoka)	140,000...	24,000
Viscount Matsudaira (Matsuyama)	315,000...	22,000
Marquis Matsudaira (Echizen)	287,000...	21,000
Viscount Kikkawa	138,000...	21,000
Viscount Akimoto	160,000...	21,000
Viscount Matsudaira (Mayebashi)	203,000...	23,000
Count Date (Sendai)	130,000...	22,000
Count Tsugara	249,000...	21,000

The incomes of 37 other Peers are not recorded, or have been reported to the Authorities as being about 10,000 *yen*. The amount of Pension Bonds given to

the Peers when they surrendered their fiefs to the rehabilitated Imperial Government, was generally at the rate of 110,000 to 120,000 *yen* per 100,000 *koku* of fief; but the amount that most of the Kyushiu Peers received was at a better rate because of the part they played in the Restoration. On the contrary, the Date of Sendai, the Lords of Aizu, Kuwana, and so forth, who took the part of the Tokugawa, had their fiefs considerably reduced and so received only a small quantity of Bonds.

Though the condition of the Kuge (Court) Nobles has been considerably bettered since the Restoration, it bears no comparison with that of the Feudal Peers. It is not, perhaps, generally known that few Court nobles, even of the highest class, possessed a fief above the value of 2,000 *koku* in pre-Restoration times; those of lower grade drew incomes of only about 30 *koku*; some as little as rations for three men per day, and most were hardly able to keep body and soul together, unless they took to work of one kind or other. At the Restoration, Pension Bonds were given to these nobles at the rate of 5,000 to 10,000 *yen* to those that had enjoyed a fief of 100 *koku* or so, and who were hereditarily entitled to rank of and below the 4th class; and 15,000 to 20,000 *yen* to those that had rank of and above the 3rd class. Court nobles that had performed services of high merit during the Restoration, or that were of good blood, also received Bonds at a special rate. But such grants did not compensate them for their old important positions, and in 1884, when the Peerage Law was first enacted and titles were conferred both on Court and Feudal Peers according to rank, a sum of 100,000 *yen* was granted to each of the five highest *kuge* families, called *Gosseke*, and their heads were, at the same time, created Princes. To Court nobles next in rank a sum of 50,000 *yen* was granted, and so on, a noble of the lowest rank receiving 10,000 *yen*. Yet still these Peers fall considerably below those of Feudal extraction in respect of wealth, as may be gathered from the following table:—

	Pension Bonds. Yen.	Income. Yen.
Prince Takatsukasa	18,000.....	9,200
Prince Ichijyo	29,000.....	9,000
Prince Iwakura	62,000.....	62,000
Prince Niyo	35,000.....	9,300
Prince Kujo	61,000.....	13,000
Prince Konoye	59,000.....	8,200
Prince Sanjo	65,000.....	—
Marquis Kikutei	32,000.....	—
Marquis Daigo	14,000.....	2,400
Marquis Kuga	23,000.....	8,300
Marquis Hirohata	28,000.....	1,800
Marquis Nakayama	39,000.....	9,200
Marquis Saionji	23,000.....	5,500
Marquis Saga	24,000.....	2,600
Marquis Shijo	16,000.....	3,400
Count Higashikaze	21,000.....	8,400
Count Sono	10,500.....	2,400
Count Yanagisawa	17,000.....	8,200
Count Anenokoji	13,000.....	1,200
Count Shimizudani	15,000.....	1,000
Count Hino	21,000.....	1,600
Count Hirohashi	9,200.....	3,000
Count Ogimachi	18,000.....	2,300
Count Kanroji	11,600.....	1,200

The Colonization Department intends to start in Hokkaido, next year, a new plan of railways, and construct a harbour at Hakodate. The estimated expenditure on the former plan is *yen* 100,000, while the latter is estimated at *yen* 250,000.

Marshal Marquis Oyama is now staying at Numazu.—*Yorodsu Choho*.

ADMINISTRATIVE FUNCTIONS AND
POLITICAL CONNECTIONS.

FROM the opening of the Diet, Mr. MISAKI KAMENOSUKE distinguished himself by directness and level-headedness. As a prominent member of the Liberal Party, he naturally assumed an attitude of hostility to the Government, but his attacks were never violent or unreasonable, and whenever a *via media* offered, he usually set the example of taking it. After the alliance between the Liberals and the ITO section of the *Meiji* Statesmen, not much was heard of Mr. MISAKI, but doubtless as one of the consequences of that alliance, he received the appointment of Head of the Local Government Bureau in the Home Department. The office being of a purely administrative character, Mr. MISAKI did not resign when the ITO Cabinet went out of power, but a difficulty soon presented itself which has very much wider bearings than those revealed by a cursory view. Our readers are aware that it is the Government's custom, in accordance with the Constitution, to appoint Delegates for the purpose of representing the various Departments of State in the Diet. In selecting officials to fill that important post, the choice has invariably fallen on Vice-Ministers of State and Heads of Bureaux; the list usually including, in addition to the Vice-Ministers, the twenty-four Heads of Bureaux, thirty-four in all. The chief duty of the Delegates in the Diet is to introduce Government Bills, to explain their provisions, whether to the whole House or to Special Committees, to answer questions propounded by members with regard to such Bills or to the Budget, and, in general, to defend, and secure the House's approval of, the Cabinet's legislative procedure. It is evident that to discharge such a duty efficiently a Delegate must be in entire accord with the principle of the measure entrusted to his charge, which means that he must endorse the Cabinet's policy and be prepared to act as its advocate. That was not difficult so long as no sort of relations theoretically existed between officialdom and political parties. But the times have undergone an emphatic change, which is very distinctly illustrated in the case of Mr. MISAKI KAMENOSUKE. It is true that Mr. MISAKI, having now been appointed a new member of the House of Peers, will doubtless resign his post in the Home Department, so that in his particular case the dilemma has been solved; but it is precisely in connection with his transfer that the general question suggests itself. Had he remained in charge of the Local Government Bureau, he would have found himself in the position of having to promote the passage through the Diet of all official legislation relating to his Bureau, and to oppose any private legislation disapproved by the Cabinet. Hence, he must have been not

only in sympathy with the Government, but also prepared to assume an attitude of antagonism towards Bills introduced by his own Party, the Liberals, in the more than probable contingency of a conflict between such Bills and the Government's policy. No conscientious man could afford to undertake functions of that character. Mr. MISAKI must have resigned his official position, had he not been nominated a member of the Upper House, or transferred to the diplomatic service where the influence of domestic politics is entirely unfelt. If his were a solitary case, no special comment would be necessary, but it seems to us that so soon as the system of party Cabinets is introduced in Japan—and the day can not be very far distant—the peculiar relationship in which the Government stands to the Diet according to the Constitution, must involve great inconvenience at every change of Ministry. It will be practically impossible for Vice-Ministers and Heads of Bureaux to remain in office while their Party is in opposition if they have to steer Government measures through the Diet in defiance of the sentiments of their own political friends. The fact is that the Constitution was framed to suit conditions very different from those now coming into sight. It was framed on the hypothesis that the Ministry hold office entirely by the will of the SOVEREIGN and independently of the Diet. In an Administration of that kind, Vice-Ministers and Heads of Bureaux, being theoretically free from all political bias, can discharge the functions of Parliamentary Delegates without any embarrassment. But where the Cabinet is in close alliance with a political party, it will be necessary either to exclude members of the party from the posts of Vice-Minister and Head of Bureau; or to relieve Vice-Ministers and Heads of Bureaux from the duty of appearing as Government Delegates in the Diet; or to make them change with the Ministry. The first two courses are evidently out of the question, so long as the Constitution retains its present form, and the third must involve great administrative inconvenience. If every change of Cabinet is to be accompanied by a disturbance of officials down to Heads of Bureaux, the machinery of Government will be constantly subjected to disabling shocks.

We presume that considerations of the above nature induced the leaders of the present Cabinet to propose the appointment of political Vice-Ministers, or chief Councillors of Departments, who would move with the Ministry, and to whom would be entrusted the duty of representing the Government in the Diet. That would be a practical and easy exit from the difficulty, but unfortunately it appears that the project has not secured general approval.

MONTHLY SUMMARY OF THE RELIGIOUS PRESS.*

Dr. Katō Hiroyuki has fulfilled his promise of giving an exposition of his views on the subject of prostitution. The following statement of the position occupied by him in this controversy is epitomised from the *Nihon Shūkyō*, the magazine to which Dr. Katō's recent essay was contributed:—"With the exception of one or two criticisms of the more serious kind expressing the shock which was given to the writers by my article, the answers it has evoked have contained nothing but abuse. The controversialists who have come into the field all assume the very point which I wished to see argued in detail, namely the vicious nature of the practice under consideration. What I wished to know was what it is that makes prostitution a vice, if vice it is to be called? To this question no satisfactory answer has been given. Not only on the subject of prostitution, but on all questions of virtue and vice, no scholar is satisfied with being told that a thing is right or wrong, virtuous or vicious; he wishes to know why it is so. Nothing could be more unscholarly than to accept without inquiry the authority of our ancestors in reference to the character of actions. To me it seems that no man of learning has a right to shelve such questions. It is his solemn duty to examine them and throw what light he can on them. Seeing, then, that the invitation I extended to scholars to give the world the benefit of their opinions on this subject has called forth only a feeble response, no other course is open to me but to submit for the consideration of older men than myself the conclusions at which I have myself arrived. As I have frequently had occasion to show before, there is no such thing as absolute virtue or absolute vice. The meaning these terms bear depends entirely on the country and the state of society in reference to which they are used. What is considered virtue in one age or in one country becomes vice in another age and another country. The rules of life and conduct which constitute what is called the morality of a country have been established for no other purpose than to preserve society in a vigorous condition and to enable it to make progress. All existing practices of society have an origin of some kind, and it is on this that it is important to concentrate attention. Prostitution, it is evident, grew out of circumstances connected with the relation of the sexes. Into these it is necessary to go in order to test the fitness or unfitness of the practice. It is well known to anthropologists and others that in the earliest stages of humanity promiscuous sexual intercourse resembling that of ordinary animals was the rule everywhere. The women captured by savage tribes became the property, not of individuals, but of the whole tribe, and were used promiscuously. Later on it became the custom for a man to appropriate a number of women for his own use, as wives or concubines, and when the world had further advanced in certain countries polygamy gave place to monogamy. As far as China and Japan are concerned, for many centuries the practice of having one wife and numerous concubines prevailed. One of the objects of the institution of concubinage was to keep count of a man's offspring. Intercourse with other women than those who lived in a man's house was not condemned, however. Men were allowed great liberty. But this was not the case with women. It was considered a disgrace for the daughter of a respectable house to entangle herself with a man unless he offered to make her a wife or a concubine. Our intercourse with Europeans has led us to adopt their notions to a large extent. Polygamy and concubinage have been alike condemned, and according to prevalent opinion sexual intercourse with a woman who is not a wife is wrong. It is very evident that all the changes under which public opinion on this subject has undergone in different countries are to be traced to one and the same principle, the desire to preserve the race and promote its permanent well-

* [We have to apologise for a long delay in publishing this Summary.—ED. J.M.]

fare. But in passing, it is worth while to notice what a variety of meanings in the course of the world's progress the words good and bad, virtue and vice, have undergone. At first promiscuous sexual intercourse was considered good; then what may be described as the keeping of women shared by several men. Subsequently, by slow degrees, the opinion prevailed that monogamy must be enforced and no other kind of sexual liberty allowed. In China and Japan for many ages the notion that men are superior to women and that this superiority entitles them to indulgence forbidden to women explains the general opinion held in reference to sexual intercourse. But there is no denying that, however necessary it seemed to our ancestors that the liberty to which I have referred should be granted to men, there is manifest in Japan a growing antipathy to this notion, and in my opinion we are not far off the time when even the habit of keeping concubines will no longer be sanctioned by society generally. Both China and Japan, as far as they have renounced barbarism, are of opinion that prostitution is immoral."

It will be observed that Dr. Katō has shifted his ground considerably, almost to the extent of being guilty of a *volte-face*. We would refer our readers to an article entitled "Dr. Katō's Doubts," published in the *Weekly Mail* of June 27th last, for a short account of the views which he originally espoused on this subject.

Under the title of "Religious Items," the *Taiyō* observes that the use of the cross as a symbol may be traced to several sources. In addition to the usual Christian explanation of this use, there is the Indian one which traces it to the worship of the sun, the emblem being used to represent the way in which the equatorial lines cross the meridian. The cross for which the Sanscrit word *Isastika* is used, and the cross used by Buddhists, are both slightly different in shape from the Christian cross. The former emblem is used by that popular Indian sect, the Sivaits.

There are writers who maintain, says the *Taiyō*, that the difference in the character of Japanese according to the locality from which they come resembles the division of Europeans into the Latin, Teutonic, and Slav, races. Those living in the West are said to resemble the Latin race, those in the North East the Slav and those in the centre of Japan the Teutonic. Whether there is any truth in this or not, it is a fact that Roman Catholicism prevails in the western and southern parts of Japan. In Kyūshū, Shikoku, and Chūgoku, where the people are said to resemble the French most in character, French priests have been most successful. In the northern and Eastern part of Japan the Greek Church has been more successful than any other body. Recent investigations connected with the relief of sufferers from the seismic wave revealed this fact in a striking manner. English, American, and German protestantism has laid hold of the central provinces of Japan. Hence, says the *Taiyō*, social proclivities may have something to do with the form of belief adopted.

The *Taiyō* has something to say on the crisis through which certain Protestant Churches are passing in their desire to be independent. As a rule, says this organ, a determination on the part of Japanese Christians to be independent means, as in the case of the Dōshisha, that foreign pecuniary support is withdrawn, which frequently involves pastors in financial difficulties and leads to their abandoning the ministry altogether in favour of some secular calling. There are cases of men of influence in the Christian Church having been forced to act thus by their straitened circumstances. In some instances the cessation of remuneration from the Christian Church has been followed by a renunciation of the Christian faith and a lapse into immorality. All this has brought a great deal of reproach on Christianity and has led men to doubt its power as an incentive to virtuous living. Devoted and earnest Christians must do their best to restore confidence in the superiority of

the Protestant faith. The crisis through which many churches are passing is a trying one, but while the dross will be destroyed, the pure gold will be unaffected by the fire to whose heat it is subjected.

The *Taiyō* asserts that certain French missionaries in Riukiu, Higo, and other places; and certain Russian missionaries and Protestant Episcopalians in Hokkaido, are actuated by political as well as religious motives in propagating their faith, but furnishes no proof whatever of this grave accusation. The language used by the *Taiyō*, it seems to us, is altogether unwarranted. It goes so far as to say that certain Christian missionaries are the slaves of politicians. *Shūkyō-ka Seiji no dorei to nari.*

The *Nihon Shūkyō* publishes a philosophical article in favour of harmonising the different forms of religious faith. The spirit of the times, says this organ, is in favour of that course. Whether in politics, law, language, or customs earnest attempts are being made to reconcile differences and to create a new *modus vivendi*. There are, of course, religious believers who regard the different systems as incapable of being blended. They are like oil and water, they will not mix, say these authorities, ignorant of the fact that the application of soda is all that is required to change the attitude of these fluids to each other. But in other quarters there is quite a different feeling. Among Protestants there is a growing antipathy to what is called the American form of Christian faith, and for some time efforts have been made to harmonise Christian doctrine and Japanese customs. Men who are convinced of the need of modification in one direction can easily be persuaded of its necessity in another, and hence a reconciliation between Buddhists and Christians is by no means unattainable. We do not intend to represent, continues the *Nihon Shūkyō*, that the adherents of the two creeds will renounce their own systems and combine to found a new one, but we see no reason why they should not approach each other in a sympathetic manner, imbued with the spirit of humility and liberal feeling. Buddhism is undergoing great changes in order to adapt itself to the life and the sentiments of mankind in this Nineteenth Century. Hence there is no insurmountable obstacle to a union being effected between forward Buddhists and forward Christians.

We are indebted to the *Nihon Shūkyō* for a fuller account that any hitherto published of the meeting of representatives of various sects held in Shiba on September 26th. The representatives numbered 42 and the audience consisted of 48 persons. Bishop Nicolai, the Rev. Arthur Lloyd, and Mr. Nanjō Bunyū were prevented by other business from attending, but sympathised with the movement. The following is a short abstract of some of the speeches that were made. Mr. Ouchi Seiran (Buddhist): For more than twenty years I have been on intimate terms with Christians. The only interruption to cordiality between me and them was during the years when Christians were intoxicated with the pro-foreign spirit and when, as a consequence, they often said and did things that were disloyal to the State and the Emperor. Against this result of Christian teaching I earnestly protested some ten years ago. Now a different feeling exists, and hence Buddhists and Christians are able to approach each other in a friendly spirit. In the matter of doctrine Buddhism excels Christianity, but in being abreast of the age and devising schemes for the benefit of humanity Christianity is superior to Buddhism. May they not meet on equal terms and seek to supply each other's defects?

Mr. Yokoi Tokiwo—The part which Buddhism has played in the development of Japanese literature and art must never be forgotten, and it seems to me that Buddhist idealism is much needed in the materialistic age in which we live. And as for Christianity, when adapted to our national customs and institutions, it will confer immense benefits on us.

Mr. Shaku Sōyen, Head of the Zenshū and Yengakuha—If asked to state in a few words the object of this meeting, I should say that it aims at destroying the fence that separates Buddhism from Christianity and enabling Buddhists and Christians to shake hands with each other, to show love for each other, and together to make plans for future action. I do not advocate the amalgamation of the two systems of religion known as Buddhism and Christianity. Where we can agree, let us by all means agree; where we differ let each be at liberty to follow his own course. An investigation of Buddhism, Christianity, Mohammedanism, and Confucianism tends to show that, though different in form, in many important particulars they agree. There are certain truths which are common to all, such, for instance, as the power and need of benevolence in the world. If we are agreed that the privilege of religious believers, whether Christian or Buddhist, is to rest in the bosom of a god or divinity who loves all alike, there is no reason why together we should not devise measures for showing kindness to the needy world in which we live. It seems to me that if the broadest meaning be given to the terms benevolence and compassion, and efforts be made to manifest to the world the beauty of that love which both religions regard as of such importance, then the union of the two sects would be practically perfect and the world would be benefited by effecting such a union.

Mr. Shibata Reichi, Head of the Shintō Jikkōha—When Buddhism first entered Japan it constantly came into conflict with our native religion, and our national life, but it gradually adapted itself to its new surroundings and thus gained the esteem of our statesmen and Emperors; and there is nothing to prevent Christianity from doing the same.

Mr. Yebina Danjō, a Christian pastor from Kōbe—At the present time the prevailing spirit in Japan is in favour of nationalism, and I take it that the object of this meeting is to adapt religion to this condition, to intensify the nationalistic spirit, and, by showing that it is endorsed by the teaching of our creeds, to render those creeds a power in the world.

Mr. Murakami Senjō, Director of the Shinshū Middle School—The intercourse of the followers of one religion with those of another resembles the intercourse of one State with another. On such occasions it is important to make much of similarities and little of differences.

Mr. Matsumura Kaisai, a Christian connected with the Young Men's Christian Association—Some fifteen years ago there was a strong feeling in favour of greater union among Christians, but in recent years the existence of two distinct parties in the Church, one conservative the other liberal, has been very marked. But among the liberals there are several different sections; which have had various epithets applied to them. Mr. Togawa Zanka, owing to his saying things that resemble the utterances of a Buddhist priest, is said to belong to the "Buddhist Christians." On account of my frequent quotations from Confucius and Mencius, I have been called the "Confucian Christian," and Mr. Yebina Danjō, on account of the open manner in which he enunciates the articles of faith of the Kōbe Church—on account of the local colouring he gives to his belief—might be called the "Shintō Christian." Thus it has happened that liberal Christians all have their special proclivities, and it seems to me that union can be effected only by the appearance of some leading spirit to whose influence and character men of all parties will show deference. Regarded from the point of view of the State, Christianity, Buddhism, Shintoism, and Confucianism are all alike.

Mr. Onishi Shuku (Unitarian), Director of the Senshin-gaku-in—We live in a world where a great variety of forces are at work, some conducing to union others to conflict and discord. It is possible to be so absorbed in the work of opposing others as to forget that we even learn much from the men we oppose. It is not enough to have a mind that is bent on teaching, we must also have a mind that is bent on learning.

Dr. Clay MacCanley—The present meeting is an event which for several years I have desired to see take place. Just as all the colours reflected by the various material objects of nature derive their beauty from the same sun, so do all the diverse features of society originate from one source, and it is only natural that religions should unite together in their various stages of development in order the better to reveal the marvellous working of the power that controls them all.

Mr. Iida Ichiji—Christians in Japan object to being placed under Government control, as I explained, some little time ago, to the head of the Ecclesiastical Bureau attached to the Home Department. I was informed on that occasion that the chief reason for official interference is to prevent Buddhism and Shintoism from being overthrown by Christianity. Is religion then to be degraded to the rank of a mere ordinary thing and subjected to secular control? My desire is that religious sects should unite and in a body take steps to shake off this control.

Mr. Kishimoto Nobuta, the editor of the *Shūkyō*—I was brought up as a Christian when a child, but on coming to years of discretion my mind was enveloped in the clouds of doubt, which ended in my becoming an advocate of free inquiry and in my attaching immense importance to a knowledge of comparative religion. I can sympathise to a greater or less extent with all religious movements, and am of opinion that united efforts to reform society are likely to effect great things.

Mr. Konishi Masutarō, a teacher in the Greek Church School of Divinity—All religions agree in labouring for the cultivation of virtue, and the reforms that religious believers of various sects desire to see effected do not differ in any important particular. Though there are doubtless irreconcilable differences in the religious dogmas held by the adherents of diverse sects, as regards the province of religion, as regards the function it is designed to fulfil in man's life, there is no difference of opinion among the devout. The various sects may be compared to the colours, black, white, yellow, red: though they all differ from each other they all possess that abstract quality we call colour. It is far too common to find religion and learning opposed to each other. Scholars are apt to regard religion as a thing with which they have no concern. There ought to be no enmity between science and religion. They occupy two different spheres; they pursue different ends; and this it is our duty to make known to the world. There is no record in history of any such decline of religious devotion as marks the present age. Hence it is not a time for dwelling on minor differences. In the face of the stolid indifference to all kinds of religion with which we are confronted, it is our duty to combine our efforts for the furtherance of a cause that is clear to us all.

Mr. Takashima Kayemon explained to the meeting some of his well-known theories respecting divine influences founded on the teaching of the *Yeki*, Mr. Takashima's Bible, which book to him possesses all the authority given to the Christian Bible by strictly orthodox Christians. The meaning of the moral *Kami* is the one who reveals, said Mr. Takashima, and it is my belief that all hearts that are true have communication with the gods, receive their commands, and become participants of divine foreknowledge.

The number that attended the meeting as representatives, distinguished according to sects, were as follow: Shintoists, 2; Buddhists, 19; Christians, 16; attached to no sect, 5.

We read in the *Shinri*, that Dr. Faber, of China, has of late been devoting his time almost exclusively to high class literature. He has lately prepared a work called *經學不厭精* which is a most scientific and masterly treatise on the Chinese classics known as the *十三經*. It is to be published in Chinese in 10 volumes, two of which have already appeared. The *Shinri* affirms that no such thorough exposition

of Chinese philosophic thought exists in Chinese or Japanese.

The *Awoyama Hyōron* has an article on "The Education of the Individual," the gist of which we proceed to give. The primary object of school education in Japan is not the development of individual character, but the preparation of instruments and agents of the State. But there is such a thing as becoming a slave to the State and losing the spirit of independences. The many privileges to be derived by entering Government schools have caused these institutions to be crowded with students, but when the character of the majority of the students is examined, it is found that they lack energy and steadfastness of purpose. And there is another drawback to the ultra-national education now so popular. The minds of the students are centred on Japan, and they grow up with little knowledge of the greatness of the outside world. Excessive loyalty to their own country prompts many students to speak and act rudely to foreigners, and even to attempt to take the lives of pro-foreign statesmen, like Viscount Mori and others. How far the incident at Otsu many years ago and the assault on Li Hung-chang were the result of an education that elevates patriotism to a rank to which it has no true title, is a question that those responsible for State education would do well to consider. To us it seems that it is high time that, instead of concentrating our attention on the training and development of State agents, we should endeavour to produce in our schools broad-minded men. Education must be widened and be better adapted to the development of individual powers and faculties. Individualism in education does not imply selfishness by any means. The State will eventually gain more by the enlargement of the world to which the student is introduced than by adhering to the narrow-minded policy now pursued. The greatness of the State depends on the greatness of individuals; and the greatness of individuals depends on the possession of a wide knowledge of men and things.

The *Awoyama Hyōron* comments on the relinquishment of holy orders which has been taking place during the past twelve months in some Christian churches. Regarded from some points of view, says this organ, the abandonment of a position in the church that has been occupied for some time is cause for deep regret, but on the other hand, it is only too evident that numerous persons have taken office in the Church without due consideration, some for the sake of worldly gain and others owing to the influence of friends, and it is far preferable that such persons should leave us. The troubles through which our churches are passing will shift the chaff from the wheat. Hence we are inclined to think that they will prove a blessing in disguise. The *Uchū Shinkyō* (Universalist) has an article on the sacredness of the body and the necessity of preserving it from defilement of every kind. No such questions as those asked by Dr. Katō in reference to prostitution would be put were the generality of mankind convinced that our bodies are "the temples of the living God," observes this organ.

The Magazine just quoted take exception to Mr. Fukuzawa's representing life as a joke in one of his 100 short essays. Mr. Fukuzawa is of opinion that some people take life too seriously and are oppressed by its difficulties and responsibilities. He thinks they would do well to take more notice of its comic side. The man who regards life as a comedy bears his losses and disappointments with a light heart. The *Uchū Shinkyō*, it seems to us, founds its objection to Mr. Fukuzawa's remarks on a misconception of their purport. This magazine has articles on the following subjects:—"The Formosan Tongue;" "Professor Toyama's View of Society;" "Christian Philosophy," and "The New Japanese Prayer Book."

In that part of the *Waseda Bungaku* devoted

to the discussion of religious topics, the question of the depth of the religious sentiment in the Japanese mind, raised some time ago by Dr. Katō Hiroyuki, is again discussed and the remarks of Bishop Nicolai in the *Taiyō*, are quoted by the *Waseda Bungaku*. The following is a summary of the Bishop's article:—Many things in Japanese history seem specially adapted to make the Japanese a very religious people, and one of the chief reasons why they are not so is that outside of religion they have a code of morals which, if not perfect, has no serious defect. In the matter of criminal conduct, like thieving, Japan compares favourably with France, Germany, and other European Countries. Though there are a number of immoral practices in Japan, compared with European countries, Japan is pure. In Rome's palmy days the flesh of her slaves was often chopped into small pieces to feed the fish which swam in the nobleman's pond, and even at the present time in Spain the spectacle of men fighting with beasts is to be witnessed. Contrasted with these and similar practices, Japan's wrestling is a mild and harmless form of amusement. Even the worst kind of men in Japan are not impressed, by religious teaching, and no wonder, for only those who are really ill stand in need of a physician. But it should be pointed out that there are truths, virtues, and beauties with which Japanese would do well to become acquainted. Bishop Nicolai concludes by observing that he by no means endorses the general opinion as to the shallowness of Japanese religious feeling. His experience, extending over a quarter of a century, leads him to different conclusion.

The *Waseda Bungaku* and the *加是 Nyose* (a Buddhist organ) both draw attention to the lack of true religious feeling among the nobility. The latter organ affirms that, as a class, noblemen are sadly ignorant of the doctrines of religion, and hence it is not uncommon to find them joining such sects as the Remmonkyō and the Tenrikyō, worshipping Kōbō Daishi at Kawasaki, Fudō at Narita (Shimōsa), or relying on divination for the averting of some of the ills of life. The mental poverty of this class exceeds the physical poverty of the lower orders. The reason alleged by this organ for the want of spiritual enlightenment among the upper classes is the superstition and ignorance of their concubines. The *Waseda Bungaku* observes that education in Japan greatly needs pecuniary help from the nobility. They might do wonders with their money, but at present, influenced by the upholders of superstition, they are frittering their money away on unworthy objects. If asked what religion is best adapted to the present wants of the nobility, the answer is Christianity. Both as regards its influence on the relations of the sexes and as a stimulus to works of charity of all kinds, Buddhism is not to be compared with Christianity.

The *Koye*, the Roman Catholic organ, continues its abuse of Buddhism, the goddess of mercy, Kwan-on, being singled out for attack in the last number which has reached us. The imposing ceremony held in Kōbe on Oct. 18th connected with the consecration of Bishop Chatron is described. It is said that there were 460 Japanese converts and 380 foreigners present on that occasion.

The *Shūkyō* (No. 61), as previously announced, has entered on a new career. Henceforth it is no longer to be the organ of the Unitarians only. It will open its columns to all contributors on religion and cognate subjects. The first number of the new series contains a tempting list of articles on a great variety of subjects, the writers being men of various schools of thought. Among the subjects treated are "Name and Reality," by the Rev. D. Yehina; "Luxury," by K. Tajima; "The Influence of Delusion on Religious Beliefs;" "Why I believe in the existence of God," by N. Kishimoto; "Demand and supply in Religion;" "Freedom of Thought;" "On the Religion of Great Japan;" "Dean Hodges on Church Problems."

In the course of one of its articles the *Shūkyō* states that a meeting of scholars, including Dr. Motora, Dr. Inouye Tetsujirō, and others, has been held in Tokyo for the purpose of devising measures for the furtherance of morality throughout the country. The *Shūkyō* welcomes this movement and thinks that it is high time that something was done to raise the moral tone of all classes of society. The writer contrasts the influence of Christian Churches in America with the influence of Shintō and Buddhist congregations in Japan, and affirms that the latter accomplish next to nothing in the way of moral reform.

The *Bukkyō* gives a vivid account of the war of sects being waged in the Buddhist territory at the present time. A statement of the questions at issue and of the attitude of the great sects to each other would require more space than we have at our disposal. We reserve this subject for the next summary.

CHRIST-CHURCH, YOKOHAMA.

An entertainment is to be given at the Public Hall next week, the funds of which are to be devoted to the purposes of Christ Church. We do not know what objects the promoters have in view, or what the purposes are, but the thought arises that a certain portion of the money might be set aside to form the nucleus of a new Church building fund. The present fabric is very old—the wonder is that it has lasted so long—and there can be no question that it is very unsightly. Before many years go by the problem of a new church will become imperative, if the Episcopalian community of this port are to continue to worship in a consecrated fane. We are not aware that any funds are in hand that can be devoted to a building fund as the subscriptions and contributions just keep pace with expenses; besides which, there is a mortgage on the Church. Next year, God willing, the British race will be celebrating the completion of the sixtieth year of the Queen's reign—the longest, most glorious, and in all senses peculiarly successful in our rough island's story. What better record could the English Churchmen of this port desire to have in their midst than a commemoration church built on the site of the present Christ Church? Such a building could be erected at small cost—a building of harmonious proportions yet simple in detail—if the Episcopalians will but put their shoulders to the wheel within the year of grace that we are now about to enter upon.

FIRES IN YOKOHAMA.

During the height of the gale on Monday morning fire broke out in the Mantake theatre—used principally by story-tellers—at the corner of Onocho, Gochome, and Bashamachi, opposite the iron bridge. Though the alarm was quickly given, by the time the Brigades arrived on the scene the place was enveloped in flames and the fire, fanned by the breeze, burned furiously. Sparks were carried all over the place, some even reaching the harbour. The Yokohama Fire Brigade, under Supt. Morgan, assisted by the Japanese brigades, had a very hard task in subduing the blaze, but after an hour and a half's incessant work, they managed to get it under. By this time ten houses beside the theatre were destroyed and many others were damaged. The cause of the outbreak is said to be accidental.

At half-past five o'clock on Thursday morning fire broke out in the Yoshino Bath-house, No. 63, Chojamachi, Shichichome, Yokohama. Six adjacent houses were entirely destroyed together with the bath-house, and six houses were greatly damaged. The fire was extinguished about six o'clock. The cause is not yet known.

Nakayama Seikichi, a fireman living at Hino-de machi, Yokohama, while going through some gymnastic feats on Monday afternoon, fell to the ground and died in a very short time—*Yiji Shimpō*.

"YOKOHAMA" LODGE INSTALLATION.

On Saturday evening, at the Masonic Temple, Main Street, Wor. Bro. Robert Newell St. John was installed for the third time Worshipful Master of the "Yokohama" Lodge, No. 1092, E.C. The ceremony of Installation was performed by the Right Worshipful the District Grand Master of Japan, Bro. W. H. Stone, who was accompanied by several of his District Grand Officers; and there was a large attendance of Past Masters and Brethren of other lodges. The Wor. Master having duly installed, invested his Officers as below:—

Wor. Bro. E. Flint Kilby.....	I.P.M.
Wor. Bro. H. W. Lea	S.W.
Bro. E. C. Fox	J.W.
Bro. H. L. Klinge	Treas.
Wor. Bro. A. T. Watson	Sec.
Bro. L. P. Von Hemert	D. of C.
Bro. F. Coghill Jackson	S.D.
Bro. V. R. Bowden	J.D.
Bro. L. H. Abel	I.G.
Bro. H. Ivison	Tyler.

Some fifty Brethren sat down to the banquet, at which the newly installed Master presided, supported by Rt. Wor. Bro. Stone and Wor. Bro. Kilby. A capital repast was provided from Clausen's Hotel, and at its conclusion the usual Masonic toasts were honoured in customary fashion. During the evening songs were contributed by Wor. Bro. H. J. Sharp, Wor. Bro. Delf, Bros. F. Coghill Jackson, E. T. Bethell, E. C. Fox, and others, a most enjoyable evening being spent.

DEATH OF THE GOVERNOR-GENERAL OF INDO-CHINA.

News has been received in Tokyo to the effect that His Excellency M. Rousseau, Governor-General of Indo-China, Councillor of State, formerly Under-Secretary of State for the Colonies, Senator, &c., died at his post on the 10th of this month. M. Rousseau enjoyed the reputation of being a highly competent official. Zeal in the cause of duty seems to have been responsible for his lamented demise, inasmuch as, despite seriously impaired health, he considered that to quit his government on sick leave would be injurious to the public interests, and so, remaining unflinchingly in harness, he finally succumbed to an attack of abscess of the liver. His loss will be deeply regretted in France as well as in the East.

THE PHILIPPINES REBELLION.

The following is taken from the *China Mail* of Dec. 15th:—News from Balacan was received at Manila to the following effect:—Between 2 and 3 o'clock on the morning of the 26th Nov., a large body of rebels attacked the exchequer house of the parish of Lolomboy and carried away a quantity of goods. There were over 1,000 rebels, but only 16 of them entered the house for the purpose of pillage. The attack was repeated on the 29th. The rebels appear to have threatened to burn the buildings.

The volunteers in Batangas succeeded in capturing six rebels out of a group which were wandering about the place on the 1st Dec.; but while they were being taken to Taal, they attempted to escape, and the volunteers shot them down.

Lient. Pintos telegraphed from Paranaque that on the 3rd Dec., on going his ordinary rounds, he discovered a party of about 200 rebels, who ran away on the appearance of the troops. Several volleys were fired upon them.

On the 2nd Dec., the troops had an encounter with the rebels in Sambat, when a few prisoners were taken. These men stated that the party was headed by one Eligio, entitled "general," and Valentin, both from Talisay.

General Polovieja arrived at Manila on the 2nd December, in the transatlantic steamer *Alfonso XIII.* and was received with great enthusiasm by the inhabitants.

General Polovieja, according to Manila papers,

comes to Manila to fill the post of Military Governor in place of General Echaluce, and not as Captain-General in place of General Blanco, as generally supposed. [Our information, however, published last night, is authentic to the effect that General Pola Vieja supercedes General Blanco.—Ed. C.M.]

CORRESPONDENCE.

[Our readers must distinctly understand that we are in no sense responsible for that sentiment or opinion of our correspondents, for the accuracy of their assertions, or for the deductions they may choose to draw therefrom.]

THE TIDAL WAVE FUND.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Though late, we think it due to the contributors to make some public report of the funds contributed through the Sendai Committee to the Tidal Wave sufferers. Several trips were made to the scene of the disaster and the funds were distributed with the utmost discrimination in view of the amount of suffering to be met by such a comparatively small amount. The distribution therefore was continued into the present month, which partly accounts for the delay in the report. If it would not be trespassing too much upon your space would you kindly give publicity to the report.

Yours truly, R. H. JONES.

Sendai, December 15th, 1896.

REPORT OF THE SENDAI TIDAL WAVE RELIEF COMMITTEE.

The whole amount of money received was \$304.50. Subscriptions came from Kobe on the South-west to Sapporo in Hokkaido. The Committee was represented on the field a few days after the disaster by Rev. J. P. and Mrs. Moore, who after a close and thorough investigation in which they were greatly assisted by the local officials, reported to the other members of the Committee that it would be well to postpone the distribution of the funds till later in the season. This opinion was supported by the advice of other Sendai missionaries who went to the front to give personal assistance and sympathy to the suffering. When the other members of the Committee went out in October to commence distribution the wisdom of the delay was abundantly shown by the condition of the people. From an early period—only a few days after the disaster—immediate relief of all kinds poured into the hands of the village and prefectural officials, so that it came soon to be difficult to store the things till they could be distributed. The Government undertook the feeding of the people in a wonderfully careful and efficient manner. Summer clothing and other articles for immediate use were soon in abundance, and the whole affords a good illustration of the benevolent character of the present age. But as the season advanced to colder weather, and other disasters occurred to claim the assistance of the benevolent, it was found that while the large contributions from the Government, from abroad, and from various subscription-centres in Japan, were providing the people with houses, boats, and other implements, a supply of thick clothing was lacking. We undertook so far as our funds would allow to meet this need. We visited the stricken districts in Miyagi Ken with relief, from Nagashimizu, South of Shizugawa, to Karakuwa, opposite Aomori, and would have gone further but our funds only sufficed to this point. Our method was to apply to the local officials for names of such as were old or maimed, or otherwise incapacitated to get their own living; or any other worthy poor who were in distressing circumstances. To each of these we gave a padded garment—*watire*, a comfortable *futon* or a simple lined garment, or *awase*, as the circumstances seemed to require. We were surprised, in view of the abundant evidences of want to be seen on all sides, at the modest requests of the officials. About 10 garments was the highest limit for any village centre; the name *Uatsuru-mura*, for an instance, having some ten or twelve village centres, and this even where scores of houses had been swept away. There was an evident desire on the part of the afflicted people to hear more about the religion that had prompted so much generous help to them in their distress; and we may expect some results in a religious way from the awakened interest manifested. Below is the list of the places helped, and the number of persons. The Woman's Society of the Japanese Kumiai Church at Moyoshi, Bingo, sent to the committee a box of clothing made by their own hands for distribution to the needy. Two Japanese Christians also contributed to our funds. The balance was collected from missionaries. It may be some satisfaction to the donors to know that none of the funds was used for expenses, the expenses of investigation and distribution being defrayed from personal or other funds. Only the small amount needed for the transport of the clothing, etc., was charged.

LIST OF PLACES AND PERSONS HELPED.

Nagashimizu—Drowned 38, wounded 18, persons helped 13.
Aikawa—Drowned 150, wounded 33, persons helped 18.
Matsu-mura—Drowned 764, wounded 76, persons helped 56.
Oya—Drowned 230, wounded 110, persons helped 16.
Hakukami—Drowned 421, wounded 110, persons helped 22.
Karakuwa—Drowned 823, wounded 57, persons helped 47.
Oshima—Drowned 56, wounded 12, persons helped 18.
Hosoura—Persons helped 10.
Shizugawa—Persons helped 10.
Kusumi—Persons helped 2.
Committee—J. P. Moore, Mrs. J. P. Moore, J. H. De Forest.
F. H. Jones, Treasurer.

Sendai, December 15th, 1896.

REVIEW.

An Unabridged Japanese-English Dictionary, by Capt. F. BRINKLEY, R.A., Editor of the *Japan Mail*, F. NANO, M.A., *Bungaku-hakushi*; Y. IWASAKI, *Hogogushi*; with co-operation of Prof. K. MITSUKURI in Zoological terms, and Prof. J. MATSUMURA in Botanical terms. Published by the Sanseido, Tokyo.

We confess that we have the greatest admiration for any foreigner who has the courage to attempt lexicography in Japan. The difficulties attending the task, owing to the rapid changes which the language is undergoing, are so great that only four or five out of a score of advanced foreign students of the language have essayed the enterprise. Lexicographers who, despairing of attaining the best, are content with the next best, deserve the thanks of the public. Were all sinologues fearful of staking their reputation for scholarship on works that fall below the highest standard, we should have no dictionaries and no grammars in Japan. One of the schemes of the late Viscount Mori, which he did not live to see put into operation, was the compilation of a Japanese-English dictionary by a committee of specialists, each collecting words on that branch of knowledge with which he was best acquainted, the labours of each to be revised by the whole Committee. The plan was a good one, and perhaps when the Japanese begin to feel the need of an exhaustive dictionary more than they do now, we may see it acted on. In the meantime, such a work as has been lately published by the Sanseido is invaluable. Among Japanese-English Dictionaries it must be acknowledged by all impartial critics to be *facile princeps*. It not only contains many more words than Hepburn's latest edition, but the definitions are as a rule more scholarly and minute than those of Dr. Hepburn's work. It is difficult to estimate exactly the number of terms it explains, but supposing that there are 32 words on each page, perhaps a fair average, the number would reach 53,884. An average of 40 words per page, which we hardly think is reached, would give 67,480 words. The pages are six inches in length against 7 inches in Dr. Hepburn's work. The latter, at 40 words per page, would contain 30,800 words; at 50 the total would reach 38,500. Roughly speaking then, the Unabridged Japanese-English Dictionary has nearly double the number of words given in Dr. Hepburn's work. And yet, as we shall show presently, the new work has omitted to give many words that are in every day use.

As regards the printing of the dictionary, we are only expressing the view of the majority of foreign critics when we say that it is disappointing. The type is far too small, with the exception of that in which the terms explained are printed. Even with fair eyesight it is very difficult to read the Chinese characters at night. There are a good number of printer's errors, but that, perhaps, is unavoidable in a work of this kind issued by a Japanese Printing Office.

In advertising the Dictionary, the Sanseido is bold enough to affirm that it contains almost every word in use in the language. The Japanese Preface states that the compilers of the dictionary have collected and translated into English all the modern and ancient terms known in Japan. We venture to think that the Sanseido was not authorised by the gentlemen who prepared the work to make any such statement, for surely those gentlemen must be aware that the book would need to be at least half as big again in order to include all the modern terms in use, to say nothing of medieval Japanese. It might have occurred to the publishers to look up in their dictionary the term which they use in the first sentence of the preface 網羅 *Mōra suru*, as the equivalent of comprehending or including, a term in every day use, but omitted from the Unabridged Japanese-English Dictionary. It is further stated in the Japanese preface that the words which appear in the Dictionary were principally selected by the Sanseido. Is it to be understood from this that the compilers whose names are attached to the work were not granted full liberty to supplement the list of words furnished by the Sanseido? If that was the case, it is a matter for surprise that the authors of the Dictionary did not make this fact known to the foreign, as well as the Japanese, public. The point is important, as will be seen later on, when we point out how defective the work is compared with what it might have been under different management. Our own experience with Japanese booksellers leads us to the conclusion that the compilers by no means had *carte blanche* to act as they pleased in the choice of terms. A variety of courses was open to them in compiling a work of this kind. The most natural for them to follow would be to examine every word given in Japanese and Anglo-Japanese

dictionaries and to include most of these in their lexicon. The contents of the work we are reviewing show that this course was not followed. Scores, perhaps hundreds, of words given in Gubbins' Dictionary are omitted from the Unabridged Japanese-English Dictionary. Both from the written and the spoken language terms in everyday use like *era* (remarkable) and *hōten* (code) are omitted. Another course open to the projectors of the Dictionary was to secure the co-operation of specialists, not only in Literature, Agriculture, Zoology, and Botany, but in Medicine, Geology, Mental Philosophy, Chemistry, Economy, and other subjects. By confining their attention to certain fixed branches of learning to the partial exclusion of other equally important departments, they rendered the primary object of the work (according to the publishers' preface), comprehensive, impossible of attainment.

It is only with the object of helping forward the cause of lexicography in Japan, and not from mere capriciousness, that we now proceed to point out such defects in the work as our necessarily limited study of it has enabled us to discover.

First as to omissions. We have no leisure to compare the pages of the new Japanese-English Dictionary with those of a standard Japanese lexicon like the *Genkai*, but we have tested the work by means of terms culled at random from books written on different subjects in colloquial and classical Japanese. As a result of this investigation, we may state that the most perfect part of the Dictionary is its colloquial part. We do not mean to say that there are no omissions even here, but they are few compared with those from the written language, and numerous terms are given which, though quite obsolete, will prove valuable to the philologist and antiquarian. Among the omissions of colloquial terms, we may mention 骨灰 *Koppai*, a word in constant colloquial use in Tokyo in such expressions as "*Koppai misin ni suru*," to utterly demolish, the figure being taken from reducing the bones of the dead to ashes and grinding them into small dust or atoms (*mijin*); 大枝 *taimai*, equivalent to *takusan*, or a large sum, in such phrases as *taimai no okane*; *taimai nijūgo ryō*, which are frequently met with in novels; and the meaning of *ato ashi* in the sense in which it is so often used in such phrases as "*ato ashi de suna wo kaku*," a figure of complete oblivion, and 刑狀 *kyōjō*, a criminal matter, used in such phrases as *kyōjō mochi da kara kono yama wo de-rarenai*, often met with in novels.

Coming now to terms in use in the newspapers, magazines, and in educated speech, we would draw attention to the omission of the following 恐慌 *kyōkō* or *kyōkō*, a panic; 同盟罷工 *dōmei-hiko*, a strike; under 本位 *hon-i*, standard of money, *kinkewa hon-i* is given as the equivalent of gold standard, but the terms for single standard and double standard, both constantly used, 單本位 *tanhon-i* and 複本位 *fukuhon-i*, are not given; 固定資本 *kotei-shihon*, fixed or immovable capital in contradistinction to circulating capital, is omitted. So also are the following 常識 *jōshiki*, common sense; 繁文縟辭 *hambun*, excessive attention to a variety of details, used constantly in the newspapers in such phrases as the following; *ima no naikaku wa hambun no hei wo nazoku to iu*, it is said that the present cabinet are getting rid of the habit of spending time over multitudinous minor details; 國粹論 *kokusui-ron*, *kokusui-hōron*; 奇貨 *kiwa* or *kika*, extraordinary prosperity or luxury, and in phrases like the following, *ōoku naru wo shitte kika to shite oku*.

The terms 抽象 *Chūshō*, abstract, 具體 *guta* concrete, 主觀 *Shukan*, subject and 客觀 *Kakkan* object, and the adjectival forms of these words are omitted. So are the terms 內界 *Naikai*, 外界 *Gwaihai*, the internal world and external world; 前提 *Zentei* premise, 大 (大) *sentai* major premise *Sho* (小) *sentai* minor premise; 封鎖 *fūsa* (suru) to seal, a word in constant use; 排水力 *Haisuiyoku*, displacement (used of ships), employed in such phrases as "*Kono gun-kan no haisuiyoku wa ikutan aru?*" 速射炮 *Sokusha hō*, quick-firing guns. The term *Kensei Suru* 牽制 is given, but the military use of the term is not explained. In accounts of battles, the term *Kensei undō* is constantly used for describing feints, in the following manner, *Ushiro wo semen ga tame teki wo mayu ni kensō su*. "In order to attack him in the rear the enemy's attention is drawn to the front and kept there." The Japanese equivalent of the term *kensei suru*, used in a military sense, is *hikitomeru*. Although the word for an ironclad is given, *Kōtetsu kan*, the term for cruiser 巡洋艦 *Fun'yōkan* is not given. The term for extra-territoriality, 治外法權

Chingwai-hōken, the most favoured nation clause, 最惠國定疑 *Saikiōoku jōkan*, and several kindred terms are all omitted. The legal term 成文 *Seibun* is given, but the antithetical term 不成文 *Fubun*, applied to unwritten law, has been omitted. We have not exhausted our list of omissions, but have given enough to show how numerous they must be when a very imperfect examination of the contents of the dictionary has led to the discovery of such a large number.

We think, in view of the numerous grammars and phrase-books treating the structure of Japanese that have been published, the authors of the Dictionary might have spared themselves the labour of preparing a grammatical introduction to the work. We have no space to discuss the merits of this part of the dictionary.

We do not pretend to have examined very extensively the English explanations of the words, but we have quite casually come across definitions that are incorrect and others that are misleading. To give only one example of each, the word 偶然 is translated as follows: "Having no fault to find; leaving no room for criticism," which is the exact opposite of the real meaning, as is shown by the example quoted, *Kansen suru nashi*, there is no room for criticism. The term 史 *Shi* is translated (1) history, chronicle annals (2) A historian. This is misleading, as the word *Shi*, unless in conjunction with another word, is no longer applied to the writers of history. It was so used in former days owing to the fact that a Chinese writer of history in ancient times was called 史. The modern term for a historian, in every day use omitted by the Unabridged Japanese-English Dictionary, is 史家 *Shika*.

We think it worth while to draw attention to the fact that the plan followed by the compilers of giving synonyms at the end of a series of definitions of a word which is used in a variety of senses, without indicating the special meanings of these equivalents, is misleading. Take for example the word *Shiawase*, which is translated (1) Fortune; fate; luck (2) An event; accident; chance. We are told that *Saimai*, *Kōfuku*, *un* and *Gyōkō* are the synonyms of this word. Then would it be correct to use the word *Kōfuku* as the equivalent of accident, a meaning *Shiawase* is said to bear? In some cases we do not agree with the definitions given or approve of the selection of synonyms. In the case under consideration the term "fate," which is almost universally used in connection with bad luck, is not a good rendering of *Shiawase*, which is almost universally used to express good luck. But this is a very minor point.

It is said that the *Wa yaku Yei-Ji-i*, compiled some years ago by Y. Shimada and others, contains 80,000 words. The *Yei-ma J-i-i*, by Shibata and Koyasu, probably contains more. The omissions from the latter work, which, after many years' use, we have discovered, lead us to the conclusion that anything like an adequate lexicon of Japanese and English or English and Japanese should contain at least 100,000 words.

We do not wish anything we have written to convey the impression that we undervalue the work which Captain Brinkley and his collaborators have given to the world. Taken all round, there is nothing to equal it. The defects, inaccuracies, and omissions to which we have drawn attention, and others, such for instance, as the mispronunciation of Chinese characters, which, though existing, we have not found space to refer to, may all be remedied in a second edition of the work. By every one who knows the difficulties of lexicography in Japan the new dictionary will be valued, and its publication is to be regarded, not as a mere step, but as a great stride, towards the goal which all ardent linguists hope to reach—a knowledge of the language no less accurate than comprehensive.

BREAKING-UP DAY AT WINTON HOUSE SCHOOL.

On Wednesday afternoon Winton House School held its breaking-up festival and distribution of prizes. Mr. James Troup took the Chair, and among others present were Prince and Princess Lobanow de Rostow, Mr. and Mrs. James Walter, Mr. and Mrs. J. R. Parsons, Mr. and Mrs. Le Prevost, the Rev. E. C. Irvine, the Rev. T. Austen, Mr. and Mrs. V. R. Bowden, Mrs. David Jackson, Dr. Munro, etc. Before gathering in the school-room, the boys went through a capital series of military evolutions under the direction of Mr. Lowe, the Assistant-Master. After this, guests and boys entered the School-room where the following recitations were given:—

"Essay on Man," A. J. H. Chope.
"Deux Camarades de Collège," A. J. H. Chope, E. dos Santos, and V. G. Bowden.

"The Merchant of Venice," H. Austen, P. Le Prevost, and F. Thomson.
 "The Lay of the last Minstrel," R. Bowden and V. G. Bowden.
 "Daffodils," J. Drummond.
 "Ein Schatz Fürs Haus," F. Herb, W. Graham, T. Jensen, and J. L. Graham.
 "The Poet's Song," and "The Beggar Maid," T. Jensen.
 "The Cock and the Hen," R. Parsons.
 "Noël," F. Lowder, H. Schurr, H. Dare, R. Box, and H. St. John.
 "Le Laboureur de Castille," E. dos Santos.
 "Bed in the Day," R. St. John.
 "Hollenlinden," M. Walter.
 "De Arrio," A. J. H. Chope.
 "The Isles of Greece," W. Graham and J. L. Graham.
 "Wishes," D. Cameron.
 "Killed at the Ford," A. J. H. Chope.
 "My Little Doggy," F. Lowder, H. Schurr, H. Dare, R. Box, and H. St. John.

The recitations were given in excellent style, Master Chope, in particular, showing to advantage whether speaking in English, French, or Latin. The five small boys—Masters Lowder, Schurr, Dare, Box, and St. John—won well deserved applause.

After an interval for refreshment, the Head-Master, Mr. G. James H. Schurr, delivered the following

REPORT.

Perhaps the first matter that calls for attention is the removal of Winton House School from 22 Bluff, to our present premises. At the beginning of the year I was able to commence work in the new building in which we are now assembled. The play ground was in an entirely unfit state for use by the boys, but, thanks to the kind contributions of their parents, I was able in a short time to get it into the excellent condition in which you now see it. Madame Salabelle has been constant in her attendance at the School, and when Mrs. Schurr was taken ill was kind enough to come during extra hours to take part of the work. I have also for short periods, enjoyed the assistance of Mr. Coningham and Mr. Edmunds, and by the kind consent of the Consul, Mr. Kitcher last term came three times a week to give instructions in drill. I have specially to thank Mrs. Syme Thomson for the very kind way in which, during the summer term, as soon as she heard of Mrs. Schurr's being ill, she came forward and offered to help with her class, which she ably took in History and Geography. At the commencement of the term I was fortunate enough to secure the valuable co-operation of Mr. Lowe as Science Master and Instructor in Drill. On his success in drilling the boys, you have just had an opportunity of judging, and I should like to accord my high appreciation of the general state of efficiency to which he has brought the boys in the subjects which he teaches. For four terms one of my old boys, Albert Austen, has given his help with the lower classes, and I beg to thank him for so kindly assisting me.

Our numbers fluctuate with the changes in the population of Yokohama. Several boys have gone into offices in Yokohama, Kuhn, Carst, and Irvine being among the number. Others, such as the two Lindsleys and Cleveland, have gone to School in America, Mollison to England, and Cook to Scotland. The work in general of the boys throughout the term has been highly satisfactory. Never at any previous examination have the German papers been so well written as they were last week. And the same may be said of the translations from Latin. The tendency, I am told, in schools at home is in give less time to the classics and to devote more attention to modern languages and scientific subjects. The modern side is growing in every public school. Army classes are a regular institution, and chemistry has much more consideration shown it than was the case ten years ago. In deference to this change of opinion at home, and to meet the requirements of the majority of residents in Yokohama, our curriculum includes no Greek, and but little Latin, while the greater portion of the school hours is given to English, Arithmetic, French, and German. Mrs. Schurr is good enough to ground the boys in German, and I desire to express my perfect satisfaction with the success of her methods, the two last boys who have passed through her hands, Bowden major and Bowden minor obtaining very nearly full marks in German composition in the examination. In September last Mrs. Schurr started a class for boys under eight years of age to be preparatory to the upper classes in the School. The advantage of such a preparatory class is manifest, as there can be nothing for the boys to unlearn when they are moved up higher. The progress made by these little boys is on the whole very satisfactory. They are being taught on the new principles, which recent experience has shown to

be most recommended. A proof of this is to be seen in the fact that those who have learnt the new method alone, are rapidly leaving behind the others who were first taught on the old lines.

Drawing has always been taught in the school by Mrs. Schurr. This subject, since the end of September, she has been unwillingly compelled to drop, and it has been a real disappointment in her to be deprived of the pleasure of offering two prizes for Drawing, as had been her intention.

After this the Chairman distributed the following prizes:—

PRIZE LIST.

CLASS IA.—First Prize—Bowden mi. Latin—Graham mi. German—Chope. French—Santos. Mathematics—Bunting ma.
 CLASS IB.—First Prize—Bunting ma.
 CLASS II.—First Prizes—Drummond. Latin—Drummond.
 CLASS III.—First Prize—Noble. First in Examination—Le Prevost mi.
 PREPARATORY CLASS.—First Prize—Freddie Lowder.
 Special Prize, presented by James Troup, Esq.—Graham mi.
 Mr. Lowe's Prize—Watson.
 Prizes for Punctuality.—Dare ma, Watson, Herb, Lowder, Schurr, absent once.

CERTIFICATES.

CLASS IA.—German—Bowden mi. General Proficiency—Graham mi. German—Bowden mi.
 CLASS IB.—General Proficiency—Graham mi. Improvement in French—Dare ma.
 CLASS II.—General Proficiency Repetition of Poetry—Cameron. General Progress—Walter. Progress in Arithmetic—Fraser. Latin—Dare mi. Marked Improvement—Oustinnoff.
 CLASS III.—General Proficiency—Le Prevost mi. Arithmetic—Le Prevost mi. Poetry—Parsons. Geography—Lobanow.
 PREPARATORY CLASS.—General Proficiency—Schurr. General Proficiency—Box, Geography—St. John mi.

YOKOHAMA SAILING CLUB.

The annual general meeting and an extraordinary general meeting of the Yokohama Sailing Club, took place on Wednesday evening in Keil's Building. There were present Messrs. G. H. Scidmore (in the chair), J. O. Averill, Alan Owston, R. Boyes (Secretary), C. V. Schmidt, K. Kingdon, J. Carst, L. Salabelle, F. L. Elliott, Kay Smith, R. Hay, B. Martinielli, W. Carst, C. S. Averill, W. Schmaderke, H. Rose, F. Abbey, J. B. Gibbs, F. Owston, and G. Hodges.

The SECRETARY, called the meeting to order, and then asked Mr. G. H. Scidmore to take the chair.

The CHAIRMAN—The first business of the meeting is to consider the report and accounts presented by the Committee. This has been printed and placed in your hands.

Mr. J. O. AVERILL proposed and Mr. L. Salabelle seconded that the Committee's report and the Treasurer's accounts be taken as read and then accepted.—Carried unanimously.

TREASURER'S REPORT.

RECEIPTS.	YEN.
Annual dues from members	248.00
Entrance fees for Races	263.00
Prizes in cash	493.87
Measurement fees	46.00
Interest from H. S. B. C.	2.13
	Yen 1,053.00
DISBURSEMENTS.	YEN.
Prizes	827.20
2 Stopwatches	34.00
Flags	11.00
Flag-boat hire	28.80
Ammunition and gun repairs	13.33
Measurement fees	75.00
Advertising and Printing	52.67
Collector's commission	7.00
Gratuities	4.00
	Yen 1,053.00

RICHARD BOYES.

Examined with the vouchers and found correct.
 W. GRAUTOFF.

Yokohama, 20th December, 1896.

The CHAIRMAN—The next business is to elect a Committee for the ensuing year. I think I am expressing the sentiments of all present when I say that the Club owes a good deal of its present satisfactory state, to the industry and active interest of our Secretary (Mr. Boyes). To him we owe much of our present financial prosperity for the report just presented is the best in its history. The cash receipts have been over 1,000 yen, in round numbers, which is about 200 yen in excess of what they were last year. In addition to this we have had the

usual number of prizes presented, which have been of great value. Altogether, the condition of the Club is most encouraging. I now ask Mr. Salabelle and Mr. Gibbs to act as scrutineers of the ballot. You will vote for five members of the Committee, and although by a provision in our rules the Committee chooses its own Secretary, this does not preclude you from indicating your own preference in the matter.

The election of Committee resulted as follows: Messrs. T. Abbey, R. Boyes, T. M. Laffin, H. Rose, and Alan Owston.

The CHAIRMAN—Gentlemen, if there is nothing further to be brought forward, I will declare this annual general meeting closed. There being no response, I declare the meeting closed and convene the extraordinary general meeting, which has been duly advertised, for the purpose of considering various alterations in our rules.

The SECRETARY read the amendments *seriatim* and they were then discussed and passed.

Mr. AVERILL proposed and Mr. ALAN OWSTON seconded the alteration of Rule I. "The name of the Club be changed to the Yokohama Yacht Club."

Mr. AVERILL, in answer to the Chair, said that when the Club first started they had only a fleet of converted ship's boats and small craft, and therefore it was then thought that to call their association a Yacht Club would be too ambitious. But now, after ten years of successful work, and also when they had rivals in the field, he thought that the name should be changed to the Yokohama Yacht Club. Besides, the new revised Treaties contained provisions that applied to pleasure yachts, and for this reason also it was well that their Club should be called the Yokohama Yacht Club, and as such be recognised by the proper authorities.—Carried.

Mr. ALAN OWSTON then proposed, and Mr. Gibbs seconded—"Addition to Rule XIII.—And no change in system of measurement for rating on sailing rules be made except in December." This alteration was made, as explained by the proposer, to meet the case of persons wishing to build boats at the close of one season to race in the next, thus giving them plenty of time to develop their plans.

Mr. J. O. AVERILL proposed and Mr. F. OWSTON seconded an alteration of Sailing Rule 27—"That rig allowance as made by the Yacht Racing Association shall be allowed."—Carried.

Mr. F. OWSTON proposed and Mr. C. S. AVERILL seconded, "That the time-allocation scale shall be increased from 50 to 100 per cent." Mr. Owston explained that the amendment meant that the Club's time allowance would be doubled.

Mr. J. O. AVERILL said that it was intended to have brought this amendment before the Club last year, but there was not a sufficient number of members then present. Since then the Yacht Clubs in England and America had adopted an increased time-scale, so that the big Clubs at home were actually following the Yokohama Club's lead.—(Laughter.)

Mr. SALABELLE said that it would be best for all concerned to double the time scale.—The proposal was carried.

Mr. ALAN OWSTON proposed that Rule 28 be cancelled and a new Club course be substituted—a course well within sight of the people on the shore at Yokohama.

The CHAIRMAN thought that the Committee had it in their own discretion to fix the course for the day. Then again, the harbour was becoming very crowded and objection might be made to races in the harbour; or even to the finishing of races inside the harbour, because objection had already been urged that racing created confusion in business transactions in the harbour.

Mr. F. OWSTON said that the old Club course was cancelled because its line was crossed by the breakwater. The only reason why the present proposal was made was to enable the boats to keep closer home, thus making the racing more interesting.

The CHAIRMAN then read the motion—"That the course for the A Division be as follows:—From the present starting place around a mark-boat off Tsunami, the lightship and home, the number of turns around the outer marks to be varied according to class. Course for B Division:—Present starting line around a mark-boat, or markboats, outside of Eastern breakwater, 12 rating Special Class:—Between the Bund and shipping."

Mr. J. O. AVERILL seconded.—Carried.

Mr. BOYES proposed that "In case of disputes, doubts, or questions where the rules of the Yokohama Sailing Club prove insufficient, decision shall be given according to the rules of the Yacht Racing Association."

Mr. SCHMIDT seconded.
Mr. AVERILL pointed out that the rules of the Y.S.C. were based on the rules of the V.R.A.; in some cases they were word for word.

Mr. BOYES thought it would be better to have the new clause in their rules, as the V.R.A. rules were ample in detail and would materially help them in their decisions.

The CHAIRMAN suggested that the words "according to the usage" be substituted for "according to the rules."

The amendment was accepted and the rule now reads:—"In case of disputes, doubts, or questions where the rules of the Yokohama Sailing Club prove insufficient, decision shall be given according to the usage of the Yacht Racing Association."

Mr. BOYES proposed and Mr. ABBEY seconded that the following be a Sailing Rule—"Time limit for Races to mean actual time of first boat in, not corrected time."—Carried.

Mr. KINGDON proposed a vote of thanks to the outgoing Committee, and more particularly the Secretary.

The CHAIRMAN—I second that. Mr. Boyes is a credit to the Club, and we all regret that he can not continue as Secretary for another year; still we hope to get plenty of work out of him.

Mr. BOYES—Thank you all, gentlemen.
The meeting then dispersed.

The following is our detailed report of the doings of the Yokohama Sailing Club for the past season:—

The Yokohama Sailing Club has now completed the tenth year of its existence, and although there was an unusual lack of wind during the latter part of the summer, the season, on the whole, has been a very successful one, fifty-one races having been completed, viz., fourteen by the 39 rating class, fourteen by the 26-raters, twelve by the 17-raters and eleven by the 12-raters. In addition to the above, there were a number of races that were either not started or else could not be finished on account of bad weather or want of wind. The following is an analysis of the season's racing:—

A DIVISION.

Date.	Class.	Course.	Wind.	Character of Race.		Winners.	
				1st Prizes.	2nd Prizes.	3rd Prizes.	
May 16	A Division	Kawasaki-Lightship	Light N.E.	Arbitrary and measurement	Maid Marion	Albatross	Molly Bawn
May 23	39 Raters	Homoku	Light S.E.	Arbitrary and measurement	Maid Marion	Albatross	Molly Bawn
June 6	39 Raters	Homoku	Light S.E.	Arbitrary and measurement	Maid Marion	Albatross	Molly Bawn
June 13	39 Raters	Homoku	Light S.E.	Arbitrary and measurement	Maid Marion	Albatross	Molly Bawn
June 20	39 Raters	Homoku	Light S.E.	Arbitrary and measurement	Maid Marion	Albatross	Molly Bawn
June 27	39 Raters	Homoku	Light S.E.	Arbitrary and measurement	Maid Marion	Albatross	Molly Bawn
July 4	39 Raters	Homoku	Light S.E.	Arbitrary and measurement	Maid Marion	Albatross	Molly Bawn
July 11	39 Raters	Homoku	Light S.E.	Arbitrary and measurement	Maid Marion	Albatross	Molly Bawn

* Record prize. † Champion pennant.

The Record Prizes in the several classes were won by the following boats:—

39 Rating Class	Mary with	25 points
26 Rating Class	Albatross & Ronin each	12 points
17 Rating Class	Eclair	18 points
12 Rating Class	Aimée	12 points

The four classes above mentioned were all well represented. The 32-rating class had only one yacht left in it and, as her owner did not care to sail alone, she was entered throughout the season with the 39-raters. The 21 and 14-rating classes again had no representatives, but the time may not be far off when the first-named class will come into favour. Two of the yachts sailing with the 26-raters properly belong to the smaller class, and one more new boat would be enough to start the class, which once started would no doubt soon become a popular one. A 21-rater can be built at a moderate expense and be big enough to sail on the bay with safety, which is more than can be said for anything below that rating.

The following table gives a comparison of the average speeds of the Record Prize winners for the last six years, which, allowing for difference in the force of the wind in different seasons, shows a

steady improvement in the yachts of the club in the matter of speed.

AVERAGE SPEED OF RECORD PRIZE WINNERS.

1891.		Miles Sailed.	Speed in knots.
39 Raters.....	Aborigine	17	3.3

26 Raters.....	Ronin	115½	3.4
17 Raters.....	Eclair	59	3.4
12 Raters.....	Aimée	—	—

There have been no additions to the 39 rating Class during the past year, but there was some good racing between the old yachts, five of them generally competing in each race. Unfortunately most of the races had to be sailed with an arbitrary time allowance, mainly in consequence of the indisputable superiority of the *Mary* over all the other yachts. *Maid Marion* has been slightly improved by an alteration in her ballasting, and, with a good suit of sails certainly went as well if not better than she has ever done before. Still her chance of ever winning a race against the *Mary*, except with the help of a handicap, is very small indeed, as may be seen from the following comparison of the performances of the two boats in the races in which they have sailed in company during the past season:—

Mary, 39		Maid Marion, 37	
Rating.		Rating.	
Races sailed together	12	Races sailed together	12
Miles sailed.....	199.5	Miles sailed.....	199.5
h. m. s.		h. m. s.	
Elapsed time	45.04.50	Elapsed time	47.49.47
Average speed	4.42 knots	Average speed	4.18
Difference .24 knot per hour.		Difference .21 knot per hour.	
Allows by club scale 7.3 per mile=24.16		Allows by club scale 7.3 per mile=24.16	
h. m. s.		h. m. s.	
Corrected time.....	45.04.50	Corrected time.....	47.25.31
Corrected average speed	44.2 knots	Corrected average speed	4.21
Difference .21 knot per hour.		Difference .21 knot per hour.	

The actual difference in time 2h. 44m. 47s. or 49s. 6 per mile. This is about seven times the time allowed for difference in rating by the club scale and shows a difference in speed of about a quarter of a knot per hour.

Tori came nearest to *Maid Marion* in speed, and these two yachts had some fairly close racing in which, however, the *Maid* generally proved to be the winner.

The cruiser *Golden Hind* sailed several races during the season and with better sails might have shown to more advantage, though there was seldom wind enough to bring out her speed. A good part of the summer was taken up by a cruise out side the bay, a purpose for which she is much better suited than for racing. This yacht has probably sailed more miles in cruising during the season than all the other yachts of her class put together. *Spray* was in about the same form as the year before but was not quite so fortunate in the matter of winning prizes. This is easily accounted for by the light winds prevailing most of the time, which was of course unfavourable to a boat carrying a small sail-plan. The *Spray* is a yacht that would profit by an increase in the time allowance, as she is capable of making a good race with the *Mary* in a strong breeze with the full time allowance for difference in rating, instead of only the half time allowance as used hitherto. There is not much to be said about *Wanderer*, she is a cruiser, and as such has done her owner good service for a long time, but as a racer she would never fill his house with trophies. *Daimyo*, although belonging to the 32-rating class was sailed with the 39 raters and with a fair amount of success. This yacht has the honour of winning the prize for the highest speed made during the season, corrected by full time allowance. This was done on the

16th of May, the first race of the season, when she made an average speed of 7.1 knots over a 14.5 mile course. The *Mary* in the same race made an average of 7 knots, which was never afterwards beaten, as there was never another opportunity for a fast race during the season.

The 26-raters made a better show than last year as there were more of them. *Albatross* and *Ronin* had new sails during the season and closely contested all the races with the result that they have scored 12 record points each, and so have an equal claim to the record prize.

Molly Bawn was this year refitted, and although not ballast for canvassed as well as she used to be, has still a turn of speed left sufficient to beat the rest of her class provided she is carefully sailed.

Surprise, formerly *Box of Curios*, came into the racing again during the season and won her first race in fine style, but other things being equal, she is not fast enough to pick up many prizes while *Albatross*, *Molly Bawn*, and *Ronin* are about. *Sperwer* and *Else* sailed only occasionally and were not very successful, generally starting on days when there was not wind enough to take them round the course.

Ideal, the new boat built by Mr. Boyes, was raced with the 26-raters, but is too small for the class, being only about 17 feet on the water line. She is a nice little boat, however, and sails well, though probably she could be made to go much faster by lowering her ballast a little. At present she sails on her side even in light winds.

The fin-keel boat *Sodeska*, of about 19½ rating, competed in one race with the 26 raters and the weather being favourable beat them all easily. Where would the present class of 26 raters be if some one were to start a 26 raters of this type?

The 17-raters had a very successful summer's racing and to most people's thinking provided better sport than the big boats. There are two reasons for this, first that their races are sailed over a short course so that their movements can be followed from the shore, and that they are more nearly matched in speed, so that they can make a race together without being so widely scattered as the big boats often are. *Eclair* was at the top of the class and succeeded in winning most of the first prizes, she is a smart little boat in light winds and could be made to do still better with a new suit of sails. *Vega* was next best in this class, sailing just near enough to *Eclair* to make her keep going. These two boats sailed 10 races together covering a distance of 54½ miles, with the result that *Eclair* beat *Vega* by 33 minutes in 16½ hours sailing, with an average speed of one tenth of a knot more, which is pretty close sailing considering that the two boats are not of the same rating and the smaller one is unbalanced, while the other has a lead keel and heavy centre-board.

Isabel came out with a new rig and competed in nearly all the races, but with small success. Her worst point was sailing to windward, but as she was not always so it was perhaps not the fault of the boat.

Violet sailed in most of the races, but was not quite fast enough to tackle either *Eclair* or *Vega*. *Petrel* was more nearly a match for *Vega*, but was only sailed in a few races at the beginning of the season. *Cocktail* also sailed a few races and was then withdrawn. The only new boat in this class, the *Bonito*, a boat somewhat similar to *Eclair*, but with more freeboard and a fin instead of a centreboard, is altogether a more powerful boat. At first she was not successful, mainly on account of badly setting sails, but now that their defects have been remedied it is safe to forecast that she can beat the rest of the class easily. At present she is only rated at 16½ but does not appear to have enough sail; canvassed up to 17 rating she would no doubt sweep the board.

This year a new class of 12-foot-one design boats was started, and as they were always sailed round a short course abreast of the Bund, where they were in full view all the time, their races were watched with much interest. They are, for their size, very staunch little boats, which with careful sailing can stand a fair amount of hard weather, but as was several time demonstrated during the past season they can be very easily capsized by unskilful handling. For beginners in the art of boat-sailing they are all that could be desired. The Club is mainly indebted to Mr. Alan Owston for this new class. Two of the boats were already in existence, having been built by him some time ago, and finding that there was an opening for a class of small boats of one design, he had three more built on the same lines and at the same time presented the Club with a substantial sum of money to provide prizes for them. The result has been very satisfactory, and now we believe he is getting three more boats of the same pattern built ready for next season. This Class only commenced racing at the end of June, but managed to com-

plete eleven races in spite of the calm weather which practically prevented any racing after the end of September. The boats being alike, they were sailed without any time allowance, the first boat in taking the prize. Of the five boats that competed *Aimée* was by far the most successful, probably in consequence of her having a larger and differently shaped sail to the others which allowed her to carry a lighter mast. The result of the season's racing was:—

FOOTBALL.

Y.C. AND A.C. VERSUS H.M.S. "GRAFTON."

Saturday afternoon was dull with a most decidedly wintry aspect in the sky-line, and a nipping grip in the north-easterly breeze, consequently the spectators at the football match were few and the ladies present could be counted on the fingers of one hand. But those that did put in an appearance had the pleasure of witnessing a very good game, all things considered. The Naval visitors were a heavy lot and possessed some good players among them: the home eleven were all youngsters, with the exception of Mair, the centre forward. But young and light though they were, the home side provided plenty of good sport and made a better showing than the score at first sight seems to tell—two goals Navy, one Yokohama. The Yokohama lads have still much to acquire, however, in the way of combined play. Time after time they sent the ball out of touch instead of passing it into the field; then they were always getting out of their places, with the result that when the half-backs fed the wings, there was often no one to carry on the ball, or when the wings found the play too hot and passed out their opponents found a practically clear field. Then again, every one is too fond of high kicking. That is not good football. A ball continually in the air is considered a disgrace to a school eleven, and is the means of many a lad getting a "jacketing" from the Captain of Football at the close of a school match—at least that was our experience. There is no reason at all why the Yokohama players should not be taught to keep the leather down, and we hope when Pearson, or Edwards, or Crawford condescend to play again that they will impress this on their teams. In one sense it was a pity that no old player—we speak, advisedly and intend by the phrase a player of some years' treaty-port standing—was not included in Saturday's eleven, for then, we think, the result would have been different.

Owing to the unpunctuality of the home team in arriving, play began some time after the hour advertised. The Navy started with the wind at their backs, and almost immediately carried the ball down the ground. It went behind. Allcock took the kick, but the ball was soon returned, the Yokohama goal being attacked in force. The backs again relieved, and for the next few minutes play was transferred to the other end of the field. Mair made a shot at goal, that was cleverly returned, and then Watt attempted to score, but without success. Several other dashes at the Navy's goal were all rendered futile by the vigilance of their backs, and eventually the ball was returned to the neutral ground. Soon the Navy pulled together a bit and assailed the local goal. It required all the vigilance of Goddard and Allcock to clear the lines, and then getting possession of the ball Yokohama passed it down the field. Hayward centred right in front of goal and Mair put the ball through, thus securing first blood for Yokohama. On restarting, the Navy made a spirited attack, and Kingdon, the Yokohama goalkeeper, had his work cut out to save. In the end he ran out, and the Navy, passing him and Allcock, dribbled the ball through—one goal all. Nothing more was done before half time was called. The second half of play produced some lively work, and time and again Yokohama seemed on the point of scoring, only to miss the opportunity by wild shooting. The last goal of the day was made by the Navy, after a determined rush, just as the whistle blew.

Mr. W. S. Gilbert has made some progress with a new work for the stage. In it he reverts to his earlier manner, owing nothing to collaboration, musical, or otherwise. The opening scene of the comedy will be laid on the deck of a P. and O. steamer. Being one of the guests on the recent trial trip of the *India*, Mr. Gilbert seized the opportunity to take a series of photographs useful for the scenery of his piece.

MARINE COURT OF INQUIRY.

FRIDAY, DECEMBER 18TH.

THE STRANDING OF THE "HIMEJI MARU."

The enquiry into the circumstances attending the stranding of the Nippon Yusen Kaisha's steamship *Himeji Maru*, on the Bombay Reef of the Paracels, on November 1st, was continued at the Marine Court, sitting at the Teishinsho, Tokyo, this morning. Mr. Morimoto again presided, with Messrs. Nagaura and S. Ito, Assessors, and Mr. J. M. James.

Mr. Thomas Law Harrison, the First Officer of the *Himeji Maru*, was first called. Cautioned, he deposed—I am a British subject. I hold a Japanese Master's certificate of the first grade, No. 394. I was chief mate of the *Himeji Maru* and in charge of the deck at the time of the stranding. We left Hongkong on the 30th October about 1 p.m., bound for Singapore. The departure was taken from Gap Rock, the distance being $1\frac{1}{2}$ miles when the lighthouse was abeam. We then altered the course to S. 7° W. The Gap Rock was abeam before that. I was in charge of the deck at the time. My note-book was lost in the wreck, along with my other books, but I made the proper entry in the log-book, where it can be found. I ascertained the distance from the Gap Rock myself by the four-point bearing. The course we set from there was S. 7° W., by compass. The deviation, as near as I can remember, was half a degree easterly. I joined the *Himeji Maru* on the 8th of October; joining her for the voyage to Hakodate under Capt. Barslow. We returned to Yokohama and then left for Europe. I had only made one voyage in the ship as Chief Officer.

Mr. James—Did you find the compasses agree with the deviation table on that voyage?—They came in very well then; but we went up by the land mostly, not getting any sun, and so had no azimuths. We did not trust to the compasses much, though we steered by them.

Did you have faith in the compasses?—Well, we had doubts, not having drawn up the deviation table ourselves; and so steered by the land most of the time.

The land is better than the sun. Then you did not put much faith in the compasses, you were rather doubtful about them?—Yes, we were doubtful, but we found very little error, very little. The compasses had been adjusted, I believe, in the time of the previous Captain, Captain Mackenzie.

Was the ship swung for compass adjustment before leaving Yokohama?—No, sir.

Was she swung in Hongkong?—No, sir.

Did you take any azimuths while at anchor in Hongkong?—I did not take any myself.

Where any taken, that is what I want to know?—I did not hear of any being taken. We anchored at Hongkong, and did not go to a buoy. I was too busy with the cargo there, and did not hear of or see whether any azimuths were taken there. I have been running on this line before, in several ships; a sailing ship among others. This was about November or December some years ago, going from Hongkong to Singapore. We went the same way as we did this time.

That is, partly the same way?—Yes.

Witness, continuing—This sailing ship was built of iron. I was second officer on board her. We had moderate winds on that occasion, with a moderate swell. We got the sun then and took usual observations.

Did you find much current?—I can't remember now.

You do not recollect whether the ship was set very much out of her course?—No.

What other vessels have you been in when running on that route?—I was never on a steamer between those two ports, Hongkong and Singapore.

Was a good course steered from the time of departure from Gap Rock up to the time of the stranding?—A good course.

During your watches?—Yes.

Were the quarter-masters on board good helmsmen?—Very good helmsmen.

Was the ship perfectly up-right when she left Hongkong, or had she a list?—She had five degrees of list.

That is what I wanted to know: it bore to starboard?—Yes, it bore to starboard. The engineers were ordered to shift the coal—to trim her—from the starboard side as soon as we left; but I saw no perceptible difference in the trim of the ship up to the time of stranding.

When you took charge of the deck at 4 a.m. on the morning of Nov. 1st, what course were you steering?—I can only tell by referring to the log-book.

At four a.m. you were steering due S.?—Yes. Was that true or magnetic?—By compass.

What was the error in the compass?—The deviation table will show you.

What kind of weather did you have, and wind?—Moderate, E.N.E. breeze.

Any swell?—Yes, moderate.

Clear or thick weather?—Dark and overcast; very dark.

How far could you see the horizon, do you think?—About 3 miles.

Come, three miles is a long way; think over it a bit?—I should say about 2 miles.

Do you think you could see breakers two miles away; it was a dark night remember?—I fancy I could have seen the horizon for about 2 miles, but I did not see the breakers two miles away.

What sails were set?—All the fore and aft sails. Had anything been sighted before you took charge of the watch?—Nothing.

Was there nothing suspicious, land or breakers in sight when you went on deck?—No, nothing. Had the look-outs been relieved?—Yes.

What was on the log, the patent log, when you took charge?—You will find it in the log.

Mr. James—Yes, 155 miles. Did you see the breakers?—Yes, about two minutes before striking.

In what direction?—Off the port bow.

Who saw the breakers first, you or the look out man?—I did.

What did you do when you first saw them?—Ordered the helm hard-a-port and the engines full speed astern.

Did she touch the reef before the engines moved astern?—Before the engines moved astern she had not touched the reef. The engines had started to move astern before she actually touched.

After the ship had got on the reef, what was the first thing done?—We lowered the life-boat and ran out a kedge. We lowered the small-boat first, and ran kedge astern with the hawser.

What was the size of the hauling-line?—It was a six inch or six and a half inch line.

What depth of water did you drop it in?—Seven or eight fathoms, I think. I do not know for sure. We ran it out a hundred and thirty, or a hundred and forty fathoms from the ship.

More than a cable?—Yes. We set the hawser up and then lowered a life-boat. The small anchor dragged home; but we did not haul the hawser too taut. The anchor dragged, and we lowered the No. 1 life-boat on the lee side. The ship was heeled over to starboard and on the listed side the boat was lowered. We lowered a two-and-a-half ton bower anchor, having first prepared the boat to receive it. Before the anchor could near the boat, or rather as soon as the anchor was sling on the stern and before the body of the boat received the entire weight, the sea rolled in and stood the boat right on end, doubling it back. Then she capsized. We hoisted the anchor up again, having first saved the lives of the crew who had been thrown into the water. An hour after this another attempt was made with two life-boats having a spar lashed across them, to carry out an anchor.

Did this fail?—Yes.

Did the crew refuse to work on this occasion?—Yes. They said that they would lower the anchor but they refused to go into the boat. The result, unfortunately, was that the boats capsized.

Did you order the men to go into the boats then?—Yes, I ordered them to the boats.

And they distinctly refused?—Yes, they distinctly refused.

How long was it after this before you left the ship?—I left on the 3rd to go out and look for a steamer—two days. I went out in the morning of the 3rd November, in one of the life boats. We had sails and oars. The log book will give the time of my starting.

Mr. James—I find that it was at 2 p.m. Which way did you go?—I started out for the Hongkong-Singapore track.

Which way was that?—I reckoned it would be about fifty miles due east.

Did you see any ships?—No, sir.

I should not think you would. Did you steer due East?—I steered on a wind close-hauled, and got out about 35 miles. When it came on dark, we let off blue lights and rockets as signals.

Did you come back again?—I kept out all day, all next night, all next day, and all next night.

You were away some two days?—Yes, two days and two nights.

Keeping about the same position?—Yes. After I had reckoned, by taking sights, that I was in a proper position, I put out a drag-sail, and kept about there. I remained away until the 5th November, without seeing anything. I left the ship again the same day, at 4:30 p.m., with eleven sailors for Tourane Bay, Cochinchina.

In the same boat?—Yes. But I patched her up before starting the second time.

When did you arrive in Tourane?—On the 8th November, about 2 o'clock in the afternoon.

Without accident?—Without accident.

Did the men behave well all the time?—They behaved very well in the boat.

Did any vessels pass you on the way across?—None at all. We made the land right dead ahead at six o'clock in the morning.

The second officer had preceded you, had he not?—Yes, he was the first person I saw standing on the end of the Promenade there.

Did the French authorities there render every assistance they could?—Yes, they did. They were civil and obliging.

Did you return to the ship or go on to Hongkong?—We all went on to Hongkong from there, after staying some 14 days. We went up in the German steamer *Ingraban*. From Hongkong we returned to Japan in the *Belgie*, to Nagasaki, and there transferred to the *Kobe Maru*, one of Company's ships.

When you were steering across to Tourane Bay, what current did you experience?—None at all, so far as I remember.

What speed did you allow the boat?—About four knots.

And made the land on that calculation?—Yes.

Are you sure; what log did you keep?—I could keep no log there, sir. The water was breaking over the boat continually, wetting everything, and even dissolving a piece of charcoal I had in a pencil case.

You might have kept a bit of spun yarn with knots in it?—Perhaps.

What was the drift of the current at the Bombay Shoal?—I could not say.

Did you experience any difficulty in saving the men from the capsized boat?—They drifted, yes; but it was more swell drift than anything. The boat itself drifted right round the shoal. What part of the reef was dry was too far off to notice drift effects.

What was the direction of the wind when you went over this track with a sailing ship?—It was the usual monsoon.

Mr. Nagura—When you first saw the breakers, you were going full speed ahead, did you then reverse the engines to full speed astern?—Yes, to full speed astern.

The President—When you took charge of the deck at 4 a.m., the course was that given by the Captain?—It was the order given in the night order-book, and was the course I altered to S. 30° W.

Between Gap Rock and the time of stranding, in your opinion, do you think that the ship made any lee-way from the send of the sea?—No, not by the send of the sea. The sea was too far aft—too much on the quarter—to set us to leeward.

Do you think she made any lee-way at all, if not from the send of the sea?—From a current, that is all I know, sir.

Mr. James—The smallest quarterly swell with the wind that you had would cause the ship to drift considerably to leeward. It doesn't matter whether you were going six knots or 19, the drift would still be there. Suppose you put a piece of wood in the water, you would soon see how it would drift.

Witness—Yes, but a piece of wood has no power in itself. We were going ten knots; perhaps more, with the sea and wind that we had.

Mr. James—You were hardly going fast enough to get out of your own way.

Witness—That may be so.

Mr. James—I congratulate you, as being very lucky people, to be where you are at the present moment.

Witness—Thank you, sir.

The depositions were then read over to witness and signed by him; then the Court adjourned for luncheon.

The Court resumed at 1.45 p.m.

Frank McGarity, Second Officer of the *Himeji Maru*, was called; cautioned, he deposed—I am a British subject and hold a British certificate of first mate, and a Japanese certificate of second mate, first grade, No. 544. I was second officer of the *Himeji Maru* when she stranded on the Paracels Shoal. When the ship left Hongkong she had a list of about 5 degrees to starboard. I joined the ship in Yokohama about the 13th of October or thereabouts.

Mr. James—You were all new on board?—I was new. I joined the ship three or four days before sailing.

Who was the navigating officer of the ship, assisting the Captain?—I was assisting the Captain.

Did you take any azimuths, or in any way attempt to adjust the compasses whilst in Hongkong?—No.

Were you on deck when you passed the Gap Rock?—No.

Who took charge of the deck at 8 o'clock that evening, after passing Gap Rock?—The third mate.

When did you come on watch again, then?—At midnight.

How was the wind and weather then?—Moderate wind from E.N.E.

The swell, nothing unusual?—A moderate swell. Weather?—Overcast, cloudy, with no stars visible. It was dull and overcast.

Did you see any vessels during your watch?—No.

See any fishing-boats?—No.

You came on watch next day at noon?—Yes.

How was the weather then?—Overcast and dull. Was it cloudy?—About the same sort of weather as the previous day. The sun was obscured; we had no sun from the time we left Hongkong.

When you took charge of the deck at midnight, what was the course?—I am not sure now, but you will find it in the log.

I find it entered as S. 7° W. Do you remember what the course was next day at noon?—I believe it was altered at noon. If you look in the log you will find it noted.

At a minutes past noon the course was altered to south. I notice in the log-book that you placed a man on the look-out then, where did you place him?—At the fo'c'sle head.

And where was the officer of the watch?—On the bridge.

Then the look-out was lower than the officer?—It is the usual thing to place the look-out on the fo'c'sle head.

It depends on what you are looking for. What was he placed there for?—It was hazy and therefore the fo'c'sle was the best place to put a man.

But are you short-sighted?—No.

But you were higher than he was and ought to have seen further than the look-out could?—He was placed there to assist me in keeping a look-out.

What was the man placed on the fo'c'sle for: was he placed there to look-out for ships, breakers, or anything all; that is what I want to know?—To look out for ships or anything that might be coming in the way.

Well, specify that?—Ships, steamers, fishing-boats, or anything that comes along.

For whales, too, I suppose. Is it hard to specify this? It is very unusual to place a man on the fo'c'sle head in broad day-light with the officer on the watch many feet above him?—It is not unusual; I have always done so whenever the weather comes on hazy.

Then you expected to meet vessels?—Yes.

Not breakers?—I did not expect to see breakers.

Only vessels, nothing else?—If I saw anything else I was to report it. I was supposed to report anything I saw.

Isn't it usual to keep a man on the mast-head as lookout as well as on the fo'c'sle?—I have never seen it.

Then what sort of ships have you been in?—Steamers, as a rule.

But is it not usual to send a man aloft instead of on the fo'c'sle head, which is several feet below the officer of the watch?—I have never seen it.

You have never seen it done?—Never.

But you were evidently looking out for something?—I have never seen it done except when we were looking out for land.

When you took over charge of the deck from the Captain at midnight on the 31st October, what course were you steering, and what instructions did you receive?—I do not remember now. It is in the log-book.

I know the log-book is here. You don't remember the course?—Not at this distance of time.

Have you no note-book?—I had, but I lost it.

I shall put it down in the evidence that you don't remember the course?—The entry in the log-book is correct.

Anything might be in the log book for all I know. According to the log-book the course was altered to S. at midnight. During the middle watch, was there any increase of sea or wind that might set the ship to the westward?—There was no great change; there was plenty of rain.

Squally?—Yes. It was very dark.

When you handed over charge of the deck to the chief officer had you discovered anything suspicious, breakers, shoal-water, discoloured water, or anything that would lead you to suppose that you were nearer the Paracels Shoal than the dead reckoning showed?—No, I had not seen anything.

You had not seen anything?—No.

Owing to the list that the vessel had of 5 degrees to starboard, did she lurch much to starboard, with the wind on the quarter, or did this list tend to make her steering difficult?—No, she went along steadily enough.

Did not the list to starboard have a tendency to make her come up in the wind?—It was not noticeable.

When you were sailing across from the Paracels Shoal to Tourane Bay, did you go straight

across, or through them?—No, I passed southward of Discovery Reef; there is a reef southward of that.

That was at night was it not?—Yes. I heard the breakers perfectly as I passed, and steered right for Tourane Bay.

How long did it take you to go across from the ship to Tourane?—Four days and four hours.

You sailed all the way I suppose?—I sailed very nearly all the way.

What average speed did you make, do you know?—I am not certain.

You did not work the distance out?—Well, it was pretty nearly three knots an hour.

Did you make the land any sooner than you expected?—No. I made it just about when I expected.

You did not find any westerly current?—It is hard to tell, for at times I had no wind; again I had plenty of breeze. The captain laid out the course for me, so I did not work out the distance. There was a strong current as I sighted the land.

Did you experience any current in your favour between Bombay Shoal and Tourane Bay?—I must have had a little current, or I should not have reached the land, because I did not have much wind.

You were four days over it, a day longer than the Chief Officer?—Yes, but he had wind.

But I want to know about the current?—Well, there must have been a current. I will say that not having much wind, and using sails and oars all the time there must have been some current in my favour; and when I struck the coast there was a strong current running south. That is the reason that I could not beat to Tourane Bay, but had to land on the eastern end.

How did your boat's crew behave on the way across?—Very well, indeed.

They were all Japanese?—No, I had two Norwegian sailors.

Were they passengers?—Passengers to London. And afterwards, on landing, how did they behave then?—Very well.

They always listened to your orders?—Yes.

Before the depositions were read over to witness Mr. James said that his evidence did not form part of the enquiry, only the Captain and Chief Officer being responsible, but as the second officer's statements might be used in evidence for or against them.

Witness signed his depositions.

Captain Tittle was then recalled.

Mr. James—There are one or two questions I should like to put to you. One refers to the list, which was not asked of you at the first enquiry. Was the *Himeji Maru*, when she left Hongkong, trimmed upright, or had she a list of 5 degrees to starboard?—She had a list of 5 degrees to starboard.

The next question is, at what time on the 30th October did you get the last bearing of the Gap Rock light, and how did it bear?—May I look at the log book?

Certainly.—There is no entry in the log-book.

No. That is a very important thing. Is there no record of that?—No record.

You see, by that bearing you could have seen whether there was any current. You could have seen that light for thirty miles?—Thirty miles, sir? It is an eighteen mile light.

Well, you could have seen it for two hours?—Yes. But it would have been difficult then to get a bearing: it was then quite aft.

Did you make any observation of the bearing of the current while at the Shoal?—No. I could not. There is a rise and fall there of about three feet. [After a pause.]—I should like to correct the statement somewhat, because the life-boat we lost we saw next morning. From all I could see there was a set to westward.

But probably the boat had been on the reef and had not kept drifting?—Well, alongside the ship there was no apparent set whatever.

That is what I mean. What was the rise and fall of the tide?—Three feet at spring tides; at neaps about one.

Did you fix the position of the ship by observation afterwards?—Yes.

There was no mistake, it was the Bombay Shoal?—It was the Bombay Shoal.

Mr. James—These questions, Capt. Tittle, are put by the President.

What do you attribute this list to, to the stowage of cargo or the coal?—Stowage of cargo.

By true courses you mean courses as measured on the true meridian?—Certainly.

Where was the steering gear fixed?—Where did you steer from?—The helmsman steered from the upper bridge.

Were the steering compass and the standard compass different instruments?—They were one and the same thing.

Mr. James—There is no necessity to call the

Chief Engineer, as the engines are not called in question, but the men who steered the ship from Hongkong will be called, by due notice to the Company, and examined as to the course that they steered.

Capt. Tittle—Will the third officer be called?

Mr. James—I do not think that there is any necessity; I do not myself see the necessity for calling him, as you were on the deck with him, and ostensibly and virtually in charge, seeing he was a junior.

Captain Tittle—Have any of the Japanese staff or crew been examined yet?

Mr. James—Not yet, but the quartermasters will be examined, because they can tell us whether a good course was steered and whether the ship was difficult to steer or not. The Court does not deal with the certificate of Mr. McGarity, the second officer, and returns it to him. The certificate of the first officer will be detained, but in the event of the Company requiring his services, application can be made by it to the Court. Your certificate, Capt. Tittle, will be detained, and whether it will be returned or not, or detained for only a short while, will depend on the finding of the Court.

Capt. Tittle—Could you give me any idea, sir, when the finding will be given?

Mr. James—I will try to hurry it on as fast as I can. We are coming to the end of the year, and we would like to finish the case as quickly as possible. I am sorry that you officers, turning to Messrs. Harrison and McGarity should have been brought up here on such a matter, and I can but congratulate you upon managing the boats as you did and in so successfully getting out of the position in which you found yourselves. I think it is very much to your credit.

The Court then adjourned.

THE ACCIDENT TO THE "SAGHALIEN."

Passengers arriving at Hongkong by the *Tamiso* says the *China Mail*, announce the true cause of the breakdown to the Messageries Maritime steamer *Saghalien*. The steamer was due to arrive at Saigon on Tuesday, 1st Dec., and on the 2nd the *Haiphong* was dispatched to look for her, but returned in the evening without having sighted the missing steamer. The *Saghalien* arrived at Saigon on the 3rd, when it was learnt she had been delayed by a serious accident. When sixty miles off Pulo Condore one of the boilers exploded killing eleven men and severely injuring nine others. Another of the injured men died in Saigon, and when the *Tamiso* left one other was not expected to survive. Amongst the killed was a European engineer, and several of the European crew were injured. In consequence of the accident, the speed was reduced to seven knots. The *Saghalien* remains at Saigon for repairs.

Le Courrier de Saigon contains details of the fatal explosion on board the French mail steamer *Saghalien*. It would appear that there was considerable apprehension entertained at Saigon in consequence of the steamer being overdue from Singapore. Ultimately it transpired that the dome of the starboard boiler had burst, killing instantaneously twelve Arab firemen and seriously injuring six others, including a French stoker named Dubois. All the injured men were horribly scalded, and Dubois and another Arab subsequently succumbed. The accident occurred about six o'clock on the evening of November 30, when the vessel was 70 miles from Pulo Condore and just when the watch was being changed. Fortunately the sea was smooth at the time. The noise from the escaping steam was most alarming, and as the electric light went out leaving the ship in darkness there was naturally much excitement amongst the passengers until the Commander was able to reassure them there was no immediate danger. The Commander, Chief Engineer, and some of the sailors, at great risk to themselves, gallantly entered the stokehold and brought up the dead and injured. It is reported that all on board behaved with admirable *sang froid*. After several hours' delay, the vessel was again got underway, but in her crippled condition, could not make more than seven knots per hour. It is anticipated that the *Saghalien* will be ready for sea in three weeks. The injured are doing as well as might be expected, and two have recovered sufficiently to be discharged from hospital.

By special permission of the Admiralty, a party of officers belonging to the Japanese Imperial Navy, visited Devonport Dockyard on Nov. 5th, and were shown over both the dockyard and the factory at Keyham.

ANOTHER READING ROOM FOR YOKOHAMA.

At a meeting held at the Clarendon Hotel on the 15th instant, the gentlemen present decided to form themselves into a Committee for the purpose of providing a reading-room for gentlemen, there being many in Yokohama not connected with the Club, whom it was thought would appreciate an enterprise of this nature. It was proposed that the name of the Reading Room should be "The Clarendon Reading Room," and that a charge of \$1.00 per month should be made, or 50 cents for minors.

Mr. F. Staniland opposed the use of the term "Clarendon," as it would, in his opinion, tend to lessen the sympathy of the community, who might think that it was a personal enterprise on his part, and would naturally suppose that he should be responsible for its proper maintenance.

The meeting decided that this would not be considered as an objection, and the idea was withdrawn, the understanding being that the "Clarendon Reading Room" is entirely distinct from and has no connection with the Hotel except that it will be situated in the building.

Mr. F. Staniland was appointed Secretary and Treasurer, and was instructed to purchase suitable furniture and order certain papers and periodicals, the room being opened in January 1st.

THE U.S. PRESIDENTIAL ELECTION.

Although the fact that Mr. McKinley had gained a sweeping victory was known in Japan the day after the election, the exact figures were not ascertainable till the mail that arrived to-day, as Kentucky, South Dakota, and Wyoming were in doubt. In Kentucky the vote was so close that one Republican elector who ran behind his colleagues was defeated; and in Wyoming and South Dakota the pluralities for Bryan were very small. The following table represents the vote in the electoral college, as figured in the *Chicago Record*, an independent and careful newspaper:—

States.	McKinley.	Bryan.
Alabama	11	—
Arkansas	—	8
California	9	—
Colorado	—	4
Connecticut	6	—
Delaware	3	—
Florida	—	4
Georgia	—	13
Idaho	—	3
Illinois	24	—
Indiana	15	—
Iowa	13	—
Kansas	—	10
Kentucky	12	—
Louisiana	—	8
Maine	6	—
Maryland	8	—
Massachusetts	15	—
Michigan	14	—
Minnesota	9	—
Mississippi	—	9
Missouri	—	17
Montana	—	3
Nebraska	—	8
Nevada	—	3
New Hampshire	4	—
New Jersey	10	—
New York	36	—
North Carolina	—	11
North Dakota	3	—
Ohio	23	—
Oregon	4	—
Pennsylvania	32	—
Rhode Island	4	—
South Carolina	—	9
South Dakota	—	4
Tennessee	—	12
Texas	—	15
Utah	—	3
Vermont	—	4
Virginia	—	12
Washington	—	4
West Virginia	6	—
Wisconsin	12	—
Wyoming	—	3
Totals	272	175

Necessary for choice, 274.

Mr. McKinley's electoral vote has been surpassed at two previous presidential elections. In 1878 Grant secured 202 electoral votes, and in 1892 Cleveland got 277 electoral votes. Mr. McKinley's popular votes, however, largely exceeds the highest popular vote previously cast for a presidential candidate—5,556,562, given to Cleveland four years ago. His popular majority of about 1,000,000 votes is the largest ever received by a presidential candidate, Grant's popular majority over Greeley being next to it in point of size.

LETTER FROM PARIS.

(FROM OUR OWN CORRESPONDENT.)

Paris, November 7th.

The French followed with much interest the Presidential campaign in the States. Not that the platform was exactly understood, but the working of the machinery of the election was new to them. As both the candidates for the presidency were discounted for favouring an increase in the duties on European imports, that wet blanket sufficed to check the development of enthusiasm. As Continentals have rather a weakness to be paid in gold rather than in silver, no matter how the latter may be ratioed, the success of Mr. McKinley meets their wishes. The phase of American politics that now attracts attention is, will the followers of Mr. Bryan continue to agitate with his programme?—which is here accepted as eminently socialist. In France, Socialism is not in the odour of sanctity, no matter how the pill may be sugared or silvered; nor are French Socialists disciplined and fagotged as in Germany, where they are rapidly becoming a state within a state. French Socialism is split up into schools, with daily recurring cleavages; its followers, being thus divided, are not viewed as very dangerous. What they might be in a period of national peril, when France was in the tetanus grip of a foreign foe, is uncertain. But the memory of the Commune points a moral that possibility handicaps France.

The revelations of Prince Bismarck as to the manner in which he deceived the triple alliance with Russian aid, and how the late Czar out-trumped the Chancellor, till the Kaiser cut short the diplomatic immorality, have done their work. They have lowered Germany, and affixed a stigma to her loyalty; they have scared opinion which held that in alliances there was a relic of salvation. For the future when a treaty is signed by her right hand, suspicion will ask, what about the counter-treaty signed by the left? Europe denounces the poor tribal chiefs of Africa who execute treaties with the Dicks, Toms, and Harrys of the Western Powers. Happy then that makes no treaties; it can never have sleepless nights through fear of being duped, while never ceasing to keep abreast of modern armaments on sea and land.

France has climbed down on the humanities; she extends her help to the Armenians, not in joining Britain to evict the Sultan, but in associating herself with the other four Powers as the Good Samaritan, but without the oil and the two-pence. The discussion in the Chamber on the Armenian atrocities resolved itself into France's joining in the collective ambassadorial decision to give good counsels to the Sultan. Nero fiddled and Rome burned, for the Sultan laughs at the syndicate of impotence, well knowing that, save England, they will not sacrifice the life of one of their soldiers nor expend one of the smallest coins of their realms. Such temporising succeeds in staving off for a little the inevitable Continental catastrophe, but it adds to the intensity of the coming trouble.

"Let us talk of graves, of worms, and epitaphs," would seem to be the yearning desire of the period. Beyond doubt the times are out of joint. At dinner parties and soirées conversation largely turns on subjects of a morbid and of an immortal character. True, politics and change are banished from a general *causerie*, and ladies in their teens are too realistic to talk of "Love's Young Dream." Mrs. Annie Besant's theosophic skit, or her "Life after the Death," affords battledore and shuttlecock amusement. She claims to have found in her inner consciousness some key to heaven, and presents us with a kind of Boedaker's guide to the other world, or "the thirteen spheres"—there's luck in odd numbers according to the gods—where mankind is classed and billeted after quitting this vale of tears. Nansen's voyage is nothing compared with that which Mrs. Besant blocks out in the astral regions unknown even to Milton. Who can deny that some enterprising penny paper—but sold at a half-penny—may not organise a service of special correspondents in the empyrean regions—whose fires, it is to be hoped, remain extinct? Already we receive despatches in the shape not only of solids, but of "bolts from the blue."

The possibilities of nature are infinite, according to Huxley. So maintains M. Jean Finot, who handles the mental fantasies of the moment, his speciality being the "ontology of tombs." He urges us not to be terrified at Death; our sepulchre becomes the most animated of silent dwelling-places; our remains are changed into multitudes of brilliant and joyful insects. M. Finot asserts that our souls to-day are sick; only the "religion of the sepulchre" can heal by making us love and venerate the spot where ancestral ashes repose. That is Chinese-like, and would necessi-

tate our travelling—like Li Hung-chang—with our coffins as personal luggage. It is better to rely on the old beliefs, accept death as the inevitable, be resigned to meet it by living uprightly, and not to be occupied by discussing its mysteries over dinner-tables or at soirées buffets. Why we exist we do not know; when we know it, we no longer exist.

The Russian journals ought to cease hoaxing the French by publishing their usual weekly official article, urging the convocation of a European Congress to settle the so-called Tunis-Bosnia-Schleswig-Egyptian question. All the European powers are friends in "provisionally" occupying grabbed territory, while grass grows and water runs. "Criminal Congresses" are very fashionable, but limited to the common order of odd fellows. Imagine a meeting of six Brother Peachums, encountering and exclaiming "Brother Peachum we are both in the wrong." It would be as interesting, and as important, as the Trappist, "*Bon jour!* Brother, it is necessary to die." Opinion is coming to the belief that the Bismarck scandal will lead to the Kaiser's descending from the high horse—a Krüger and Zanzibar result—and accept the English lead in his foreign policy, the more so, as Lord Salisbury, between the rival alliances, has the ball at his feet. Besides the defensive preparations of Britain are slowly but noiselessly being pushed forward to a formidable standard. A nation backing its premier, commanding all the peace-making weapons and machines of modern warfare, with unlimited means, and proverbial staying power; resolved to provoke no war, determined to be dragged into none, save when the gauntlet is thrown down, is "an out and outer to be let alone."

The once notorious Arton, to-day a convict, has at last resolved to make a clean breast of the rôle he filled as middle-man during the reign of Panamaism, between the legislators he corrupted and the money of the duped shareholders of the second South Sea Bubble. It is not conscience that urges him to solicit the penitent's blouse and taper. He is vexed that those he bribed and whose reputation he spared by his silence leave his wife and family to starve. In his halcyon swindling days, he had purple and fine linen and fared sumptuously; his thievings were at the rate of 100,000 francs a year. Ill got, ill gone. The singular part of the "revelations"—these are becoming contagious—is that they excite no interest now. Five years ago they could have set France on fire. *Quid rides?*

The marriage of the Duc d'Orleans will help him in his running for the Pretender Stakes; but Cup or Throne day has not yet loomed, nor is a change in the form of Government of France possible, so long as the Republic abstains from suicide by avoiding war. Happily it is a popular truism in France, and thus an admirable restraint, that in a general war, after the preliminary skirmishes all round, the issue would be whittled down into a duel between herself and the Turton. After the quarrel—to be tried hilt to hilt—the world might be excused asking "Stands Scotland where it did?" I never met a Frenchman desirous to create a situation where he risked having his brains knocked out. Let France remain strong, be "aye ready," and, like her rivals, form not only one but half a dozen alliances; in fact negotiate with all the Powers, and so be at once protected against foes, or perhaps worse, against friends.

But she must do her level best with her colonies; have a plan even in her present colonial maze. The recalled governor of Madagascar, M. Laroche, blows hot and cold as to the condition of Madagascar. Its future is compromised, while being encouraging; he could promenade round the island with a corporal's guard, satisfied that a hair of his head would not be touched by the terrible Faha-valos—which is true, as they cast away the head of a victim after striking it off. At the same time he applied for more troops. It was only Nora Creina who could traverse Ireland from north to south of the isle, with "only her tears to guard her." Then home-rulers and unionists were all saints. But General Galliani thinks otherwise, and relies on martial law rather than soft-sawder. He has already shot the home minister and the Queen's Uncle—*pour encourager les autres*. Why does he not seize her Majesty and export her, say to Senegal? There she would encounter, since she has a weakness for matrimony, two bachelor ex-Sovereigns, Behanzin of Dahomey, and Dinah Salifon, whom the late Shah treated as his "cousin," at the World's Fair.

The juridical importance of a "hole in the wall." The police have captured a ruffian long wanted, who had a band of unfortunate women to thieve for him. He terrorized them, and his last punishment on one of the girls was to cut a strip off the skin of her hand, and carry it in his purse to awe

the others. He was arrested in a café; he was a Herculean brute and took five policemen to tie him hands and feet—pity they forgot his neck. The women were so afraid that they refused to be placed in his presence to identify him, so the magistrate ordered a hole to be made in the wall of the guard room and the ruffian was thus peeped at.

The Free Thinkers have held an assembly, where delegates met to discuss rather Sapphic questions—not Odes. Many ladies were present. Ex-School Master Robin, aged 68, expounded as his doctrine; "Liberty in Love and in Maternity." Some dissenters made a rush to choke him. Madame Leonide Rouzade, totally oblivious of the awful weight of the National debt, proposed that woman should have liberty as respects maternity, and for that great social function the state should accord her a pension for life. Sigh no more ladies!

LATEST TELEGRAMS.

[REUTER'S "JAPAN MAIL" SPECIAL SERVICE.]

London, Dec. 21.

The Spanish Minister of Marine has issued orders to hasten the completion of the warships now building.

The Governors of several American States declare they are ready to raise volunteers to fight Spain if necessary.

Don Antonio Canovas, the Spanish Prime Minister, in an interview with Reuter's representative at Madrid, said he relied on the statesmanship of President Cleveland and Mr. Olney, and the good sense of the more sober citizens of America, to prevent war between the two countries, but Spain, he declared, was determined to uphold her dignity and was preparing against all eventualities.

(Reuter's Service of Telegrams supplied to the "Japan Herald," the "Japan Gazette," and other Subscribers in Tokyo and Yokohama.)

London, Dec. 18.

A sharp earthquake was experienced yesterday in the Central, Southern, and Western counties of England and also in the suburbs of London. The most serious shock was felt at Hereford, where the Cathedral, the station, and a number of houses were damaged.

Baron de Courcel, French Ambassador to Great Britain, resigns the Embassy in London, being discouraged by the difficulty of a solution of the existing Anglo-French differences.

Exchange on London at Paris 25.26
Exchange on London at New York..... 4.87
(Tel. Trans.)

London, December 19.

Despite the opposition of Mr. Olney, Secretary of State, the Senate's Committee on foreign relations has adopted a joint resolution requiring President Cleveland to recognize the autonomy of Cuba. The adoption of this resolution has caused a semi-panic on the New York Bourse.

(Tel. trans.)

Exchange on London at Paris 25.25 1/2
" " " " New York 4.88

London, December 22.

President Cleveland has signified his approval of Secretary Olney's position on the Cuban question.

The Spanish Premier, Senor Canovas, states that Spain will succumb rather than grant Cuba independence, but she is sincerely disposed to grant a satisfactory measure of autonomous administration providing the rebels will first submit.

London, December 23.

Mr. Carlisle, Secretary of the United States Treasury, estimates there will be a deficit of sixty-four million dollars for the current financial year.

The U.S. Senate has adjourned the discussion of all resolutions relating to Cuba, including the Foreign Committee's report, until after the Christmas and New Year holidays.

(FROM THE "N.C. DAILY NEWS.")

London, December 15th.

The *Viedomosti*, in a much commented article upon the Armenian Question, states that

if the Powers decide upon an active policy Russia must obtain the sole mission for executing the work of protecting the Christians in Turkey. *The Times* says that any intervention for the coercion of Turkey must be international, conferring no exclusive advantage on any one Power.

London, December 16.

The preamble of the Italian Naval Estimates deplores that the Navy has fallen below the level of efficiency as compared with other nations and demands a sum of seven million lire additional for the purpose of building ships.

The correspondent of *The Times* in Athens states that an extensive revolutionary movement is being projected in Macedonia to take place in the Spring, and that the leaders propose to create a diversion by fomenting a revolt in Crete. It is also stated that quantities of arms and ammunition have already been sent to Crete.

London, December 17.

The Italian Government has denied that Russia has occupied a strip of land near Obok, at the southern entrance to the Red Sea.

The French Chamber has rejected the proposal to expend two hundred millions of francs on the Navy, with the assent of the Government. The Ministers admitted that there are defects and abuses, and promised remedial measures.

The Orient Liner *Orotawa* has sunk at Tilbury whilst coaling.

London, December 18.

Lord George Hamilton, speaking at Ealing, stated that there was great possibility of a satisfactory agreement being reached at an early date for stopping Turkish misrule.

(FROM THE "CHINA MAIL.")

London, December 13.

Said-Edin, the Sultan's Envoy to Crete, is thwarting the execution of the reforms, and the Ambassadors have demanded from the Porte that he be recalled within forty-eight hours.

The Russo-Chinese treaty published in Shanghai is denied at St. Petersburg, and the railway scheme is confined to the building of a short Chinese railway in Manchuria, connecting with West Siberia and the Vladivostock lines.

The South has beaten the North, under Rugby rules, by one try to nil.

Mr. William Jones, at present Magistrate in Jamaica, has been appointed Judge to the Straits Settlements.

(FROM THE "CHINA GAZETTE.")

Manila, December 15.

The Spanish troops are continually being reinforced, and most determined measures are being taken to effectively and decisively stamp out the rebellion in these islands. There are already 20,000 Spanish troops here and 8,000 native infantry; while 25,000 men are on their way here from Spain.

The rebels are strongly holding Cavite and Bulacan, and most parts of Laguna province are under their domination.

General Blanco, has been relieved by General Poliviejo, the latter taking command to-morrow (Thursday). General Blanco leaves here for Spain in a fortnight.

Enquiries made with regard to the alleged loan by the Hongkong Bank, show it is flatly denied.

It is now found that the rebel forces are much stronger than was at first believed, but the Spanish Government is taking overwhelming measures to stamp the rebellion out, to restore order, and eradicate lawlessness, no matter what may be the cost.

I am going with the Spanish troops to Bulacan and Cavite in order to gain a personal knowledge of the rebel movements and the Spanish methods of coping with them.

Manila itself, although in a state of siege, is very quiet, albeit the rebel lines are in sight, but in spite of the close proximity of the insurgents everything is calm and business is being transacted in the ordinary way almost as though nothing unusual was going on. There is, however, no danger in Manila itself.

(FROM "EL COMMERIO.")

Madrid, December 2.

The direct steamer for the Philippines leaves Barcelona on the 9th instant, instead of the 5th, as previously announced, taking on board eight companies of Cazadores.

The orders issued by General Azcarraga, Minister of War, regarding the despatch of the fresh troops for the Philippines are:—On the 15th Dec., the steamer *Magalanes* leaves Cadiz with battalions Nos. 9 and 10 of Cazadores; and from Barcelona the steamer *Isla de Luzon* and *Antonio Lopez* with battalions Nos. 11 and 12. On the 18th Dec., the steamer *Montevideo* will leave Valencia with battalion No. 13. On the 20th Dec., the steamer *Colon* will leave Barcelona with battalions Nos. 14 and 15, also of Cazadores.

(FROM "EL COMMERIO.")

Madrid, December 8.

In his Message to Congress, President Cleveland denied to the Cuban insurgents the status of belligerents, declaring that they were damaging American interests. Spain did not contest the proposition made by the American Government to the effect that the present régime in Cuba should be varied. Mr. Cleveland lamented the fact that the unquiet element in America supported the insurgents. He said that if the war was prolonged it might become necessary to take steps to terminate it, but the North American Republic would allow no other Power to mix itself up with the affairs of Cuba.

This declaration has caused great annoyance to the Powers.

Madrid, Dec. 4.

The campaign in Cuba is being actively pushed forward under the direction of General Weyler. The rebels have sustained heavy losses. The commercial treaty between Spain and Japan is being discussed the last few days.

Madrid, Dec. 9.

The *Gaceta* to-day publishes the royal decree appointing Sr. D. Camilo Polavieja y del Castillo to be Governor General of the Philippines.

The appointment of Sr. D. Enquire Zappino y Moreno to be Second General (Military Governor), will shortly be made.

The mail steamer leaving Spain to-day, has on board Sr. D. Patricio Montojo y Pasaron, the officer appointed to be the chief of the naval station in the Philippines.

(FROM THE JAPANESE PAPERS.)

Kobe, December 17.

The present stock of rice in Hyogo is 183,917 koku.

Bakan, December 16.

Marquis Ito has arrived here to-day from Miyajima.

The Jutetsu Kaisha (Iron Smelting Company), has decided to build a foundry in front of Karatsu Station.

Kyoto, December 17.

Lieut.-General Sakuma, Commandant of Middle Section Head-quarters arrived here to-day. To-morrow he starts for Osaka.

Kanazawa, December 17.

About one hundred *soshi* of *Jiyu-to* assaulted Mr. Innan, Supervisor, on his return from the Court. This originated in some scandal regarding the Tetori River works.

Kochi, December 17.

Major-General Sakai, Commander of Brigade here, has returned.

Osaka, December 17.

Out of yen 1,400,000 which the Osaka Shosen Kaisha has been ordered to pay in by the 16th inst., yen 1,080,000 has been paid.

Sendai, Dec. 18.

Mr. Innazuka, Chief Public Procurator of the Miya Court of Appeal, died yesterday.

A storm has been raging furiously for several days, and much damage has been done.

Akita, Dec. 18.

The Prefectural Assembly of Akita Ken has passed a vote to spend yen 7,500 in surveying the proposed port at Funakawa.

Matsuyama, Dec. 18.

Several hundred people assembled in the District Office to protest against the removal of

the District Office and Police Station. In consequence the police are keeping a strict watch at every spot.

Nara, December 21.

The ordinary meeting of the Prefectural Assembly ended to-day. The expenditures for the next fiscal year are estimated at yen 309,600.

Mr. Nakamura, member of the Upper House, and Mr. Nakayama, Representative in Lower House, started for Tokyo to-day.

Kobe, December 21.

Lieut.-General Sakuma, Commandant of the Middle Section Head-quarters, arrived from Osaka to-day. He will go on to Suma for pleasure.

Captain Saito, a Military Chamberlain, arrived here the night before last. To-morrow he returns to Tokyo.

The spending of yen 280,000 on buildings for the Hyogo Prefectural Bureau has been postponed until next year.

The training-vessel *Hiei* left here for Shinagawa yesterday morning.

Kyoto, December 21.

Majima Sakichi, an employe of Mr. Okumura Yoshimatsu, at Gojo, murdered his employer last night. The murderer is an utterly profligate man and has caused great anxiety to his employer, besides bringing his own family to ruin.

Akita, December 21.

Yen 7,500, the estimated cost of surveying the proposed port of Funakawa, having passed the Prefectural Assembly, the proposal was presented to the Governor. The Governor not seeing his way to acquiescing, a discussion on the matter will take place early next year.

Nagano, December 21.

A woman, generally known as Okiku Inari, has been arrested on a charge of having obtained about yen ten thousand from her neighbours by fraud.

Kobe, December 22.

Out of one hundred *soshi* who arrived here from Osaka to coerce the weaving women working at the Hiogo Branch of the Kanagafuchi Cotton Spinning Company, thirty were to-day sent back to Osaka by the Hyogo Police.

The cotton spinning factories of the district being in a disturbed condition, the Governor of Hyogo Ken has issued a notification stating that workmen of one factory should not go to another factory unless they have formally left the employment of their first employers.

Osaka, Dec. 22.

The Osaka money market presents a brighter prospect to-day.

Tsu, Dec. 22.

The tone of the market is dull.

Atami, Dec. 22.

H.I.H. Prince Kacho arrived here to-day.

Bakan, December 22.

Marquis Ito left for Miike (Kiushu) to-day.

Wakayama, December 22.

Mr. Oki, Governor of this Prefecture, gave an entertainment to the members of the Prefectural Assembly to-day.

The Wakayama Orifu Kaisha (Wakayama Hemp Manufacturing Company) held a special general meeting yesterday at which the raising of further capital to the amount of yen 50,000 was decided upon.

Hakodate Dec. 22.

Mr. Nakayama Kanzo, President of Teikoku Suisan Kai (Japan Marine Products Company) left here for Tokyo last night *via* Aomori.

Toyama, Dec. 22.

Snow has accumulated here to a depth of two feet.

Numadzu December 24.

H.I.H. the Crown Prince arrived here to-day accompanied by a numerous suite.

Marugame, December 24.

The election of a representative for the four sections of Kagama Ken resulted in the return of Mr. Kageyama Jinnyemon.

Sendai, December 24.

Lieut.-General Nishi, Commandant of the Second Army Division, left for Aomori this morning.

Osaka, December 24.

The third, *Tashan Maru*, dredger was launched to-day.

Torite, Shitachi, Dec. 25.

The opening of the Tsuchiura line on the Nippon Tetsudo Kaisha, was held to-day.

Mitajiri, Suwo, December 25.

Owing to the death of Prince Mori, Prince Mori Mototeru, his successor and heir, started for Tokyo last night.

Yokkaichi, December 25.

The formal opening of the Yokkaichi Commercial School took place to-day.

Kumamoto, December 25.

The election of a representative for three sections of Kumamoto Ken resulted in the return of Mr. Saku Seichiro.

Yonezawa, Dec. 25.

The action against the *Yonezawa Nichi Nichi Shimbu* for disrespect towards the Cabinet, will commence on the 7th of January.

Bakan, Dec. 25.

Fire broke out in the Toyouru Ordinary Middle School last night. The building was burnt to the ground.

Nagasaki, Dec. 25.

The jailers of Nagasaki gaol have resigned in a body.

CHESS.

All Communications to be addressed to the Chess Editor.

The Yokohama Chess Club meets on Monday and Thursday in each week, at the Club Hotel, No. 5, Bund, from 5 p.m. to 11 p.m.

Visitors to Yokohama, and Officers of ships (whether Navy or Merchant service) who are Chess-players, are welcome to use the Club during their stay in this port.

The Tokyo Chess Club meets at the Tokyo Hotel, every Friday, from 1 p.m. to 7 p.m.

| 38—Q to B 7 | 38—R to Q sq. |
| 39—Kt to B 5 | 39—Resigns. |

(a) Normal play till this point, but this move is inferior to the usual continuations, Kt to B 3, P to Q 3, B to Kt 5, and B to Q Kt 5.

(b) If 24—P to Q 6, Kt to K 3, with no advantage for White.

(c) We would prefer 16—Q to Kt 3, bringing the Q R into play.

(d) White now assumes the attack and conducts it well to the end.

(e) Better to have moved the King.

(f) This seems a useless move. Black's game is not altogether hopeless; R to K sq. would have given some resource.

(g) This repetition of the move, in a slightly altered condition of Black's position, is very clever. Black is now compelled to capture the Kt.

PROBLEM 272.

The White Knight in the centre of the board should be a Black Knight, as per note in our Editorial columns of 24th instant.

The report, which we have already given, is now confirmed, that the Japanese Government has given contracts to a firm at Philadelphia, and to another at San Francisco, for each to build a cruiser of the exact type of the United States cruiser *Olympia*, which has a displacement of 5,500 tons.

Measurement	\$11 Gold per ton.

LATEST COMMERCIAL.

IMPORTS.

The dreary account must be repeated. Dull market with nothing doing, Kobe is also feeling the stagnation, and Importers' godowns are crowded with goods. Money is tight for the end of the year, and there is no certain prospect of much improvement when the New Year opens.

COFFIN PRICE GOODS.

"Disfigured For Life"

Is the despairing cry of thousands afflicted with

Unsightly skin diseases.

Do you realize what this disfiguration means to sensitive souls?

It means isolation, seclusion.

It is a bar to social and business success.

Do you wonder that despair seizes upon these sufferers when

Doctors fail,

Standard remedies fail,

And nostrums prove worse than useless?

Skin diseases are most obstinate to cure or even relieve.

It is easy to claim to cure them, but quite another thing to do so.

CUTICURA REMEDIES

Have earned the right to be called Skin Specifics—

Because for years they have met with most remarkable success.

There are cases that they cannot cure, but they are few indeed.

It is no long-drawn-out, expensive experiment.

25c. invested in a tablet of

CUTICURA SOAP

Will prove most convincing.

In short,

CUTICURA WORKS WONDERS

And its cures are simply marvellous.

SPEEDY CURE TREATMENT.—Warm baths with CUTICURA SOAP, gentle applications of CUTICURA (ointment), followed by mild doses of CUTICURA RESOLVENT (the new blood purifier).

Sold throughout the world. British depot: F. NEWBURY & SONS, 1, King Edward-st., London, E.C. POTTER, DRUG AND CHEMICAL, CHESTER-CHURCH, Sole Proprietors, Boston, U.S.A.

May 4th, 1895.

THE GREATEST WONDERS OF MODERN TIME

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the druggist Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN. HOLLOWAY'S OINTMENT

Is certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It is a miraculously healing ointment, curing skin diseases, and in arresting and subduing all inflammations. Mr. J. T. COOPER, in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas—and the demand became so great that I was obliged to lock up the small remaining 'stock'."

Sold by all Chemists and Medicine Vendors throughout the World.
May 1st, 1895.

MILKMAID BRAND CONDENSED MILK

The "Milkmaid" Brand is guaranteed to contain all the cream of the original milk. In the process of manufacture nothing but water is removed, nothing but the best refined sugar added.

Avoid low-priced brands from which the cream has been abstracted, and ask for the "Milkmaid" Brand, the best for all purposes.
